As has been said, the lumbermen have entered the edges of this country, and their portage roads are the only highways except for long circuitous ways by water, and here the long carries discount any advantage that way may have.

These portage roads are, in their beginnings at the settlement or clearing, well worn and easily traveled, but as you advance they grow bad as they grow long. Over treacherous bogs only thinly protected by brush and logs; on long stretches of corduroy; up sudden rises and down steep declines; over large rocks as thickly planted as pebbles on the seashore; the stumps, roots and bushes cut above the ground as high as the snow lay when the road was swamped; so the road winds its way through the woods, the partridge barely flying out of the way, the owl regarding the intruder with stupid stare, while the hedgehog makes clumsy attempts to escape observation.

Camp is made with regard to water supply, and your day's journey is long or short as its middle and end brings you to spring water.

It was to this country that two sportsmen traveled at the opening of the hunting season of 1897. It had taken well near a year of correspondence to complete their arrangements, which were as near perfect as could be in a new country and under strange conditions. It had been their good fortune to have the suggestion and recommendation of Mr. Frederic Irland, Washington, D. C., and without the kind offices of Mr. W. T. Chestnut, Fredericton, N. B., many of the important details would have necessarily been neglected and the journey lacked much of its smoothness. And in this connection it can be said that from the time the line was crossed till the return was made they were the recipients of so many kind and thoughtful attentions from every one they met, that they were made to feel as though they were among their own people.

A trip like this could not be made to advantage under six weeks, so that while their hopes and anticipations were high, it was with some misgivings that the start was made on an excursion that would take them so far from home and friends, and into a country where communication with the outer world ended as they entered the woods, and could not be resumed till the return trip brought them to the clearing again.

The start was made from Boston on the evening of the last day of August, and after several vexatious delays the last night in a bed was passed under Holt's hospitable roof in Pleasant Ridge settlement, Northumberland county, N. B.

"Jocund day stands tiptoe on the misty mountain top,"

when, breakfast finished, we come out to find our team loaded with supplies and camping outfit, and the guides, cook, helper and teamster waiting for the start. The veteran Henry Braithwaite had charge of the party, and to his energy, thoughtfulness, patience and large experience is due the auspicious beginning and successful ending of the trip.

Early as we were, a lumbering party had started before us. Our goods were taken to the edge to the clearing on a wagon, transferred to a wooden-shod sled, and here the actual journey commenced.

It required the united attention of teamster and men to see that the load was safe, and to help the team over rough and dangerous places. Once it was necessary to stop to reshoe the sled, and twice the horses narrowly escaped serious injury from bog and treacherous roots.

We traveled ahead, watching for game, with an occasional shot at partridge, owl or porcupine, taking note of familiar scrub or herb, gathering strange plants, or, resting on some convenient log by the roadside, talked of previous trips and compared them with the one we were making. As each day's walk neared its end, the guides would come forward to select a camping place. It was interesting to watch the dexterity and speed with which all details of camp making were accomplished, so that by the time the team reached the spot dry wood had been gathered, trees felled for the night's fire, tent poles cut and in place, and the fragrant bed of spruce boughs carefully spread. Then the cook gathers his kettles and pots about the fire and cleverly mixes the dough in the flour bag, the tin baker meanwhile warming before the merry blaze. As the bread bakes, the meat is cooked, potatoes boiled, tea made, and in an incredibly short time seven hungry men respond to supper call. This important function over, a pleasant hour is spent stretched out on blankets under a shelter tent before a roaring fire. Plans for the following day are discussed, incidents of other trips related, the pleasantries and mimicry of the clever story-teller listened to, and all the warmth and comradeship of the genuine camp-fire felt and enjoyed. But the effects of ten hours' hard tramping become evident in sounds of slumber from the men's tent, and soon the wakeful one is alone with his thoughts and the weird night sounds of the forest.

Four days we traveled, stopping at some brook or spring to boil the mid-day kettle of tea, and eat our lunch of eggs, bacon, fresh baked bread and potatoes, camping by wide-spreading lake or beaver made pond, in the forest silence or near some deserted lumber camp or depot. At last we said good-by to happy Jim and his faithful, patient, honest pair of horses, camped for the night, and the following morning, shouldering our packs, started on the last stage of our journey. Here we left the portage road and for the rest of the distance followed a narrow trail cut by our guides.

This day we first saw a pirogue or dug out. We had seen many samples of the woodsman's craft, but this, hewn out of a solid log, with only the axe for tool, gave conclusive evidence of his skill and artistic eye. These boats, which we had always supposed to be unstable, rough and uncouth in appearance, we found to be safe, durable, and built on lines as pleasant to look at as any boat we ever saw.

Two hours' ride in these boats down the Crooked Dead Water, by bogs and barrens, along wooded shores, through the Jaws, by the Gulquark Branch, around Ough Island to the head of the quick water, brought us to the camp, situated in a grove of trees about 100yds. from the shore. This was to be our home for the next four weeks.

It was with some apprehension that we viewed our accommodations. The camp was built like a right-angled triangle, the roof the hypothenuse, a smoke hole for chimney, and an opening in the side for entrance. There was no floor, and the fire was built on the ground against the front end of the camp. We found, however, that this style of camp was warm, comfortable, free from smoke, and without the cold drafts of the stove camp to which we had been accustomed. Side of the camp was a shed to store supplies, and here the cook prepared the mysteries of his art, and we, the guests, ate them in state at a little table of his manufacture.

It was now the middle of the second week in September. The moon was passing out of the third quarter into the full, and the commonly-considered best time for moose calling was at hand. Except, however, as the moon might influence the movements of our game in search of their mates, and so in our way, she was not considered as a factor in our anticipations of sport. Our guide called only by daylight. Before the trip was over any skepticism on this point was entirely removed and our ideas on the subject of moose calling had wholly changed.

But an unusual factor negatived any influence the moon might have. The weather was extremely warm; the foliage wore the green of summer; and the moose were as completely hidden and unapproachable as could be imagined. We were not idle, however.

Excellent fishing was at our door, and while one of us, under the guidance of the cook, who was a clever fisherman, tempted the speckled beauties, the other tramped over bog and barren, up hardwood ridges and along streams and lakes looking for the gallant moose.

One of the pleasantest excursions was a four days' trip to the Little Sou' West Miramichi Lake. Lumbering operations have at present spoiled this country for big game; but when the logs are all cut, the lumbermen gone and the woods given back to the game from which it was taken, it will be the beau ideal spot for the sportsman. It is comparatively easy of access, affords good opportunities to call and still-hunt game, is a fine fishing ground, and a favorite resort for ducks.

We visited Deer, Moose and Indian lakes—waters never hunted before by sportsmen. On the latter and its outlet we saw, in broad daylight, otter and beaver. Here the dams and large houses of the latter were the best samples of their work we had seen, though afterward, at Fox Lake, we saw more extensive and fresher works.

While signs of moose were plenty and an occasional answer was heard, we failed to get the coveted shot

Toward the middle of the month our headquarters was changed to Irland Camp, situated in the heart of a new moose country. Trails had been cut through this, and these were frequented by the moose. It was some time, however, before we were fortunate enough to meet any under favorable conditions to shoot. It was after a hard day's tramp to Indian Lake, that our party was returning to camp about sundown. The writer was in the lead, tired, hungry, and wondering how much longer beans would be the chief item on the bill of fare. A sudden turn in the trail brought us to the top of a sharp decline. The moss-covered path smothered any sound our tired feet might make. The wind was fair in our faces. As the head of this ridge was reached, a moose was seen about 50yds. in advance, walking down the trail. With a remark hardly suited for a warden's ears, the .45-70 was brought to shoulder, a quick, steady aim taken, and an invitation sent to Sir Moose to dine with us the next day. The invitation was accepted after a very short deliberation, and as we reached the spot where he was waiting, none of us were sorry the invitation had been tendered and accepted. The ball had gone from end to end of as handsome a young bull as ever roamed the forest. Two days after our second moose was shot, and the same day we lost the largest head seen on the trip. There were two interesting experiences connected with this day's sport: the approach of the one we got, the retreat of the one we lost. As the former stole, then crashed through the brush toward us, there was a mixture of caution, desire and defiance in his deep-lunged cough, which made it evident he was alone, desired company, an was looking for fight if need be. And when he broke through the bushes at the edge of the stream, the look he gave us embodied all these feelings. A single shot ended the entertainment.

Success had made us confident of the result of a well-directed shot from our rifles; but when an old bull walked off with four 500-grain bullets in points of his body that would have made the escape of a younger animal impossible, confidence in our guns was shaken. We followed his trail for a day and a half without success. No doubt he will be food for the foxes this winter, but that won't help us.

Our last was interesting, because it was a very fine head of 51in. spread and eighteen well-marked points; because it gave evidence of the caller's skill, supplemented by excellent generalship in taking the best possible stand from which to shoot, and because it demonstrated the effectiveness of the English express rifle. This was a very old and, as we found when dressing him, tough bull. His position for the shooter was not over favorable, yet a bullet from a Tisdale express crashed through bone and tissue, making a wound from which he could not rally or travel any distance.

This happened on the last day of our stay in the woods, a fitting climax to a most enjoyable trip. The next day we passed up the Crooked Dead Water for the last time. The curtain of leaves which had hidden the shores when we went down had fallen; the ridges were a mass of yellow, with here and there a tall spire of green; ducks and geese were starting on their southward flight, and we followed with forced marches.

Good luck and extra effort shortened our outward trip by a day, and on Oct. 8 we bade good-by to five pleasant acquaintances and took the train for the place from whence we came.

We can truly say there is a vast difference between hunting moose and a moose hunt, and that the place to have the latter is in New Brunswick. GORDON PARKER.

The FOREST AND STREAM *is put to press each week on Tuesday Correspondence intended for publication should reach us at the atest by Monday, and as much earlier as practicable.*

THE JACKSON'S HOLE ELK CASE.

J. W. SAMMON, County and Prosecuting Attorney, Uinta County, Wyo.—EVANSTON, Wyo., Nov. 8.—*Editor Forest and Stream:* Replying to your favor of recent date, relative to outcome of controversy between myself and Attorney-General Fowler, touching certain elk in the possession of one Adams, etc., I herewith, under separate cover, mail to your address *News-Register*, which gives desired information.

J. W. SAMMON.

From the Evanston (Wyo.) News-Register, Oct. 30.

In the Adams elk case, which has created considerable newspaper comment between County Attorney Sammon and Attorney-General Fowler, a four-ace hand was evidently held and the opportunity only awaited the playing by our county attorney.

It will be remembered that County Attorney Sammon took issue with the interpretation of the law as put forth by the attorney-general, he (the attorney-general) claiming that no permit could be granted and that the feed and care given the elk was a loss to be sustained by the parties who took them in. Prosecution was demanded at the hands of the higher official, but in this the county attorney refused to abide, on the grounds that no offense had been committed.

It will further be remembered that these elk were not taken by way of captivity, but that they were held in care for protection only, being in a half-starved condition when found upon the premises of the parties in controversy. Again, the County Attorney held that the elk were not taken up in violation of the game law, but were gathered only as a matter of protection, and that the holders of the property should be allowed just expenses or a permit to ship.

Now, after much objection on the part of the Attorney-General, comes Gov. Richards, who practically sustains Mr Sammon in his rulings, in so far that he grants to Harvey K. Glidden, a zoölogical manager of New York, a permit to ship the forty head. While the subject under discussion will most likely come up again, still it must be contended that to County Attorney Sammon belongs "first blood," and, although he is slightly disfigured, he is still in the (Court House) ring.

Birds and Bob-Tailed Horses.

PRINCES BAY, Nov. 13.—*Editor Forest and Stream.* I have just returned from a week's shooting in the vicinity of Mastic, L. I. J. and myself had fair sport—yes, you might say good luck, taking the weather into consideration; for we only had one clear day while there, and that day we brought to bag twelve quail, two partridges and two woodcock. The other days our score was small; but we cannot complain, as it was purely our fault we did not hit all the birds we shot at. There was one bird I shot at and made a clean miss, which I afterward procured in a very unsportsmanlike manner. I marked the bird where he went down, and after we had tramped around after several more I said to J.: 'Come over this way and we will get the bird I missed so nicely. The bird lit right in there ahead of you." "I know it, Dot is 'making game;' he is on a point now." I came up, and surely enough, there stood Dot looking straight up in the air, stiff as a rail. "Will," said I, "I never saw him point that way before."

I went toward the dog and naturally looked up a little myself and there, not 6ft. away and about 4 or 5ft. from the ground, hung the lifeless but still warm body of the quail I had shot at a few moments before. It had lit on the ground and run along until it saw a nice little opening in the brush to go through, then it was caught with a nicely arranged piece of horse hair, thrown into the air and hanged by the neck until dead. We took the quail from the snare and put it with the rest, so we had snared game in our possession.

After that little experience we took notice, and counted in all nearly 1,000 snares in the woods around Mastic and Moriches. I think there should be a law passed prohibiting snaring, because it is dangerous to walk around among them; if your foot happens to strike the spring pole, it very often happens that a hunter will get a slap across the face from it, and that is very disagreeable. I don't know as my feet are any larger than any other people's of my size, but almost every day my feet would come in contact with those devilish snares, and I even had to draw my penknife several times to cut the horse hair and fine copper wire off from my boots. One afternoon when it was raining hard, J. and I were sitting on the veranda of the Wilson House, when J. said: "Here comes another bob-tailed horse." Said I: "Have you noticed many bob-tailed horses out here?" "Yes, I have, and I don't wonder at it, when we see so many snares through the woods." A. L. H.

Maine Snow and Game.

BOSTON, Nov. 16.—Mr. Hamilton, of Lynn, is out of the Maine woods, in the vicinity of the Katahdin Iron Works, where he obtained a couple of handsome buck deer. Speaking of the shooting accidents in that State he says that they are "altogether too common," and that he learns that it is proposed to pass a law, at the next session of the Legislature, making it a penal offence to "shoot more than one man in a season."

A heavy body of snow is now on the ground in that State, from six to 10in. having fallen in many of the northern sections. Deer hunting will be especially good, and the moose hunters will rejoice that they have a chance before the end of the open season, Dec. 1. Game shipments in Maine are most remarkable. SPECIAL.

Killed by a Stone.

BRISTOL, N. H., Nov. 10.—A deer was killed in Newfound Lake, Bristol, N. H., on Monday last, 8th inst., in a rather novel way; but as the men were not in possession of firearms at the time, it was the only way they could hope to capture it.

D. P. Hardy and Cyrus Moore, while driving along the shore of the lake, saw a deer swimming toward shore. Hardy picked up a piece of rock and threw it at the deer, striking it squarely on the head, which stunned the animal, so that its head dropped under water, causing it to drown. Hardy then waded in and dragged out the deer, which proved to be a fine young buck, about two or three years old, and weighed 165lbs. LANDLOCKED SALMON HOUSE.

Rhode Island Fish and Game.

PROVIDENCE, R. I., Nov. 15.—*Editor Forest and Stream* Samuel Smith, of Pawtucket, and Sylvanus Peck, of Rehoboth, within a few days have shot six foxes in the vicinity of Rehoboth, one of which weighed 12lbs.

Codfish were never more plentiful than at present along the shore at the mouth of Narragansett Bay. No dexterity is required to make a catch, and it is even said that scarcely any bait is required, as the cod are so numerous that they sometimes bite at the bare hook. Big catches are daily reported. One day last week the Lewis Brothers, of Wickford, hooked 1,170 codfish.

Simeon Gardiner, of Wickford, captured an eel last week that was 4½ft. in length and weighed 13½lbs.

J. M. K. Southwick, a member of the State Fishery Commission, will distribute 3,000 brook trout among the park owners of Newport this month.

Thursday afternoon a strange animal was noticed in the pasture with the cows of Charles T. Chase, a milkman, near Saylesville, in the northern part of this State, and upon investigation it proved to be a good-sized wild buck deer, but it scented danger and quickly disappeared in the woods. Several persons saw the animal, which was an unusual sight in that part of the State.

Large flocks of wild ducks frequent the waters of Narragansett Bay in the vicinity of Prudence Island, but they are so wild that they keep out of range of sportsmen's shotguns. The ducks began coming into the bay about Oct. 1, and were hunted from sail boats and steam launches. At first many were bagged by this means, but they have lately become so wild from constant hunting that they now keep out of range A few ducks are taken from blinds on the shores of the rivers and upper waters of the bay at night, when they come ashore to feed.

Seldom, if ever, has a finer string of deer been seen in Providence than that displayed last week, three bucks and three does, as a part of the results of a vacation visit to the big game section by Drs. P. H. and J. W. Keefe and W. L. Munro, with Charlie Harris, Emery Perkins and Fred Ray, three hardy woodsmen, as guides. The deer were all shot within a radius of ten miles from Lake Nahmakauta, the most beautiful of the Maine lakes. W. H. M.

The New England Exposition.

ANTONIO APACHE, the Indian whose recent tour through the Maine and New Brunswick wilderness resulted in securing so many valuable features for the New England Sportsmen's show, is now in the wild regions of the far West revisiting many of the scenes of his childhood, notably those in southern Arizona, where, as an untutored Indian boy, he was captured by troops operating under Gen. Crook and sent to Fort Monroe.

While selecting from among various tribes of North American Indians the finest hunters and trappers of the several races and nations for the great Indian camp to occupy the entire stage of Mechanics' Building in March next, he has been enabled to secure an extensive collection of antique and unique specimens of Indian art of rare value, and has already shipped ten cases of Pueblo pottery, and a number of bales of carefully selected Navajo blankets, which, with rugs, robes and curios, will play an important part in the forthcoming exhibition, and will serve as valuable souvenirs for those who are fortunate enough to obtain them.

Tents of birch bark, inhabited by full blooded braves, squaws and papooses wearing rudely fashioned garments of furs and buckskin, will exemplify the aboriginal conditions of the North American Indians. The visitor will then stroll through an Indian village of the last decade, with its more brilliant and effective adornment, pausing here and there to admire the skillful handiwork of the Indian maidens, and the sturdy manhood of the braves, as they fashion their implements of warfare and deftly make bows, arrows, spears and canoes, and a great variety of traps and devices for the capture of game animals and birds. In point of realism and scenic effectiveness this Indian camp will undoubtedly prove a revelation not only to those whose journeyings have never led them beyond the confines of civilization, but to the great army of sportsmen; while the antique specimens of genuine Pueblo pottery, the brilliant and picturesque Navajo blankets, and the rugs, robes and curios will interest amateurs no less than connoisseurs in this delightful field of research, especially when shown and demonstrated by the Indians themselves.

New Publications.

THE STORY OF THE COWBOY.

THE review which appeared in the issue of Nov. 6 did simple justice to Mr. Hough's admirable book, "The Story of the Cowboy." It is a vivid and truthful picture of a splendid figure which played a heroic part in the subduing and civilizing of our West, but which occupied the public eye only for a brief quarter of a century, and then rode away into the darkness, to be seen no more.

Mr. Hough's comprehension of this figure is complete, and the measures that he has applied to it are faithful and accurate. It was time that it should have been measured and its history written, and it is fortunate that a writer so competent and so sympathetic as Mr. Hough should have undertaken the work.

It was not until the drives from the south had begun, and the cattle had commenced to invade the northern ranges and to mingle with the buffalo, which they were soon to replace, that the cowboy began to figure in the fugitive literature of the day. In the Southwest he had existed for many years before this, but always far from the railroads, and so beyond the ken of the newspaper reporter. When, however, the cattle came north and reached the railroads, the reporter met and was quick to recognize the new type and to grasp its salient points, those which came in view when the cowboy "struck" the town—his worst points and his weakest. But the reporter knew nothing then, and never came to know anything, of the cowboy's life on the range—of his industry, his endurance, and above all, his unflinching loyalty to his employer. To all these characteristics Mr. Hough has done ample justice. But the last point deserves especial emphasis, and should be referred to over and over again; for it was on precisely this point that the success or failure of the whole cattle business depended, since cowboys who were careless, unfaithful or dishonest meant ruin to the owner. No doubt from time to time there were worthless cowboys, but "Jim, the foreman," soon learned of their failure to do their work, and weeded them out. In like manner there were men for whom the continuous and severe labors of the range proved too arduous, and whose constitutions broke down under the work. The younger hands taken on from time to time felt the influence of the devotion to duty of the older men, and took a pride in doing honest work on the range. So, by a process of natural selection, a class of men grew up as cowboys to whom loyalty to the employer and enthusiasm for his interests was as natural as eating or sleeping.

The cowboy of the old cattle country would as soon have thought of losing his right hand as of letting a calf belonging to his employer be branded by another's iron. He would fight for the interests of the man who hired him to the last drop of his blood. Sometimes he might grumble and growl at bad weather, night herd or the stampede, but when the time came for action he was in his place and doing his duty. But, as Mr. Hough says, the cowboy was a silent man and did not grumble much. It was the cook who did the growling for the outfit, and indeed it may have been the cook's example that taught the cowboy to bear in silence the hardships of his life.

The ill repute of the cowboy arose from the excesses which many of his class committed when they came to the town For months at a time he was working alone on the broad free range, trusted to do his work, and bearing always a load of responsibility. On a sudden he found himself in town where he met other people, where he had no duty and was free from responsibility. Then he was like a sailor just arrived in port. He wanted to have a good time; as good a time as he possibly could. It is not inapt to call the cowboys land-sailors. They were like sailors in their isolation, in the severe labors which they performed, and in the dangers to which they were exposed. They were like them, too, in the readiness with which they yielded to temptation when they were off duty.

The cowboy is a being of the past. Brief was the time during which he rode across the spacious stage of the busy range, but while he was there he played his part bravely and well—a vigorous, indomitable and ever loyal type. He could exist only so long as the range cattle business was at its height, and with the passage of the glory of the old range, the cowboy passed too. There are still in the West good riders and ropers and cattlemen, but the cowboy is gone; the type has disappeared. He has largely become a granger; once an object of his own deepest contempt and scorn.

The Indian, the trapper and the fur-trader were the striking and picturesque figures of the old uncivilized West, which some of us can remember. They were in and of it, but they did nothing to make it productive. They took what it offered, reaping where they had not sown, and gathering where they had not strewn. There followed them the soldier, the cowboy, and the railroad builder, and a new era dawned over a vast empire. These men were civilizers, and each did his part toward increasing the resources of the world. Of them all, none—according to his opportunities—did more than the cowboy.

Let us be glad that he has found a fit historian; that one has arisen who could acceptably sing the great epic of the range. There are many thousands of men who owe Mr. Hough thanks for refreshing their fading memories of the old days, and for doing justice to a class of men to whom it was denied until after they had disappeared. G. B. G.

Sea and River Fishing.

Proprietors of fishing resorts will find it profitable to advertise them in FOREST AND STREAM.

The "Game Laws in Brief."

THE current edition of the *Game Laws in Brief* (index page dated Aug. 1) contains the fish and game laws for 1897, with a few exceptions, as they will continue in force during the year. As about forty States and Provinces have amended their laws this year, the *Brief* has been practically done over new. Sent postpaid by the Forest and Stream Pub. Co. on receipt of price, 25 cents. All dealers sell it

ANGLING NOTES.

Trout Eggs Separating.

SOME weeks ago a correspondent wrote to know what I meant when I wrote in FOREST AND STREAM of trout eggs separating. I have not replied for several reasons, the chief of which is I do not know what I did mean, for I do not know when I wrote it. It might have been written any time during the past twenty-one years, so far as I am informed, and the correspondent does not give the issue of the paper, the month or year. I made a memorandum of the query, and put it on the hook to answer it when I got to it. Now, I have looked back over the numbers of FOREST AND STREAM for the past year, and I cannot find that I have written anything during that time about trout eggs separating. It is rather too much to expect me to look back over the twenty other years to find what I may have written. Now I cannot find the letter even, to see the language that the correspondent used, and have only the memorandum for a guide. If the issue of the paper had been given, I would have replied to the query long ago. The letter came from Cambridge, Mass., and if the writer cares enough about the matter at this late day to repeat the query and give the date of FOREST AND STREAM I will try and not lose the letter until the reply is written. It is safe to assume that I wrote of trout eggs separating in connection with spawning operations, for I can think of no other sense in which the word would be used. When the eggs first come from the fish they are not perfectly sound The eggs and milt are joined in the spawning pan and impregnation takes place; then a little water is added to the pan, which the eggs absorb until they are round and plump. During the time that absorption takes place the eggs adhere, and when it is completed they separate. This is, in brief, the only separation in trout eggs that I would be apt to write about.

Trout In New Zealand.

Mr. D. Russell, honorary secretary of the Otago Acclimatization Society, writes me from Dunedin, New Zealand, very interestingly about the fish and game of that country, and I quote a portion of his letter: "Trout in New Zealand have thriven wonderfully well from the very start, some twenty-six years ago, and at the present time the whole of our inland waters are well stocked and very large numbers are to be seen along the coast in the sea, and they run up the river to spawn in June and July.

"The largest fish that we know of having been caught in the salt water was 36lbs., and it is quite possible larger may have been caught, as fishermen are very silent on the subject, it being illegal to take them with a net.

"Although we have put large quantities of American brook trout and Loch Leven trout fry into our streams for the last twelve or fourteen years, it is very seldom that anglers catch them over 9 or 10in. long or over 1lb. in weight. All our river trout seem the same.

"This society purposes breeding as many young salmon as possible to turn out as fry and yearlings. The stock salmon grow to about 3lbs. in our ponds and produce ova for about five or six years, the eggs being as large as the eggs of a large salmon, but we lose a great many every year of the old fish in the stripping, as it takes considerable pressure to obtain the ova, and it must be severe on the parent. The fry grow well in the hatchery, and when in the smolt stages they are fine fish 6 to 8in. long, and are often caught by the anglers when they are making their way down stream the latter end of November and beginning of December. It may be possible to grow our stock fish larger if we only knew how to do it. Unfortunately in New Zealand game birds are very scarce on account of so much poisoned grain being scattered all over every winter to destroy the rabbits. As long as we have the rabbit pest we will have very little game; wild ducks and our native pigeons being the only birds we have to shoot now."

I have replied by letter to Mr. Russell's queries about feeding young fish in the hatchery and raising ponds, but I made no mention of one matter now called to my attention by copying from his letter. He says, "all our river fish seem the same." This is directly after the mention of American brook trout and Loch Leven trout. Of course, the trout first mentioned as growing so large in the sea are the brown trout, and the mere fact that they go to sea will account for their large size, for there they obtain a great supply of the best sea food. By river trout looking all alike, Mr. Russell evidently refers to brown and Loch Leven trout, and I can say that I do not know of a single instance of a Loch Leven trout egg brought to this country from Scotland that did not, when hatched, grow into a brown trout. Every one has developed the crimson spots peculiar to the brown trout, and absent from the Loch Leven. Again and again I have taken trout of different ages, hatched from Loch Leven eggs, and placed them by the side of trout hatched from brown trout eggs, and never have I seen the least difference between them; both were always brown trout pure and simple, with crimson spots. If the people of New Zealand have had a like experience with Loch Leven eggs, it is not strange that all river trout look the same, if our native brook trout (*fontinalis*) is excluded. To me it is just as evident that the 9 and 10in. trout of these rivers lack proper food, and in abundance, as it is that the brown trout running down to the sea grow very large because of the rich pasturage they find there. Food in abundance will do wonders in the way of increasing the size of various species of fish, and the absence of it will as surely dwarf the fish, but it is doubtful if feeding will materially increase the size of salmon (*Salar*) confined in fresh water beyond the figures I have quoted from Mr. Russell's letter. The late Mr. John Mowat confined sea salmon in fresh water until they arrived at the spawning age, but they were dwarfed in size from fish of same age that had access to the sea. Being an anadromous fish, the changed conditions when confined in fresh water is sufficient to account for their slow growth. Particularly when it is considered that a smolt going down to sea weighs not more than 2 or 3ozs., and two or three years later, when it returns from the sea, may weigh anywhere from 9 to 12lbs., or even more. It is the sea food that gives size and weight to the fish, and when salmon are cut off from sea pasturage it must be expected that they will be under normal size.

Trout In South Africa.

Mr. E. Latour, in the London *Field*, gives a very interesting account of his operations as a fishculturist in South Africa, and the results he obtained in the way of hatching and rearing trout in water of high temperature. Mr. Latour went out from England to hatch trout eggs for th Government of the Cape of Good Hope. The ova was sent out from England, and the eggs were from brown, Loch Leven and American brook trout. In the details of his experiments he scarcely mentions the American brook trout eggs. The Loch Leven eggs amounted practically to nothing, but he was very successful with the brown trout eggs. After satisfactory work near Capetown he put up a new hatchery 600 miles from Capetown to hatch a lot of eggs sent out from England (6,000 miles by sea) for King William's Town Acclimatization Society. He had to put up with a water supply yielding but 2,308 gallons in twenty-four hours. The water at the beginning, Feb. 15, was 70° Fahr. With considerable sediment, I will give a few extracts from Mr. Latour's diary: "March 1—Water 74° Fahr. Very hot. Temperature of hatchery 85°. March 3—Water 70°. Outdoors in shade, 87°. March 4—Water 70°. Five new troughs tarred with two coats of tar, but not charred; have ropes of fungus on sides and bottoms; one charred deeply and painted two coats of black enamel has no signs of fungus. March 5—Put some fry in rearing pond. Water in pond 71°, in hatchery 70°. March 8—Very hot day. Water in troughs, 75° Fahr.; outside in shade, 92° Fahr. March 11—Two boxes of ova arrived from Guildford, Eng., this morning. Removed trays and cooled them off, with an occasional shower of tepid water, for they unpack easier and with less danger if soaking wet. Water 74° Fahr. March 18—Ova all hatched. March 23—Fry in pond feeding well. Water 66°. April 6—All fry turned out into feeding ponds. Water 70°.

"There is no difficulty in hatching trout ova successfully and in rearing the trout afterward in water of a temperature of 75° Fahr. * * * Although I have incubated trout ova successfully in a temperature of 75° Fahr., and the fry revel in the water afterward, I do not for a moment think that naturally deposited ova would ever come to anything in such a temperature; and I think this will always prevent the *Salmonidæ* from becoming common to South Africa. At the same time, I am of the opinion that the trout can be successfully introduced to any country, provided always that a permanent river is found possessing upper waters, accessible to the fish, with a winter's temperature not higher than 60° Fahr."

This would seem to explode all preconceived ideas of

trout breeders in a climate colder than is found in South Africa. But Mr. Latour has more to say on this subject, which is of more than ordinary interest. Continuing about the introduction of trout into any country with a winter water temperature not above 60°:

"Everything depends upon the operator until a few fish can be reared and kept to give acclimatized ova. It is impossible to say which height of temperature would be fatal to the fry when hatched, for they soon came on the feed in the rearing ponds, which were innocent of any shade beyond that afforded by a few planks laid across one end; and while in charge at Stellenbosch during the hot weather the two-year-old fish fed like bulldogs in water on several occasions of a temperature, a foot below the surface, of 85° Fahr."

Mr. Latour lays stress upon running a large, full stream of water with considerable force over the eggs, which every fish breeder understands, for life and air in the water (vigor, Stone calls it) are vital qualities in rearing fish: "The dribble down a straw is enough to incubate ova in our colder clime, but abroad I like to see it swirling along in the troughs, and if the most forward of the fry will climb over each other's backs it will do no harm."

This matter of temperature for fry and adult fish has had more than ordinary interest for me for some time, and I have for a year past been in correspondence with foreign fish breeders to discover if any fixed rule can be depended upon to determine the maximum temperature with force of water flow that will be safe for rainbow and brown trout. I have known rainbow trout (stock fish) to succumb at 70.5°, and the same species of fish under apparently similar conditions to live in water several degrees higher. It is believed that rainbow and brown trout can be made to thrive in a number of waters in this State if we can arrive at just the conditions demanded without sacrificing too many fish in experimenting. Mr. George A. Seagle, Superintendent of the Wytheville station of the U. S. Fish Commission in Virginia, says: "Rainbow trout will live in warmer water than brook trout; they will thrive in 'vigorous' water at 85°, especially where there is some shade; in ponds I would consider that temperature dangerous, even with shade and a fairly good current."

When I first read that statement I was somewhat surprised, because it was so different from personal experience, then fresh in mind, but Mr. Seagle has had extensive experience with the rainbow trout and I knew that he wrote only of what he had personal knowledge, so I was satisfied that our trout died from lack of vigorous water. That is, that although the water appears to be vigorous, it was not vigorous enough for the fish. Now, what I want to get at is how can we measure the vigor of water to tell the maximum degree of warm temperature the fish will thrive in, or at least what must be avoided to save the fish. In all probability we will not arrive at any hard and fast rules, for varying conditions will upset very specific calculations, with so many elements to consider; but it is more than likely that some water now considered fit only for coarse fish may be made the habitat of brown and rainbow trout. Another statement made by Mr. Latour, furnishes food for thought and possibly experiment: "Everything depends upon the operator *until a few fish can be reared and kept to give acclimatized ova.*" How far can this be carried? If brown trout can be acclimatized to water many degrees warmer than we have believed possible. Cannot the same thing be done with our native brook trout, and the range of the fish be thus extended? Of course, there will be other things to be considered in this connection, in case the trout can be inured to warmer water than that of the fountains from which it derives its specific name. Will its game qualities be destroyed or cooked? Will its table qualities suffer, etc.? A writer in a New Zealand newspaper takes the ground that brown trout above 6 or 8lbs. in weight may lose not only their flavor but their activity; but this is probably a matter of individual taste, for there are people who prefer for the table baby trout 3 or 4in. long, fried until they are hard and crisp, and can scarcely be told by taste from a piece of leather. Taking the subject in all its ramifications, however, perhaps it would require a young man to follow it to the end, through a lifetime, to arrive at positive conclusions. A. N. CHENEY.

Niagara River Bass.

LOCKPORT, N. Y., Nov. 5.—I have repeatedly told FOREST AND STREAM that I was no angler, never having put a hook and line in Niagara county's water during the thirty-five years I have resided here; but I am always interested in piscatorial matters, and when shown the photos of ninety-one small-mouth black bass, taken on Sept. 17 last, at Four Mile Point, on Niagara River below Youngstown, by Messrs. B. J. Ferguson, J. E. Emerson and J. E. Emerson, Jr, of this city, I thought the catch might interest the many angler readers of your paper. Mr. Emerson, Sr., is the efficient treasurer of the Farmers' and Mechanics' Savings Bank here, and Mr. Ferguson is a prosperous fruit dealer, and both enjoy their day off.

The ninety-one bass weighed an even 200lbs. It seems to me that that is almost too much fish for three persons to take in one day, but as I am not an angler I suppose that I cannot take an angler's interest in the excitement of capturing them. J. L. DAVISON.

Mashkinoje.

Editor Forest and Stream:

In my note on the spelling of mashkinoje and wininiche in FOREST AND STREAM for Oct. 30, I made up the words from my Indian note-book vocabulary, and Mr. Cheney's appeal for something authoritative and classical has led me to hunt the thing up this morning. I find in Bishop Baragas' "Dictionary of the Otchipwe Language," 1878 edition, Part 1, this authority: "Pike (fish) kinoje. Another kind, mâshkinoje," It seems to me that that ought to act as a mordant in fixing a common name that has been protean. I feel sure that Mgr. Lafiche had a typewriter who was in a hurry to go to a ball game if he is quoted as saying that "mash" means "deformed." "Manâdes" is the word for "deformed." "Mash" means "strong." I am strong, "nin mashkawis." It is strong, "mashkawissin." Pike, "kinoje"; strong pike, "mashkinoje." ROB. T. MORRIS.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

THE NEW YORK AQUARIUM.

BY FRED MATHER.

(Continued.)

ONE of the good things done under the new management was shutting down the light in the building, so that the visitor can see into the water better, as the light should come through the water; but the central floor tank is too dimly lighted, which might possibly be remedied by electric lights and reflectors so arranged as to light no other places The five other floor tanks have light enough, but the central one is inclosed by pillars, and covered by a dome. In all the alterations, it was forbidden to change the historic old fort on the outside.

After it ceased to be a fort, it was a theatre, and was rechristened "Castle Carden," and here Jenny Lind sang in 1850. Then, as the city had grown too far away from the Battery, it was used as a clearing house for emigrants, and a thriving colony of rats dwelt below its decaying floors until the new place for emigrants was made on Ellis Island a few years ago. Thus it happens that the aquarium is in a circular building, the worst possible form for arranging tanks, instead of a square one, or, better yet, in the form of a cross with a circle in the middle. The tanks do not complete the circle, as on the park side, the foyer, check-room and office make the chord of an arc. As no canes or umbrellas are allowed inside, to be used to tap the glass to "stir 'em up" and scratch the plate, a check-room is a necessity, as is also a Cerberus, who stands at the portal and sees that no cane or umbrella escapes being checked. A child with a gold watch and a hammer could not work as much damage in an hour as a hundred men addicted to the cane habit would make in an aquarium in the same time; for the cane and umbrella tip always carry sharp sand, and scratched glass in such a place is opaque glass.

The semicircle of wall tanks is broken in the middle by the entrance to the engine rooms, and this break makes a convenient division of the salt and fresh-water tanks, which are on the main floor and on the gallery above. These wall tanks are not near the walls of the building, as there is space back of them for the attendants to walk, clean the tanks and

HELLBENDERS.

feed the fish. Plate glass 1in. thick is used in all these tanks, the fronts, backs and sides being wood, which in most cases is covered with white tiles. The tiles are gradually being removed and the wood covered with asphalt instead, and in time this becomes beautifully covered with vegetation of many kinds, and adds not only to the appearance of the tanks, but also to the health of their inmates.

There are two pumps which, at a very slow movement, easily throw 400 gallons each minute into the tanks. The engines and pumps are in duplicate in case of accident. There are two salt-water wells under the building, to which 10in. suction pipes run, but are so arranged that each can pump from the same well, if necessary. Of salt water there are 130,000 gallons pumped twice each day and of fresh water 26,000 gallons, making nearly a complete change of water in the tanks twice each day The big central floor tank contains 54,000 gallons; it is 38ft. in diameter and 6ft. deep, being intended for white whales or other large creatures. The six other floor tanks are 28×15ft., by 3ft. deep. On the main floor there are thirty-six wall tanks in the semicircle, and fifty-nine more in the gallery, the latter being smaller. These are 6 and 8ft. long by 4ft. wide and deep. The weight of water in the gallery tanks is 1,800lbs. on one side and 3,000 on the other, while in the wall tanks on the main floor it is 2½ and 4 tons. The daily consumption of coal is from 2½ to 3 tons, the larger amount being used in cold weather to warm the building. There are twenty-one men employed, of whom nine are in the engine room, three on at a time, for the pumping must go on night and day.

The Aquarium is closed to the general public on Mondays and Tuesdays, when the water in tank after tank is drawn down as low as the comfort of the occupants will permit, and the glass is cleaned on the inside, and such other work done as may be necessary, and which could not well go on when visitors are present, because the fish are easily alarmed when they find themselves in shallow water, and in rushing about would be bruised on the rocks. On other days visitors are admitted free of charge from 9 A M to 4 P. M., and the place is usually thronged.

If the Aquarium is ever put in charge of a Board of Trustees, as was suggested in my last article, it would be a good plan to have one day on which a charge for admission should be made. This plan works well at the American Museum of Natural History and at the Museum of Art, both in Central Park; and it not only brings in a revenue, but induces people to go there who have a horror of crowds, and would cheerfully pay the price of admission. The old Aquarium at Thirty-fifth street and Broadway received over $100,000 in admission fees the first year of its existence. I gave the figures last week from my notes, but I have no notes of the receipts in the succeeding years. The treasurer, Mr. Edgar, gave them to me in confidence; but as every one connected with the Aquarium is dead, except the superintendent, Prof. Butler, and myself, there can be no harm done in giving the figures. Taking the year as 313 week days, it will be seen that the receipts at the door were over $300 per day. The admission for adults was half a dollar, but the amount received does not indicate the attendance, for Mr. Coup was liberal with "complimentaries." Every clergyman whose address he could get received several weekly; every Saturday some school children with their teachers were invited, and we employees always had a few cards for friends; but this was the shrewd policy of a keen manager of a place of amusement The place must never be empty and appear to be unfrequented. Consequently he always showed a good front to the public, for while one may dislike a crowd, he does not like the echo of his solitary footstep in a public place.

I am freely giving expression to personal views on the management of the present New York Aquarium, because I believe that great improvements can be made in it if it is taken from the control of an ever-changing Board of Commissioners of Public Parks, appointed by a Mayor who is in office for four years, and placed under a more permanent board of trustees, who may be selected by reason of their interest in, and knowledge of, matters directly or indirectly connected with fishes, and who have some idea of the difficulties in the way of managing an aquarium, and do not expect miracles of a superintendent, as some newspaper writers seem to do. To superintend an aquarium is a trying position and requires an education in that particular line. A man who is only a fishculturist knows how to keep the few fish he has transported in cans alive, but that does not fit him to care for the food and temperature of migratory and tropical fishes. The ichthyologist and the closet naturalist, who can tell you every variation in the anatomy of fishes, is the surest man to blunder when he enters the field of aquaria, and if I had to choose between these two, I would take the first, but would want to put some old net fisherman with him to tell him some things he might not know. The ideal man for a superintendent is one who is both fishculturist, naturalist and old fisherman, with added experience in aquaria, and such a man is Dr. Bean, and you may count over the fingers of one hand without finding one who possesses all these qualifications, even if you've lost a few fingers in a saw mill.

These lines are written exactly as I think. These is no other reason for writing them than to see the Aquarium put in its best shape to be of use in educating the public to a taste for knowledge of our fishes as they are in life, and which cannot be learned from pictures and descriptions in books, nor from dead fishes on the market slabs. No dead fish, nor picture and description of it, could give a person so clear an idea of that singular creation which we call a "trunk fish," where the triangular body, broadest on the bottom and sharp on top, like a beech nut or a grain of buckwheat, is encased in an inflexible shell and can only move its mouth and its fins. One view of it in life, laboriously working its dorsal, anal and caudal fins, through what seems like port-holes in its armor, is worth a dozen pages in a text-book.

The popularity of zoölogical gardens and aquaria prove how readily the public will absorb knowledge with amusement. They have no desire to be instructed and go to these places to be amused, to pass an idle hour, and they depart with a little knowledge which has been absorbed against their wills. There is where the "zoös" and the aquariums pay, they educate the unthinking public, even if they only look at the big fishes and the seals.

To illustrate this point, and to show how the average man exhibits contempt for things with which he is familiar, and takes interest in new and strange forms for a moment only, I will tell a story. While trying to get up an aquarium for the Centennial Exposition in Philadelphia in 1876, the Hon. James Geddes, of New York, called my attention to three men who had come from Long Island and were looking over the salt water collection

"Look-a-here, John," said one, "that old turtle is bigger 'n your'n; it says he weighs 648lbs., an' he looks it."

"Oh, yes, mine on'y weighed a little over 200, but they get 'em bigger down in the Gulf; but see h re! If they hain't got a lot of ole horsefeet in that tank, and what anybody wants to see them for is more'n I know."

Geddes remarked: "Your Long Island friends don't care for that curious animal which you have labeled 'Simulus,' whatever that may mean; but let's crawl up behind them and listen."

When they reached the fresh water tanks they went into all sorts of wonder over the hellbenders and the proteus. "What 'n thunder 's that?" asked John. "That's the curiousest thing I've seed in the whole show. There's one feller lyin' quiet an' the other is wavin' a lot of red things to fan himself with."

They passed on, and then came a party from western Pennsylvania. Geddes nudged me, and I listened. The hellbenders had no interest whatever for them; they were familiar objects. One said: "Look at that alligator, the dirty thing; who'd a thought o' bringin' that thing to the Centennial? When we boys ketched one in the Allegany River we used ter cut the line an' let him have hook, sinker an' all, an' here's one o' the things stuck up for folks to look at."

"That's a different opinion from the Long Islanders," said Geddes, "and now wait till they run up against the horseshoe crab."

A gigantic "horsefoot," measuring about a foot across the carapace, was trying to climb up the glass front, exposing its under surface, which is so like the hoof from which it gets its popular name as to be remarked at first sight, when the Pennsylvanians saw it. "Gosh all hemlock! Jake, there's somethin' worth comin' all the way from Pit-Hole City to see. Look at its legs; there's more'n forty on 'em, an' all a goin' to wunst."

"An' it ain't got no head," said another, "on'y just a holler shell an' a lot o' legs stuck into it. There it goes over on its back, an' I'll be dingswizzled if it ain't got a tail like a three-cornered file. Say, le's go get the wimmen folks to come an' see these things."

As they moved off Mr. Geddes remarked: "That's the way it goes. The average man pays no attention to the every-day life about him, and those Pennsylvanians will study the horsefeet and know more about them before they go home than that Long Island party does which has known them from boyhood."

"Yes," said I, "and the Long Islanders will carry home a vivid impression of the large salamander which we call a hellbender, and they miscall an 'alligator.' That is where an aquarium comes in as an educational force. A man might write about these animals, figure them in magazines or in school-books for a lifetime, and he would not make half the impression on any mind that a five-minute interview with the living animal in an aquarium would."

"Do you think that fish life can be studied better in an aquarium than in the lakes, rivers or the sea?"

"Yes. In the river a man might watch for a year and not see a hellbender in the position that one is, with its back almost out of water and its legs drooping, as if it were dead. That appears to be its way of resting and possibly is what gave it its popular name, but those men who caught the benders on hooks in their boyhood's fishing trips would never see that act. If they did they would stone the animal, for they have about as great a dread of it as the average woman has of a mouse, and would never give a moment to the study of its habits. In an aquarium they will see more of it than they ever did in all their lives."

"How did it ever get the name of hellbender?"

"The origin of the name is not known to me. Jordan and other authorities give that as the popular name, and as the only choice is between that and 'alligator,' which is the local name in western Pennsylvania, we choose the former, for the animal with its slimy skin is certainly not an alligator, but the name must have come from some aquarium naturalist who had observed its bending habit, and then, after seeing that our friend was not a beauty, added a syllable to denote its infernal origin, but, as it is an animal of just as orderly and respectable habits as any other dweller in the rivers, it seems unjust to call it hard names."

"What good is it?"

"There you go, on that old question," said I. "What good is anything? This animal in its small way fills the whole round of animal life. It feeds, procreates and dies. It may be a check on the increase of other forms of life; of that I cannot say; but the big lake trout have been known to eat a hellbender, and man eats the trout. I don't believe that this world was made for man any more than it was for a hellbender; each lives as best he can and enjoys life as seems best unto him."

This did not accord with my friend's view of life, and he proposed that we should sit down and discuss this thing. Said he: "Do you seriously tell me that you believe that this world was created as much for a rattlesnake as it was for us?"

"Just as much, Jim. In our animal nature we are on an equality with the rattlesnake, or with the elephant. They are animals which differ greatly in structure, but vastly more in brain. Neither could exterminate the other, but man can kill off both when he becomes numerous enough. Man survives because he is the fittest"

"See there," said Geddes, "that big hermit crab pulled another one out of its shell and popped into it. Pardon me for interrupting your lecture."

"Don't apologize; you only illustrated it. The strongest hermit crab took the shell; the longest pole knocks the persimmons, which proves that the longest pole is the fittest"

That is the kind of talk that an aquarium suggests. It is a great object lesson, which causes men to observe fishes and aquatic animals, and to learn that they have their hopes, fears, loves, jealousies, and all the other passions, including selfishness, that man has, facts which fishing for them would never reveal. An aquarium is a greater educator in this line than a zoölogical garden, for there each species is isolated, and does not show its nature, as a tank full of pugnacious crabs displays the character of its vigilant and pugilistic tenants. No museum can teach us as much as an aquarium can, for there we see not only the different forms of aquatic life, but they are much nearer to their natural conditions than are caged animals; they seem to be unconscious of the presence of spectators, because the latter are not in as strong a light as are the fishes.

The city did a grand thing when it converted the old building into an aquarium after it was no longer used as a place for receiving emigrants, and it came about in this way: One day Mr. E G. Blackford, then president of the State Fish Commission, met Mr. Meyers, the city Comptroller, and asked: "What are you going to do with old Castle Garden, now that you have another place for emigrants, and there's nothing in the old place except rats?"

"We haven't thought about it," said Mr. Meyers. "It's a building of too great historical interest to be torn down, but just what use can be made of it I don't know. Can you suggest something?"

"Yes," said Mr. Blackford; "the best thing you can put it to is to make a public aquarium in it. Give the people a chance to see not only different kinds of fish, but also how they use different means of locomotion; how they breathe, eat, and how they live in the rivers and in the seas, and yet differ as much, or more, in their ways as the land animals do."

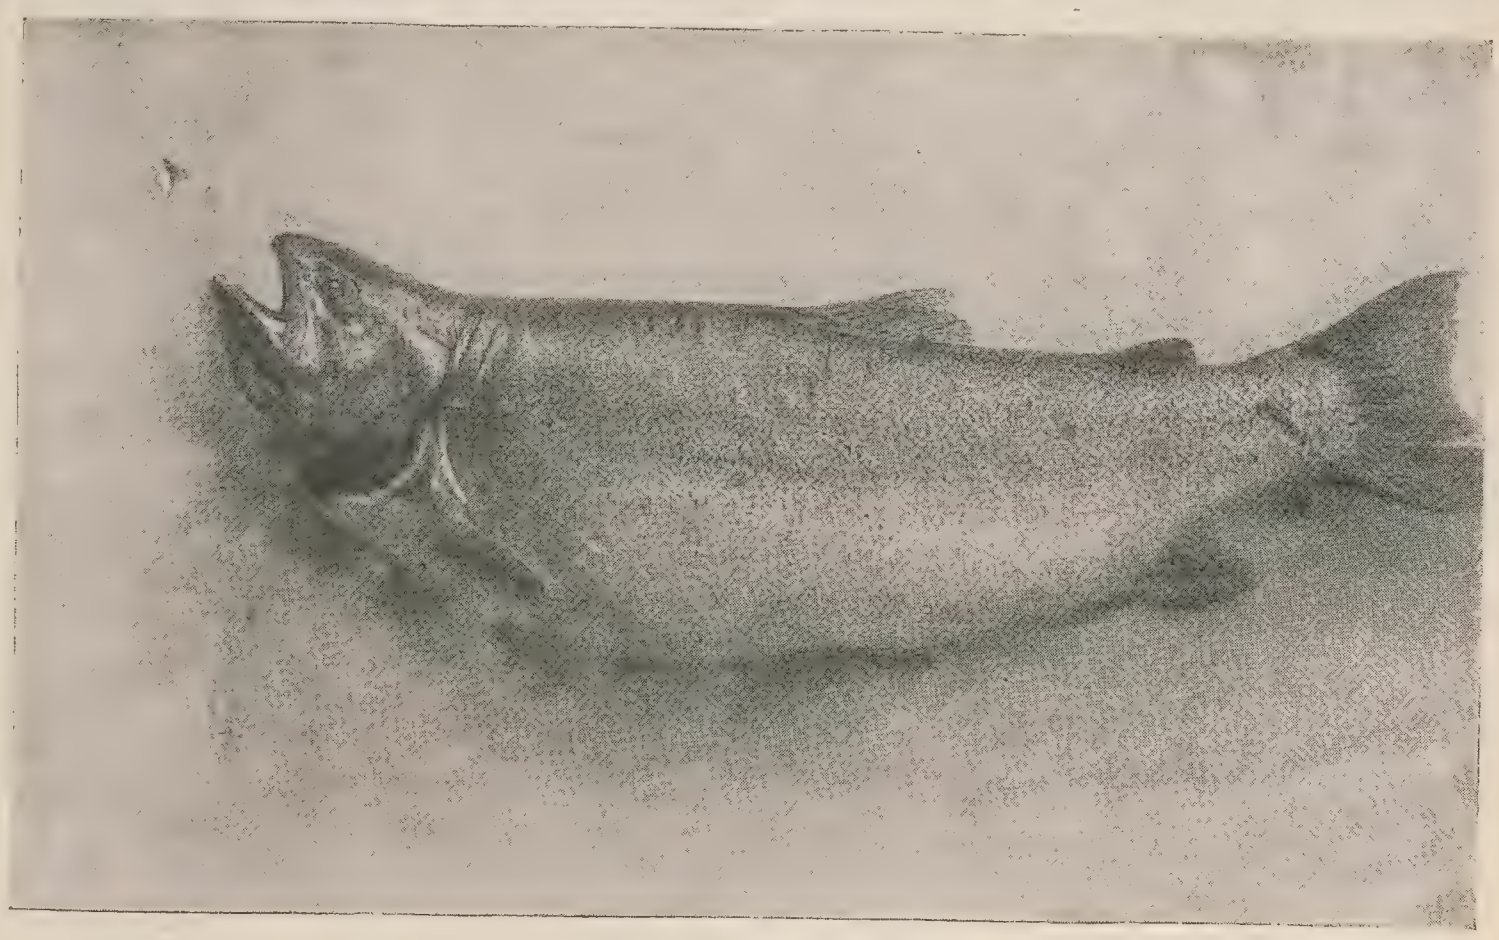
Mr. Meyers answered: "That's a good suggestion, Mr. Blackford; but we must bring the matter before the Park Board in some shape, so that they will approve the plan and get the State Legislature to sanction it and make an appropriation for the purpose. If you will make a ground plan of some sort and send it to me, it will serve to start the movement for an aquarium."

Thus it began in the brain of one man, spread to the Park Board and then to the State Legislature. But unfortunately Mr. Blackford, in his busy life as merchant, banker and other business, was not consulted about the beginning of the work, as he should have been, and in a former article I have shown how the Aquarium was badly managed by an incompetent superintendent, who was only dismissed after he had completed the work so far that it needed to be built all over again. The present superintendent has done enough of this to put the Aquarium in running order. Two weeks ago the gallery tanks were opened to the public, and all the tanks are watertight.

Lest it be thought that I am too severe on the first superintendent, and designer, for he seems to have had his own way in all his plans, let this instance suffice: A 10in. pipe supplied the tanks on one side of the building, and for an outflow he had two 5in. pipes. Any schoolboy would have said that if you put two 5in. circles together they will cover about half of a 10in. circle, and all through the Aquarium the waste pipes were too small. If they were equal in size to the supply pipe, the fact that the water from the latter came in under pressure with an increased flow was overlooked. I hate to scold, but if ever there was a gross case of mismanagement in any public work greater than this I don't know of it.

So much space has been taken up by the history of the Aquarium and other matters, that the interesting creatures in the tanks have been neglected. Next week they will have an inning.

[TO BE CONTINUED.]



The FOREST AND STREAM is put to press each week on Tuesd Correspondence intended for publication should reach us at atest by Monday, and as much earlier as practiable.

THE FISH COMMISSION AND COMMERCIAL FISHERMEN.

BY W. E. MEEHAN.

Read before the Pennsylvania Fisheries Convention, Harrisburg, Pa., Sept. 15.

THE interests of the Fish Commission are those of the commercial fishermen. Between the two the closest and most cordial relations should exist, and remain unbroken. Unhappily, however, this desirable state of affairs does not prevail throughout the entire State. Among many commercial fishermen there is an unreasonable disposition to look upon the Fish Commission as their natural enemy, instead of, as is the fact, their best and strongest friend. The extent and intensity of this feeling varies according to locality. In some places, as for instances the Delaware Valley and Lake Erie, the feeling of animosity is almost entirely absent, or at most mildly antagonistic among isolated individuals, who, as a rule, are natural and persistent lawbreakers and poachers, and the majority of the commercial fishermen are staunch supporters of the Commission. In others, notably the Susquehanna Basin, the bitter feeling is still so intense as sometimes to lead to the shooting at and wounding the fish wardens while in the performance of their duties. It is idle to deny either the extent or the strength of this feeling of antagonism, for the evidences are abundant and may even be found in the Legislature The one comfort and encouragement which the Fish Commission may take to itself is that a few years ago the fishermen of the Delaware Valley, and to some extent of Lake Erie, who are now its staunch supporters, were as bitter as many of those of the Susquehanna Basin to day, and it may hope in time to prove their devotion to the latter's interests as effectually.

A TROUT OF THE GUNNISON.

Caught by F. C. Brown, of Fox Lake, Wis., in the Gunnison River, Colo., Aug. 18, 1897. Weight, 12lbs.

The element which fosters antagonism to the Fish Commission is composed chiefly of those who wish to fish how, when and where they please, regardless of the rights of others or the maintenance of the food fish supply. They find sympathizers among those who are inclined to look upon fish as *feræ naturæ*, and therefore the lawful prey of anyone and at any time. They also have at least passsive supporters among those who ignorantly suppose that the Commission labors chiefly in the interests of the sportsman angler. The contention that the interests of the commercial fishermen are subordinated to those of the sportsman anglers is the greatest difficulty which the Commission has to contend with in coming to a friendly understanding with the former, although it is the easiest to disprove. It seems strange, but it is often in vain that it is pointed out that of 100,000,000 to 160,000,000 fish distributed every year, less than 4,000 000 are what are called game fish, while the remainder are practically commercial fish only, namely, shad, white fish and wall-eyed pike or Susquehana salmon. The answer almost invariably is, "The Commission won't allow us to use fish-baskets, fyke nets, eel-weirs or outlines, although we only wish to catch eels." This is followed usually by the declaration that very few game fish are taken in fish-baskets or eel-weirs. A curious phase of this declaration is, that it is persistently reiterated in the face of the presentation of overwhelming evidence to the contrary. The experience of the Commission, and of all who have any knowledge of such devices, flatly contradicts the claim that fish-baskets or eel-weirs capture or hold few game fish; but while I speak entirely for myself, and without the authority of the Pennsylania Fish Commission, I say emphatically, that I believe the Fish Commission would withdraw all opposition to the use of fish baskets and eel-weirs in such streams as the Susquehanna, if only the catching of game fish and eels were concerned. My confidence in this is founded on the knowledge that the Fish Commission regards the commercial food fish industry as paramount to the sportsman anglers' interests, great as they are. This is abundantly shown by the vast preponderance of commercial fish fry distributed every year in comparison with those of trout, black bass and other game fish, by the capacity of the hatching stations devoted to the rearing of the former and by the amount of money expended therefor. But the financial returns of the commercial fishermen, where the laws can be enforced, should be the most convincing proof that the Fish Commission is working in their interests. The increase in the value of the commercial fisheries of the State, have been more than $1,000,000 a year for the last seven years. It may confidently be said that if the Susquehanna Basin fishermen would give the Fish Commission hearty coöperation, the increase five years hence would be nearly $1,750,000.

The vital objection to the use of fish baskets and eel weirs is not so much that they catch and hold game fish but that they destroy the most highly prized food fish known as the shad; that in this manner, not the sporting interests but the commercial interests suffer. There can be no successful contention against the proof which can be advanced concerning the destructiveness of baskets with respect to shad. The annual half million dollar catches in the Delaware, where there are no such devices, and the few thousand dollar catches in the Susquehanna, where destructive contrivances exist, would convince anyone who desired the truth.

There is no doubt that the fishermen along the Susquehanna and its tributaries in Pennsylvania have a real grievance in the fact that Maryland permits her citizens to fish the river within her borders how and when they will, but that is not the fault of the Pennsylvania Fish Commission. This body has been fighting for years to have a stop put to the use of over destructive devices in that State and will continue until that desired end is gained.

It may be also claimed by some that the Fish Commission is too sweeping in its condemnation of many devices for catching fish. Among the contrivances employed are some less destructive than others, and perhaps if the commercial fishermen on the Susquehanna and elsewhere were to send or appoint a strong and reasonable delegation to discuss the matter with the Fish Commission some understanding could be arrived at, which would be satisfactory to all around. This is a matter to which the earnest consideration of the Governor, of the Fish Commission and the commercial fishermen is earnestly invited. It is time that the strained relations which undoubtedly exist between the Commission and the commercial fishermen be replaced by good feeling and hearty, unanimous coöperation for the increase of the food fishes of the State, to the profit alike of the people, the fishermen and the Commonwealth.

THE MASSACHUSETTS ASSOCIATION.

BOSTON, Nov. 13.—*Editor Forest and Stream:* The first meeting of the Massachusetts Fish and Game Protective Association since the long vacation was held Thursday evening, Nov. 11, at the Copley Square Hotel, and notwithstanding many of the members are still in the woods after various kinds of game, there was a good attendance and a very profitable and enjoyable meeting. Among those present were ex-presidents B. C. Clark and E. A. Samuels, Benj F. Stevens, J. W. Wildman, the venerable Judge Charles Levi Woodbury, Dr. Heber Bishop, Laring Crocker, George O. Sears, E E Small, Warren Hapgood, W. B. Hastings, Charles G. Gibson, Joseph W. Smith, Thomas Dickson, Dr. Wm. D Ferguson, Silas Lawrence, Dr. John T. Stetson, John F. Dennen, Charles A. Read, and Messrs. Arthur W. Robinson, Daniel C. Pierce, Henry W. Sanborn, Albert Bernard, Dr. C. M. McConnell and William A. McLeod, of the Megantic Club. Col. H. T. Rockwell, the president, was in the chair, and secretary Kimball was at his usual place. Considerable routine business was disposed of; several applications for membership were received and Messrs. George W. Wiggin, J. N Roberts, J. S. Duncklee, T H. Hall, A. C Risteen, C. Z Bassett and W. C. Prescott were appointed a committee to nominate a list of officers for the ensuing year. A vote was passed requesting the committee on legislative matters to consider what, if any, changes are desirable in the fish and game laws in order to further the public interest, the committee to report their findings to the board of government prior to the next annual meeting.

Mr. E E. Small was then introduced as the principal speaker of the evening, his subject being the mackerel, and how better to protect them In the beginning he said the Association was not an enemy of the honest fisherman—its members were fishermen themselves, and their only concern was for the greatest good of the greatest number. He then went on to say that the mackerel were lost sight of about Cape Hatteras in the fall when they were fat and good; they re-appear in the spring about the same place when they are so poor and emaciated as to be unfit for food. If left alone a large part of them would without doubt reach the New England coast to spawn, but at the start they are met by the destructive purse seine of the Southern fishermen and ruthlessly slaughtered. It takes from 125 to 175 of these fish to make a marketable barrel, and it is estimated by competent authority that there were 40,000 000 eggs in every barrel of these fish. Years ago, when there was a law protecting the fish during the spawning season, there was a notable increase in the supply, but since the law was repealed the catch has largely decreased. But in his opinion it would be useless to enact laws to protect these fish in the spawning season unless protection was extended to them until they reached mature age. There were three ways to remedy the evil:

First—To reënact the law of 1887, which provides that

any vessel taking fish before the 1st of June shall not only forfeit the fish, but its license as well; and such a law should be made perpetual, instead of remaining in force for a period of five years, as before.

Second—There should be a law prohibiting the taking of fish under 10in. in length.

The third method did not require legislation, but simply an application of reason and common sense, and that was to educate public sentiment so that people will not purchase mackerel, shad or haddock during the spawning season. There was the most eminent authority for the statement that the sea will never be depleted so long as fish are protected during the spawning season and until they reach maturity.

Judge Woodbury followed with a most entertaining talk upon the same and kindred subjects, agreeing with Mr. Small's conclusions as to the proper way to protect the mackerel.

Mr. B. C. Clark also spoke on the subject in a general way, expressing the opinion that, while some legislation should undoubtedly be devised to stop the rapidly decreasing supply of edible fish, the fishermen themselves, many of whom had grown old in the business and could hardly do anything else for a livelihood, should be carefully considered. On his motion, the subject was referred to the board of government for further consideration. WM. B SMART.

A St. Clair Flats Bass.

CINCINNATI, O., Nov. 8.—Mr. H. C. Holabird, of this city, intends to present to the Courier Club a mounted small-mouth black bass of large size, which weighed some hours after capture a fraction under 7lbs.

It was caught on the St. Clair Flats. It took just twenty-five minutes to land him, and, like all of his noble race, he battled with the vigor of a great warrior. Twice was he netted and twice did he leap from the latticed twine, and time and again the skillful angler was led to believe, through the subtlety of his scaly adversary, that he had escaped, but it was only a "doubling," a retracing of his dashing runs. The third time, when in the landing net, his strength was too far gone to again leap out, and then it was that the victor's heart beat with tumultuous joy.

The prize measured 22½in. from head to tail, with a girth of 16in. This capture wound up the sport for the day, for aside from this there was a dozen more of the scaly warriors of the rocky reef reposing on the bottom of the boat.

James L. Prince, a former Cincinnatian, who was angling nearby, when informed of this capture, immediately took his naphtha launch to the scene located, and in a short time landed five black bass that weighed 22lbs.

If consistent, will you kindly give me the following information: What is the largest small-mouth black bass you have any record of? Are there any prizes offered for the largest bass caught for season 1897? G. C. C.

[The FOREST AND STREAM's Big Fish Record lists a 10lb. small-mouth black bass, taken in Round Lake, N. Y. We know of no prize offered for a fish caught in 1897.]

The Kennel.

FIXTURES.

BENCH SHOWS.

Nov. 23.—Metropolitan Kennel Club's second annual show, Brooklyn, N. Y.
Nov. 30.—Washington City Kennel Club's show, Washington, D. C.
Dec. 8.—Rhode Island Poultry Association's show, Pawtuxet, R. I.

1898.

Feb. 15.—New England Kennel Club's fourteenth annual show Boston.
Feb. 21.—Westminster Kennel Club's twenty-second annual show New York.

FIELD TRIALS.

Nov. 22.—U. S F. T. Club's autumn trials, Newton, N. C.
Nov. 29.—Dixie Red Fox Club's third annual meet. Waverly, Miss.
Dec. 6.—Texas Fox-Hunters' Association's meet, Hinson Springs, Tex.
Dec. 8.—Hoosier Beagle Club trials, Danville Ind.

1898.

Jan. 10.—U. S. F. T Club's winter trials, West Point, Miss.
Jan. 17.—Continental F. T. Club's trials, New Albany, Miss.
Jan. 24.—Pacific Coast Field Trial Club's trials, Bakersfield, Cal.
Jan. 24.—Union Field Trials Club's trials, Tupelo, Miss
Jan. 31.—Champion Field Trial Association's Champion Stake, Tupelo, Miss.
Feb. 7.—Alabama Field Trial Club's second annual trials, Madison, Ala.

E. F. T. CLUB'S TRIALS.

The Members' Stake.

THIS stake was a gratifying success. The interest in it has been growing most encouragingly in recent years, and it now is assuming the proportions and importance which it held a decade ago when the club members attended in full force, and the competition of this stake was not overshadowed by the open and more professional events. Gradually, through the encroachment of the open stakes, the Members' Stake declined till it became a mere perfunctory, something which was to be hurriedly cleared out of the way before the open events began. If a few members had not stood loyally by it through years of neglect, it would long since have ceased to exist. Instead of being allowed to decline, it should be the most important stake of the meeting. Quite as much energy and careful consideration should be given to it as to any other stake. It is the stake specially devoted to sport for its own sake, as compared with the competition in the open stakes, which is professional.

The success of this stake is most pleasingly significant of a trend toward true sport in field trials. It is a return to better principles of sport after a somewhat disturbed career through the reign of professionalism during recent years. Professionalism, as an exponent of true sport with dog and gun, has had its rise, progress and decline. Public trials will be held in future, but the lines between business and pleasure will be more sharply drawn. The club member will claim a recognition justly his due in the realm of sport instead of the sole privilege of paying his dues or his assessments, as too long heretofore was the practice. It is either this or no trials.

For the revived interest in this stake much credit is due the members who have evoked it. It was no small task to dispel the apathy of years and the discouragement resulting from neglect. There are better and brighter days ahead for field trials.

The competition took place on the club's preserve at Newton, N. C., on Nov. 13. An excellent class of dogs competed. While there was none of the extremely wide ranging, which is more or less a feature of the open events, there was, nevertheless, an exhibition of high-class competition on the basis of field work. The dogs knew how to work to the gun and were free from wildness and lawlessness in their methods, although a few were forgetful in a matter of detail, that of stanchness, as is in place duly related.

The judging was well done by Messrs. S. C. Bradley, the club's secretary, and Irving Hoagland, New Brunswick, N. J., who has attended field trials in the past and proved to be an apt student. He fell into the methodical ways of the veteran at once. As to Mr. Bradley as a judge, no comment is necessary, since he is conceded to have no superior in America.

The grounds were not favorable for even competition. They vary so radically in many places in respect to open and cover, and there are so many more birds in some sections than in others that judges less skillful would have been hopelessly at sea in making conclusions.

One day, however, was insufficient for the proper running of the stake. It needed hurrying at the finish in order to end it within that time. It should have two days devoted to it in future, if need be. Most of the members arrive in the forenoon of the day before the running, so that a whole half day is available even as the circumstances are at present. It should have every consideration necessary.

The prizes were valuable intrinsically, but were selected more with a view to their beauty and appropriateness as trophies—valuable in themselves, pleasing to the eye, and commemorative of a most wholesome event. First prize was a large solid silver cup; second prize was a small solid silver cup; both these cups were donated by the club. A beautiful silver flask, donated by the Eldred kennels, was third prize. Dr. J. J. Davis donated a fine traveling clock and Mr. Frank H. Fleer donated an elegant silver flask, which were allotted to the dogs awarded vhc. and hc., respectively.

As there were so many good dogs in the stake, the club thought it proper to give them meritorious competitive notice by the commendations mentioned.

The stake was open to members. Ten dollars entrance. All winners of open field trials barred.

There were fourteen starters, run as follows:

Pierre Lorillard, Jr.'s, setter bitch Ruth (Antonio—Texas Daisy), with Dr. J. Spencer Brown's pointer dog Montclair (Rap—Lady Grace).

Pierre Lorillard, Jr.'s, setter dog Roland (Eugene T.—Lou), with W. B. Meares's setter dog Rush Mark (Gath's Mark—Countess Rush).

Eldred Kennels' setter bitch Antonia (Antonio—Miss Nellie Y.), with Dr. J. Spencer Brown's setter bitch Molly B. (Roderigo—Lilly B.).

Edm. H. Osthaus's pointer bitch Ripsey (Rip Rap—Dolly D.), with Frank H. Fleer's pointer dog Gamester (Duke of Hessen—Woolton Game).

Edm. H. Osthaus's pointer dog Speedaway (King of Kent—Spinaway IV.), with Edw. Dexter's setter bitch Shadow (Count Gladstone IV.—Daisy Croft).

Eldred Kennels' setter bitch Vivian (Gath's Mark—Gossip) with W. B. Meares's setter dog Hope (Joyful—Nora).

W. B. Meares's pointer bitch Zelda (Tick Boy—Abdallah Romp) with Pierre Lorillard, Jr.'s setter dog Fred (Eugene T.—Patsey).

The winners are: first, Ripsey; second, Antonia; third, Shadow; v.h.c., Roland; h.c., Molly B.

Ripsey is a handsome pointer and a sweet worker. She ranges diligently and intelligently, finds and points skillfully, and is most admirably honest in working to the gun. Her point work is sharp and accurate, and she backs with strict honesty; in short, she was trustworthy under all circumstances. Her range is wide, though not of the extreme width of the widest rangers; it is the range of the practical shooting dog, that which is possible for constant use, instead of the flushy wide range which is for the display of the moment. She marred her good work by occasionaly putting her nose to the ground in honor of possible rabbit trails; but the fault was trifling when compared with so much excellence.

Antonia, second, made a very close competition for first, and had a well deserved second. Her heat with Ripsey was nip and tuck, but on previous work she had not the good showing of the pointer. Her point work was sharp, clean and skillful, and in her way of going she was more dashing than the pointer and did not dwell on rabbit trails for a moment. She did not cover so much ground as Ripsey.

Shadow, third, also ran a very good race and showed much merit, but her heats were not uniform in their quality and quantity of work, nor was there a well defined class of it.

Roland, vhc., ran a poor race in every respect save the one quality of pointing well, but he was inexcusably lacking in stanchness, flushing willfully and inexcusably, and ranging close most of the time. There were several dogs which made a better competition.

Mollie B., hc., ran a pretty race and showed a great deal of merit, but the class of her work did not rate up with that of the winners.

As to the handling, it was far above the average of professional handling, taking the legitimate handling as a standard. There was very little whistling, and none of the bawling of commands so offensive to the ear and so distinctly unskillful as a part of handling. There was none of the marking of birds and helping of dogs to make points of which they were unconscious, and none of the scrambling and hustling which are sometimes practiced in the open events and which are so harmful to them.

The weather was comfortably cool in the morning. The sun shone clear and bright. Patches of white frost were visible in the small shaded valleys as the start was made. The vegetation was a mixture of greenness and sereness, still rank, and but little affected by the fall storms. The birds still retained their summer habits, and were difficult to work, As the day advanced the temperature grew warmer, till toward noon it was too warm for the best working conditions.

First Round.

RUTH AND MONTCLAIR were cast off at 8:51. Ruth pointed a bevy in sedge, and when Lorillard shot, Montclair was a bit unsteady. On the scattered birds in woods, some opportunities were lost. Montclair made two points on singles, Ruth a flush. The pointer had the better range, though exercising little judgment in beating out his ground. Ruth ranged close, but went with more spirit after birds were found. Up at 9:35.

ROLAND AND RUSH MARK ran 48 minutes, beginning at 9:41. Roland pointed a bevy wildly in open weeds, then wilfully broke in and flushed it. Mark was the wider and better ranger, and was going with good judgment and purpose. Roland ranged close, and seemed to be stale or lacking in interest. Mark had no opportunity on birds.

ANTONIA AND MOLLIE B. were cast off at 10:34, and ran 51 minutes. Antonia was lost, and when found was pointing a bevy well hidden by the banks of a creek. On the scattered birds nothing decisive was done. Mollie went the wider at first, but Antonia maintained her range and speed throughout. Both were working diligently at the finish. The weather was then warm and calm.

RIPSEY AND GAMESTER were soon started and ran till lunch time, about 12:25. Ripsey found and pointed a bevy nicely, and was steady to shot. In woods, Ripsey on dry leaves flushed a bevy, or it flushed after she pointed it. The trees obstructed a clear view of the matter. The birds were followed and she pointed them nicely. Gamester flushed a single, then pointed on the foot-scent. Next he pointed two birds well and was stanchly backed; Gamester broke shot. Next each made a point and back. Ripsey was the better in every respect.

SPEEDAWAY AND SHADOW started at 1:03. Both were very close on a bevy when it flushed. Those who saw it best stated that Shadow pointed, then the pointer went by her, then she moved and the birds flushed. Up at 1:56. Shadow was the speedier and better ranger.

VIVIAN AND HOPE began at 2:03. Vivian flushed a bevy and Hope next scored a similar error, his being excusable, as the ground was bare. Vivian was feeling the air and half pointing, when a bevy across the hollow a few yards away flushed wild. Hope pointed a single well. Each made a flush. Both made game. Hope roaded nicely after running birds, showing knowledge and skill. He pointed and the bird was flushed after he moved on. Vivian also pointed near it. Up at 2:49. Both dogs showed good speed and beat out the ground well, Hope using the better judgment and showing better ability in locating. Much of the heat was run on unpromising ground.

ZELDA AND FRED were cast off at 2:52. Zelda is a puppy and was puppyish in her work. Fred pointed a bevy in corn; he moved on and flushed excusably. Zelda pointed scattered birds and broke shot. Fred pointed a bevy in weeds. Zelda backed. Up at 3:37. Fred ranged close.

Second Round.

RIPSEY AND ANTONIA made the real even struggle of the trial. It was practically an even heat, though the competition in the first round was in favor of Ripsey. They began at 3:49. Each made a point on open ground and each backed nicely. Nothing found. Ripsey pointed a bevy on a side hill in sedge and at the same time Antonia, about 50yds. to the rear, pointed another bevy. On the scattered birds in woods, Ripsey pointed single and was nicely backed, Next both pointed scattered birds. Antonia pointed twice and was nicely backed by Ripsey. Next, the latter flushed a single, then stopped to a point on some remaining birds. Up at 4:23. Antonia had a more dashing way of going, while Ripsey went a bit the wider. Their range was about alike. It was a heat marked by work of clean finish, and by good, quiet handling. It was not only good in itself, but pleasing to look at.

RUSH MARK AND MOLLIE B. were cast off at 4:24. In dense briers Mollie pointed running birds. She next dropped to a point on a bevy. Next she flushed a single. They ranged well and at good speed. There was a lack of positive work in the heat. Up at 4:46.

HOPE AND SHADOW started at 4:54. Shadow pointed a bevy in corn, and was well backed by Hope. Sent on, Shadow pointed scattered birds at the edge of woods. Hope did not back Shadow in her last point. He flushed a single. Up at 5:08. Shadow ran the better heat.

ROLAND AND VIVIAN started at 5:11. Roland pointed a bevy, then broke in and flushed. He pointed twice on singles. Vivian pointed a bevy and a single.

A number of good opportunities were lost. This heat ended the stake.

Mr. J. E. Orr, Brooklyn, N. Y., a member of the E. F. T. C., who has attended the club's trials regularly a number of years in succession from a love of sport, but with little love of competition as a business, caught the spirit of the new order of things, and declared that he would be the owner of a dog and a competitor in the Members' Stake of next year. No doubt the infection of true sport will spread, and others will go and do likewise.

Messrs. F. R. Hitchcock and A. Merriman arrived at Newton on the 14th inst. Mr. Julian Corbett, a relative of Mr. C. E. Buckle, arrived with the latter on Saturday.

Mr. George W. Richards, quiet and unassuming, but one of the hard workers of the profession, will compete here in the trials. In the near future he goes to San Francisco to take charge of the Verona Kennels, the finest on the Western coast and probably the finest in America. They have secured a first-class man, whether he is considered as a man or a trainer.

Now that the Union Field Trials Club expired because it didn't suit, it is in order now to organize a new club which will suit. Clubs whose only vitality and organization are in their title seldom live long.

A much lamented absence is that of Mr. Ed. Dexter, or Uncle Ned, as he is endearingly termed by all field trial goers. However, he will attend the winter trials in Mississippi, so that he will not be entirely lost to his host of field trial friends. Could he but hear the numerous regrets at his absence and the expressions of esteem for him, he would be convinced that there was no war between setter and pointer men on one point at least.

A pointer won the Members' Stake. The judges were simply judges—neither pointer nor setter judges.

There was excitement and consternation among the field trial men in Newton Monday afternoon. The barn of the Summerow House caught fire and burned furiously. Mr. Rose and others had engaged room in it for their dogs, but fortunately the dogs were out when the fire occurred.

The barn was in dangerous proximity to houses, but lively tearing down of fences and outhouses, and sprinkling of roofs with water, confined the fire to the barn. No wind was blowing, otherwise the whole town might easily have been burnt. Tony Gale, Tony Boy, Sport McA., Hurstbourne Zip and others were of the lot kenneled in the barn. It was a fortunate escape. B. WATERS.

Blood Will Tell.

DETROIT, Mich.—*Editor Forest and Stream:* I have noticed of late several articles in your paper discriminating against our pure-bred Llewellyn setters, making the old claim of too fine breeding resulting in lack of strength, staying qualities and weak constitutions. It seems to me that this is due to improper breeding rather than fine breeding.

While I agree that too much inbreeding produces these results, there is no occasion for it in this country, where we have more pure strains of Llewellyn than there are in any place in the world. They can be crossed without inbreeding, giving pure Llewellyn with the best results.

I think all breeders will agree that they have seen this class of dogs do better work, show greater determination, more nerve and lasting qualities, with more intelligence, than any other class, showing how "blood will tell."

A few days ago I had a most beautiful exemplification of it, shown in the work of a four-months-old puppy, called Heather, one of a litter of seven, by Dash Antonio out of Nellie Breeze. The pedigree of these two dogs speaks for itself, while the work of this puppy most gracefully confirmed it. The remainder of the litter also were the strongest, most perfectly formed and best developed puppies I have ever seen, with but one exception, this was another litter by Dash—Antonio.

We took this four-months-old bitch out on quail, because she had been out times before and pointed her birds, and she simply would not be left behind, but climbed up on the top of the fence as if on a ladder, only to fall over on the other side and to rush on to her work like an old dog. She not only stood her birds, but hunted for them, and this day made points on single birds. The first quail I shot over her, she ran and retrieved it, and in one case, while the old dogs were trailing a bevy along the high weeds at the side of a fence, she backed them. While the old dogs were trying to locate them, having lost them owing to their going in to the next field, the puppy crossed over the fence, caught on to the scent, trailed them and stood them in the field.

While I have seen puppies stand birds, etc., it has never before been my good luck to see a four-months-old puppy work like an old dog, and know "blood will tell." I am a breeder and believer in pure Llewellyns.

TOLEDO QUEEN.

M. V. G. & F. P. A.'S TRIALS.

(Special Report.)

JEFFERSON, Greene county, Pa.—The third annual field trials of the Monongahela Valley Game and Fish Protective Association, beginning Tuesday, Nov. 2, were run on the club's preserve, which consists of 10,000 acres of ground, situate near the town of Jefferson. The conditions were most unfavorable, owing to the long drought. No rain has fallen for the past three months. The ground was exceedingly dry, vegetation very rank, and it looked as though the trials could not be held. There was also a lack of opportunity for preparing the entries, owing to the absence of rain. The competition showed this lack of preparation, as quite a number of the dogs possessed excellent capabilities, but made a poor exhibition on birds.

The only weak place in the meeting was the scarcity of birds, and while a number of the dogs were high class, the work on birds was very meager and poor. It is to be regretted that such is the case, for the club promoting these trials deserves the highest praise. A more enthusiastic and genial lot of gentlemen would be hard to find assembled at a field trial. This is bound to insure the success of their trials.

The attendance was good. About forty horsemen followed the trials throughout. Among those present we note: R. V. Fox, Harrisburg, Pa.; Joseph Maiden, David Lewis, Homestead, Pa.; G. O. Smith, Wheeling, W. Va.; J. L. Cravens, Pittsburg, Pa.; S. B. Cummings, secretary of the club, Pittsburg, Pa.; J. O. Connor, Carnegie, Pa.; A. B. Ferguson, Sennecaville, O.; Dr. J. R. Daniels, Cleveland, O.; R. C. Stenger, W. H. Beazell, A. C. Peterson, Dr. George Gladden, Homestead, Pa.; Capt. J. T. Wood, Wood's Run, Pa.; J. T. Crawford and W. F. Daugherty, Brownsville, Pa.; William Harrison, W. J. Blankenbuehler, John Charlesworth, Monongahela City, Pa.; H. Milkins, Leamington, Ont.; S. C. Bradley, Greenfield Hill, Conn.; W. S. Bell, Pittsburg, Pa.; J. B. Stoddard, Thomasville, N. C.; Jack R. Bell, Carmichaels, Pa.; J. W. Phillips, Homeville, Pa.; W. J. Reis, Philadelphia, Pa; Henry Klee, New Castle, Pa.; Henry Christ, Belmont, O.; Dr. R. S. Lacock, Allegheny, Pa.; J. S. Robb, Jr., Pittsburg, Pa.; Fred West and W. V. Winans, Brownsville, Pa.; R. S. D. Hartwick, George Wilson, Pittsburg, Pa.; D. B. Darrah and Mr. Kennan, Bellaire, O.; Joseph Lewis, Canonsburg, Pa.; Charles G. McIlvaine, Pittsburg, Pa., and others.

The entries numbered thirteen in the Derby and twenty-four in the All-Age stake. The starters, however, were large comparatively, eleven of the thirteen entered in the Derby came to the post while eighteen of the twenty-four entries in the All-Age stake filled.

The winner of the Derby, Nellie Wilson, is a pointer of merit. She is owned and was bred by Dr. J. R. Daniels, Cleveland, O. She is by Plain Sam—Dolly Dee II.; of fair size, with plenty of bone and substance, and would prove herself a strong competitor on the bench as well as in the field. She has fair speed and range, both well-applied and well sustained throughout. Her work on game is good withal. She is perfectly steady to wing and shot. She deserved her place.

The winner of second, Mattie's Gleam (Spot Cash—Mattie Berwin), owned by H. K. Devereaux, Cleveland, O., is a bitch of much quality; a very merry worker, carrying a high head and gives one the impression that she is looking for birds.

Mr. J. T. Crawford, Brownsville, Pa., owner of the setter dog Winks, shared third place with Madera. He is a puppy of good speed and range and exhibited wonderful endurance, sustaining his pace well throughout the entire running. Madera is a puppy of rare quality, with a flight of speed and ample range. Even in her undeveloped state she impresses one with the idea that she is out on a hunt, busy every moment, a pleasing mover. With more finish in bird work, she would have stood higher in the competition. She is owned by Fox & Blythe, Harrisburg, Pa., and is by Dion C.—Hopeful.

The stakes were judged by S. C. Bradley, Greenfield Hills, Conn., and W. S. Bell, Pittsburg. Their duties were laborious. Much of the ground necessitated going on foot. The competition was skillfully handled and their decisions were well received.

Tuesday.

The start was made about three miles from town, at 9:09. The drenching rain of Monday made the conditions more favorable. The sun shone clear and warm—a most pleasant autumn day. The trials, therefore, opened most auspiciously. The first brace was cast off in open stubble.

Winks (Joe—Dot C.), owned by J. T. Crawford and handled by Jack R. Bell, and Lady B. (Rodfield—Florence Gladstone), owned by Martin Bumgarten, handled by A. B. Ferguson, were put down at 9:09 in stubble and ran until 9:45. Winks ranged out well and remained out, cutting out all the work. Lady B. was narrow in range and inclined to follow Winks. Ferguson flushed a bevy that Lady was evidently working on, which settled in clover field. The dogs were worked in the direction of the flight of birds, but failed to find.

Mack Noble (Tom Boy II.—Flora Noble), owned by Dr. W. R. Foster, handled by H. Christ, and Sam's Bang (Plain Sam—Dolly D. II.), owner Dr. J. R. Daniels, handled by H. Milkins, were cast off in wheat stubble at 9:55. Their work was only ordinary, Sam's Bang having the best of it. Neither deserve further consideration. Up at 10:53.

Fly Windem (Ruby's Max—Fly Wun Lung), owned and handled by A. B. Ferguson, and Kitty Dean (Plain Sam—Belle of Lancaster), owner Monongahela Kennels, handled by J. W. Phillips, were cast off at 11:00 and ran a heat lasting 1 hour and 5 minutes. Both had good speed and range. Fly Windem remained out at work the better. Kitty returned too often for orders. Up at 2:05. A recess was now taken for lunch.

Little Dorrit (Whyte B.—Dolly Varden), owned by Beazell & Gladden, handled by Beazell, and Nellie Wilson, handled by H. Wilkins, were cast off at 1:08. Little Dorrit in brierfield flushed a bevy, which settled in same field near by; dogs worked in that direction. Little Dorrit, getting too close, flushed excusably; steady to flush. A moment later one flushed wild, Nellie Wilson at same time drawing and steady to flush. Ordered up at 2:20.

Kent's Vic (Kent's Priam—Nellie Fauster), owned by W. L. Coulson, handled by H. Christ, and Mattie's Gleam, handled by S. B. Cummings, were cast off at 2:25. Mattie's Gleam had good range and speed, but no opportunities on birds. Vic's range was contracted, and her opportunities were not improved, having three flushes in woods on some scattered birds. Up at 3:08

Madera (Dion C.—Hopeful), owned by Fox & Blythe, handled by Fox, a bye, was put down in open country at 3:26, starting well and fast, going with a high head, and covering lots of ground. After crossing a ravine in edge of cornfield, Fox walked up a bevy, which settled in the wake of the horses. Madera worked toward the place where some birds were seen to settle, but failed to find. In pasture she flushed and chased. No more were found. Up at 4:10.

Second Round.

The judges consulted, and announced the second series as follows: Winks with Fly Windem, Sam's Bang with Mattie's Gleam, Kitty Dean with Nellie Wilson, Little Dorrit with Madera.

Winks and Fly Windem were put down at 4:25 and ran until 4:53. This heat resulted in favor of Winks, who maintained his form, speed and range.

Sam's Bang and Mattie's Gleam started at 4:55, up at 5:25. Gleam sustaining herself.

Wednesday.

Kitty Dean and Nellie Wilson were put down on new grounds near the Potter place, and ran from 9:30 until 10:05, covering a great deal of territory, which proved barren of birds. A report was then circulated that a party of hunters with a pack of beagles had gone over the grounds. The course was changed, and Nellie Wilson soon was on a bevy point; birds flushed; both steady. Nellie then pointed a single. Birds were not followed.

Little Dorrit and Madera were cast off at 10:08. A bevy was seen to flush in cornfield; as both dogs were in close proximity it could not be determined where the fault was. Both dogs maintained themselves. Up at 11:20.

Third Round.

The party now adjourned for lunch, after which the judges announced a third series as follows: Winks with Gleam; Nellie Wilson with Madera; Fly Windem with Little Dorrit.

A start was made at 12:48 with Winks and Gleam. Gleam secured one point, the only opportunity. Both went wide and fast, Gleam on the outside. Up at 1:30.

Nellie Wilson—Madera were put down in large stubble. Milkins claimed a point for Nellie, and at the same time Fox claimed a point for Madera about 100yds. to the right in same field. Fox was first to reach his dog, and flushed a bevy, which flew just over Nellie's head. Nellie remained on point, which was supposed to be foot-scent of bevy just flushed. A bevy was then flushed to her point which flew to the woods. Nellie secured three singles. Steady to wing and shot. Up at 2:10.

This was the best work yet seen, as it was sharp and accurate.

Fly Windem—Little Dorrit ran from 2:25 until 2.59. Neither improved its position.

Fourth Round.

Nellie Wilson with Mattie's Gleam started at 3:10, and ran fifteen minutes, to comply with the rule of first and second running together. Up at 3:25.

The judges promptly announced the winners as follows: First, Nellie Wilson; second, Mattie's Gleam; equal third, Madera and Winks.

The All-Age Stake.

Klondyke (Gladstone's Boy—Speckle Gown), owner, G. O. Smith, handler. Jack R. Bell, with Pat J. (Dash Ranger, Jr.—Patti M. II.), owners, Ganter & McDonald, handler, J. W. Phillips, were put down at the conclusion of the Derby at 3:40, and ran 50 minutes without finding. Pace and range ordinary.

Strictly Business (Kent's Priam—Belle Fansher), owner, J. L. Cravens, handler, H. Christ, and Loretta (Gladstone's Boy—Rill Ray), owner, K. P. Beattie, handler, A. B. Ferguson, were cast off at 4:48, and gave a good exhibition of speed and range. Each had a point on a bevy. Up at 5:35, and the work for the day was over.

Thursday.

Jingo's Joy (Jingo—Pearl's Dot), owner, Monongahela Kennels, handler, W. H. Beazell, with Winks; ran from 8:57 until 9:51 without finding.

Tony's Ruby, owner, William Cummings; handler, owner, with Forzando (Gath's Mark—Countess Rush), owners, Fox & Blythe, handler, Fox. Started at 10:06. Ruby got one single point and two flushes in woods, Forzando one single, and Ruby's range was very short and narrow, while that of Forzando was wide and fast. Near hedge fence Forzando pointed a bevy, and Ruby, brought up to back, pointed independently same bevy. Both steady to shot. Up at 10:57.

R. S. D. Hartrick's bitch Bird (Gath's Mark—Ruby's Girl) and Scott C., owner, G. A. Wilson, handler, S. B. Cummings, were cast off at 11:06, ranging well and fast. Both gave a good account of themselves. Bird pointed a bevy, Scott C. backed; both steady. Up at 11:52.

Don (Doc—Rachel), owner, Thos. Harriott, handler, H. Christ, started at 12:47 with Albert's Shot (Beau Brummel—Albert's Phoebe), owner, S. W. Carey, Jr, handler, Joe Lewis. Both started well, but soon contracted their range and pace perceptibly before the heat ended. No birds. Up at 1:52.

Rush (Rush of Lad—Spotty Ale), owner, F. Kruse, handler, H. Klee, with Spot Cash (Vanguard—Georgia Belle), owner, H. K. Devereaux, handler, S. B. Cummings. Spot Cash started well, and soon was on point. A lark was flushed and Spot ordered on, when horsemen coming up, flushed a bevy. His handler not going wide enough. On singles, Spot pointed four; steady to wing and shot. Rush gave the poorest exhibition ever seen at a field trial, apparently not knowing what birds were. Down at 1:56; up 2:25.

Rod's Pell (Rodfield—Opal), owner, J. S. Robb, Jr., handler, J. W. Phillips, with Baron Cincinnatus (Dow R.—Nattinatis), owner, F. J. McCoy, handler, H. Klee, started at 2:30, and ran until 3:10. Rod's Pell ranged well and fast, working on the outside of her competitor. She was soon on point in woods. Unsteady to flush, Baron Cincinnatus not in the competition further.

Rod's Boy (Koderigo—Larry Gladstone), owner, King Graphic Kennels, handler, H. Klee, with Virginia (Little Ned—Pearl's Dot), owner, H. K. Devereaux, handler, S. B. Cummings, started 3:26. Both went fair. No birds. Up at 4:04.

Second Round.

Strictly Business with Klondyke, Loretto with Pat J., Scott C. with Albert's Shot, Bird with Don, Rod's Pell with Spot Cash, Forzando with Rod's Boy, Winks with Virginia, Tony's Ruby with Jingo's Joy.

Sixteen were continued, not that there was so much merit in so many, but because the judges wished to see all on game.

Strictly Business and Klondyke started at 4:40 in open country. Klondyke flushed repeatedly and was unsteady each flush. Strictly Business had no opportunity. Range and pace well sustained. Up at 4:55.

Loretto and Pat J. were cast off at 5 o'clock in corn. Ranging out adjoining fields Pat J. flushed one bird and stopped to order when remainder flushed. Pat J. flushed a bird. Loretto was drawing on. The heat ended all in Loretto's favor. Up at 5:30 and the work for the day ended.

Friday.

Scott C. and Albert's Shot started at 8:30 and ran until 9:10. No birds.

Bird and Don were cast off in large stubble field and ran from 9:21 until 9:52. No birds.

Rod's Pell and Spot Cash were put down in old brier field at 9:57, and inside of 100yds. Rod's Pell pointed a bevy, which she flushed and chased, stopping to order. Worked on singles, Spot Cash got three points and Rod's Pell two. Rod's Pell was unsteady, while Spot Cash remained steady to wing and shot. Up at 10:27.

Forzando and Rod's Boy found no birds. Forzando worked wide and remained out at work all the time. Rod's Boy did a deal of loafing. Up at 10:51.

Winks and Virginia.—Winks made game, left it, and cast to right and ahead 100yds., returning to the place where he first got scent, Virginia coming in from the right, and when close together a bevy was seen to rise. On singles, Winks flushed three and Virginia secured one indifferent point. Up at 11:50.

A detour was made to the wagons for the last brace of the second series, which were put down before lunch at 12:10.

Tony's Ruby and Jingo's Joy.—This brace proved indifferent and was run to have an opportunity on game, but failed, and were ordered up at 12:40.

Finals.

After lunch the judges consulted and called for Forzando and Loretto; this brace was no doubt put down to settle first and second place and they gave a fine exhibition of hunting; indeed, it was the first race of the meeting, both dogs going wide and fast and in improved form. Forzando secured two points and Loretto two. Put down at 1:30 and ordered up at 2:22.

The judges again consulted, and requested Scott C. and Albert's Shot to go down on scattered birds found by former brace to have a chance on game; they failed to embrace the opportunity and were ordered up at 3:02, after a run of 30 minutes. Albert's Shot flushed one single. Both dogs ran a poor race and ranged close to handlers.

Bird and Strictly Business were cast off at 3:17. Strictly Business ran about 100yds. and whirled into a point on a bevy; a good piece of work, but she marred it by flushing on scattered birds; both dogs made several points, but were unsteady to wing. Up at 3:51.

After a few minutes' consultation the judges announced the awards, as follows: First, Loretto; second, Forzando; third, Spot Cash.

WESTERN MASSACHUSETTS FOX CLUB.

The Annual Hunt.

THE annual hunt of the Western Massachusetts Fox Club was held near Westfield, Mass., Nov. 10-11. The hunt was successful, both in point of number of hounds present, their work on the foxes started, the large number of sportsmen in attendance, and the number of brushes obtained, viz.: ten on the two days, as against seven in '96.

On Nov. 10, the first day of the annual hunt, nearly fifty hounds and 100 hunters took part in the chase. The section about Pochassic and the eastern portion of Montgomery was given a good rattling, and many foxes were started. The wind, however, was too strong and too cutting for the comfort of those who took their stands on favorite runways; the strength of the wind, too, detracted from the sport in some respects, as hounds did not work together so well, nor in such large packs as is usually the case.

An early start was made for the home of William Moore in Pochassic, and it was about 7 o'clock when everybody had found a place that seemed likely to give him a chance at the fox or foxes. At first there was some very lively tonguing, the music being quite inspiriting. It was not long before gunshots sounded in many directions, showing that some fortunate individuals were getting chances at the flying game. At times there was a perfect fusilade along the mountain side that bordered on Montgomery. It seemed almost impossible that any fox, once started, could escape with his brush, all points being apparently guarded. Still, some got away, but five were left behind to show what had been done during the day.

Among those out on this day were Miss Bessie Way, daughter of Mr. John T. Way, president of the Fox Club, who was accompanied by her friend Mrs. J. S. Shepard. Miss Way carried her gun, but was not lucky enough to have a fox started that had suffi ient courtesy to come her way and deliver up his brush. Those who secured brushes were: A. B. F. Kinney, who got two last year; David Hall, of Montgomery; A. A. Sibley, of Leicester, and Walter Otis and Edward G. Clark, of Westfield.

Some of the Hounds.

Of the fifty hounds or so that were engaged in the chase, several of them have taken part in previous hunts of this club. Among the number were: Of the Kinney and White pack from Worcester, there were present Logan, Buck, Dan, Ben, Sam, Duke, Guess and Carl. Among the other hounds were: Tolland and Ranger, owned by Walter W. Holmes, of Waterbury, Conn.; Rover, Josie and Speed, owned by John R. Thayer, of Worcester; Rock and Rye, owned by E. L. Walling, of Auburndale, and W. N. Walling's Hunter; E. S. Knowles's John R. of Worcester; Duff and Dora Jackson, J. H. Baird, of Auburndale; Popple, George Waite, of Worcester; George W. Roraback's Walker and Silver Tip; Ben Baff's Jack; Ranger, C. S. Davis, of Meriden, Conn.; Bob, Sidney Harrocks, of Fitchburg, and Burt R. Holcomb's Prince, Major, Ring and Betsey.

As is usual on such occasions, many of the hounds had not shown up when nightfall came on. Mr. Walter Holmes, of Waterbury, Conn., was lucky enough to have his tan hound, which ran over the mountain as far as Huntingdon, a distance of ten miles, returned to him at Westfield by train on the first evening.

The Annual Banquet.

The club's annual banquet was served in the Park Square Hotel, on the evening of Nov. 10. There were 175 present.

Principal Charles S. Chapin, of the Normal School, was toastmaster, and among the speakers were W. H. H. Murray, of Guilford, Conn.; A. B. F. Kinney, of Worcester; John R. Thayer, president of the Worcester Fur Company; Judge Huber Clark, of Willimantic, Conn.; Judge P. H. Casey, of Lee; Judge Clark, of Derby, Conn.; A. S. Kneil, H. W. Ely, H. P. Moseley and George W. Roraback, of this town. Pettis's orchestra furnished music during the evening. The speaking was of a high order and the best in the history of the club.

Among the guests present were: Dr. Charles E Higgins, secretary of the Worcester Fur Co.; E. S. Knowles, O. M. Ball, W. R. Dean, Capt. D. M. Earle, W. D. Kenerson, all of Worcester; C. S. Davis, of Meriden, Conn.; Mark B. Carpenter, David F. Allyn and J. C. Munn, of Holyoke; Charles E. Brace, of Lee; George M. Ripley, Fred Bishop and James Pitkin, Hartford; A. A. Sibley and George H. Waite, of Leicester, J. H. Baird, E L. Walling, and W. N. Walling, of Auburndale; John M. White and A. D. Windle, of Millbury; H. P. Varney, of Wellesley; H. F. Rice, of Sutton; J. T. Flannelly, of Boston; Judge George B. Clark, of Derby, Conn.; C. L. Young, M. J. Stevens, E. T. Stephens, J. F. Riley and F. E. Clark, of Springfield.

The Second Day's Hunt.

The weather conditions for the early part of the second day's hunt were far better than on the first day. There was no wind, while there was enough frost to make the ground damp and hold the scent well. Of course, the attendance of hounds and hunters was less than on the previous day, but those that were out were on the scene bright and early. A slight accident was recorded during the day, Mr. Walter Otis being unfortunate enough to have three pellets of shot penetrate one of his feet, owing to the accidental discharge of a companion's gun. Mr. Otis made light of his injuries, although one of the shot penetrated the flesh of his foot for a distance of about 3in.

The ground hunted over was the same as that hunted on the first day. The hunters, however, seemed to be more widely scattered over the territory than on Nov. 10. Five more foxes yielded up their brushes, making the total for the two days ten in all. Those who secured brushes on the second day were: F. H. Clapp, of Southampton; James Axtell, of Huntington; Frank Clark, of Montgomery; Charles Clemens, of Westfield, and M. J. Stevens, of Springfield. Two of the foxes secured were grays.

Notes.

One of the most interesting persons present on the first day was Judge George B. Clark, of Derby, Conn., who was attending the hunt for the first time. He was a guest of Mr.

George W. Roraback. The Judge lost his right arm twenty-eight years ago through the accidental discharge of his gun. He, however, is able to handle his gun with his left arm in a manner calculated to surprise the best of shots. He is greatly interested in hunting and fishing, and is one of the directors who have recently leased several thousands of acres of land in Tolland with the idea of making it into a game preserve.

Mr. W. H. H. Murray, of Guilford, Conn., was one of the most popular speakers at the annual banquet, his remarks being eloquently put and especially timely.

Ben Chadwick sang some of his original songs at the annual banquet, and met with well-deserved applause for his efforts.

Mr. A. B. F. Kinney, of Worcester, Mass., not only owns some great hounds, but also knows how to get in the way of a fox and double him up. Last year he secured two out of the seven that were killed; this year he scored one to his credit on the first day. His hound Logan has something like a thoroughly national reputation.

On the second day, while returning from the hunt, Judge Huber Clark, of Willimantic, Conn., W. Stiles Bush, of Westfield, Mass., and several others, witnessed a peculiar sight. While passing a house in Pochassic, they saw a fox chasing a black and white cat. The cat was badly frightened and soon treed. The fox did not seem to mind the presence of the spectators, whose guns were all unloaded, but as soon as he had treed the cat he took his way to the woods and disappeared.

President Way, of the Fox Club, was presented by Mr. Kinney with the handsome fox he shot on the first day. The presentation was made at the annual banquet.

Union Field Trials Club's Trials.

THE Union Field Trials Club's trials, run at Carlisle last week, were but poorly patronized, and ended in dissolution. There were five starters in the Derby. The winners are as follows: First, C. P. Mingst's setter Trixie (Antonio—Columbia); second, W. H. Dye's setter Golden Rod (Rodfield—Kate N.); third, W. G. Graham's setter Dick Bland (Sam Gross—Maida Rogers); fourth, G. G. Williamson's setter Lady's Count (Count Gladstone IV.—Dan's Lady).

All-Age Stake, seven starters: First, Theodore Goodman's setter Albert Lang (Count Gladstone IV.—Dan's Lady); second, J. T. Mayfield's setter Rod Gladstone (Rodfield—Sue Gladstone); third, Phil M. Essig's setter Saragossa Belle (Gleam's Pink—Maud E); fourth, P. J. Madison's setter Rodfield's Boy.

Amateur Stake, four starters: First, Albert Lang; second, Fishback & Bond's Vim Gladstone; third, L. Rausch's Tory Davis; fourth, Horace Comstock's Tony.

Judges—C. Churchill, Louisville; S. H. Socwell, Indianapolis. Mr. Isgrigg was the third judge in the Amateur Stake. This club's winter trials at Tupelo declared off.

CHICAGO AND THE WEST.

Sallie and Maudie.

SALLIE is a colored girl, and Maudie is her dog, Maudie has fleas. She always has had fleas and probably always will, in spite of all efforts to the contrary. Maudie and the fleas are like liberty and union, one and inseparable, sink or swim, survive or perish. Not that Sallie has not attempted to bring to an end the combined inseparable union and irrepressible conflict between Maudie and the fleas, for Sallie thinks as much of Maudie as she does of herself, and the two eat together, sleep together, go walking together and attend church together, such is their mutual friendship.

One day Sallie said to her employer, "I 'clare to goodness, I don' know whut to do wif this sheh dawg, she jess eat up 'ith them fleas."

"Oh, try some Persian insect powder for her, this yellow powder, get it at a drug store. That's a good thing for her."

Sallie said "Yesseh," and nothing more was heard about it till the next day, when she was on hand again.

"Well, seh, I 'clare I don' b'lieve that there insec powdeh is any good 'tall, seh"

"What's the matter about it?" was asked,

"Well, seh, it shohly does seem to kin' o' make Maudie sick like. Yesseh, she wouldn't eat hahdly no'e of hit, an' whut she do eat seem like it make her kin' o' sick like."

It was then all explained to Sallie that the powder was not intended for internal revenue purposes, and she went away somewhat cast down. It seems that she then sought expert advice, and went to a drug clerk. Now, of course, a drug clerk knows all about everything, or he couldn't hold his job. This one was fully competent. In a few days Sallie came around again.

"I 'clare, I don' know whut ken be the matter wif Maudie's back, seh," she said, pulling Maudie out from under her skirt for inspection. "It shohly seem like her hair wus comin' loosened, I don' know how come that, seh."

It transpired that Maudie had had, on the advice of the drug clerk, a good treatment of carbolic acid, being well rubbed with it, and then covered tightly with a blanket, which had had holes cut through for her legs and was tightly strapped on her for a couple of days. The drug clerk said this would kill the fleas, and it did, over quite a large area, where it could be plainly seen that the hair was "loosened," until the skin was bare.

"How much carbolic acid did you use, Sallie?" was asked of her.

"Oh, only a little bit," she said, "only about this sher much." And she measured off about two fingers on a bottle.

"And how much water did you put that into?"

"Oh, I don' know, quite a bit o' water, I speck more 'n a little tea cup full, anyways."

It was explained to Sallie that only a special dispensation of Providence had saved her dog's life that time, and she was very sorry that she had hurt Maudie. "Whut ken I do fer her then, seh?" she asked.

"Well, don't do anything for her yet a while, and I'll bring you a bottle of liquid flea medicine for you to put on her, sometime."

"Oh, all right, seh," said Sallie, much pleased.

Now it happened that the bottle of flea medicine came to hand and got into Sallie's hands without further directions, and at the first opportunity she fell joyfully upon the bottle and forthwith proceeded to give Maudie the benefit of it. This was in the early morning, and she could not wait till after breakfast before she was around, with much trouble in her voice.

"I 'clare, I don' know whut's the matter wif Maudie again, seh," she said, "she shohly is actin' mighty funny, seems like to me."

"What's wrong with the dog this time, Sallie?"

"Well, seh, hit's that new flea stuff you all give to put on Maudie. I taken Maudie down in the basement this mawnin', en I put some o' that new medercine on to her, an' I 'clare, she jiss drawed her laigs up and went plum intoe a fit, an' then she run away from me an' I shohly thought I never would ketch her ag'in"

This time, it seemed, Sallie had put a bath of this strong and undiluted fleawash on the dog's back, which was still raw from the carbolic acid treatment of the drug clerk. It was no wonder the poor dog "drawed her hind legs up." (Maudie is a fox terrier, and only about a foot or so long). An edict was issued that Sallie should not undertake any more medication for Maudie without assistance, and she was told to try the use of vaseline on the poor little back. The next morning she was on hand again.

"I 'clare, I don' know whut to do about Maudie yet," she said. "Pears like she kaint never get shut o' them fleas, nohow. Her hair is still a-loosenin. I' mighty sorry, I am, fer Maudie aint never had had no veh'y long hair, and she always wus a cole kin' o' dawg, and now winteh is comin', an' I don' know whut to do about Maudie."

"Did you put the vaseline on her back?"

"Yesseh, I put plenty on her back. But my sakes, ef you want to cure Maudie's back, you got to put somethin' on hit whut aint good to eat. She jiss likes that there vaserline."

It was dimly suggested to Sallie that it might be well for her to get a new dog and begin all over again, but over this she was dubious, though polite. "I think a heap o' Maudie," said she, loyally. "Kaint you think o' nothin' that's good fer her, that aint good to eat?"

This latter question might, it seems to me, be referred to a veterinary. But there was the name of a veterinary, by the way, on the bottle of flea wash. What I want to know is, can anyone suggest a remedy which will eradicate these fleas without eradicating the dog, and can the remedy, or the remedy for the remedy, be classified as "not good to eat?" I should very much regret to see the friendship between Sallie and Maudie cut short by death, but I don't believe Maudie will last much longer, her hair is still "a-loosenin'" so

E. HOUGH.

1206 BOYCE BUILDING, Chicago.

Death of Lester A. Pearle.

NEW HAVEN, Conn., Nov. 13.—*Editor Forest and Stream:* Lester A. Pearle, of the Hampton Kennels, is dead. An honest man! Can anything more noble be said? A capable and successful man—can anything better be written of any? He went to bed last week Thursday a sick man, and this week Wednesday I strewed rosebuds on his casket, and he was covered with the cold, damp earth. He was not a Christian man according to the general acceptation of the term, and yet he lived, it seemed to me, a godly life. He was a great admirer and observer of nature, and none enjoyed the ever changing scenes of forest and mountain, plain and valley, more than he, especially when with dog and gun. He was one of the best shots in the country.

He was an artist, and the house now bears evidence by the many pictures that hang on the walls, of birds painted in true colors, in natural position, and crayon portraits. He was a taxidermist, and leaves on exhibition over fifty native birds that he shot and set up.

He played many musical instruments, and when he last sang before an audience in the Town Hall the words "I hear the angels' voices calling," he made quite a hit, and many have recalled it with great emotion.

Last winter he went before the legislative committee in the interests of the kennel men and presented their case in connection with five lawyers and others. It was said that he interested the committee more than any, and at the close of the hearing Mr. Pearle was the only one that they questioned for information desired. It was considered at the time a great compliment. He was naturally so reticent and retiring that none realized his ability and character, and yet on account of his reputation many have bought dogs of him only upon representation, and their reply has been that the dogs were better than described. E. KNIGHT SPERRY.

[Mr. Pearle will be remembered by those who attended the New England field trials as the one who won first in Derby, 1891, with Kit Carson; first in Derby, 1892, with Daisy A.; first in All-Age, 1893, with Jolly G., and second in All-Age 1894, with Jolly G.]

Hoosier Beagle Club.

THE date of the trials has been changed from Nov. 2 to Dec. 8 on account of dry weather.

At the field trials of the Hoosier Beagle Club, the following stakes will be run.

All Age—Entry fee, $5, entries to close immediately before starting the class. First prize, $30; second prize, $20; third prize, $10.

Derby, one year old and under two.—Entry fee $5, entries close immediately before starting the class. First prize, $30; second prize, $20; third prize, $10.

"Futurity," puppy under one year old.—Entry fee, $5; entries close immediately before starting the class. First prize. $30; second prize, $20; third prize, $10.

Pack Stakes, dogs and bitches, *bona fide* property of the party making the entry.—Entry fee, $5 per pack; entries close same as in preceding trials. First prize, 40 per cent.; second prize, 25 per cent.; third prize, 15 per cent., and 10 per cent. to go to the breeder of winner in this class.

Rules same as National Beagle Club, excepting Sec. 4, Rule No. 3, which is omitted. These rules can be had on application. In event of any class being decided off, money will be refunded. Special prizes will be given in each class. Trials will be held near Danville, Ind. Arrangements have been made with the express companies, whereby dogs will be returned free. Good grounds have been secured for the trials, and there is plenty of game; very reasonable hotel rates; saddle horses can be procured cheap for those wishing them. The trials will wind up with a genuine fox chase given by Danville parties.

The Horse Show.

THE annual show of the National Horse Show Association of America in Madison Square Garden has grown into a stupendous affair. Society has made it a fad; and it is therefore a financial success, notwithstanding the enormous expense attendant upon getting up and carrying on an affair of this kind, in the manner in which it is handled by the National Horse Show Association.

The Garden itself is transformed, and its general coldness removed for the occasion by the artistic handling of the orange and black bunting and flags, the colors of the Association. The immense ring, with its tanbark covering affords an excellent place in which to view the specimens of horseflesh paraded for the benefit of the judges, and of the public generally.

The horse show, too, is spectacular. There is the bugler, an expert in his art. There's the "ring master"; we would call him by that name if this were a circus (which it isn't). Then there are the ushers stationed at different points in the ring, neatly attired in the uniform of the Association. And the attendants also; their orange and black jockey caps and natty appearance generally, adding much to the spectacular part of the show. They may not all keep perfect step to the bugler's music as they march down the ring, but they line up well and give a capital idea of the magnitude of the undertaking gotten up and carried out by the National Horse Show Association.

Many of the horses now on exhibition have been in the show ring dozens of times. It is interesting to notice how well they seem to realize why they were. They arch their necks and step delicately; many of them almost mincingly, and everyone of them trying to look his or her very prettiest. Vanity is not confined to human beings alone. Visit the horse show and you'll see what me mean.

The Late Pottinger Dorsey.

LINDEN, Mass., Nov. 13.—*Editor Forest and Stream:* At a special meeting of the New England Beagle Club, held at Oxford, Mass., Nov. 5, H S. Joslin, Geo. F. Reed, Wm. Saxby, A Parry, Thomas Shallcross and W. S. Clark present, it was unanimously voted that the president and secretary draw up resolutions of regret on the death of Mr. Pottinger Dorsey, and they were drawn up as follows:

Whereas, In the providence of the Almighty and Supreme God, our friend, Pottinger Dorsey, has been taken from the midst of us by sudden death;

Resolved, That we, the New England Beagle Club, express our sincere and heartfelt sorrow at the loss of a gentleman of such sterling worth, true nobility of character, and a typical sportsman in the highest sense; and be it further

Resolved, That these resolutions be included in the minutes of this meeting, and that copies thereof be sent to the bereaved family and to the sporting papers throughout the country.

(Signed) H. S JOSLIN, President,
W. S. CLARK, Secretary,
New England Beagle Club.

International F. T. C. All-Aged Entries.

FOREST GLADSTONE—W. W. McCain's English setter dog (Dan—Kelsey's Blue Jess).

MAUD W.—Leamington Pointer Kennels' pointer bitch (Plain Sam—Beppo's Mollie).

DASH ANTONIO—R. Baugham's setter dog (Antonio—Lady Lucifer).

LUCK—R. Baugham's setter dog (Locksley—Liddesdale).

COUNT VASSAR—J. Kline's setter dog (Dash Antonio—Queen Bess II.).

MAUD S.—F. C. Stegman's b. and w. bitch setter (Bankor—Bell).

CLEOPATRA—W. B. Wells's setter bitch (Mingo II.—Cambriana).

SELKIRK WHYTE—W. B. Wells's setter dog (Whyte B—Luna).

SELKIRK TANA—W. B. Wells's setter bitch (Theirs—Cambriana).

The Eastern Trials.

NEWTON, N. C., Nov. 16.—[*Special to Forest and Stream*]: There are ten starters in the Eastern Derby: Maiden Modesty, Sam's Bow, Hope Zeb, Pearl R., Lena Belle, Ghoorka, Why Not, Fairview Belle and Sport McA. Three will compete to day—Pearl, Zeb and Why Not.

The All-Age has sixteen starters: Pinmoney, Tony's Gale, Elgin's Dash, Winkee, Hurstbourne Zip, Ann of Abbottsford, Cristina Young, Rip Rap, Kent of Grace, Sarsfield Shadow, Radfield's Boy, Count Gloster, Saragosa Belle, Cincinnatus, Pride, Dave Earl. B. WATERS.

POINTS AND FLUSHES.

The field trials of the Champion Stake Association which, as stated elsewhere, are to be held at Tupelo, Miss., will immediately follow the Union Field Trial Club's trials, to be held at the same place, beginning Jan. 24. The judges are Messrs Bradley, Titus and Osthaus. The occasion seems likely to prove one of great interest.

Rumor hath it that the Union Field Trials Club's trials ended unpleasantly, in consequence of which the winter event, fixed to be run at Tupelo, Miss., was abandoned.

Mr. Frank D. Norveil, Sec'y-Treas. of the Hoosier Beagle Club, writes us that the club has encouraging prospects and has found a good beagle support within the State of Indiana. The club will endeavor to make the competition a permanent feature. He further writes: "We did not expect other than local dogs in this trial, but we are getting a good many letters from Eastern parties, and will probably have several dogs from the Eastern States. We suppose we will be easy prey, so let them come and we will try to treat them as nicely as we know how and give everybody all the fun we can, and learn to run the trials right for the next year. There is no red tape business. We didn't know how, so just tell those having the dogs to pay their entry fee before the race. Owners can write and tell us what dogs they will enter, with names, etc., so we can tell what to expect."

Our report of the Eastern Field Trials Members' Stake this week is the only first hand report of the occasion, as Mr. Waters, of FOREST AND STREAM, was the only representative of the press on the grounds to see the events and report them as they were run.

Prof. Osthaus will give a painting to the winner of second in the E. F. T. Members' Stake, and besides the cup, a painting by Earl, donated by Dr. J. Spencer Brown, was also for first.

Canoeing.

Division Representation.

BROOKLYN, Nov. 11.—*Editor Forest and Stream:* In your subjoined statement to Mr. R. J. Wilkin's letter in the issue of FOREST AND STREAM of Nov. 13, there is evidently some

misunderstanding. In my conversation with you I said that "Division Representation" was based on a ruling made by the Executive Committee, not the Board of Governors, and that my authority was Mr Robert J. Wilkin, to whom I referred you at the time. Kindly give this correction space in your next issue, and oblige.

FRANK L. DUNNELL, Commodore.

[We are under the impression that the statement as originally made to us, mentioned the Board of Governors and not the Executive Committee, but as the business of the meeting had just begun, there was no time then for a discussion or for obtaining particulars of the reported decision. It would now appear that no decision has been made by either body.]

Yachting.

AT a special meeting, on Nov. 11, the Massachusetts Y. R. A. decided to abolish time allowance at once, and not to allow time for another year to the older boats.

THE Society of Naval Architects and Marine Engineers held its annual meeting in New York, on Nov. 11-12, a number of interesting papers being read and discussed.

Having disposed of Britannia, the Prince of Wales has very naturally ordered a new racing cutter, to be designed by Watson, built by D. & W. Henderson, and sailed by Capt. John Carter, all of these experts having done their parts toward the wonderful success of the old boat. The new one will be much smaller than Britannia, about the size of Mr. Watson's successful Bona, built this year; she being 75.80ft. l.w l., 18 10ft beam, and carrying 7,600-q ft. of sail, making her linear rating 82 1l. The size itself is enough to settle the authenticity of any wild rumors as to intentions to challenge for the America's Cup, with the prospect of meeting Defender; or of the latter crossing the Atlantic to meet the new boat.

The change of size marks, we hope, the abandonment of the so-called "90ft. class" on the other side of the ocean, and on this side as well. The experience on both sides has fully proved that there is no demand on the part of even the wealthiest of racing yachtsmen for such large and expensive racing craft; and that, if built at all, it is only by royalty or or by syndicates of wealthy men who are not always yachtsmen. The influence of the class on yacht racing at large has been distinctly bad; and is one of the great reasons for the abandonment of yachts of racing build in the large and medium sizes and the rush for very small racing machines or one-design classes.

There is very little possibility of the building of racing yachts of even 75ft. l.w.l. in America to-day; but the establishment of such a class would do more than anything else to bring about a restoration of international races on large yachts.

The Principles of Measurement.

Editor Forest and Stream:

Answering Sextant in your issue of Nov. 6 briefly, for no new points seem to be adduced. First head (*a*). Instead of all, I should have said most. As illustrative, the 21ft. class, the 30ft. class and the 34ft. class, all built under specific restrictions, failed to produce the type of yacht the class was intended to produce.

The success of several designs for commercial purposes by naval architects whose reputations were gained from the design of yachts, is evidence of the commercial value of the lessons thus learned. Sextant says: "Measurement rules are based on the fact that large boats are faster than small ones." He will probobly desire to qualify this statement in some way in view of the recently reported speeds of above eleven knots by 20-footers, speeds that few larger boats have exceeded.

As I have stated already, if (*a*) fails of proof then C is correct. I am simply taking what seems to be an existing opinion and suggesting a means of measuring or comparing yachts. (*b*) When I wrote, "Sail area is not in the least a factor in the speed that comes from length," I had reference to the reduction in retarding forces, which, with a constant displacement, comes from added length and consequently decreased breadth, and therefore less disturbance As a practical illustration, I have sailed in a yacht in which the increase of length, with increase of heel, amounted to a maximum of about 30 per cent., and with each increase of heel came increased speed.

(*d*) Concerning freedom of design. The English girth rule, the French rule, the English tonnage rule, all were unsatisfactory. The rules proposed both by A. Cary Smith and Cox seem to have been dropped. In all of these the designer was limited, either directly or indirectly. In none was there an attempt to do more than approximate. In the proposed rule all of the elements are derived directly and leave an open choice with the designer to take any combination he likes to win prizes. Not by speed alone, but by a combination of speed with other desirable qualities. I know that this is desired by the majority of yachtsmen whom I have the pleasure of knowing.

Fourth: The various points here raised are in the main practical and must be decided by practical men. I must object, however, to the use of the word control where I used encourage.

The statement, "the allowance of time to a small yacht by a larger one, both having the same length and sail area, is so illogical that it is not surprising that the author dodges the concrete question." Now compare two yachts:

	L W. L Length		Beam. over all.				Displacement.	Cubic.	Sail Area.
	Erect	Heeled.		Erect.	Heel'd.	Dft.			
A	30	38	45	10	7	7	13,000	10.000	1,800
B	30	32	45	10	9	5	20,000	20.000	1,800

According to Sextant and C., these yachts should race on even terms, though A has less of accommodation than B, is in fact a racing machine, while B. is a roomy safe cruiser. By the proposed rule, A. measures for racing 38.68; B. measures 32.28, and any yachtsman of practical experience will say that this is fair.

It is by no means unprecedented to give a prize to a yacht finishing other than first.

Finally: As to the theoretical and practical accuracy of the time allowance tables. The speeds given by C. were all made in strong winds, and therefore favorable to the larger yacht. Compare them.

	Speed.		Length.			
	Ratio.	Actual.	Actual.	$\sqrt{L}$.	Ratio.	60% of
Glencain and Momo..		11	33	5.74		
Thirty-footers	1.18	13	42	6.48	1.13	.67
Dorothy	1.18	13	31	5.56	0.97	.58
Defender	1.45	16	95	9.74	1.70	1.02

They do not agree very well under the lengths stated by C. Now compare again by the actual L.W.L., that the rule contemplates.

	Speed.		Length.			
	Actual.	Ratio.	Actual.	$\sqrt{L}$.	Ratio.	60% of
Glencairn	11		17	4.12		
Thirties	13	1.16	30	5.47	1.32	.79
Dorothy	13	1.18	25	5.00	1.21	.73
Defender	16	1.45	90	9.48	2.30	1.36

The agreement here is still bad. Practically, over long courses there is no chance for the smaller yacht, even when the allowances are doubled. The allowance table states, "opportunities for speed vary with the square root of the length, and for light winds .06 is allowed."

We must subdivide our yachts for racing purposes into many classes, and either legislate to give the cruiser a chance or else adopt C.'s suggestion.

The writer will welcome almost any rule that has actual dimensions where length is an element and displacement or cubic contents is another, or where actual area of midship section below L.W.L. is used with L.W.L., but is opposed to any rule in which breadth and depth appear as the equivalent of the midship section, where the overhangs are arbitrarily taxed or where any special type is aimed at.

Let us try to abolish approximations, and if we want displacement, ask for it; if speed, ask for speed; and whatever elements we use, take them from the draft of the designer, and take them as they exist when the yacht is sailing. A.

Notes on the Yacht Defender and the Use of Aluminum in Marine Construction.

BY RICHMOND PEARSON HOBSON, ASSISTANT NAVAL CONSTRUCTOR, UNITED STATES NAVY.

Reprinted by permission from the Proceedings of the United States Naval Institute.

Copyrighted by the U. S. Naval Institute.

(Continued from page 395.)

ABROAD a number of experiments have been made.

In connection with the building of the torpedo-boat Foudre, Mr. A. F. Yarrow carried on a series of experiments, the results of which he describes as follows: "With reference to corrosion from sea water, we have tried a series of experiments, extending over twelve months, and we find, provided there is no galvanic action due to other metals being in contact with aluminum, the corrosion may be taken at under 4 per cent. for aluminum for plates about ⅛in. thick, the surface being unpainted." *

This rate is not unfavorable in comparison with the usual rate for steel.

As a result of investigations of corrosion incident to the subsequent condition of the Foudre, M. Le Chatelier, Naval Constructor, French Navy, pronounced that aluminum is oxidizable in proportion to its impurities; that salt water affects the aluminum of commerce, but not pure aluminum; that pure aluminum resists oxidation as well as gold and platinum, and is not attacked by nitric and sulphuric acids, though dissolving in alkalies and hydrochloric acid.

M. Besson, Naval Constructor, French Navy, arrived at similar conclusions after investigations in connection with the building of the Davoust for African service, stating that corrodibility diminished as the quantity of copper impurities diminished, pure aluminum being practically incorrodible, the impurities most instrumental in causing the corrosion being aluminum oxide, iron, carbon and silicon.

M. Guilloux, Naval Constructor, French Navy, designer and superintending constructor for the Vendenesse, who also inspected the Foudre after her corrosion, and who investigated the subject in conjunction with M. Minet, of the Ecole des Arts et Metiers of Paris, found that the usual assemblages of aluminum, taken at random, are liable to create batteries within themselves, and found that the more aluminum is electro-positive the better it resists salt water, and enjoined the following rules in the use of aluminum: 1. Choose aluminum as pure as possible. 2. Have the ingots mixed by fractional fusion to insure homogeneity. 3. Subject the material to galvanometric test and require it to be electro-positive to a piece already tried and found to give satisfactory resistance to corrosion. Take careful precautions during construction. Paint all surfaces and avoid absolutely all contact with copper.

In the paper in which these investigations were described, read before the Association Technique Maritime, which had been preceded by a paper on investigations in connection with the Vendenesse, M. Guilloux stated in conclusion that he regarded the metal as well adapted to marine construction, though delicate and as yet of irregular composition in production, while but slightly understood and insufficiently tried.

Experiments conducted at Neuhausen, Switzerland, in 1895, showed that pure aluminum was not attacked, while they showed that the copper alloys were badly attacked.

In connection with the application of aluminum to uses in the arts and industries ashore, various experiments have been made in the United States and abroad on its resistance to the usual agents that attack metals, noted among which experiments are those conducted by Prof. Richards, of Lehigh University. The uniform result has been the establishment of the fact that aluminum offers particularly great resistance, except in the case of alkalies and the chlorine group.

The experience in actual service and the experiments made, as outlined above, are inadequate to a definite and final conclusion as to the corrosion of aluminum in salt air and salt water.

The consensus, however, would lead to the following general conclusions:

1. When isolated, pure aluminum is not attacked.

2. When isolated, the usual alloys of aluminum and commercial aluminum are attacked in a measure more or less proportional to the amount or per cent. of the alloy or impurities. Among the alloys, copper and zinc seem the most corrodible.

3. When in contact or in communication with other metals below it in electro chemical scale, galvanic action sets in and aluminum and its alloys are rapidly corroded. The action takes place when the contact is between different alloys of aluminum, and even between different pieces of the same alloy, when not homogeneous; and there is indication that the corrosion of isolated alloys is probably due, in large measure, to the galvanic action between the particles of the two metals in the body of the alloy. Copper is again the metal whose contact causes most accentuated action, and the copper alloy is the alloy in which galvanic action is most marked.

4. The conditions of corrosion can be ameliorated by the application of coatings and coverings. The usual coatings for iron and steel, however, are not adapted to aluminum, particularly red lead. In case of special coatings, as yet prepared, special care and frequency of application are required. It would seem that the special characteristic to be sought is impermeability.

While drawing the above conclusions on corrosion, the imperfect behavior of steel and iron should be borne in mind. With full appreciation of this imperfection, however, the comparison of the two metals gives the following general results:

1. At the present stage, structural aluminum is materially more subject to corrosion than steel. The marked corrosion, however, must be attributed to galvanic action due to the high electro-positive character of aluminum, the pure metal itself, practically incorrodible, being far ahead of steel, and to this galvanic action must be attributed the corrosion of alloys and the usual commercial aluminum where even there is no external contact with other metals, the action taking place in the body of the metal from the intimate contact of the molecules of aluminum with the molecules of the alloying metals or impurities.

2. This feature of inferiority must therefore be regarded as subject to future amelioration from increase of knowledge and selection in the preparation of the alloys and from improvement in conditions of insulation and protection. Substantial amelioration has already been found in the use of nickel for the alloy, without entailing loss of strength, while further amelioration seems promised in the use of tungsten for the alloy.

Special measures toward insulation seem not to have been taken or tested in any case.

3. The coatings used for painting steel are not effective in protecting aluminum, and the special coatings as yet prepared are but partially effective, and then only on condition of special care and frequent renewal.

4. This feature of inferiority must likewise be regarded as subject to future amelioration with further experiment and increase of knowledge. It could scarcely be expected to find a suitable coating without research, particularly when the usual coatings for steel are composed so largely of oxides of metals whose contact with aluminum sets up galvanic action.

5. The degree of importance of the inferiority of aluminum to steel in the question of corrosion varies with the conditions of exposure and is disqualifying when the exposure to salt water and spray is constant and where frequent visitation is difficult or impracticable.

The cost of maintenance and care and the length of life identify themselves, as seen above, with the question of corrosion. Without being able, evidently, to assign definite values, the cost of maintenance and care at the present moment must be taken as appreciably greater for aluminum than for steel. The cost of additional care is not of great consequence for parts easily accessible, provided the exposure is not great and the coatings applied or the other process of care are at all effective. For parts constantly exposed multiply the frequency of visitation, the additional cost is considerable, particularly where the parts are difficult of access. In such cases of exposure and difficulty of visitation, the inferior conditions of preservation reduce the length of life, which, under good conditions even, must be considered as shorter than the life of steel. This factor of cost takes on large proportions, and, at the present moment, must be considered prohibitory for water-washed surfaces and parts in contact with bilge water, while still of large consequence for all outside parts, topsides, upper works, and upper deck fittings.

F.—APPLICATIONS.

With the conclusions thus arrived at for cost of maintenance and length of life and the results of calculations for strength, weight and first cost, assembled in the table adjoined, a basis exists for judging between the two metals for adaptability to the various purposes of marine construction. For the present purpose, and in keeping with the necessitated method of broad treatment, examination will be limited to salient features only.

1. *Adaptability for shell plating.*

(a) *For plating below water.*

(1) Bottom plating requires, besides elastic strength for structural stresses, special ultimate resistance to dynamic strains incident to grounding or even docking or moving alongside of wharves.

While adequate to the first requirement, aluminum, as seen, is altogether lacking in the second; an aluminum bottom would be penetrated and torn open where a steel bottom would only be deformed without perhaps springing a leak.

A torpedo explosion on the bilge or flank would shatter aluminum plating over a large area, bilging in all probabilities a larger number of compartments.

From considerations of strength, aluminum is thus unadapted for bottom plating of large vessels unless reinforced by sheathing.

(2) Bottom plating is necessarily in constant exposure to salt water and beyond the reach of visiting, except at long intervals when in dry dock. Considerations of corrosion, of care and shortness of life also unfit aluminum for bottom plating of vessels keeping the sea, unless they are sheathed.

Notwithstanding its advantages of lightness, aluminum is therefore doubly barred from use for bottom plating of unsheathed vessels keeping the sea.

(3) The application of sheating to prevent fouling gives to steel bottoms an excess of resistance to penetration; its application to an aluminum bottom would supply the deficiency of resistance, and at the same time give protection from the contact of sea water.

Dynamic resistance in tension, elastic, ratio of, per sq in, .261, weight ratio .33.

Dynamic resistance in tension, ultimate, ratio very small, approximately inversely proportional to length.

Having a weight ratio of but .43, the aluminum bottom would realize a large saving amounting in a 9,000-ton vessel

* See paper by Mr. Yarrow in the Transactions of the Institution of Naval Architects, Vol. XXXVI., 1895.

to about 200 tons, a large fraction of the increase of weight due to sheathing.

The cost ratio being 2.83, the increase of cost in the case considered would be about $90,000, or about 3 per cent. of the total cost of vessel.

A 3 per cent. increase of cost is a small price to pay for a 2 per cent. saving of weight.

The bottom would still be liable to corrosion from the inside, and until experiments have been made with cement and other bilge coverings, it would not be prudent to use aluminum even for sheathed bottoms in the parts where bilge water is liable to collect.

(4) For torpedo-boats and small boats considerations of stiffness determine the scantlings for shell plating. The fiber stress of girder calculation in such cases is less than half the stress admissible. To give the same stiffness aluminum plates would be 1.34 as thick as steel, making a weight ratio of .48, but the same weight of aluminum plating would realize 9 times the stiffness. For stiffness, therefore, aluminum offers pronounced advantages. In cases of grounding, however, to which such boats are more or less liable in their operations in shoal water, the inferiority of aluminum in dynamic resistance would be in evidence as for the case of large vessels, debarring its use for keel plates and garboards.

When navigating in fresh water and when hauled up, such craft are removed from the corroding effects of salt water and sojourn in these conditions is more or less extended. The conditions of corrosion are therefore materially ameliorated, but would still require a suitable coating or paint of good resisting qualities.

The increase in cost would be similar to the increase in the case of large vessels, not at all prohibitory.

There are, therefore, material advantages to be gained in the use of aluminum for the bottoms of torpedo-boats and small boats generally, where saving of weight is precious and only the absence of a suitable paint stands in the way of adaptability.

(b) *For plating above water.*

(1) In conditions of usual service, plating above water does not require unusual dynamical resistance found necessary for the safety of bottom plating, and the pronounced greater elastic dynamical resistance of aluminum places it perhaps ahead of steel, notwithstanding the great inferiority in ultimate dynamical resistance. In battle, however, the inferiority of aluminum would again appear in an emphasized form in the increased wreckage and *débris* and multiplicity of splinters. The use of aluminum is, therefore, questionable in wake of gun protection and in the region of unprotected spaces occupied in battle. This is an important factor for unarmored war vessels and is serious for armored vessels, where, notwithstanding isolation of gun positions and the high degree of armor protection, the secondary battery is largely exposed, and fragments and splinters are still a menace.

The conditions of corrosion are severe just above the water line and would exclude aluminum from two or three strakes at least. For the topside above, subject to intermittent spray and sea, the conditions of corrosion, though much less, are still serious and would require an efficient protecting coating.

The increase in cost is similar to the increase for plating below water and is not commensurate with the similar large gain or saving in weight.

(2) Fragments and splinters in battle do not enter the consideration for torpedo-boats and small boats and for mercantile vessels.

(3) There is, therefore, an important field for aluminum in plating above water, restricted only by the lack of a suitable coating.

2. *Adaptability for framing.*

Requirements of dynamic resistance exclude aluminum from use in framing behind armor and in general from all association with armor except the support of weight. They affect its use in gun positions and in other spaces occupied in battle where fragments and splinters are to be feared.

For framing elsewhere, however, the nature of its resistance would not incur disadvantage for aluminum, except to a certain extent for outer angles of frames and longitudinals.

Considerations of corrosion are against its use as outer or frame angles in the parts liable to collect bilge water, also as outer angles on longitudinals in the same regions. The conditions for the other parts are also more or less severe.

For the purposes of comparison, assuming the use for all longitudinal and transverse framing below protective deck, and for half the transverse framing above the protective deck, the saving in weight in a 9,000-ton vessel of ample freeboard would be about as follows, with weight ratio .48 for shapes and .43 for plates:

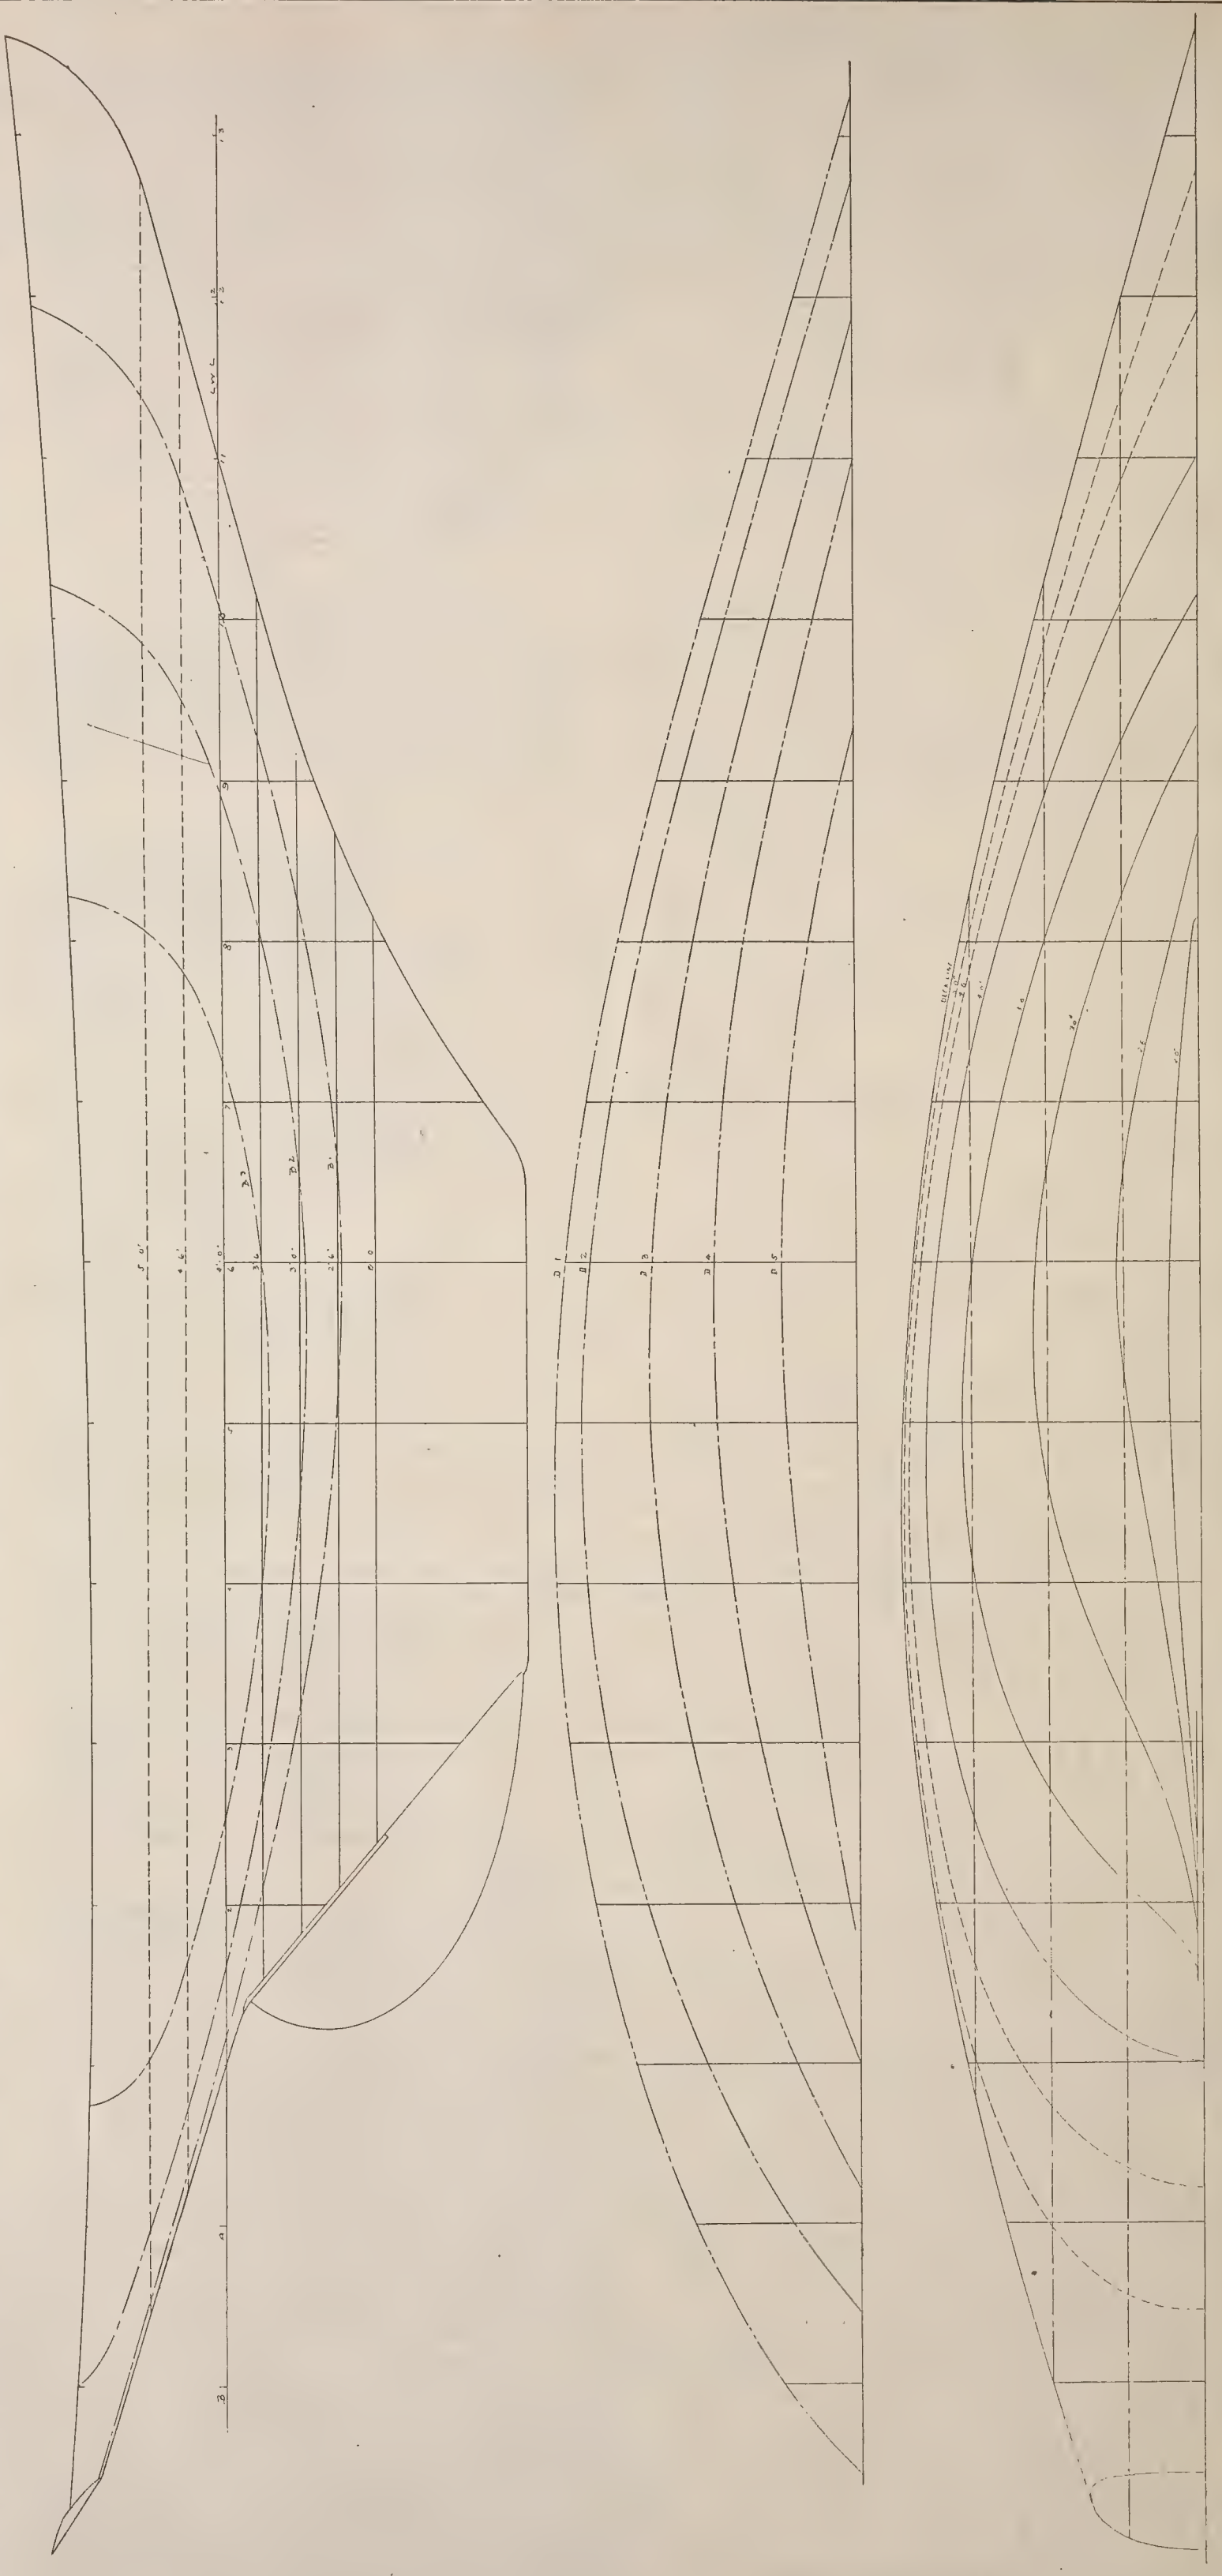
	Tons.	Tons.
Transverse framing below protective deck.....	..	about 58
In angles and other shapes.....about 30		..
In platework, floor plates, brackets, gussets, etc...about 28		..
In transverse framing above protective deck, angles and other shapes.....	..	about 13
In longitudinal framing.....	..	about 45
In plates.....about 32		..
In angles .....about 13		..
Total.....		116

Total saving about 116 tons. With cost ratio of 2.9 for plates and 5 for shapes, the additional cost would be about $98,000; $69,000 additional for shapes, and $29,000 additional for plates.

It is to be noted that the shapes realize only 56 tons of the 116 tons saved, while they entail $69,000 out of $98,000 increase of cost, illustrating the general fact of the smaller advantage to be gained in the use of aluminum for shapes, than is to be gained in the use for plates.

In the present case, as pointed out, the outer angles are additionally subjected to severe conditions of corrosion. If, therefore, these remain of steel, the saving in weight would be about 16 tons less, and the increase of cost would be reduced by about $20,000.

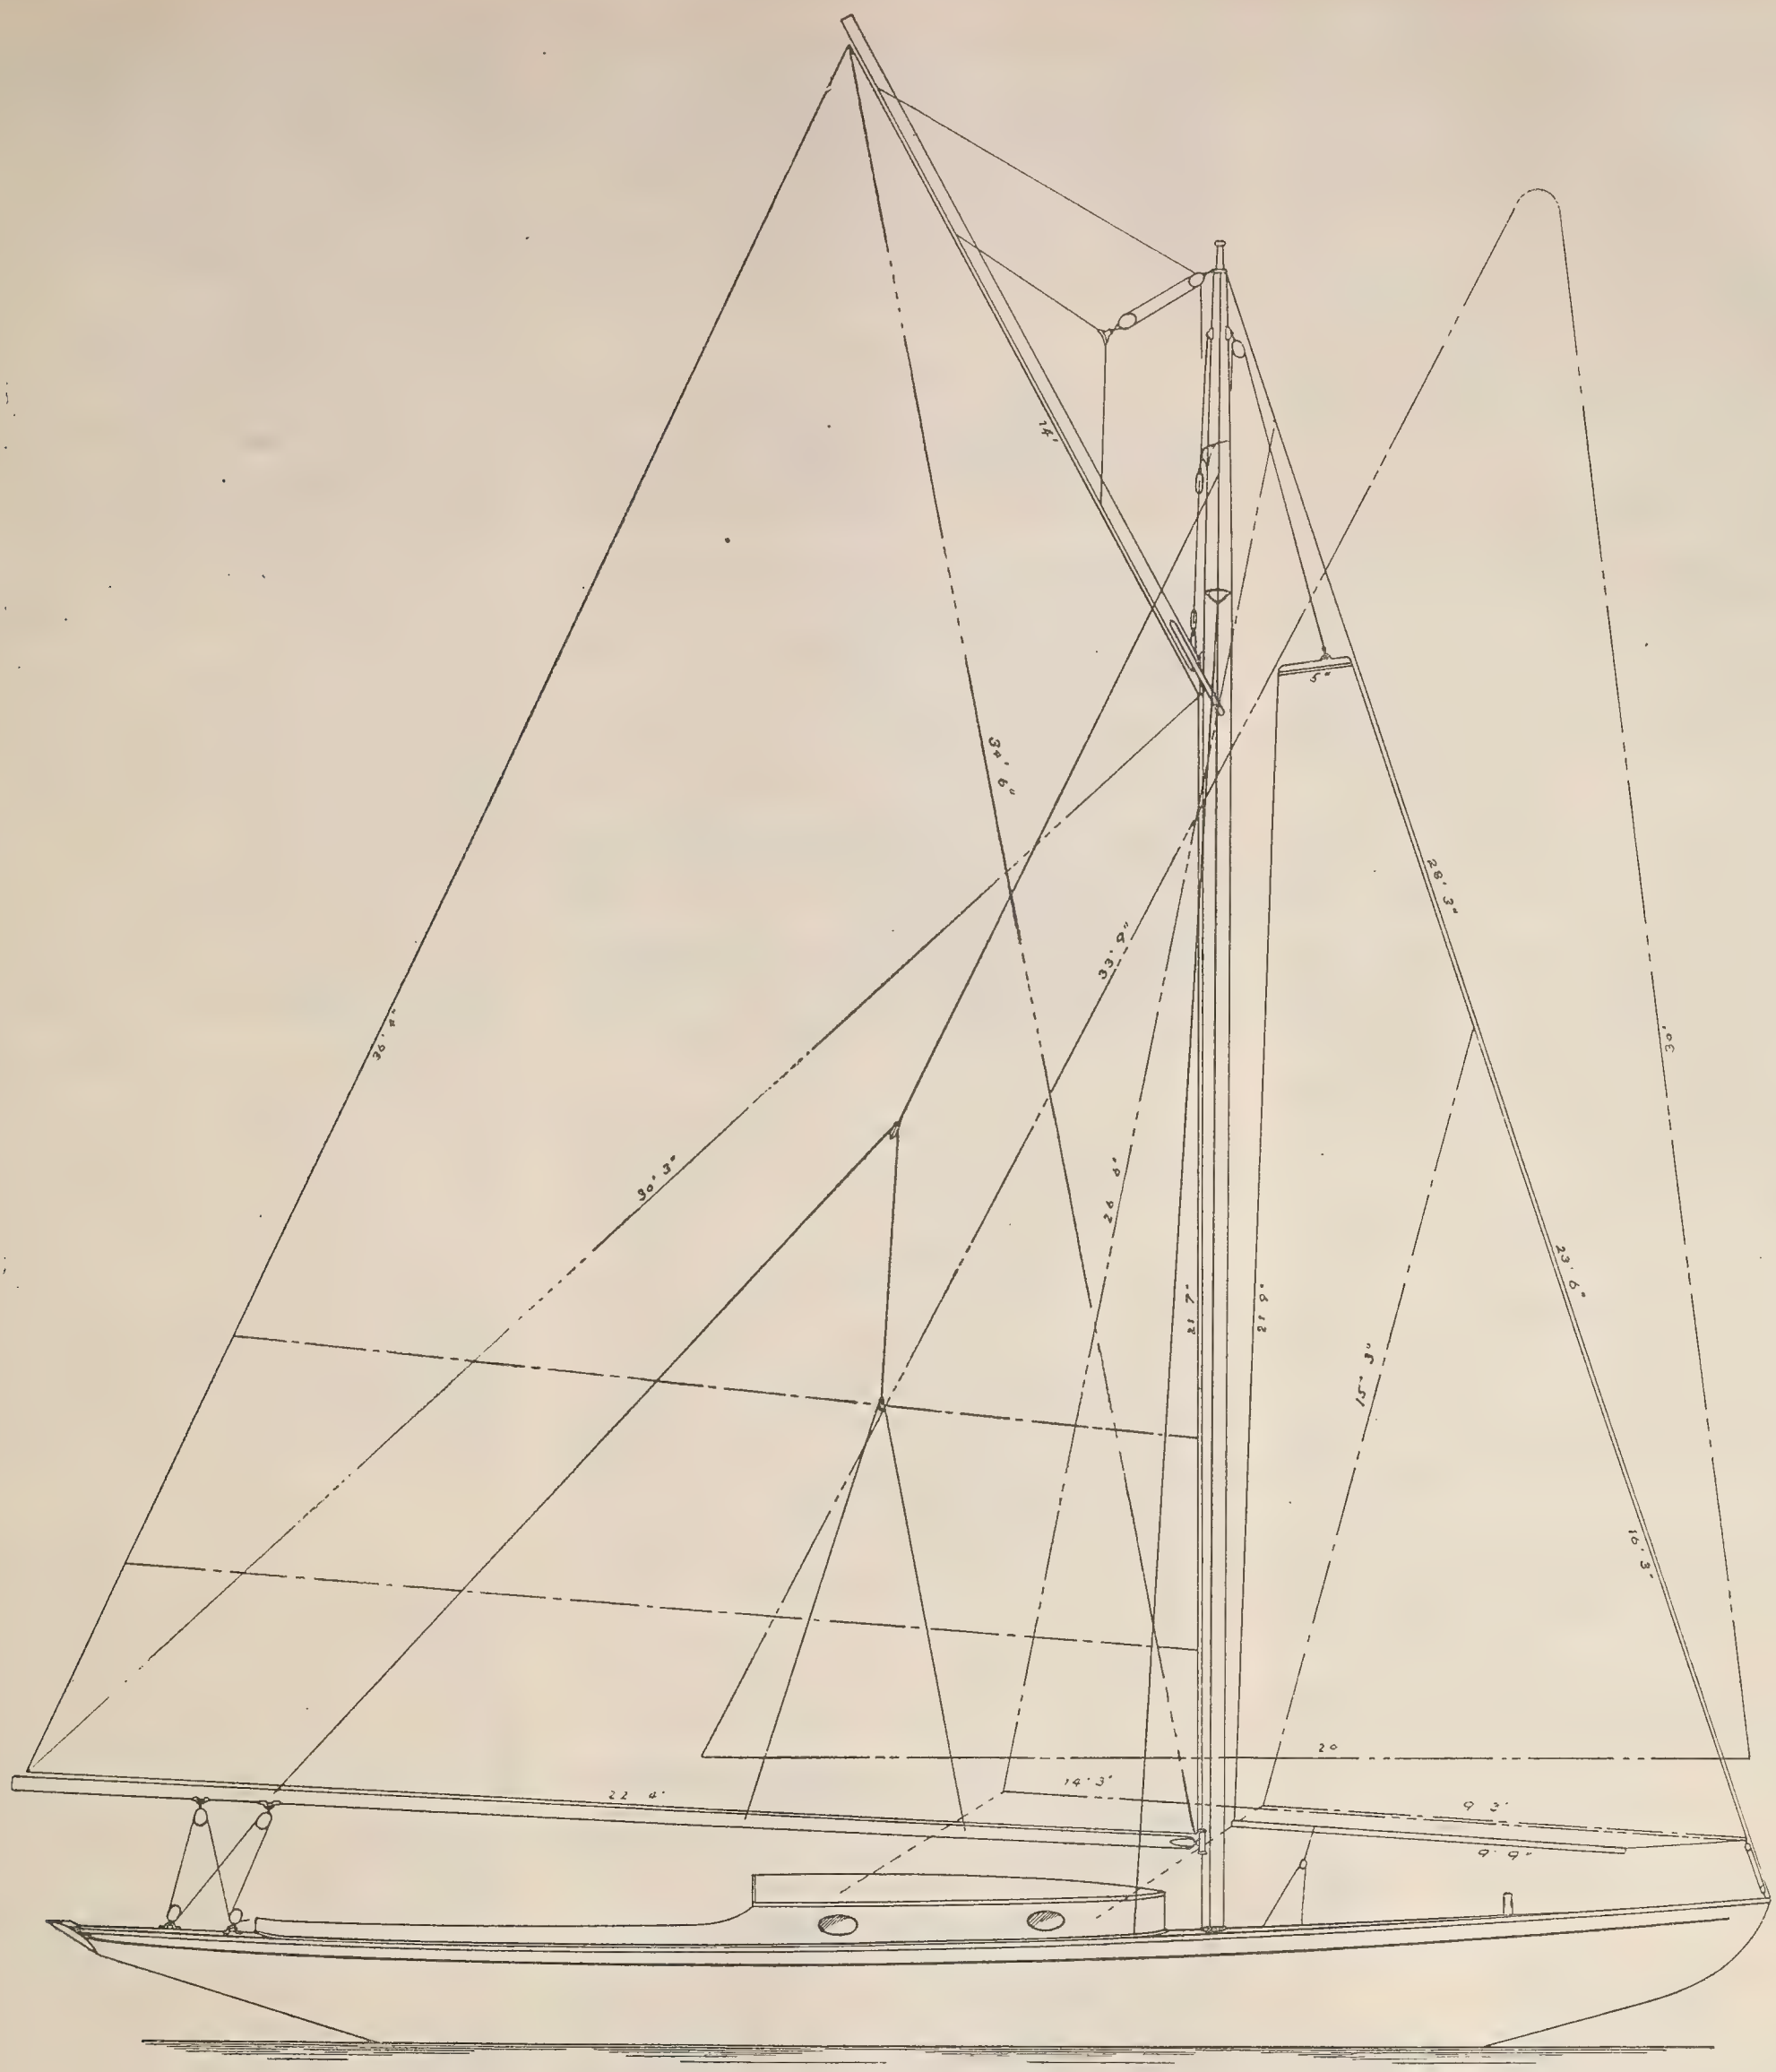
Considering the smaller advantage of weight, the larger increase of cost, the severer conditions for corrosion, and the lesser adaptability of resistance, it would appear advantageous to have the outer angles of steel, even in the case of the adoption of aluminum for the plates and inner angles.



For these latter plates and angles, decided advantage is to be gained in the use of aluminum when a suitable coating is found. Until this time, however, such use would not be prudent in view of the conditions of the double bottom and difficulty of access.

For framing below the protective deck forward and abaft the double bottom, and for framing above the protective deck, where not associated with armor, and where there is no special menace in battle from fragments and splinters, aluminum can be used with advantage in the present stage of progress, provided, as is assumed throughout, that use is made of an alloy other than copper, and that due attention is paid to preservation.

For torpedo-boats and for small boats generally, the conditions of corrosion of frames are not severe, and the frames are more or less accessible, excepting the lower parts of frames of torpedo boats. The nature of its resistance being suitable, aluminum is therefore adaptable. General adoption for this purpose, however, should also be preceded by experiments to determine the coating best suited for preservation, while it should be borne in mind that the gain in weight of about one-half entails an increase of five times in cost.



3. *Adaptability for inner bottom.*

The nature of aluminum's resistance is suitable for inner

SEAWANHAKA ONE-DESIGN KNOCKABOUT

Designed and built by W. B. Stearns, 1897.

SEAWANHAKA ONE-DESIGN KNOCKABOUT.

bottom plating where the conditions of corrosion are not severe, due regard being taken to the conditions of the underside and the difficulty of access. With a coating of fair efficiency, and with due attention, aluminum offers decided advantages for general adoption for inner bottoms. Taking the case of a 9,000-ton vessel, the gain in weight with plates of equal stiffness would be about 30 tons, and the increase in cost would be about $16,000.

4. *Adaptability for bulkheads.*

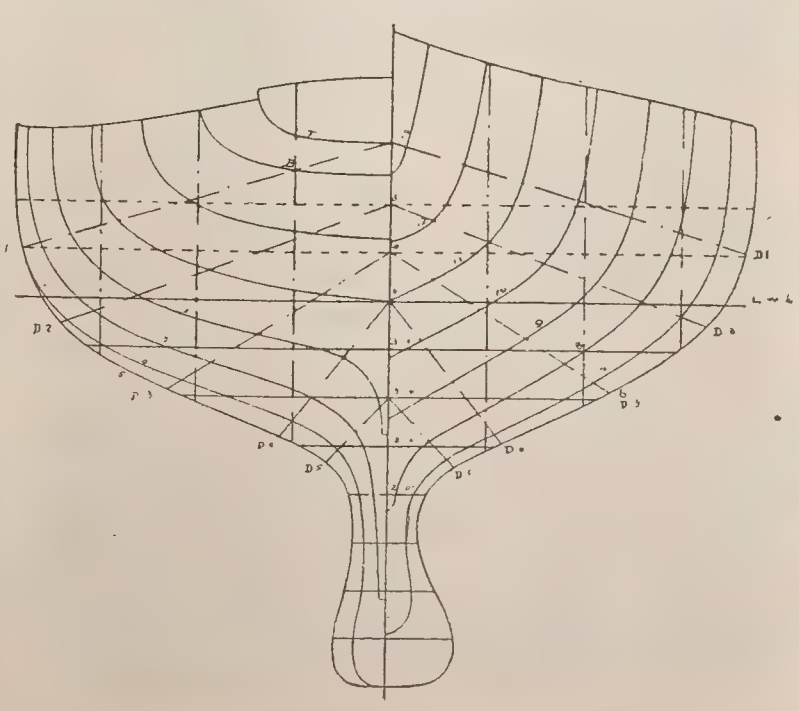
The integrity of bulkheads is undermined as a rule by distortion destroying water-tightness, while rarely, if ever, is the metal called upon to exert its ultimate strength of resistance. The superior stiffness and greater elastic resistance of aluminum mark it, therefore, for special adaptability for bulkhead purposes, for both plating and stiffeners.

Standing vertically, as it does with ease of access, and without exposure of any kind, the conditions for preventing corrosion are peculiarly favorable.

Aluminum therefore, is eminently suitable for bulkhead purposes for all classes of vessels.

Taking a vessel of 9,000 tons of unusual subdivision and high freeboard, and assuming equal stiffness, the saving of weight and increase of cost are about as follows:

	Weight Saved.	Increased Cost.
Transverse bulkheads below pro'ective deck	45 tons.	$33,000
Transverse bulkheads above protective deck, W. T.	30 tons.	27,000
Transverse bulkheads above protective deck, light divisional	7 tons.	5,000
Longitudinal bulkheads below protective deck	96 tons.	77,000
Longitudinal bulkheads above protective deck	23 tons.	18,000
Longitudinal bulkheads above protective deck, light divisional	9 tons.	2 000
	210	$157,000



Total weight saved 210 tons, about 2⅓ per cent. displacement.
Total increase of cost $157,000, about 5 per cent. of total cost.

5. *Adaptability for decks.*

For reasons pointed out above, aluminum is debarred from association with the protective deck. The nature of its resistance, however, is suitable for other decks, both for beams and plating, exception being made for stringers and tie-plates, reservation being made also for considerations of fragments and splinters in battle as pointed out above.

For beams, however, with the present conditions of manufacture, the sizes required for large vessels, for which there has yet been no demand, could probably be produced only with increased difficulty, though for the present purpose it will be assumed that they could be produced at the price quoted above for shapes.

Conditions of corrosion would exclude the use for the upper deck unless the plating were covered by wood flat. As a matter of fact such a wood flat is found, as a rule, on the upper deck of war vessels where the deck is of steel. All other decks would require efficient linoleum or other covering on top and an efficient coating on underside. For structural purposes the deck stringers would remain of steel.

For a vessel of 9,000 tons, supposing the decks except the protective deck to be of aluminum, both plating and beams, the saving of weight and increase of cost, assuming equal stiffness, would be about as follows:

	Weight Saved.	Increased Cost.
Main deck	about 85 tons.	about $60,000
Gun deck	about 60 tons.	about 42,000
Berth deck	about 67 tons.	about 47,000
Platform deck	about 21 tons.	about 15,000
Flats and floors	about 2 tons.	about 1,000
	235	$165,000

Total weight saved about 235 tons, about 2⅔ per cent. of total weight.

Total increase of cost about $165,000, about 5½ per cent. of total cost.

6. *Adaptability for other hull work.*

(1) For casings and trunks the same advantageous conditions are offered for aluminum as pointed out in the case of bulkheads. For a 9,000-ton vessel the saving in weight would be about 45 tons, about 51 per cent. of the weight in steel, with an increase of cost of about $30,000, about 2⅓ times the cost in steel.

(2) For small trunks and ducts, coaling trunks, ventilator trunks, forced draft ducts, ammunition hoist trunks, chain lockers, blower casings, the same conditions hold; the saving in weight would be about 32 tons, and the increase in cost about $21,000, bearing about the same ratios to tota weight and cost in steel as found for casings and trunks.

(3) Similarly for hammock berthing where the saving in weight would be about 14 tons, and the increase in cost about $9,000, bearing about the same ratios to total weight and cost in steel.

(4) For metal ceilings inside the same conditions hold, giving a saving of about 6 tons with an increase of cost of about $4,000, bearing about the same ratios to total weight and cost in steel.

It should be remarked that the greater conductivity of aluminum would increase the condensation, requiring special provision against same in living spaces.

7. *Adaptability for hull fittings.*

(1) For the ventilating system the conditions for corrosion

are not severe and there are no special requirements for resistance. Aluminum is therefore suited to the air ducts and fittings, and the pipes and cowls, into which forms it can be readily made and is easily worked. On the vessel taken for the comparison the saving in weight would be about 20 tons, with an increase of cost of only about $8,000, the cost ratio being taken at 1.24. About 3½ tons are saved in the copper and brass cowls, rims and hoods, without increase of cost.

For the cowls, too, the lighter weight affords greater ease of manipulation for trimming to wind.

(2) For metal doors, water-tight and non-water-tight, the advantages of aluminum are in special evidence. For water-tight doors the stresses are similar to those of bulkheads, the main consideration being stiffness and resistance to deformation. The distinctive superiority, however, lies in the greater ease of opening and closing afforded by the lighter weight. On the vessel in question the saving in weight would be about eighteen tons and the increase of cost but about $6,000. There would be advantage for the substitutions for some wooden doors, as to staterooms, where lightness is also specially desired.

(3) For hatches (other than armored), man-hole covers and frames, the same considerations hold. The saving in weight would be about eleven tons, with an increase in cost of about $4,000.

(4) For torpedo ports and coaling ports, the special advantage of ease of handling is again in evidence, though the conditions of corrosion would require an effective coating on the outside. The saving in weight would be about five tons and the increase of cost about $2,000.

(5) For dead light, air port, and deck light frames and casings, cast aluminum would be well suited, provided due attention is given to consideration of corrosion, proper care in selection of material of castings, and application of effective coating The saving in weight over the brass castings would be about fifteen tons without any considerable increase of cost.

(6) For metal ladders and gratings, ease of handling due to lightness gives a distinct advantage, and conditions of corrosion are not severe. The saving of weight would be about three tons and increase of cost about $1,000. There would also be advantage in many cases in the substitution of aluminum for wood gratings.

(7) For masts and spars the advantage of lightness is in special evidence as reducing high weights, and the conditions of corrosion are not severe. Aluminum is, therefore, well adapted for usual service where sails are not carried and unusual forces are not to be resisted. It is to be noted, however, that in battle an aluminum lower mast would be more likely to be shattered and drop its charge of military tops, etc. For the lower booms, or boat booms, lightness offers additional advantage for rigging in and out.

The substitution in the case of a vessel carrying two military masts of usual development would be about fourteen tons, the increase of cost about $7,000.

(8) Among additional miscellaneous fittings for the application of aluminum may be mentioned fresh water tanks, galley outfit, furniture, ammunition boxes, binnacles, lanterns, etc.

Reference has been previously made to the fact of aluminum's being largely debarred from boiler and engine application on account of the overthrow of its physical properties by heat, even at comparatively low temperature It should be pointed out, on the other hand, that this obstacle is not incurred in a number of applications in the engine and fire rooms, such, for instance, as the parquets or floors, envelopes of boilers and condensers, condenser tubes, etc. In connection with the use for condenser tubes it would be necessary to avoid the use of alkalies like soda in cleaning. In the above and in many other applications the lightness of aluminum would be in large advantage, particularly for reciprocating parts. In other applications, to parts of machinery where unusual forces are not to be feared, where the oft-repeated forces are well known, the high elastic dynamic resistance would in addition be of decided advantage. For the present purpose, however, this field of application is not investigated.

(9) The above applications, assembled, are as follows:

First, where, at the present stage and under the present condition of manufacture, aluminum could be used to advantage, provided a suitable alloy other than copper is used, and provided due care and attention are given to preservation, as follows:

For Hull Work.

	Case of 9,000-ton Vessel — Saving in Weight.	Increase in Cost.
Bulkheads	210 tons.	$157,000
Casings and trunks	45 tons.	30,000
Small trunks and ducts	32 tons.	21,000
Hammock berthing	14 tons.	9,000
Metal ceilings	6 tons.	4,000
Total in hull work	307 tons.	$221,000

For Hull Fittings.

Ventilation system, ducts, pipes, cowls and fittings	20 tons.	$8,000
Metal doors	18 tons.	6 000
Hatches	11 tons,	4,000
Torpedo ports and coaling ports	5 tons.	2,000
Metal ladders and gratings	3 tons.	1,000
Masts and spars	14 tons.	7,000
Total for hull fittings	71 tons.	$ 28,000
Total for hull work	307 tons.	221,000
Total	378 tons.	$249,000

Thus, at the present state of manufacture and with present means of preservation, there could be realized with safety on a vessel of 9,000 tons a saving of about 380 tons with an additional expenditure of about $250,000, or an economy of about 4¼ per cent. of the total weight of vessel with about 8⅛ per cent. entailed increase of cost. The relative advantage is most marked in the case of hull fittings, where the saving of weight is about 14 per cent. of total weight of hull fittings, and the entailed increase of cost is only about 8½ per cent. of total cost of hull fittings.

Second, where aluminum can be used with advantage as soon as experiment finds an efficient coating against corrosion, as follows:

For Hull Work.

	Case of 9,000-ton Vessel — Saving in Weight.	Increase. in Cost.
Shell plating.		
Bottom plating of small vessels		
Bottom plating of large vessels when sheathed	200 tons.	$90,000
Topside plating of small vessels		
Topside plating of large vessels when not associated with armor or armored spaces occupied in battle		
Framing.		
Bottom and topside framing for small vessels		
Bottom framing except over angles of transverse frames and longitudinals in double bottom and topside framing for large vessels	100 tons.	78,000
Inner bottom plating	30 tons.	16,000
Decks, plating and beams	235 tons.	165,000
Total for hull work for sheathed vessel	565	$349,000
Total for hull work for unsheathed vessel	365	259,000

For Hull Fittings.

Dead lights, air ports and deck light frames and casings	15 tons.	$ 000
Total for hull work	365 tons.	259,000
Total	380	$259,000

Thus, as soon as an efficient preservative coat is found, a further field will be opened up where with a 9,000-ton vessel an additional saving of 380 tons could be realized by an increase of cost of about $510 000, or a saving of about 8½ per cent. of total weight and an increase of about 8⅜ per cent. of total cost.

When thus occupying its whole legitimate field in hull construction, the use of aluminum would realize, in a 9,000-ton vessel, a saving of weight of about 760 tons with an entailed increase of cost of about $510,000, or a saving of about 8½ per cent. of total weight with an increase of about 17 per cent. of total cost.

It should be recalled that the above results apply to a vessel of war, and for the present purpose it will suffice to point out that for a merchant vessel, where conditions of battle are not taken account of, the application would be larger.

* * * * * * * *

G.—SUMMATION—CONCLUSIONS.

The above comparisons lead to the following results:

Comparison for Strength and Weight.

1. In simple tension, aluminum, which is about one-third as heavy as steel, has about two-thirds of the ultimate and about fourteen-fifteenths of the elastic resistance.

In simple compression and shearing the ratios are slightly smaller.

2. In bending, aluminum bars of square section having the same weight as steel give about 2 9 times the ultimate strength and about 4 5 times the elastic moment of resistance, and are about 3 times as stiff.

Aluminum plates of equal weight give about 5.1 times the ultimate and about 7 8 times the elastic moment of resistance, and are about 9 times as stiff.

Aluminum shapes of proportioned dimensions of equal weight give for I beams about 2 9 times the ultimate and about 4 5 times the elastic moment and about 3.1 times the stiffness, and for angles about 2.4 times the ultimate and about 3 6 times the elastic moment, and about 2.3 times the stiffness.

3. In elastic elongation, aluminum gives about 2.8 times the elongation of steel with a modulus of elasticity of about one-third of steel. For elongation beyond the elastic limit, aluminum is incomparably below steel, the ratio being smaller as the length increases.

The dynamic resistance of aluminum in tension within the elastic limit is, therefore, about 2.6 times the resistance of steel per unit of cross section, and is about 7.8 times the resistance for equal weight.

Beyond the elastic limit the dynamic resistance of aluminum cannot be compared with the resistance of steel.

Comparison for Cost.

1. To realize the same resistance, plate work in aluminum costs, in general, about 2 8 times as much as steel in hull work, and about 1 2 times as much in hull fittings; angle work and work in other shapes cost, in general, about 5 times as much in hull work and about 1.7 times as much in hull fittings.

Cast fittings in aluminum cost about 1.5 times as much as in steel, and about the same as in brass.

In all of these cases the weight for aluminum construction is less than half the weight for steel, and about one-third the weight for brass.

2. The cost of maintenance and care is at present substantially greater for aluminum construction than for steel construction, and increases in proportion to the exposure to corrosion, which becomes exaggerated where conditions favor galvanic action.

3. The length of life of aluminum construction under favorable conditions must be regarded at present as substantially shorter than the length of life of steel construction, on account of pronounced tendency to corrosion. This tendency has been found to be due in most part to galvanic action, largely caused by the alloy or impurities in the metal, an alloy being necessary to realize good results of strength. Of the alloys tried, the copper alloy has given the worst results for corrosion.

As yet a suitable protecting coating has not been found, and the field is calling for further scientific experiment.

The cases of the employ of aluminum have been unfortunate in results of corrosion, but they have been incomplete, and the conditions, upon examination, have been found to have been extremely severe.

With a properly chosen alloy, like the nickel alloy, and with proper care, aluminum can be safely used where there is not direct exposure to salt water and spray, and the further extent of the advantageous use to fields where the exposure is not specially severe is only held back by the lack of an efficient protective coating.

Applications.

The results of the comparisons for strength and weight and for cost lead to the conclusion that at present aluminum is adapted for use in hull work for bulkheads, casings and trunks, small trunks and ducts, hammock berthing and metal ceiling, and for use in hull fittings for parts of ventilation system, for metal doors, hatches, torpedo ports and coaling ports, metal ladders and gratings, masts and spars; this adoption in the case of a 9,000-ton vessel, realizing a saving in weight of about 380 tons at an increase of cost of about $250,000.

The same results lead to the conclusion that as soon as an efficient coating is found, aluminum will be further adapted for the bottom plating of sheathed vessels, for the bottom and topside plating of small vessels, part of the topside plating of large vessels, for bottom and topside framing of small vessels, for topside framing of large vessels, for the bottom framing of large vessels, except outer angles in double bottom, for inner bottom plating, and deck plating, and for dead light, air port and deck light frames and casings, realizing by this adoption in a 9,000 ton vessel a saving in weight of about 380 tons at an increase of cost of about $260,000.

It is to be remarked that in the above applications it is assumed that galvanic action does not set in from the contact of aluminum and steel, an assumption apparently justified by experience thus far; but in course of time it is largely probable that appreciable action would set in, if some insulating provision were not made in the joints between the two metals. It is not believed, however, that such insulation provision would be impracticable.

It may be recalled also, as stated in the outset, that performances and homogeneity of aluminum as taken are somewhat ahead of the present stage of manufacture, and that the applications have been extended to dimensions and scantlings not yet commercially turned out.

Moreover, it should not be overlooked that the element of cost in the maintenance and care of aluminum construction and the length of life are not well determined and are difficult to evaluate on account of the limited experience.

The results arrived at are thus to be taken in connection with the limitations necessarily imposed by the fact of the field being essentially new.

In summation, and in conclusion, aluminum has incontestable virtues as a structural material. Its great elastic elongation and resistance within the elastic limit places it far ahead of steel for resisting usual, well determined and repeated dynamic forces, while its great comparative lightness marks it for marine construction. On the other hand, it has serious defects. An excessively low elongation beyond the elastic limit unfits it entirely for use where liable to be subjected to violent and unknown dynamic forces; temperatures beyond atmospheric undermine its physical properties; while, notwithstanding an innate superior resistance when pure to the attack of corroding agents, the high position on the electro-chemical scale causing excessive tendency to galvanic action, places a severe obstacle in the way of adoption where exposed to salt water and spray, particularly in the case of alloys, in which form alone the metal exhibits its best physical properties. This last serious defect, however, must be considered as subject to constant amelioration with increase of knowledge and experiment in precautions and higher perfection in manufacture.

Thus, while this new metal has an important field in marine construction, an important field now ready for occupation, and additional fields awaiting only the improvement in conditions for resisting galvanic action, these fields are essentially limited, and the larger domains are shut out by impassable barriers.

The early optimist who inferred all virtues from a single virtue, and the later reactionist who pronounced general unfitness from a few partial trials, were both wide of the mark. The metal is not utopian, but it has, nevertheless, beyond question, an important mission for the serious marine architect, who is only waiting further improvement in manufacture and reduction in cost and further amelioration in conditions of corrosion.

For the naval architect of our own country, for our country itself, the question has a special significance.

The maintenance of a strong commissioned naval force must be our country's policy for taking its destined part of international greatness in regulating the common affairs of the planet, but our position and the spirit of the nation mark our naval policy specially for a great force kept economically in reserve, commissioned only periodically for drill purposes.

In a state of reserve the conditions of corrosion are greatly ameliorated. The vessels seek and lie in fresh water; the torpedo-boats and small boats, which do not seek fresh water, are hauled up under sheds. Under these conditions the great obstacle of corrosion is largely removed from aluminum's path. Indeed, aluminum appears to be superior to steel in the resistance to the corroding effects of atmospheric exposure and of fresh water.

The question becomes more significant where account is taken of the great natural facilities and possibilities of our coast line for fresh water basins of large expanse for taking vessels of all sizes. It takes on a still more significant aspect when it is recognized that nature in the inland routes along the coast has marked small craft as our great second line of defense; while, in the inland waters of great rivers and great lakes in communication with the sea, she has provided immeasurable possibilities for the construction and maintenance of these craft.

Torpedo-boats which are thus marked for a great natural economical branch of national defense form now the least developed arm of our navy.

There therefore lies ahead, inevitably, a vast programme of torpedo-boat construction, for which every advantage of materials of construction should be earnestly sought. Fortunately for the nation, this branch of defense admits of rapid growth and may be expected to have large expansion in the near future. Indeed, the time is not far distant when, with treaty restrictions abrogated, we shall see on the Great Lakes, vast flotillas of torpedo-boats lying for most of the year in economical reserve, free from corrosion. Periodically, they will be commissioned for drill purposes, and from time to time will sally forth to the seaboard for mobilization and exercise in the operations of coast defense.

We would realize thus, at a minimum cost and a minimum turning away of the nation's energies from the channels of production, a great power, tranquil in time of peace and good-will, irresistible for defense in time of war.

[CONCLUSION.]

Mr. Brand's Challenge.

From the Yachting World, Nov. 5.

MATTERS in connection with Mr. J. Arthur Brand's challenge for the Seawanhaka C. Y. C. challenge cup continue to progress, but slowly. On Friday Mr. Brand received a cable from his agent, Mr. Sturdee, to the effect that if a race was wanted the necessary backing of the challenge by the Minima Y. C. would have to be sent immediately. Mr. Brand at once placed himself in communication with the Minima Y. C., and Admiral Hallowes has been requested to call a meeting of the committee to consider the matter. Since receiving the cable Mr. Brand has had a letter from Mr. Sturdee, informing him that he (Mr. Sturdee) had absolutely promised the Royal St. Lawrence Y. C. that a British boat will be sent over, provided all the arrangements for a contest are satisfactory. Mr. Brand is still waiting an official communication from the Royal St. Lawrence Y. C., giving the full conditions for the proposed meeting.

The 25ft. Knockabouts.

THE second meeting of the Long Island Sound yachtsmen interested in the new 25ft. knockabout class was held on Nov. 11 at the Grand Union Hotel. The weather was very bad, but a number of yachtsmen turned out, including B. B. Crowninshield, of Boston, who was present by request of the committee. Mr. Crowninshield's design, which was the choice of the first meeting, was finally accepted with some modifications, the freeboard, displacement and sail area being increased and a bowsprit added. The centerboard will be of wood. It is probable that some twenty of the yachts will be built.

The Seawanhaka One-Design Class.

THROUGH the courtesy of the designer, W. B. Stearns, of Marblehead, we are enabled to publish the accompanying designs of the new 21ft. l.w.l. knockabouts ordered for the Seawanhaka Corinthian Y. C. Twenty-five of these little yachts are now under way at Mr. Stearns' yard. The interior plans and further particulars will follow next week.

YACHTING NEWS NOTES.

ON Saturday, Nov. 27, the annual meeting of the Yacht Racing Union of the Great Lakes will be held at Detroit. On the following Saturday the annual meeting of the Lake Y. R. A. of Lake Ontario will be held at Hamilton.

Yampa, schr., R. S. Palmer, from Maderia for New York, put into St. Thomas on Nov. 5 with foresail carried away, sailing again on Nov. 9 after making repairs. The yacht had made a long passage, but all were well on board.

It is reported, on the authority of the *Field*, that Valkyrie III. will be fitted out for the Mediterranean races by her original owners.

A regular meeting of the Seawanhaka Cor. Y. C. was held on Nov. 9, with Rear-Com. Van Liew in the chair, in the absence of Com. Rouse, who has been seriously ill for some weeks. The trustees reported the election of fifty-nine members, filling the limit of membership. The race committee reported that the contracts had been made with W. B. Stearns, of Marblehead, for twenty-five of the new knockabouts. The committee also reported that it had challenged for the Seawanhaka cup, and the club, by unanimous vote, endorsed the challenge. The Twenty-second street club house is now open for the winter, and mess dinners, lectures and entertainments will go on as usual. Golf links are now being laid out at Center Island, for use next season.

A. C. A. Membership.

APPLICATIONS for membership may be made to the purser of the division in which the applicant resides on blanks furnished by purser, the applicant becoming a member provided no objection be made within fourteen days after his name has been officially published in the FOREST AND STREAM.

ATLANTIC DIVISION.

Rifle Range and Gallery.

Sportsmen's Exposition Tournament.

ONE of the principal features at the fourth annual Sportsmen's Exposition and Bicycle Show, to be held at Madison Square Garden, Jan. 13 to 22, will be the second annual grand championship rifle tournament. There will be in the programme of events an individual championship match, open to all, 10 yds., off-hand, at a 25-ring target, distance 100ft. Entrance fee for this test is $5, which will include a season ticket of admission to the Exposition. First prize, championship trophy and $10. The other twelve prizes will divide $110. A continuous match, open to all, distance 100ft., off-hand, at a 25-ring target. Entrance fee for ticket of three shots, 50 cents. First prize, $50; $140 divided in other prizes. There will be a target of honor, open to all, and a bullseye target, open to all. Full money prizes and premiums will be given. The target of honor will have $100 in cash prizes. The rules governing are as follows:

A shot must cut the ring to count.

All targets will be counted and entered by the official scorer, and will be returned to the shooter in case there is no dispute. The referee committee will decide all matters pertaining to doubtful scores. Any sights except telescopes allowed.

All questions in dispute not covered by these rules will be decided by the referee committee.

(Note.—Messrs. Zettler Bros will have charge of the ranges, and will furnish rifles and suitable ammunition free to all competitors. All kinds of .22 rim-fire ammunition will be on hand.)

The officials in charge are:

Tournament Committee: H. D. Muller, chairman; G. Zimmermann, C. G. Zettler.

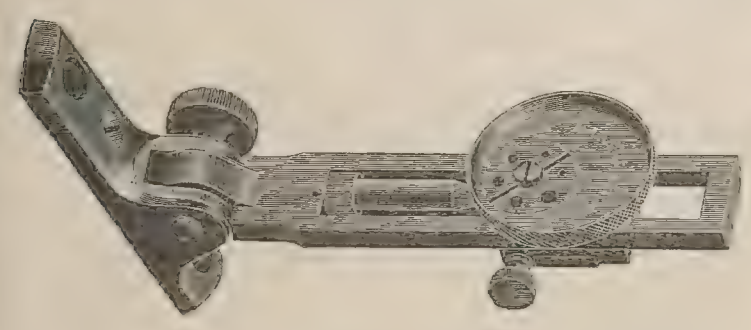
Edward Banks, Secretary, Forest and Stream Publishing Co, 346 Broadway, New York city.

Referee Committee: G. Zimmermann, chairman; J. Tholks, C. G. Zettler, R. Busse.

Honorary Committee: Capt. F. Ehlen, Capt. J. Radloff, President B. Walther, President Barker, Capt. G. Krauss, Capt. H. Mahlenbrock, Capt. R. W. Dewey, Capt. W. V. Weber, Capt. A. W. Lemke, President O. Uehlein, Capt. J. Facklamm, Capt. I. Martin, Capt. L. Dohling, Capt. E. Tietje, Capt. D. Meersse, A. C. Gould, Capt J. Ringler, Capt. F. Kleppsattel, Capt. T. Wolters, Capt. H. Erxmeyer, Capt. C. Basse.

A Remarkable Score.

OUR correspondent at Fredericton, N. B, Mr. Frank H. Risteen, under date of Nov. 8, writes:



The innocent amusement known as record-breaking which has raged with such epidemic violence for the past five years in the United States, insomuch that no man could feel safe on going to bed at night that his record would not be broken in the morning, has never been a popular pastime in Canada. Here if a man does a fast mile on a bicycle down hill with a cyclone at his back and a locomotive in front he does not claim to be the champion of the universe. If he performs the juvenile feat of shooting a few bull partridges in the head with a rifle he does not think it necessary to proclaim his achievement in the sporting papers. If he catches a big trout he does not rush to the photographer in search of immortality. Hence it now and then happens that a really notable and remarkable feat is performed which deserves to be placed on record, but which floats away with the smoke of things and is soon lost forever.

There is one such achievement, performed by a very modest man, who went on with his work next day as if nothing out of the ordinary had occurred, that I would like to rescue from oblivion. On Aug. 28 last, at the Fredericton rifle range, Mr. Roderick T. Mack, of this city, put up a score which I am inclined to think, taking all the conditions into account, has never been beaten on the earth. The distance was 200yds., the rifle an open-sighted military Martini with a 7lb. trigger pull; the position kneeling; the target was of regulation size, 8in. bullseye, counting 5; 4in. outside of that the inner circle counting 4; 4in. outside of that the magpie circle counting 3; the remainder of the target comprising the outer and counting 2 points. The shooting was performed in the presence of many members of the Fredericton Rifle Club, and so electrified were the markers in the butts that when Mr. Mack stopped shooting they rushed out of the butts and cheered the marksman. Mr. Mack fired 20 shots and made the marvelous total of 98 out of a possible 100, as follows:

5 5 5 5 5 5 5 4 5 5 5 5 5 5 5 5 5 5 5 4—98

Stevens's Wind Gauge Vernier Sight.

THE J. Stevens Arms Co., of Chicopee, Mass., has gotten out something new in the way of a wind gauge vernier sight. The new sight presents a neater appearance than the ordinary mid-range vernier, the thumbscrew at the top having been done away with and the leaf otherwise shortened. Elevation is secured by the rotating knurled thimble in the center of the leaf under the eye cup, while windage is obtained by means of the thumbscrew on the right side of the eye

cup. The eye cup is of course first loosened, and then the side motion is obtained by use of the thumb screw. This side motion amounts to ½in. either way if desired.

With the wind gauge on the vernier a lower base on the muzzle sight is rendered possible. This lowering of the base on the muzzle sight permits also the shortening of the vernier. Another advantage in having the wing gauge on the vernier is that the danger of adjusting a muzzle wind gauge on a loaded rifle is done away with. The vernier wind gauge sight is also made with a combination eye cup, which permits of several changes in the size of the aperture. At present it is manufactured for the Stevens Ideal rifles only.

Trap-Shooting.

Leading dealers in sportsmen's supplies have advertised in our columns continuously for almost a quarter century.

If you want your shoot to be announced here send in notice like the following:

FIXTURES.

NOV. 23-25.—ST. LOUIS, MO.—Tournament of the St. Louis Trap-Shooters' League. First two days, targets; last day, live birds. $100 added to the purses each day.

NOV. 25.—PAWLING, N. Y.—Thanksgiving tournament of the Pawling Gun Club.

NOV. 25.—BUFFALO, N. Y.—Thanksgiving Day tournament of the Bison Gun Club. Sweepstakes and merchandise events. C. H. Werlin, Sec'y, 1634 Broadway, Buffalo, N. Y.

Dec. 6-11.—WATSON'S PARK, Chicago, Ill.—*Dec. 6*—Heikes-Grimm match for the Cast-Iron badge. *Dec. 7*—Elliott-Gilbert match for the Kansas City *Star* cup. *Dec 8*—Sweepstakes, open to all. *Dec. 9*—Elliott-Gilbert match for the Du Pont trophy. *Dec. 10-11*—The Kansas City-Chicago team race.

Dec. 8-10.—INDIANAPOLIS, Ind.—Tournament of the Limited Gun Club. First day, sparrows; last two days, pigeons. Dec. 10, Grand Central handicap, 25 pigeons, $25, birds extra. Entries close Nov. 30, with a forfeit of $10; post entries, $30. Handicaps, 25 to 32yds. Royal Robinson, Sec'y.

Dec. 16-17.—CHARLESTON, S. C.—Tournament under the auspices of the Charleston and Palmetto Gun Clubs. Targets. Purses divided Rose system—four moneys. $200 added. G. H. Peterman, Sec'y.

1898.

Jan. 18-20.—HAMILTON, Ont.—Grand Canadian Handicap. Live birds; $1,000 guaranteed. For full information write secretary, H. Graham, American Hotel, Hamilton, Ont., Can.

March 22-24.—ELKWOOD PARK, Long Branch, N. J.—Interstate Association's sixth annual Grand American Handicap. 25 birds, $25, birds extra; $1,000 guaranteed to the three high guns; all surplus added.

March 29-April 1.—READING, Pa.—Annual tournament of the Pennsylvania State Sportsmen's Association, under the auspices of the Independent Gun Club, of Reading. A. Knauer, Sec'y.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed. Ties in all events are considered as divided unless otherwise reported. Mail all such matter to Forest and Stream Publishing Company, 346 Broadway, New York.

In Chicago trap-shooting is booming; at least we judge so from the reports of the Cook County Trap-Shooters' League's doings we have published monthly during the past season. In Philadelphia, the Philadelphia Trap-Shooters' League is a husky fellow, an organization that can draw out ten teams to shoot at targets in a perfect gale. Yet here in New York and the suburbs, we have not a single organization left. The New Jersey Trap-Shooters' League died suddenly about eighteen months ago. Then came the Amateur Trap Shooters' League, of New Jersey. That promised well, but six months was all that it could stand. So far as we know, it lacks pretty nearly every officer. Mr. E. A. Jackson, secretary of the Bergen County Gun Club, the club that was fairly entitled to first honors in the league race, has tried to find out how things are going with the organization, prior to his departure for the Klondike next spring. He tells us, however, that he has not received any reply to a circular letter he sent to each of the clubs forming the league, although the letter was mailed several months ago, and not one has been returned unopened. Cannot Vice-President G. H. Piercy and Secretary Thomas Bell get together and call a meeting, so that decks may be cleared for action once more? We need a good live trap shooters' league around here just new.

Chicago is fully alive to the important shooting events that are to take place at Watson's Park, Dec. 6-11. She is making preparations for that week in a style that warrants the belief that the Kansas City crowd will find nothing lacking in the warmth of the greeting it will receive nor in the hospitality accorded it. It is going to be a great week, and its promoters deserve every credit for bringing it about. In this city far more than a passing interest is being taken in the big events of the week; the greatest interest, perhaps, being shown in the outcome of the Heikes-Grimm match, Heikes being practically an untried man in live bird match-shooting circles. Everybody, however, puts it down for a settled thing that Charlie Grimm is up against no sort of an easy game. The one wish seems to be that the Chicago sportsmen may be favored with the best of weather and the best of birds during the whole week. The weather, of course, is under nobody's control; but Watson can be trusted when the quality of the birds to be furnished is under consideration; he doesn't seem to care a pin how many dead birds he can gather and sell to the market; his idea is to furnish birds that will make a man shoot straight and quickly to stop them within bounds.

The programme for the Carleton, Mich., Gun Club's tournament, Nov. 17-18, shows very plainly that much energy has been devoted to getting it up, and to making the shoot a success. A long list of merchandise prizes speaks for itself, and tells, better than words can, the time and labor expended in the interests of the club and its shoot. Before this issue is on the bookstands in the East the tournament will have started, so nothing that we can do in the way of reviewing the programme can be of any assistance to the club. It is worth while noting, however, that a shooter can enter for sweeps or for merchandise only. In the sweeps targets are charged for at the rate of 2 cents each, but when a man enters for merchandise, he pays at the rate of 3 cents per target. One-fourth of a cent will be deducted for every target thrown, such sum going to form an average fund, to go to the five high guns at the end of each day. All purses are to be divided under the Rose system.

The almost absolute dearth just now of real live trap news speaks most eloquently of the stronger charms of field and brush shooting. A man won't go down to the traps and blaze away at bluerocks, or even at live birds, when he can get away into the fields or woods and try what he and his dog can do on grouse, quail, woodcock, or the humble but agile cotton-tail. And when a man brings home a couple of grouse, two or three quail, etc., there's something tangible to show to his friends and relatives. A score of 1s and 0s in FOREST AND STREAM does not convey very much to the laity. But a bird! That's something they can understand. Hence we all go after birds when we get the chance. And if we don't shoot a bird, we—well, we get it somehow.

We have always liked the Novelty rule system of shooting targets, and have often suggested to the Interstate Association that it should recommend its adoption to some of the clubs who give tournaments under the auspices of that Association. The "eight unknown traps," with a handicap by distance, would go a long way toward making shooting at targets more interesting and less mechanical. Of course there is a slight additional expense to the club giving the shoot to have three extra traps to look after and provide for; but we think the club would gain in the additional number of entries it would draw to its shoot. We may be wrong, but we believe in novelty in trap-shooting, and in the Novelty rule in particular.

John Wright, the moving spirit of the Brooklyn (N. Y.) Gun Club, says that he will have the programme for the club's all-day shoot, Dec. 13, in the hands of the shooters by the first of the month. As there will not be much shooting around the city about that time, and as all field shooting will be over, save ducks, there should be a good attendance at Liberty avenue and Enfield street, Brooklyn, on the above date. As stated in Drivers and Twisters last week, the main event will be a handicap affair, probably at 30 targets, and each man will know his handicap upon receipt of the programme. This idea of Mr. Wright's is somewhat of an experiment, but we think that it will be approved of by the shooters interested.

For the next two weeks we are going to enjoy what we consider to be a well-earned vacation. Pamlico Sound and the eastern shore of North Carolina will probably be able to tell something about our trip that modesty will prevent us from relating on our return. In view of our absence from the office and the difficulty of reaching us by mail, we would urge upon all correspondents to our trap columns to send all such matter addressed simply to Forest and Stream Publishing Company, 346 Broadway. On our return, if the camera is as effective as our gun is liable to be, we shall have something worth showing.

An employe in a wholesale rubber goods house in New York had a close call recently. He was out shooting on the meadows and was concealed in the grass. Raising himself up to look around, he was greeted with a charge of No. 6 shot, all the charge save a single pellet striking him on the breast. That one pellet lodged in the right hand side of the lower lip. The balance did him little harm. The gentleman in question weighs, at a rough guess, in the neighborhood of 220lbs., and is smooth-faced also, so it is hard to guess what kind of of a bird the man who shot at him took him for. Anyway, it's a very lucky thing that he made the common error of undershooting a rising bird!

Since writing our views on the trap shooting situation we have had he pleasure of reading Will Park's ideas on the lack of interest in big tournaments, displayed by trap-shooters in general during the season of 1897. We are particularly glad to note that Mr. Park is of the same opinion that we are, viz: that the expert amateur is as much to be dreaded by the semi-expert and the novice as is the expert professional—the paid man. It looks very much as if some system of handicapping will have to prevail before we can hope to get all three classes of shooters—experts, semi-experts and novices—to attend the same shoot.

A party of shooters were talking about next year's Grand American Handicap a few days ago, and the sentiment of the party was that the number of entries would eclipse last year's stupendous total of 146. We entirely coincide with the above, and look for a new record to be established at Elkwood Park in March, 1898.

We have received the following letter from J. A. R. Elliott, dated Kansas City, Mo., Nov. 9: "Mr. F. S. Parmelee, of Omaha, Neb., and I have made a match, to take place the last week in November in Omaha, for $100 a side. I have also, to-day, forwarded draft and challenge to the Du Pont Powder Co., requesting Mr. Gilbert to defend the Du Pont trophy again." It will be remembered that Parmelee and Elliott shot a 100-bird race at Omaha about one year ago, Parmelee winning by one bird. The match this month should be something more than a breather for the Kansas City man.

On Friday last, Nov. 13, we had the pleasure of meeting Mr. Holberton, late of Hackensack, N. J., but now of Chicago. Mr. Holberton, while a resident of New Jersey, took an active interest in the work of the Oritani Field Club and the Bergen County Gun Club. When we saw him on Friday he was so full of the big week at Watson's Park, Dec. 6-11, and we were so short of time, that we had no opportunity of finding out whether he was doing any shooting just now or not.

The Ottumwa, Ia., Gun Club will hold its fall tournament at live birds and targets on Nov. 24-25. This tournament is "for amateurs only," but professionals who are barred from the money, "may come and take dinner with us." The programme each day contains eight 15-target events, $1.50 entrance, and two 10-bird races at pigeons, $5 entrance. All purses divided 40, 30, 20 and 10 per cent. All targets will be thrown from a magautrap, and will, therefore, be bluerocks.

It is reported (and we believe it) that Pittsburg's delegation to the Grand American Handicap at Elkwood Park, March 22-24, 1898, will be larger than ever. Bill McCrickart and Old Hoss will certainly be on hand; and it is rumored that even Jim Crow may desert his practice for a couple of days and come East to take in the greatest live bird event of the year. And, by the way, it's getting about time that Eastern shooters saw Jim Crow again.

The Winchester Repeating Arms Co. has requested us to mention that it will send one of its new 148-page catalogue free of cost to anybody writing for the same. The catalogue contains a description of all the firm's new goods, and also an outline of its system of manufacture. There is also a detailed description of the different tests and inspections to which Winchester guns are subjected before being placed on the market.

Miss Annie Oakley, or rather Mrs. Frank Butler, and her husband, Frank Butler, have returned for the winter to their home in Nutley, N. J. We met Mr. Butler the other day, and had a talk with him. He is full of the quail shooting and wild turkey hunting they had had down South; and from all accounts the quail suffered considerably owing to the quickness and accuracy with which Miss Oakley handled her featherweights.

Ferd Van Dyke, who was to have gone South with us this week, is at present detained in New York on business. He will shortly take a trip into the country—away from the treacherous climate of the Atlantic Coast—and enjoy a thoroughly-deserved rest while plugging away at game, both furred and feathered. It is no trick for anyone to guess what Ferd's guns and ammunition will be!

Tom Keller, Jake Blendermann and Captain Cramer, the latter well known to sportsmen around Norfolk, Va., took a hunt on Nov. 10 on Mr. Blendermann's property in south Jersey. A good crop of rabbits was reaped as a result of the trip; not a single one, we are told, being bagged by any other means than the legitimate ones of the powder, shot, gun and hounds of the party.

Neaf Apgar writes us from Pine Point, Orange Lake, near Newburgh, N. Y., that there has been some excellent shooting around his place; and adds that there's plenty of game there if anybody wants to look for it. He has scored a good number of woodcock, partridges (ruffed grouse), and ducks this season.

There is every prospect of a series of three-cornered team races between the Freehold, N. J., Gun Club, the Brunswick Gun Club, of New Brunswick, N. J., and the Endeavor Gun Club, of Jersey City. The project is under consideration, and the first match will very probably be shot in the near future.

From outside sources we learn that both Memphis and Knoxville are considering what they can do in the trap-shooting line next year. Perhaps one or other, or both, of these enterprising clubs may evolve some plan that may do much to resuscitate large attendances at tournaments.

C. W. McPeek, a member of the Endeavor Gun Club, of Jersey City, N. J., was a passenger on "the milk" on the N. Y., Susquehanna & Western, Thursday morning last. He was after rabbits and bagged nine, although it rained hard nearly all day.

John J. Hallowell, alias U. M. C., Jr., was in the city the latter end of last week, and was looking none the worse for his experience in Rochester, N. Y., two weeks ago, when he came in contact with a fog bank and a sand bank at one and the same time.

Paul R. Litzke will represent FOREST AND STREAM at the tournament of the St. Louis Trap Shooters' League, Nov. 24-25. From what we can learn trap shooting is on the boom in St. Louis, and the outlook for a good shoot on the above dates is decidedly promising.

The Montpelier, Vt., boys are going to have a little shoot of the invitation order on Thanksgiving Day, Nov. 25. It will be a gathering of the local boys, but will be none the less pleasant for all that.

Charlie Grimm has accepted Rolla Heikes's challenge for the Cast-Iron badge, and the match will take place, as stated in our last issue, on Dec. 6, at Watson's Park, Chicago.

The seventh and last shoot for the Recreation cup will in all probability take place Wednesday, Dec. 8, on the grounds of the Bergen County Gun Club, Hackensack, N. J.

Paul Litzke, in his notes about the coming tournament at St. Louis, hints that the St. Louis men talk of a $3,000 added tournament next spring.

Nov. 15. EDWARD BANKS.

ON LONG ISLAND.

UNKNOWN GUN CLUB.

Nov. 11.—The Unknown Gun Club, of Brooklyn, held its regular monthly shoot at Dexter Park this afternoon. Eleven members put in an appearance and took part in the club shoot at 7 live birds per man, handicap rise. E. A. Vroome (29) and Dr. Schwartz (28) were the only shooters to make clean scores. The weather was most unfavorable for shooting of any description. Below are the scores:

Dr Schwartz (28)	1111122—7	W Skidmore (26)	2022202—5
E A Vroome (29)	1111111—7	Dr Moore (26)	1210100—4
J A Akhurst (27)	2112101—6	R Smith (25)	0101012—4
J Bohling (28)	1111012—6	Wm Sands (28)	0202220—4
H Knebel (28)	0121101—5	Geo Selig (27)	2001010—3
J B Voorhies (29)	1•10212—5		

Sweeps were shot as below:

No. 1, 3 birds, all 28yds: Dr. Schwartz 3, Voorhies 3, Smith 2, Knebel 2, Sands 2, Dr. More 0, Selig 0.

No. 2, same: Schwartz 3, Voorhies 3, Smith 2, Sands 2, Moore 0, Selig 0.

BROOKLYN GUN CLUB.

Nov. 13.—The Brooklyn Gun Club held its regular monthly shoot this afternoon on its grounds, Liberty avenue and Enfield street. The wind blew a perfect gale from the northwest, and it was a regular guessing match when it came to shooting bluerocks from the magautrap. The scores in the club shoot, given below in detail, tell the story very well. After the club shoot had been disposed of, Manager John Wright produced a specimen of Thurman's new shooting jackets and put it up for competition under the following conditions: 10 targets, $1, handicap allowances. The jacket was won by Banks from scratch, with 9 out of 10. Greiff, another scratch man, scored 8, Hallowell, also from scratch, making 7. The other entries were: J. H. Swan (14), Platt Adams (16) and John Wright (17).

Scores in the club shoot were as below, no one shooting off his handicap, not being able to tie or beat Greiff, who had an allowance of 4 extra targets to shoot at, but who didn't need them:

	Club Shoot.	Tie.	No. 1.	No. 2.
C Furgueson (A)	2•02200222—7	.....	02220—3	22220—4
C M Meyer (A)	22200•2001—5	.....	221•2—4	21220—4
F A Thompson (B)	•012021202—6	22222—5	21222—5	22222—5
J N Meyer (B)	12020202•1—6	21202—4	22121—5	21202—4
S B Tophtz (B)	0112012200—6	20100—2	10021—3	20100—2
D C Bennett (B)	0220•02022—5	.....	.....	.....

Nos. 1 and 2 were 5-bird sweeps.

G. Greiff (4).....1101001111001110011101011101101110101111100101011—33

NEW UTRECHT GUN CLUB.

Nov. 13.—The semi-monthly live-bird shoot of the New Utrecht Gun Club was held this afternoon at Woodlawn, L. I. There was a high wind that made the birds, which were a fine lot, very hard to hit, and also made things interesting for the man at the score. C. Furgueson won in Class A, F. A. Thompson winning in Class B after shooting off a tie. Scores follow:

G. E. POOL, Sec'y.

The Situation in the Trap-Shooting World.

A YEAR OF SMALL TOURNAMENTS.

THE year of 1897 will go down on the pages of trap-shooting history, when such a work is written, as a year of small tournaments. With the exception of a few shoots, and State shoots at that, we can recall no tournament where more than $500 added money was hung up. In past years, for instance, in 1896, there were several $1,000-added shoots; but in 1897 "the circuit" must be marked as non-existent

There is some reason for this sudden change in the plans of tournament giving. A few years ago large added money tournaments were unknown. Then came the venture of the Knoxville Gun Club in this line. That started the ball, and other clubs and some manufacturers followed its example. Such tournaments were mammoth affairs, viewed in the light of the tournaments of 1897. It was not uncommon for the first event on the first day of these large added money tournaments to have 100 or more entries, even if some of the entries had to be drummed up from among the help and the lookers on.

This year the maximum amount of added money at any tournament that we have attended has been $500; and we don't believe the club that added that amount of ready cash came out anything like even with the game. As a matter of fact, we don't believe that any club can afford to add more than $150 a day and hope to come out even. As we look at it, the time when a club could and did make money is gone by. There are too many experts, amateur as well as professional; and under the old system of dividing purses this class takes all the money, or at least 90 or 95 per cent. of the total purse. The semi expert, that is, the 85 per cent. man, has no chance in reality, although in theory he has about a 100 to 1 chance of getting third money alone once in a while. But he is a sure loser on a tournament, and it is expensive for any one who is not paid for attending shoots to go to work and shoot 200 shots or so a day.

IT COSTS MONEY TO SHOOT THROUGH A TOURNAMENT.

It costs money to shoot through a tournament, and even the expert amateur has to shoot a hot gait to come out even, and have his "fun" for nothing. Suppose the tournament is an affair of two days. The programme calls for 175 targets at $17.50 entrance each day; total cost of entrance for the two days is $35. Then there are 350 shells, or with extras, 500; put them at the low figure of $25 per 1,000; there's another $12.50 for shells. Hotel bill for two days, including lunch at grounds, etc. (the latter a large item!); $10 will about cover that bill. Say his railroad fare costs another $10, a low figure very often, and the total foots up to $42.50. Of course, everything drawn out by the semi-expert as his share of the purses reduces the above figures by just so much. But what is that share? When we have subtracted it from the $12.50, the remainder won't be so so very much less than the original sum.

There is no question to our mind (and we have often produced figures to prove our contention) that the losses of the semi-expert under the Rose system will average less than under the old system. He *may* strike a portion of a pot *alone* once in a great while under the old system, but that chance is so slight that he is no longer fooled into hanging on in the hopes of striking that lucky place. There was a time when experts were less numerous than they are now, and when a semi-expert had some show to get a good slice of a pot now and then; but that's all in the sweet by-and-by now, and the experts know it.

For the semi-expert it's a losing game; as a rule every event he shoots in he is just so much money out of pocket. Trap-shooting is for him a luxury, and an expensive one. When it is all over, and the semi-expert has gotten home, and has gone over his cash account, he is an enthusiast, indeed, who can look the matter squarely in the face and say to himself honestly that he's had his money's worth of fun out of what he has spent.

If it's expensive for the semi-expert, what must it be for the novice? We had better draw a veil over that feature in the case. The novice is out his railroad fare, his hotel bill and the "et ceteras," the price of his shells, and about the whole of his entrance money. That's the size of it. He can take up a programme and figure out very quickly what it will cost him to attend such and such a tournament. That's what he pays for his fun.

NOT THE VIEW OF A PESSIMIST.

We don't expect that our view of the case will suit everbody. There may probably be some that will say it is the view of a pessimist. But it's not so. We think that the sport of trap-shooting was never in a more thoroughly healthy condition than it is now. New clubs are springing up everywhere, and more targets are thrown, more shells used, and more guns and powder manufactured and sold than ever before in the history of the world. Some old fossils may stay at home and never venture out anywhere; they may take the columns of the sporting papers and look at the records of the tournaments of 1897, and figure from them that, on account of the poor attendance that have marked the shoots of 1897, the sport is on the decline.

But is it so? Ask the U. M. C. Co., the W. R. A. Co., the E. C. & Scnultze, the Hazard, Du Pont, King, Laflin & Rand, Austin, Gold Dust and other powder companies, the Cleveland Target Co., and all the standard gun manufacturers, what their opinion is. We will hazard a guess that one and all will say that, compared with other lines of business, they have nothing much to complain of.

Then ask them whether they think that large tournaments are a benefit or otherwise to their business. We must be very dull of comprehension, or cannot have heard aright, if we should say that we honestly believed that one of the above firms would say that large tournaments were a benefit to them or to trap shooting. As we have gathered it from what we have heard and seen, it is at small tournaments that the greatest good results both to trap-shooting and to the business of the manufacturers.

We have often heard it said by some of the manufacturers: "How many men were there at such and such a tournament that didn't get their shells, powder, gun or expenses given them? Not 5 per cent. of the shooters present on all the days of the tournament!" And that's about right. The sport is really too expensive for the vast majority to indulge in, unless they get something free to help them along.

THE OLD GUARD.

On more than one occasion this year, "the old guard" has saved the day. We say this advisedly, because had it not been for the attendance of the regulars, there would practically have been no shoot. This may sound heresy, and we can imagine we hear some people grunt a dissentient note. But we believe it to be a fact.

Suppose "the old guard" of professional experts and manufacturers' agents had not been present, would the amateurs have turned out in force? Yes, they would perhaps once or twice. But how quickly they'd run wisely back to cover again! The expert amateur would be found to be just as deadly as that bugbear the expert professional; he'd have all the money, or the bulk of it, under the old system; the semi-expert would get his usual moiety; and the novice would get left, as he always does, and always will until he can shoot as well as the expert; or until some satisfactory system of handicaping is devised that will be of benefit to his lesser skill. As at present pursued, there is no system, Rose, old, Jack Rabbit, Pumphrey, or any other, that will enable the novice to pay his way at the trap. He is paying for his experience just as the expert of to-day has paid for his in the past.

There is one feature, however, in which trap shooting to-day differs from that of the past. To-day the novice knows that he has no chance, and therefore he stays at home; in the past the novice wasn't so well educated; he came out to learn, and he learned.

THE ROSE SYSTEM.

The Rose system has been abused very roundly this season. On its shoulder, and also on the shoulders of its father, FOREST AND STREAM, have been heaped abuse of a more or less unfriendly type. The shoulders, however, of both the parties named are pretty broad, and no damage to speak of has been done. It may be that the outcry has something of a boomerang in it. The very personnel of its assailants is such that the abuse is in reality praise.

The system was devised to make an equitable division of the purse according to the merits of the scores of the shooters. It was also devised to spoil all money-making schemes, such as pooling of interests and dropping for place. It spoiled those schemes, and it reduced winnings and losings. Therefore it has been maligned and called bad names. Nevertheless, until a better plan for dividing purses is devised, we shall hold to our opinion that the Rose system is the best of all to date. If sweepstake shooting at the trap is to continue, and if such sweepstake shooting is not to become an out and out gamble simply to win money, the Rose system is the one to adopt.

VIEWS OF A COUPLE OF EXPERTS.

Only a short time ago we learned of the views of a couple of experts that were to our mind telling arguments in favor of the Rose system, although those who made the remarks were loud in their talk against the system. The first one said:

"If I was shooting with Rolla Heikes, Gilbert and all that class of shooters, I'd want the Rose system all the time."

The other said (and this was at a very recent shoot):

"Last year I put in the bank over $2,000 that I made by following the shoots, little and big. This year your —— Rose system has knocked things out so that I can't make more than my bare expenses."

Looking at it in another light, we would deduce the following from that last quoted remark on the subject: That the $2,000 that went into the bank account of 1896 drove more shooters away from the shoots of 1897 than the Rose system, or any equitable system, could drive away in 100 years.

WHAT ARE WE COMING TO?

The situation briefly reviewed is, therefore, this: The attendance at tournaments has dwindled this year into comparative insignificance. The number of experts, paid and unpaid, is increasing quite rapidly. What is the prospect for 1898?

Frankly speaking, in the tournament line, we can see small prospects of anything big. No club can afford to give a large amount of added money, unless it is helped considerably by the manufacturers themselves. But the manufacturers have called a halt, and refuse to pay more than a stipulated sum for a page advertisement in a programme now and then. How long they will keep up this form of help to clubs, we cannot venture to predict. We do believe, however, that it will not be so very long before there is a further cut in the prices paid by manufacturers for notices in programmes. We have lately seen enough straws in the air to show us which way the wind is blowing.

A review of the trap columns of FOREST AND STREAM for the past season will show that the amount of scores printed is larger than ever before. Our reports naturally increase with the increase in numbers of trap-shooting clubs. Clubs are springing up everywhere, and local trap-shooting was never more popular than now. It takes the form, though, more of inter-club shoots and team races of a friendly nature, than of the get-down-to-business-and-shoot-for-the-stuff style that prevails at most of the tournaments of the present day. The $5 that it costs to shoot for an afternoon at one of these clubs' grounds is more in keeping with the average pocket-book of to-day, than the $15 and $20 that it costs even the semi-expert to frolic at a tournament with "the old guard."

Western Traps.

EUREKA MEETINGS.

CHICAGO, Ill., Nov. 13.—A meeting of the Eureka Gun Club was held on the evening of Nov. 11, at the Great Northern Hotel, for the purpose of arranging for live-bird shooting during the winter months, also to attend to general business.

A motion was passed instructing the secretary to advise with manufacturers of target traps, requesting that they number each trap made, to enable clubs losing traps by theft to identify the same when found by the number thereon. Several of the clubs whose grounds are located in this city have lost by theft traps stored in the club houses.

The Eureka Club voted to engage in three live-bird matches with Garfield Gun Club during the winter. This is a part of the challenge accepted July 1—the three races at targets having already been shot, Eureka winning two out of the three. An auxiliary committee, consisting of F. P. Stannard, E. M. Steck and Charles Antoine, was appointed to arrange handicap for the live-bird contests. The first club contest will possibly be held at Watson's Park, Burnside Crossing, Nov. 20, at which time it is thought the Garfield Club will shoot the first match with Eureka.

A committee was appointed to arrange for the annual club meeting and banquet. Ladies will be invited to the banquet.

STONE—VON LENGERKE.

In the absence of Mr Mussey, who was expected to shoot a race with Percy Stone at Watson's, Nov. 11, a match was made up between Percy Stone and Oswald von Lengerke at 25 live birds. A strong wind blew, and most of the birds were fast hustlers to the left. The score was: Von Lengerke 22, Stone 16.

GARFIELD CLUB.

At a meeting of the Garfield Gun Club, held at the office of the secretary, on the evening of Nov. 11, for the purpose of arranging for live bird contests during the winter months, a committee was appointed to decide handicap and arrange contests, providing medals, etc. The handicap will be in added birds, ranging from 1 to 4 birds. The committee consists of Thos. P. Hicks, Silas Palmer and Dr. Meek.

BINGHAM AND AMBERG VS. CLARET AND PATTI.

E. Bingham and John Amberg shot a race with John Claret and Patti, at Watson's Park, Tuesday, Nov. 9, 25 live birds per man. The race was shot under conditions hardly satisfactory even to the winners. It was started about sundown and finished after dark. At times it was impossible to see the bird unless it was light colored and flew so that it could be seen against the sky. Many birds were killed which fell out of bounds. In all probability these men will again get together and shoot when the conditions are more favorable.

Following were the scores:

Ed Bingham	22022222222222222220222—23
J H Amberg	12110122222221222032022121—22—45
Claret	10221011001022201202022112—17
Patti	20201120021021211110020ll—17—34

CALUMET HEIGHTS CLUB.

Nov. 7.—There was a fair attendance to-day at the grounds of the Calumet Heights Club. The regular medal shoot was decided, as also the one postponed from Oct. 31.

In the medal shoot of Oct. 31 Booth won in class A, Norcom in class B, and Harlan in class C. Scores:

Lamphere (A)	111111111011011011011111—21
Booth (A)	111111110101101111111101—21
Norcom (B)	111111101111111111111111—24
Harlan (C)	110111001011011111111111—20

No. 3 was at 5 pairs; Nos. 4 and 5 at 15 targets, "snipe shooting."

COOK COUNTY'S E. C. CUP.

The challenge race for the E. C. challenge cup of the Cook County League was contested for Nov. 13 on the grounds of the Douglas Gun Club, Lavigne, Ill., between Ed Bingham and W. R. Morgan. The race was one of interest from the start and was at 100 targets, known traps and angles. The wind was from a left quarter and the birds were thrown swift and low, though erratic in their flight. Both shooters were in excellent form, and it was expected that better scores would have been made. Wm. L. H. Goodrich acted in the capacity of referee and old John Glover as scorer.

The attendance at the club on this day was fair, many of the club members being at Watson's Park, shooting live birds in practice for coming event between Chicago and Kansas City. Mr. Morgan has now accepted the challenge of A. C. Paterson for the same trophy, which will be shot for at an early date, though not yet published. Bingham was 1 bird ahead when starting in on the final 25, but missed 4 out of his first in this frame, Morgan going him 3 better, and winning by 1 target only. Following are the scores in detail:

Ed Bingham	11011001111111101111111011111111101011111111111001—41
	11011111001111110111111100011001111101101111111111—39—80

A. C. PATERSON.

St. Louis Trap-Shooters' League.

LITTLE ROCK, Ark., Nov. 12.—Several weeks ago the shooters of St. Louis met and organized what will hereafter be known as the St. Louis Trap-Shooters' League. The principal object of this organization will be to centralize the shooting interests, and to place St. Louis in its former position as a shooting center. With this object in view, the league has decided to hold a three days' tournament, Nov. 23-25. The first two days will be devoted to target shooting, and the last day to live birds. At this, its maiden effort, the league will add $300 in cash to the purses. This amount of added money, and the geographical location of St. Louis, should assure the success of the tournament as its excellent railroad facilities make it only a night's ride from most of the important inland cities. It is quite likely that this will be a great factor in swelling the attendance. The programme, too, will be a varied one, as there will be feathers and saucers—just as you like it. On each of the target days live birds will also be shot, though no targets will be shot on live bird day.

The target programme will be exactly alike each day. Nos. 1, 3 and 5 will be 15-target events, $1.50 entrance; Nos. 2, 4, 6 and 8 will be at 20 targets, $2 entrance; No. 7 will be at 25 targets, $3. The added money on each of these days will be $77.50. There being $7.50 added in each 15-target event and $10 in each of the 20-target races, to the 25-target event there will be $15 added. The purses will be divided under the old system, four moneys in the 15s and five moneys in the others. On live-bird day there are two events scheduled, one 15 and one 25. In the former there will be $25 added, and in the latter $75. The main event will be high guns, not class shooting, the money going to the eight high guns. Then there will be $15 average money each day, which makes up the total of $300 added.

The tournament will be held at Du Pont's Park, one of the best equipped shooting grounds in the West, 40 minutes' ride from the center of the city, and reached by the Suburban electric line. The arrangements for throwing targets consists of a magautrap and a set of expert traps arranged on the Sergeant system. It is on this set of traps that the programme will be shot, while extras will be run off on the magautrap. The background for target shooting is a fairly good one. The live bird grounds are separate from those where the target shooting is done, though the tract of ground is all in one. The pigeons will be shot from King's automatic traps. There are no trees or buildings to interfere, and the birds are sure to get the benefit of any prevailing winds. The pigeon game here should be "plenty hard," as at this season of the year the birds are strong and well feathered. There are ample buildings on the premises to protect the shooter in case of inclement weather, and of the right kind, too. One of them, the largest, is a brick structure, and will readily accommodate 100 people. This is used as a club house proper. Mr. Gardner, the manager of the park, has established a reputation of knowing how to take care of his guest. On Nov 25, Thanksgiving Day, a turkey dinner will be served free to the shooters. This day there will also be contests for turkeys.

Only 2 cents will be charged for targets. This is also a new departure in the tournament business, as it has always been customary to charge 3 cents at added money shoots. This will be virtually equal to $50 a day to the shooters, as it is safe to assert that 5,000 targets will be thrown in the programme events each day.

The officers of the League are: Dr. M. C. Starkloff, Chairman, and W. R. Nold, Secretary. The doctor has long been associated with the trap-shooting interest of St. Louis, and is always keenly alive to its progress and elevation. Mr. Nold is one of the young shooters of St. Louis, and is well qualified for the position of secretary, being both energetic and efficient. Should this tournament be the success and arouse the interest which the promoters have reasons to expect, it is their intentions to hold a large tournament in 1898, to which they expect to add $3,000. It is my opinion that in the future St. Louis tournaments will appear in the fixture column more frequently.

PAUL R. LITZKE.

The Intercity Team Race at Chicago.

IN view of the interest taken in the Chicago-Kansas City team race, Dec. 10-11, at Watson's Park, Chicago, a few figures on the two contests which have already been decided will be good reading. The first shoot between representatives of these two cities took place at Chicago, the visitors winning by 4 birds, with a total of 420 to 416. The second was held at Kansas City, and, strangely enough, the visitors carried off the honors, Chicago winning by 2 birds, the scores standing: Chicago 442, Kansas City 440. Below we give the names of those who shot on the teams, together with their scores:

Shoot No. 1, at Chicago:

Chicago.		Kansas City.	
H Kleinman	47	Anderson	46
W P Mussey	45	Ed Chouteau	45
Macfarland	43	J A R Elliott	45
M J Eich	42	Ed Bingham	44
C E Felton	42	J E Riley	44
A Kleinman	42	J B Porter	42
R B Organ	42	A E Thomas	42
Price	39	L H Vories	40
Payson	39	W B Twitchell	36
Reeves	35—416	J K Guinotte	36—420

Shoot No. 2, at Kansas city:

Chicago.		Kansas City.	
M J Eich	48	J A R Elliott	48
G Kleinman	46	Ed Bingham	47
A Kleinman	46	J E Riley	46
C E Felton	46	A E Thomas	46
C B Dicks	46	Ed Choteau	44
W P Mussey	44	W S Halliwell	43
H Kleinman	43	J B Porter	43
Abner Price	43	J K Guinotte	43
P F Stone	41	W B Twitchell	41
J E Price	39—442	L H Vories	39—440

On the occasion of the visit of the Chicago team to Kansas City, the Chicagoans took a second team along with the first team, and the Kansas City shooters made up another team to compete with it. In this race the Kansas City men were easily winners, the scores being, Kansas City 427, to Chicago 408. The scores of these teams were:

Chicago No. 2.		Kansas City No. 2.	
H Ehlers	47	F C Maegley	47
G Hoffman	44	F J Smith	45
W E Philips	42	J L Porter	45
G W Reeves	41	W G Eads	44
E M Steck	40	G Youmans	42
C D Gammon	40	C F Holmes	42
John Watson	40	D S Gordon	41
Geo Airey	39	G Schroeder	41
J M Hutchinson	38	G Stockwell	41
Geo Farmer	37—408	J H Magee	39—427

Answers to Correspondents.

ELECTRICK, New York.—Write to Wilson House, Mastic, L. I., or to H. J. Rogers, Eastport, L. I.

H. F. H., Portland, Ore.—Dorrler used a 28in. barrel, but most experts here use 30in. barrels. We would recommend a 30in. barrel where a .22 long rifle-cartridge is used.

F. P. HISH.—We have never found sweet oil of much benefit as a rust preventative.

O. M. G., North Andover Depot, Mass. The symptoms are those of worms. Give him no food for twelve hours; six or eight hours before giving the worm medicine give a dose of castor oil. Give one dram of freshly grated areca nut. It can be mixed with lard and given in the form of a large pill.

S. E. T., Mount Vernon, N. Y.—In treating canker of long standing in the internal passages of the ear, cleanliness is essential. Inject tepid water gently and remove all discharge from within. This should be done several times daily, then warm to bloodheat and drop in the ear a little of the following mixture:

Acid carbolici	ʒ ss
Glycerinæ	ʒ ss
Aquæ	ʒ ijss

C. D. R.—My Irish setter puppy had his left hindleg fractured by the kick of a horse when the dog was about five weeks old. The fracture united rapidly, and now, at the age of ten months, the leg is straight, strong, of equal length with the other hindleg, and the only visible result of the fracture is a bony lump at the point of fracture, much of which will, I am informed, ultimately disappear by absorption. Will this lump, other things being equal or better, militate against the dog in a dog show? Ans. Yes, so long as it remains evident to eye or touch the lump will be regarded as a blemish.

PUBLISHERS' DEPARTMENT.

Lincoln Park, Chicago,

ONE of the beauty spots of Chicago, is described in a most beautifully illustrated book of ninety-six pages, now being distributed by the Chicago, Milwaukee & St. Paul Railway Company. It is full of the finest half-tone pictures of one of Creation's most charming places of resort for citizens of the Great Republic. Every one who has ever visited the park will appreciate the souvenir, and for those who have not, it will be a revelation of what is to be seen in Chicago. It can only be procured by inclosing 25 cents in coin or postage stamps to George H. Heafford, General Passenger Agent, 410 Old Colony Building, Chicago, Ill.—*Adv.*

The Smokeless Blue Ribbon.

[COPY.]

NEW HAVEN, Conn., Nov. 5, 1897.—*The Hazard Powder Co.:* Gentlemen—Yesterday I gave your "Blue Ribbon" Smokeless a trial and the results were very satisfactory.

The charge (3¼d.) is quick, gives good penetration, and a very even pattern, with very little recoil, and what is more important, does not foul your gun. I take pleasure in recommending it to all shooters who wish to use a satisfactory powder. Yours truly,

(Signed) DAVID CALLAHAN.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SATURDAY, NOVEMBER 27, 1897.

VOL. XLIX.—No. 22. No. 346 BROADWAY, NEW YORK.

NOTICE TO SUBSCRIBERS.

The address label on the wrapper shows the date of the close of the term for which the subscription is paid. The receipt of the paper with such dated address label constitutes the subscriber's receipt for money sent to us.

Subscribers are asked to note on the wrapper the date of expiration of subscription; and to remit promptly for renewal, that delays may be avoided.

For prospectus and advertising rates see page iii.

Readers are invited to send us the names of friends who might be interested in a current copy of the Forest and Stream. We shall be glad to forward a specimen number to any person whose address may be furnished us for that purpose.

SNAP SHOTS.

Whatever may be the advantages to Pennsylvania of the new game law, in force for the first time this season, which forbids absolutely the export of game, it certainly has caused decided dissatisfaction among sportsmen who visit that State for shooting. The grouse covers of Pike and adjoining counties have decided attractions for New Yorkers; the district is within comparatively convenient access from New York city; and the border counties have been resorted to by sportsmen from Elmira and other points, who have been accustomed in the past to bring their game home with them. The purpose of the non-export law is of course the most commendable one of putting an end to the shipment of game to market. In this all sportsmen are interested, those of Pennsylvania and those who resort to the shooting grounds of the State; and no valid objection could be made to the rigorous terms of the statute if the rigor were absolutely necessary to accomplish the purpose.

In some other States which have non-export laws, designed to cut off shipment for sale, visiting sportsmen are accorded the privilege of taking home with them a small number of birds or a small amount of venison. These laws work well in practice, wherever there are wardens whose business it is to see that the restrictions actually amount to something. If Pennsylvania had a force of game protectors to watch the trains as trains are watched in Maine, the amateur shooter might safely be permitted to bring out his two dozen birds "tagged and exposed to view," while the wholesale traffic in game would be prevented. As it is, we have heard of no attempts to enforce the non-export law. What is everybody's business is nobody's business. Iowa has a double-barreled anti-traffic law, which first forbids any person killing quail or grouse or other game for traffic and then makes it unlawful for any person, company or corporation to ship, take or carry any of these birds out of the State. What that amounts to is hinted in a recent market review in the New York *Evening Post*, in which "the largest game dealer in the city" is quoted as saying to the reporter, "I got in three hundred and fifty dozen grouse last week and four hundred dozen quail, from Iowa." It was President Gilman, of the Game Dealers' Association, who, when defending the New York law which makes the metropolitan market a dumping ground for the illicitly shipped quail and grouse of Iowa, told a legislative committee last winter that the city dealers handled only game lawfully sent to them. And the committee was either simple enough to believe Mr. Gilman, or polite enough to conceal their appreciation that he was lying to them.

Whatever may be the derivation of the name, we might all agree to accept Von W.'s sensible suggestion to spell it with a W. Years ago the original French form Ouisconsin was abandoned for the English of it, Wisconsin. Usage has altered other place names in like manner. There is no good reason for not applying the same principle and substituting a sensible English spelling for the outlandish ouananiche.

A cable report the other day chronicled a recent feat of the German Emperor, who had killed two thousand and odd pheasants in two thousand odd minutes, or some such incredibly short space of time; and esteemed contemporaries have been busying themselves in figuring out the impossibility of the performance. The shooting was battue shooting, a mode in which the semi-domestic birds are driven by hundreds and thousands to the guns. In this country, where sport is followed under less artificial conditions, and where we are accustomed to hunt up our birds instead of standing in a "lot corner" and having them driven to us by servants, we are given to denouncing such wholesale killing as sport-lacking slaughter. This is an uncharitable view. If there is little sport in battue shooting, so much the more battue shooting must one do to get decent returns of sport for his labor. It is like crushing poor-pay ore; the poorer it is the more must one crush to get anything out of it. And as one single nugget may be worth many tons of quartz, so one wild, wary, full-plumaged grouse on an American hillside is worth a thousand pheasants in an European preserve.

Mr. Chas. Hallock, who has a taste for antiquities, tells us that our present Thanksgiving is simply an echo or iteration of the Proclamation of Thanks ordered or ordained for Nov. 29, 1588, to celebrate the victory over the Spanish Armada and the establishment of free trade and free religion throughout the world, by command of Her Majesty Queen Elizabeth. The date of the introduction of the turkey into Europe is mooted, but if Mr. Hallock will continue his investigations into the history and development of Thanksgiving, he will probably discover that the turkey feature of the observance is distinctly of American origin. And we may perhaps claim also the old-fashioned Thanksgiving turkey shoot, New England style, as pictured by the inimitable pen of Rowland E. Robinson in "Uncle Lisha's Shop." We hear complaints that Thanksgiving is losing its serious aspects; and it must be conceded that the point is well taken; one New England club, for example, has added to its turkey shoot the vain and frivolous chasing of greased pigs and climbing of greased poles.

The outlook is for a goodly gathering at the convention of the New York State Association for the Protection of Fish and Game in Syracuse, Dec. 9. President Gavitt and the other officers have been untiring in their endeavor to insure an adequate representation of every section of the State. All citizens who desire to promote the interests of game and fish protection should give warm support to the Association. It is the agency through which all should work to gain the common end. In union there is strength. Every club of shooters or anglers in New York should have voice and vote in the Syracuse convention. All are most cordially invited to attend the meeting and take part in it. The Association should have both the moral support and the financial strength that come of large membership. The dues for each club are trivial, but the aggregate should be such as to provide the funds which are essential if the work is to be carried on beyond the convention stage. The secretary is Ernest E. Gould, of Seneca Falls.

President Gavitt, of the New York State Association, would do well to invite Police Justice Thompson, of Syracuse, to attend the Association meeting there in December. Justice Thompson has given out that in his opinion "Those fish and game laws are all rot." Acting on this conviction the other day, the justice held a snap court, and without waiting to hear the evidence discharged three prisoners of whose guilt the game protector had indisputable proof. Members of the Anglers' Association justly regard Justice Thompson's action as an outrage. His conduct should have official investigation. The bench is no place for a whimsical oracle who flouts the statutes as "all rot."

Our reports of the field trials in Canada and North Carolina furnish complete records of the work done and careful estimates of its merits and value. The reports have added interest inasmuch as the FOREST AND STREAM was the only journal which had staff representatives at Newton.

A correspondent who has been among the Chippewa Indians of Minnesota sends us a sad story of the destitution to which those unhappy people have been reduced by a combination of native crop failures and new game law restrictions. The wild rice and the berries were destroyed this year by high water; and the failing of the rice resulted in driving the ducks further West. Ruffed grouse also were drowned out, and only small covies hatched. To this dearth of supply must be added the effect of the game law which forbids the shipment of game, so that if the Indians kill they cannot sell. Last year 72,000 grouse were shipped from Tower, most of them killed by Indians; this year no birds have been shipped from that point. Our correspondent takes a hopeless view of the situation; without stores of food for the winter, and without means to acquire anything, many of the Minnesota Indians, he thinks, must starve.

If the whole or the half of what our Everett, Wash., correspondent writes of the Indian situation in Alaska be true, his letter is a tremendous indictment of the United States for its treatment of this simple and defenseless people. It is a story of heartless rapacity, and of cruelty hardly exceeded by that of the gold-hunting Spaniards who exterminated the natives of the West Indies and Central America. Cayuga's letter supplements an article published in the *Overland Monthly* from the pen of Dr. Lincoln Cothran, who spent some time in Alaska as physician and surgeon to a large salmon packing company. He has the same tale to tell of imposition, robbery and the communication of loathsome disease. "The life blood of the Eskimos," writes Dr. Cothran, "with their independence and manhood has been swallowed up by three great corporations whose heads are in San Francisco.

An important food and industrial supply, the whale, has been dynamited out of Alaskan waters by the steam schooners of the Pacific Whaling Company. The seals and other fur-bearing animals have been practically annihilated on both land and sea by the Alaska Fur and Commercial Company. This company has wrought its purposes in Alaska by fixing a bondage on the natives more galling and detestable than outright slavery, because it disclaims responsibility or care for its wretched serfs.

Under the guise of preserving the game from quick destruction, and to prevent uprisings of the natives against the company's traders at the various posts (they line the mainland and peninsula from Sitka to Bering straits, and extend up the many large rivers), a law was caused to be enacted at Washington prohibiting the sale of repeating arms to the natives of Alaska. This was a ruse to keep outside parties away, and to enable the traders themselves to supply arms at unheard-of and almost fabulous prices. The native was not slow in appreciating the superiority of firearms over bows and arrows in hunting bears and seals. The method of exchange was as follows: The rifle was set upright on the ground, stock down, and the natives piled skins upon one another flatwise until the stack reached to the muzzle. Thus, often more than eight or nine hundred dollars worth of fine furs were obtained for a ten dollar gun.

Independence and plenty have been exchanged for serfdom and squalor by the destruction of the animals of this land. In the summer the country is covered with high grass and flowers. Unless you go far away in the interior, you will tire yourself wandering over the tundras and through the forests and never see a vestige of life, except very rarely, a frightened ptarmigan. And yet innumerable millions of dollars' worth of furs have been taken here. Not long ago the sea, the river banks, the lakes, tundras and mountains, swarmed with seals, otters, foxes, minx, bears, lynx, martens, beavers, wolverines and wild reindeer.

It is only a matter of a few years until the last food source of the Eskimos will become ruined by the numerous salmon canneries, which are now under the control of another big corporation called the Alaska Packers' Association.

To publish to the world such a condition of things should mean that the remedy for them would quickly be found. But past experience affords slight ground for expectation that the recital will accomplish anything more than a momentary shiver. The average man cares more about the quail supply in his own fields, that he may have the sport of shooting them, than about the game supply of Alaska and its relation to the existence of a savage race. If he ever thinks of the Alaska Indians at all it is perhaps to denounce them for fancied interference with his duck shooting. Was ever anything in the whole history of game protection on this continent more gruesome than this, that while the natives of Alaska were being reduced to destitution and starvation by the destruction of their game resources at the hands of American citizens, other Americans in so-called national convention were raising the fool cry that these same Indians of Alaska were destroying eggs from which should have been hatched ducks for these sportsmen to shoot for fun?

The Post Office Department reports that its efforts to reform the careless practice existing in a large number of offices, by which so many postmarks on mail matter are illegible, have so far succeeded that the ratio of 30 per cent. illegibles has been cut down to 10 per cent. This means that newspaper publishers are more often now than formerly able to determine from the postmark the address of the man who sends money for a subscription but omits to give the name of the town he lives in.

The autumn has brought with its reports of an unwonted game supply in many sections stories of disappointment in districts where the grouse tick has played havoc with the birds.

The Sportsman Tourist.

A FOX CHASE AT MIDNIGHT.

In my younger day I had followed the fox and hounds many a mile with the keenest enjoyment. But what with ten or more years of school life, vacations scrupulously utilized in earning a few dollars to help through the next term, and withal a busy pastorate of twenty years in town, my scent for the fox had become almost lost. If at any time I had given the old hunting days a thought, it was to recall for the moment only some adventure that had impressed itself a little more on the mind than others, without thinking that any rudiment of the fox hunter was lingering in me. In this, however, I was mistaken.

After twenty years in town, I began to long for the country again. My dreams of the green fields, the running brooks, and the deep woods, grew more and more vivid, until I decided to close my pastorate and return to them. I had no fortune, so took a small church in a northern town in Maine. Here the hills were high, the mountains steep, the brooks full of trout, the lakes of bass and pickerel, and, better than all, the woods of partridge and woodcock. Foxes were quite numerous also, a fact which, although I would not admit it to myself, must have had a kind of "back stairs influence" on my choice of this particular town.

We moved in the summer so as to get settled before cold weather came down upon us. The parsonage was a farmhouse, with sixty acres of land, a good part of which had been cultivated, so that I could easily keep a cow and horse, pigs and hens if I wished, and any other creature I cared to have around. My fancy was turkeys. There was a yard bordering on the house lot and reaching back some ten rods to the wood lot, especially adapted, I thought, to the raising of fowls. Near the house were some maple trees, and between two of them a long pole had been fastened 10ft. from the ground, which my predecessor had put there for a hen roost. It was the timely suggestion. I must have a flock of turkeys occupying that roost next year at least. What a recreation it would be to take care of them. And my wife, what a good time she would have with her chickens.

Well, early in the following April, as the snow silently disappeared from the hills, I got my turkeys hatching. I used hens for incubators, which in due time brought forth, three of them, a dozen or more little turkeys apiece. Turkeys are very tender in their childhood and youth, and my neighbors said I was lucky, when, on Sept. 1, out of a total of thirty-nine hatched, I had thirty strong, healthy birds. Some of the little ones went to feed the hawks, others the skunks, others still the way of all the earth, but none had gone to the fox. Yet I was expecting master reynard now most any night, for I had caught a glimpse of one or two about sunset for several days, and had stationed, in a warm kennel, under the lee of the porch, an old hound given me by a friend. It had been a good hunter and preserved its instincts wonderfully, but it had become deaf in one ear. Thus setting a guard over my turkeys which roosted 10ft. from the ground, I could go to bed and sleep.

Near the end of September the annual cattle show was held in our town, a great event, from which all the town affairs dated, and of course wife and I must go. I also entered my flock of turkeys for exhibition. I spent most of my time studying the fowls, but on the second day wandered into the great hall where the merchants were exhibiting. My wandering was somewhat aimless, absently looking at one thing after another—stoves, shovels, hoes, churns, washing-machines—until my eye fell upon a gun. Then I woke up. It was a beauty; the latest patent double-barreled shotgun. My hand was instantly caressing that polished stock, and my eye stealing along that barrel. How bright and smooth it was inside! What virile hammers! What strong locks! How it brought back the old days! I was again following the fox with my father's old muzzleloader, speeding through the tangled thickets, leaping the fences, climbing the cliffs, cutting across lots. The old love for the chase was uppermost once more, and far away days of supreme joy, and distant lands where the fox abounded, came thronging back in that one glance along the barrel of this new gun. What a necromancer it was, this light and bright shotgun to whom even the best and busiest years of my life seemed as naught, while the old heydays of youth returned.

"Elder, you ought to have that gun to protect your turkeys with." It was the exhibitor's voice, repeating my own thought, word for word.

"I'll give you a neat little figure on it if you want to buy." Yes, I wanted to buy. It was a foregone conclusion from the instant my eye rested on it. I forgot about my turkeys, and almost went home without my wife, so elated was I with this new treasure.

My wife was not so taken with the gun as I was. She said: "Are you sure you can afford to have it? You know there are some books you planned to have this winter." And in her quiet way she smiled a whole system of economics at me. But I was glad I had made the purchase without consulting her. The turkeys must be protected, I thought, and foxes run fast.

"I expect nothing," my wife said later, to a neighbor, "but that that gun will get him into some kind of a scrape."

All hints and criticisms of that nature slipped from my mind and the autumn days came down upon the hills, and the woods turned scarlet and yellow and crimson, varying each of these into a hundred shades, and the sound of the quail and partridge was heard in the land. Gunning a little days, I took particular pains at night to see my turkeys safe on their roost, that the hound was in his box, and went to bed. I had been told that turkeys did better if kept in the open air summer and winter. I did not feel quite sure of the winter business, but planned to let them stay out until Thanksgiving at least.

The night of adventure was light with a full moon, near the end of October. I had seen my turkeys safe to bed, the hound in his sentry box with his good ear open, and my gun in the corner of the kitchen, loaded. So, as usual, I went to bed and to sleep. Had I known as much about turkeys as Master Reynard, I should not have felt quite so secure; for the fox has only to go under their roost and the foolish things go wild with fright, each flying—it knows not where—its own way, some higher up into the trees, some to miss their aim and flutter to the ground and be instantly seized by the fox. Those that are so hapless as to come to the ground one after another, in wonderful quick succession, are killed, and if no one disturbs it the fox will carry them all off and hide them.

It was about midnight, I guessed, when I was awakened from a deep sleep by the flying and crying of my turkeys. As soon as I came to my sense I sprang from the bed, instinctively put on my slippers, seized my gun, and rushed out. I reached the gate into my turkey yard just in time to see a big fox making off as fast as it could with one of my fowls. It was a long shot, and I could not see very well; but I fired both barrels, for the old instinct of the hunter was on me at the sight, and my hand recalled its cunning. The fox dropped the turkey and took to his heels, while the hound, aroused by the report of the gun, with a deep bay that always carries terror to the fox's heart, was instantly off. I hurried into the kitchen and reloaded my gun, and returned to note developments.

The old hound had struck the trail, I knew by its deep voice, so I hastened the faster into another field that I might take in the sweep of their circle. The old skill was back that night, and quickly computing their route, I instantly made my plans, which were to run the diameter of their circle and get another shot at the fox as it crossed the road, a half mile or more up the river. I ran across the field, scaled the stone walls, cut through the pasture, dodged hurriedly round a grove of spruces to come into the road just about a minute behind the fox. But I had the measure of its circuit now correct, and a clear road before me which I reckoned the fox would cross again somewhere near my turkey roost. I had only to get the length of this road, or within 80yds. of the house, to be within range of it again.

I am something past sixty years, but I was twenty again that night, and although it had been many years since I had done much running, especially in felt shoes, I experienced no inconvenience from them.

My pace along that road must have been astonishing So lost was I in the chase that a team just ahead escaped notice until I was up with it, and then I turned aside as by instinct and whisked past. As I did so the horse shied and became almost unmanageable with fright, while from one of the occupants came the startled cry: "Great Scott, Tom! What was that?" Tom was too busy preventing a runaway to answer, and before I had it clear what frightened the horse, I was up with another team. This one was a three-seated wagon drawn by two horses and loaded with girls. A faint dawning of the situation now stealing into my mind led me to accelerate my pace and dash on, hoping thereby to so bewilder them that the actual state of affairs might not appear. Scarcely had I passed, however, when, amid cries of alarm and astonishment, there rose a great clapping of hands and cries of "Run, grandpa, run!" "Heed your white skirts, sir!" and more I did not stop to listen to. Then it came to me like a flash of light that I was in my night shirt, without hat, and a pair of soft felt slippers on my feet. And these girls, up to the game now, were hurrying their horses into a fast trot to be in at the end.

In my selfconsciousness I had lost run of the fox, and was now racing with the teams, looking only for a place of escape. Consequently I ran direct for the house, and turned the corner into my yard just as the first team came up, when, to my astonishment and the great delectation of the passers, right in the middle of the front yard stood my wife in her night apparel. We ran for the house together, but not without receiving a parting salute from those girls.

We crept back to bed in silence. My wife never said; "I told you so," but she went about her work the next morning with a very sweet and knowing smile on her face, and a sly twinkle in her eye.

Two turkeys had been killed in the attack, but the hound ran the fox down, and I found upon examination that I had wounded it at my first shot.

S. W. Strout.

THE TIME OF FALLING LEAVES.

I look from the windows of my den upon a rain-drenched landscape. Through the open door across the passage comes a sound of pattering on the garret roof.

To many, the weather conditions this gray November morning will doubtless prove dismal in the extreme. I wonder if my make-up is so materially different from that of others—to me this steady drive of rain upon the shingles is nothing,—a comfortable, sound, restful suggestive. 'Tis true I am under cover, but that in no wise affects my keen enjoyment of the varying weather conditions in these days of falling leaves.

I delight in heavy storms, and when they rage about the cottage I listen to their tumult and think. Think of all sorts of outdoor life and experience in storm and sunshine, at home, on the dun marsh where the true "hurricane note" of Clark Russell's sea-tales comes booming in from the ocean, or abroad on the heaving waters themselves, where it has been my fortune to live through the wild frenzy of cyclonic gales.

Do not imagine from this that my career has been altogether tempestuous, my experience is the common one of the wanderer afloat and ashore, but it seems to me that I enjoy to a fuller extent than many of my associates the wild exhilaration of a heavy storm. At times I don my rough togs and sally forth, enjoying the tumult to the full.

There is equal delight in calmer scenes, though in differing measure. I do not go a hunting after storms (never lost one in my life), but I am ready to make the most of them when they come my way, and heretofore the discomfort caused has been more than compensated for.

One of my most pleasing memories is that of a day of sunshine closing with a storm, in this wise. The sole occupant of a houseboat, moored some two miles from the shore, on Lake Champlain, I arose before the sun one morning, as is the custom, to look at the weather

Abroad on the sleeping lake all seemed calm and peaceful. I could hear the occasional honk! honk! of a goose. A flock had come in just at sunset, and from the direction of that lonely voice out in the inky blackness that brooded on the waters, I surmised they were feeding on the flats.

The stars had a misty look, their crispness all gone, while the solitary planet swinging low in the sky, had lost its frank, clear glance. Soon the sun rose and kindled the fragments of cirrus in the zenith until they glowed like a deep ruby red. These little cottony clouds, the advance guard of a host that later filled the heavens, were hurrying toward the northeast, sure precursors of a change. Of that glorious day I will not speak, save to say that Indian summer held the earth in its dreamy calm.

Through the glass I watched the geese out on the flats, where they lingered, often losing them entirely from view in the purple haze that at times veiled the surface of the lake. Again they would appear, strangely distorted in the glimmering mist. Toward night they grew restless, and finally, with a chorus of wild cries that set the echoes going, they took wing and sailed away into the sunset.

Shadows crept down the mountain sides, out over the lake they stole, while a strange chill seemed to touch me as I fed my live decoys in their little coops, and made them snug.

A light supper. My pipe—. Hark! there comes the storm. 'Twas a little mite of a structure, that houseboat. Through a crack in the door the first note of the approaching gale was wailing. Now dying away, now rising in a single high pitched note, like the singing of an æolian harpstring. Insensibly the wind rose until it seemed to be sitting there cosy and snug in the midst of a huge roar, so to speak. I thought of an old saying of my deep sea friends who fare the ocean:

"Wind before the rain,
Set your topsails again."

No rain yet. Presently it came—at first a scattering volley of drops on the low roof, then a terrific downpour. Between the lulls I hear the lap, lap, lap of the water at the sides of the houseboat, again its voice is lost in the swirling gusts of rain. As I listen, I fancy there is a sting in the sound of the dashing water, a viciousness I have not noticed before.

At intervals my big gray gander in the coop rouses, and cr-onks to me; on my answering, he replies in monosyllables. After a few moments of this desultory conversation we lapse into silence, and are again lost in the uproar of the raging storm.

I remember a feeling of cosiness that grew as the time passed. A sense of comfort possessed me as I realized that I was pretty close to old mother nature this stormy night, as I held familiar converse with her wild creatures.

My pipe drops from my hand—a few drowsy fumbles recover it, and then, fearing really to awaken and disturb the delicious sleepy spell that held me, I roll into my bunk. There, with the spat of the driving rain, the heavy booming of the gale, came such perfect, dreamless rest as is not often found.

I am still in my den, the rain is quietly pattering on the shingles of the garret roof. *Au revoir.*

Wilmot Townsend.

Bay Ridge, N. Y.

IN THE COUNTRY OF THE SILENCE.

We could not make coffee from the water of the crater lake, it was so filled with arsenic and copper washed from the mineral ledges that seamed the whole mountain, and that is why Billy took the coffee pot and the prospecting pick up to the glacier to "cut some ice."

Bluie was spreading the blankets out over the bones of an old balsam fir so they would get the benefit of the sun. I tinkered with the fire and watched the thin wisp of blue smoke rise straight up until it lost itself in the gray of the early morning.

The crimson of the coming sun emblazoned the east and tinged the scorched rocks that piled wildly up into brown pinnacles a thousand feet above, and pictured themselves in reverse on the glassy surface of the little black lake in the old crater. A faint and far-off murmur came up from the roaring river in the cañon of shadows far below, and lent its voice in contrast to the eternal stillness of the peaks—a stillness that can almost be felt when you are 10,000ft. above the busy world.

"Tink, tink, tink," said the hammer, as Billy broke the ice from the front of the glacier. We could even hear the musical tinkle of the slivers that rattled down into the crevices. "All coons look alike to me," sung Billy, and then the echoes joined in a boisterous chorus and you would have to guess the rest.

Faint sounds, indefinite, indefinable, came up from the lower country and made a part of the upper silence. A few fleecy clouds rode by on the gentle breeze, but we saw the top, not the underside of them, as we usually do; for they could not climb to us, and were content to drag their skirts across the fir tops of the 6,000ft. level.

The fire burned down to a red-hot bed of coals, the coffee welled up in furious bubbles, that wilted before a dash of cold water as Billy set the pot to one side. The bacon sputtered and curled up, and I had to reason with it while Billy attended to the rest of the meal.

The sun was just peeping over the blue wall of the Cascades when we sat down on the moss to eat breakfast—and such a breakfast! It takes mountain air to properly season common bacon, and ozone is the proper flavor to properly mix with a pot of black coffee. I wonder why some enterprising city man don't get a stock of these two culinary helps; he would soon have a monopoly.

After breakfast the odor of tobacco went up—a pipe is better than a fine wine away up there—and we three partners gave ourselves up to a half hour of solid comfort and of watching the world from the same point of view that the bald eagle does every day.

"Let's go to the very top of the highest pinnacle and look at the world from there, fellows." No sooner said than acted on. I took the 60ft. coil of rope and threw it over my shoulder, for I have a certain feeling of friendship and a sense of respect, begot among just such peaks, for a good, strong, light rope; it's mighty apt to be a friend in need up there in the silent country.

The prospecting pick, too, is a handy little tool, both for getting secrets from the rocks and for furnishing a grip where its sharp point will cling in a crevice.

A half mile above camp the pinnacles petered out and reached up in a last sharp needle, in vain effort to pierce the blue dome above. Up and across the little kindergarten glacier, on up the smooth reach of mossy cliff and to the reach that was the divide, we went. Turning to the right, we followed along the top of this ridge, winding about among the broken rocks that age and weather had shattered from the ribs of the world, weaving and twisting, climbing, slipping, always a little higher. "Look out!" shouted Billy, and Bluie and I had only time to flatten ourselves against the face of a huge boulder as a rock of several tons' weight thundered by, crashed down and flew into fragments like an exploded bombshell hundreds of feet below. Loose rock and fragments followed it down and flowed over our feet, up to our knees and—stopped, as we stood against the

boulder waiting for what might happen and what we could not flee from

Billy had loosened a tiny rock, it in turn loosened others, and the big boulder followed—we had just space enough to "clear" as it went by. This incident, common enough in mountain climbing, took all the "starch" out of the other boys, and they shook like the mountain aspen after it was all over—it might so easily have landed us over the cliffs, you know.

"I'm going back, it's too risky," said Bluie. "So'm I," said Billy. "Well, fellows," I remarked, "you know we started for the tip top, and I'm going up there just to look at the world. You can go back if you want to, and I'll go on alone. Kind of a habit with me to get what I start for, you know, and I reckon I'll stand upon the peak if any white man can do the trick." "Better come back," they counseled. "Nope."

That settled it. They started back, and I waited until they should be far enough away to be out of the reach of any rocks that I might start, and then I climbed on. It was certainly a rough and not a little dangerous climb. In some places I clung with my hands alone for a few feet; in others I risked my weight against the roots of the pine moss, the hold the moss had on the smooth rock; it was just like crossing a steep house roof, by clinging with the friction of your weight against the shingles, only if I had started to slide I probably would have been going yet.

All this went by though, and I reached the crest of the peak. It was a mass of broken rock, as though some mighty force had shook the mountain and left it a broken heap of rock. On the highest point I sat down and looked around—studied the world below me.

A dozen little glaciers were in sight, and the steep sides of the mountain looked very much flattened. On each side a deep valley wound away into the heart of the range, and a tiny ribbon of silver wound its length among the blue shadows of the pines that peopled the valleys. Snowbanks piled up against the rocky cliffs everywhere, but always on the north side, where they hid from the sun. Far to the east, the bald outlines of the Cascades formed a saw-edged horizon, seemingly on my own level. Mt Ranier stood up into the sky just as cold, just as white, just as huge as it did from salt water level. Such a beautiful jewel set in the chain of giant mountains, and as prominent as a flashing diamond against the dull sheen of gold. Mt. Baker, St. Helen, Adams, Hood and the Three Sisters, all reared their snowy bulk at different points, and seemed to be still many feet higher than my 10,000ft resting-place.

Mountains, mountains everywhere, in seamed and serried ranks, ranges that ran amuck when the world was young and hardened there to wait the crack of doom. Far to the west the blue waters of the Pacific sparkled in the sunlight and flashed with a sheen of reflected beams.

At my very feet seemingly, the many bays and inlets of Puget Sound were spread out like a child's playground—a map in flat relief. I could see a queer little place that looked as if some one had rubbed out some of the blue color that I knew was timber on my map, then I found two or three more and there was a dirty, smoky looking cloud just over each place—then I knew that I saw Seattle, Tacoma, Port Townsend and Olympia, each a busy city—yet each only a place rubbed out of the blue.

How queer the world is—viewed from the land of peaks and glaciers, the country of the silence. I sat there a long time, far up in the air—above the country of the elk, above the level where the clouds play tag with the treetops, above the line of the eagle's flight, right in the land of solitude, the country of the silence—and as I sat there the world spread out before me, flat, yet curving away in every direction, even showing the rounding in the jagged range of the cascades that came from out the north and disappeared into the south. I had many thoughts, and it seemed that men were very small—very small when one looks at them from this country of the silence.

I saw a ship on the water and it was only a tiny speck with a big cloud of black smoke—as big as your hand—trailing along behind. I saw a dirty spot in the air and it traveled from the rubbed-out place on my map that I knew was Tacoma to the rubbed-out place that was Seattle, and I knew it was 10:30 A. M. in Seattle, and that the eastern mail had finished its race across the map—the train was in on time. I read the doings of men whom I could not see on my map because they were too small, and I could only read the sign they made in the air, it said: "Busy, busy, busy."

The sun was in the south when I stood up and looked for a way down again. A marmot—they live in the silent country—whistled and scuttled away among the rocks as he saw this new intruder in his domain. The eagle he ever watched for, but not for this queer man who could not fly, and he was astonished and said so from the shadow of his burrow.

Down I clambered, straight toward the black lake in the crater 1,000ft. below, simply because I could go in no other direction. I saw our camp there among the boulders by the lake and saw Billy go across the moss to the glacier—he looked like an ant on a sandpile.

Soon I had to uncoil my rope and loop it over a point of rock and slide down, then loop it again. When I came to the last shelf I was still 30ft. above the big snowbank against the foot of the cliff, standing on a smooth ledge with nothing in sight to loop the rope around—not a blessed thing to hitch on to so I could go on down. I couldn't get back, either, and I couldn't go sideways, because the shelf fell away into a smooth cliff. I was out of sight and hearing of camp, and those bare cliffs leave no trail—especially when one travels with a rope. I didn't just exactly see how I was going to reach camp in time for dinner, so I lit my pipe and sat down and let my feet hang over, so they would get used to it if I had to jump.

I smoked, and then walked the length of that bit of a rocky shelf, thinking, perhaps, I wouldn't look much bigger to a man over in Seattle than he did to me, and I couldn't see him at all on the map. I concluded I'd have to depend on myself to get down, or stay until my wings grew; and about then is when I saw a very little crevice—not very big—but I thought the prospecting pick might get a grip in there and I could loop the rope over it so I could slide to the snowbank below.

I got into camp all right after a few more slides and tumbles on the snowbanks and slippery places on the mossy side hill—you cannot travel there without a prospecting pick very handy, and I left mine jambed into the crack in the rocks, 30 or 40ft. above the snowbank, because I couldn't reach back and get it after I got off that measly little shelf. Maybe some of the people who are to follow us on this old world will find it and call it a relic of prehistoric man, who must have had wings to get up there in the country of the silence.

EL COMMANCHO.

THE CHESTNUT RIDGE.

And Along Its Foot.—IX.

ABOUT Nov. 1, before or after, in former years always we had a period of several days of delightful weather with peculiarities of its own of such a character as to entitle it to be regarded as a distinct season, "Indian Summer." Happening about All Saints' Day, the pious inhabitants of Canada called it the "Summer of All Saints." Usually it was preceded by a brief period of cold, blustering weather, which was known as "Squaw Winter." We still have returns of Indian summer, though I think not so regularly as in former years, or so distinctively pronounced. The causes of this peculiar "spell of weather" being on the decline, a waning effect must naturally ensue.

In a little volume of essays, "Country Days," by my old friend James M. Swauk, now of Philadelphia, if not formerly an inhabitant of the Chestnut Ridge, at least a dweller "along its foot," in speaking of this sweet summer of All Saints, remarks: "The characteristics of Indian summer, when it appears in all its glory, are a mild and genial temperature, gentle southwestern breezes, unusual brightness of the sun, extreme brilliancy of the moon, a clear blue sky, sometimes half hidden by a veil of gray smoke; dawns redder than scarlet, and sunsets laden with golden fleeces, forests all aglow with the fire of richly-tinted leaves, a holy stillness throughout all of nature's walks, and an intuitive sense in every devout soul of God's goodness to his ungrateful children." These are the days of which Bryant sings:

"When the sound of dropping nuts is heard,
Though all the leaves are still,
And twinkle in the smoky light
The waters of the rill."

Mr. Swauk adduces two theories, assigned by different writers, to account for the occurrence of this season. One is to the effect that in the month of September the water in the higher latitudes begins to congeal, and in doing so a vast amount of latent heat is dispersed through the atmosphere. There are at the same time two sets of warm air currents flowing—one from the torrid zone northward, and the other from the polar regions southward.

"These two currents meet about midway in the temperate zone, near the 45th parallel of north latitude, and in the collision the warm, condensed current in some measure descends. This affords a solution, in some measure, of the warmth, as well as of the calmness, the softness and the dryness of the air of Indian summer." The other theory is that the first severe frosts of autumn put a sudden check to the immense vegetable perspiration that has been going on all summer, and this preserves the heat of the atmosphere by diminishing the radiation of heat that takes place more slowly in dry than in moist air.

"There is a sudden and universal diminution of the moisture that was given out from the leaves of trees and other plants before the frost had destroyed them; for the evaporation caused by the drying of fallen leaves and herbage is comparatively slight, and ceases after a few hours' exposure to the sun. The atmosphere being dry, and the radiation of heat proportionally small in quantity, all these circumstances, if no unusual atmospheric disturbances occur from any other hidden cause, unite in producing a sudden and universal accumulation of heat." As Mr. Swauk observes, these explanations do not account for the other characteristics of Indian summer—the smoky condition of the atmosphere and the redness of the sky at this season.

The cause is, no doubt, found in the decay of the forest leaves. All the phenomena seem to indicate this. Vegetable decay, we are told, is but a species of slow combustion; and the same chemical changes are brought about, whether the process of combustion is a rapid or a tardy one. This will account for the slight haziness of the atmosphere and the warm air of Indian summer. As the forests are being cleared away, the partial or the entire failure of Indian summer must eventually come about.

All the fruition of the year seemed to gather itself up in this delightful season. Then the corn was cut and husked, and often the yellow ears lay in great heaps in the fields, interspersed with the golden pumpkins; the cider mills were busy in the orchards; the sound of the flail was heard in the barns; the cheerful voice of chanticleer was borne afar on the quiet air; the thistle-down, "the ghost of flowers," floated lightly through the narrow valleys; the beating of the pheasants echoed from the hillsides; the occasional crack of the sportsman's gun was heard in the woodland, where the squirrels were frisking and barking. Indian summer was the breathing spell of the year. The forces of nature that had brought to maturity the promises of spring, seemed to be lying in calm restfulness after their labors. There was an unwonted dreaminess, a languor of spirit in keeping with the soft haziness of the atmosphere that lay upon the landscape. It was a time for reflection and thoughtfulness. What man could sit down in this calm season among these rural sights and sounds, and not experience a feeling of gratitude that he was permitted so much as to live. "There were times," says Micah Clarke, "as I rose up with my mind full of the noble poetry and glanced over the fair slope of the countryside, with the gleaming sea beyond it, and the purple outline of the Isle of Wight upon the horizon, when it would be borne in upon me that the Being who created all this was not the possession of one sect or another, or of this nation or that, but was the kindly Father of every one of the little children whom he had let loose on this fair playground." Somehow this seems a finer theology than we sometimes hear from the pulpit.

For all its balmy airs, its bright skies, its softened landscape, the Indian summer is not a period of exhilaration. It arouses none of the feelings of buoyancy that characterize the month of May and early June. Then all nature is full of promise. Bud and blossom and leaf, the purling of brooks and the songs of birds, all join in a *sursum corde*, to which the heart cheerfully responds. But Indian summer has a rather depressing influence upon the mind. It is suggestive of somber reflections as we walk among the fallen leaves and the dry grass, and feel that the end of the year is near at hand. The flight of time is a common theme of the preacher and the novelist, and the recurrence of stated periods is always impressive. The anniversary that the youth hails with pleasure, to the elderly person becomes a sad reminder of departed years and the chilly monitor of the approaching end.

The Indian summer was doubtless so called because it was the season when the Indian women gathered their harvests of maize. It is a great mistake to imagine that the Indian depended mainly on the product of the chase for his support. He resorted to the woods for his supply of flesh provisions and in case of failure of other food; but the primitive red man was first of all an agriculturist. He raised immense crops of corn; and the reader of our early annals will recall more than one instance when the early white settlers were saved from starvation by the timely supply of corn from the stores of the Indians. On Nov. 16, 1620, only four or five days after the landing at Plymouth, the first expedition of the Pilgrims into the country under the command of the redoubtable Captain Standish, came upon a hidden store of corn, "a fine, great, new basketful of very fair corn of this year," of which they took as much as they could carry; and down in Virginia Captain Smith received from old Powhatan 200 or 300 bushels of corn for a handful or so of glass beads—a characteristic beginning of the prosperous Indian trade which followed.

In the first year of the occupation by the French of the small plain where Pittsburg now stands, the Indians who lived about Fort Duquesne raised over 2,000 bushels of corn. The attack on Kittonning began in the cornfields below the town. In the year 1779, General Sullivan invaded the country of the Iroquois in western New York, and destroyed 160,000 bushels of corn. They sometimes laid up stores sufficient to last for two or three years. The raising of the corn was almost exclusively the work of the women; and we seem to see them in the mild Indian summer sunshine, moving among the towering stalks, and stripping them of their golden stores.

"Cantantowwit! God of the red man's summer! All hail to thee for thy gift of this most lovely of the seasons! Well may the untutored Indian ascribe to thee every blessing which he enjoys, and worship thee as the guardian of the spirits of his dusky ancestors. And deaf, indeed, Cantantowwit, must be the ear of the Christian pale-face, who does not hear in the whisperings of thy gentle breezes the 'still, small voice' of a God of love, which says as plainly as the language of inspiration itself, 'My peace I give unto you. Blind, indeed, must be his inward vision if he discern not the prompting to high and holy resolves, which comes to him from the leaves of russet and brown, and scarlet and orange, and silver and green, that mark everywhere the presence of the 'varied God'."

To these beautiful sentiments of my friend Swauk, I beg to append these lines of Mrs. Sigourney:

"When the groves
In fleeting colors wrote their own decay,
And leaves fell eddying on the sharpen'd blast
That sang their dirge; when o'er their rustling bed
The red deer sprang, or fled the shrill-voiced quail,
Heavy of wing and fearful; when, with heart
Foreboding or depress'd, the white man mark'd
The signs of coming winter, then began
The Indian's joyous season. Then the haze,
Soft and illusive as a fairy dream,
Lapp'd all the landscape in its silvery fold."

T. J. CHAPMAN.

PITTSBURG, Pa.

THE INDIANS OF ALASKA.

Editor Forest and Stream:

When I was coming down on one of the Alaskan steamers last month a passenger, who for seven years had been an explorer in our northernmost domain, related to me a tale of woe concerning the Indians of the far North, which, if true, amounts to a most serious charge of criminal neglect on the part of a civilized government. So startling were some of the matters told that if I had not later seen and read an account of similar import in a Pacific Coast periodical I would not at this time relate it. From these accounts it appears that the Eskimos have been and are so far deprived of their natural base of supplies by the extermination of the fur-bearing animals, the whales and fishes, as to be in a state of starvation, while to add to these horrors disease is rapidly depleting the race and tending to an early closing of their chapter of life.

I presume that every one is fairly familiar with the international controversy concerning the fur seals, and hence no doubt realizes that the early extinction of these animals is a possibility, while in some high quarters it has been urged that the killing off of the remnant of the seals would be an easy solution of the matter which is agitating our country and other nations. Likewise most of your readers have no doubt placidly come to the conclusion that the extermination of the whale by modern use of artillery is an early and indifferent possibility. Still, I imagine that few realize what the destruction of the seal and whale means to the helpless people in the far North.

Twenty-five years ago the northern Alaska Indians were living in comparative comfort, for the sea yielded a substantial supply of quite all that sufficed for their simple mode of life. Owing to the peculiar and rigid climatic conditions that exist in their land, agriculture is not a profitable following as a means of livelihood, hence these people obtained their food and raiment, the materials for building their habitations, their boats, spears, bows and arrows, and dog sledges and harness from the fauna of that region. Skins, fur, ligaments, muscular and adipose tissue were the *sine qua non* of their existence. At the time of the Seward purchase, these northern regions fairly teemed with food and fur-bearing animals. So rich a field attracted the cupidity of the white man, whose religion is the attainment of the almighty dollar, and whose avarice knows no compassion for any suffering that may stand in the way of the idol of greed.

Great moneyed corporations were formed for the purpose of trespassing on these rich natural preserves, by whose operations a hundred or so men have become rich. One company, with its headquarters at San Francisco, has practically annihilated the whale, one the fur seal, while another combination is industriously devastating the waters of the salmon. For the millions of dollars paid for this portion of former Russian America by our Government, whereby a small revenue has been received—small in comparison with the per capita benefits obtained by our people—a few men have been enabled to pocket enormous sums of money, while as a resultant fact a race of people has been reduced to privation, if all accounts are true.

When this nation acquired Alaska it became the protector of the simple people inhabiting the territory. The lives of these Indians came into our keeping as wards of the nation. As guardians of this trust, our Government has appointed

men drawn from the ranks of professional politicians, whose fitness for the execution of a fiduciary trust is often first estimated on their value as party workers. Such men cannot administer an office of trust, consistent with their appointment, in an impartial manner when moneyed contingents urge their demands on adverse lines. This proposition is supported by the situation in Alaska, where a body of people, denied the right of suffrage, demands humane treatment, and is opposed by organized wealth controlling a voting power.

Many people have, no doubt, been informed that the sealing and cannery industry has been handled to the benefit of the Indian by giving him employment. But if these tales from the North are true no blessings have been showered on the natives, and my own personal observation of the way the Siwash on this coast have been benefited by trading with the white men, makes me skeptical of any redounding benefits that would accrue to the Eskimos through dealings with the companies operating further North.

From the evidence at hand, it seems clear that the companies in their transactions with the Indians have cheated and demoralized them—cheated them in trading arms and supplies for skins at prices that would paralyze a Bowery shylock. As an example of profit possible heretofore under government license, consider the trading of a rifle wholesaling in the States at less than $10 for a pile of furs marketable at $1,000, also the exchange of a pound bag of tobacco mixture, dear at 50 cents, for a sea otter pelt worth $300 What follows? Having exterminated the seals, the whales, the salmon, and other profit-bearing fish and animals, there will be no further opportunity of trading at 1,000 per cent. profit, and the Indian robbed of his original base of supplies, and deprived of his later and more short-lived commercial prosperity (?) dies. Following this system of robbery under the guise of trading, demoralization and extinction is hastened by inoculation with disease through the corrupt and heartless brutes in human shape in the employment of the commercial organizations at their trading posts.

Pages have been written on the treatment of the Indian until the story is an old one. We have been too often in the habit of accepting the trite saying that "The only good Indian is a dead one," in order to dismiss the consideration of a disagreeable subject. This sentiment is brought about largely through the representations and conduct of callous-minded speculators, and through the cupidity and cowardice of public office-holders, whose influence has been greater than that of the few missionaries and travelers who have attempted to arouse the people to thoroughly sift the cause and effect underlying the Indian question. Investigating committees have, therefore, invariably failed to settle the matter. Again, the name of Indian has been associated with the warlike tribes of the plains, until no distinction appears in favor of the many peaceful races of dusky-hued people in, habiting the Northwest coast. Yet with all their timidity-there may come a time when the realization of the wrongs heaped on them may cause bloodshed at the hands of the Eskimos. Even a rat will turn when cornered.

Does robbing a race of the means of livelihood and inoculating a people with a loathsome disease warrant a civilized nation responsible for such conditions, when retaliation is at hand, in acting solely on the theory that only a dead Indian is a good Indian? To answer in the affirmative would be an argument of inhumanity and sounding the slogan of the depraved. After more than a century of vacillation on the Indian and kindred subjects by individuals holding public office under party management, it does seem that the body of the people will never get at the bottom facts except through the instrumentality of a non-political press, or perhaps the church.

FOREST AND STREAM has done excellent work in the interests of game protection and humane sportsmanship, hence I suggest here a field of investigation on a higher plane of humanity. CAYUGA.

EVERETT, Wash., Oct. 25

NEWS FROM THE KLONDIKE.

EXTRACTS from a letter written by J. B. Burnham, dated at White Pass, Alaska, Sept. 25:

"I am still enjoying the same perfect health. * * * I feel as if I could never stop eating while there is anything edible in sight. I have not had a cold or sore throat, or anything of that kind since landing, which is good proof of the healthfulness of this out-of-door life. It rains three out of four days, now. I wear a Macinac coat and slicker, and rubber boots and an oil-silk hat, heavy underwear and flannel shirt. Men, camped here with us last night, remarked upon my healthy condition and said that the trail certainly agreed with me. The party seem determined that I shall be one to go in, and it seems the general understanding that I shall select the one to go with me.

"Now as to prospects for getting through. We have all the grub—2,000lbs.—for two men, through to within a few days' trip of our starting point at Lake Bennett. In my opinion, Lake Bennett and the other big lakes will not freeze for more than a month yet. Last year Lake Bennett did not freeze before Nov. 15. Two weeks should take us down the river. This would bring us to Dawson City in good safe season, or we will be in position to winter, if forced by any unforeseen conditions. We are told that provisions are being confiscated at Dawson. We will take good care that ours shall not be, by ascertaining if there is any truth in the rumor, before reaching Dawson, and 'caching' a part, if there is reason to believe it.

"Old trappers who have been all through this country between here and Dawson say that there is yet ample time, and that, aside from Lake Lebarge, the country is all good for wintering on the way if stuck.

"I shot two ptarmigan yesterday and picked up a wounded duck in Summit Lake the day before.

"Lots of men on this trail have not got far enough over its endless forty-five miles of mud to give any promise of getting through, and hundreds of log cabins are being built at points where they happen to have their supplies.

"There is a wonderful freedom from sickness on the trail. A man was drowned the other day in crossing a pond by getting mad at a horse and causing him to pull him into the deep water of Shallow Lake immediately below, but there have been very few deaths and very few accidents of any kind. Horses die like sheep, but their deaths are due to starvation and overwork combined. None of ours have died unless on the last trip, from which our boys have not yet returned. We have fed them well and still have 1,200lbs. of oats and two bales of hay and a sack of barley. The trail ahead of us is in better condition than for a long time. There is no snow at this point, but at the summit there is 4 or 5in. It will soon melt off, however.

"I had no idea of being able to write again, and am trusting to Providence for some means of sending out this letter. I feel confident of getting through to Dawson City safely. If delayed beyond reason I shall not risk needless danger.

"Our boats are very staunch and splendid sea craft; they exceed my hopes. One great point in their favor is the fact that they can be handled very easily, rowed against head winds, etc., where most of the craft sent here are useless and helpless. I have been lying idle now for nearly a day, resting and waiting for Sheriff and Macurcher, who are down at the last camp bringing in the last load."

J. B. BURNHAM.

[Note by Rev. Geo. W. DuBois, Essex, N. Y.—I infer that Herrington and Baskoville were resting in camp with John Burnham at the time of writing, and all well and hearty.—GEO. W. DUBOIS]

Natural History.

OUR SNOWY EGRET.

BETWEEN our house and the lagoon is a lawn that is smooth and grassy, except where it is covered by that thick and juicy vine which loves the loose sand of salty beaches and bears a wealth of blossoms that look like morning glories. The salt water laps eternally against the edge of that lagoon, except when the trade wind dies away, as it sometimes does for an evening, and the land breeze comes down from the distant mountains.

When that wind blows our shore is a busy place, for that chill breeze drives from pastures and thickets back of the village bugs, beetles and flies of many kinds and assorted sizes. The hum of their wings is like the roar of a coming hurricane. Thousands are caught in their flight by birds or bats, which dash here and there, and swoop down to the smooth lake. Other myriads drop to the water and are snapped up or down by fish that swarm close to shore. Pelicans and other birds hover over the lagoon and little sharks dash about, all preying on the fish that prey on the insects, which in their turn perhaps prey upon each other.

Egrets come to these feasts and patrol that sandy shore, alert to snap up any insect unlucky enough to fall within reach, and quite as ready to spear any minnow foolish enough to venture close to the beach in its eagerness to catch a bug.

These herons are more at home on the narrow strip of sand two miles away, which separates the laguna from the sparkling Caribbean Sea. There they may be seen in scores any day, standing like trim sentinels in snowy uniform, or marching with immense gravity near the water's edge, but always ready to rush at any careless crab that may be too far for safety from his refuge in the wet sand, and fully as eager to thrust a keen beak into any eatable thing luck may send their way.

Best of all, it seems to me, these little herons love to live among the hundreds of islands of tall grasses, which float about on still Nicaraguan lagoons where man is seldom seen. There they may dream in peace all the day, if they will, beside the deep, dark channels between the shifting masses of green. But I doubt if egret is ever deep enough in day dreams to miss any silly frog or bold mouse that may come within striking distance of that long, sharp bill. It shoots out like a flashing spear, and the foolish one is bayonetted.

We have in our home a white egret, to keep company with two blue herons of his own size, and a lead-colored giant of a cousin of theirs. They stroll about most of the day, beneath the bananas and the limes, the orange and the mango trees. They peer into every crevice in search of a bug, beetle or roach. They are ever alert to rob any chicken which may be unwise enough to tell of the finding of a wormy prize. They snap at passing flies, and chase butterflies with exceeding earnestness.

Often our egrets lie in wait near the kitchen for whatever scrap of meat or fish the cook may toss to cat, or dog, or chicken. Such a bit can scarcely more than touch the ground before one or other of those birds has saved it. No cat, nor dog, nor chicken is swift enough in a race with any of those egrets to capture a flying bit of food.

Blanco is boldest of that flock. I gravely fear he deserves to be denounced as a robber. He regards the rights of no living thing about the place. Dogs dread him; cats fear and hate him; the gamecock that is ever eager to attack any other bird of his inches, readily stands aside for that little white demon. Even the cook and the waitress are laughingly afraid of Blanco. But so they are of the big blue heron also.

Often we hear a womanly squeal, and look up to see one of those girls scurrying for the kitchen or the dining-room. She has offended, perhaps by trying to "shoo" a heron away, and he has resented it by jabbing with his spear of a beak at her bare, brown toes; or perchance Big Blue has seen fit to send in his bill merely because a skirt innocently fluttered when passing.

Sometimes those girls give a dish of meat to the cat, but meanly set it down outside of the kitchen, then wait to see the fun. But it is no fun to poor puss. She begins growling fiercely and foolishly, as soon as her nose is over the dish, and when Blanco hears that he comes running. His long neck goes out toward that dish and puss threatens him with a paw. He pecks at her tail, for which he has a standing grudge, and puss jerks it aside. He thrusts the point of his bill into the fur on her rump with emphasis, and she half turns to cuff his saucy ears. He nimbly hops aside and puss seizes a piece of the meat and keeps her head over the rest to guard it. Blanco digs her severely in the ribs, and in her pain and rage she forgets the nimbleness of that thief. She whirls around to give him a lesson he will not soon forget, and he has a piece of the meat that instant, and is off to enjoy it at ease, then comes back for more.

Any one of our herons will attack our turkey and make no bones about driving away any number of zopilotes—which other folk might call buzzards—that may see fit to gather in the grounds, but not one of our long-legged protectors will trouble cat, dog or bird at mealtime, unless one of these so far forgets good manners as to go near the table.

When the girl brings the soup, the herons muster for duty. Big Blue stalks with immense dignity to his post, 6 or 7ft. from the table, and there he waits; for he is not quite as tame as the others; and he is more dignified than they. Little Blue and Azulito—that is only the Spanish form of the same name for the other little blue one—take their places not far from the chairs, ready to pick up any crumb of meat, dodge any blow from napkin, run from any threat by their big blue cousin, and most especially to flee from any rush by Blanco the bully.

And Blanco? Does he stand modestly back and bashfully wait to be coaxed to take a mouthful? No, not precisely. Instead, he takes a stand beside one who has been his fast friend and protector from the very hour in which he was first touched by human finger, and if the morsel of meat or fish is not given soon enough to suit his notion of right, he gently tugs my sleeve. It happens sometimes that two or three such hints go seemingly unheeded. Then comes a stroke that any one would notice, if his skin was not like boiler iron. No use now to savagely flirt a napkin at Blanco's head. Time was when that might have driven him away for as much, possibly, as half a minute. Now he scorns so vain a trick, and resents it with bold vigor.

Some one at table tosses out a piece of fish or a bone, that we may see what may happen. All four herons start for it together, that is, unless it has fallen near Big Blue. No use of going if he is near. One stride of his tremendously long legs, one straightening of his prodigiously long neck, and he has the prize almost before the most agile of the others can start. If it is a mouthful he can gulp down Big Blue thrusts his bill upward and outward, a bad case of mumps passes along his throat down, down until it is lost in the feathers on his breast, and that tidbit has gone where it will do the most good. But if it is too big to go down at one swallow, or if there is a bone to pick, there is a dash of white amid the blue, a scattering of herons, and Blanco has the prize. Even Big Blue gives way before the fearless rush of Blanco, the bravo.

Every woman who comes to the house hates that bird for his thrusts at her bare feet; yet every woman likes him, as does everybody belonging to our household. Perhaps this is because of his courage and dash; maybe it is for his swift alertness and manifest confidence in the good will of people who belong to him; perchance it is because he is always a model of neatness; and possibly it is because of his sublime audacity in trying to boss the whole ranch—but whatever the reason, he is certainly a favorite with all.

There are along the shores of the waters of warm climates many thousands of birds like Blanco. And each year many thousands of them are murdered that their aigrettes may adorn women whose attractions are so many that they surely need no such help as can be got only by slaughtering these brave, dainty and beautiful little herons. E. W. PERRY.

COON EDUCATION.

Editor Forest and Stream:

Your correspondent, Mr. R. L. Warner, writes of a young coon that protects its eyes with its "front hands" when grasped by the throat. Mr. Warner hazards the guess that the act is hereditary. This idea is not so bad, if the coon, when captured, was too young to have received education from its mother. A thing that favors the hereditary idea, is the evolution of "front hands" and forearms so perfectly adapted to the work of protection. But, perhaps, after all, the coon was old enough before its capture to have received some education from its kind.

Coons educate their young in rough-and-tumble play, just as cats educate their kittens. It has been my good fortune to have the chance to observe the development of a young coon from a helpless, sprawling bunch of fat and fur, to a bristling battery of claws and teeth operated by chain lightning.

Looking through my notes for the years 1885, 1886, I find that I had in captivity seven coons, all of different ages when captured. I herewith select and re-write some of the observations jotted down in my note-books.

The young coons spent the greater part of the time in play. Sometimes the play ended in a lively scrap, then each tried to seize the other by the throat, or neck, under the ear. If one succeeded the other immediately covered its eyes with its front feet. The reason for the act was evident enough to an observer. It was to protect the eyes from the fierce clawing which was sure to follow. The victim would not give up, but would continue the fight with its hind claws, and usually kicked itself free in a short time.

Instinct plays no part in coon lore. A coon can reason quite as well as the average human being. An old coon, one of my captives, was as artful as Lucifer. Whenever my back was turned he would be up to all sorts of mischief. When caught red-handed he could put on a look of innocence too comical for anything. I put a collar on him when he was first captured, and for two weeks he fought against the indignity, then suddenly appeared to be contented. By the end of the first month he had got all of my ways of life down fine. If I went into the woods with my gun, on my return he would tear around in his cage anxious for the squirrel he had not seen, but was sure to get. When I went away without the gun he paid no attention on my return. I do not think he was guided by scent, for sometimes the wind would not be right. Without doubt he connected the gun and squirrel in his mind, and perhaps knew more about a gun than I thought.

He did not take kindly to cage life, although his cage was under a small pine tree, so when I was about the cabin I chained him to the tree and let him run outside. I put him into the cage every day before going to the city for my mail. He resented this, and would run up the pine tree when he saw me lock the cabin door. One day I pulled him down and whipped him while he lay prone on the ground, with his eyes covered. I took away his food and water. He must have been downright hungry before I fed him. He never forgot the lesson. After that when he saw me lock up he would sneak into his cage, fearful, I suppose, that if found outside he would be whipped and starved. My notes on this coon cover nine months and contain many things of interest. He settled "the cry of the coon" forever.

Tell Mr. Hough that he can have my goat! I held my breath while reading his goat shooting experience. When a human being sleeps between two ice cakes, freezes to death, starves to death, and is smothered to death in a snow-slide, to get a goat that he can't eat, it takes me away off my feet. No one but Mr. Hough, outside of a lunatic

asylum, would endure such danger and hardship for such a reward. However, if I were younger—ahem!

HERMIT.

SEALING FACTS AND CONDITIONS.

THE Bering Sea conference of representatives of the United States, Great Britain and Canada, in Washington, closed Nov. 16, with an agreement as to the facts relative to the seals. The results were announced in an official statement made public by Gen. Foster, as follows:

"The delegates to the fur seal conference have agreed unanimously on certain propositions touching the fur seal herd of Bering Sea. The report contains sixteen propositions, which are briefly epitomized as follows:

"That the Pribilof herd has declined in numbers from 1884 to 1897; that the number was formerly three to five times that which now exist; that the death rate among pups is great, not more than one-half to one-third surviving to the age of three years; that the number of breeding females in 1896 and 1897 was between 160,000 to 130,000; that the decrease from 1896 to 1897 was notable, though its extent could not be definitely determined; that land killing of males, as now practiced, does no harm to the herd; that the pelagic sealers respect the limitation of the law; that pelagic sealing involves indiscriminate killing; that the catch at sea contains a marked excess of females; that the killing of males on land is the cause of this; that among the females killed are not only those both nursing and pregnant, but also many who are immature, or who have already lost their pups; that the fur seal being polygamous, a large number of males may be killed with impunity; that females cannot be killed in similar numbers without checking the increase of the herd or bringing about an actual decline; that a small number of females, less than the annual increment of breeders, might be taken without producing actual decrease; that excessive pelagic sealing has led to a reduction in the herd; that pelagic sealing has of late fallen off in greater ratio than the herd has, thus producing a tendency toward equilibrium in numbers; that in estimating the future conditions of the herd, there must be taken into consideration the reduction in the number of surviving pups caused by the pelagic catches of 1894-1895; that the herd is not in danger of actual extermination so long as its haunts on land are protected and the protected zone is maintained; that both land and sea killing now yield an inconsiderable profit either to the lessees or to the pelagic sealers themselves."

The delegates signing the agreement are Charles Sumner Hamlin, David Starr Jordan, D'Arcy Wentworth Thompson and James Melville Macoun.

Some Introduced Birds.

IN the year 1879 twelve dozen Eastern quail (*Colinus virginianus*) were brought to Idaho and turned loose in the Boise River Valley, near Boise City, Idaho. The mild climate of this region, and the extensive grain fields, furnished these birds precisely the surroundings which they required. They did well from the first, and have so greatly increased that they are now by far the most abundant game bird in the vicinity. Some species of grouse which used to be very abundant there have almost been exterminated, but Bob White continues to thrive and to hold his own.

A number of California Valley quail, introduced there some years later, did not do well, and ultimately disappeared entirely.

It is reported that the European skylarks turned out in Oregon, in the vicinity of East Portland and at other points, have done remarkably well and are firmly established there. They migrate each year about October, returning to the vicinity of Portland in February. Here they spend the summer and breed in great numbers. It is understood that the European song thrushes and starlings, introduced about the same time, have also done well.

A Virginia Lynx.

PINE VIEW, Va., Nov. 10.—*Editor Forest and Stream:* There was killed near this place on the 6th an animal of the cat family. There are so many different opinions in regard to the class of cats he belongs to that I write to get you to identify it for us. The cat is 26in. from end of foot to top of back; would stand about 24in.; a little over 4ft. long; tail 4½in. long, and weight 22lbs., but seemed very thin in flesh; is a grayish white on back, sides and head, a dirty white under belly and throat, long hair on legs, with a few black hairs on end of ears about 1½in. long. We are forty-five miles from the mountains, and cats of any sort are rarely met with A little bob cat was killed near here some twenty years ago. One of our local hunters says it is a catamount, met with in the mountains of West Virginia. W. L. C.

[Evidently a lynx of one species or the other. The description reads like the Canada lynx (*Lynx canadensis*), which, however, would hardly be looked for so far south. It is more likely to be a bay lynx (*Lynx rufus*), though as we say the description of the animal, if from a more northern locality, would lead one to think the animal a Canada lynx. Catamount is a general name often applied to both species of lynx and sometimes to the cougar or panther.]

Mutilated Squirrels.

JACOBSTAFF writes of red squirrels mutilating gray ones. There are no red squirrels here, but it is often asserted and generally believed that such mutilation is practiced among the gray squirrels, and almost any squirrel hunter will say that he has killed many that bore unmistakable evidence of mutilation, and I have shot many that looked that way. But close examination never failed to show that the glands, which appeared to be missing, were still there, but for some reason had not grown with the rest of the squirrel, and were so small as to be easily overlooked, being frequently but little larger than a grain of wheat. O. H. HAMPTON.

The art of avoiding a conversational unpleasantness by a graceful way of putting things belongs, I suppose, in its highest perfection, to the East. When Lord Dufferin was Viceroy of India, he had a "shikarry," or sporting servant, whose special duty it was to attend the visitors at the viceregal court on their shooting excursions. Returning one day from one of these expeditions, the shikarry encountered the Viceroy, who, full of courteous solicitude for his guests' enjoyment, asked, "Well, what sort of sport has Lord —— had?" "Oh," replied the scrupulously polite Indian, "the young Sahib shot divinely, but God was very merciful to the birds."—*Manchester Guardian.*

Game Bag and Gun.

The "Brief's" Pictures.

THERE are twenty-nine illustrations in the current edition of *Game Laws in Brief*, most of them full-page half-tones, and all admirably printed. The book is a beauty, and well worth having for the illustrations which, Mr. Charles Hallock says, so well represent America's wilderness sports. The *Brief* gives all the laws of the United States and Canada for the practical guidance of anglers and shooters. As an authority, it has a long record of unassailed and unassailable accuracy. Forest and Stream Pub. Co. sends it postpaid for 25 cents, or your dealer will supply you.

THE PARTRIDGE.

SHOT of the wood, from thy ambush low,
Bolt off the dry leaves flying,
With a whirring spring like an Indian's bow,
Thou speed'st when the year is dying;
And thy neat, gray form darts whirling past,
So silent all, as thou flyest fast,
Snapping a leaf from the copses red,
Our native bird on the woodlands bred.

I have trembled a thousand times
As thy bolt through the thicket was rending,
Wondering at thee in the Autumn chimes,
When thy brother's soft wings were bending
Swift to the groves of the spicy South,
Where the orange melts in the zephyr's mouth,
And the azure sunshine humors the air,
And Winter ne'er sleeps in his pallid chair.

And thy whirring wings I hear,
When the colored ice is warming
The twigs of the forest sere,
While the Northern wind a-storming,
Draws cold as death round the Irish hut
That lifts its smoke in the railroad cut,
And the hardy chopper sits dreaming at home,
And thou and I are alone in the storm

Brave bird of my woodland haunt,
Good child of the Autumn dreary,
Drum of my city and bass of my chaunt,
With thy rushing music so cheery,
Desert not my bowers for the Southern flowers,
Nor my pale, Northern wood for her ruby hours;
Let us bide the rude blast and the ringing hail
Till the violets peep on the Indian's trail.

Editor Forest and Stream: The foregoing poem is from W. E. Channing's "Life of Thoreau," and is by Channing. If you have not printed it in FOREST AND STREAM it will fill a niche about this time of year, and your readers will be glad to see it. E. M. MACDONALD.

WE HAVE THE RED SQUIRREL.

THE conditions under which most sportsmen live are so commonplace that they cannot expect any very striking experiences or successes. In the long-settled regions the big game is gone, and the small game and vermin are so nearly gone that to get any shooting we need to make the most of every bird and beast that the law permits us to shoot at. For the average gun-lover there is no special car to take him to the Dakotas and the Rockies. He must find his sport within the limits of a day's tramp or a few hours rowing. There may be near him lands or waters that invite the tarrying of the migratory game birds, and if by studying his neighborhood and working it shrewdly, by good hunting and good shooting, he can pick up a few snipes or ducks, or a brace of woodcock, he considers himself lucky, and really has not much to complain of. Three or four gray squirrels or rabbits will send him home pretty well satisfied.

But there are many men who are within reach of little or no game, who yet feel the hunting impulse, love the woods and fields and enjoy the handling of well made shooting irons. If they are to have any hunting career they must magnify their opportunities and their discoveries. A pretty small incident must serve for an adventure; a woodchuck must rank as a bear; a raccoon must pass for a panther; a fox will do for a wolf; a chipmunk may figure as a coyote, and a red squirrel as an antelope; a snipe must look as big as a wild goose, and if on some great day the shooter manages to worry down a grouse he must let himself feel as if he were toting home a backload of wild turkeys.

A recent correspondent, taking a pessimistic view of this matter and casting a prophetic glance into a future void of game, foresaw the sportsman reduced to gunning for pismires. But we are not there yet. We have almost everywhere some larger vermin still to shoot at, and this article celebrates the red squirrel as a substitute for game, with some good points of his own. The best is that he is not yet extinct. He does not insist on the tall timber amid which the gray squirrel hides. Any little grove may harbor the red and bring him within a walkable distance of town. He deserves death for his depredations among the birds' nests, the cornfields and the nut-bearing trees, so the shooters of him need have no compunctions. He is hardly game, but that has some advantages. We need not employ counsel, or even look into the *Brief* to learn when we may hunt him. As Roderick Dhu might have said:

"Though breeding time the gray we lend,
Ere aim we take and lead we send,
Who ever reck'd how, where or when
The prowling red was popped and slain?"

As he is vermin rather than game, we need not bother to dress him when he is shot, but may leave him to mingle with the elements where he fell and where he sometimes lies invisible under one's nose, so well does his back match the color of the russet leaves.

Over and above the shooting, the squirrel hunter has all the chances to enjoy his outing that any hunter has in the same region. The landscape spreads about him as broad and beautiful on his way to the woods as if he were after the noblest game. The autumn air is as exhilarating for him as for the nabob who runs his hunting car away into the Northwest. The trees rise about him in October as gorgeous in their ripened leaves as if he were shooting grouse and bagging one every five minutes. When those leaves lie damp with frost and rain, they are as fragrant to him as if he were stalking a deer; and the bare twigs trace just as delicate a network against the overarching blue.

After all, we would not recommend the hunting of the red squirrel if it did not require, when properly practiced, enough skill to make it worthy of a sportsman. That, of course, implies the use of a rifle. Thomas Alexander well said: "Shooting squirrels with a shotgun is about the dreariest drudgery that was ever miscalled sport. But when you exchange the shotgun for the rifle, you have in your hands a veritable enchanter's wand that transforms a species of sport fit only for boys into as delightful a pastime as can well be imagined."

The beginner who starts out with the idea that he is going to hit with a bullet every red squirrel that he sees, may not have much modesty, but he is on the way to get more. This squirrel is a small and restless mark, and harder to hit at 100ft. than a deer's shoulder at 100yds. If you find the work too easy, you may adopt the heads-or-nothing rule. and if you come back telling your friends you shot a lot of squirrels, all of them in the head, they may believe you if your general reputation is good and they never hunted squirrels

As to rifles for this sport, the more powerful of the .22s are all right, and even the short will do at a pinch. The .25 covers the whole ground. If you get out of factory bullets of this caliber, a tolerably accurate cartridge, costing practically nothing, may be made by loading a No. 3 Tatham's buckshot in the mouth of the shell with a muslin patch, over a reduced charge of powder. I have killed five in successive shots with this load. The buckshot does not "hold up" like the long bullet, but it does not need to at squirrel distances. Here as much as anywhere the telescope sight comes in play, and if you have it not it will pay you to slip an opera glass into your pocket. Either will often save you from losing a chance or wasting a bullet on a knot, a bird's nest or a dead leaf. Particularly will a glass help you to spy out a squirrel that is hiding in a tree-top, perhaps flattening himself out on the upper side of a limb till he hardly makes a projection. There is something mysterious and uncanny in the way that a red squirrel that was in plain sight a moment ago can disappear from a little tree that has not a leaf on it or a hole in it to conceal him. I have sometimes wondered if one could not hide himself on a telegraph wire. Next to the telescope come the Lyman sights. Some kind of a white bead is almost a necessity.

Thus armed and equipped let us approach the woods. If there is a fence around them, of any kind but wire, it will be a natural runway, and you will glance along it, right and left, to catch the form, color or motion of the enemy. Many a squirrel is knocked off from stake, rail or stump in the fence before the hunter has entered the woods. Arrived at the fence, take a little rest there. Sitting on a fence is often the most pleasant and profitable part of a hunt, especially a squirrel hunt. Some squirrels will do their share of the hunting if they have a chance Young ones, with the inquisitiveness and impudence that belong to young creatures, may "sass" you to your face, within a rod or two. An older one, particularly if he has sometime lost a streak of fur by misplaced confidence, you probably will have to hunt for, and these that you look up will not expose themselves so freely as those that look you up. Without their unnecessary exposure the hunt will be a failure, so far as the score is concerned. A squirrel can always save himself from the rifle if he does his best. It is a case of contributive negligence every time one is killed.

If it is a pleasant day you may be tempted to linger on the fence, sniffing the woody perfume and peering through the vistas among the trees. If the day is dark and windy you may as well have stayed at home. At such a time the squirrels are sluggish and silent, and the waving of the boughs in the wind cuts you off from both sights and sounds that you need to get if you are to hunt successfully. And if the fallen leaves are deep and dry, they, too, will thwart you, for they advertise your advance like a brass band.

As you look and listen, you become aware of a sound that started so faintly it hardly gained your attention. It might be called a grunt if it were not so fine and small. This is the note that the squirrel is apt to begin with when he stumbles upon you before you have seen him. Now it comes more loud and brisk, and broken up into syllables, alternating with a little chirp or chink, so totally different that it is hard to believe them parts of the same performance; the more so as they curiously sound from somewhat different directions. Listen and stare as you will, no squirrel can you see probably, where the leaves are on, though so sure of his position that you could almost hit him firing by the sound. But now he is carried away by his excitement, and comes scurrying down a neighboring tree trunk by fits and starts, spread out at full length and breadth against the bark, like a hide tacked on a barn-door to dry. He is almost too easy, but you could have tried his head if you had scorned the full-sized mark.

Let us stroll quietly into the woods, looking, listening and pausing now and then to let a squirrel proclaim himself. Where is that one that challenged us with separate chirps, so like some bird's that you would have paid no attention if you had not heard them before? There he sits, crosswise of a 4in. limb, looking over at you. It is head or nothing now, to be sure, and when the shot sends him spinning backward end over end, you feel a good deal as you would if an old buck had jumped up and tumbled in a heap at the bang of your .45-70.

How did you miss that one that showed up on the stump there, covered with chips of chestnut burs? He must have started just as you were pulling trigger There was a red streak up the tree close by, and he may be your mark again. But he is in a mood to hide now, and will not stand for another shot if he knows it. Is there not a little bulge from that big branch away up? And has it not a rusty tinge? The glass exposes the tricky scamp lying low in fancied security. The white bead creeps up against the narrow strip of brown, the little cartridge snaps, and the squirrel tumbles heels over head and strikes the ground with a d. s. t.—a decidedly satisfactory thump.

Now there sounds from over yonder the long chirr, that is one of the commonest and pleasantest sounds of the autumn woods. It seems to be the utterance that the squirrel uses on general principles, with nothing to alarm or excite, and is the one that most often calls attention to him. Sometimes it runs off into whines and squeaks like those of a young puppy. It will test our judgment to conclude which tree that squirrel is in. It will need one or two more of his calls to show the distance and the exact direction, and we shall not get them unless we go quietly. The squirrel is not pleased to find himself hunted. Here is one of those flat topped stumps so conveniently provided for the sportsman, since it became the fashion to saw down trees. If we sit here a bit we may hear from our tawny friend again. It is a trial of patience

to keep still with the game so near, but we shall get a shot sooner than if we rush ahead.

Here comes the repeated chatter, so loud and plain that we are sure of the tree, one of two that stand together among smaller ones. Sneaking softly about between these, avoiding dead twigs and sudden motions, we search for an opening that will give a view of the tree that holds the squirrel. Only a glimpse can be had here and there. One such shows a brighter patch against the brown bark, half seen through the leafy twigs. The glass makes nothing more of it, but uncertainty is the spice of the sport, and the rifle is fired as much by faith as by sight. The reddish patch lengthens out and up for an instant, and the next instant the jar of a bough tells where the squirrel jumped from the other side of the trunk into the big hemlock alongside, in which no eye could find him with any glass.

Is that a squirrel or only a stub that we see topping that rotten stump as we pass on? Problem solved by the object dropping down under the stump, a place to which many red squirrels resort late in the season for winter quarters. It is somewhat like hunting for a needle in a haystack to stare around in the trees while any leaves are left, on the chance of seeing a squirrel that has kept silent and motionless, but the practiced eye will sometimes spy one, and more frequently when the boughs are getting bare, though in that case they seem to see the need of being correspondingly wary. How about that little round bunch silhouetted against the sky in this tree-top? It is not the easiest kind of a target with its sky backing, but it looks suspicious, and a careful shot straightens it out into a squirrel, hanging for a moment by his slim, sharp claws, which instinctively gripped the twig when the bullet went through him. Where that old grapevine has interwoven itself with the thick-branching limbs of a low tree is securely placed the bunch of leaves that made a squirrel's summer house. A shot through one of these sometimes kills an inmate and sometimes brings out one for a better chance, but shooting at the animal or the family of them unseen may cause only wounds and suffering, which the sportsman regrets to inflict. It is one merit of the .25cal. rifle that it almost always kills such small creatures at once.

So we have fared on with varying luck, and come to scattering trees at the border of the woods. A squirrel scampers along the ground and runs up the last one 20ft. to where the stub of a little dead limb makes a sufficient perch. He is 50yds. away, and the degenerate marksman of these days prefers them closer, though we have all heard how the old-timer nipped their heads off without fail at twice that distance. If you are going nearer, you may as well sidle off to the right and not hint your scheme too plainly to the intended victim. There is also a better reason. Shooting from here, you would send your bullet out into the fields at a low angle and perhaps hit something else but squirrel and ground. The same if the game stood on a fence or stump, where the ground beyond could not be seen; while if the ball were to be sent up high enough to lose its headway in the air, it would drop with little chance of harm, especially if it is the light, round bullet. So you edge off to a point where you have the squirrel outlined against the tree and near enough to suit you. Then incidentally turning the rifle his way, you plant the white once more against the red, and end the hunt with a shot that spreads him motionless on the ground.

We will not go gunning for pismires until the red squirrels are gone. BRISTOL HILL.

GROUSE IN CENTRAL NEW YORK.

Editor Forest and Stream:

The ruffed grouse, commonly called partridge, is a scarce bird in central New York at present, and, judging from reports received from various quarters, this is the case all over the State. Sportsmen hereabouts attribute the scarcity of these favorite game birds to the continued rains and cold weather which we had late in the spring and in early summer when the birds were nesting, and which it is believed prevented the hatching and rearing of new broods. This theory is apparently upheld by the fact that very few young birds have been seen this fall, and in some localities not one can be found.

Many hunters insist that there are no better grounds for ruffed grouse anywhere in the State than are found in Oneida and Herkimer counties, and certainly there is an abundance of food and the best possible cover. Ordinarily excellent shooting is to be had during the open season, but expert wing shots say that it is almost impossible this year to make a respectable bag of grouse, and, as a rule, only old birds are flushed. If by chance a few young birds are encountered, an exceedingly rare occurrence now, they are sure to be small and weak flyers, which fact leads to the natural conclusion that they belonged to a belated brood. Possibly they may have been the outcome of a second attempt on the part of the mother to raise a family, her first efforts in this direction having been frustrated by unfavorable weather during the nesting period.

In the fall of 1895 ruffed grouse were exceedingly plentiful in Oneida county, owing, doubtless in a great measure, to the wise act passed by the board of supervisors two years before, shortening the shooting season at both ends. Perhaps the law was not as rigidly enforced as it might have been, but its beneficent effect was apparent in the increase of birds. Many of our sportsmen consider it unfortunate that this law was rendered inoperative in the same year when there was such a marked gain in the number of grouse, and that the supervisors no longer have the power to legislate in their behalf. No sooner was the protective measure referred to repealed than the market-hunter began to get in his work, and he kept it up until the close of the season. Thousands of grouse were slaughtered for the market in Oneida county alone, and most of them were killed late in the fall and early in the winter.

Last year there was fairly good shooting, but it was not equal to that of the season previous. This year sportsmen say they have not been able to bag a solitary bird where a year ago they killed ten or a dozen. At this time in other years long strings of grouse have been a common sight in front of the markets in Utica, but this season the display is exceedingly meager. So many causes annually combine to retard the increase of the grouse, that it seems essential to afford them better protection than they now receive. The Black River Fish and Game Protective Association earnestly advocates shortening the season for grouse and woodcock, believing, that for the best of reasons, shooting should not begin until Sept. 1 or, better yet, Sept. 15, and end not later than Nov. 15 in each year.

I have sometimes wondered whether or not the ruffed grouse in the Adirondacks had any definite purpose in constructing its nest near a footpath or trail. There are certain localities in the wilderness where one is almost sure of finding a nest or brood of young birds every spring (that of 1897 excepted), and it is a noticeable fact that most of these places are in close proximity to frequented paths. Of course, all grouse do not follow this rule, but enough do so to apparently indicate something of a preference in this direction, other things being equal. One can readily understand why the parent birds should choose to nest in the vicinity of a clearing or a patch of berry bushes, or if no more favorable place is convenient, near a clump of alders. They evidently make the selection of such sites because of the convenience with which proper food is obtainable and perhaps, also, with a view to having as much space as possible for unobstructed flight in case of an emergency. It may not be easy to bring forward any convincing arguments in favor of the latter idea, but a wise bird would do well to take such a point into consideration. It is quite noticeable, too, that the wilderness grouse usually has an eye on the question of water, and builds its nest in a spot where plenty is to be had. A person can readily perceive the wisdom of all this, but just what idea the bird has in nesting near a path is not so easy to determine. Can it be that it believes man to be the least dangerous of its enemies and appreciates the fact that places frequented by him are as a general thing shunned by its four-footed foes? Some may, perhaps, be inclined to say that it is only a matter of coincidence, and that the nests are near the path simply for the reason that the path runs through the clearing or the clump of berry bushes, but such ones will not be those who have closely observed the habits of the grouse. The birds' predilection for the neighborhood of a path seems unmistakable.

While spending a vacation on North Lake, in the Adirondacks, one spring, I discovered the nest of a ruffed grouse in a brush heap only a few rods from our cottage, and not more than 10ft. from the footpath leading to a neighboring cottage. The boughs had been cut the year previous, and were almost identical in color with the bird and her nest. The mother bird was seen on her nest several times, but was not disturbed by our party, and seemed quite unconcerned, although a trifle curious, when we passed by. Once when she was temporarily absent, we paused for a moment to see what she had been so faithfully guarding, and found that the nest contained ten eggs. We were in hopes that the mother would be successful in rearing a fine brood, and were very careful not to alarm her. One night, however, disaster overtook her in her home. Some of our party heard an owl during the evening, and not long after a peculiar squeak, which sound was also attributed to his owlship. The noise came from the direction of the nest, but it was not until the next morning that the extent of the catastrophe which had befallen our feathered neighbor became known to us. Judging from the appearance of the nest, the owl or some other robber had raided and looted it. All of the eggs were gone, and we were unable to find so much as a shell remaining. There were also other evidences of trouble, and many downy feathers from the grouse were scattered around. Whether or not the latter finally escaped from her enemy we never knew, as our vacation ended about this time, and we left the woods without catching another glimpse of her.

W. E. WOLCOTT.

UTICA, N. Y., Nov. 8.

CHICAGO AND THE WEST.

Size of a Sea Otter.

I PRESUME that everybody has heard about the sea otter of the Northwest Coast country, and knows how very valuable its fur is, and how hard it is to get. Probably most readers have read of the way in which this animal is secured by the long-range riflemen who perch on towers and watch for it day by day. But how many persons of the middle West or the East, or indeed about any other part of the country, know what sort of an animal this sea otter is, how big it is or what it looks like?

I confess that, for one, my own notions about the sea otter were very vague. I supposed, taking it for granted without any advice to that effect or to the contrary, that of course the sea otter was just about like our ordinary otter, about the same size, though with a deeper and choicer fur. I knew that a really good piece of sea otter fur is worth much more than seal skin. Once I saw a very pretty bit of trade over just such a thing. There was a handsome sea otter coat in a certain store in this city, which was offered for sale as seal skin. A certain lady happened to see it and ask about it, and was told it was seal and would be sold at such and such price. She put her hand on the fur, and being expert, and also having control over her countenance, said quietly that she would take the garment. She did, and is wearing it yet, about as good as new, though that was ten years ago or more. The fur is better than that of the seal. I know where I can get a whole lot of raw seal skins, salted, and untanned, for less than $10 each. They can be plucked and dyed (American dye) for about $5 each. It takes about a half dozen to make a coat or jacket such as ladies like to wear, and less than $40 will cut, sew and line it, making it an easy problem at $125 Usually we pay about two to four times that price for our genuine London-dyed seal garments, which were possibly dyed in New York; but the biggest part of the price rises in the nerve of the dealer. There are tricks in all trades except the fur trade, and it is all one continuous gold brick game.

But about my sea otter. The other day I was wandering around in a fur store here, talking otter to the accommodating head of the house, who sometimes lets me into a secret or two in fur matters. I had a very pretty otter skin, which we were admiring, a river otter, very dark, which came from St. Paul market.

"I'll show you a good otter," said the dealer, smiling and turning to a skin which was hanging on the wall. "What do you think of that?"

I turned and walked to the specimen, and saw that it was indeed an otter. But such an otter! I rubbed my eyes. It was an otter a good deal bigger than I was, a terror of an otter, yet surely an otter by the long, narrow, tapering skin, and by the quality of the fur, soft and deep, and with the guard hairs showing well. I could also tell at once that the skin, while large, was not a prime one; for the fur was shallow beneath, and not so deep as it should have been on the back. Of course, I knew at the second glance that this was a sea otter, and that I had seen my first specimen of what I had supposed was a very much smaller animal than this.

I got a tape and measured this skin, which was "cased" and stretched just as the ordinary otter skin is by the trapper. The tail was short and stumpy, and I presume it had been broken off at about one-half or two thirds of its length from the body. As the skin was, it measured 6ft 4in. from nose to end of tail. It was 17in. across the back (a "cased" skin, of course, is one not ripped open, but taken off with only a cut along the hindlegs, being after that taken off over the head, and inside out). Just back of the head it was 15in. across. The hind paw, which had been carefully skinned out and split open, measured just 10in. across. Thus it may be seen that the sea otter is quite an animal, and roughly speaking, about twice the size of the largest land otter.

My dealer man said that he had just bought this skin (at a figure which I should not name); but he said he had declined an offer of $350 for it, made him by another dealer here in Chicago. The skin was large, he said, but not prime. (The surface was crinkly and burned, so that it would appear to be a summer skin.) Had it been prime, it would easily have brought $800. It was intended for use in trimmings, and in that form the dealer expected to get much more than $350 for it. The hunter who killed it probably did not get more than $100 for it, for it was sold to this dealer by another dealer who is located further West. I never knew any fur dealer to sell anything that he didn't make at least $100 profit on it; but they have to do this, because a good many of them have families to support. This is all I know about sea otters, and a good deal more than I knew day before yesterday. They are a large and husky beast, but I would like to be chased by a few of them.

Warden Osborne Scores a Victory.

Nov. 14.—Warden Chase S. Osborne, of Michigan, has scored a decisive victory in the courts over the market-fishermen, and a still greater victory in that it includes the right of the State to confiscate material used in violation of the law. The Chicago *Record* of Nov. 12 has the following dispatch from Lansing, Mich:

"The constitutionality of the act of the last Legislature, prohibiting fishing in the waters of the Great Lakes from Oct. 31 to Dec. 15, and also of the act of 1893, providing for the seizure and destruction of nets and other apparatus used in violation of law, were upheld by the Supreme Court today in a unanimous opinion. The question was raised by commercial fishermen, on whose application Circuit Judge Corbett, of Traverse City, issued an injunction restraining State Game and Fish Warden Osborne from enforcing the closed season law. Claim was made that the law is unconstitutional." E. HOUGH.

1206 BOYCE BUILDING, Chicago.

LARGE ANTLERS.

Editor Forest and Stream:

Through the kindness of Mr. A. L. Crosby, the taxidermist, of Bangor, Maine, I have an account of some of the moose killed the present season, up to Nov. 2. Mr. Crosby had received for mounting the following moose heads: Twenty eight killed in Maine, seventeen killed in New Brunswick, two in Quebec, and five killed in Nova Scotia. The heads from New Brunswick have the largest antlers, as follows: One of 66in. spread, one of 60¼in., one of 59in., and two of 58in. The best head from Maine spreads 61in., with 12in. blades and 28 points. Some of the above New Brunswick heads have already been mentioned by your correspondent Mr. Risteen, who is giving some very interesting accounts of New Brunswick hunting grounds. It is a pity he cannot get all details of the killing of each large moose; when, where, and how each was killed, what rifles were used, and the number of shots needed, would interest readers of FOREST AND STREAM. I know from experience that it is sometimes very difficult to get full details from some hunting parties, even when one has taken pains to advise them to try certain grounds and to recommend certain guides.

Several years since, when I first became ambitious to kill such game as moose and caribou, I tried to find out about the best places, and at that time had some correspondence with a gentleman living in Fredericton, New Brunswick, and was advised by him to try some of the grounds of which Mr. Risteen is now giving such good accounts, and as I remember was also advised to engage the guide Braithwaite. I fully intended to try New Brunswick, but happening to go first to Nova Scotia, I found at that time that moose were quite plenty there, and I went there three successive seasons, getting a moose each season. I have never hunted moose since, as I thought I had killed enough.

As for caribou, none of the heads taken elsewhere are equal to those of Newfoundland. In a clipping from a Bangor Maine paper, I see that Mr. Crosby has for mounting a remarkable head. This caribou was killed during the present season, in Newfoundland. The antlers having 54 points and are very symmetrical and massive, the brow antlers measuring 16in. in depth. On my first trip to Nova Scotia after moose, I was told that caribou were quite plenty, but I never have so much as seen fresh signs of them when hunting in the Province. When we were hunting in Digby county, near the boundary rock, our Indians said the place to find caribou was over in Queens county around Dunraven Bog. The following season we were hunting around Dunraven Bog, and our guides said the caribou grounds were over around the boundary rock.

In Maine, when hunting for caribou, I found it very uncertain about finding them. They seemed to be continually going somewhere and never getting there. On three trips I saw nine caribou in all and killed five, which were all I shot at. None that I saw had large horns.

Judging from Mr. Risteen's accounts, New Brunswick seems to furnish fine sport and good specimens of large game, and doubtless there will be a large increase in the number of hunting parties who will go there in the future. Beneficial as the new laws of Maine may be to its game supply, the law is not liked by many sportsmen who heretofore have regularly gone on their hunting trips to the Maine woods, and the New Brunswick game will be likely to suffer in consequence. E. M. STARK.

DUNBARTON, N. H.

For Rest and a Moose.

BOSTON, Mass.—Mr. C H. Cook, the genial and popular representative of the large commission house of Bliss, Fabyan & Co., has gone on his annual trip to the Maine woods. He goes nominally for a much-needed rest, but as he is an indefatigable sportsman, we expect great results when the returns come in. Mr. Cook's reputation on small game is already established, as he has always returned with a full bag, but we understand that nothing short of moose will tempt him this trip. NIMROD.

PEDRO.

We were sitting out on the veranda in the cool of the evening, watching the moon come up over the tops of the trees; and my German friend was telling me, between puffs from his cigar, a story about a big jaguar that had killed several of his young calves some six months ago. I will try to tell the story to your readers, not as he told it, half German and half English, but in plain English.

He was boss, or manager if you choose, of a cattle ranch of about 400 to 500 head of breeding stock. Several young calves and two young mules had been killed by jaguars. Twice the cowboys had come in with the report that they had seen a big jaguar sneaking away from the carcass of a dead calf.

Something had to be done, so my friend offered a reward of $25 to any man who would kill the beast. Now $25 is not to be made every day in the year, and is big money to a Costa Rica cowboy; so the old muzzleloaders around the ranch were loaded up to the nozzle with powder and buckshot.

Within a week's time another calf had been killed. This time it was a day-old calf; one blow from the beast's paw had done the work. The calf was found in the morning with its skull crushed in. The meat had not been touched; the big cat would come back that night for his kill. So a hunt was arranged, every one going, including all stray dogs; only the cook left in camp.

Most of the men thought that the jaguar would return at dusk, so the start was made at about 5 that afternoon.

Half an hour's ride brought the hunters to where the dead calf had been that morning, but the carcass was not there; it had been dragged a little way off to a clump of bushes. The scent was red-hot, and all the dogs were off at once; one old hound in particular baying at every jump, and the cowboys and the other men following as best they could.

All at once the barking of the dogs broke out louder than ever. They had the jaguar treed, and when my friend reached the tree the old hound lay all in a heap dying from a blow from those terrible claws. The jaguar was high up in a big mountain guava tree and hugging a limb close, only showing his little ugly head.

The boys blazed away with their old muzzleloaders, but the cat was so high up and the buckshot scattered so that it did not have much effect upon the brute.

My friend was watching the jaguar pretty closely, expecting a change of position, and when the brute did make a spring for a higher limb, let drive with his .44 Winchester.

The result was startling, for down came the animal and struck the ground like a sack of salt.

The ball had cut the spine, so that the hindlegs of the beast were paralyzed.

My friend told me that the jaguar struck the ground about 8ft. from where his youngest cowbow, Pedro, stood; the boy had no gun, but like a flash his machete was out and he sprang at the beast without fear. The jaguar, with open mouth, made a vicious grab at his leg, but the boy ran his machete down the brute's throat with all the strength that was in him, and when he drew it out the jaguar was dead.

Little Pedro got his $25, all right, and something else that money could not buy—the respect of the whole ranch.

MARYLAND QUAIL AND RABBITS.

In spite of the raw and the soggy condition of the ground Baltimore county was covered Monday morning of the 8th with gunners. It was the first day of legalized rabbit and partridge shooting, and the reports of the "Klondike" condition of the game brought sportsmen from far and near. From daybreak until nightfall the reports of guns could be heard all over the counties where the law was out. Considering the thoroughness with which the country was covered, it must be either a very lucky or a very skillful rabbit that escapes with a whole skin, while the partridges also had their troubles.

At the railroad stations Monday night many gunners arrived with bulging game bags, and all had stories of a good time, which was somewhat belied by their thoroughly draggled and muddy condition. Game within striking distance of Baltimore hunters with a day off is certainly more plentiful than heretofore. The Game and Fish Protective Association is succeeding in its guarding of the game of the State, because it has struck a popular chord. Inhabitants of the nearby counties are alive to the necessity of protecting the game, and they accordingly are more and more co-operating with the Association. Dealers in guns and ammunition are experiencing quite a boom in their business, and when the stories of the deeds on the opening day get abroad the boom should increase.

Beagle hounds have suddenly taken a rise in the market. Some of the more fastidious of the gunners refuse to use beagles, thinking it too prosaic to take a crack at bunny as he sits meditating after doubling on his trail. These sportsmen prefer to "kick him up," and then take a snap shot as he flies over the brown field and through the weeds. As rabbits jump up in unexpected places and scamper off with the speed of a comet, it takes something of an expert to "nip" them after this fashion.

With the shooters of birds, the pointer and setter dogs are receiving a new value. When it seemed that the game of the State would be depleted, the training of these dogs showed signs of going backward; but the brighter light that has come over the local hunting world has brought them back to their old-time importance. People in some of the counties of Maryland are now making a business of keeping pointers, setters and beagles, which they hire to the city gunners, together with their own services.

Perhaps Anne Arundel offers the best field for the small-game hunter who "runs down for a day." Baltimore and Hasford counties are so well tilled that the tangle of briers and sedge coveted by Bob White and cotton-tail is comparatively rare. Of course, a good field may be found in a tramp of a mile or two, but in "Ann Randle" it is nearly all brier and sedge, and the birds and rabbits are in it. One of the places attractive to gunners from this city and Washington is Waterbury, about halfway between Annapolis Junction and Annapolis, on the old Elkridge railroad. There one may secure a guide. An old colored man named John, who can bag more rabbits in one day than any ordinary mortal can in a week, will take the "city marse" in tow for a consideration. One does not need a guide, however. Steering clear of the places that are posted, a hunter can do without guide or dog, even, for the game is so plentiful that numerous streaks of gray and white fur through the grass, many whirs of startled coveys and the occasional rattle of a pheasant will keep a snap shooter's hands full.

A visitor to Anne Arundel will be rewarded for his trip, not only by a plethoric bag, but more than likely by an interesting story or two while waiting for the homeward train.

An idea is prevalent there that partridges and rabbits are fully aware when the day arrives that ushers in for them the perils and responsibility of another open season. In driving through the lonely lanes of the country it is no uncommon sight to see partridges lining the low fences or strutting before one's horse, apparently bold in the knowledge of governmental protection. Rabbits will line up alongside and sit on their hindlegs with a suspicious movement of the front paws near the smelling organ as they watch you go by. This all happens during the summer months and early fall, but on Nov. 15 there is no more sitting out in the road. Before the first gun has been fired they have vanished, and the darkies believe that there are high doings on the midnight before the law's limit expires.

The good prospects for rabbits and partridges are more than equaled by those for ducks. Some gunners on the flats have had excellent luck. One party from here last week killed 151 in one day. These were mostly blackheads and redheads, but four canvasbacks were in the bunch. It is the belief of the more enthusiastic of the sportsmen that if the present stringent measures for the protection of game are continued this State will afford them sport for an indefinite time. John T. Higgins.

GOKEY, OF DAWSON.

Peekskill-on-Hudson.—*Editor Forest and Stream:* In a recent number of Forest and Stream your Western correspondent, Mr. Hough, has given an excellent description of his Honor J. J. Gokey, of Dawson, N. D.

While in Dakota this autumn with a party of gentlemen, I became fairly well acquainted with the Judge, and I must say that Mr. Hough has not at all overdrawn the estimate of the former's value. I spent several pleasant days in Mr. Gokey's company—one particular Sunday will ever remain green in memory. His Honor asked me to drive with him "over to his buckwheat stubble." This "over," I found out later, meant a ride of twenty-five miles across the prairie, incidentally keeping our eyes open for "goose flights."

GOKEY, OF DAWSON.
Photo by Dr. P. H. Mason.

Although I am in the habit of riding several thousand miles in a buggy annually, I really enjoyed that trip with Gokey immensely. The crisp morning air; the bright sunshine; the steady pat, pat, of the ponies' feet upon the beaten trail; the vastness of the unbounded prairie, together with the great expressed ability of my friend to entertain with song and story, made the ride, long as it was, altogether too short.

With considerable persuasion on my part to overcome the Judge's natural modesty, he consented to pose for me with his faithful friend, on the porch of the Halls of Justice at Dawson.

I have the pleasure of transmitting to you the result, and I have no doubt his many friends in the many States of this Union will unite with me in the exclamation, "All hail, Judge Gokey!" P. H. Mason, M.D.

SHOOTING CASUALTIES.

Brief mention of the accidental shooting of John Benson was made in last week's Forest and Stream. The details of the sorrowful tragedy are given below; not so much as an item of news as for a warning to others who might thoughtlessly put themselves in the way of being shot as poor John Benson did

On Friday, Oct 30, Wm. P. Cook, John Benson, Mahlon T. Hampton and John Daly were in camp twenty miles from Grand Rapids, Minn., hunting deer. They were all old friends and experienced hunters, all of them over fifty years old. After they had gone to bed on the night of the 30th, Cook asked each one of the others where he was going the next morning. Hampton and Daly told where they would go, and Benson said he did not think he would go out, as his hip hurt him.

Next morning Cook again asked the men where they would be located. Hampton and Daly said they would go southwest of the camp about a mile, while Benson again said his hip hurt so he would not go out that morning. Cook then told exactly where he was going; to a certain small patch of very thick cover, where Benson had two shots at deer the previous day. Just as Cook was leaving the camp, he turned to Benson and again asked whether he would go out, and Benson said, "No." Soon after the others left camp, the colored cook says Benson started out. Mr. Cook went somewhat beyond the particular spot where he expected to watch for deer, and walked slowly back over the same route. On reaching the place where he had felt confident that he would see a deer, he saw a slight movement in the bushes 100yds. away. Everything was covered with a heavy white frost, so Mr. Cook could see a portion of some brownish object, but not enough to determine what it was, and did not shoot. Presently it moved again, about the distance a deer would take at one step. Again Mr. Cook waited, until after a few seconds it took another step. Still nothing could be seen except what appeared a small portion of a deer's body. After another wait, and thinking where Daly and Hampton were, and that Benson was in camp, he fired, the bullet passing through Benson's body just above the heart, Benson wore a corduroy cap and shooting jacket very near the color of a deer.

The editor of our paper has recently given us a most excellent and timely article on criminal carelessness with firearms, and it is to be hoped it will be well and often remembered by all of us, but he did not deal with the other side of the question, that of the man who carelessly and sometimes deliberately puts himself where he stands a good chance to be killed. Benson knew just where Cook expected to be, and knew that Cook believed Benson was in camp. Yet he went there, dressed in almost the exact color of a deer. If he had actually planned to get himself shot he could not have done it better.

Perhaps the writer feels rather strongly on this subject, as he has been shot three different times by hunting companions. Once it was altogether his own fault, coming to another shooter through thick cover when he was known to be some distance away a few minutes before, and going in another direction. Next time it was the shooter's fault, as he knew where I was and shot at a snipe flying straight toward me. The third time the cover was too thick to see through and the shooter did not know my whereabouts.

O. H. Hampton.

Kettle Falls, Washington, Nov. 10.—*Editor Forest and Stream:* Yesterday another name was added to the fearful list of unfortunates mistaken for deer.

Some ten days since, Mr. Jay W. Fuller, of Olean, N. Y., accompanied by an old man named Vanderpool, went on a hunt for deer into the mountains to the southeast of this place, and yesterday, Nov. 9, while hunting on a mountain some four or five miles distant from the town of Kettle Falls they separated, agreeing to meet on a mountain spur a mile distant; and when after a time Mr. Vanderpool caught sight of his comrade standing under the drooping branches of a small fir tree he promptly mistook him for a deer and shot him through the heart with a .50cal. reedle gun. The unfortunate man fell dead without a struggle.

This occurred about 1 P. M. Horrified at the awful sight, the old man hurried back to town and reported the sad affair, and a party of four of us, guided by the sorrowing survivor, started about dark for the body. Driving to the foot of the mountain, we left the team and climbed up the steep mountain side through 6in. of soft snow about a mile and a half further up, and by the light of two lanterns improvised a stretcher, and after an hour and a half of toil such as none of us could well repeat reached the wagon and regained the town at midnight.

If the reading of this sad story will only check the hasty action of some one of the class of those most dangerous of creatures that roam the woods—those who jump at conclusions, and follow them instantly with bullets—I will be well repaid for the considerable effort it requires from my tired arm in penning it. Orin Belknap.

DEER TRACKING IN THE SNOW.

Boston, Nov. 20.—The snow has continued to cover the ground in nearly all the big game sections in Maine, and deer hunting has been remarkably good. The noon train over the Bangor & Aroostook Railroad Saturday had forty-six deer on board. A Boston gentleman, who saw them, says that the lot was a fine one; nearly all bucks, with some fine sets of antlers. It is a curious fact that the deer killed in Maine early in the season are largely does, but later in the season, and especially after tracking snows, the bucks begin to predominate. Within a week a great many deer are to be seen in the Boston markets, evidently from Maine. Game Commissioner Carleton himself is reported to have been hunting big game in the Katahdin region this week, and to have obtained one deer.

Deer hunting in New Hampshire has also been good for a week past, the ground generally being covered with snow, in the deer country. A dispatch to the daily papers, from Littleton, says that E. Bailey, Everett West and Charles Henry, have just returned from a hunting trip in the neighborhood of Lincoln, each with a deer. Frank Ranlett also shot one, though the rest of his party returned empty-handed. John Renfrew and W. Nute have just returned from the same section, but their success is not reported. Edward Haynes, of Twin Mountain, has killed a deer there that weighed 200lbs. and had a fine set of antlers. Will Haynes and Will Burrows have been on a hunting trip in the vicinity of Willey Pond, and have secured a deer. F. W. Bent and Carles Taylor, of Bethlehem, have recently taken a deer in the neighborhood of the Franconia Notch. A deer was recently shot in the churchyard at Benton. Fred Brown has lately killed a large deer near Gorham. Several deer have been lately secured in the vicinity of Parkman. So much for a couple of weeks' deer hunting in New Hampshire. It looks likely that, under the partial prevention of deer hounding in the Granite State, the famous White Mountain region is to become noted as the home of deer. Special.

Good Reports from Maine.

Jackman, Me., Nov. 19.—The hunting season has proven as good, and if such a thing were possible, better in the whole Moose River region than the most sanguine anticipated.

A much larger number of sportsmen have registered at the hotels and sporting camps than ever before.

On Oct. 7 I noticed on the registry at the Newton House the following entry: "John Wooldridge, Wakefield, Mass., one deer, weight 145lbs; call at 3 o'clock A. M."

Three o'clock in the morning is quite a backwoodsy season for arising from a comfortable hotel couch, but the truism that "the early bird catches the worm" is equally true of a moose or deer. Sportsmen will not have the month of December for hunting this year as formerly. J. F. S.

Lake Onawa, Me., Nov. 17.—Sportsmen have had unusually good luck here and in the whole Elliottsville and Long Pond region since Oct. 1. Twenty-five deer have already been taken to their homes from the Onawa station on the C. P. Railway.

Some of the large game taken by sportsmen has gone from here via Monson and other stations of the C. P. Railway.

IN PIONEER DAYS.

(*Continued from page 368.*)

THESE passages, from the private diary of a resident of Cleveland, O., have never before been printed. They have a doubled interest now as showing the wilderness conditions of Ohio and Michigan a half-century ago, when there were elk and wild turkeys and wolves, and when the home conditions of the residents were more primitive than those which prevail to-day:

DEC. 14, 1842.—Having heard a great deal of a celebrated wolf-hunter by the name of Snyder, who lived in the Black Swamp, near the mouth of the Maumee River, we started this day, well equipped for a prolonged hunt to this famous game region, to make the acquaintance of the noted nimrod.

The third day, while driving along through a dense piece of woods, we all at once heard martial music, and stopping our horse, soon saw emerging from the forest a company of men marching in Indian file to the tune of the "Dead March in Saul;" behind them came a wagon containing the dead body of an "old Revolutionary soldier," who, after having fought successfully the battles of his country, had migrated at an early day into this wild and lonely region, where the keen old hunter Death met him in the warpath and sent him to the home of his fathers.

A moment after, at a short turn in the road, we started a large flock of wild turkeys, and shortly before sunset we entered the hamlet of Woodville in the Black Swamp. This being the nearest place we could get to Snyder's with horse and wagon, we left them at the tavern. Buckling on our belts and shouldering our rifles, we followed a blazed road as directed when, night and a snowstorm coming on, we found ourselves lost as to direction. Sitting down on a log that crossed a small arm of the Portage River, in consultation, it occurred to us to retrace our steps some half mile, where we had seen a light shining through the woods. Following these directions, in about an hour we found ourselves at the door of a miserable old dilapidated log house. We knocked, and the door was soon opened by a long, lank and forlorn-looking old woman, to whom we related our unsuccessful hunt for Snyder. She replied, "This is Snyder's," and, sure enough, in a moment more we stepped into the august presence of the rough old wolf hunter of the Black Swamp. He spoke to us very kindly, and gave us, in a rough way, a very cordial reception, bade his wife prepare for us some supper, and seemed greatly pleased that his fame as a wolf hunter had extended as far as Cleveland.

The house was situated near the Portage River, and besides never having been "chinked," possessed no floor save a few loose "puncheons"; the house had but one room, and that contained all his plunder, a number of various-sized animal traps, bundles of various kinds of skins, cooking utensils, and two beds about 6ft. square, that he had made himself out of white ash and basswood bark. His family living with him consisted of his wife, a daughter of eighteen, and five boys from four years of age up to nineteen. Snyder, his wife and youngest boy, whom we named "Coughing Jake," slept in one bed, and the girl and three of the boys slept in the other, while the eldest boy, J. W. and myself camped down by the fire, without covering to protect us from the cold. During the night Coughing Jake, who had the king's evil on his neck, so that he could not move his head, had several violent fits of coughing and kicking, during which he kicked the old wolf hunter out on to the floor, whereupon his mother, after a heavy spanking, tucked him under the bed and ordered him to remain there and keep the peace the rest of the night. Just before daylight we heard a lively scratching overhead, and immediately afterward the lusty crowing of an old veteran rooster. In a short time the entire Snyder family were out of their beds, and we learned afterward that, having no timepiece, the crowing of the old game cock was the morning reveille for all hands to muster for duty.

After our breakfast of fried venison and corn dodgers, with "spice bush tea," Snyder, J. W. and self, with our rifles started into the woods. In the course of the way Snyder stopped and gave us the lay of the land and ways of the game; pointing out directions for each to take, and reminding us that when we heard the hooting of an owl to go in the direction of the sound and we would find him. Shortly after parting with Snyder I saw a doe loping slowly from me about ten rods off. I bleated at her and she stopped when I dropped her in her tracks. I had barely hung her up when I heard the report of a gun to my left, followed by the hooting of an owl. Going in that direction I soon found old Snyder stripping some bark from a basswood tree, and as quickly tying it around the neck of a fine doe he had just shot, quietly remarking to me: "Seeing that I am an old man and you are young and strong, suppose I carry the rifles while you take the deer home." From the nature of the case I could do naught else but comply, and after a hard tug through the woods and a long pull on the ice of the river, I reached the house well tuckered out, resolving, however, in my own mind that in the future I would pay no attention to the hooting of owls.

We had for supper the aforesaid fried venison and spice bush tea, but for variety, before stretching out for the night on the puncheon floor, old Snyder brought out his fife and played for us, over and over, the airs he had played as a fifer in the war of 1812, for Snyder, as he informed us, was at Lundy's Lane and many other fights.

Old chanticleer from the rafters the next morning, gave us notice of the spice tea and fried venison, after which, as soon as finished, we made for the woods, determined to hunt this day after our own fashion; within an hour we passed many fresh signs of deer, and saw two small droves of turkeys, but they were too much on the alert to give us a passable shot. While carefully treading the margin of a cottonwood swamp, and carefully keeping a sharp eye out for game, I at last detected the movement of a white object some forty rods off, partially covered by a fallen log. In a moment more I found it to be the antlers of a buck. The log preventing me from seeing anything more of his body, I crawled to the side of a cottonwood tree some ten rods nearer the game, when getting all ready, after reaching the tree and peeping carefully around it, I saw the old buck standing up with his ears in full play, trying to detect some strange sound that had disturbed him, probably the noise of my footsteps, as he did not have my wind. The moment I got sight of him he was looking toward the spot where I stood, but I dared not make a motion to shoot. At last when he turned his head in a different direction, I drew up my rifle to fire, when he again lay down.

Thinking I was too far off to make a sure thing of hitting him I carefully crawled some 10 rods nearer, and cocking my rifle as I rose from the ground, I saw the buck again standing up and moving his head around seemingly somewhat frightened at some noise he had heard, but not satisfied as to the direction it came from. His head being sidewise, I took aim at his neck on a line with his body and fired. The instant I shot he made several tremendous jumps and was soon out of sight. On going to the spot where the buck had stood, I found that instead of his having been directly behind the log he was, in fact, some 5 rods beyond it. I found no blood on the snow, but did find a tuft of hair that looked as if cut off by a ball. In pacing the distance from the tree to where the buck had stood I found it to be 28 rods. I took the track, and following it for half an hour and finding no blood stains or other signs of wounds, but the animal continuing to make the same tremendous jumps, I gave up the chase.

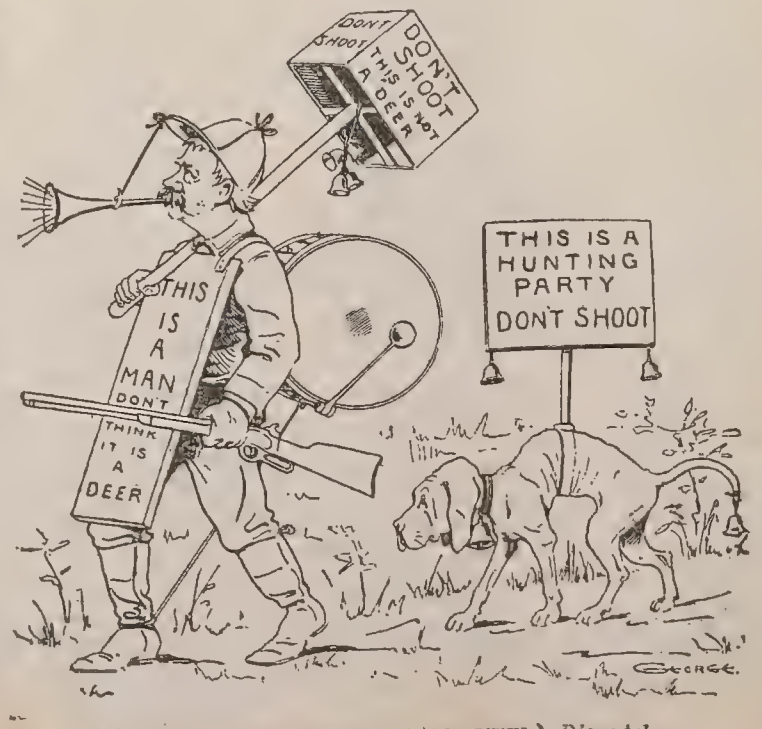
Taking a look at my compass I shaped my course toward Snyder's—which was also the direction the buck took—and had gone about a half a mile when I started another noble buck. I fired at him when on the keen run, and going forward found that my ball had struck a large log and glanced upward. Thinking, of course, I had not hit him, I had little curiosity in going to look at his track, but finally doing so, was surprised to find spots of blood about it. Instantly it occurred to me that this was the same old buck I had just shot at near the big log, so going back on his track a short distance I found that such was the case.

Loading my rifle as I walked along to where I last saw the buck, I followed for half a mile, when he slackened his jumps to a slow walk, and now one single drop of blood commenced dropping on the snow at every step. Keeping a careful lookout to the right and left and ahead, I suddenly saw him a few feet off facing me, with his hair bristled up and head depressed, just in the attitude of making a dash at me. I instantly fired, when he partially fell, but immediately regaining himself plunged on directly for me. I jumped behind a tree, when I heard a crashing fall and a hoarse, guttural bellowing sound near me. Looking from behind the tree I saw the old buck square on his back, with his horns fastened in the earth and all four legs kicking the air. In a second he was up and running a few rods, and again tumbled down. Being much excited by the attack, it took me longer than usual to load my rifle; but before he could regain his feet I was ready and brought him down at last. Going up, I found the largest deer I ever met, with a monstrous pair of horns of remarkable whiteness and polish. On examination, I found my first ball went through the thick part of his neck, doing no damage to any vital part; my second shot struck the log only; the third shot struck the brisket, glancing on the shoulder-bone passed into its body; the fourth shot through the head. I dressed him, but on account of his great weight could not easily hang him up beyond the reach of wolves and hogs, so I returned to Snyder's and had the two boys drag him in. Old Snyder said, 'twas the largest deer he ever saw, and guessed it would weigh nigh onto 250lbs. undressed.

J. W. getting tired of Black Swamp board, so we concluded to leave. After visiting his traps, Snyder was to accompany us as far as Sandusky, he wishing to "verify his wolf scalps," of which he had seven. So bidding goodbye to "coughing Jake" and the rest of the family we started from Cleveland, and so ended our first hunt in the Black Swamp region.

Nebraska Game Fields.

OMAHA, Neb., Nov. 11.—I notice in the Oct. 23d number an article, written by Mr. McCandless, in regard to the Eskimo curlew, or dough bird, as it is commonly called. If he will go to the vicinity of Edgar or Sutton, Neb, about the last of April, he will find them in abundance, as they always stop in that neighborhood on their northward flight. Large numbers are killed there for market every year. Regular buyers, representing Eastern cold-storage houses, come out every spring for this purpose. I have also seen the birds, but not so numerously, in the sandhills near Alliance, Neb.



Dr Carver may be correct in stating that the Bartramian sandpiper is called the prairie pigeon, but I think he is in error. I have hunted considerably in all the Western States, covering a good many years, and have never heard it so called. The common name always given to the Bartramian sandpiper is the upland plover. The golden plover I have often heard called the prairie pigeon. I shot some golden plover the other day and found them unusually fat; great layers of fat nearly half an inch thick covered the body, and it took lots of shot to bring them down.

In regard to Mr. Candless's criticism of the Nebraska laws on wildfowl, I have not a copy at hand, but have a brief synopsis that I made that expressly makes it illegal to shoot from sandbars or shores of islands, etc, of any river, stream, lake, or other body of water in the State; also illegal to shoot between sundown and sunrise, or from any form of boat or raft. I agree that it is a fool law, but just the same, his idea of building a blind upon a sandbar instead of in the bed of a river, etc., will not do if he is to observe the law.

He is wrong in stating that ducks and geese do not nest in the State; the marshes and lakes in the sandhill country are nesting grounds for thousands of ducks, and not a few geese, to my certain knowledge, as are to a considerable extent, the lakes throughout the northern part of the State. Ducks and geese also nest and rear their young all along the Platte River, not many, of course, but still quite a few can be seen.

Quail are all over Nebraska in unusual abundance this year, more plentiful than I have ever seen them before; and as far as I can learn, the law has been fairly well lived up to Not so with the pinnated and sharp-tail grouse; both were slaughtered unmercifully before the season opened. I was hunting ducks recently in the eastern part of the State, and my companion and I flushed seven bevies of quail in cutting across an island covered with cottonwoods, that apparently held no food for them, with the exception of wild grapes.

W. R. HALL.

A SUGGESTION FROM THE ST. PAUL (MINN.) *Dispatch.*

"Market-Hunting Outrage!"

Editor Forest and Stream:

Mr. Hough, in to-day's FOREST AND STREAM, relates an illegal game incident which he terms the "champion outrage of market-hunting." It seems the warden had found two squabs of the mourning dove in an illegal shipment of game. This is bad enough, but it is not the champion outrage. It remains for Mr. Hough to relate that in his notes on "Ducks."

He writes: "The canvasbacks are in at Koshkonong, and shooting there is about as good right now as at any place known hereabouts. Eddie Bingham is just back from there, and in two days got thirty-odd canvas, fifty-odd bluebills, a fine lot of redheads and a few mallards, about 150 birds in all."

Here you have it in cold type, the "champion outrage." If this is protection, what is meant by extermination? Where shall we place this slaughter of about a quarter of a ton of game in two days by one sportsman?

If Mr. B threw away the birds, which I do not for a moment suppose, the market-hunter would stand head and shoulders above him. If he sold the game, he is a market-hunter. If he gave it away, is he not a market-hunter also? It is human to expect an equivalent for our gifts. In any event the birds are being exterminated.

I have kept a tab on game killed by sportsmen as reported in FOREST AND STREAM since 1888. Mr. Hough would be startled by his own record. The slaughter of about 8,000 birds by one club during the spring flight is one item that is a lasting disgrace to the guild of sportsmen.

Establish a limit, and it may be possible to save our game from extermination.

We have wardens to look after the market-hunters that ship squabs, but no check to restrain the greed of sportsmen.

HERMIT.

GLOUCESTER, Nov. 13.

The Delaware Game Protective Association.

Editor Forest and Stream:

The attention of non-resident gunners in this State is called to the following extracts from our laws:—

An Act to Incorporate the Delaware Game Protective Association, Sec. 6: That hereafter any person or persons, non-residents of this State, who shall kill, destroy, hunt or take any * * * kind of grouse, quail, woodcock, Wilson or gray snipe, reed bird, rail bird, black duck, gray duck, sprig tail, teal duck, mallard or any other kind of wild duck, or any wild goose, swan, brant, or other wild fowl, or any hare or rabbit at any time * * * without complying with the by-laws of this Game Protective Association, then the person or persons so offending shall forfeit and pay the sum of $50 for each and every offence.

Extract from the by-laws of the Delaware Game Protective Association:

Any person or persons, non-residents of this State, wishing to kill, destroy, hunt or take, at any time, any game as provided for in the sixth section of the Act incorporating this Association shall first become members of this Association by payment of the membership fee to the secretary receiving a certificate of membership signed by the president and secretary and sealed by the corporate seal of the said Association.

The fee for non-resident membership in this Association is $5 for the first year, and for each succeeding year $2.

Certificates may be procured from I N. Mills, Secretary, Clayton Del., or of T. B. Brison, Station Master P. W. & B. R. R., Wilmington Del.

DELAWARE GAME PROTECTIVE ASSOCIATION.

DOVER Del.

Game near New Berne, N. C.

NEW BERNE, N. C., Nov. 13 —Deer seem to be in great plenty eight or ten miles out in the country, and a good many have been brought in. Several large ones have been recently killed in Pamlico county. Quite a number of skins have been brought in and sold in New Berne. There is no place where a man can get a week or ten day's fun and have so little discomfort in getting his game as near New Berne.

Our hotels and boarding houses are good and terms reasonable. There are plenty of good teams that can be hired at very low rates. Our climate is delightful, and an outing among the pines will bring vigor to the step and give an appetite to the invalid. Try New Berne when you need a little rest, and you will not be disappointed, but you will go home a new man and be ready for any amount of hard work. The trip on the steamer is delightful, and the accommodations excellent. Partridges seem to be quite plentiful, and some good sport awaits the sportsman. Now is the time to come.

C. A. S.

Florida Quail.

LETTERS received by the Messrs. Atkins, of Asbury Park, from Enterprise, Fla., state that quail will be more plentiful than for ten years. The season opens in December, and the woods are now overrun with fat birds that seem to know they are safe for another month. The summer has been cool and pleasant, and all the conditions favorable for thrifty growth of orange trees and other vegetation. Heavy rains have fallen during September and October, and high water in the river and lakes insures the best sport with snipe and ducks.

Didymus writes from St. Augustine, that the birds have practically been exterminated there by over-shooting by sooners and pot-hunters.

CONCERNING SPORT.

NEW YORK, Nov. 1.—*Editor Forest and Stream:* It was with no thought of being drawn into a controversy that I penned my modest remonstrance against "fun" (issue Oct. 9), but as Mr. W Wade has filed friendly objections in general to my brief expressions therein (issue Oct. 23), I assume that a few words more clearly defining my position, may, not be out of place.

While Mr. Wade closes his remarks with the statement that he is "not a sportsman in the least degree," I wish to record right here that I am a sportsman in the strongest degree, and I think I know what that implies.

Born within the very district made notable by the Modoc incident to which he refers, reared in the shadow of many snow-capped peaks, and with a large portion of my time since early youth passed in the game-stocked mountain wildernesses of the Northwest in quest of health, sport and, incidentally the elusive nugget, and with FOREST AND STREAM as my infallible and constant criterion, I feel that when I express my opinions on the subject I am not "measuring others' corn in my half-bushel."

All mankind is possessed of a natural instinct for the chase, inherited from our ancestors of the ages when they had nothing else to do but hunt, and no other way of providing themselves with a living; and I realize the impossibility of this instinct being overcome, to much extent, by sentiment—though it remains latent in some cases. Thus—being only human—I love the chase and the free life it involves, and can see only pure sport in that phase of it in which the reasoning intelligence of man is pitted against the instinctive intelligence of the game; but in that phase in which the hunter brings to his aid the animal instinct in the form of trained hounds, who do the work while he sits on a log and smokes his pipe, the flavor of sport is well-nigh eliminated, and is lost entirely when the run is for a varmint and ends in a fight. It is inconceivable to me that any true sportsman or humane person can find enjoyment in witnessing the *finale* when the pack has run a "critter" to his last stand, and the inevitable "gallant fight" ensues which can have but one termination—the most horrible death and mutilation of the many times overmatched victim.

I re-assert, then, that there is no excuse for applying the term "sport" to any kind of a fight between animals—human or otherwise—which is all I was kicking about in the first place.

To be sure, such a spectacle is exciting and stirs the blood of the beholder—even in the recollection—who lauds the victor, and in some instances sympathizes with the vanquished. Fighting and killing may have been sport of the most elevating nature at one time, and may now be considered so by that class of persons who constitute the patronage of the bull-ring, cockpit, prize-ring and other kindred amusement enterprises, but true sport certainly ends when blood begins to flow.

All sportsmen know right well that the charm of hunting is not in the slaughter, but in the hours and days spent in earnest effort amid novel and multi-varied conditions and surroundings, which may finally lead up to that point. Anyone who has ever hunted with the camera will cheerfully testify that the mental exhilaration, the enjoyment, the sport, is just as satisfying as hunting with the gun. In fact, they will undoubtedly, in their enthusiasm, tell you it is infinitely more so, and there is no denying that for this work the patience, cunning and all other requisities of the sportsman is needed twofold and of extra quality. The results, if successful, are proportionately more gratifying, though few, precious few are they who have succeeded, and few indeed, I fear, are they who will ever care to take up a branch of sport in which the odds are so great against them.

But to return to the subject. The fact that tender-hearted men, though brave, enjoy the sport of hunting, is so evident that I require no convincing argument; but that they are often deeply affected by the killing itself is quite as evident, for I've seen the silent tear dim the eye of the veteran hunter and trapper—bronzed and gray from exposure and hardships—when, pausing at close range to deliver the death shot to a wounded buck, he was met with that never-forgotten expression of agony and pleading despair in the deep, round eyes. And I've seen the brave old scout, for whom no war whoop or signal fire ever had terrors, return from his morning hunt after the death of his quarry, and, flinging himself on his blanket, cry himself to sleep.

These men were ardent sportsmen. Would they enjoy a cat fight? Would Mr. Brunot have enjoyed a cat fight? I don't think?

LOUIS BENSON AKIN.

THE KANSAS MYSTERY.

I WAS sitting in my office, feeling rather blue, one day, when a big buckboard rattled up to the door, with two good-looking horses hitched to it, and another following that looked as like the span as if they had been painted. I went out and there were Mat King, his wife and a three-year-old little Mat. Down the road came a Government ambulance driven by Mat's pet Mexican, Juan, and pulled by two big mules. Mat does not like to go anywhere on the cars when he can drive, and so he had driven 350 miles over prairie to let Nell show her mother the new boy, and to visit me himself. The Cooks, Nell's parents, live about twenty-five miles north of here on the Pawnee. I promised to come over in a few days and hunt antelope at Cook's ranch. I wanted to trot Mat's horses against a bunch of antelope that were out there and I knew that the horses would be better for three days during which they could rest and only be driven a few miles a day, just to limber them up. Mat promised to save the antelope for me, and away went the outfit for the North.

The next Monday I drove over accompanied by my boy Will, who is fifteen years old. I had to take him out of school and his mother objected some to that, but I convinced her that Will wouldn't study worth a cent if I went hunting without him. With lots of bedding and a barrel of apples as a peace offering for Mrs. Cook, we landed at the Cook ranch just before dark. Juan had Mat's tent up near Cook's house and was sleeping in it, for the house has only two rooms, so Will and I put our blankets into the tent and were soon eating supper. Juan had a mysterious stew that smelt good; he had cooked it down in the tent on the camp stove and brought it up to the house in a camp kettle. Mrs. Cook and Nell did not seem inclined to taste it, but the rest of us did not eat much of anything else. It was prairie dog—young ones—dressed, frozen over night and then cooked as squirrels are with potatoes, onions and chili (red peppers). I have eaten prairie dog before and cannot say that I hanker after it, but this dish was almost as good as squirrel. Mrs. Cook said she believed that Mat and I would eat anything that Mexican cooked and would say it was good. Her son Harry and Will were mightily pleased with the stew and had several more in the tent during our visit. Cook encouraged the boys to kill prairie dogs and said he hoped they would kill all on the ranch. Will did thin them out pretty well with my .45 90. I know he used up about 100 cartridges for me.

After supper we drew up around the fire, and Cook told us that he was glad we had come to hunt, for we might kill the thing that was killing his calves and colts. It was a mysterious animal that had never been seen, and could not be traced to its den. It had been heard howling, nights sometimes, for the last two years. It made a noise something like a big wolf, but coarser, and said *Ooh ooh-ooh* at the end of the howl. It didn't stay around all the time; would kill a calf or a yearling or a colt for him, eat what it wanted, and then perhaps be heard of ten miles down the creek killing something for some other man; and just about the time that they hoped it was gone, they would find another calf killed.

People had got so that they did not like to be out after dark; and he disliked to go away from home and leave Mrs. Cook and Harry alone over night at the ranch. He had seen its track once about a mile down the creek in a soft place, a big, round track.

Mat said that we would try to find it, and Cook said he would get the man that killed it $50

Will and I had heard of the animal often before during the last four years, and Will said he would rather kill the thing than have the $50

It seemed that it was always heard down the creek; that it generally came from down there when it killed anything, and that above the ranch it had killed only one animal—a colt. Mat and I concluded that it must be a panther or mountain lion.

That night I lay awake in the tent and listened half the night, hoping to hear it yell, but it didn't, and the very next morning Will and Harry found where it had killed a calf during the night about a mile below the ranch. Mat and I went down and hunted for tracks, but could not find any distinct ones. That night we set out four baits of strychnine around the carcass big enough to kill four, lions every one of them. We got two coyotes next morning and saw no sign of the animal. Juan fooled around all that day down the creek trying to track it, and found some sign several miles below, but could not follow it. The track that he found was not round, however, and he said it was of a big wolf.

That night there was snow and we were out early next day horse-back. We found a big wolf track leading from the carcass down the creek, and then four miles north and under a big ledge of rock in a low cañon. I stayed at the hole and Mat went six miles and got a big trap. We set it in the mouth of the hole with a light log attached to it, and went over there every morning for four days, and then one day the trap was gone. We followed the track of wolf and trap about six miles and Mat shot her, a big she wolf, old, gray and lank. Cook was very much pleased and said that he would get us the $50. I had to come home next day.

Now here comes in the funny part.

The next night another calf was killed, and the "thing" is still doing business at the old stand.

Mat has gone to Kansas City on business, and I expect his wife and the Cooks don't dare to go out to get a bucket of water after dark. I am going to try again after the next snow. I think that it is a cougar, for the carcasses are bit in the neck and throat—though I have heard of some that were bit in the flank and rump, but that was before we got the wolf.

There! This is not much of a story, but if you heard the people out there talk of "the thing" as I have it would interest you. The average man out there, if he told the truth, would say that he thought it was an evil spirit, and that he was rather afraid that it would catch him some time. I have heard some very queer tales of "things" that are seen on the prairies, and will tell you about that in another story.

W. J. D.

A Firm with a History.

A RECENT issue of our London contemporary, *Land and Water*, gives an interesting sketch of the history of the well-known gunmaking firm of W. W. Greener, of Birmingham. The dates go back to 1829, when the late W. Greener, having learned his trade of the famous master, John Manton, established himself in Newcastle. Six years later he published his first volume, "The Gun," dealing with small-arms and containing many ideas then new, and deductions from his numerous experiments. Then he wrote "The Science of Gunnery," and after removing to Birmingham he put out in 1845 the pamphlet on the Proof House, which was the chief means of promoting the Gun Proof Act of 1855. "Mr. Greener was the first to discard vent holes in the breeches, relics of the old flint lock gun. His greatest achievement in gunnery was the discovery of the expanding principle for muzzle loading rifle bullets. The method used was that of a plug driven by the powder gas into the base of the bullet. As a sporting gunmaker, W Greener arrived at a very high position. In the palmy days of the Southern States of America before the war, very highly finished weapons were sent there, as much as £75 being paid for a gun of W. Greener's make. Though he lived until 1869, he never took kindly to the breech-loaders, and died in the faith in which he had lived. His son differed from him in this respect, and struck out a line of his own in breech loaders, producing in 1864 his first patent, an under lever pin-fire half-cocker, with a top bolt entering the barrels underneath the top rib.

"After the death of W. Greener the two businesses were amalgamated and carried on by W. W. Greener, whose next patent was the self-acting striker—a method only superseded by the rebounding lock. This was not of so much importance as the patent that followed it, the famous cross bolt, produced as a single top bolt in 1865. In 1873 this was combined with the bottom holding down bolts to form 'the treble wedge fast,' one of the strongest breech actions ever invented, and one that has become much used of late wherever an extended rib is thought to be necessary. W. W. Greener having written five books, of which two have reached a sixth edition, has emulated his father in authorship. His first effort was the 'Modern Breechloaders,' in 1871.

"The introduction of choke boring may be regarded as W. W Greener's greatest achievement; his previous inventions had showed his cleverness; this one made him famous throughout the world. Choke-boring, as brought out by Greener in 1874, altered the whole system of gun boring, and made close shooting the servant of the gunmaker, where before, it had been his Will o' the Wisp. Mr Greener makes no claim to be the inventor of choke-boring; what he claims is that he improved an American invention."

Monomoy Coots.

BOSTON, Nov. 20.—Returned Boston gunners say that coot shooting off Monomoy has not been very satisfactory of late. The winds and tides have not served, and at that famous shooting resort much depends on wind and tide. W. B. Ellms, of the Pullman Palace Car Co., and Capt. W. E. Gould, of the Chatham Beach Hotel, killed sixty-seven coot at Monomoy last Friday, and they are also reported to have suggested that under proper weather conditions this remarkable shooting could be duplicated almost any day. Mr. Frank Nickerson took six black ducks at Hammond's Meadows, Chatham, recently. A Chatham dispatch says that Messrs. Joseph Dawson, Mark Watson, John Bannister, E. F. Dahill, F. A. Cummings, Dick Barstow and N. A. Whalen, of New Bedford, members of the Chatham Shooting Club, are in camp at Inward Point, and are finding game plenty. Mr. Dawson bagged a magnificent specimen of brant the first day out, and the first one of the season there. SPECIAL.

"Forest and Stream" Luck.

IN the Fredericton correspondence of the St. John (N. B) *Telegraph* of the 15th inst., appears the following item:

"The light fall of snow yesterday started the deer hunters on the path in full force. As usual, Ald. F. H. Risteen came out ahead, having succeeded in shooting a magnificent buck in the Hanwell woods, near the city."

Another local paper mentions that Mr. Risteen's deer was a ten-point buck, which, after being bled and brought into town, tipped the beam at 260lbs.

Sea and River Fishing.

Proprietors of fishing resorts will find it profitable to advertise them in FOREST AND STREAM.

The "Game Laws in Brief."

THE current edition of the *Game Laws in Brief* (index page dated Aug. 1) contains the fish and game laws for 1897, with a few exceptions, as they will continue in force during the year. As about forty States and Provinces have amended their laws this year, the *Brief* has been practically done over new. Sent postpaid by the Forest and Stream Pub. Co. on receipt of price, 25 cents. All dealers sell it

BLACK BASS DEPLETION.

Editor Forest and Stream:

As I remarked the other day, it is only through observation that we can see the defects in the law. For several years it has been quite apparent to sportsmen, and also to the Board of Commissioners and all others interested in the matter, that our waters were becoming depleted of small-mouthed bass, and the calls for bass fry for planting and re-stocking have been far beyond the supply.

It has been well understood that this has not arisen from rod and line fishing, but from netting, mostly done during the open season.

The game law has—perhaps inadvertently but most certainly—been constructed and maintained in favor of netting. Last winter a determined effort was made to change the date of the opening of the season, in order to protect the spawning fish. I learned of a curious and novel fact about bass last week, illustrating a new way of conveying them to market, and this article is the result thereof.

It is well known that the farmers whose lands border on Oneida Lake cultivate both the land out of the water and the adjoining land under the water. Nature furnishes the crop under the water, the farmer being only obliged to go to the trouble of harvesting the crop without planting any seed; and nature is so generous that he can go out harvesting almost every day in the year, as the crop is a continually growing one, and not annual but perennial.

This fall the farmer is harvesting potatoes on land out of water and bass from that under water, principally rocky, so that it would not raise even potatoes, but producing a more valuable crop because so well watered. He puts his potatoes into bags of two bushels each for protection from the sun, the storm, and the weather. At the same time, for uniformity, he puts his crop of bass from under the water into one, two, or even three bags of the same size, loads his wagon with both crops, starts up his horses, and his double crop is hauled to the market, all protected from too curious eyes, and much better for him than to expose them openly.

Under the law these bass thus inclosed are amply and absolutely protected against any fish and game protector, who has no authority to even untie the bag string of a single bag to take observations of its contents, no matter how suspicious he may be, nor what he may believe, nor even what he may know. He has no right of search.

Then the farmer bags the bass upon the land under the water and again bags them upon the land, and conveys his potato-fish securely to the dealer. Arriving at the store, he shoulders his bag or bags of bass, and the ordinary observer believes they are potatoes, and the law protects him in so doing by limiting and restricting the powers of a protector during the open season.

As stated above, part of the law aims to protect the bass while spawning. This is all right as far as it goes, but it does not go far enough for full protection. The adult fish need more protection than this, more than that also afforded by the excellent 8in provision.

So to speak, the law now protects one end only of the season. Very few sportsmen take any bass after Nov. 1 or 15. In the greater part of the State of New York the weather is too cold for rod and line fishing, to sit out in a boat waiting for a bite. Few people would care to sit there and shiver, and expose themselves in that way; even for the sport derived from the handling of a few nice bass. It is apt to be too long between bites. Consequently the water farmer has it all to himself; he is hardy, and accustomed to it by his regular duties and dual avocation. It is this water-farming which depletes our waters of adult bass, and reduces the number of spawners in the spring; not the rod and line fishing. There is no necessity whatever for the open season for bass to extend to Jan. 1 each year. It should close earlier, certainly not later than Nov. 15. We should protect the adult fish in the fall, in order to ensure spawners to be protected in the spring; and the only way to do it is to shorten the season by cutting off that part of it when there is very little, if any, rod and line fishing. We shorten a setter's tail for protection. I think I can safely predict, that the tail-end shortening of the season will give more protection to increase the bass than anything which has been done during the last twenty years.

C. W. SMITH.

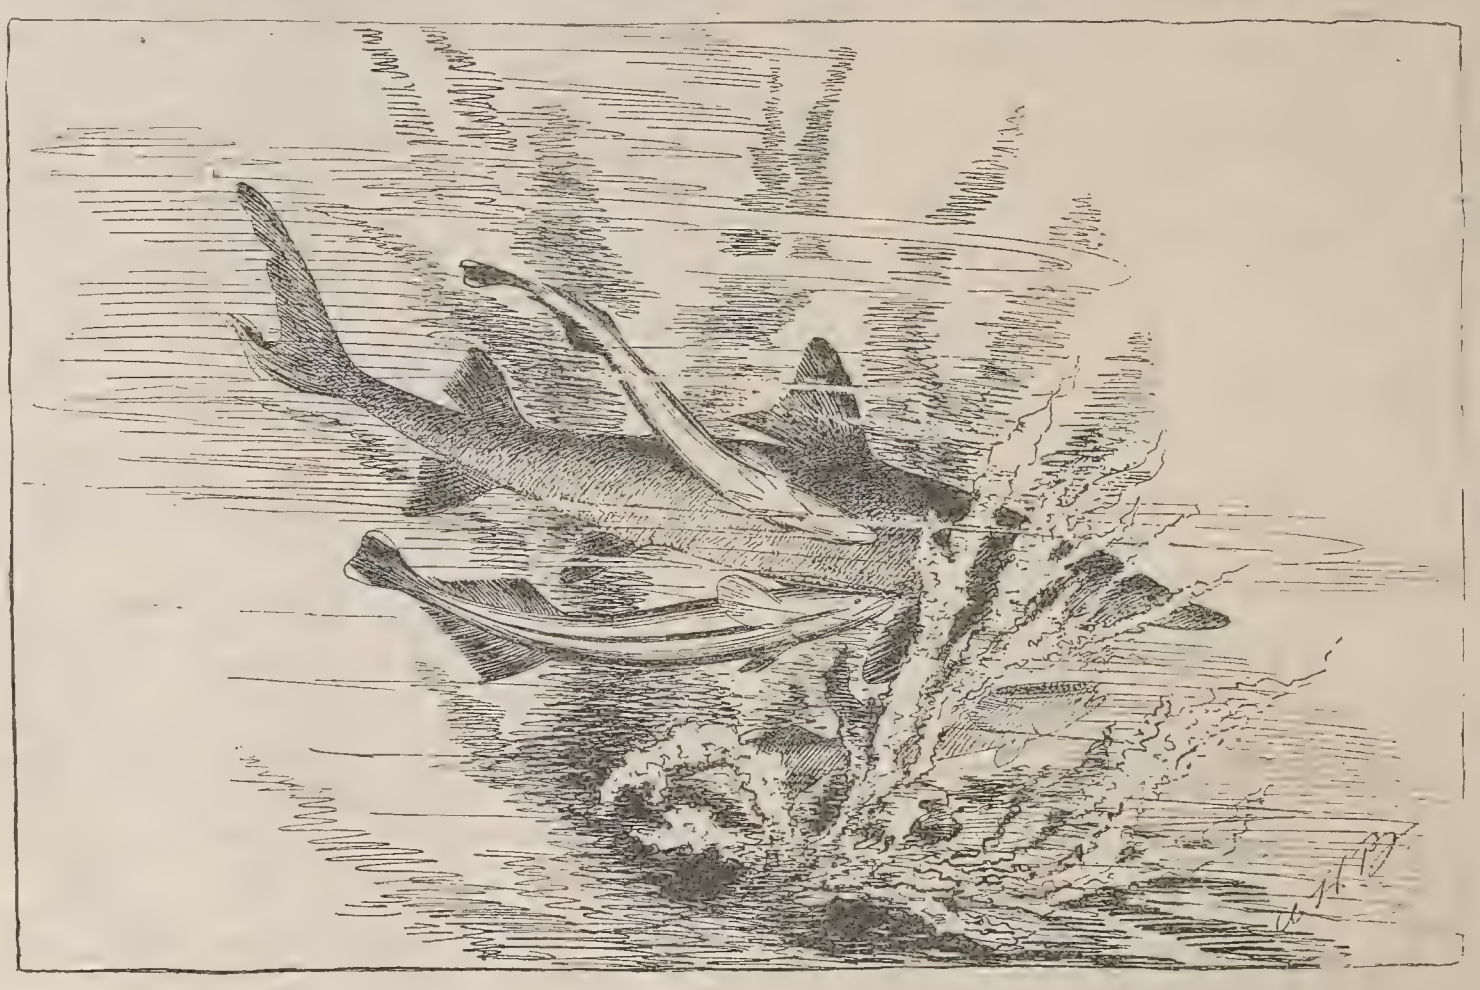
SYRACUSE, Nov. 13.

THE NEW YORK AQUARIUM.

BY FRED MATHER.

(*Continued from page 411.*)

On entering the Aquarium, and keeping to the right, as directed one comes to the large fresh water tanks through whose clear glass may be seen great carp, dog or mudfish (*Amia*) nearly 2ft. long; tench and golden ide, from Europe; small 2ft. sturgeon in a double tank, *i. e.*, the ordinary partition is replaced by an arch, giving them a greater range; large sunfish and calico bass; pike-perch of 18in. and pickerel of 15in.; black bass of 3lbs.; big bullheads, long gars in a double tank, brook trout of 2lbs. and brown trout twice as big, and some small steel-head salmon which were hatched somewhere in the East.



The figures of length and weight are guesses of my own, made on a trip entirely alone last week. All the filters are now used for fresh water, as none are needed for the clear salt water which is taken from wells under the building and comes up clear enough. The two big bronze filters, originally intended for salt water, can easily pass 100,000 gallons each per day, and the two smaller ones have a capacity of half that amount, and consequently the filters are not overworked. Just at this time, when eels are migrating down stream, they have somehow passed a defective strainer and the pumps, and got into the pipes. Mr. Blackett, the engineer, has taken thirty-two good-sized ones out of the pumps since Oct. 28, six being found on the morning of my last visit.

Passing to the salt-water tanks on the main floor, we find an elegant lot of sub tropical fishes from Bermuda, which are rich in color, curious in form, and hold admiring crowds in front of them all day. There are the bright red squirrelfish, nearly a foot long, with enormous black eyes and a long, slim tail ended by a deeply-forked caudal fin. Anglers will please note the distinction between the tail of a fish and the fin which terminates it, for they usually miscall the fin the tail. If I was a real, simon pure scientific man, I would not even say "tail" for the fleshy end of the fish, but would call it, as the scientists do, "the caudal peduncle." It sounds nice, but every fisherman has not met the word: so I just say "tail," taking care to use it correctly, as distinguished from the tail fin.

Then come the grunts, a variety of them, some in striped and others in spotted suits; but all grunts just the same. Then there are queerly marked hinds, and an elegant amberfish, elegant both in form and in delicate tints; and the handsome snappers—truly these Bermudans with odd names are beautiful to look upon. But stop! Here is a tank containing an angelfish in blue and gold, always a rich combination, and its flattened sides are resplendent, while the rays of its long dorsal and anal fins float behind almost to the extremity of the fin by which its course is directed. One cannot help asking: What is the use of this gorgeous coloring and these long, streaming fins? Is the color protective among the brilliant sea weeds, corals and anemones which abound in the translucent waters of the Gulf Stream, or has it merely to do with sexual selection? Do the graceful, flowing fins play a part in such a selection, or do they act as centerboards or as auxiliary rudders? The general public does not bother with such speculations; it looks for the name first, and then says: "That's an angelfish, Marier, an' he's pooty, too; queer name for him, ain't it?"

Then the eye is caught by a dozen clean-cut, wide-awake fish about the size and shape of a man's hand, minus the thumb, with several vertical bars in black upon their sides, and the label beneath says: "Sergeant Major." They are certainly trim and soldier-like, neat, but not gaudy, and as I look upon them and consider the fitness of the name, I wonder that the British garrison at Bermuda never named some of the more showy fish the "Drum Major," for that official is usually the most gorgeous of human beings, and the colonel of the regiment never compares with him in either dress or carriage.

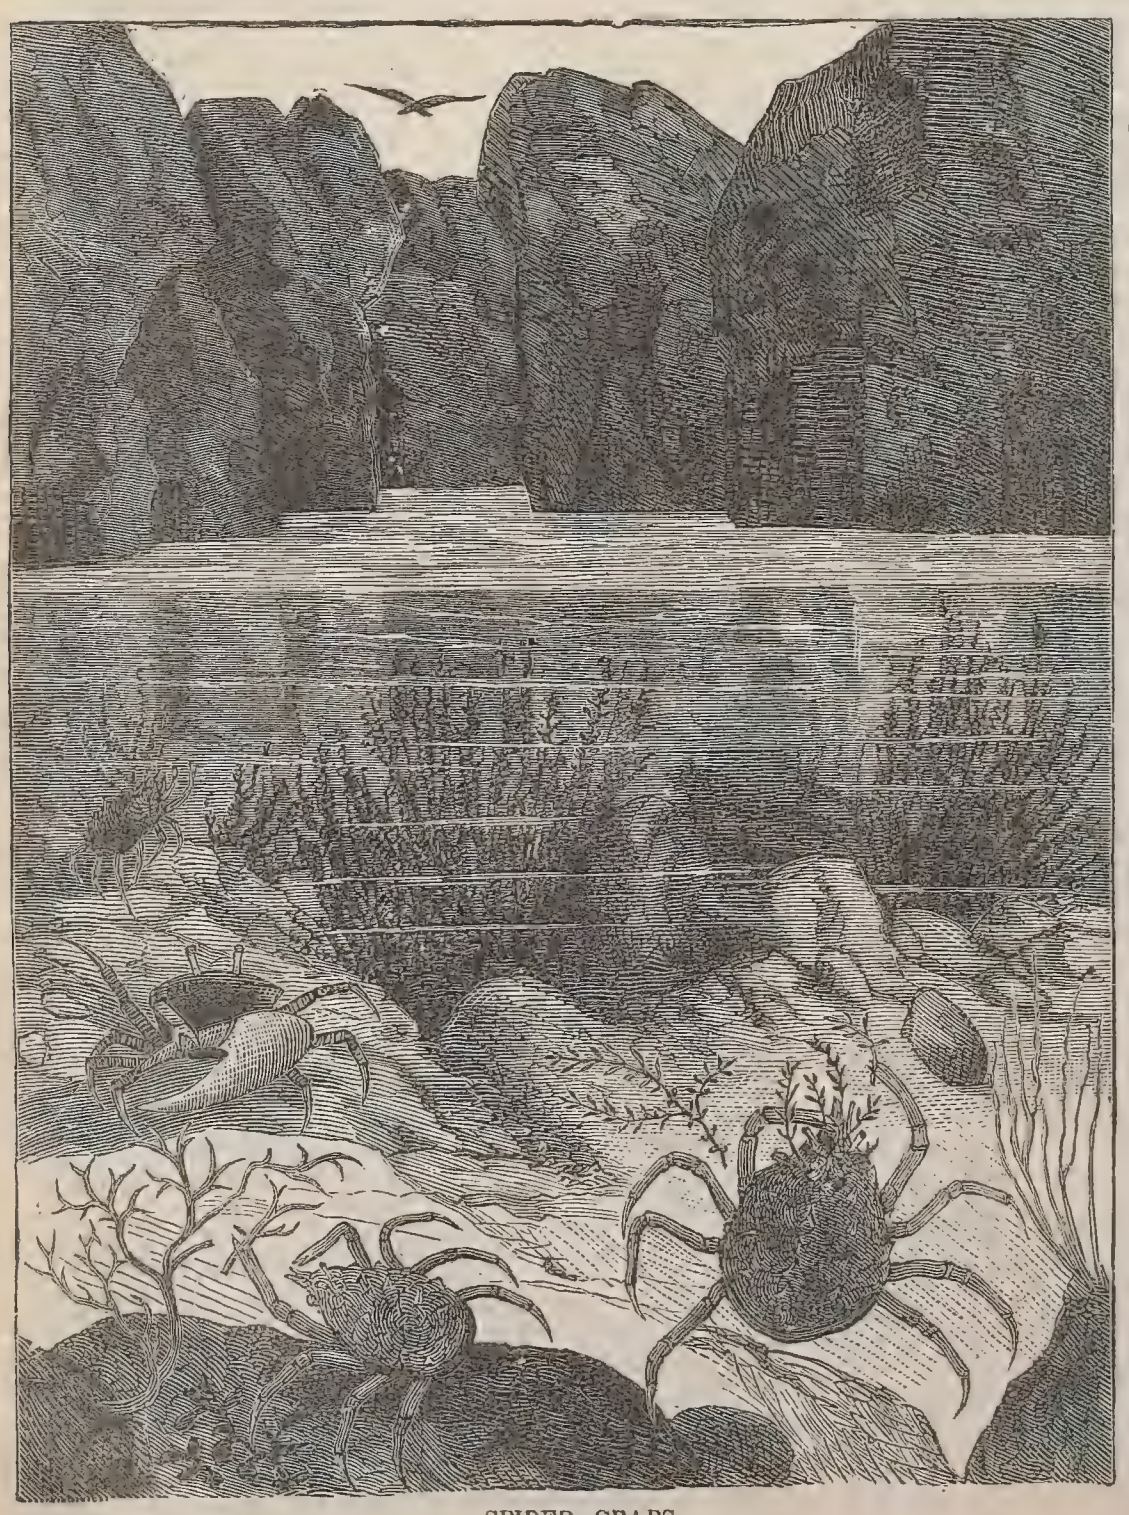
There is a poverty of names among the fishes called spot-snapper, red-snapper, and others who are just plain snapper without any distinctive appellation, until we reach the mangrove snapper, surely the early Bermudans were somewhat deficient in imagination, not wholly so, as in the next tank we meet the surgeon, a small, compressed fish of plain exterior which carries two sharp bony lancets on each side of its "caudal peduncle," which to the observant eye needs no label: "Handle with care," but the public gazes at the fish, wonders at the name, does not see the fleams and passes on. A fish must have a name, and given a fish and a name they are satisfied; its structure, habits, food and geographical range are not thought of nor cared about. The elder Agassiz used to say to students: 'Never mind the name of a fish, first find out its characters and its relation to other forms, the name is of minor importance." Perhaps the quotation is not exact, but it is nearly so. I've seen crowds at Blackford's on trout-opening day, gazing at some unusual fish and then departing entirely satisfied with a name.

THE REMORA.

On one occasion I was examining that beast which is variously called "angler," 'goosefish." etc , which is common in Long Island Sound, is all mouth and stomach, and is said to be able to swallow a wild goose, and to entice fishes to its maw by lying on the bottom and waving a little filament on a dorsal or occipital spine over its mouth to attract fishes. The crowd wanted to know about the bighead monster, and Mr. Blackford was not near. Temptation in its most attractive form appeared: "Ibis," said I, "is a Japanese fish, which is hated by the farmers; it leaves the water at night and devours young sheep and goats. It avoids older animals because of the danger of their horns piercing the stomach. This appetite is entirely confined to the spring of the year, but in summer it ranges the pastures on moonlight nights and milks the cows; see what a mouth it has for milk; it envelopes the entire udder and takes the last drop." I was about to tell more to this admiring audience when a gentleman tapped me on the shoulder and said: "I have seen this fish in Japan climbing fruit trees in the night and destroying orchards." A look showed the face of my old friend Francis Endicott, but we met as strangers until the crowd had absorbed much fish lore and departed. This incident shows how our public schools give the average man a little bit of natural history.

The silver moonfish is not a bit like the moonfish from sub tropical waters which come to New York markets and are excellent table fish; it is one of those flattest of fishes which swim belly down, as distinguished from those flat fishes like the halibut, tunny, fluke, flounder, etc , which lie upon one side, to which the local names of "shoemaker," "blunt-head shiner," etc., are applied. If there is anything in phrenology, which I deny, then these fishes with great, high foreheads should, during all the centuries past and gone, have ruled the seas, but they are poor, weak things compared with the shark and the blue fish, and, while not the "fittest," they have somehow survived.

Ponderous groupers look out at you from another tank; their slanting stripes on a buff ground seem to follow no regular pattern, but yet to be similar enough to be nearly uniform They would probably pull the scales down to the 15lb mark and suggest an excellent boiled fish dinner to the housewife, and she would make no mistake in selecting them. With the hogfish we are about to take our leave of the Bermuda fishes, whose tanks are furnished with heating pipes to keep the water at a temperature of 68° Fahr. all the year round, when we come to a most curious form of fish life, something so outside of our ideas of fish construction that it is worth half an hour to observe it.



The label on the tank says: "Trunkfish." Anglers all know that the abominable thing turned out by tackle dealers and called a "trunk rod" is cut up into small joints in order to be packed into a trunk for transportation, but is useless for any other purpose. The sponsor of the trunkfish had no such idea in view, but he struck a curio which was all trunk and he named it. Head on to the spectator the trunkfish suggests a joke on the part of Dame Nature; the fish is triangular, about 4in. broad on its belly and tapering to a point on its back, like a beech-nut viewed in profile. Then it has a little round mouth, a very funny expression in its eyes and face which at once attracts attention and provokes hilarity. But wait until the fish turns its broadside to the glass and then you will see where the name fits this curious specimen from Nature's workshop. The profile recedes from front to rear; the sloping sides are armor plated like a modern warship, and the plates are as hard and unyielding as those on the shell of a tortoise. There is no flexibility of vertebrae such as reaches its culmination in the eel. The fish cannot move its trunk in any manner, and here we see the appropriateness of the name. Through necessary places in its armor are embrasures through which project pectoral, anal, dorsal and caudal fins which, with labor that seems painfully apparent, this fish forges slowly along on its way, fearfully handicapped, it seems to us, but who can doubt that it fulfills its mission in the waters?

Passing on to our northern marine fishes, we find the scup or porgie; the spot, or Lafayette; the tautog, or blackfish; the striped bass, or rockfish; sea bass, great codfish, and many minor and familiar forms Then we come to a great 8lb. brown trout and a large landlocked salmon, both kept in salt-water for the purpose of destroying any fungus that might have developed either in transportation, or by abrasions received in the tank.

The clowns in an aquarium show are the crabs, and of crabs there is a great number of species. The best known crab is the blue crab, appearing in the markets in summer as the "soft-shelled crab," at about 60 cents per dozen, or boiled as "hard crabs" at one-fourth that price. The "rock crabs" never come to market except in the soft state in winter, when the others are not to be had Few who watch the crab tank ever notice that of the ten legs provided for the locomotion of crabs, the blue crab and the lady crab are the only two which have the last pair of legs modified into paddles to swim with; all others have a single finger on their hindfeet.

But stop and notice these pugnacious crustaceans. There's a "horsefoot," so called because its underside has the shape that suggests its name. It is a remnant of a past age; they may call it a horseshoe crab, but the modern crabs disown it. In turn, the odd crustacean which scientists persist in calling *Limulus polyphemus* can turn up its nose, if its nose would turn, and point to the fact that it is a cousin to the trilobite, and was on earth a hundred centuries before the ancestors of our own "Colonial Dames" had evolved the idea of dressing for dinner to celebrate the deeds of their ancestors.

But those crabs! Somewhere in my reading I've met the statement that "the funniest thing is a frog." A frog is funny because it has a semi human form, but that ends it. The crab shows you the nature of man in pugnacity, selfishness, and also in an apparent sense of humor which manifests itself by teasing or irritating its neighbors. There is the edible blue crab purposely tapping a hermit crab on the claws to make it draw its head in. And the hermits! I could fill a page of FOREST AND STREAM with their peculiarities and not half tell them, so we will just give them a passing notice in order that the visitor will not miss these interesting little fellows, for really it is the small life in an aquarium which is of real interest; but the general public

SPIDER CRABS.

does not stop long enough to become acquainted with it, but spends most of its time watching the seals and looking for big fish.

Scientists know several species of hermit crab, one of which lives on land, but we will only consider our native species, which actually swarm in the salt water about New York. If you ask why this singular creature is called a "hermit," you will learn that while all other crabs have hard shells covering their bodies, as in a suit of armor, nature has been stingy with the poor little hermit in the matter of armor, but the hermit does not mind that deprivation, and makes the most of life while it can. The claws, head, legs and carapace are as well armed as are the same parts of a lobster, but its long abdomen, equivalent to what marketmen call the "tail" of a lobster, is the softest piece of flesh imaginable; it is almost as soft as a jellyfish. The hermit crab is built entirely for attack, and presents a solid front to the enemy, while his rear is exposed to the nibbling of the tiniest fish, and when his commissary department is gone he goes with it. But away back in the prehistoric auld lang syne some wise old members of this tribe inserted their defenseless abdomens in the empty shells that surrounded them, and the fittest survived; now these animals begin life by searching for a small shell, try it on as we do a shoe, and find one to suit. They only use the spiral shells in which they can get a grip and can withdraw, closing the aperture with their claws. Then the drawbridge is up, the portcullis has fallen, and the hermit can stand a long siege; he needs no sally-port, save that in front, for he never sends out an antennæ as a skirmisher until he feels sure that the enemy has departed. As the hermit grows, it seeks a larger shell, and it is a treat to see him select it. The outside is carefully felt over, to see that no holes exist, and then a claw is inserted to explore the interior. No woman examines bedrooms, kitchen, dining room and closets before hiring a house more carefully than does our hermit. If the inspection is satisfactory, the new tenement is put in position, there is a wiggling of antennæ, a scanning of the surroundings, a placing of claws on the rims of each shell, and pop! before the keenest fish or crab can wink, the hermit has moved, and is doing business at the new stand, and you may pull him into fragments, but can never dislodge him by force from the shell into which the hook-processes that terminate its abdomen hold like grim death to a deceased African.

If I linger over the hermit crab it is because it is one of the things that are most interesting in an aquarium. They are small, the largest of our native species being content with the shell of our large snail, *Buccinum*, which seldom exceeds 2⅓in. in diameter. When I was with the old aquarium, to which I have referred, I lent myself to a scheme to deceive the public. The press agent came every day for items, and I did, with malice aforethought, and entirely in the interest of my employers, break the shell of a hermit crab and then put the animal in a small table tank, in which the only hollow thing that the poor hermit could hide its diminished abdomen in was the bowl of a common clay pipe. The pipe had no convolutions, but was the best thing at hand, and next day the city press told how a hermit crab had been caught which had taken up its quarters in a "T. D." pipe, for the press agent never forgot himself so far as to omit the particulars, and Mr. Blackford has a wood-cut of the unfortunate crustacean, which would gladly have swapped its tenement for a more spiral one, but it had no choice.

In the summer if you will dig a trench a dozen feet long and about 2ft. deep about halfway between high and low water, you may get great numbers of hermits; they come up with the flood tide and to avoid the dogfish and skates, which devour them and their castles of retreat as if there were no such things as sanctuaries, and these little crabs huddle in the trench and are powerless to climb up the shifting sand when the tide goes down. The fact that the hermit is called such hard names as "Jack-in-the-box," "thief" and "stone lobster" does not discourage it in the least; it keeps on its mission of being a scavenger, and its services in an aquarium in cleaning up the particles of food which fishes may drop make it a valuable servant as well as a most interesting exhibit.

Taking a look into the pools in the floor, we indistinctly see some great sea turtles, large striped bass, big sturgeon and other fishes. Nellie, the harbor seal, is alone and ever watchful, never trusting herself to sleep while the building is full of visitors, but the two noisy West Indian seals seem to like the crowd; they play, snort, blow water at the people occasionally, or curl up on the platform and sleep, while the crowd looks at them and talks. These southern seals are a different species from the hair seal of our northern harbors and will not, like Nellie, eat ordinary fish. In several instances they have starved to death in confinement, and these came near it until small eels, cut into short pieces, was offered them and then they throve. The Aquarium is closed to the public at 4 P. M and a bell announces the hour for visitors to retire. Then the seals know that feeding time has come and the building echoes and reëchoes their harsh, discordant barks, and they try to jump out of the water to see if Mr. Spencer is coming with those delicious eels.

[TO BE CONCLUDED.]

IN MISSOURI STREAMS.

AURORA, Mo., Nov. 1.—*Editor Forest and Stream:* It has been my intention for some time to give an account to FOREST AND STREAM's readers of a fishing trip on James River. The party, composed of Ben. W. Dillard, recorder of deeds; Bert Gardner, assistant cashier, Bank of Aurora; G. M Kirby, "Frisco" station agent; Charles Robinson, of the Verona Milling Co; Master Harry Miller and myself, insurance agent, left Aurora on a Tuesday evening this fall and arrived at the club house on James River, near Cape Fair at 11 o'clock same evening, going into camp on the bank of the river. We started down the river Wednesday and went into camp our second night out about six miles down the river at Rainey's Mill. The fishing during the first day was not very good. We, however, got an early start Thursday and the fishing during the day, below Rainey's, was some better, and the third night found us camped near Byron Carr's, about eight miles further down stream. We passed Jackson's Hollow the following day, but had considerable hard work getting our boats over the shoals just below this point, owing to the low water. The fishing improved wonderfully after passing Jackson's Hollow; Dillard made a nice catch of bass before getting to camp, his largest bass, 3½lbs. (large mouth), being caught here. We went into camp near the mouth of Aut's Creek Friday night with some good strings of bass.

The following day we had splendid fishing. Dillard, pulling his own boat the first two miles, got twenty-two good small mouth black bass, weighing from 1¼ to 2½lbs. Kirby got twelve of about same size, while the rest of the crowd got enough more to make a big string of fish before we went into camp.

Saturday noon found us at James Wilson's ranch, at the conjunction of James and White rivers, and after getting our dinners we put up our two tents, one for sleeping and the other for storage tent, and arranged things for permanent camp, naming it Camp Wilson. Charley Knight, of Cape Fair, was one of our party down the river from that point, and his assistance in handling the boat was highly appreciated. Charley left us Saturday evening, however, and made his way back home on horseback.

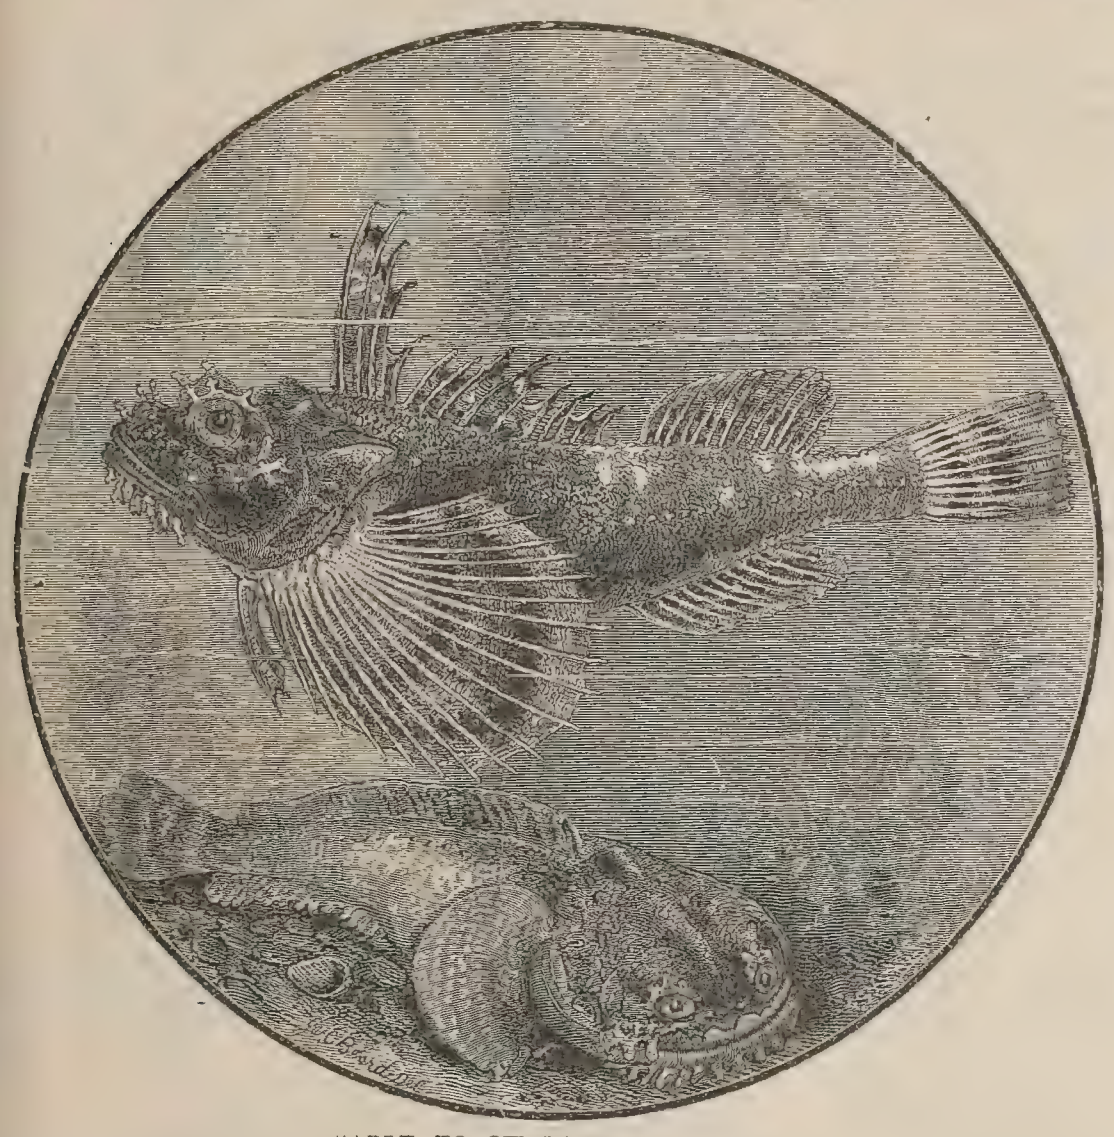
Mr. Lige Stone, a veteran river man and all round good fellow intended to accompany us from Cape Fair also, but on the morning of our departure from that point he got on his horse to come down to the river and the unruly animal threw him, and injured him so badly as to put him to bed, which occurrence was very much regretted by all of us, as we had counted upon Lige to make one of our party, and of course we were very much disappointed.

We were at Camp Wilson from Saturday until Tuesday morning and had good luck fishing in both James and White rivers, our entire catch amounting to 158 good-sized bass, and I might add, in justice to our good-natured recorder, that he caught ninety-six of them, all with Skinner spoons. I think he used a No 4½ or 5 spoon, this size proving better than any others according to our experience with small-mouth bass. We tried minnows quite a good deal, but they seemed not to be biting minnows, however; I can assign no reason for it, as the water was not too clear I did not think. I understand, however, from a party just returning from White River last week that most of their catch was with minnows. They reported getting some large-mouth bass as good as 6lbs. and one jack salmon dressing 9lbs.

Our party broke camp at Wilson's Tuesday morning about 9 o'clock and drove home to Aurora, arriving at 10 o'clock that night.

The entire party voted it the most enjoyable fishing trip we had had the pleasure to partake in for "many moons."

WOODFILL.



AND SOME HE HAS NOT FISHED WITH.

Editor Forest and Stream:

In your issue of Nov. 6 Mr. W. E. Wolcott gives a very good sketch of that grand old angler, the late Thomas G. Alvord. It gives me a chance to remark to Judge Van Cleef—Jacobstaff—Mr. R. B. Marston, of the London *Fishing Gazette*, Dr. Robert T. Morris and other joking friends, that I knew Mr. Alvord, but never fished with him. That's one on those men who wrote: "What bait did you use in the Ark?" "Did you ever fish with Ananias?" "I am probably the only man on earth that you haven't fished with." "When you fished with Izaac Walton, what did that pious man say when he got a fishhook in his thumb?" And so on, away beyond my memory to quote.

I applied a simple arithmetical rule to Judge Van Cleef in FOREST AND STREAM, and showed that up to date I had not written of as many men as I was years old, and surely a man may fish with ten men in a year, which would give me over 500, without close figuring.

Returning to Mr. Wolcott's article, I find Mr. Wolcott fished with eighty-two men, named: "and others," on the St. Lawrence River alone, and fished in the Adirondacks and on Long Island and in salt water. But Mr. Wolcott only quotes names mentioned in Mr. Alvord's article, "The Men I Have Met Upon the Great River"—meaning the St. Lawrence—an article which I missed seeing. Up to date I have written of fifty-nine men and boys, and I have fished since 1840.

"ABLE TO SWALLOW A GOOSE."

ANEMONES.

Of course there is little in all this, further than to acknowledge the wit of a few friends as expressed in the columns of FOREST AND STREAM or in private letters. For their benefit I will merely state a few facts. Noah used only one kind of bait, and that was clams, salted at Essex, Mass.; and it was not his custom to expectorate on any clam which could expect to rate as a first-class inducement for a sand porgie to catch on. Ananias was not a truthful man, and there is no record that he ever went a-fishing. If he had, his tendency to prevarication would have been lost. The spear of Ithuriel would never strike the angler nor the fisherman, make the distinction as you will.

What was the answer of those fishermen of Galilee? "We have toiled all night and caught nothing," an answer many an angler has made after an unsuccessful day, and one that he is not ashamed to make. No man can see into the water and see if the fish are there; or if the water be so clear that he can see them, they simply place a pectoral fin in front of a nose and wiggle it. The result is the same.

The public has been led astray by the jocular newspaper reporter, who has a set stock of subjects to joke about, but does not know that the angler really catches fish at times and at others he doesn't.

To get down to personal matters, this will illustrate: When I go on short trips, to be home at night or the next day, I am apt to say something like this to the woman who looks closer to my interests than I ever did: "Well, good-by, I'll try to get back on time and to bring you some nice fish for dinner, but you know that I always tell you to go to the market and order a generous supply of fish when your husband goes a-fishing. If he brings home some we'll have 'em for dinner and send those from the market to our friends, with our compliments."

That system is far ahead of the plan of buying fish in the market yourself and having your wife say: "John, these fish, which you caught yesterday, should have been caught a month ago." Or: "James, I thought you were going out to troll for blue fish and these are fresh-water perch." If the angler is truthful to his wife he can look the world in the face. If, in the advice of Polonius to his son, the word "wife" be substituted for "self" it would express my meaning. He says:

> "To thine own self be true;
> And it must follow, as the night the day,
> Thou canst not then be false to any man."

For if a man did not have the courage to paraphrase the saying of the Apostle, and reply to a wifely inquiry by saying: "I fished all day and caught nothing," and then if she should say some of the things which have been hinted at, see where he is "at," for of all the hundreds of millions of human beings on this earth, there is usually one woman whose credulity is not to be trifled with. To respect you she must believe you; and it is my belief that among the unnumbered millions of anglers in America, not one per cent. are untruthful, even where a stretch of imagination might be condoned.

All of this is irrelevant to the question of the number of men I have fished with; but then, what can you expect of an irrelevant fellow who never stuck to a subject long? There are a vast horde of men I never fished with, some of them personal friends, but I don't propose to be abused for that. The fault is as much theirs as mine, and if they will so consider it and join me in the hope that we may yet "drown a fly" together, we will bury the hatchet, take one pull at the pipe of peace and then go out in the garden and dig a few worms. FRED MATHER.

FISH NOMENCLATURE.

CHARLESTOWN, N. H., Nov. 15.—*Editor Forest and Stream:* I am glad to see in friend Cheney's last chapter of "Angling Notes" that he has given his evidence in court on the subject of the names of the different varieties of the pike family.

It may be, as he says and as you have written me yourself, that "it will take a convulsion of nature" to get people to stop miscalling pike "pickerel"; but we may accomplish something if we all keep hammering at it.

In regard to the "maskinonge," I am inclined to think that the original Ojibwa name is correct, as the fish was an inhabitant of their waters; but their language being an unwritten one, the white men who heard it spelt it in various ways, as the sound struck their ears.

Frank Forester very ingeniously derived "mascalonge" from "masqui-allongé," or "long face," and it is highly probable that the early French *voyageurs* so interpreted the word.

As the old Italian proverb says, "*Si non vero è beu trovato*," and hence comes the common spelling of "mascalunge," which slips more easily from the tongue than "mash kinonge" or "maskinonje," at any rate, and in either case is usually abbreviated into "masky."

I wish we could find some better name for the "pike-perch," which is clumsy, and "wall-eyed pike" is an utter misnomer; for there is nothing of the pike about him except that he has rather a long nose, while "jack salmon" or "Susquehanna salmon" are simply ridiculous. We might give it the European name of "sandre," or follow the Canadians and call it a "dorè," or golden fish, which is a very appropriate name.

I have not seen Mr. Chambers's essay, referred to by Mr. Cheney, but I do not suppose it would convert my spelling of "winninish" if I had.

The word, like "maskinonje," was an unwritten one, and the early explorers of the country spelt it in their own language from the sound. The English settlers in Maine called it "winninish"; the French ones in Canada called it "wannanish," but the French alphabet having no W in it, they spelt it in writing with an "ou." Now, as I am not writing French, I propose to stick to the English mode of spelling, and, as old Weller said to Sam, "Spell it with a 'we'," which gives "English as she is spoken."

The word "winne" or "winnin" in the old Algonquin language undoubtedly meant fish of some kind, and was probably applied to the trout and salmon family generally. Hence, Winnepesauke (great trout place) and Winnesquam, here in New Hampshire, to say nothing of Winnepeg, Winnebago, Winnemucca, and other Western waters. We do not go out of the way to spell any of them with an "ou," why should we in the case of this fish? I see no reason for using the defective alphabet of another language when we can express the sound more simply in our own, and when, as in this case, the sound is our only authority. If we used the French spelling, with English pronunciation, we should get "ounanitch," or "oonanitch," while with the French pronounciation the two words come out practically alike, only they use an "a" where we have an "i;" and I prefer to stick to my own language when the result is the same, and I am writing English for an English-speaking people to read.

I am also glad to note Mr. Cheney's protest against catching "baby trout," for that is one of my numerous hobbies also. VON W.

Pennesseewassee Salmon.

EIGHT years ago some 5,000 fry of landlocked salmon were placed in Lake Pennesseewassee. On several occasions since several thousand more of the same kind have been added to the supply in our waters. At various times our citizens have seen the fish in shoal water. This fall near Norway Lake village they have gathered in large schools and drawn many spectators.

The opening of the outlet, in order to rebuild the dam, let some of them escape. It was promptly decided by our sportsmen that that must not be Sunday morning the current from the lake was stopped and the water drawn off from C. B. Cummings & Sons' millpond below the upper dam. Mellen W. Sampson, Geo. H. Cummings, Sanford H. Walcott and Wm Libby equipped themselves with rubber boots and long handled dip-nets and waded the bed of the stream, capturing such salmon as could be found. As fast as taken the fish were put in tubs of water and carried to the lake and put into it

To say there was an audience is putting it mild. The street and sidewalk was blockaded with spectators, and even the street car crew stopped to look at fish in tubs and the passengers were delighted to avail themselves of the same privilege. Col. W. W. Whitmarsh, Freeland Howe, A. L. Cook, James Shedd, Lamont Truman, Arthur N. Record, Will Gary, John Sampson, Deputy Sheriff Cross were all there, and a lot more whose names we don't recall at the moment of writing this. And they were all interested and ready to lend a helping hand if it were needed. You never saw more enthusiasm crowded into a Methodist revival. Freeland Howe and the *Advertiser's* local reporter became so absorbed in watching the work that neither remembered the hour of church service.

The hunt was kept up for a couple of hours, and all the river bed between those two dams thoroughly explored till it became certain that no salmon was lurking there. Ten salmon was the result. They ranged from 18 to 24in. long, and weighed from 2½ to 8lbs. each. A trim fish indeed, with symmetrical form, narrow back and deep body. Slaty-brown above, but not very dark, and white below, they looked, as a small boy said, prettier than an autumn leaf. The characteristic black spots were numerous. Two, however, were males, as was shown by the spots on sides and belly being red, and the lower jaw having a heavy horn nearly as large as a man's thumb.

Won't there be a rush for Pennesseewassee fishing when the law goes off on the 1st of next May! May we be able to catch the biggest one! All of us Norway fishermen have great expectations.—*Oxford County (Norway, Me.) Advertiser, Nov.* 19.

Big Leather-Back Turtles and Striped Bass.

SOME months ago a very large turtle of the leather-back species was caught by fishermen in the ocean near Morehead City, N. C., and sent to the State Museum at Raleigh, to be mounted by the curator, Mr. H. H. Brimley. It measured 8ft. in length when first caught (but now 7½ft.), breadths from tip to tip of fore flippers 8ft., depth 19in., and weighed 781lbs. The back is black and the under part black and white. The shell is laid off in eight squares. Its bill resembles that of a hawk. In the same museum is the skeleton of another turtle of the same species which was caught in the same vicinity, off Beaufort, in 1822, measuring 7ft. 4in in length and 9ft. in breadth, and 32½in. through the body. The capture was noticed in the *Carolina Centinel* of May 25 of that year as something extraordinary. Indeed, leather-back turtles are not often caught, because they are pelagic rovers and do not resort to the sand beaches frequented by men, like the familiar green turtles. They probably have their isolated haunts where they deposit their eggs. Sometimes they are confounded with the great loggerhead turtles which are so common off the Florida coast in the Gulf of Mexico, but they are an entirely different species, and unlike in habits and features.

Mem The beaches and sounds in the vicinity of Beaufort and Morehead City afford the most comprehensive fishing and shooting on the continent. More varieties of salt and fresh water fish are found there (the latter in the creeks and tributaries) than elsewhere on the coast; and terrapins, oysters, scallops, crabs, and all kinds of shell fish are in unlimited supply. The hunting on upland birds, wildfowl and deer is unsurpassed.

I know of a tract of 5,000 acres within an hour's sail of Swansboro, Beaufort and Morehead City, and almost in touch with Fort Macon, on historic ground, which can be bought for less than $1 an acre, and cheap at ten times the price for a hunting reservation The Atlantic Ocean on one side, Bogue Sound on the other, White Oak River in front, Brown's Sound, close by, and Cove Sound, Newport River and Queen's Creek within easy distance. So is the famous Atlantic Hotel, which cares for 1,000 guests in the summer months, and the A. & N. C. R. R. runs from thence up to New Berne. Such a luxurious location cannot be duplicated. I have spent six winters in this country, and know it well. I am infatuated with it, and would like to see a nice club of select sportsmen take hold of it.

Your readers have known me from the beginning and place confidence in my estimate. I should like to be interviewed by any whom I can impress on the subject. Now is the time to go down and examine the land and try the sport, and I will obtain permits for such as are vouched for.

Brown's Sound is one of the best places for ducks on the coast Bogue Sound is also good, and there is a superb system of marshes at the head of White Oak River. The banks are in great part wooded, with plenty of deer on them, and would be a fine country to stock with native and imported pheasants, ringnecks and Mongolian. Quail, woodcock and snipe abound, both on the banks and on the main land. Beach birds are in evidence by thousands in August. Coons, 'possums, bob cats and 'gators are everybody's game. Black bass are abundant in the rivers and sea trout in the estuaries, where they are caught by thousands with hook and net. And especially is White Oak River celebrated for its striped bass! In October, November and December they chase the spawning herrings up the branches in great schools, just as bluefish chase menhaden off the coasts, and they run to great size Sometimes they are found in the Trent River above New Berne, thirty miles further inland, but White Oak River is where they favor most. Any coasts survey map will locate this section very intelligibly to those who wish to be certain of the ground CHARLES HALLOCK.

NEW BERNE, N C., Nov. 18.—Croakers and sea trout are in abundance below, and spotted sea trout are taken in quantity with hook and line

Capt J. W. Willis, of Morehead City, reports that hunting is first-rate along the sounds. He went hunting last Saturday and killed thirty-five ducks, red-head, black-heads and other kinds. At Bogue Sound the hunting is said to be very good, with plenty of different kinds of game. C. H.

There are Other Frogs.

ST. LOUIS, Mo.—Anent the article in FOREST AND STREAM of Nov. 13 regarding frog culture, which is very interesting reading to connoisseurs in frogs' legs, Frenchmen or others. It may be said that southeastern Missouri is a very extensive shipping point for this description of delicacy in the spring, not less than 65,000lbs. going out from the town of Kennett alone, and 25,00lbs. from New Madrid. A moiety goes to the city of New York, and the balance to towns of the Mississippi basin. Other facts, as leared from Prof. W. A Wilcox, of the State Fish Commission, are to the effect that these goods command a higher price in the markets than Northern frogs do, and that the swamp lands of Arkansas and Mississippi are as good, and even better, than those of Missouri for frog culture. Frogs are caught in all sorts of ways. Some are shot, and some are caught with a red flannal rag tied below a hook, but the best results are from spearing. C. H.

Nature's Compass Signs.

Editor Forest and Stream:

There are two natural pointers of the compass not noted by Mr. Geo. W. Dearborn in your issue of Nov. 20. Note the direction in which fences and other obstructions to the winds lean. The heavy winds of spring, when the ground is soft and mushy on top, deflect the fences, and a little observation, even in a country new to the observer, will show the fences leaning generally in one direction. This sign I owe to that old book "The Young Marooners."

Another sign is, that young trees, where the ross bark has not thickened, are frequently flattened on the southwest side, often showing the bark killed. Maple, chestnut and sycamore trees show this the most frequently. The horticultural journals attribute this flattening to the effect of the southwest sun in winter, but why the southwest only I have never seen explained. Of course, this sign only shows in trees standing in the open, unshaded, and is most marked in those free from low branches, which shade the trunk

W. WADE.

Vermont League.

THE Vermont Fish and Game League had a most enjoyable reunion at Rutland on Wednesday evening of last week.

The Kennel.

FIXTURES.

BENCH SHOWS.

Nov. 30.—Washington City Kennel Club's show, Washington, D. C.
Dec. 8.—Rhode Island Poultry Association's show, Pawtuxet, R. I.

Jan. 24.—Union Field Trials Club's trials, Tupelo, Miss
Jan. 31. Champion Field Trial Association's Champion Stake, Tupelo, Miss.
Feb. 7.—Alabama Field Trial Club's second annual trials, Madison, Ala.

EASTERN FIELD TRIALS CLUB'S TRIALS

THE 1897 series of field trials of the Eastern Field Trials Club was run at Newton, N. C., on the preserve owned by the club. The weather conditions were exceedingly trying. No rain of any consequence had fallen within a time before the trials, which would be of benefit to the grounds. With every passing day the grounds seemed to be drier and dustier. The dogs with keen nose and wisdom in following scent had a decided advantage over those which were good performers under better conditions, or which were not patient enough in following up the light trails of the birds. The grounds, too, were broken up by large areas being sown in wheat, and the birds were far from being evenly distributed over the grounds. Some sections had birds in abundance, while in others there was a dearth.

There was a light attendance of visitors. Among those present were: Messrs. J. E. Orr, F. R. Hitchcock, Pierre Lorillard, Jr., New York; Edm. H. Osthaus, Toledo, O.; W. B. Meares, Linwood, N. C.; Frank H. Fleer, Philadelphia; Julian Corbett, Charlottesville, Va.; F. B. Griswold and J. Paine, Troy, N. Y.; Dr. J. Spencer Brown and wife, of New Jersey, and others.

Notwithstanding the light attendance, there is much more prospect of a wider support for field trials and a better future than there has been for number of years past.

The club held a meeting on the evening of the 15th, and the following list of officers were elected, they being the same as those of last year, with one exception: President, Pierre Lorillard, Jr.; Vice-President, C. H. Phelps, Jr.; Secretary-Treasurer, Simon C. Bradley; Board of Governors: C. H. Phelps, Jr., W. A. Coster, Edw. Dexter, H. B. Duryea, F. A. Hodgman, W. S. Bell, Bayard Thayer, Theo. Sturges, F. R. Hitchcock, Dr. J. Spencer Brown, P. Lorillard, Jr., S. C. Bradley, Edm. H. Osthaus, J. E. Orr and W. B. Meares, Jr In regard to future competition in the Members' Stake it was ruled that a dog entered in it must be the property of the member running him, or if the dog is owned in partnership, all the partners must be members of the club, otherwise the dog is not eligible to compete.

The Deby.

The competition in this stake was far below any standard of good work. There was a distinct lack of finish to it, and a distinct inability to work up to the opportunities.

The conditions were unfavorable for any extraordinary displays of good competition, for the weather was too warm and dry, the cover was heavy in many places, and the birds were most erratic in their doings; but with all due consideration of these unfavorable circumstances, the work was bad. In bad cover the work was very bad, and at such times as the birds were in favorable places for point work, a large percentage of errors or lost opportunities was in evidence. There was so much that was sloppy, mediocre and indecisive that the stake also was far from easy to decide.

There were ten starters, a small percentage of the forty-odd entries, but one thing and another prevented the starting of a number which were in actual preparation, so that the stake assumed small proportions. They were drawn to run as follows.

Pierre Lorillard, Jr.'s, b., w. and t. setter bitch Maiden Modesty (Eugene T.—Maiden Mine), C. Tucker, handler, with Dr. J. R. Daniels's b. and w. pointer dog Sam's Bow (Plain Sam—Dolly D. II.), Geo. W. Richards, handler.

Joe E. Meares's lem. and w. setter bitch Hope (Joyful—Thompson's Nora), with Victor Humphrey's b. pointer dog Zeb (Kemp B.———), owner handler.

Dr. M. F. Rogers's b., w. and t. setter bitch Pearl R. (Sam Gross—Donna Inez), D. E. Rose, handler, with Pierre Lorillard, Jr.'s, b., w and t. setter bitch Lena Belle (Sam—Minnie B.), C. Tucker, handler.

Charlottesville Kennels' liv. and w. pointer dog Ghoorka (Delhi—Selah), C. E. Buckle, handler, with Pierre Lorillard, Jr.'s, b., w. and t. setter dog Why Not (Eugene T.—Miss Ruby), C. Tucker, handler.

W. G. Brokaw's lem. and w. setter bitch Fairview Belle (Edgemark—Bell), R. Storey, handler, with J. J. Odom's b., w. and t. setter dog Sport Mc A. (Tony Boy—Blue).

Zeb, first, is a black pointer, which won both on some good work on the one hand and the absence of any formidable competition on the other. His strong qualities are his speed, good nose and stanchness. His judgment is very poor. This deficiency was nicely patched up by the pleasing obedience he observed when signaled, and many times he was sent into good ground and helped out in his ranging by signals when he had no intelligent purpose of his own. He ranged fairly wide, though irregularly so, and, though he won his place fairly, he can be classed only as a good puppy, with some pronounced good qualities present and others absent. He showed nothing which would indicate a successful future aside from practical field work.

Pearl R., second, showed intelligence, dash and energy, but her work on birds was very faulty, as will be noted on referring to the account of her heats, and she found with little success. Had the stake been at all strongly contested, she would not have had a place on the competition she made.

Why Not, third, while showing good qualities, made a faulty showing on birds.

This stake was for all setter puppies whelped on or after Jan. 1, 1895. First, $300; second, $200; third, $100. First and second forfeit $10 cash; $10 additional to start. Entries close May 20.

The judges were Messrs. A. Merriam, Memphis; S. C. Bradley, Greenfield Hill, Conn., and Theodore Sturges, New York.

Monday.

The weather was warm, clear, dry and unfavorable for a general good class of work. The birds, with the exceptions of a few bevies, would not lie to the dogs' points, and flushes and lost opportunities were common incidents. Many birds, marked down, were run over by the dogs and afterward flushed by the handlers or horsemen.

First Round.

MAIDEN MODESTY AND SAM'S BOW started at 8:29 and ran 57 minutes. A bevy was flushed and followed from place to place, the birds flushing wild. At last Modesty secured a point on a single bird in woods. The range of both dogs was moderate.

HOPE AND ZEB were cast off at 9:26; down 44 minutes. A bevy was marked down in pine woods. Hope made two points on singles and Zeb flushed once. Hope pointed a bevy and was steady to shot. On the scattered birds Zeb made two points. He had the better speed and range, but Hope outclassed him in finding, locating and pointing. While he had a fair range, he beat out his ground with poor judgment.

PEARL R. AND LENA B. were down 54 minutes. They were started at 10:12. Lena flushed a bevy. The birds were followed into thick pine woods. The dogs were hardly in the woods before they stopped on point. Then there was a noisy calling of points, a scrambling to the front, birds flushing and nothing definite determined. Further on each made a good point on singles, then both joined in a good point on scattered birds. In heavy cover next Pearl pointed a bevy. The birds were followed into woods and a number of good opportunities were lost. Birds were scattered about in numbers. Lena pointed a single and Pearl backed. Both were fast and merry workers, with fairly good range.

GHOORKA AND WHY NOT were cast off at 11:12; down 49 minutes. Why Not made a point and a flush on scattered birds. Ghoorka flushed a bevy in the open. He was warm, and seemed somewhat off his nose. On the same birds, each secured a point. Next, Ghoorka made a hesitating point on part of the bevy in brush. In woods, Why Not wheeled into a sharp point on a single, and the pointer backed. A flush by the setter and a point by the pointer ended the bird work. The points fell far short of the opportunities. Ghoorka ranged well and at good speed, he covering more ground than the setter; but his point work was faulty, and in that respect the setter showed the better ability.

FAIRVIEW BELLE AND SPORT MCA. were cast off at 1:47; down 1 hour. Belle was more diligent, and maintained a more uniform pace. On scattered birds both secured points. Sport's locating was marked by uncertainty, slow roading and premature pointing. They lost many opportunities to point.

Second Round.

SAM'S BOW AND ZEB were run 51 minutes. Toward the end of the heat, Zeb pointed a bevy. The birds were followed in heavy weeds. Bow pointed a single. Zeb roaded some yards, pointing every few steps. He roaded past the bird, which was flushed by his handler. He had good speed, was not regular in his range, and beat out his ground with poor judgment.

PEARL R. AND WHY NOT ran 35 minutes, beginning at 4:11. They soon found a bevy in open sedge, but some trees cut off the view. Rose claimed point, Tucker was loudly cautioning Why Not to be steady, and some birds were seen to fly from their vicinity. A moment later Rose called point and Pearl further on was pointing steadily. The birds were followed. Pearl roaded to a good point on a bevy in the open. Both dogs were diligent, showed good speed and bird sense. Pearl had the better of the heat.

GHOORKA AND LENA ran an ordinary heat. They started at 4:54; down 56 minutes. Lena flushed, then pointed some remaining birds and flushed them wilfully. Their range was commonplace.

Tuesday.

The weather conditions were better, though still unfavorable. There was a gentle breeze betimes with a slight coolness, and the sun was partially obscured by clouds part of the time. Birds were found in sufficient numbers, but in places entirely unfavorable for the purposes of a competition. A start was made at the Conover end of the grounds.

Third Round.

ZEB AND PEARL R. were cast off at 8:48. They were run 2 hours and 2 minutes, longer than seemed to be necessary, as the pointer had the heat well won after the first hour. At no time was it an exhibition of a high-class performance; yet, such as it was, the pointer won it most thoroughly. Pearl pointed a bevy in weeds; next she pointed a single, and next she flushed and chased. Zeb found and pointed three bevies, and had one divided point on scattered birds with Pearl. The latter made two more points on scattered birds, and made two flushes. On one bevy in woods the work is not taken into account, as no one saw which dog found or pointed or flushed. Pearl had a more pleasing way of going, and used more judgment in beating out her ground, though she had less range than the pointer. Her point work was faulty in its execution, and also in the many lost opportunities. Zeb ranged with poor judgment, though his obedience to his handler's signal in casting as directed helped him greatly in seeking in good ground. He showed a good nose, but on point he was lacking in intensity; and in locating, while he went true and quickly to his birds, he had a wiggly way which was not pleasing, and this deficiency in style was noticeable in his ranging. This heat ended the Derby.

Why Not was placed third without further running.

The All-Age Stake.

Immediately after the Derby was finished on Tuesday this stake was begun. Mr Sturges retired from the judging, he being interested as an owner in the competition. Mr. F. R. Hitchcock, whose ripe experience and skillful knowledge well fitted him for the position, was chosen to fill the vacant place.

This stake was open to all setters and pointers which had never won a first prize in an all-age open stake at the Philadelphia, Southern, United States or Central Field Trials. First prize, $300; second, $200; third, $100. Forfeit, $10; $20 additional to fill. Entries closed Oct. 1.

There were sixteen starters, run as follows:

Charlottesville Field Trial Kennels' lem. and w. setter bitch Pin Money (Count Gladstone IV.—Daisy Croft), C. E. Buckle, handler, with Eldred Kennels' setter dog Tony Gale (Antonio—Nellie G.), D. E. Rose, handler.

F. W. Dunham's lem. and w. pointer dog Elgin's Dash (Kent Elgin—Mack's Juno), D. E. Rose, handler, with S. D. Rippley's b., w. and t. setter bitch Winkee (Count Gladstone IV.—Tory P.), W. Tallman, handler.

D. E. Rose's (agent) setter dog Hurstbourne Zip (Tony Boy—Dimple), agent, handler, with Edward A. Burdett's b., w. and t. setter bitch Ann of Abbottsford (Gladstone's Boy—Bohemian Girl), Geo. W. Richards, handler.

H. Ames's b., w. and t. setter bitch Christina (Blue Ridge Mark—Lou R.), D. E. Rose, handler, with Chas. B. Pineo's l. and w. pointer dog Young Rip Rap (Rip Rap—Pearl's Dot), Geo. E. Gray, handler.

R. A. Johnson's l., w. and t. pointer dog Kent of Grace (King of Kent—Queen Grace), Luke White, handler, with Geo. E. Gray's (agt.) b., w. and t. setter dog Sarsfield (Rodfield—Opal), agent, handler.

Charlottesville Field Trial Kennels' b. and w. setter bitch Shadow (Count Gladstone IV.—Daisy Croft), C. E. Buckle, handler, with J. T. Mayfield's (agt.) b., w. and t. setter dog Rodfield's Boy (Rodfield—Sue Gladstone), J. H. Johnson, handler.

P. Lorillard, Jr.'s, b., w. and t. setter dog Count Gloster (Eugene T.—Gloster's Girl), C. Tucker, handler, with Phil. M. Essig's b., w. and t. setter bitch Saragossa Belle (Gleam's Pink—Maud E.), J. H. Johnson, handler.

Edward A. Burdett's b., w. and t. setter dog Cincinnatus Pride (Cincinnatus—Albert's Nellie), Geo. W. Richards, handler, with Fox & Blythe's b., w. and t. setter dog Dave Earl (Count Gladstone—Dan's Lady), J. H. Johnson, handler.

Count Gloster, first, is greatly improved in form over that which he displayed last year, and he has a merry, dashing way of going which is pleasing to the eye. His point work was mixed as to quality, some of it excellent, some of it very erroneous. Some of the time he worked diligently, some of the time he romped gaily. His judgment is fairly good.

Ann of Abbottsford, second, has much more knowledge of work than the winner of first. She is an excellent finder, beats out her ground with judgment and maintains an even, uniform degree of work. In style she is inferior to the winner, whether in action or on point.

Elgin's Dash, third, is also very perfect in the knowledge of working to the gun, and has to an eminent degree the quality called bird sense. He has an excellent nose and knows to a nicety just how to use it. He was not so stylish as the winner, but he was a better workman.

Cincinnatus Pride fared hardly in being left out of the places entirely. He classed well with the three dogs left in, and it seemed certain that he would have a place.

The competition was such that it was a matter of opinion as to how the dogs would be placed. One expert had guessed Pride, Dash and Ann in the order named; another named Pride, Gloster and Dash, while a third had Dash, Pride and Ann. This will give a fair idea of the diversity of opinion in respect to the matter.

First Round.

PIN MONEY AND TONY GALE started at 11:11; down 56 minutes. Pin pointed a bevy, moved on down wind and flushed a bird or two; then she pointed the bevy and it flushed wild. Next, Gale pointed in the open and Pin backed; nothing was to the point apparently, but a few moments after the dogs had gone on the horsemen flushed a bevy down wind from the point. Gale's next was a good point on a bevy which flushed wild. Pin made three good points on scattered birds; Gale two. Both were fast and wide rangers. The ground was too irregular and the work too largely in cover to make any intelligent comparison of range and speed.

The lunch was one of the best ever served at a field trial.

ELGIN'S DASH AND WINKEE were sent off at 1:07. Winkee was lost for a few moments. Dash pointed a bevy in an unfavorable place. On the scattered birds Winkee made two good points, Dash one. Sent on and Dash pointed a bevy in corn. Sent on, Winkee pointed a bevy on a side hill and the birds flushed wild. Dash made three more single points in rapid succession in or near brush and briers, they being marked by quickness and accuracy. Up at 1:59. Winkee had good speed, range and ability, but Dash had greater ability and was doing a very high class of work for any dog to compete against.

HURSTBOURNE ZIP AND ANN OF ABBOTTSFORD began at 2:20. Ann beat rapidly to and fro in a cornfield on the scent of birds which had apparently been running about. She found and pointed them, doing a clever piece of work. On scattered birds, Zip made two points; Ann made one. Both made next a point on the same bevy. Up at 2:59. Ann showed a decided superiority in every respect. She ranged wide, fast and with good judgment, and her bird work showed knowledge and high ability.

CHRISTINA AND YOUNG RIP RAP were started at 3:13. Both were fast and had good range, Rip the wider. Both were near a bevy which flushed. Rip pointed a single. Sent on. In a cornfield Rip was making game when Christina, coming near, flushed the bevy and seemed to go on refreshed. Some of the birds dropped in sedge near the woods, and Rip, going with great dash, flushed them and gave no heed to the error. Up at 4:01. Aside from their range and pace, their exhibition was very faulty.

KENT OF GRACE AND SARSFIELD were cast off at 4:12. This was the last brace of the day. Kent, in the open, caught scent, flushed a single bird willfully, and the rest of the bevy then flushed. It was a very poor piece of work. Sent on. Sarsfield was lost during some minutes. Sent on, he found and pointed two birds. Grace pointed a bevy. Their range was about average in point of judgment, though the pointer had the wider range and worked more reliably to the gun.

Wednesday.

The weather during the night changed sharply. The morning was quite cool and much more favorable for good work. The sun shone clear and bright. The dryness of the preceding days prevailed. The work was commendably good as a whole, though none of it was of a sensational good kind.

SHADOW AND RODFIELD'S BOY were started at 8:41, and were run 1 hour and 16 minutes. Rodfield's Boy was seen but a few times during the heat, and most of the time was spent by the judges and others searching for him. A more aggravated case of self-hunting was never seen at a field trial. Shadow was on chain a good part of the time waiting for Boy to be brought to the course, consequently her opportunity for competition was spoiled. Such a rank self-hunter should never have been started in a field trial, and being started, he should have been taken up when his true character was determined. Shadow was given another chance later.

SARAGOSSA BELLE AND COUNT GLOSTER were cast off at 10 Soon both dogs were making game and the judges flushed the bevy. Count pointed on the scattered birds. Sent on, and a bevy was seen to come from nearby Count. He made two points on the scattered birds; Belle, one. Next, Count pointed by a ditch and about 50yds. further on Belle pointed the bevy. Count made two more points on singles and one on a bevy, Belle joining close by in the point on the latter. Count flushed a single. There was an abundance of birds found during the heat. One bevy came out of a run and Belle was suspiciously near it when it flushed. Up at 10:53. Both show good speed, dash and range. We thought Belle would have had another trial on her good general showing in this heat.

CINCINNATUS PRIDE AND DAVE EARL began at 11:08. Dave made game in sedge; a bevy was seen to flush and both dogs were afterward seen standing close by the place. Pride pointed a bevy in cornfield and Earl backed. On this bevy, marked down and followed nearby, both pointed. Pride next made a point where some birds were, but the cover was so dense they could not be flushed, Earl pointed in cornfield and there was nothing found. Up at 11:56. Both dogs maintained their speed and worked diligently. They ranged well considering the unfavorable nature of the ground.

SHADOW was run alone after lunch. She pointed in the open; no birds, but a roost was near by. She found and pointed a bevy and made two good points on singles, making a creditable showing. Up at 1:49. Down 30 minutes.

Second Round.

Ten dogs were retained for further competition.

ELGIN'S DASH AND YOUNG RIP RAP started at 1:53. Down 57 minutes. Dash made game; Rip was found on a point in sedge; Dash came near him and pointed; a single was flushed. The cover was very heavy. Next on some scattered birds, in sedge each pointed a single. Sent on, Dash found, located and pointed a bevy nicely. Each dog next made a point on a single bird in woods. Both ranged well and sought diligently. Dash showed superiority in his bird work and judgment. Up at 2:50.

PIN MONEY AND HURSTBOURNE ZIP began at 2:56. Zip pointed a bevy in corn; Pin, close up, backing or pointing. The birds took but a short flight. On them Zip made two points; Pin made a point and a flush. Pin had the better range and speed. Neither showed the best of judgment in beating out the ground. Up at 3:27.

TONY GALE AND ANN OF ABBOTTSFORD were cast off at 3:32. Gale made two stanch points; nothing found. Ann roaded nicely to a point on a bevy in open weeds. Sent on, Ann made game and beat about; on a side hill in open weeds she flushed a single bird, then stopped, and Richards flushed the rest of the bevy. Gale was lost for some minutes, and was found near woods on a stanch point; nothing found. Sent on, Ann roading diagonally down wind, flushed a single, then pointed the bevy. Next she made a point to which nothing was found, and next she made two good poins on singles. Gale got out of control, and Ann, though working nicely, was taken up till Gale could again be got in hand, and while she was up he made a point on a single bird. Ann next made a good point on a single. Both ranged well, Ann having decidedly the better of the heat. She excelled in picking up the faint trail of a bevy, and wisely beating about till she located it. Gale seemed to be utterly at fault in locating after he made a point. Up at 4:22.

COUNT GLOSTER AND CINCINNATUS PRIDE were cast off at 4:27. Both wasted a lot of time in frivolous running, and for some time they had no idea of working for birds. Count romped the most. Both pointed a bevy in open sedge. Count flushed two singles, and Pride pointed twice nicely on singles. Sent on, Count found and pointed two bevies, and made a point on scattered birds. Each made a flush on singles. Up at 5 04. The latter part of the heat was marked by good work. Each backed nicely and was steady to shot. Both showed good speed and range. They were specially favored in good ground, a good time of day and plenty of birds.

DAVE EARL AND WINKEE were cast off at 5:09. Dave pointed a bevy, which flushed wild. On the scattered birds, Winkee made a good point on a single, and made an excusable flush. She worked pleasingly and merrily, and was a sweet worker to the gun. She handled very easily. Earl was diligent and fast, but worked out his ground with poor judgment. Up at 5:37. This ended the day's competition.

Thursday.

The morning was clear and frosty. As the sun mounted higher the weather became warmer, till in the afternoon it was too warm for comfortable exertion. Little wind was stirring.

Third Round.

COUNT GLOSTER AND ANN OF ABBOTTSFORD began at 9:54, and ran 1 hour and 28 minutes. A bevy flushed nearby Gloster. Each made a point on scattered birds. Each made a point to which nothing was found. Gloster pointed a bevy in briers as he was being called out of the woods, so it had little merit as a find. Sent on, Ann found and pointed a bevy in sedge in woods. Gloster flushed a single, and missed some opportunities to point others which were scattered about in the woods. Both pointed a single. Gloster was going merrily most of the time, but he was not always seeking birds, and much of his ranging was done with bad judgment. Ann beat out her ground with good judgment, and showed an excellent knowledge of field work, but she was not running so well as in previous heats. Both had good speed. Ann had the better of this heat.

CINCINNATUS PRIDE AND ELGIN'S DASH were cast off at 10:22. They were worked on some scattered birds. Dash pointed and Pride backed instantly. Sent on. Pride pointed, then moved on and abandoned the scent. Dash coming up a few moments later caught the same scent and roaded quickly to a point on the bevy. Dash pointed a single. Pride pointed two singles, and found and pointed two more bevies. Sent on, both pointed near a branch; nothing could be flushed, so the handlers started on the course. Dash went down the branch further, and down wind flushed a single, then the rest of the bevy flushed. He crossed the branch shortly afterward and pointed another bevy. He showed rare judgment in finding and pointing his birds. Up at 11:14.

The judges then awarded Count Gloster first, Ann of Abbottsford second, Elgin's Dash third.

Eastern Subscription Stake.

The stake which bears this title was open to all setters and pointers. Prizes, $300, $150 and $50. Subscription $50, payable Oct. 1, 1896. Each subscription entitled the owner to start any dog he pleased, whether his property or not. The subscription was transferable to any person not objectionable to the club. The first round consisted of two-hour heats; afterward the heats are at the discretion and direction of the judges.

The judges were Messrs. Merriman and Bradley, two thoroughly experienced men. There were twelve starters. This support was most encouraging. Instead of losing on this stake, as was the case sometimes in previous years, there was a balance to the good. As nearly all the dogs ran in previous stakes, a list of pedigrees, etc., is unnecessary.

Tony Gale, first, ran one good heat—an excellent one—but his subsequent work was sadly marred by false points. He has a fine way of going, ranges wide when at his best, and he ranges, points and backs prettily as to style.

Rip Rap, second, taken from first to last, ran far away the best race of any dog of the four kept in after the first series. While his first heat would not compare with Tony's in finding birds, his work as a whole was better sustained and better in class, and he was free from the false pointing which so marred the competition of Tony.

Count Gloster, third, was lacking in proper industry. While he ran gaily, much of his time was devoted to romping, and his point work was not specially remarkable for its excellence.

When the competition in the second series was becoming so weak, and the class of work falling below that of Marie's Sport and Pride, it would have been quite proper to have taken them in and to have given them further trial. Whatever faults they may have shown, they had far less than those shown by most of the dogs shown in the second series. However, the judges are of the most expert class, and anything contrary to their decisions is offered merely as a matter of opinion.

First Round.

TIPPOO (Charlottesville Kennels' pointer dog, C. E. Buckle, handler) AND DAVE EARL were started at 12:46. The former had a decided advantage in every respect from start to finish. He showed some signs of weariness toward the close of the heat. Tippoo found and pointed two bevies and made a single-bird point. Earl made two points to which nothing was found, and he pointed a single bird; each backed well. Earl ranged in an indolent manner. Tippoo ranged wide, showed good judgment and speed, and put spirit into his work.

LADY GRACE II. AND TONY GALE were cast off at 2:48. The competition was very one-sided. Tony had the better speed, range, style, judgment and success. He found and pointed eight bevies, but marred his work by making a few points

to which nothing was found. He pointed twice on singles. He was going strong and well at the finish. Lady's competition was ordinary. She pointed a bevy, raked her ground a great deal in following scents, and her range was moderate. She was not perfectly stanch to wing.

Friday.

It was a charming day, after a frosty night, calm, with a warm, soft atmosphere, which had a hazy tinge, and with a bright sun, which shone with only a pleasing warmth. Birds were found in good numbers, but in a patchy way, accordingly as the grounds were favorable or unfavorable. As a whole, the dogs worked diligently and well, but there was a great difference in results, as will be noted in the report of the running.

ELGIN'S DASH AND ZEB were cast off at 8:26. Dash pointed a single loafing bird of a bevy which was flushed some yards ahead of him by the horsemen. Next, Dash found and pointed a bevy. Both made game next. Dash flushed a single and next he pointed some scattered birds. Zeb pointed a bevy which ran from his point probably; both then drew about in the open and neither located the bevy, though it seemed easy for them to do so. The birds were flushed independently of them Dash flushed a single bird. Sent on, he next pointed a bevy after two or three birds of it had flushed. Next, both pointed a bevy by a creek. Each flushed a single. During the heat the dogs lost many opportunities to point, or for that matter to flush. Their performance was of an ordinary grade. Zeb ranged the wider. Dash showed the most knowledge, as was to be expected considering his much greater experience, but the work was distinctly a low grade and marked by neglected opportunities.

COUNT GLADSTONE AND SARSFIELD began at 10:33. Count did not take the affair so seriously as he should, and he made three points to which there was nothing, save that the first may have been on tame chickens. Sarsfield pointed a bevy in the open, and Count, coming up a few moments later, joined in the point. He should have backed. The birds after a time could be seen running from the point and they flushed wild some yards away. Working on the scattered birds, Gloster, in woods, wheeled to a point as a single flushed; he held his point and others were flushed to it. In woods, Sarsfield flushed a bevy which but few saw. In open, Count pointed; nothing found. He was now steadying down to more earnest work. He next found two bevies well, Sarsfield joining in a point on the second bevy. Gloster pointed twice on the scattered birds, flushed a single, and next he pointed a bevy in woods. Sarsfield pointed a bevy, which ran into a ditch; Count pointed or backed. Count distinctly outclassed Sarsfield in his work on birds and work to the gun. The latter worked beyond proper limits and was difficult to handle. Count had a good range, worked well to the gun, but was disposed in the early part of the heat to show some indifference to the exercise of his best efforts.

Lunch was spread out most temptingly and a most appetizing spread it was, but there was short time spared for it.

MARIE'S SPORT AND ANN OF ABBOTTSFORD at 1:04 began a heat of which much was expected in the way of grand work. Ann's ability was recognized. She ranged diligently, felt the air with her nose incessantly, and showed excellent judgment and an accurate knowledge in respect to the haunts of quail, but on birds she seemed to have a nose which either was temporarily off, or she was careless as to errors. Sport had a swift pace and a great range, he surpassing Ann in those qualities, which does not imply that she was either slow or a narrow worker. Sport pointed; Ann backed; nothing found. Sent on, Sport pointed a bevy nicely. Ann flushed a bevy. On the scattered birds, Ann flushed. Neither could locate them nor catch scent, though the birds were marked down accurately in the cornfield. Ann flushed. Next, sent on, she pointed in a cornfield, then moved on down wind and flushed the bevy. Next worked on the scattered birds, Ann pointed; nothing found. Sport pointed a single nicely in woods, and sent on, he next pointed a bevy in corn. Sent on, Sport dropped to a point on a bevy Ann refused to back, went close up to the bevy and stopped, but showed no signs of recognizing scent, although she was close to the birds. Sport had decidedly the better of the heat in every respect. Ann was coming in season, which explained a great deal of her changed deportment and work.

CINCINNATUS PRIDE AND YOUNG RIP RAP began at 3:13. The latter ran a strong race from start to finish, ranged wide and showed good judgment, though he lost a number of opportunities to point which seemed very favorable. His speed was excellent. Pride ranged wide and fast, and was always seeking birds, though toward the close of the heat he showed some signs of fatigue in a slackening of effort, though not in the least disposed to quit. Pride was near a bevy and it flushed, but whether he pointed or not I could not see. Rip pointed a bevy nicely at the edge of woods and was handsomely backed. Pride pointed a single well. He was roading in thick cover by a ditch when two birds flushed wild ahead. Rap made a long cast, beating out a likely wheat stubble, then coming on bare plowed ground he pegged a single bird nicely. Next both pointed where a bevy flushed. Sent on. Pride took a long cast and returning pointed a bevy in a mass of briers. The Rip flushed a single. On some scattered birds in a hollow, or a bevy feeding, Rip flushed and missed several easy opportunities to point. Pride was lost for awhile and was found pointing a single. Rip next made three points on singles. He made a point in corn; nothing found. Next he made a long cast, found and pointed a bevy well, and the heat was ended. While the bird work was not all that the excellent range and industry of this brace would seem to produce, it is but fair to mention that a good part of the heat was on the part of the grounds containing the least birds.

Saturday.

The weather was calm, warm and pleasant.

Second Series.

The judges spotted out the dogs very close, only retaining four in the competition. This seemed rather severe on Marie's Sport and Cincinnatus Pride, which had shown a higher class of work than a great deal of that done on this day.

TONY GALE AND TIPPOO were cast off at 9:20. On some scattered birds marked down, Gale made two points on singles and flushed one. Tippoo was where birds were flushing. Gale next pointed stanchly; nothing found. Sent on. Gale pointed a single and flushed one. Tippoo made a point; no birds. Tip working in thick cover was where birds were flushing. Gale pointed stanchly; nothing found. Up at 10:05. Tippoo far excelled Gale in range and maintained a more uniform speed. Gale came in frequently toward his handler and was many times ordered on. His work was far below that of his previous heat. Each backed well. Tippoo's bird work was faulty.

YOUNG RIP RAP AND COUNT GLOSTER started at 10:12. Rip found and pointed a bevy in open sedge; Count coming up, flushed part of the birds, refused to back and stole the point. The birds were followed. Count pointed; Rip backed; nothing found. Count flushed a bevy, then a single. In woods, Rip pointed a bevy; Count came in afterward, went ahead and pointed the same bevy. Up at 11:05. In ranging, Count was going well, but showed little sign of using his nose, and his bird work was either all stolen work or erroneous.

The running was suspended to give the dogs a rest before further running. In the meantime the party went to lunch.

Final.

TONY GALE AND RIP RAP were cast off at 12:59. Gale pointed a bevy nicely in open ground. The pointer outranged the setter from start to finish, and stayed out at his work without any encouragement. Gale was receiving frequent orders to go on. He idled time on false scents occasionally, and he was going in poor form generally. He was lost some minutes, and was found in heavy sedge on a stanch point; the ground was thoroughly beat out by his handler, but nothing was found. Rip in the meantime pointed a bevy in woods, and next he pointed a single. Sent on. Gale pointed a bevy in open stubble and the heat soon ended. Time, 2:41. The judges then announced the winners: Tony Gale, Young Rip Rap and Marie's Sport. Taking the work of both dogs throughout the stake, it seemed to me that Rip had won easily. Tony had done some very good work and some rank bad work, while Rip ran a well-sustained race.

CENTRAL BEAGLE CLUB TRIALS.

[*Special Report for Forest and Stream.*]

THE second annual trials of the Central Beagle Club were held at Rice's Landing, Pa., Nov. 9 to 12. The meeting was an undoubted success, but the incessant rain and snow marred much of the pleasure of the meet. The weather, however, did not prevent a gathering of more than twenty true sportsmen from following the hounds from start to finish. Good-fellowship and friendly feeling prevailed during the entire meeting; no dissatisfaction was heard in the placing of the dogs and harmony was the order of the occasion. The meeting brought together a magnificent lot of beagles and the competition was sharp and keen in every class. Some of the winners are already well known and many new aspirants for field trial honors made their appearance here. Those deserving special mention are Summers's Stump, who won the championship in the 15in. class; McAleer's Little Hornet, and Kitty Peterson's Sailor and Chance, and Hartt's Madge H.

The attendance was excellent throughout the trials and the interest kept up until the end. Among those present were: Dr. S. W. Hartt, J. A. Schaum, Theo. Bolljie, McKeesport; A. C. Paterson, Homestead; E. Bruell, T. C. Moxham, Loraine; D. F. Summers, Thorndale; Jacob Zelt, Jr., Washington; Dr. J. A. Phillis, Allegheny; John W. Hancock, Hornersville; R. C. and L. J. Tomer, New Kensington; J. F. Bell, Carmichaels; Jas. Phillips, Homesville; Jas. McAleer, Emsworth; L. O. Seidel, Sharpsburg; Wm. Pitcock; Homesville; Mark Lewis, Cannonsburg; James Liddy and Charles Hartman, McKeesport; Robert Gibbs, Homestead; M. Young, Rice's Landing.

The decisions of the judges, Dr. W. E. Johnston and J. W. Simpson, were well received. The work was arduous and difficult, owing at times to the density of the cover and the inclement weather, and in some classes great care, patience and long runs were required before decisions could be made.

The club did not arrive at Rice's Landing until 10 A. M. Tuesday. The dogs were at once measured by the judges and transferred to their proper class. While here some thought the judges were not quite lenient enough, but they decided to hew to the line, which altered some of the classes. Afterward the dogs were shown in their respective classes. Hotel Faddis was the headquarters of the club, where Landlord Faddis looked carefully after the wants of his guests. The rain having ceased for a time, a start was made for the grounds at 1 P. M.

Derby—15 to 13in.

Derby for beagles 15in. to 13in., whelped on or after Jan. 1, 1896. Fee to start, $5. First prize, 50 per cent.; second 30, third 20.

L. O Seidel's b., w. and t. bitch Daisy S. (champion Lee II.—Molly Dean), whelped March, '96, with Croker & Torner's b., w. and t. dog Montane Lee (champion Paderewski—Beatrice), whelped December, 1896.

Franklin Field Trial Kennels' b., w. and t. dog Summers's Sailor (Sailor—Summers's Fly), whelped March, '96, with Mark Lewis's b., w. and t. bitch Lucy L. (champion Raffler—Jessie), whelped June, '96.

DAISY S.—MONTANE LEE.—Chas. A. Denby's Daisy S and Montane Lee were put down at 1:10 in a brier field. L. O. Seidel handled Daisy S., L. J. Tomer handled Montane Lee. A rabbit was jumped by a spectator when the dogs were worked up to the line; both dogs hit the trail, but owing to the high west wind trailing was difficult and both dogs soon ran to a loss. Moving on, another rabbit was started; both dogs were brought up, and catching the scent about the same time trailed to a loss on the public road. Another rabbit was started at once, when a short run was had and the judges ordered up the dogs at 1:50.

SUMMERS'S SAILOR—LUCY L.—Down at 1:55; Sailor handled by D. T. Summers, and Lucy L. by Mark Lewis. Quite a long tramp was had before a rabbit was found. One was started and both dogs were laid on. Sailor, catching at once, did most of the leading, driving to a loss in a swamp field. The work of Lucy L. was good, but she was over fat and could not catch her nimble rival. This was a good chase. Up at 3.

Second Series.

DAISY S.—SUMMERS'S SAILOR—Handled by their owners; went down at 3:05 in a brier field. A rabbit was found in its form by the field marshal; both dogs were called up and the rabbit jumped from its form and proved to be very small and much inclined to run back and forth through the fence, and was run to a loss in the hedge row. Up at 3:16.

LUCY L.—MONTANE LEE, handled as before, went down at 3:30 at edge of woods. A rabbit was soon started by Lucy L., when a good hunt was run by both dogs; but the work was rather slow and lacked the dash of Summers's Sailor. Up at 4.

The judges awarded first prize to Summers's Sailor, second to Lucy L., third to Montane Lee, Reserve to Daisy S.

Derby—13in. and Under.

Derby, open to all beagles 13in. and under, whelped on or after Jan. 1, 1896. Fee to start, $5. Moneys divided 50, 30 and 20 per cent.

Jas. McAleer's b., w. and t. ticked bitch Little Hornet (Sailor—Lucy S.), whelped April, 1896, with McKeesport Kennels' b., w. and t. bitch Madge H. (Streamer—Blossom H.), whelped May, 1896.

McKeesport Kennels' b., w. and t. bitch Topsy B. (Harker—Birdie S.), whelped June, 1896, with McKeesport Kennels' b., w. and t. dog Spotty (Streamer—Blossom H.), whelped May, 1896.

McKeesport Kennels' b., w. and t. dog Harker S. (Harker—Birdie S.), whelped June, 1896, with A. C Peterson's b., w. and t. dog Chance (champion Frank Forest—champion Snow), whelped May, 1896.

LITTLE HORNET—MADGE H.—This brace was put down on the Young farm, Little Hornet handled by owner, Jas. McAleer, Madge H. by J. A Schaum. Down at 4:04 at edge of woods. A rabbit was soon started, and this merry brace did some excellent work, running the game to earth. Another was soon started. Little Hornet was all business, and after a splendid run they were ordered up at 4:45.

TOPSY B.—SPOTTY were put down at 4:48, both handled by J. A. Schaum. This brace was watched with interest owing to size of Spotty, who measured scant 10in., but showed good hunting sense, searching likely places and trailing well, but slow when game was started. Up at 5:18.

HARKER S.—CHANCE.—Down at 5:20. J. A. Schaum handled Harker S., and J. F. Bell Chance. Put down where previous pair were lifted, and a rabbit was soon started, both dogs doing good work; but, owing to darkness, were ordered up after being down 15 minutes.

Wednesday morning was cloudy, with occasional showers, and scent still lay badly. Game was plenty, but the running was short, with no long drives, the rabbits seeking cover as soon as possible. Harker S. and Chance were put down again at 8:05 to finish their heat. A rabbit was started by a spectator, and the dogs worked up, when Harker first caught on, both trailing well to a loss. Chance was first to find. Harker belied his name and would not bark to the trail, Chance driving to a loss in briers, where numerous ground holes were found but none marked. Up at 8:25.

Second Series.

HARKER S.—LITTLE HORNET, handled as before, down at 8:30. Little Hornet started a rabbit at once, when the best work was done in this class. Hornet cut out almost all the work, catching turns quickly and driving with great speed. The work of this little bitch in this and subsequent heats was phenomenal. Up at 8:45.

MADGE H.—CHANCE, handled as before, down at 8:48 in brier patch at edge of woods. Madge H. started a rabbit and drove out in a grass field; Chance, who was brought, failed to catch on. Madge drove to a loss in adjoining field. Here Chance picked up the trail, working industriously, and soon unwound the trail, forcing Bunny from his hiding and trailing to a loss in the public road. Coming back another rabbit was started in the same field which proved to be one of the best runners yet found. Both dogs did well, but Chance did most of the leading and drove the rabbit into a board pile. Up at 9:55. This ended the Derby, and the judges announced the winners: First, Little Hornet; second, Chance; third, Madge H.; res., Harker S.

All-Age—13 to 15in.

Class C, 13 to 15in., open to all beagles not having been placed first at any recognized field trial. Fee to start, $5. First prize, 50; second, 30; third, 20 per cent. Ten starters.

A. C. Peterson's b., w. and t. ticked dog Sailor (Royal—Forest Beauty C.) with McKeesport Kennels' b., w. and t. bitch Lady Linda (Driver—Copsy).

T. C Moxham's b., w. and t. bitch Chippy (Bounce E.—Anna T.) with Mark Lewis, Jr.'s b., w. and t. bitch Mollie L. (Don—Mollie).

Franklin Field Trial Kennels' b., w. and t. bitch Belle S. (Sailor—Lucy S.) with R. C. Slinger's b., w. and t. dog Ramrod (Black Joe—Flora).

Frank Gallz's b., w. and t. dog Doc Weller (Sam Weller—Belva Lockwood) with Franklin Field Trial Kennels' b., w. and t. dog Summers's Sailor (Sailor—S. Fly).

Franklin Field Trial Kennels' w. and t. bitch Summers's Fly (Clover—Lucy S.) with Jas. McAleer's b., w. and t. bitch Kitty Rowdy—Muric).

SAILOR—LADY LINDA were put down in clover patch at 10:05, Sailor handled by owner, A. C. Peterson, Lady Linda by Theo. Bolljie. A rabbit was soon started, but a picket fence interfered, and both dogs had to be helped over by their handlers. Both dogs bit off the scent together, when a pretty chase was had over what the judges pronounced a very steep hill. Running to a loss, both dogs were taken up and a move was made to more level ground. A rabbit was discovered in its form by a spectator; both dogs were brought up, and bunny jumped from her form. Both dogs catching together, a very hard drive followed into a grass field, where for a time a loss was made. Lady Linda found another rabbit, and drove to cover; but Sailor here exhibited good quality, sticking to the rabbit and bringing it back to cover, near where it was started. Up at 10:50.

CHIPPY—MOLLIE L.—Down at 10:55 in woods. Chippy handled by owner, T. C. Moyham, Mollie L. by owner, Mark Lewis, Jr. Chippy soon started a rabbit, and after a short chase by sight the rabbit took refuge in a stone quarry, neither dog having the advantage. Moving on up a ravine a bit, a rabbit was started by Mollie L., who trailed well into the woods; but owing to the high wind good trailing was impossible for either dog, and after a loss, both dogs were ordered up at 11:55. Lunch was now announced at the Young farm, where all partook heartily of sandwiches, hot coffee and pumpkin pie.

BELLE S.—RAMROD.—This brace was put down after lunch, at 12:30, in an orchard. Belle S. handled by owner, D. F. Summers, Ramrod by James Phillips. A rabbit was started by Summers, and both dogs called on, but owing to a peculiarity of the fences about this field which the dogs couldn't get through, the running was marred for a while; but after getting away, a very pretty chase was had, Belle S. doing the best work so far. At last the rabbit took refuge in a board pile, from which it was dislodged, both dogs driving to cover, where Belle S. caught the rabbit. Up at 1:23 P. M.

DOC WELLER—SUMMERS'S SAILOR.—This pair was put down at 1:25, Weller handled by Jas. McAleer, Summers's Sailor by D. F. Summers. No game was found by this pair for some time; but after moving over some barren fields a rabbit was started, and both dogs caught on, Sailor cutting out all the work, and Weller being satisfied to trail behind. Sailor drove his game fast and true into rocks in a ravine, where he marked the hole in grand style. Taken away, rabbits began jumping on all sides, in fact, entirely too many. They were worked up to trail, when Sailor again drove his game to a ground hole and marked the hole, he having decidedly the best of the heat. Up at 2:30.

SUMMERS'S FLY—KITTY.—This long looked-for brace were put down at 2:35 where previous pair were taken up. Fly, handled by Summers, Kitty by owner, James McAleer. They were cast off in a grass field where so many rabbits were seen. A spectator discovered one in its form. Both dogs were taken up by their handlers when the rabbit was jumped from his squat. Then began one of the best runs of the meet. Both were evenly matched as to speed and nose, but Kitty's years of experience in trailing rabbits stood her in good stead now. Trailing across a ravine in full view of judges and handlers, beautiful work was done by this pair, routing bunny from every cover she took to. But this rabbit had not exhausted all its cunning. When driven from the last cover she took to the water, running more than 20yds. in water up the stream and squatting at the edge of the water, never moving, although Kitty passed within a few feet of her. The judges ordered the handlers to take their dogs and work them up, when bunny was quickly driven to a ground hole, Kitty marking the hole. This was an excellent exhibition of good and accurate trailing, Kitty seeming to have the best of it. Up at 3:05.

Second Series.

MOLLIE L.—SAILOR were down at 3:10 at the edge of a scrub oak thicket, and were handled as before. Game was found at once, but owing to the density of the thicket and fallen logs the work was not as fast as in previous heats, although both acquitted themselves well. Mollie L. was a bit over fat, and did not have the speed she possesses when in condition Sailor did most of the leading. Up at 3:35.

CHIPPY—LADY LINDA.—This brace was put down at 3:38, handled as before. They were started in scrub oaks, both dogs hunting well, but neither barking to the other, but running separately. They were carried on to a grass field where a small rabbit was found, which took to the public road and the dogs went to a loss. Up at 4:15.

BELLE S.—DOC WELLER, handled as before, went down at 4:18. A rabbit was started near a deserted graveyard, taking at once to the thicket in the rear. The brace did excellent work, both dogs showing good hunting sense and driving the game rapidly and true to cover. Up at 5:20.

CLUB MEETING.

In the evening the annual meeting of the club was held in the parlors of the Hotel Faddis, Dr. S. W. Hartt, the presi-

dent, in the chair. Officers were elected for the year resulted as follows: President, J. W. Simpson; Vice Presidents, Theo. Bolljie and D. T. Summers; Secretary-Treasurer, L. O. Seidel; Executive Committee, A. C. Peterson, Dr. S. W. Hartt, Mark Louis. The official show judges are Dr. W. E. Johnston, D. F. Summers, A. C. Peterson. Delegate to the A. K. C., Theo. Bolljie. The question of giving special prizes at dog shows being brought up, it was voted that it was the sense of the meeting that in all cases where the Central Beagle Club offers special prizes at recognized bench shows, judging must be done by a judge recommended by the Central Beagle Club or by one recommended by any recognized beagle club of America.

Thursday morning opened with a steady downpour of rain, saturating everything, so that scent lay poorly. Everything seemed calculated to allay the ardor of dogs and men.

SUMMERS'S SAILOR—KITTY.—This excellent pair were put in thicket at 7:30, handled as before. A rabbit was started by a spectator, and both dogs were worked up to where the rabbit was seen. With the rain now coming down in torrents, both dogs caught on, Kitty in the lead, driving well to an open pasture field, in which was a deserted graveyard, surrounded by an osage hedge, with only one or two openings large enough for the dogs. Here the rabbit sought shelter, and was again dislodged by one of the handlers, followed by a nice chase to cover. Kitty catching on first and doing most of the leading. Moving on, another rabbit was started and driven to cover, both dogs working keenly and actively. Up at 8:40.

SAILOR—DOC WELLER were put down in grass field at 8:45, handled as before. In this, as in all other races of this day, rabbits had to be found by handlers or spectators, as no scent lay for the dogs. A rabbit was soon started, both dogs were laid on, when an excellent chase was had up a steep hillside to a sheep pasture, where both went to a loss. Sailor cut out all the work in this heat; Weller seemed satisfied to run behind. Up at 9.

The prizes were awarded: First, Kitty; second, Summers's Sailor; third, Sailor; reserve, Doc Weller.

Class D, All-Age—13in. or Under.

LITTLE HORNET—PINNIE.—This lively pair were cast off in woods at 9:05, Little Hornet handled by Jas. McAleer, Pinnie handled by D. F. Summers. The rain, which had for a while, now began falling in sheets, as it was driven by a strong west wind, more than an hour was spent in searching for game, while rain, sleet and snow fell thick and fast. At last a rabbit was routed from some brush in a ravine; both dogs worked up, and Little Hornet caught on, Pinnie barking. A beautiful race was seen with this crack pair. They carried the trail a long distance through a grass field to a farmhouse, where both dogs gave up, evidently frightened at something. Coming back, another was started, which proved to be a good runner also, and was driven to a loss in a cornfield. A small rabbit was found at once, when another good exhibition of trailing was witnessed by all. Little Hornet had most foot, indeed put up a remarkable run, depending on her own nose. Up at 11:15, the judges awarding Little Hornet first, Pinnie second.

Lunch was now announced at the Young farm. After lunch the champion 13–15in. class was called, when Kitty and Stump were entered for honors.

Champion Class.

KITTY—STUMP.—When this brace was put down great interest was awakened over the outcome of the contest. Kitty's work had been seen by all at these trials, and Stump was fresh from her victories in the East. Kitty was handled by owner, Jas. McAleer, Stump by owner, D. F. Summers. Down at 12:30 in edge of wood, and through a driving rain mingled with snow. A long tramp was had before game was found. Finally a rabbit was jumped from his form in a sheep pasture. The dogs were put on and the fastest driving of the trials took place. The rabbit was a good one, and ran well through the rain. Stump kept up her reputation for speed and had somehow the best of the heat, although neither dog could do themselves justice owing to the excessive rain. Up at 1:45, the judges awarding Stump first prize.

Owing to inclement weather the club unanimously voted to postpone the running for club cups and special prizes until next year. Returning to headquarters all partook of a bountiful supper, after which the club boarded the handsome packet Adam Jacobs, arriving in Pittsburg next morning. After handshakes and hearty good-byes, all promising each other to be back next year with more and better dogs, the members took their several routes to their respective homes.

L. O. SEIDEL.

INTERNATIONAL EIGHTH ANNUAL.

Up to the Average.

CHATHAM, Ont., Nov. 19.—The eighth annual trials of the International Field Trials Club may be classed as up to the high average of this organization. In the Derby there were but seven starters out of fourteen nominations. These starters showed no great talent, but brought out one fine young dog, Noble Chieftain, winner of first, which with further work, may show later far down in more important events. He is a very fetching worker, and moreover, a good, stiff, upstanding, useful field dog, of evident constitution and stamina. I liked him very much. Essie D., second in the Derby, is a bright and snappy little one, and very rightly placed. Nora, third, and Heath Gladstone, fourth, might have done more. Nora was off her nose, with a sore and swelled muzzle, and Heath Gladstone needs a shade more hunting on quail in open country.

The All-Age a Good One.

The All-Age stakes were far and away better relatively than the Derby, and indeed, something of a surprise, not so much for the quality of any one dog, as for the evenness of several good ones. For the first two dogs birds were found in fair abundance, seventeen bevies the first day, though some were worked the second and third time.

The Club Meeting.

The club meeting was held at the Rankin House, Chatham, Monday evening, Nov. 15, President Richard Banghan in the chair and Secretary W. B. Wells at the desk. Routine business was despatched promptly. The report of the hon. sec. showed $123 35 on the right side of the ledger. The following officers were elected for the ensuing year: President, R. Banghan, of Windsor; secretary-treasurer, W. B. Wells, of Chatham; first vice-president, H. M. Graydon, of London; second vice-president, I. L. Nicholls, of Chatham; executive committee, L. H. Smith, M. Smith, Jos. Kime, C. R. Atkinson, W. D. Tristen, A. Wells, T. G. Davey, Thos. Gutridge, Geo. H. Briggs, Dr. O. Totten. The secretary was advised to correspond with the passenger departments of railroads with the view to securing free carriage of dogs.

There came up before the executive committee the application of Dr. J. R. Daniels, of Leamington, for the transfer to the International trials of his entries in the abandoned Peninsular field trials, Nellie Wilson (first at Monongahela trials) and Sam's Bang. Of course, this request was made long after the close of the Derby entry in the International (July 1), and after the payment of the second forfeit (Sept. 1), so it was merely a request for a courtesy. The matter received a discussion distinguished for courtesy and temperance, but the members concluded they had no option but must stand to their rules, the more especially as protests had been filed against the proposed course. The entry was declined, with the explanation that while the club would be glad to have it, it did not feel it had the right to do so.

The Banquet.

After the business meeting those present adjourned to a game dinner given at the Rankin House by Mr. W. B. Wells. The latter had been out duck hunting, and each man at table, some thirty in all, had half a mallard to his portion, there seeming to be a roast duck factory somewhere in the rear of the hall. There were present only four men from Yankeeland, Messrs. John Davidson, of Monroe, Mich.; Ed. Warner, of Detroit; Jake Klein, of Detroit, W. W. McCain, of Stevensville, Pa.

The Grounds.

The grounds were at Mitchell's Bay, near the shore of Lake St. Clair, where the trials were held last year. The field party again put up at Mr. C. W. Raymond's hostlery, which was a bit crowded, but as comfortable as one could ask, convenient to the grounds, and run with a view to affording all present the utmost enjoyment and pleasure possible. These grounds are good, the birds abundant enough. The fields are small, but there is stubble in plenty to try out in the open, and cover enough for game to cling to in winter. Of course, the judges and spectators are obliged to walk, and thus the sport resembles a day's shooting. Indeed, I have earlier remarked that these are perhaps more purely amateur in their character than any in the country. They are developing some cracking good field dogs, and are doing their share toward exploding the fallacy about "speed and range." As to another field trial notion, Judge Davidson remarked before beginning the running:

"I shall be much pleased if all you gentlemen will bring up your dogs for examination for their 'field trial form' before we begin to run. In this way we shall not need to run the dogs at all, but can judge the dogs on the shape of their hips, and guess at what they ought to do at finding birds." There is a heap of good sense under this sarcasm.

After a while we shall hear less of the absurd distinction between the "field trial dog" and the "shooting dog"—the foolishest of all foolish distinctions. Mr. W. E. Warner, one of the judges, was right when he said to-day: "What I call a high-class field trial dog is just a high-class shooting dog." A while ago this declaration would have been heresy, yet it could never have been anything but hard horse sense.

The Judges.

For the judges, Mr. John Davidson and Mr. W. E. Warner, too much cannot be said; but little need be said, since both are so well known. They did their hard work with conscientiousness in every detail, and with the skill and judgment that comes only of long acquaintance with dogs working on game. John Davidson is now sixty-eight years of age, and it was hard for him to follow fast and fresh dogs at speed all day; but this he did, and lost nothing that was going on. There are some who think John's temper grows perhaps mellower with age, but there are none who have discovered any change in his keenness of perception in a dog's performance afield, or in his knowledge of the habits of game birds. Mr. Davidson still remains loyal to Scotland, and we all had fun joking him about it.

"I know right well," said he, one day in an argument at table, "that Wallace was the greatest Scotchman ever born, and that is saying much."

"You forget, John," said a friend sitting near him. "You have forgotten another and still greater Scotchman."

"And who'll he be, tell me that, mon?" said John.

"Oh, his name would be such a matter as John Davidson!"

"A-weel, mon," said John, with no visible twinkle, "I said only that Wallace was the greatest man of his own century, do you mind!"

For Mr. Davidson there could be no better associate than Mr. Warner. The latter is an athlete, and his tall and powerful form was always close up with the dogs, and nothing escaped him. The best of insight into the trials game, good judgment and a perfect good humor and *bonhommie* constituted him an ideal judge. No club can ask a better or abler one.

The Derby.

Following is the description of the Derby entry as drawn for the running, only seven starting:

Maid Marian, b., w. and t. English setter bitch (Dash Antonio—Lady Mingo), owned by H. Marshall Graydon, London, with Noble Chieftain, b. and w. English setter bitch (Dash Antonio—Rose Rapid), owned by Geo. Kime, Mitchell's Bay.

High Noon, b. and w. English setter bitch (——— — ———), owned by S. Holmes, Chatham, with Nora, b., w. and t. English setter bitch (Washtenaw Grouse—Gladstone's Nora), owned by Jake Cline, Detroit.

Midday, b. and w. English setter bitch (——— — ———), owned by S. Holmes, Chatham, with Heath Gladstone, blue belton English setter dog (Dan Belton—Forest Gladstone), owned by W. W. McCain, Stevensville, Pa.

Essie D., b., w. and t. English setter bitch (Brighton Dick—Nancy), owned by J. W. Humphridge, London, a bye.

Tuesday, Nov. 16.

Weather wet and windy after the late storm, birds disposed to be wild. The party arrived on the grounds just before noon. Running began at 1 P. M.

MAID MARIAN—NOBLE CHIEFTAIN.—Mr. Graydon handled Maid, Mr. Geo. Kime Chieftain. The latter showed superior range and went to his work like a veteran. Maid Marian had less judgment and was not in so good control. Indeed, Chieftain seemed in all-age form and a very useful field worker. A bevy was put by men walking. Maid pointed the old scent, Chieftain stopping to order as he came up. Again three birds were flushed, the dogs getting no work. Chieftain worked out the trail of a single in the woods, but it went out wild ahead of him. Later he pointed, Maid declining to back, but no bird was put up. Maid seemed to have but a poor notion of the game. Down 54 minutes.

HIGH NOON—NORA.—Former handled by Holmes, latter by Joe Spracklin. A very baddish pair. High Noon showed herself a fiend to find birds, but regularly flushed every bird she got to. Nora evinced but very poor nose and had no confidence in it. Noon has plenty nose and is snappy, but guileless of all sort of staunchness. She ran up two bevies and a single, both she and Nora chasing this. Nora pointed sparrows once, Noon passing her contemptuously for larger meat. Nora false pointed once. On stubble Spracklin shot a rabbit, and at the report a bevy flew off. Marked along a log fence, Noon was badly handled here, not being brought up when Nora was among the birds. Nora was not even then sure of her nose, but moved her tail as she stood. Sprocklin put out six singles here, and deserved far more credit for his energy than did Nora for her nose or Mr. Holmes for his ability as a field trial handler. Down 42 minutes.

MIDDAY AND HEATHER GLADSTONE.—The former by Mr. Holmes, the latter by Mr. McCain, owners handling. Neither very wide nor very fast. Midday, on woods, made game, a rabbit seen later. On stubble, Midday pointed false, Heather not backing. Along a likely weedy fence the dogs found nothing. John Davidson, who is something of a bird dog himself, came along and saw fresh tracks in the muddy road, and a bevy was put up and marked at the edge of a wood and along a fence, Heather pointing at the old trail when brought on. The dogs bungled at the singles, the only point falling to Heather, which broke in a step or two when Midday ran in and on after the bird. The bulk of these birds could not be found. A yellow pup from a farm house later ran them out from their huddle further on and in the wood. Down 1 hour.

ESSIE D., *a bye*, run with Noble Chieftain. Mr. C. Allen handled Essie for Mr. Humphridge. A clinking heat, the little bitch showing a quantity of speed and going merry as a lark. Three fields blank. Chieftain made game and dropped as the bevy went out. On singles, in heavy cover, Essie got two points, but wheeled back on both in a way suspiciously like a blink. Taken up and led to a field, Essie pointed, but but did not like over well. Called up, she made game again, and a bird was seen running and was put up. A long march was made, and at sundown Chieftain made out a bevy in tall weeds, and several sections of it came out of the weeds where possibly he had pointed. Down 1 hour and 20 minutes. End of day.

Wednesday, Nov. 17.

Weather bright and clear. Running began at 8:30.

ESSIE D.—NORA.—C. Allen handled Essie, Jos. Sprocklin, Nora. Both had range enough. Essie cut out her fields like a veteran. Nora twice showed evidence of being off her nose (she had a swelled and sore muzzle). A bevy was later walked up and marked, the dogs being taken over. Both made game on the open stubble, but Essie cast up into the wind, pointed the bevy and blinked it plainly, going back a few steps. Nora was brought up to point, and did so, in spite of the judges' warning to let Essie work it out. Without Essie, Nora would never have known the birds were there. On very bare corn ground Essie made game, but put up the bevy in casting about to locate it, she dropping to wing. At a fence, Essie promptly went to her game, but put up the birds again. In thicket, two birds came out; Essie broke through excited, Nora, also, the latter chasing. More birds went out behind the birds, possibly another bevy. On the woods and slashes Essie kept up her gait, and was quartering her ground beautifully and carefully. Down 1 hour 2 minutes.

HEATH GLADSTONE—MAID MARIAN.—For Maid little could be said. False-pointing, failure to back, and failure to find, were among the least of her faults. She seemed to have no conception of hunting, and was quite aimless. Heath passed through one bevy. He pointed three birds, under his nose, but sprang at them puppyish, and put them up. He chased a single, stopping to order. He pointed, but located the bird badly, it going up 30ft. to one side. He was not very steady to shot, but broke in, stopping to call. Down 37 minutes.

HIGH NOON—NOBLE CHIEFTAIN.—The former is a natural pot-hunter, and made for the hedges, leaving Chief to quarter out the fields, which he did handsomely. After a stiff little run, Chief made game on stubble. He cast about with the caution of an old one, and jumped into a grand bevy-point at edge of a cornfield. High Noon was not in his class as a field dog, and, compared to his gait, she was an ice wagon with an injured wheel against a smart trap with cobs and a double tiger. This young dog showed very old-headed and methodical. Down 35 minutes.

HIGH NOON—HEATH GLADSTONE.—On marked birds Heath pointed, and Noon ran up the birds after her invariable fashion. Both chased and were hard to quiet. Noon flushed a single. Heath pointed, but no bird materialized, it being possibly fur. Down 13 minutes.

The judges now ordered up the dogs and announced the winners in the Derby as follows: First, Noble Chieftain; second, Essie D.; third, Nora; fourth, Heath Gladstone.

This Derby brought out two good dogs. Noble Chieftain was fit for All-Age competitions as he ran. Essie D., cured of her timidity in pointing, as she easily can be, will be a brilliant little one. She is a bird finder, and is tractable and intelligent. In type she is smaller than Noble Chieftain. The latter is a Dash Antonio puppy, and shows his size and carriage, standing high-headed and going high-headed, with excellent judgment and positiveness, as well as will, speed and method.

The All-Age drawings were as follows:

Forest Gladstone, b., w. and t. English setter dog (Dan—Kelsey's Blue Jess), W. W. McCain, Stevensville, Pa., with Count Vassar, b., w. and t. English setter dog (Dash Antonio—Queen Bess 2d), J. Kline, Detroit.

Selkirk Tana, b., w. and t. English setter bitch (Theirs—Cambriana), W. B. Wells, Chatham, with Lock, b., w. and belton-ticked English setter dog (Locksley—Leddersdale), R. Bangham, Windsor.

Dash Antonio, b., w. and t. English setter dog (Antonio—Lady Lucifer), R. Bangham, Windsor, with Selkirk Whyte, b., w. and t. English setter dog (Whyte B.—Luna), W. B. Wells, Chatham.

Cleopatra, b. and w. English setter bitch (Mingo 2d—Cambriana), W. B. Wells, Chatham, with Maud W., b. and w. pointer bitch (Plain Sam—Beppo's Mollie), Leamington Pointer Kennels.

All-Age Stake.

At the close of the Derby the first pair in the All-Age were called out, going down at 11:41.

FOREST GLADSTONE—COUNT VASSAR.—Mr. McCain, owner, handled Forest, Joe Sprocklin Count. The latter at once showed his heels to Forest, which was trained in the Pennsylvania hills in heavier cover and not for the speedier work of the open. Count is an old veteran at this game, and has been hunted for many days in succession. In the edge of a thicket Count snapped into a point. Forest, brought on, also pointed. A small bevy went out a bit further on. Count had all the credit here, finding his bird far ahead and alone. On singles, Forest pointed, steady to wing. Count failed to back here, apparently, though the cover was thick and he may not have seen him. No bird was put up, a running partridge being the probable cause of the situation. On further, Forest pointed and moved on. He made game, but had not located his bevy when it was walked up to one side of him. These birds scattered on the open woods and a small thicket. Three partridges (ruffed grouse) were also put up here, which made matters bad, as some trailing was done by both on these, especially by Count, who took Sprocklin off after a partridge some way. Forest pointed and nosed up his bird. On the open woods Forest pointed, Count also pointing and moving on, a partridge flushing wild ahead. Forest pointed and moved up, stopped again, and again failed to materialize his bird. Count made game and Sprocklin killed a bird that rose near behind him. Forest had now pointed again at a log heap, but no bird, the bevy having run over a good bit of this ground. Count pointed and moved on, a bird going out behind. Again Count pointed, roading on the running birds. Forest was now found pointing stanch at edge of the thicket, but it was a false point. Count rapidly roaded on, seeming to understand better how to locate his birds, and a partridge went out ahead. Count pointed, Forest backed nicely; but Count moved on, the bird still running, perhaps one of the partridges. At a treetop Forest pointed a bevy to his own credit. A few yards on, at a fence, Count pointed first, Forest drawing ahead of him and pointing. Jealous of this, Count left, jumped over the fence, and landed smash among the birds, which went out and were marked out. The dogs were sent out over a stubble, but brought back to the marked birds. Forest pointed, Count also pointing at the same time on the opposite side of the fence. Forest again pointed and moved on. Forest was clearly lacking in promptness and speed on running birds, though showing nose and training to the gun. Down 1 hour.

Luncheon followed at the roadside a half mile from the closing scenes of this busy heat.

SELKIRK TANA—LOCK.—Mr. W. B. Wells handled Tana, Joe Sprocklin Lock. The fastest brace yet down in the two days. A long walk and no birds. Lock pointed at a log trap, Tana not backing, but passing him and pointing ahead, he remaining steady. No bird found. After 40 minutes of barren work the party moved to the grounds of the morn-

ing. Put down again at 2:30 on stubble, and in less than 30 seconds Lock had a handsome point. Tana refused to back, but ran up close to point. She then passed him and the birds went up ahead, both steady to shot and wing. On corn, Tana pointed a single, it going out as she stopped. Tana pointed. Lock pointed. Tana none too steady to wing here. At a fence Lock worked out a nice point on three birds that went out. He now worked out the fence row in good meat dog style, getting three points. Tana cast in ahead and pointed, Lock backing perfectly at 35yds., a good bevy find for Tana. Brought up, Lock pointed and so did Tana still, and two more birds went out. Singles, on grass, Lock pointed, Tana drew by him and stole his point, Lock taking it good-naturedly and steadily. These showed us a lot of work, Lock looming up pretty well. Tana was a merry one, a mere vest-pocket one, of a type which I can never learn to like. Yet she seemed a finder, and her worst fault was failure to back and a shade of unsteadiness.

DASH ANTONIO—SELKIRK WHYTE.—The former by Sprocklin, the latter by Mr. Wells, owner. Dash went over his field in his customary rapid style. Whyte showed plenty of speed, and a merry and cheerful action. Whyte flushed a single, not to wind fault, as he dropped instantly. He backed Dash on a point which developed no bird. Whyte now went out far ahead, but his legs were too good for his nose. Coming down wind, he had the bad luck to run smash through a bevy. Both honored this footscent when brought up. On the woods, after singles the dogs were hurried on entirely too fast, in fact, absurdly so for shooting purposes, though this may be orthodox field trial work. They passed and missed about all the birds. Dash pointed and Sprocklin killed, Dash steady; Whyte cautioned by his handler. Both made game on a partridge which went out ahead. Dash pointed at a brush heap, one bird was found; but a few yards on both made game, and Dash cast about to head the running birds. He ran over a single, dropping to wing. He moved on and another went up not pointed. Dash pointed once more, but the bird had slipped him again and run on. Whyte was having no better luck, though he made a very good impression. Down 50 minutes.

CLEOPATRA—MAUD W.—Mr. Wells handled his old favorite, once winner of this stakes, last year second in them. She was down with the only pointer in the stakes, Maud W., handled by Hess Milliken. Maud showed a very fast, nervous, snappy one, going out very far ahead, yelping and barking. She stopped to gaze down a rabbit hole, but left it. Clo had plenty of speed, of course, and at first it seemed she had the first point, but she moved on. Maud jumped into a grand-stand bevy-point 60yds. ahead, along the fence, Clo backing handsomely. On some distance, Clo was seen on a fair point, and Maud backed uncertainly and to order. Clo could show nothing but some domestic chickens for all this and got laughed at. Clo again made game on corn, but, though she rounded, no birds were found. Across a wide field, Maud jumped into a second fine bevy-point and was steady to shot. In heavy cover, she flushed two singles. Led for fifteen minutes, they were put down on corn at 5 P. M., a good time for bird-finding. In less than a minute Maud had nailed her third bevy in fine positive style, Clo backing all right. In less than three minutes more Maud had pointed her fourth bevy, and was booked for further running. Clo pointed a single. She pointed again and moved on. Maud backed very badly. Maud whipped into a single point, Clo backing nicely. Maud had scored four bevies and one single clean, and two shaky backs. Clo had little to offset this, but she had made no mistakes, so it was wise of the judges after all to ask to see her again the next day, as they did. Down one hour and twenty minutes. End of day.

Thursday, Nov. 18.

Weather again clear and lovely for the work. Running began at 9 in second series of the All-Age.

SELKIRK TANA—COUNT VASSAR.—Count proved himself a powerful, fast dog, though perhaps he might have quartered his fields a shade more thoroughly. Tana was fast enough. Both made game, Tana moved on, put up the bevy and chased. Count dropped. Tana chased again as the birds scattered up, seeming under baddish control here. A bevy was flushed and flew over Tana and she was steadier then. Count was found pointing, but no other bird went out. A moment later he whirled into a good single point on stubble and was steady to that. Tana also pointed at edge of thicket, but no bird was found. A bird went up ahead of Count as he lay, and Tana needed steadying as it crossed near her. On a bit, Count pointed, Tana refusing to back, but running a circle about him. Count roaded on and put up this bird. He was well under control. Up for 10 minutes and a cornfield drawn blank. Up again for a few minutes. Cast off on stubble, Count showed his bird sense by striking for a likely hedge and began roading. Tana was sent up and joined him, passed him and finally ran up the bevy, gaining small glory here. Tana pointed a single in a ditch. Count roaded, Tana stole ahead of him, pointing, he coming up also pointed and two birds were put up before him. Count trailed a runner, but it went out ahead. Later, Count pointed a single. He was steady to shot and under perfect control at all times, and, in short, seemed a fine dog. His fault was a sort of hesitation about going up to his birds. Tana had a certain snappy quality, but needed far more handling and cautioning. Down 1 hour 10 minutes.

DASH ANTONIO—MAUD W.—Maud went out yelping. Dash had been barking all the morning in the wagon, and tugging on the lead to get away. He plunged on like a locomotive and soon plunged bang into a bevy point in the heart of a brier patch, which he seemed to like. Maud backed indifferently, looking at her handler and dropping as he came up. On a bit, Maud pointed a single. They drew some blank covers and were led a short way over bare fields. Turned down again, Dash took the bit in his teeth and proceeded to run the whole procession. Always self-willed and headlong, he here broke away and went on a quarter of a mile, Sprocklin running and whistling after him. This was at least awkward. Meantime Maud hunted rather aimlessly, and the heat had little quality. Finally, after some five minutes of hard work, Sprocklin came up with Dash, who had had his way and gone to the place where he thought the birds were. He had a bevy pointed in a weedy fence. Maud came up and pointed the same bevy independently on the opposite side of the fence, not seeing Dash. On a flat field, Dash again refused to obey, but went off by himself to a hedge, pointed, and a bird went up. He hung to the hedge, but failed to score on a bird which he passed close. Meantime Maud was far away, and the scene was not ideal, Dash again refusing to honor his handler's whistle or call and making his own course. Maud, some 300yds. ahead, got a clean bevy point and held it handsomely till we came up. Dash came along a ditch, and probably not seeing Maud, pointed also. On singles in thicket, Maud pointed a single. Dash pointed on a running bird, but had no credit, though two birds went out near. Both were ready to go on. Dash carried too much flesh and showed lack of the hard hunting he needs, but he evinced no letting up in his gait or his independence. Down in all 1 hour 14 minutes. Lunch followed this heat.

LOCK—SELKIRK WHYTE.—These were taken back from the road and put down on exactly the same place where Lock had been with Tana the day before. Witness the intelligence of the meat dog. Lock in less than twenty seconds had gone direct to the spot where he had found these birds the day before, and was pointing them again at about the same spot. Over on corn, no single work was had. On a slashing, Whyte took a turn or so out of a rabbit, just for fun. They drew some blank fields. Whyte was letting down in speed as compared with the day before. Lock was fast as ever, and regular as clockwork; with a long, reaching gallop, that took him over a lot of ground and at a gait plenty fast enough to find birds in a sustained manner. Lock was now working outside of Whyte, and on dead leaves he first pointed. Moving on, Whyte pointed and moved on, Lock backing, looking back over his own shoulder, a singular position. This was likely a squirrel. Lock pointed again in the woods, Whyte backing. A rabbit was seen. Taken up for a few fields and put down at woods, Whyte pointed, Lock backed; no bird found. All this cover briefly a very long and discouraging walk in the middle of the day. The advice of our guide, the local enthusiast Charlie Mills, had taken the party a couple of miles astray over sheep pastures, marshes and woods, with no feeding grounds near them—a very unlikely country. It was not the fault of the dogs that no birds were found in this bruising heat. Down 1 hour 55 minutes, the longest heat yet.

DASH ANTONIO—CLEOPATRA.—Destined to be a brilliant heat. Both dogs went out past a bevy which w s at once walked up near the edge of a narrow wood, and marked on grass. Dash was first to point, Clo backing. Three feet further he nailed another, and she also one close by. Clo pointed again, or stopped just as the bird went up. They were all around in the grass. Dash pointed again here and moved on. On woods, Clo pointed, but did not locate her bird very accurately, Mr. Wells walking it to one side. He steadied her to order. Three feet further she picked off another point in her smart way, and Mr. Wells killed, she steady to shot. Ten yards further she pointed again, but as Dash came up she sprung in and put up the bird—a baddish error. Ten feet further she and Dash both pointed, a bird going out. A few moments later Dash pointed, Clo backing sweetly, but no bird was found. On to thicket, Dash got the first point, but Clo swung in around him and pointed ahead. Clo sprung after this bird as Mr. Wells put it up, showing an unsteadiness which is a singular thing in the old lady, who showed better last year than she did this. At this time Dash was out nearer the edge of the thicket, and here he pointed, the bird going out over the fence. Dash got five points up to this time on this bevy. The birds were wild from having been harried so much (most of the work had been done on five bevies in this neighborhood) and they ran like deer down the fence. Clo made a half-dozen roading points, and at last headed them and proved out five birds. Dash pointed on stubble near by, no bird; perhaps running bird.

They were now taken to a new stubble and cut it out handsomely, the little bitch going at her true form and Dash just getting his stride. It was noticed that the dog Lock, after his two hours' heat, was eager for more. He tugged at his head and whined to get away to the work again. His mate, Selkirk Whyte, made no such demonstration. I may be old-fashioned and unorthodox, but I believed a good big dog can run a good little dog off his feet just as surely as a thoroughbred horse will run a polo pony to a standstill. I fancied Lock from this time on.

On corn, both Dash and Clo made game, and Clo located the bevy first, 30yds. ahead of him. In briers both stopped, Dash firm, and a bird went out beyond them in the thicket. Along the hedge row Clo cut in ahead smartly and pointed a single, starting in a few steps to wing. Later Clo made her worst blunder in a beat otherwise brilliant. On a bare cornfield she made game, roaded, cast about and came to a point, but the bevy was walked up 30ft. back of her, and she must have passed fairly through it to get where she was. This bad locating of her birds seemed hard to explain, and Mr. Wells admitted he did not see how she could have done it. On to woods a single went out, and Clo was seen behind the dog which had it, and where she had probably located it. Taken on over a field at a hedge Clo cunningly got in ahead and pointed, Mr. Wells tramping up two birds. This ended a very close and interesting heat, in which it would have been hard to pick a winner. This was the best heat Dash run in the stakes. It certainly proved sufficient warrant for bringing Clo forward into the second series and showed her to be the good one she was and is.

COUNT VASSAR—MAUD W.—These got the desirable evening run. It was disastrous for Maud, who went to pieces, though showing streaks of great brilliancy. She needs more work, and with plenty of that may make trouble later, though she is of a timid, tender sort, not to one's fancy for field work. On stubble Count pointed, Maud refused to back, passed him, raced on, flushed and chased the single bird, stopping only to order. Count stopped and kept down, and a bevy was walked up just beyond him. Both steady to shot. On singles, Count pointed, Maud would not back, but raced in, chasing. Maud pointed a single, Count backing. Count pointed, Maud refused to back, but went in and stole the point, he steady. On 50ft. Maud pointed, but broke in unsteady. Count pointed on two birds, but he might have been a bit more positive, and less backward in going up to his game. Now ensued, however, the severe test of single bird work on dry leaves, and here the shooting dog triumphed decisively over the nervous and flashing field trial brilliance. No better single work was seen at the meet than Count did here. Count picked up four points and one point on fur, Maud getting one independent point, and twice running ahead and taking Count's point. Again Count pointed, and she once more passed him. Count pointed and she passed him; no bird found. On a hit from the woods, across the canal to the open fields. On corn Maud put up a single, and chased it. A bevy was near by rose and was marked. On these Maud ran up a single deliberately, and then hustled up the bevy and chased them merrily. Her work had now grown rank, and was not more than what would be called brilliant puppy work. Of course, she no longer belonged in All-Age stakes. On a bit of stubble Count pointed, too far back on his bird, showing his worst fault. Maud started to run in to him, but caught scent on the way, and wheeled into a good bevy point, steady to wing on order, her handler being near. Down 51 minutes. End of dog's work.

Friday, Nov. 19.

Weather cool and sky overcast, a good morning. Running began 8:30 A. M.

CLEOPATRA—LOCK.—Lock's long, sweeping stride kept him outside of Clo's more choppy gait, though the little one covered her ground handsomely. Lock showed a grand head carriage and also a lot of bird sense. Crossing a wood, Clo pointed a small bevy ahead on stubble. Lock in a way did not see her. Lock was 75yds. ahead, when Clo nailed a single, Lock froze into a grand point as soon as he saw her. In high weeds Lock nailed a single in turn, and in turn Clo backed handsomely. On stubble Lock made game first, but the bitch swung ahead of him up wind and pointed in front of him, he then backing. As the bird rose Clo started in a step or two, dropping to caution as usual. Over bare corn ground Lock was ahead and made game on a running bevy which was following a ditch. Clo made a swift and suspicious dash ahead and was stopped by her handler just in time. Sprocklin was just in front of Lock when the birds went out of the ditch, no actual point being scored, though Lock found the bevy.

The dogs were taken over the canal to a flat, marshy piece of ground, open, with bits of cover. They cut this up nicely, it now being plain we were seeing a grand heat. Clo pointed a single and dropped flat to order, Mr. Wells tapping her with the whip and standing over close by. Lock was called up to back and passed up to Clo as she lay, not backing, and yet without distinct fault, as Clo was lying flat down and all the party were standing about, as though he were called up to his handler and not to a distinct and visible point. He did not point Clo's bird or notice it till just the instant it rose. It was known long before that both these dogs would back perfectly.

Lock was now going strong and free; Clo a bit shorter than on the evening before. The wider range and the equal nose and intelligence now made a decisive gap between these two beautiful performers. Lock cut out the next stubble ahead of her, and made game. She joined him, roading with him, and like two grand machines they swung off neck and neck on a wide cast to head the bevy, crossing the entire field beyond them. It seemed a toss-up which would first get this bevy. Lock would not leave them, but came back. He was wisely left quite to himself. Mr. Wells perhaps thought the birds were ahead on the woods, and he took Clo on over there, and she began to make game. Meantime Lock nailed the bevy he had been after, dropping in the fence corner with his head up till Mr. Davidson could get up from behind, Mr. Warner being ahead with Clo in the edge of the wood. Here the bitch pointed, but moved on, and, as it proved, in the wrong direction on her trail, for in less than thirty seconds after Lock's bevy was flushed at the field, he sprang over the fence, made a straight run for the woods, and at once jumped into a second bevy-point at a log and brush heap, doubtless on Clo's bevy, though she was now working off to the right, away from the bevy. Lock was now getting in some high-class work. He continued steady as a clock, and needed practically no handling at all. He was simply a high-grade meat dog at his work, and that means a field trial winner of the best sort. Nor should the bitch be accused of innocense of meat sense, for few are better on singles. She picked up two fine single points on leaves, but later pointed firmly at a brush heap where no bird at all was found. A moment later than this the party came to a fence, and here the judges ordered the dogs up. Sprocklin went on over into the woods after Lock, calling to him, but shouted back that the dog was on a point. This was seen to be the case, Sprocklin putting up the bevy and killing two birds. This ended a rattling, exciting heat, and brought out some highly satisfactory work by good bird dogs, the sort of heat which is all too rare at field trials. Clo was now still going, but not with the steady vigor of Lock. When the latter was put on the lead while the next brace was going on, he followed after with head high up, tugging to get away and whining in eagerness to hunt some more. He was not in the least pumped out. Clo, though perhaps more quiet in habit, certainly was not begging for more, though she would have gone on freely of course. This sidelight on the dogs is not without value. It is dogs with the ability, the courage, and the physique to keep on hunting, hour after hour and day after day, which should be developed by field trials, and yet which are all too rarely found in field trials, these being set aside for shorter and "faster" work. Mr. Wells has hunted this good little bitch of his for three days, and Lock has been hunted for a week; but again it seemed to me that as the dogs ran this year, it was a case of a good big dog being too strong for a good little one. Down 1 hour 15 minutes.

DASH ANTONIO—COUNT VASSAR.—Sprocklin was obliged to handle them both. His whistle was now in much use on Dash, who again laid out his own course. Dash pointed an old trail of one of our earlier bevy, Count backed, no bird. Count made game continuously, Dash backing. On a few yards, Dash pointed, Count backed, Dash moving on. Under a brush heap Dash pointed, no bird found. Moved on from woods to stubble, the dogs being led for some distance. Dash, when put down, made for a weed row and was seen far ahead, pointing in the open road. He at last moved on before we got up to him, but no birds were found, though Count also pointed on the opposite side of the hedge. Both now cast far ahead and left this trail apparently satisfied the birds were gone. This brace was perhaps the widest ranging yet seen, indeed too wide, for Dash was handling Sprocklin, and carrying Count on out wider than he would otherwise have gone, though Count is plenty independent. Dash showed far too much independence, mildly speaking, though an absolutely just statement would pronounce him a self-hunting fellow and needful of about two weeks of hard horseback hunting to tame him down. He did not compare with Lock this year in sweetness of handling or in hunting to the gun.

On over a field a bevy was noted flying from a weedy ditch, and Count was found point, a shade too late for much glory. Two other birds went up from the ditch later. Dash was brought up, and came up the ditch, the wind in his favor. He passed a single on the ditch bank, whirling as it rose behind him; not much credit in this. Later, at a fence row, on these running, wild birds, Dash pointed and moved on, a bird being put up later. They now cast out over open fields, found nothing at a thicket, and were ordered up after a long but rather indecisive and unsatisfactory heat. Down 1 hour and 30 minutes

LOCK—DASH ANTONIO.—Again Sprocklin handled both. The party walked some distance toward home before casting off the dogs on a wide stubblefield. Here the ground was soft and sticky, certainly making hard galloping, though both dogs took it cheerfully and kept out and on without stopping. Lock continued his steady, workmanlike, methodical quartering, his head high and his stride still long-reaching and powerful. Dash showed an equal, though more erratic power, taking chances at hedges and fences and laying long lines of his own. Lock was obedient always, and continued for the brief run the good impression he had made. Down 18 minutes. The judges then announced the winners:

First, Lock; second, Dash Antonio; third, Cleopatra.

The decision in the Derby was easy, but that in the All-Age required all the care and pains which it may be seen the judges gave it. The dogs all had full trying out on birds, and were not taken up after a few chance points on bevies or on singles There was the customary dissatisfaction among the losers, of course, but this is part of the game and has little to do with an impartial look at the merits of the dogs.

Mr. Bangham has now won the International Trials Cup three times with his kennel, and it now becomes his property. Dash Antonio has won the cup twice for him and Lock once, Dash won first in his Derby in these trials, and he ran second this year, so that he has had his share, even had he not sired two Derby winners in these trials. His new California purchasers may be sure they get a good dog, but he will be missed in this country, where he is doing much to restore the only rational and lovable type of English setter, a breed well-nigh ruined by "field trial" squirts and whippets. Dash is by no means perfect as he ran, nor was he last year. His habit of false pointing is hard to explain, and his headstrong breaking away from control is not the loveliest thing in the world by any means. Yet the old fellow wins by the strokes of brilliance seen in any distinct genius, and one cannot help loving his insistence that he knows where the birds are, so long as he really finds them and goes into them with such confidence in himself. He is a distinct character of a dog, a noteworthy individual, and we need more such in field trials and in the field.

Cleopatra is well known and needs no comment. She has gone after this cup five times, and landed it once. She is a finder and a rapid single bird worker, and a lovely shooting dog. She is smaller than I fancy, but that is no question in a trial of merit in work actually done.

She very rarely points false, and she is under control always, yet this year she made the bad error of missing her bevy in one by a wide error, fairly crawling over the birds without noting them, and she betrayed the singular unsteadiness to wing so often noted in the foregoing story of the meet.

Lock was head and shoulders over anything that ran here. Big, symmetrical, lean, with high roached back and a good

heart and lungs, he made a grand exhibition and one with almost no mistakes. Lock has been derided as a "shooting dog," but he has his sweet revenge. His is a triumph of the meat dog, and may we have more of such! It is the triumph of the amateur and the individual sportsman over the professional and the commercial side of dogdom, and, moreover the triumph of a good, working, surviving type of dog over a faddish and inferior notion which is certain to disappear in the long run. A horse ought to be a horse, a man ought to be a man and a dog ought to be first and last of all, a dog. You don't need tissue paper for a good bird dog, and he will live without a blanket and he will hunt as long as you will. A dog different from this sort is the wrong sort.

The judges, Mr. Davidson and Mr. Warner, said that the five dogs, Noble Chieftain (Derby), Lock, Dash Antonio, Cleopatra, Count Vassar, were much above the field trial winners. (Count Vassar ran unplaced but a good one.) Mr. Bangham takes down in money with his two winners only $85, less fifteen per. cent. If it is mostly glory. These international trials have come to have considerable interest of their own in their departures from current and conventional trial meets, and are worth watching for next year. They are doing good, and should be patronized, offering, as they do, a hard game and a clean amateur competition among good dogs and good sportsmen. E. HOUGH

1206 BOYCE BUILDING, Chicago.

Squirrel and Fox and Gun.

CLAREMONT, N. H.—*Editor Forest and Stream:* We are having beautiful hunting weather here. The boys report squirrels plentiful. I never hunt them myself. I prefer to see them skipping around, or sitting on a limb with their great bushy tails curled up over their backs. I have no use for them, and would as soon shoot a knot in a board fence as a squirrel out of a tree. I was going to say, I do not believe in killing game just for the fun of it; but right here is a chance for some brother sportsman to pick me up when I do say that I shoot a fox, when I get a chance, ahead of my little hound. But to me there is a vast difference in killing a cunning, crafty fox, pursued by a hound, and a beautiful and innocent gray squirrel. Mind you, I blame no one if they want a squirrel muddle.

The fox is not found in quantities to be sure of killing vast numbers, and if it were you could not do it, even where they are plentiful. The fox hunter will draw many, many more blank days than successful ones, as far as killing his fox is concerned. It is craft and cunning of the fox pitted against that of man, and the most of the time the fox has the best of it. I well remember one fall killing four foxes in one day, and yet I hunted all that fall, and only secured one more fox to my gun. But I hear some brother squirrel hunter say that that must have been poor fun to hunt so many days and not get a chance to shoot something. That is where he is wrong. I enjoyed every one of those days. Do not for once think I did not have any fun, for I had lots and lots of it. The anticipation was pleasant; it was fun starting out; it was fun to see old Bony work out the cold trails; it was music to hear her when the fox was routed; it was fun to see them cross some opposite ridge; it was nerve-inspiring to question: "Will he come round to this stand, or to the one opposite." Even when out of hearing there is excitement in it; for the fox may get quite a lead of your hound, and you have got to keep your eyes in every direction, for you know not how near he may be. And mind you, a fox on a clear day will spot you far away if you are not paying attention to business and keeping quiet. In fact, they are always suspicious; so you see, it is all fun for me. But if you do not care for the music of the hounds, nor see them work out a trail, nor enjoy the beauties of nature, but just have a desire to kill, kill, kill, don't go fox hunting, but just chase a poor squirrel up a tree where he can't get away, and then shoot away whether you have any use for him or not Tell Von W. I have got a number of pupils under my charge on the fingerling question, and am happy to say that I see a marked improvement in them. COLUMBIA.

National Fox Hunters' Meet.

OWING to the severe illness of Mrs. Emily Webber Herr, who was to have reported for us the National Fox Hunters' Association meet at Cynthiana, Ky., last week, we can give only the winners, as sent by Mr. A. B. F. Kinney, who writes:

"The people here have overwhelmed us with kindness, so much so it has interfered with our field work, though we have been able to pull off our races fairly satisfactory."

The winners are as follows:

Derby—First, A. Gibbs's Judge; second, W. L Graddy's Grace; third, E H Walker's Cricket; v.h.c., John Fults's Lygia and H Trigg's Mike.

All-Age—First, Dr. W. F. Sturgill's Venus; second, Bourbon Kennels' Star; third, H C. Trigg's Lou; vhc., Roger Williams's Ruse.

The officers elected for the ensuing year are as follows: H. C. Trigg, President; A. B. F. Kinney, First Vice-President; W. S. Walker, Second Vice President; Rear-Admiral J. E. Jouett, Third Vice-President; Roger D. Williams, Secretary Treasurer; Directors—John Haymaker, E H. Walker, Jack Chinn, W. W. Huffstutter, Capt. Hathaway, Clay Gateskill, Dr. W. F. Sturgill.

A. K. C. Meeting.

NEW YORK, Nov. 22.—The regular quarterly meeting of the American Kennel Club will be held at the office of the club 55 Liberty street, New York, Thursday, Dec. 16, at 2 P. M. By order of the president.

A. P VREDENBURGH, Sec'y.

POINTS AND FLUSHES.

Immediately after the burning of the barn of the Summerrow House, at Newton, N. C, on Sunday, Nov. 14, a subscription was started among the field trial men as a spontaneous testimonial of national sympathy, with the result that $76 were subscribed. The loss was estimated at $300. This is a kind of sympathy deserving of notice for its rarity. The cause of the fire is unknown.

Pierre Lorillard, Jr., contemplates giving a magnificent cup for a prize in the E. F. T. C. Members' Stake of next year. On Saturday of last week he went to High Point, N. C., to enjoy the shooting on his preserve. The provision, newly imposed, that any dogs competing in the Members' Stake must be the *bona fide* property of the member starting such dog, or that the partner or partners of such member must also be members of the club, seems to be a drawing of the lines unnecessarily close. This rule would prevent Messrs. Thayer, Duryea and Osthaus from competing with their kennel dogs, and would impose upon them the unnecessary special ownership of a dog for the purpose of competing in the Members' Stake. No doubt but what the club knows what it desires for its own pleasure, but it is worth while to consider the greatest possible success of this stake.

After the All-Age Stake was concluded Mr. F. R Hitchcock returned to New York.

While the Count Gloster—Young Rip Rap heat was being run on Saturday, the field trial party drifted over the boundary of the preserve. Rip was on point, and Count got his half of it by insistence. The still air was broken by a loud cry of "Take away your dogs." It came from a be-whiskered gentleman astride an animal, a full grain sack resting across its shoulders. "I don't want my birds killed" he added. "We are not killing any birds," said the secretary. "Take away your dogs, I don't want my birds scared," he said. "I can't net them if they are scared." Then the secretary said he didn't know he was much over the line, and the other gentleman assured him that he was over the line "right smart." And he added that he had a pretty good net. He loved birds He didn't approve of anyone else frightening the pretty birds Then he went calmly on his way, and the field trial crossed back over the line. Sometime or other it will be against the law of North Carolina to net birds. Also the club "took away" the dogs from High Point, N. C, and that made a difference of several thousand dollars a year in that town's revenue. It is now rumored that that town would dearly like to have the dogs brought back.

Mrs Dr J S Brown was the only lady who graced the trials with her presence this fall so far. The calm and self-possessed manner in which she rode a bargain counter horse over rough fields and across frazzly ditches was worthy of notice.

It is not generally known that the efficient secretary of the E F. T. C. weighs about 270lbs. When he is astride of a wide country horse properly inflated, he hides a large part of the landscape from view. The field trial preserve is one of hills and valleys, with many creeks and ditches running through it. Once the secretary's horse essayed the task of climbing a creek bank, but with his forefeet on the edge of the bank he settled down and contentedly reposed to rest, his quarters in the creek bed. The giant calmly slid backward head first into the sand and water, and held his pipe up above all harm. Then he calmly mounted and went on with the job of judging, without any exterior sign of knowing that anything had happened.

The judges at the United States Field Trials Club's trials this week are Messrs. C. E. Buckle, William Tallman and W. B. Stafford.

Yachting.

Massachusetts Y. R. A.

A SPECIAL meeting of the Massachusetts Y. R. A. was held in Boston on Nov. 4 for the purpose of completing the work of amending the rules, which was left unfinished at the recent annual meeting. The principal amendment was that providing for an extension of time allowance through 1898 This failed of securing the necessary two-thirds, the vote being 13 for and 7 against, and consequently was lost. A proposal to reduce the crew allowance by one in each class was also defeated. It was decided to divide the 18ft. and 21ft. classes into two divisions, open and cabin. A proposal to forbid the carrying of ballast in bags was rejected. The following amendments were adopted:

1 The following sails may be carried:

On schooners—Mainsail, foresail, forestaysail, jib, flying jib, jibtopsail, main and fore gafftopsail, maintopmast staysail and spinaker.

On sloops and cutters—Mainsail, forestaysail, jib, jibtopsail, gafftopsail and spinaker.

On yawls—The same as on sloops and cutters, with mizen and mizenstaysail and maintopsail.

2. Balloon sails may set over working sails.

3. No extra spars, booming out or whisker poles, except spinaker boom, shall be used.

4. A working main or foregafftopsail must be jib-headed, and must not extend above the topsail halyard block, or beyond the end of the gaff. A spinaker must be triangular, and must not extend above the masthead block, or beyond the outer end of the spinaker boom.

In any start, if the point marked by the foremast in schooners and the mainmast in single-masted vessels and yawls has crossed the line before the starting signal of her class, she must return and recross the line when so ordered by the judges.

A yacht shall not, after crossing the finish line, interfere with any yacht still in the race so as to affect the time of such yacht at the finish.

The very important matter of defining a cabin yacht was left to the executive committee. President Clark made a report on the recent meeting of the Y. R. U. of N. A. in New York.

The question of retaining the time allowance for another year has created much feeling among members of the Association, the majority being in favor of it. It was agreed in 1896 that all time allowance should cease after the season of 1897, with a rigid enforcement of that building to class limits which the FOREST AND STREAM has advocated for so many years. The original class limits were 30ft., 25ft., 21ft, 18ft. and 15ft., the length being measured 3in. above the water, and without crew on board. In abandoning this ancient and faulty method of measurement for a more civilized one of actual L.W.L. with crew on board, at the end of 1896, the Association made the mistake of changing its class limits to 29, 24, 20 and 17ft., at which figures they have stood through the present season. At the annual meeting last month the classes were again revised, a new one being added at each end—35ft l.w.l., 30ft., 25ft., 21ft., 18ft. and 15ft. In view of the addition of a foot to each class, it is contended that as a plain matter of justice to the older boats, some of which come several feet under the new limits and are thus doubly penalized as against any yachts built this winter to the limits, the time allowance should be continued for another season.

There is no question of the necessity for the ultimate abolishment of time allowance and the stopping of the absurd habit of building to all odd sizes, that has always been a drawback to American yachting. The building to class is now universal, the one notable exception being the largest class of each rig, in particular the single-stick class of "over 70ft. racing length," in which are all the Cup defenders—Defender, Vigilant and the others. Even this class must in time follow the advance of enlightened ideas, and it is quite probable that before another match is made for the America's Cup an agreement will be made by which both yachts shall be built to a stipulated racing length.

The general opinion, both among yachtsmen at large and the delegates, seems to be strongly in favor of the continuance of the allowance for another year, and there was an understanding that this would be done in case the limits were raised. As a matter of policy, and for the general good, the continuance of the allowance was perhaps desirable. At the same time, after a careful inspection of the list of yachts entered for the Y. R. A. races of 1897, we are by no means convinced that any serious harm has been done in practice. At the worst, some of the new yachts of 1897 will be handicapped to the extent of 1ft. of L W.L; not all of them, as some will benefit by the privilege of increasing their L.W.L. Some of the old ones will be handicapped to the extent of 1ft. more than would otherwise have been the case; but of those which suffer most in this way there are very few that could have hoped to win prizes, even with their allowance, against the new boats of 1897 and 1898. Among the faster boats which will suffer most are Harbinger, Emma C. in the 30ft. class and Vitesse, Alpine, Fantasy and Circe in the 18ft. class. One very important point, however, is the renewed opportunities afforded to many old boats, such as Beatrice, Little Peter, Snipe II, Privateer, Yankee, Perhaps, and many others, which will go from the bottom of one class to the top of a lower one. The total number of yachts listed by the Association is 149, or 136 excluding the knockabouts, of this number at least 40 will go from the bottom of one class to the top of the next lower class, where they will be entitled to no allowance in any case. The net results on the racing will probably be better than if the old class limits had been continued.

The retention in two classes of both cabin and open divisions makes it imperative that the Association shall define the difference between the two; something that has never yet been successfully accomplished.

The executive committee presented the following addition to the rules:

DEFINITION OF A CABIN YACHT.

A cabin yacht shall be defined as either a flush-deck yacht with cabin accommodations below deck, or a decked yacht with cabin trunk and similar accommodations, which shall conform to the following limitations:

1. The least freeboard shall be equal to 7 per cent. of the L.W.L. length, measured in a perpendicular line from the top of the covering board of deck to the surface of the water.

2. The cabin shall have headroom over the required floor space equal to not less than 18 per cent. of the L.W.L. length, to the limit of 6ft. in the clear, under deck or cabin trunk, exclusive of skylights and hatches, with substantial partition at the after end of cabin, and shall have a floor above the timbers flush throughout, excepting the space occupied by centerboard box, for at least 35 per cent. of the L.W.L. length, with a minimum width of not less than 20 per cent. of the extreme beam, and shall be fitted with two permanent lockers and suitable berths or transoms for the accommodation of the crew.

3 A cabin trunk shall be capable of sustaining the weight of the entire crew.

4. The cockpit shall have its floor above the L.W.L., and shall have scuppers draining outboard.

5. The centerboard trunk shall not come above the deck or cabin trunk.

6. The cabin shall contain cushions or mattresses for the berths or transoms, and one blanket for each berth, or 7ft. length of transom, stove and cooking utensils, and receptacle for two gallons of fresh water

7. There shall also be on board an anchor weighing not less than 1½lbs. for each foot of L W.L. length, and not less than one fathom of suitable cable for each foot of L.W.L. length, life preserver, compass, riding light, foghorn, bucket and boathook.

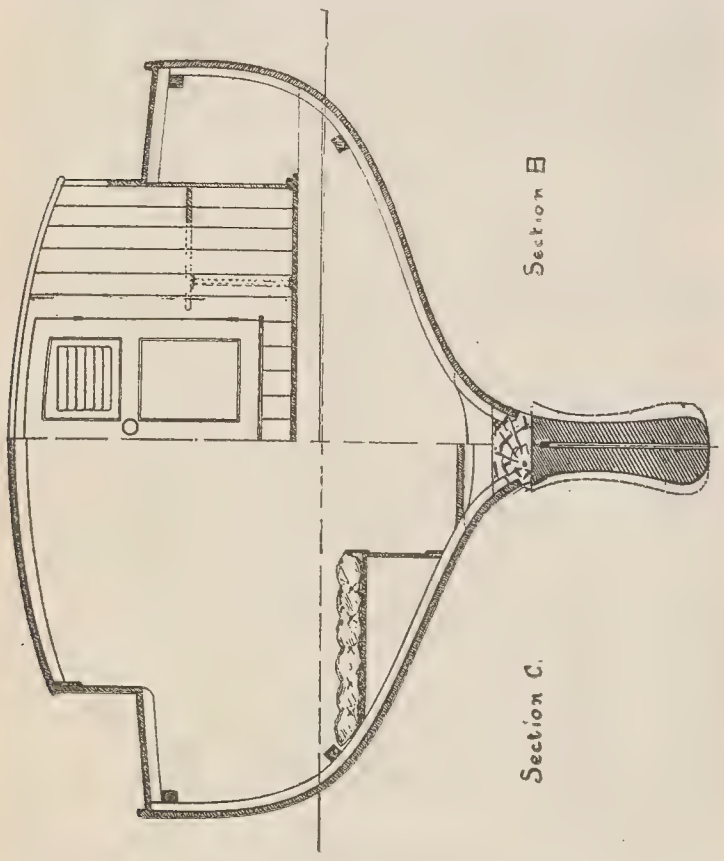
8. All inside ballast shall be stowed under the floor of the cabin or cockpit.

9. All fixtures and fittings herein mentioned shall be suitable for cruising purposes, and shall not be removed or substituted by articles smaller or of lighter weight.

10. Existing cabin yachts (1897) may race in cabin classes, provided they carry the full cruising equipment.

We are pleased to see that the proposal to reduce the crew limit was not carried, and that the same crews will be allowed in 1898 as have been carried in the past. This matter of the reduction of crew is only second in importance to the building to class, correct measurement of L.W.L and one-gun start. With the present tendencies of design in the classes of 36ft. racing length and under, the too liberal allowance of crew is an extra and most unnecessary premium on the live ballast racing machine. As the conditions are to-day, the allowance of six men in a yacht of 25ft. l.w.l. (30ft. racing length) is merely a premium on selecting a crew of heavy-weights and building a boat to carry them, a virtual return to the old sandbagger. A total of four skillful sailormen ought to be able to handle sails on a yacht of 25ft. l.w.l., and this number would not count materially as live ballast in determining the type of yacht. With six the case is different; the winning yacht of the class next year will probably be a lightly built racing machine, with very large sail area, and designed to lug it through the hiking of a heavy crew of six. We are strongly in favor of reduced crew limits in all classes, to the number of skilled men required to handle a reasonable rig for the length in each class. The result of such a change, not in Boston alone, but in other localities, would be double, the "splasher" hull would give place to something of more moderate proportions, and the sail plan would be both reduced and simplified, so as to be perfectly handled by the smaller crew. At the same time, we prefer to see the possibilities of an L.W.L. rule worked out under the same conditions which have thus far existed in the Association.

The development of yachting on Massachusetts Bay within the past five years has been most interesting, but it is by no means complete, and we, at least, shall watch the next season or two with more than usual interest. The most conspicuous feature thus far has been the gradual drawing together of the many small clubs, just as has been the case on Long Island Sound; the abandonment of disputes and clashes, and the organization of what promises to be a permanent and powerful association. The immediate result has been an increased interest in the racing, as was naturally to be expected from the pre-arrangement of fixtures, the improvement of the details of race management, and the establishment of an excellent system of records, averages and championship prizes. This revival of racing started on a pretty good basis, the large fleet of existing yachts including many of strong construction and serviceable type such as the Cape cats. The leaven of these old boats has been felt in the Association fleet up to the present time; and it can hardly be said that the rules of the Association have had any material effect on design. One detail of the rules, the method of measuring l.w.l., has been very much improved; with general good results on the racing.

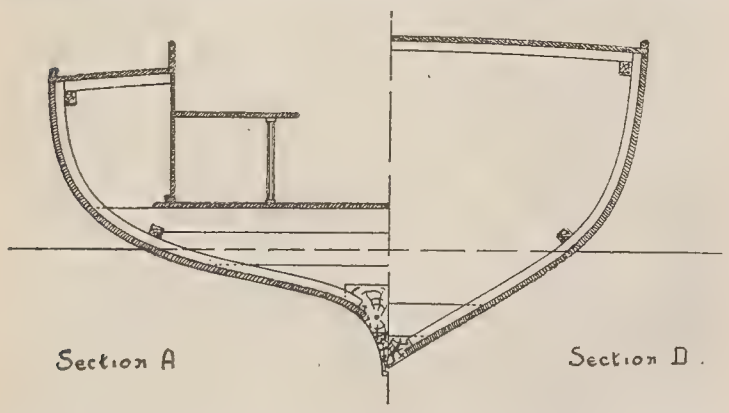


The season of 1898, which is now beginning in the planning of new boats, finds a lively interest in the racing, the assurance of many fixtures and good prizes, with established class limits and general racing rules and conditions. It is probable that a number of yachts will be built in the eight classes recognized by the Association. The owners and designers of all of these prospective boats now understand perfectly the rules and conditions, and it is only reasonable to expect that they will go in to make the most of them. The main conditions are, briefly, limited L.W.L., unlimited sail, beam, draft and ballast, unlimited scantling, and large limit of crew. If, under these plain conditions, anyone is foolish enough to build a yacht of moderate proportions, staunch and durable construction, and capable of doing anything like the all-round service of racing and cruising that the older boats accomplished, he will have only himself to blame

when the averages are figured out next fall. In view of the strong feeling in Boston against sail area as a factor in the rule, the experiments of next season are likely to be both interesting and instructive.

The Seawanhaka Corinthian Knockabout Class.

THE accompanying drawings, show the general arrangement of the new Seawanhaka knockabouts, whose lines were published in our previous issue. The design is practically a modification of the keel knockabout Verona, designed and built last winter by Mr. Stearns, whose lines were published in the FOREST AND STREAM of Jan. 23-30. 1897. Verona was designed for cruising, and carries a large weight of fittings, but she has proved fast and able.

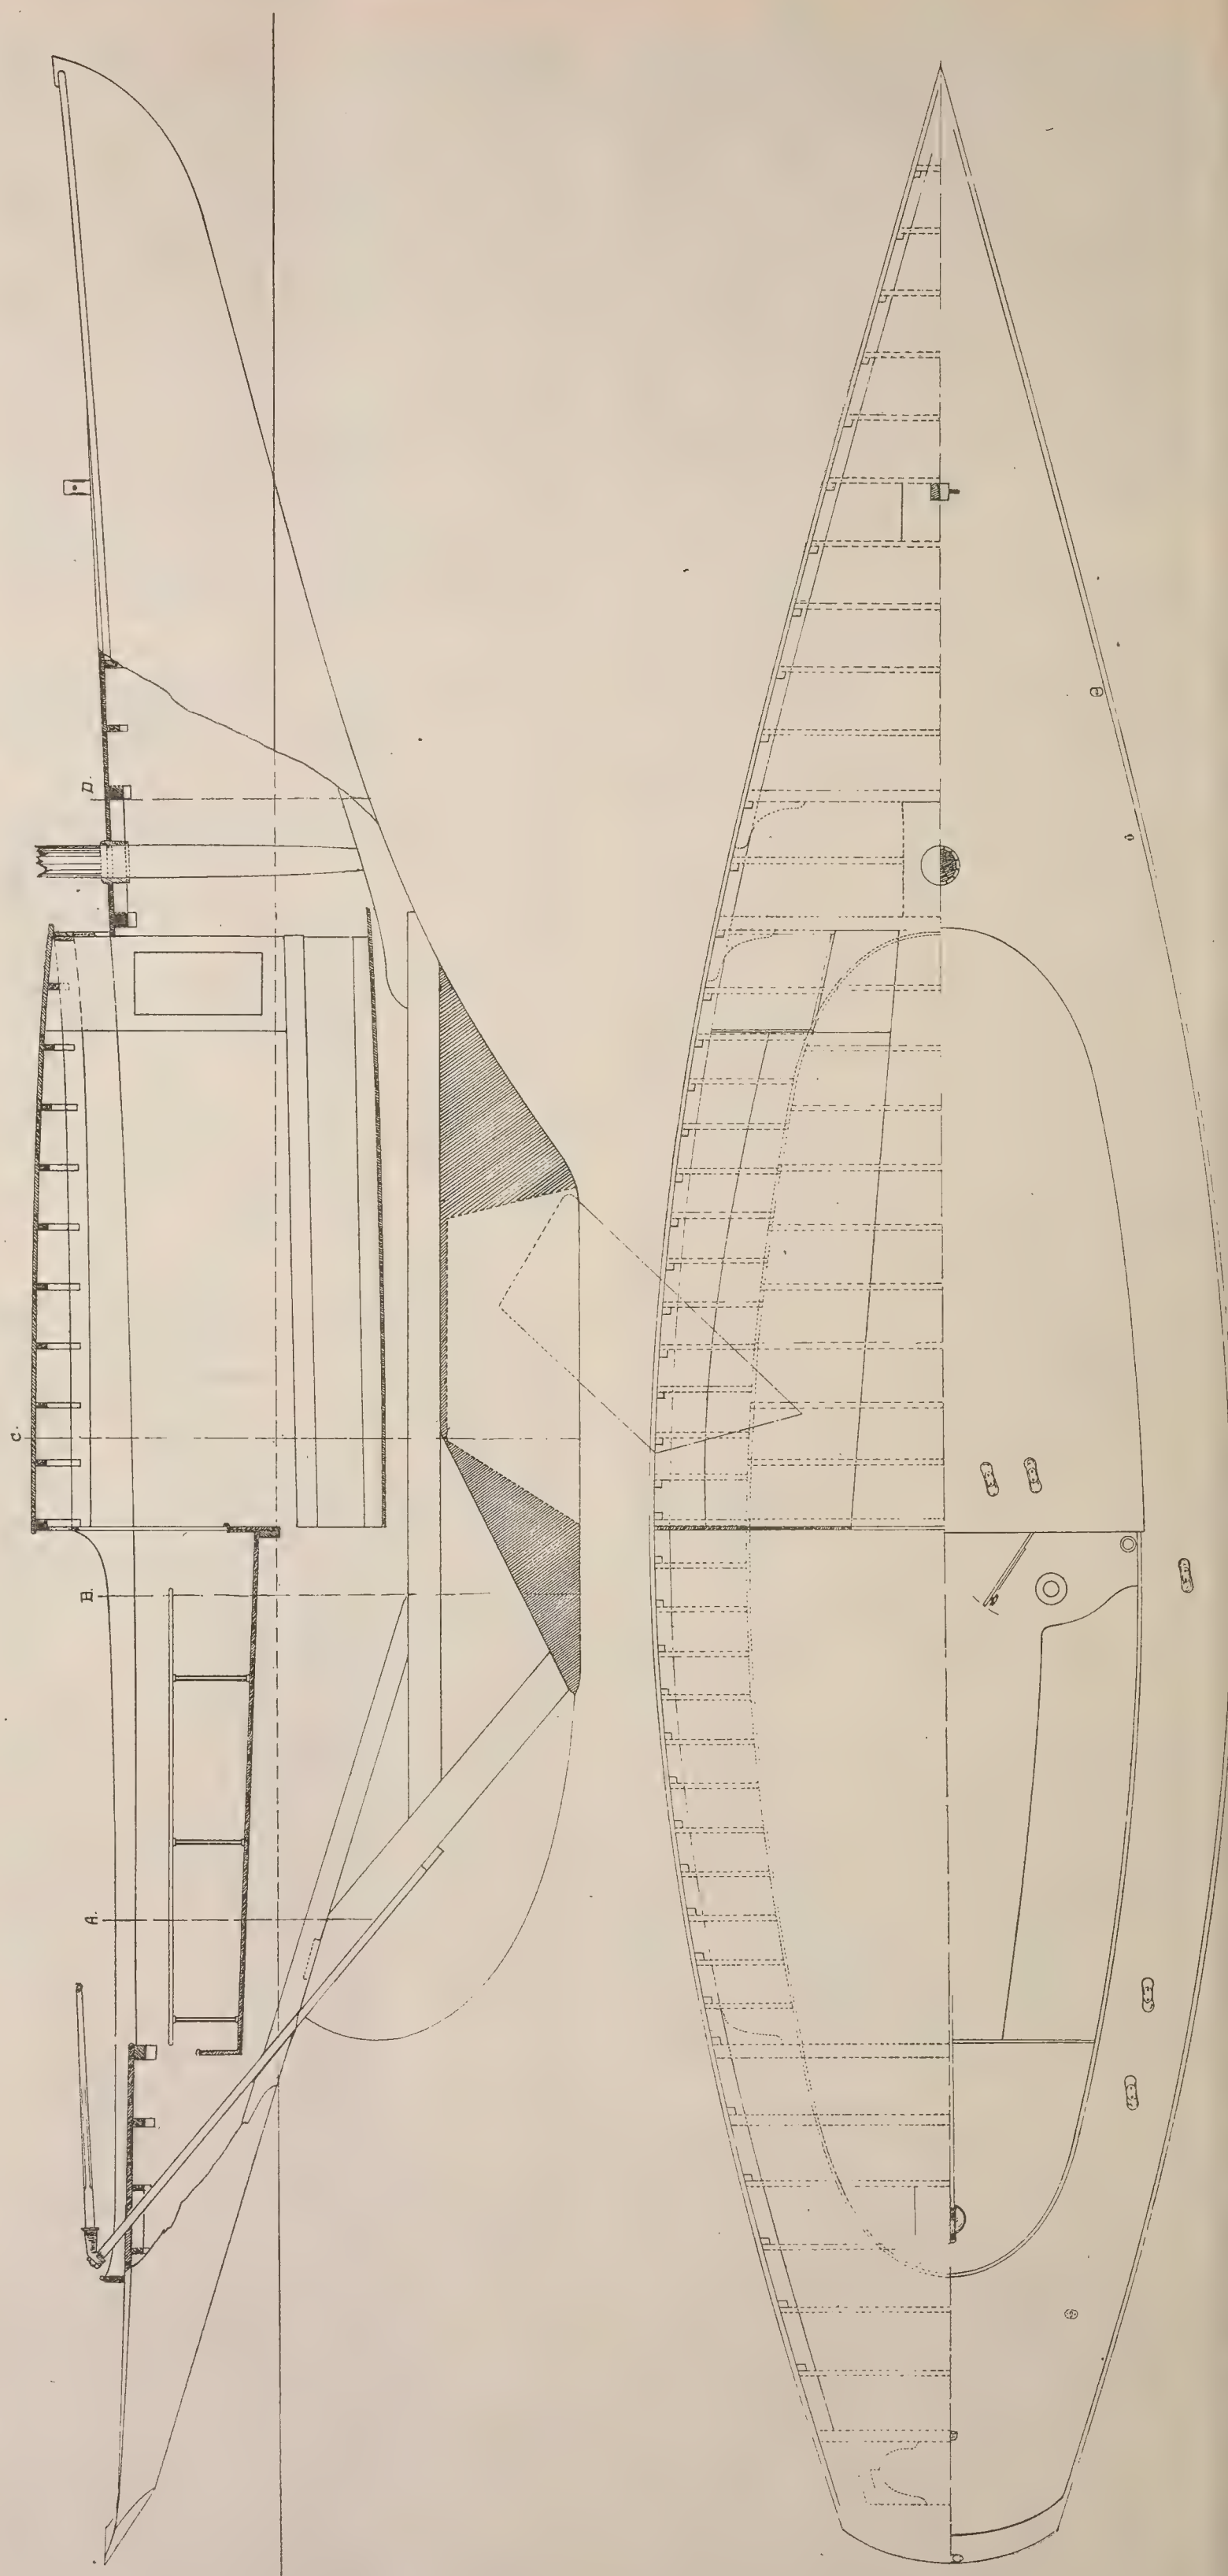


In common with other neighboring clubs, the Seawanhaka C. Y. C. has experienced much difficulty within the last few years in securing starters in its races, owing to the very small number of racing yachts now in commission. Liberal prizes and earnest work on the part of its race committee have failed to secure more than a few starters in the schooner and the larger single stick classes; and it is mainly due to the new international cup for small yachts that there has been any sustained racing during the past three seasons. The 15-footers in 1895 and 1896, and the 20-footers last summer, have been of the greatest benefit to the club in keeping

alive the interest in racing after it was dead in the larger classes. At the same time it is quite plain that these unlimited classes have reached a degree of perfection where they cease to be of further use. The expense of a racing 20-footer, the skill and labor necessary to the production of a successful boat, and the lack of durability and general uselessness of the type, all combine to limit the number of boats and the interest in the races.

When the Oyster Bay station was established in 1891, the club built four catboats of 20ft. 1 w.l., from a design by A. Cary Smith, the boats being alike in every respect. They were moored off the float, ready at all times for use by members; and they have been kept busy, season after season, both for casual sailing about Oyster Bay, West Harbor and Cold Spring Harbor, and for racing. Though little has been heard of them outside the club, they have afforded a great deal of sport to the members, series races being sailed throughout the season, and prizes given for the records. The four have proved to be equal in speed, except for occasional differences in condition of sails or bottom.

The idea of a one-design class on a larger scale, that would be free from the objections of expense and faulty type that stand against the 20 footers, and that at the same would possess the characteristic features that had made the catboat racing so popular, originated with Mr. D. Le Roy Dresser, a member of the race committee, and a resident on Center



Island. While on the New York Y. C. cruise last summer, Mr. Dresser visited some of the Boston yards, and also that of Mr. Stearns, at Marblehead, and inspected the different Boston knockabouts.

After the international races at Montreal were over, the idea was put into definite shape by a request for designs made to several designers and builders. The designs submitted by Mr. Stearns was generally approved by those present at the first meeting at the club house, on Sept. 4, and the gentlemen agreed to build from it. Further negotiations with Mr. Stearns and some modification of the design resulted in the yacht here illustrated, and the signing of contracts for twenty-five yachts, all that Mr. Stearns was prepared to build.

The dimensions of the design are:

Length, over all	32ft. 11in.
l.w.l.	21ft.
Overhang, bow	5ft. 6in.
stern	6ft. 5in.
Beam, extreme	7ft. 8in.
l.w.l.	7ft. 3in.
Draft, extreme	4ft.
with board	7ft.
Least freeboard, to plankshеer	1ft. 9in.
Displacement, lbs., 6,778; tons	3.02
Ballast, lbs., 3,600: tons	1.60
Sail area, sq. ft	550

The draft of Verona, a keel boat, is 4ft. 10½in.; but the Seawanhaka committee decided that a centerboard boat was the more desirable, so the draft was reduced to 4ft., and a Tobin bronze board, housing entirely within the keel, was added. The question of lead or iron for the keel was very fully discussed, and was finally decided in favor of the latter. The committee was desirous of keeping the cost as low as consistent with thoroughly good work, and the difference in favor of iron over lead was about $75, while with the softer metal there would be more or less difficulty in using a cen-

SEAWANHAKA ONE-DESIGN KNOCKABOUT.

Designed and built by W. B. Stearns, 1897.

terboard and keeping the slot clear. In stability, the bulbing of the iron, as shown, with an added width of keel, made it about equal to the lead.

The form is fair and easy in the extreme and promises speed, and while the design has been cut very close for this end, at the same time there is a cabin 7ft. 9in. long, with a headroom of 4ft. 6in., fitted with two transoms, each large enough for sleeping. The cockpit is 6ft. 9in. long and 5ft. wide, with watertight floor above l.w.l.

The rig is the characteristic "knockabout," with no bowsprit and extreme hoist on a short baseline.

While the cost has been figured very closely, the specifications have been framed to secure a shipshape, well-built and durable vessel. The scantling is light, but well designed to secure strength, thorough fastening is provided for, and while the minimum price calls for no elaborate finish, it covers all the essentials. The fittings are of special design, made for these boats by Mr. Stearns. The criticism that the boats were to be of cheap and flimsy construction is entirely without foundation. The price runs from $785 to about $1,000; the latter including mahogany, special bronze fittings, extra cabin fittings, etc.

The hulls will be identical in every respect; the sails, made by Cousens & Pratt, of Boston, will of course be alike. The ownership of the different boats will be decided by lot when they are nearly completed, each owner having the final fitting done according to his wishes. The construction of an entire fleet of twenty-five yachts is something unprecedented and promises to be a most interesting incident of modern yachting. The only way in which the price can be kept down to the given figures is by the substitution of some method of quick manufacturing for the slow one of building as carried on in the case of a single craft. The material for the entire lot will, of course, be prepared in advance, the hulls will be built upon a mould or last, insuring rapid work and perfect similarity, and the process will go on continuously, one boat following another through each successive stage, thus minimizing the labor. Mr. Stearns has been busy since September in the enlargement of his plant and a rearrangement with special reference to this work, and we hope later on to describe the operation of building. The first of the fleet will be launched this week and tried under sail.

The committee is now at work on the details of the class racing, with a view to keeping up the interest among the majority of the members of the class, though some of the yachts will be used only for sailing and cruising. It is proposed to hold a series of races at frequent intervals throughout the season, with a variety of prizes calculated to encourage each man to race his yacht as often as possible.

The Society of Naval Architects and Marine Engineers.

THE fifth annual meeting of the Society of Naval Architects and Marine Engineers was held in New York on Nov. 11-12. For the first time since the organization of the Society, President Clement A. Griscom was unable to be present, the meeting being called to order by Vice-President Charles H. Cramp. Mr. John C. Kafer, of New York, presided through the two days. The business reports showed a large membership and a substantial balance in the treasury. President Griscom was reëlected, and Com. F. M. Bunce, U. S. N., Thos. W. Hyde and Edwin A. Stevens were elected vice-presidents, with Chas. H Cramp, Philip Hichborn, Chas. W. Loring, Wm. H. Webb, George W. Melville, Geo. W. Quintard, Irving M. Scott and Frank L. Fernald reëlected. Prof. C. H. Peabody and Walter M. MacFarland, Passed Assistant Engineer, U. S. N., were elected to the Council. Naval Constructor Francis T. Bowles was reëlected secretary-treasurer. A number of new members and associates were elected.

At the opening of the meeting Commander J. W. Miller, New York State Naval Reserve, offered a resolution of condolence over the death of Rear Admiral Richard W. Meade, a vice-president of the Society. Several members spoke of the hospitality and courtesy which they and other members had received on the occasion of their visit to England last summer from the British Institute of Naval Architects, and a vote of thanks to that body was passed. The two sessions were occupied by the reading and discussion of the following papers:

Watertight Bulkhead Doors. The "Long Arm" System on the U. S. S. Chicago. By Wm. Barnum Cowles, Esq., member.

Regulations for Loading Vessels. By Lewis Nixon, Esq., member.

Torpedo-Boat Design. By Ass't Naval Constructor H. G. Gillmor, U. S. Navy, associate.

The Commerce of the Great Lakes. By C. E. Wheeler, Esq., member.

Progressive Trials of the "Guardian." By Prof. C. H. Peabody, member.

An Experimental Study of the Influence of Surface upon the Performance of Screw Propellers. Preliminary Paper. By Prof. W. F. Durand, member.

Some Notes on the Speed Trials and Experience in Commission of our New Battleships. By Chief Constructor Philip Hichborn, U. S. Navy, vice-pres.

Use of Water-Ballast for Colliers in the Pacific Coast Trade. By Wm. P. Frear, Esq., member.

Estimated Weights of Machinery. By Prof. Geo. R. McDermott, member.

Navy Yard Expenses. By Naval Constructor W. J. Baxter, U. S. Navy, member.

Pneumatic-Steering Gear as applied to the U. S. Monitor Terror. By H. A. Spiller, Esq., member.

Mr. A. F. Yarrow was present both days, and was one of the guests of the Society at the banquet on Friday evening at Delmonico's. Assistant Secretary of the Navy Theodore Roosevelt was the principal speaker.

Seawanhaka International Challenge Cup

AFTER waiting for over two months for some definite advices from Mr. J. Arthur Brand in confirmation of his cable notice of challenge, the Royal St. Lawrence Y. C. has at last formally accepted the challenge made in August by the race committee of the Sewanhaka C. Y. C., and recently endorsed by the club at its November meeting. Both parties have treated Mr. Brand and the club which he proposed to represent with the greatest consideration; the Royal St. Lawrence Y. C. has written and cabled to him repeatedly, and the Seawanhaka Cor. Y. C. has refrained from insisting on its indisputable rights as the maker of a challenge in due form, in order to give a chance to foreign challengers. The match next season will be in the same class, and between yachts of the same general dimensions and type as Glencairn II. and Momo. Mr. Crane will have at least one new design in the races.

YACHTING NEWS NOTES.

THE annual meeting of the Lake Y. R. A. will be held at the Royal Hotel, Hamilton, on Dec. 4. A number of important amendments are proposed.

Yampa, schr., R. S. Palmer, arrived at New York on Nov. 21 from St. Thomas.

Republic, schr., George P. Matthews, which has been under charter for some months on a cruise to South America, was dismasted in a gale off Cape Fear on Nov. 18. She was reported by a passing vessel at Southport, N. C., and a tug towed her into that port, and afterward to Wilmington, N. C., where she is awaiting orders. All on board are well.

Canoeing.

The Races at the 1898 Meet.

THE new regatta committee of the A. C. A. has begun its work in good season by preparing the programme for next year well in advance, and at a time when the results of the present year are still fresh in mind. The committee invites criticism and suggestion now, instead of at the end of the meet or after the races are over; and is prepared to make changes, if such are shown to be desirable. We hope that the racing men will display a little interest in the work of the committee by discussing the programme in our columns:

REGATTA PROGRAMME—STAVE ISLAND, AUG. 5 TO 16, 1898.

Races for decked sailing canoes:

Maximum length.....16ft.
Maximum beam.....30½in.
Maximum draft.....11in.
Maximum sail area.....130sq. ft.
} See Rule 1 of Racing Regulations.

Record.
Event 1. Combined paddling and sailing, ½ mile alternately, 3 miles; time limit, 1½ hours.
Event 2. Paddling, ½ mile with turn.
Event 3. Sailing, 4½ miles; time limit, 2 hours. The same rig and seat will be used as in Event 1.

The record races are prescribed by Rule 5, Racing regulations. In addition to the record prizes, a first and a second prize will be given for each race.

Event 4. Trial sailing (see Rule 5), 6 miles; time limit, 2½ hours. The contestants in trophy race will be selected from this race; first and second prize.

Event 5. Novice sailing, 3 miles; time limit, 1½ hours. Open only to members who have not sailed a canoe prior to Sept. 1, 1897; first and second prize.

Event 6. Trophy sailing, 9 miles; time limit, 3½ hours; first and second prize.

Event 7. Dolphin trophy sailing, 7½ miles; time limit, 3 hours. The canoe winning first place in trophy race cannot compete in this race.

DIVISION RACES.

These races will be sailed during the first week of the camp, provided they have not been sailed at Division meets. Special rules will be posted on bulletin board.

Event 8. Atlantic Division trophy sailing.
Event 9. Central Division trophy sailing.
Event 10. Eastern Division trophy sailing.
Event 11. Northern Division trophy sailing.
Event 12. One-man paddling, ½ mile with turn; decked sailing canoes; first prize.

RACES FOR OPEN CANOES UNDER RULE 1.

	One and two men.	Four men.	War Canoes.
Maximum length	16ft.	20ft.	30ft.
Minimum beam	29½in.	29½in.	36in.
Minimum depth	10in.	12in.	17in.
Minimum weight	50lbs.	70lbs.	120lbs.
Maximum crew			9 men.

One and two-men canoes weighing less than 50lbs. may make up a deficiency of not more than 5lbs. by ballast. War canoe limitations do not apply to canoes built before Oct. 1, 1897.

Event 13. Combined paddling and sailing, ½ mile alternately; 1½ miles; time limit, 1½ hours; single blades; first and second prizes.

Event 14. Sailing, 1½ miles; time limit, 1½ hours; first and second prizes.

In events 13 and 14 the sail area is limited to 40sq. ft. No rudder and no seat which projects beyond the gunwales allowed. One pair of detachable leeboards may be used.

These races are arranged for the encouragement of those members who have open canoes for general use. The regatta committee reserve the right to rule out any canoe which in their judgment has been built with the idea of developing these canoes into racing machines. The same canoe and sail will be used in both events.

Event 15. Trophy paddling, one man, 1 mile straightaway; first and second prize in addition to trophy.

Event 16. One man, single blades, ½ mile with turn; first prize.

Event 17. Two men, single blades, ½ mile with turn; two first prizes.

Event 18. Four men (club or division), single blades, ½ mile with turn; one first prize.

Event 19. War canoes, ½ mile with turn; first and second prize.

Event 20. Relay race (club or division) in one man open canoes, single or double blades at individual option, three men from each club or division will compete, course around regular sailing triangle, the starters paddle to and turn the first buoy, when they will pass some article to the second men, who will paddle to and around the second buoy, passing to third men who finish; three first prizes.

Event 21. Tail-end race, single blades, paddlers must kneel in extreme stern, facing astern and paddle stern first with the wind.

Event 22. One lady paddling, single blades, ¼ mile straightaway; first prize.

Event 23. Two ladies paddling, single blades, ¼ mile straightaway; two first prizes.

Event 24 Upset paddling, paddles optional; first prize.

Event 25. Hurry scurry, paddle optional; first prize. This race will probably vary from the usual run, swim and paddle.

Event 26 Tournament; two first prizes.

Event 27. Swimming 100yds.; first and second prizes.

Shell Mound.

SAN FRANCISCO, Nov. 15.—*Editor Forest and Stream:* A beautiful shooting day greeted the marksmen at Shell Mound yesterday. The German clubs held turkey shoots for members and every man got his bird.

The Columbia Club held its regular semi-monthly shoot. C. M. Daiss made the grand score of 29 rings, Columbia target, in a 10-shot score with pistol.

Columbia Club scores:

Rifle, re-entry matches, open to all comers, 200yds., Columbia target, F. H. Bushnell rifle medal and cash prizes, 5-shot scores: F. O. Young 8, A. H. Pape 9, Dr. L. O. Rodgers 12, O. A. Bruner 13, 12, A. B. Darrell 11, 15.

William Glindeman military medal and cash prizes, 10 shots, Creedmoor count: F. O. Young 48, 47; E. Hovey 46, 46; C. F. Waltham 41.

F. O. Young rifle record medal and cash prizes, 10-shot scores: A. H. Pape 44.

Rifle, 200yds., class medals for members only, one 10-shot score:

Champion class—A. H. Pape 49, F. O. Young 51, Dr. L. O. Rodgers 56.

First class—E. Jacobson 78, O. A. Bruner 85.

Second class—J. E. Gorman 61.

Third class—C. F. Waltham 74, G. Manuel 117, B. Jonas 132, A. H. Cady 180.

Pistol, re-entry matches, open to all comers, 50yds., Columbia target, Gordon Blanding pistol medal and cash prizes, 3-shot scores: F. O. Young 11, 11; C. M. Daiss 11, 25.

Diamond pistol record medal and cash prizes, 10-shot scores: C. M. Daiss 29, Theo. Meyer 87, A. H. Pape 45.

Achille Roos .22-rifle medal, ladies' trophies and cash prizes, 5-shot scores—A. B. Dorrell 10—11, Mrs. C. F. Waltham 43, Mrs. M. J. White 17.

Pistol, class medals, for members only, one 10-shot score with pistol, champion class—C. M. Daiss 45, A. B. Dorrell 48, J. E. Gorman 48, F. O. Young 50, A. H. Pape 62.

Second class—G. M. Barley 72, Mrs. M. J. White 71.

Third class—A. H. Cady 72, C. F. Waltham 171, Mrs. C. F. Waltham 82.

ROEEL.

Cincinnati Rifle Association.

CINCINNATI, O., Nov. 14.—The following scores were made by members of the Cincinnati Rifle Association at their range to-day. Conditions: 200yds., off-hand, at the German ring target. Capt. Gindele was high on King target with a score of 228; he was also high on the Honor target with a score of 65. It rained more or less all day, and the light at times was poor. Strickmier and Nestler made their highest scores to-day, the former 215 and the latter 218; both are running up toward the front. Mat. Gindele shot in fine form to-day, averaging a fraction less than 217, strictly off-hand, in 100 shots, with but 4 out of the black. Payne had but 8 out in his 100.

Gindele	19 22 21 23 24 24 24 24 21 25	227

Conlin's New Gallery.

CAPT. JAMES S. CONLIN has entered upon his thirty-third year of gallery management in his new Shooters' Headquarters, at 102 and 104 West Forty-seventh street, near southwest corner Sixth avenue, this city, where will always be found modern rifles, revolvers, ammunition, ranges, targets and records, with plenty of room, light and air. Sportsmen from everywhere are invited to inspect the art gallery, containing the largest collection of shooting records (targets), portraits of noted marksmen, and antique firearms in the world. Mr. Conlin gives special attention to the instruction of beginners in revolver shooting, teaching them how to handle revolvers with safety, and shoot with accuracy. Capt. Conlin begs to assure ladies who wish to become experts in the use of firearms that he will take special pains to instruct them.

Western Rifle Scores.

CHICAGO, Ill., Nov. 15.—Following are the scores of medal contest of Calumet Heights Club, shot on their range, at Grand Calumet Heights, Ind. The wind blew from the south across the range. The sky was clouded, and atmosphere misty.

Class A, 10 shots, 200yds. range, standard American target, off-hand:

Metcalfe	5313326223—33	Schmidt	4211364024—27
Harlan	7321742543—38	Paterson	8237524455—41
Norcom	0325236653—35		

Class B, ladies' medal shoot, 100yds.:

Mrs Schmidt..... 3 3 3 5 10 1 2 5 7 0—39

A. C. PATERSON.

Trap-Shooting.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed. Ties in all events are considered as divided unless otherwise reported. Mail all such matter to Forest and Stream Publishing Company, 346 Broadway, New York.

On the Bergen County Gun Club's grounds, Thanksgiving Day, there will be shooting all day, commencing at 9 o'clock. Club trophy at 11 o'clock. Entrance $1, 25 targets, unknown angles, handicap Winner in club trophy event to become owner of trophy. At noon a Thanksgiving dinner will be served free to members and guests. E. C. cup at 1 o'clock. Entrance $1, 50 targets, unknown angles, handicap, Sweepstakes galore. Trains leave foot of Cortlandt street as follows: 8:30, 9:30, 10:30, 11:20 A. M., 1:10, 2:20, 3:30 P. M.

JOHN R. BANTA Captain.

The New England Kennel Club will hold a tournament on Thanksgiving Day, with sports consisting of a greased pig race, a greased pole, a turkey shoot, and a sack race. Members and friends are invited, and a lunch will be served free at the club. Trains to Braintree—9:30, 10:30, 11:30 A. M., 12:18 P. M. Trains from Braintree—1:06, 1:58, 3:06, 4:06 P. M., and every hour to midnight.

A notice from Mr. H. S. Lippack, of Dexter Park, announces an all-day shoot at his place on Thanksgiving Day, Nov 25. All the events will be at live birds, with a fine live turkey or cash added to each event. If the birds are the same as those used in the first squad of the Emerald shoot the boys will have to shoot very hard.

A live-bird sweepstake shoot will be held at Dexter Park on Thanksgiving Day, Nov. 25. In each event live turkeys or cash money will be added to purse as prizes. H. S. LIPPACK.

At Elkwood Park, Long Branch, N. J., Thanksgiving Day, there will be a holiday handicap, 15 birds, $7 entrance, birds extra, handicap, 25 to 30yds.; at 25 targets, $2.50 entrance; at 10 live blackbirds, $2 entrance, birds included.

Miss Annie Oakley in Tennessee.

[*Special to Forest and Stream.*]

Annie Oakley's engagement with Buffalo Bill having ended a few weeks ago at Richmond, Va., she came to south central Tennessee anticipating a season of good hunting, and that upon the haunts of a once famous hunter, Davy Crockett. She was not disappointed in finding good hunting. All game common to this latitude is yet found plentiful here, and wild turkey and small game in abundance. She also had the privilege while here of shooting when and where she pleased. The best shooting was found within two hours' walk of Crockett's mill.

Most of our hunters have turned to the hunting that pays the most money, quail hunting. One man shipped from this county last season over 1,000 dozen quail While here Miss Oakley engaged mostly in quail hunting, it being the chief sport. Quail are found in abundance, and the character of the country is such that the hunting is delightfully exciting. Annie came with a record of three dozen quail in one day, but while here had to compete with a man who has a record of six dozen in one day.

Joe Eakin is one of the most successful hunters and finest shots in these parts. He and his fine pointer Nellie accompanied Miss Annie on a number of hunts, and he was the only one of our rural hunters who excelled her in the field. However, Joe found himself severely tested, while shooting with her, to maintain his fair record. As he remarked, "Miss Annie's so quick with her gun if you want to get a shot at a bird you must shoot mighty quick or wait till she misses, and that may keep you waiting some time."

Annie's shooting in the field excited a great deal of admiration in all who were fortunate enough to see her, but her rifle shooting was simply marvelous She performed feats with apparently greatest ease that must be seen to be believed.

While here, she performed the extremely difficult feat of shooting a meadowlark on the wing with her .32 cal. Winchester. She hit a brick tossed in the air, broke it, and then hit one of the pieces before it reached the ground. The writer saw many a walnut and pebble torn to atoms by her rifle balls. She leaves with us a penny, through which she sent a .22 ball; also a photo, marked as only a rifle ball can mark, while held in the hand of a friend, edge toward her, at a distance of fifteen paces. WALTER SWAIN.

CROWSON, Tenn.

Emerald Gun Club.

Nov. 16.—Twenty-five members and their guests faced the traps at the regular monthly shoot of the grand old Emerald Gun Club this afternoon at Dexter Park. Gus Greiff and John H. Moore were the only shooters to kill straight, Fessenden, Vroome and Otto Hilmer losing their last birds The birds were of a mixed order except for the first 50, which were hot ones. The day was a perfect one, sweaters, etc, being at a discount. The scores follow:

Dr Hudson (28)	1010101210— 6	C C Mollenhauer (25)	0202101021— 6
J Clayton (29)	1222200222— 8	G Greiff (29)	2222222222—10

IN NEW JERSEY.

THE BOILING SPRINGS HANDICAP.

Nov. 17.—The regular semi-monthly club handicap shoot of the Boiling Springs Gun Club was held to day. Only four shooters participated in the sport. Huck won the silver tea service with 40 breaks. The handicaps were not shot, as none of the shooters could have tied Huck. Sweeps followed the club event:

Huck	1111111101111111111101110101011011110111111011101—40

W. H. HUCK, Sec'y.

HOOPER AGAIN LOSES BY ONE BIRD.

Nov. 20.—R. D. Hooper, who lost his match with Gilbert by missing his last bird, did precisely the same thing to-day in his match with Capt. A. W. Money, on the Carteret Gun Club grounds. As before, the contestants were tied on their 99th birds, and Hooper lost the match on his last bird, a fast driver, which he failed to grass. The match was close and exciting throughout, the men being tied on their 25th, 50th, 75th and 99th birds. The weather was admirable for a trap-shooting match; the birds were a good lot, some exceptionally fast, and the traps worked to perfection. Hooper was handled by Geo. S. McAlpin. Capt Money handled himself. Another match was arranged, to be shot off at an early date, as neither party was satisfied. The score:

Capt A W Money (30)	22211••12•2•2221111212222—21
	22•22211•2111012222•2221•—20

Indianapolis has Changed Dates.

INDIANAPOLIS, Ind.—The dates for the winter live-bird tournament of the Limited Gun Club have been changed to Dec. 13, 14, 15. Nominations in the Grand Central Handicap will close Thursday, Dec. 9. Entries are now coming in and we feel assured of having a good attendance, ROYAL ROBINSON, Sec'y.

Western Traps.

CHICAGO, Ill, Nov. 14.—The Calumet Heights Club held their regular weekly shoot on their grounds at Grand Calumet Heights, Ind., to day Twenty one persons attended, but only a few took part in the contests. Others spent their time on the river and through the woods. Some few quail, partridges and ducks were bagged. The duck shooting thus far this fall has been very poor, compared to previous years at the club. The weather being warm and no signs of winter, it is more than possible that the ducks usual to this district have not come south as yet.

The medal race was shot during the afternoon in a driving wind from the rear of platform, and while the targets were largely easy, many were over shot. Following is detailed score of medal contest and practice; 25 targets, known traps, unknown angles:

Class A.

Paterson	0111011111111111111101111—22
Lamphere	1111111111111011101111111—23

A. C. PATERSON.

MILWAUKEE, WIS.

CHICAGO, Nov. 20.—The National Gun Club, of Milwaukee, Wis., announces its maiden effort at arranging its first annual tournament, to be held on the grounds of the National Park Club Nov. 24, 25 and 26, commencing at 9:30 A M. The contests will be at targets and live birds, with added money in most of the events. This should stimulate the shooters as to prove a good attendance, which is looked for.

BELVIDERE, ILL.

The Belvidere Gun Club, of Belvidere, Ill., announces a live-bird shoot, to be held on its grounds at Belvidere, Ill., on Thanksgiving Day, Nov. 25, under American Association rules.

CALUMET HEIGHTS, IND.

The Calumet Heights Club will hold an all-day shoot on its grounds at Grand Calumet Heights, Ind., Thanksgiving Day, Nov. 25, which will conclude its year's shooting. The contests will be at live birds and targets, and the winners of prizes in events of both live birds and targets will be decided As it now appears, the winners in the target events for the year will be: In Class A, A. C. Paterson; in Class B, P. D. Norcom, and in Class C, Dr. A W. Harlan, unless some phenomenal scores are made in the next two shoots, which is not looked for at this season of the year. In the live bird events is still undecided, but Geo. H. Knowles has the lead by one bird, and is closely followed by Dick Turtle G. E Marshall, G. E Lamphere and A. C. Paterson. A slip-up on the next live bird contest on the part of the leaders, it is any one's prize

EUREKA GUN CLUB.

The Eureka Gun Club held the first shoot of its winter series at Watson's Park on the afternoon of Nov. 20, 1897, and was participated in by a considerable number.

It was intended, if possible, to have the first of the contests between Eureka and Garfield gun clubs come off on this day, but the Garfields were unable to get their arrangements and handicaps perfected in time relating to their own shoot.

The Garfields now expect to start in on their winter series during the early part of December. Both clubs having some good live bird shooters on their rolls, it is expected that a hot contest will result in the contests to follow.

The day was one with clear atmosphere with a strong wind from the left quarter. Most of the birds were left quartering drivers and left-quartering incomers, and were very fast. The attendance was exceptionally large for a club shoot, and being the first of the season, bids fair to be a successful one.

Many members of Garfield Club were in attendance, but spent most of their time shooting targets Adams and Hoyt, who were shooting new guns, were somewhat handicapped, and their scores were not up to their usual form.

Among those present who did not not participate in the event, but who are interested in trap-shooting, were E. L. Rice, O. P. Richards, Dr. Shaw and wife, Silas Palmer, John Amberg, E. E. Neal, H. Wiley, and others.

Following are detailed scores, which are considered fair considering the elements of the day:

F Hollister	1102101212— 8	W Darlington	0022022011— 6
L Goodrich	1221122001— 8	W A Jones	0100100022— 4
E Steck	2100220222— 7	C W Carson	2110102002— 6
C Antoine	2001120020— 5	F P Stannard	2202202222— 8
L Willard	2221212101— 9	Hoyt	0002002212— 5
E Bingham	2222222222—10	A W Adams	1020012000— 4
A C Paterson	0212002111— 7	Geo Airey	1220020222— 7
John Glover	2012211012— 8	Dr F Liddy	2121022202— 8
J Rehm	0002210022— 5	F Spreyne	0202122100— 5

Only those who had a chance to win shot up handicap. Owing to darkness O'Brien and Van Brunt did not shoot off tie.

Sweep, 10 targets: Adams 10, Van Brunt 9, F. A. Thompson 8, O'Brien 7, Schmitzspan 1.

Sweep, 10 targets; Adams 8, Nostrand 8, F. A Thompson 8, Van Brunt 7, Deacon 7, W. H. Thompson 7, O'Brien 7, Schmitzspan 5, Fleet 4.

Jeannette Gun Club.

GUTTENBURG, N. J., Nov. 19.—The regular club shoot of the Jeannette Gun Club was held at the old Guttenburg race track to-day. After the club shoot a team race was shot between teams captained by Packard and Brunie respectively. This event resulted in a tie, and as it was too dark to see the birds, the tie was not shot off. The scores:

Class A:

	Club Shoot.	Sweeps.
Brunie (28)	1111212112—10	.....
Meyer (28)	1221122222•— 9	.....
Otten (30)	•1122222212— 9	.....
Lott (30)	2102222212— 9	12121—5

The Gilbert-Hooper Match.

GARDEN CITY, L. I., Nov. 15.—In one of the most exciting matches ever shot on the Carteret Gun Club's grounds, H. B. Gilbert to-day defeated T. D. Hooper by 1 bird in a 100-bird match. In no part of the match did more than 2 birds separate the contestants; they were tied on the 99th round, and Gilbert won out in the last round by killing his bird, while Hooper missed. Gilbert shot remarkably, killing 99 birds, but he had the misfortune to lose 7 dead out of bounds. Hooper also did good work, losing 3 of his 9 last birds out of bounds. The birds were a mixed lot, and a strong wind blew directly across the traps. W. A. H. Stafford was referee and W. R. Hobart scorer. The conditions were 30yds. rise, 30yds. boundary. The score:

H B Gilbert	•2221222222•2222212122202222— 22
	1222122220222222?2222•122— 23

Audubon Gun Club.

BUFFALO, N. Y., Nov. 13.—The Audubon Gun Club's shoot was held at Audubon Park to-day. Five events were shot, the first four at targets and No. 5 at live birds. No. 3 was the club shoot, the following being the class winners: Class A, C. S. Burkhardt; class B, Jacobs; class C, Reynolds. The club will send a big delegation of shooters to the Bison Gun Club's Thanksgiving Day shoot. The scores:

PUBLISHERS' DEPARTMENT.

Washington and Old Point Comfort.

CHRISTMAS HOLIDAY TOUR VIA PENNSYLVANIA RAILROAD.

THE annual Christmas holiday tour to Washington under the Personally-Conducted Tourist System of the Pennsylvania Railroad will leave New York on Tuesday, Dec 28 These tours appeal especially to the teachers of New York, Brooklyn, and vicinity, affording an exceptional opportunity to visit the National Capital at the height of the season. The tour of the present season will contain many interesting features, including an opportunity for a trip to Mt. Vernon and Alexandria. At a slight additional expense those who desire may first visit Old Point Comfort, spending a day there, and continue to Washington by boat The Pennsylvania Railroad's Christmas holiday tours have an enviable reputation.

For itineraries, rates, and full information, apply to ticket agents, or address Tourist Agent, 1196 Broadway, New York; 4 Court street, Brooklyn; or Geo. W. Boyd, Assistant General Passenger Agent, Philadelphia.—*Adv.*

New Service to Augusta and Aiken.

THE Southern Ry. announces, effective Nov. 21, new schedule and Pullman sleeping car service between New York, Aiken and Augusta. The Southwestern Limited, leaving New York at 4:25 P. M., daily, arrives in Aiken, S. C, following afternoon at 3:55 P. M.; Augusta, 4:15 P. M. Pullman drawing-room sleeping car, New York to Columbia and Columbia to Augusta. Dining-cars serve meals between New York and Charlotte. The Bonair Hotel, at Augusta, and Highland Park, at Aiken, will be open in a few days. For full particulars call on or address Alex. S. Thweatt, E. P. A., 271 Broadway, New York.—*Adv.*

Quarantines Removed—No Detention to Travel South.

THE Southern Railway announces that there is no detention in travel South on account of quarantines. The lines are all open, and tickets are now being sold to all points through New Orleans, Vicksburg and Memphis. The travel for the last week has been very heavy, extra equipment being required every day to accommodate the heavy traffic Southward. The Southern Railway Eastern Passenger Agent Office is at 271 Broadway, New York, and is the headquarters in the metropolis for information regarding the Southern travel.—*Adv.*

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SATURDAY, DECEMBER 4, 1897.

VOL. XLIX.—No. 23. No. 346 BROADWAY, NEW YORK.

NOTICE TO SUBSCRIBERS.

The address label on the wrapper shows the date of the close of the term for which the subscription is paid. The receipt of the paper with such dated address label constitutes the subscriber's receipt for money sent to us.

Subscribers are asked to note on the wrapper the date of expiration of subscription; and to remit promptly for renewal, that delays may be avoided.

For prospectus and advertising rates see page iii.

And birds of ev'ry note, and ev'ry wing,
Their loves responsive thro' the branches sing
In sweet vibrations thrilling o'er the skies,
High poised in air, the lark his warbling tries;
The swan, slow sailing o'er the crystal lake,
Tunes his melodious note; from ev'ry brake
The glowing strain the nightingale returns,
And, in the bowers of love, the turtle mourns.
Pleas'd to behold his branching horns appear,
O'er the bright fountain bends the fearless deer;
The hare starts trembling from the bushy shade,
And, swiftly circling, crosses oft the glade.
Where from the rocks the budding founts distil,
The milk-white lambs come bleating down the hill;
The dappled heifer seeks the vales below,
And from the thicket springs the bounding doe.
To his lov'd nest, on fondly flutt'ring wings,
In chirping bill the little songster brings
The food untasted; transport thrills his breast;
'Tis nature's touch, 'tis instinct's heav'n-like feast.
Thus bower and lawn were deck'd with Eden's flowers,
And song and joy imparadis'd the bowers.

THE LUSIAD.

THE UNITED STATES FISH COMMISSION.

THERE is a growing sentiment that whenever a United States Fish Commissioner shall be appointed to succeed the present incumbent, his selection shall be such as to command respect for the man himself and for the office, and such as shall restore the Commission to its former place in popular esteem. This can be done only by the appointment of a Commissioner fit for the position because qualified to administer its affairs. The work of the Commission is public business; it ought to be conducted on business principles, intelligently and efficiently; and the person to whom it is intrusted should be chosen for his capacity to do this, precisely as a selection would be made for the management of any private business. The President's one care should be to fill the position with the most capable man he can find for it.

The place is a large one, and has concern with large interests; it is no place for a tyro, nor for a small man, or one untried or ignorant. Special knowledge is demanded, with training and experience in this particular field. The Commissioner must have attainments in the science and art of fishculture—attainments which can come only of practical experience in fishcultural work, and of experience most valuable if acquired in the field of the National Commission itself. This practical personal knowledge of fishculture is an absolutely essential qualification of a competent head for the Fish Commission. It is not enough that, as now, his subordinates in the Commission may have knowledge, in a measure to make up for his own lack of it. No blundering ignoramus, though he be a martinet, can command from his staff confidence and respect, and without them there must always be demoralization like that which now prevails.

In addition to his knowledge and skill in fishculture, the Commissioner must have executive ability and proved business capacity. The responsibilities of his office and the nature of his duties demand this. His record in fishculture or other work should attest his possession of the administrative faculty, show him capable to manage men and affairs, and give assurance that the complex work of the Commission shall be carried on in the best ways and with the best results.

The head of the National Commission, it goes without saying, should represent the fishcultural and fishing interests of the country; should have a thorough knowledge of the commercial fisheries, their requirements and the relation of the Fish Commission to them; and should enjoy the confidence, respect and support of commercial fishermen.

The appointment of a Fish Commissioner is one which, we have the strongest confidence to believe the President recognizes, cannot for a moment be considered in any political relation, except as a part of that good politics which has regard for the highest public interest. To put the right man in the right place, when the position is one of such importance as this, means to command popular approval. By the selection of a man having such qualifications as we have briefly outlined for the office of the United States Fish Commissioner, Mr. McKinley has an opportunity of adding a most creditable appointment to the record of his administration.

THE FOREST RESERVATIONS.

IT is but little more than half a year since a state of high excitement prevailed over a considerable portion of the country concerning the establishment of certain forest reservations in accordance with law. At that time the FOREST AND STREAM advised patience, and gave reasons for believing that the action which had been recommended by the National Forestry Commission would cause injury neither to the West in general, nor to any class of its inhabitants. We then said, "The facts are all in favor of wise recommendations by a Commission made up of such men as is this one, and we venture to predict with confidence that in a few months those persons who are now making the most outcry about the injury likely to be done will be the most enthusiastic in favor of the plan which the Commission shall recommend."

This prediction has been fulfilled in a way that is fairly startling. Since last March, when it was made, there has been an absolute and widespread revolution in the public sentiment of the West. People have had time to think about the subject and to realize what the effect of forest preservation will be on the different localities interested.

A recent investigation of the state of public opinion over a very large portion of the West shows that where a short half year ago entire communities were bitterly opposed to the establishment of the forest reserves, the same communities are now heartily in favor of such establishment. Where there was then bitter hostility, there is now cordial friendliness. The country covered by this investigation includes the Priest River and Olympic reservations, both sides of the Cascade reservation, the cities of Seattle and Spokane, both sides of the Flathead reservation, the Lewis and Clark reservation, and the Black Hills reservation.

The opposition which showed itself last spring had its origin in the belief that their property was to be taken away from the people living in and about the reservations. The miners, the prospectors, the ranchmen and the cattlemen believed that they were to be deprived of what they had and what they hoped for, and an epidemic of excitement and panic swept over a region far wider than that covered by the reservations. At the same time it is to be noted that in some communities individuals and journals were found who were able to resist this excitement and to take a common-sense view of the matter in hand. Notable among these newspapers was the Portland *Oregonian*, a journal which always commands respect.

We pointed out to the alarmists East and West that this excitement was unnecessary; that when the Commission announced its plan it would certainly recommend that agricultural lands lying within the reservations should be excepted, so that the settler who might wish to do so could take up a claim of arable land there, just as he might have done before the reservations were established; that miners would be allowed to prospect and to mine on the reservations, and to cut timber for their own uses; that actual settlers would be allowed to cut such timber as they might need for domestic purposes; that the rights of no individual would be interfered with; that no settler would be prevented from taking up a ranch, no prospector hindered from searching for mineral, no miner from working on his claim. Reason, however, seems to be wasted on people while in a condition of such apprehension.

Soon after that, however, the complete report of the National Academy was made public, and its recommendations have since been before the people. Liberal regulations have been established by the Secretary of the Interior for the protection of the forest reservations. An appropriation has been made by Congress for the survey of the boundaries by the United States Geological Survey As things stand to-day, the rights of actual settlers within the reservations are fully protected. They have the power to build wagon roads to their holdings, to build schools and churches, and they have the privilege of exchanging their claims—if they wish to do so—for other lands outside the reservations. The Secretary of the Interior is authorized by law to permit the use of timber and stone by settlers, whether farmers, miners or cattlemen, for firewood, fencing, building, mining, prospecting, and other domestic purposes.

With the change in public opinion, the active interest of the Secretary of the Interior, and a reasonable prospect that Congress may be induced to take some steps toward giving its aid in enacting the laws, and may supply the money so greatly needed for this purpose, there seems at last a hope that an adequate forest service may be established in the United States.

SNAP SHOTS.

Four hundred years have elapsed since (in 1497) Vasco de Gama rounded the Cape of Storms, named thereafter the Cape of Good Hope, and discovered the ocean route to the East Indies; and it was three hundred years ago that Camoëns wrote his "Lusiad," the epic of the achievements of De Gama. Camoëns was a poet of nature; exquisite bits of description are found in his poem. Of two famous passages, one is that in which the adventurous seamen are confronted in the night by the warning apparition of the Giant of the Cape—

"when rising through the darken'd air,
Appall'd, we saw a hideous phantom glare;
High and enormous o'er the flood he tower'd,
And 'thwart our way with sullen aspect lower'd."

And another is the description of the Island of Venus, the concluding lines of which furnish the quotation at the head of this page. That which has prompted our allusion to Camoëns, however, is this simile, which, considering the three centuries that have elapsed since it was written, is interesting as showing that the Portuguese poet knew something of shoulder-guns and retrievers:

"So, when the fowler to his cheek uprears
The hollow steel, and on the mallard bears,
His eager dog, ere bursts the flashing roar,
Fierce for the prey, springs headlong from the shore,
And barking, cuts the wave with furious joy."

Let us suppose a case. Suppose that once upon a time there were moose in New York. Suppose that the moose having become extinct, the law nevertheless made a close season on moose. Suppose, moreover, that New York had a clause in its law which forbade the export of "any game mammals of the State." Suppose that the Chicago owner of an Adirondack game preserve should stock his preserve with moose "rescued" in Jackson's Hole, Wyoming. Suppose, finally, that the Chicago man should kill his Wyoming moose in his Adirondack preserve. Could he lawfully take it to Chicago, or would it be classed as among the "game mammals of the State," and so not a subject of export?

This is a case which has no existence in fact, but the principle involved actually has come up in a certain game preserve enterprise, where introduced game has multiplied to an extent demanding reduction; and the owner of the preserve being a non-resident is, or is not, debarred by just such a law from killing and taking home what he would. The species is extinct as wild game in the State; its only representatives are in zoos and preserves. The point of the law's application in such cases is one which is likely to come up, for preserves are multiplying rapidly. In New Hampshire, we believe, a special provision of the State exempts the Corbin game park from the operation of the law.

The buffalo of the Corbin herd, which have been for some months in Van Cortlandt Park, in New York city, were transferred this week back to the Blue Mountain Park, in New Hampshire. Only two cows remain in New York. The reason why Mr. Corbin took the animals back into his possession may be found in the fact that live buffalo nowadays are extremely valuable live stock, for which there is a ready market. The animals excited much interest in New York, and the loss of them will be felt. The Park Commissioners, we observe, have complained that the buffalo had ruined the shrubbery in that part of the park given up to them. This was at best a scrubby waste, wholly insufficient in food supply and of restricted range; and this talk about the havoc made by the buffalo comes with ill grace from officials whose misconduct of the public park affairs is in some respects simply monstrous.

The Sportsman Tourist.

CAMP PARTRIDGE.

After several months of anticipation and preparation, the Marquis and I departed from New York city, bound for Norcross, Me., on the line of the B & A Railroad. We took the Fall River steamer to Boston, and thence by rail to Bangor. We reached Norcross a little after 6 P. M., and were met at the station by our old friends, the Daiseys (father and son), and Jack Hathaway, who were to be our guides and companions for the next two weeks. We put up for the night at the little hotel, which together with the railroad station and a diminutive store, form all there is of this little backwoods hamlet. Norcross is veritably in the woods, and one need go no further to obtain good deer shooting.

We turned in early, and were up with the sun. Our boys soon had our three canoes loaded, and pretty generously loaded they were too, and by 7:30 we were on our way up North Twin Lake. The weather was glorious. We left North Twin Lake and entered Pemerdumcook, and thence across Amageges to the narrow strip of land that separates the latter from the lovely Millonokett. We stopped on the carry long enough to eat lunch, and then circumnavigated Millonokett Lake, and camped for the night within half a mile of the mouth of Sandy Stream, up which we intended to proceed the following day, and make a permanent camp some eight or nine miles from the mouth. But the first bad luck overtook us here, and the next day and the succeeding night it rained and blew a hurricane, hopelessly cutting us off from the mouth of the stream.

Sunday, Oct. 17, the wind still blew terrifically, and we concluded that we were doomed to another day here, and so christened this Camp Despair. However, about 9 o'clock the wind moderated considerably, and Jack and young Daisey determined to venture out in a canoe, round the point, and if successful, leave the canoe at the mouth of the stream and return to us on foot. They succeeded, and made two more trips with the other canoes, while the Marquis, the elder Daisey (now christened Papa) and myself walked around on the beach. We started up stream at once, and had not gone far before the wind began to blow again as hard as ever, and we gave thanks that we had made such good use of our time during the lull. On the stream we had nothing to fear from the wind. By noon we had reached the quarter-mile carry around the falls, and by 4:30 we beached our canoes at a spot on the west bank which promised well as a camping ground. It had taken us seven and one-half hours to come nine miles from the mouth, there being but one carry of a quarter of a mile; but when I recall the swiftness of this stream, filled, too, as it was, with treacherous rocks and snags, I marvel that we reached there at all. I shall never cease to admire the skill and muscle of these woodsmen as they poled and pushed our heavily-laden canoes up the wild mountain stream.

About a mile below the spot we selected a party of three gentlemen from Portland, Me., were camping. They had been here but eight days and already had their legal number of deer and two moose. We disembarked, at their invitation, for a few minutes to stretch our tired legs and partake of some refreshments. We also took a snap shot at their game. The larger moose measured 56in. from tip to tip and 13in. across the palm. The other head, while a very fine and even one, was considerably smaller.

From now on one day was very much like another, and as I look over my diary I can find but two days that differ materially from the others. These were the 19th and 21st. On the first named the Marquis, who had begun to feel blue at our continued ill-luck with the deer, to say nothing of moose, stalked and shot a fine spike horn buck in a piece of burnt land situated about a mile or less northwest from our camp. On the 21st, while on a little excursion by myself in the afternoon, I almost ran over the first bear I had seen out of a menagerie. It was only a cub and I could only see its head, for the rest was hidden behind a rock; but bringing the Lyman sights in line I let go and the cub dropped all in a heap, and so far as I know never stirred again. As I pumped in another cartridge I saw not 20yds. from my first cub another black bundle of fur and proceeded to dispatch this fellow also.

I think about this time visions of an army of bears must have been in my mind, for I am conscious of being distinctly nervous, and shot the second cub much too far back, and he started off squealing and I after him, but I had not gone ten paces before I found my progress was to be contested by a very angry Mme. Bear, who was indelicate enough to let out a series of the most hair-raising growls I ever had the misfortune to hear. Now I think, and so does the Marquis, that I must have been a little rattled, for I tried to shoot, but somehow the cartridge got jammed in my rifle and I could neither get it in nor out. I feel sure that this dowager bruin had an appreciative palate for my somewhat highly prized carcass, and when she stopped to investigate the apparently lifeless body of her offspring, I remembered an urgent engagement at camp and proceeded to keep it at the best gait the rough country would permit. It afforded the boys considerable amusement afterward to measure my footprints, the distance between which, I beg to assure you, should they ever tell you of it, they will grossly exaggerate. I have always insisted that my retreat was an orderly one and not made with undue haste.

After telling my story to the Marquis and two of our boys and fixing my rifle, we four returned, armed like pirates, to give battle to the old bear, but in the approaching darkness we could not find the spot, and were reluctantly compelled to abandon the hunt till morning. The next day at sunrise we started for the scene of action and after a long search found the spot but not the bears, and the Marquis, who had pretended to be skeptical up till now, really began to think I was playing a joke on them. But another half-hour's search disclosed the dead body of one of my cubs, and this the one I had shot last and thought I had only wounded. The old one and her other cub we never found a trace of, though we hunted all the morning. The first cub was, as I have said, apparently dead, and from the time he dropped up to the time of my departure for camp he never moved, but lay all in a heap just as he had fallen. We carried back the cub we had, and decided not to remove the hide, but to bring him home just as he was. He was a pretty little fellow, and we judged would weigh about 60lbs. The fur was in fine condition, black and glossy.

The weather continued dry and fair from now on until our departure on the 27th, and although deer were abundant on the hardwood ridges, the noisy condition of the woods made still-hunting nearly an impossibility. I had one or two fairly good opportunities, but failed to score. The Marquis was unfortunate enough not to get another shot. We saw from day to day a good deal of game, but in almost every instance caught just a glimpse of a white flag as the startled deer disappeared and left us cussing at the noise the dry condition of the leaves compelled us to make. However, we thoroughly enjoyed our life at Camp Partridge, as we named it, because of the abundance of this prince of game birds in our locality, and when the time came to break camp and begin our journey to Norcross and home, it was with a feeling that the end had come all too soon.

Though the indications of moose on Sandy Stream and immediate vicinity were abundant, with one exception we did not catch sight of any of this lordly game. The exception came to my old friend, the indefatigable younger Daisey, who while trying to locate a small pond some two miles west from the stream, discovered it rather more suddenly than he anticipated, and at the same time started an old bull and a cow who were feeding close to the shore. The distance was too far to shoot, and after vainly endeavoring to track them, he was obliged to give it up. It was evident that the moose that were in this locality two weeks before had moved off, owing probably to the hunters before mentioned, who were ahead of us, and who had such good luck. I believe it is well known that moose, unlike deer, when once thoroughly alarmed will leave a locality entirely for the time being; though, if undisturbed, they are content to remain a considerable time where they find good feeding ground, even though the spot be comparatively circumscribed.

CAMP PARTRIDGE.

On the morning of the 27th we reluctantly packed our duffle, and taking our meager supply of game—one cub bear and a spike-horn buck—and taking a farewell look at our now dismantled camp we stepped into the canoes and began the journey out As we embarked we turned for a last glimpse at grand old Katahdin, rearing his rugged and hoary head away to the north, and under whose shadow we had enjoyed such glorious days. I believe that right here, with Katahdin for a background, we have the most perfect and picturesque wild beauty on this seaboard. At all events this is what the Marquis and I thought, and the camera was constantly called into requisition to immortalize some particular view or bit of landscape that caught our fancy more than its fellows. To sort them out and name them now I fear will be a difficult task, for we neglected to keep an orderly memorandum.

WHERE WE SPENT A NIGHT.

We reached Norcross at the end of the second day; that is, on the evening of the 29th, and while our journey thence was delightful, it was also without incident of sufficient interest to record. The weather continued perfect, as it had been since that first stormy night on the 16th. Indeed, it had proved much too fine for successful still-hunting.

We were up betimes the following morning, garbed in the conventional clothing of civilization, cleanly shaved and washed. I cannot say who felt the more uncomfortable, the Marquis or myself. A few hours sufficed, however, to accustom us to the change of raiment, and having said farewell to our friends, the guides, who we felt were companions in every sense, we were soon on a Pullman train rushing toward New York, and the woods and streams had ceased to exist for us except in recollection. P. E B.

Brooklyn, Nov. 23.

THE NATIVE AMERICAN HUNTER.

VI.—STARVING AND KILLING FAT MEAT.

A good many years ago a party of seventeen Cheyennes started from the camp on the Laramie River to go to war against the Utes. They traveled along, looking for enemies, and at length among the mountains they found a Ute camp. When they came in sight of the village, however, some of the Utes saw them and gave the alarm, and before they knew it the Utes were close to them. They ran away and the Utes chased them. They kept after the Cheyennes and were so close to them that they scattered, and so they got away from the Utes, and no one of them was killed or even wounded. Three of the Cheyennes kept together, Shell, Tangle Hair and one other. They had nothing to eat, and after a day or two they got hungry and pretty soon they began to starve.

Tangle Hair had a gun, while the other two carried only bows, but Tangle Hair could not kill anything. There was game, but he could not hit it. It was in the spring, the season when the birds were sitting on their eggs, and they used to look for birds' nests and gather the eggs. Sometimes there would be young ones in the shells, but they did not mind that. They ate the eggs, birds and all, for they were starving.

They traveled on, always starving, until they reached the place where the Laramie River comes out of the mountains on to the Laramie Plains. On this day two of them were riding along side by side, talking about what they were likely to get to eat that day. One of them said, "Perhaps we will find a duck's nest." "Yes," said the other, "maybe we may kill the duck, too." Shell was riding ahead, saying nothing, but perhaps he too was thinking about eating.

Just as they went up the side of a little hill, as Shell looked over the crest he saw, a little way off on the other side of the hill, a big buffalo bull coming toward him. He dodged back and said to the others: "Here is a bull; quick! let us strip off our saddles here and chase him and try to kill him."

Tangle Hair said: "No, no; I'll shoot him. I'll shoot him."

They had quite a little discussion as to what should be done, but the two who had bows pulled off their saddles and got ready to chase the bull, if Tangle Hair should not kill him.

Shell said: "All right, go ahead. You shoot, and if you do not kill him, we will chase him, and will try to get him in that way."

Tangle Hair crept up to the top of the hill, and the others were close behind him. The bull kept coming closer and closer. At last Tangle Hair shot and the bull fell, and they all laughed they were so glad. The two who were on horseback started on the full run to go up to the bull, and Tangle Hair was only a little behind them. They all held up their hands to the Great Spirit and thanked him for having given them a bull to eat. The bull looked nice, and they were all in a hurry to begin to eat. They were excited.

After he had looked at the bull lying there, Shell rode off a little way and jumped off his horse and threw down his rein, and began to gather buffalo chips for a fire. Then he struck his flint and steel, and in a little while the fire was blazing nicely. He wanted to cook as soon as they had some meat cut off. After this he ran up again to look at the bull. Tangle Hair and the other man had pulled the bridles off their horses, and were at work gathering buffalo chips for the fire. After he had looked at the bull again, Shell ran back to his fire.

The bull was not quite dead; he could hear him breathing; and he called out to Tangle Hair, "He is not dead. You will do well to shoot him again." Then he pulled the bridle off his horse, and piled some chips on the fire. He called out once more: "Shoot him again, and begin to cut some meat off." Then he piled some more chips on the fire and ran back to the bull.

He drew his knife out and thrust it into the bull just in front of the hip-bone to see if it was fat. When he drew out his knife after doing this, a big piece of fat stuck out of the wound, and he tore off a piece of it. The bull was not yet quite dead, but still he did not move. Shell thought he would walk around to the bull's head and look at him; and he did so. He took an arrow from his quiver and poked the bull's nose with it, and just as he did so one of the other men stuck his knife in the bull's ribs.

At this moment the old bull bounced up to his feet—mad. There was a little pile of rocks a short distance in front of where it had been lying, and Shell ran for this to get on it. The other two ran for their horses, to get behind them, and the bull chased these two. As they dodged around behind their horses, the old bull caught one horse under the belly, and raised him on his horns and threw him over his back. The three horses got frightened, and ran off in one direction as fast as they could, and the bull ran over a little hill another way, and disappeared.

The men followed their horses a long distance, but at last they got around them and caught them. They went back to look for the bull, for they expected to find him lying down or dead just beyond this little hill. They could not find him anywhere. After they had made up their minds that they could not find him, they went back to where he had lain to get their saddles, and as they started on again, Shell looked at where his fire had been. It had burned out.

He said, "Now it is just white ashes, and I expected to roast fat meat on it."

They went on, and at last reached their village.

Geo. Bird Grinnell.

From Outside the 300-Mile Limit.

George Vandewerker, proprietor of the Park Hotel, Cooperstown, N. Y., was made the subject of a test case under the game laws last week. The suit was brought to recover fines amounting to $125 for receiving and serving five partridge at a private supper during the closed season. It was shown by Mr Vandewerker that the birds were purchased from an Albany dealer who had received them from a Chicago house, and as the law prohibiting the shipping of game into the State out of season applies only to a radius of 300 miles, the jury brought in a verdict of no cause.

Natural History.

THE RED SQUIRREL.

It is only by the discussion of a subject that we arrive at the truth concerning it, and taking exception to the statements of others does not necessarily imply anything more than a search for information. Very many controversies regarding the facts and theories of natural history have been pretty definitely settled in the columns of Forest and Stream, and as nothing which pertains to the great out-of-door world, that we love so heartily, is beneath our notice, I venture to engage in the defense of the red squirrel. I am impelled to do this after reading an article signed Jacobstaff in Forest and Stream of Nov. 13, in which he describes this little quadruped as "the Ishmael of the woods, the buccaneer of the forest, who lays up nothing, but robs the larder of his larger and more valuable brothers."

Now, I admit that in one respect he is an Ishmael, for truly the hand of every man—and every boy, too—is against him; but that only makes me the more willing to defend him. I do not know that he needs my sympathy, for he seems abundantly able to take care of himself, and, although protected by no game laws that I know of, manages to thrive and reproduce his species within stone's throw of his worst enemies. He even "snickers" at them and seems to court the danger of their presence, while his larger but more cowardly relatives are having palpitation of the heart and making frantic haste to get under cover. It therefore seems to me that this saucy little chap is entitled to admiration and that no true sportsman would wantonly put an end to his joyous existence. He has his faults, it is true. He is no respecter of persons and would as soon drop a pine cone on your head as on mine. He is said to be a destroyer of birds' nests and their contents; but in so doing he is merely obeying the law of nature and perhaps helping to adjust the balance she is always striving to preserve. He is hardly big enough to eat, and that is a serious fault in the eyes of some people. He is pugnacious, and stands ready at all times to whip gray squirrels much larger than himself, which we must concede is a very naughty thing. I know men who rejoice to see a small dog best a big one. or chuckle to see a bantam whip a shanghai, but who, nevertheless, cannot see anything commendable in the red squirrel that chases a 2lb. gray into an adjoining township. But then all men do not see things alike.

Friend Jacobstaff calls my little fellow woodsman "the buccaneer of the forest" Possibly if the tiny warrior could speak he might ask Jacobstaff what he was doing there with a gun, and whether a squirrel has no right to forage on his own ancestral preserve. If he happened to be a very moral and thoughtful squirrel, he might even ask Jacobstaff which were better, to take the gray squirrel's food or his life. And now what I want to know is, does the red squirrel actually steal the food which the gray squirrel has stored up? If so, I shall have learned something. I was brought up in a section of the country where gray squirrels were almost the only four-footed game, and spent more time hunting them than my parents and schoolmaster thought absolutely necessary, but I never yet saw a gray squirrel store up food in a tree or nest. I don't say that they do not do it, for the more I learn of the woods and the inhabitants thereof, the more chary I am of making positive assertions respecting them. These transactions may have been carried on when my back was turned or on Sundays, when I was not watching them. I do believe that the gray squirrels locate and make a mental note of the position of fallen nuts, for they dig down to them through the snow with great accuracy; but I have never thought that they hoarded food for winter use. If I am right—and I wish to be corrected if I am not—then the red squirrel is not guilty of the larceny with which he is charged.

Natural history sometimes gets distorted into unnatural history, and the statements concerning it are, like faith, merely "the evidence of things unseen." So it is with Jacobstaff's assertion that the red squirrel lays up nothing for himself. Time and again I have seen him do it—sometimes in hollow trees, and sometimes in the ledges or piles of stones. Not long ago I watched a red squirrel carrying nuts from the top of a chestnut tree to a hollow branch on the same tree. The frost had opened the burrs, and he was making the most of his opportunity. He made each trip in about two minutes, and if he worked many days as he did during the hour or more that I watched him, he must have accumulated a rich store for winter consumption The fact that a very hard winter thins out the gray squirrels, but makes no visible decrease in the supply of red squirrels, would seem to indicate that the latter were the more provident of the two. It is also barely possible that the red squirrels rob each other, and their own stores may have been mistaken for the hoards of the grays.

I suppose I speak for the minority when I say a good word for the red squirrel. I am told, for instance, that the farmer does not like him. In fact, I know one farmer—who lets his mowing machine stand out of doors all the year, and sometimes doesn't get his corn in until snow comes—who complains of the depredations of the red squirrels. I am really sorry for him, because, if it had not been for these destroyers, I presume he would now be rich and prosperous. I am aware that some hunters do not like them because they give notice of danger and scare the game away. If this is so, then the red squirrels should receive honorable mention in the reports of game protective associations, and great care should be taken to perpetuate their species in some localities that I know of. Furthermore, the man who cannot kill game in a forest where there are red squirrels has my sympathy; for I never yet visited a big piece of woods that didn't have in it some red representatives of the squirrel family.

In the Northern forests, where the winters are too severe for the larger squirrels, and where, consequently, he cannot steal from them, the hardy red still contrives to keep comfortable. The cold has no terrors for him, and if nuts are scarce he can adapt himself to a frugal diet of cone kernels. In summer sun or winter blast he is the same bustling, self-reliant little chap, and I, for one, do not feel that I could spare him. He is associated in my mind with the rail fence, which is his own particular highway, and with the butternut tree, which is his *dulce domum.*

In my mind's eye I can see the apple, lodged in the fork of a tree, which he has purloined from the neighboring orchard, and from which he occasionally takes a nibble to vary his diet of nuts, and also, perhaps, to ward off a bilious attack. I love to hear his policeman's rattle and watch his antics when an enemy is near. I enjoy his social ways and spirit of *camaraderie* about a camp when he has discovered that he is among friends and has nothing to fear. I can forgive his pranks, as I would those of a mischievous boy who is full of vitality that he can never stop to walk. I like to hear his toe-nails rattling on the roof of my "lean-to," and he is welcome to all the food he wants whether he takes it with or without my permission. Call him the Puck of the forest, if you will, but neither the "Ishmael" nor the "buccaneer," and let him who thoughtlessly or wantonly destroys this roguish but picturesque little animal remember that

> "He prayeth best who loveth best
> All things both great and small;
> For the dear God who loveth us
> He made and loveth all."

Arthur F. Rice.

Passaic, N. J.

Latham, Kan., Nov. 17.—*Editor Forest and Stream:* In your paper of the 13th inst., Jacobstaff speaks of the red or chicaree squirrel, as robbing the gray squirrel of his winter supplies. I know he is an unmitigated scamp, but, as he has, in the absence of his big cousin, the grays, afforded me many hours of pleasant sport, I do not like to have him painted any blacker than he is. In my experience of some twenty-five years as hunter and lumberman in the Connecticut River Valley, I never knew him to rob the gray; for the gray squirrel, in New England at least, never makes provision for winter, but depends on what he can pick up, and, I have reason to believe, trespasses somewhat on the supplies of the red squirrel. I could always tell after snow came where the gray squirrels lived, as they were obliged to dig through the snow to the ground for their food; and I came to the belief that in a winter of crusted snows some at least perished of starvation, but of this I am not sure. These are small matters to speak of, but anything pertaining to the habits of the wild creatures is of interest to me; and if I am wrong I shall be glad to be set right, and I trust Jacobstaff will accept these criticisms in the spirit they are made.

Should like to take him hunting squirrels here amid the timber along the creeks. Fox squirrels are so plenty that they are hardly looked upon as game. We have also some grays and rarely a black one, but no chickarees or chipmunks, but on the prairies there is the striped ground squirrel. Once this fall, crossing a cornfield distant from any timber, I started what I supposed was an ordinary gray squirrel. Thinking I could capture it alive, I chased it, when it ran to the grass and disappeared in a burrow. The young man who was with me at the time said it was a species of ground squirrel quite plenty further west of here.

One of your correspondents speaks of hooking and losing a large turtle. I would say for his benefit, never try to get them out of the water with the line. They lead like a lamb up to the shore, but no further. Always hook them then with the gaff if you have one, or in the absence of that take them by the tail or hind foot and lift them out. I catch a good many in the creeks here, and there is a bit of excitement when one of 12 to 14lbs. gets hold, as he stirs up the water somewhat. They are not the snapping variety, but "mighty good" for the table, and any one fond of turtle soup can get "filled up" out here in the summer months. Pine Tree.

The Yellowleg and the Hens.

Last August, on the shore of Silver Lake, Manitoba, I saw by the margin great numbers of snipe, tattlers, and other wading birds. As I drew near they arose in flocks and flew away; but as I was gazing after a noisy array of flying yellowlegs, my eyes fell on a single one that stood in the grass no more than 10ft from where I stood. It was looking at me fearlessly, and seemed to have so little idea of flying away that I got out my sketchbook and made the sketch which appears with this article As it still stood looking at me, first with one eye and then with the other, I stepped up quietly, took it gently in my hand, and put it into my game bag, intending to make a more finished drawing at home. When I reached the house I set the bird on the floor; it ran about, whistling at times, did not seem much alarmed, but it refused all food. So the next morning I put it into the yard, that it might feed itself after its own fashion. There was a number of hens about, and as soon as they saw the stranger they were all excitement. They gathered together, and with loud cackles came on, with upraised feathers, to attack the newcomer. The yellowleg was swift of foot, and eluded them once or twice, but the hen-mob, noisier than ever, at length succeeded in surrounding him, and all closed in together with evident intention of pecking him to pieces; but the yellowleg, giving one glance, I thought, of scorn at the clumsy, cackling cowards, spread out his great, glorious wings for the first time since I had seen him, and pouring out his loud thrilling whistle, so well known on the breezy sandbars, he sailed away and away in great, ever-widening circles, till bird and chant were lost in the far heights of the sky, and the hens were left to feel as foolish and mean as it was possible for hens to do.

I was much puzzled by the whole incident, and can only suppose that the bird had in the first instance been slightly stunned by a stray shot from some sportsman; while it was reviving in the grass I discovered it, the gentleness of my approach gave it no alarm, and during the night it fully recovered its faculties and its power of flight.—*Ernest Seton Thompson, in Our Animal Friends.*

The Cricket as a Thermometer.

An individual cricket chirps with no great regularity when by himself and the chirping is intermittent, especially in the day time. At night, when great numbers are chirping, the regularity is astonishing, for one may hear all the crickets in a field chirping synchronously, keeping time as if led by the wand of a conductor. When the numbers are so great the resting spells of individuals are unnoticed, but when the latter recommence they not only assume the same rate but the same beat as the rest in that field. The crickets in an adjoining field will have the same rate, that is, will make the same number of chirps per minute, but with a different beat, as one may easily perceive by listening.

The rate of chirp seems to be entirely determined by the temperature, and this to such a degree that one may easily compute the temperature when the number of chirps per minute is known.

Thus at 60° F. the rate is 80 per minute.

At 70° F. the rate is 12P a minute, a change of four chirps a minute for each change of one degree. Below a temperature of 50° the cricket has no energy to waste in music and there would be but 40 chirps per minute.

One may express this relation between temperature and chirp rate thus:

Let T. stand for temperature and N. the rate per minute.

$$T. = \frac{50+N-40}{4}$$

For example: What is the temperature when the concert of crickets is 100 per minute?

$$T. = \frac{50+100-40}{4} = 65$$

A. E. Dolbear, *in American Naturalist.*

Audubon Society Meeting.

Editor Forest and Stream:

The Audubon Society of the State of New York, in coöperation with the American Museum of Natural History, will hold a public meeting in advocacy of bird protection on Thursday next, at 3:30 P. M. The large lecture room of the Museum, at Seventy-seventh street and Eighth avenue, will be used, and an interesting programme is promised.

Mr. Morris K Jesup, president of the American Museum of Natural History and of the New York Audubon Society, will make the introductory address, and will be followed by Mr. Frank Chapman, of the executive committee of the Audubon Society, who will speak on the "Destruction of Birds for Millinery Purposes." Mr. Chapman will be followed by the Rev. Dr. Henry Van Dyke, also of the executive committee of the Audubon Society, who will make a "Plea for the Birds." The last address will be by Prof. A. S. Bickmore, of the Museum, on "Methods for the Study of Birds in Schools," and will be illustrated by lantern slides of birds and their haunts.

The occasion promises to be one of much interest, and, no doubt, will be well attended. It were to be wished that all the teachers and all the children in New York might be present. Admission will be free, but by ticket.

New York, Nov. 29.

Texas Presages of a Hard Winter.

Petty, Texas.—I am glad to note the interest taken in game protection in this State. There are clubs formed at different points for the purpose of rendering assistance to enforce the game laws, and I hope that this movement may be transmitted from county to county until the entire State shall feel the good influence of game and fish protection.

I noticed on Sept. 20 a gang of wild geese passing southward; this was during a norther, but was, I think, the earliest flight I have ever noted in the State. I also noted, some time about Oct. 25, the arrival of three slate-colored pencos or snow birds. I think this is an exceptionally early date for the arrival of these little winter visitors; and I am told by some of the old residenters that it foretells a severe winter. Countless swarms of crickets have appeared here within the last two or three months; every board or chunk of wood laying on the ground is underlaid with them, and every crevice and corner around the houses and closets are full of them; they seem to be doing no harm, and it is amusing to see the chickens chase and catch them around the yard.

The quail crop this year is not so large as last year, but I think there will be some good shooting soon. I hope to have a day or so with them soon. F. E. W.

Game Bag and Gun.

The "Brief's" Pictures.

There are twenty-nine illustrations in the current edition of *Game Laws in Brief*, most of them full-page half-tones, and all admirably printed. The book is a beauty, and well worth having for the illustrations which, Mr. Charles Hallock says, so well represent America's wilderness sports. The *Brief* gives all the laws of the United States and Canada for the practical guidance of anglers and shooters. As an authority, it has a long record of unassailed and unassailable accuracy. Forest and Stream Pub. Co. sends it postpaid for 25 cents, or your dealer will supply you.

REMINISCENCES OF AN OLD SPORTSMAN.—V.

(*Continued from page 365.*)

My friend, John Boyden, was one of the worst cases of this kind I ever met. A thoroughly good fellow, one of the most genial companions afield that one could wish for, well posted on the habits of our game birds, with rare good judgment as to the best localities to look for them, and the very best man to mark down a bird that I ever saw—with all these accomplishments he could not shoot, or rather, he could not hit, for he always shot as soon as he heard the first flutter of wings, and in almost every instance it was bang, bang! as soon as the bird was in the air. It was all in vain that I tried to coach him; his nerves would not be coached, and I had to give it up as a bad job There seemed to be some sort of an electrical communication between him and the noise of fluttering wings that caused that forefinger to double up, and my best efforts to sever the connection met with no success.

When I first met Mr. Boyden I was a very quick shot, almost as quick as he was; for in the dense covers in my section of country I had learned and profited by the lesson that a slow or pokey shot would get badly left. Upon his first visit, we drove some three miles to a favorite woodcock cover; and during the drive I was greatly impressed with his conversation, which showed that he was well up in woodcraft, as well as a capital companion. But when we got among the birds, I soon found that so far as bringing them down went he was not a success, for I gave him several fair shots, but he never touched a feather. I had taken no shots, and he now wished me to shoot, saying that this appeared to be an off day for him; so when the dog pointed, I walked in front of him and flushed two birds, and killed both of them; but he fired at about the same time that I did, and when the dog was bringing in the second one, I motioned to him to carry it to my companion, at the same time remarking that the dog appeared to know who killed the bird. He took the bird, and as he put it in his pocket, very drily remarked that the dog knew more than he did, for honestly, he knew nothing about it. After this, when I had anything like reasonable grounds to lay the getting of a bird to him, I would send the dog over with it, and although I saw him shake his head rather dubiously once or twice, he appeared rather to like it; and by the time we reached home he really

believed he had killed them, for I overheard him telling my mother that he had been a little off in his shooting, and had been beaten, only killing eight out of the eighteen, and one of those he rather thought had fallen to my gun.

An incident occurred that day which showed that Mr. Boyden could mark down a bird if he could not kill it. I had shot at a bird in a dense thicket, and was in doubt as to whether I had hit or not; but he said that he plainly saw it double up; so I sent the dog for it, and we moved on some 20yds., when the dog came back without the bird. We went to help him find it, thinking that perhaps it had lodged, but we could find nothing of it, and I came to the conclusion that I had missed. But Mr. Boyden was sure that it had fallen, and returning to the place, he stood where I had fired, took his bearings, and going into the thicket stopped beside a stump, saying that the bird fell near there. A moment later he drew it from a hole in the stump, into which it had fallen, where, of course, the dog could not smell it. This was an excellent bit of work, and a little beyond me, although I was quite an expert in this line and could nearly always locate my bird within a yard or two.

Mr. Boyden appeared to have taken quite a liking for me, and after his first visit I saw him frequently, and we spent many very pleasant days together among the birds each season for a number of years. Game was very plentiful in those days and, although he did not improve in his shooting, we usually brought in a goodly string, and so well did I learn to time my shot with his that he soon came to accept the decision of the dog without question, and I honestly believe he really thought he was killing his birds. I have seen him bring them down occasionally, but as a rule they were nearly safe so far as he was concerned. We had a point one day on a bevy of quail that had escaped us the previous day by flying across a narrow swamp, and then going, we know not where, as we failed to find them; so when the dog pointed Mr. Boyden proposed going through the swamp to a bit of high ground beyond to mark them, and at once started in that direction. He had nearly crossed the swamp when a grouse rose some 15yds. in front of him, and at the bang-bang of his gun dropped stone dead before it was 2ft. from the ground. I was watching him at the time, and he was carrying his gun with both hands in position and the gun low down and pointing straight in front, and as it happened exactly at the bird as she rose. But the most amusing part of it was that he never halted nor broke step during the whole performance, nor did he even turn his head, but kept straight on at an even step, and as he came to the bird picked it up and put it in his pocket, still keeping step; nor did he pause until he had crossed the swamp to the open, when he stopped with his back toward me and proceeded to load.

When all was ready he mounted a stump on the top of the knoll and waved his hand, when I flushed the bevy, which flew in the same direction they had taken on the preceding day. Picking up the two I had killed, I started toward Mr. Boyden, but he signaled for me to stop, and creeping to me informed me that the bevy had taken a complete circle and settled at the head of the swamp behind us, and not more than 80yds. distant. This performance was something new to me at this time, although I have since quite a number of times seen about the same dodge tried with more or less success by quail, and on several occasions I have known woodcock to try the same trick. The quail, I am satisfied, knew what they were about, but as to the woodcock having any ideas upon the subject I very much doubt.

One woodcock I remember missing with both barrels that flew in a circle and alighted within 10yds. behind me. Mr. Boyden was not near enough to shoot at the first rise, but came up and flushed it again before I had reloaded, and also took a couple of shots at it, but the bird kept on and again described a circle, alighting within a short distance of the place where it had just started from. Upon the next rise it took only three barrels to bring him down, and we found upon examination that some one within a day or two had put a shot into the left wing near the body, which accounted for the erratic flight.

There was a grouse frequenting an alder run that had escaped us several times by flushing wild and crossing into an extensive forest, where we failed to find it. We were in the vicinity, and Mr. Boyden proposed going around to cut off the bird in case I should fail to get a shot. So I waited until he had taken his position, about 200yds. from me and in plain sight, when I sent the dog into the run and kept on the outside, but had gone but a short distance when the bird rose up about half way between us and flew, quartering, toward him, not more than 4ft. from the ground. Just as he pulled the first trigger another grouse rose into the line of fire and both of them doubled up at the report. Notwithstanding the thorough work of the first barrel, the second one had to come; and as I joined him and the dog brought in the two birds, he straightened up and asked me what I thought of that for a double.

One of my warmest friends, Fred Eaton, who also lived in Worcester, frequently accompanied Mr. Boyden to my home, and we invariably had lots of fun. We were after grouse one day, and they were standing together on a little knoll, while I worked out a corner and then started toward them. When about 100yds. below them, a grouse rose near me and flew to the left, and as I dropped it I heard Mr. Boyden's gun, both barrels, and then saw him start on a run for the bird. I saw that he did not know that I was in the vicinity, and so I at once turned back in the thicket and came around to the knoll where Eaton was standing in the full enjoyment of the scene. Motioning for him to keep quiet, I hailed Mr. Boyden, who was approaching with measured stride, and asked him what was up. He did not say a word until close to us, when he finished his journey with "ninety-five, ninety six, ninety-seven"; then with a self satisfied air he exclaimed: "I call that a pretty good shot."

Eaton and I were as soon as judges and warmly congratulated him; but when he took out his knife and cut two stakes, and planted one where he had stood and then started to place the other where the bird fell we had to retire to the rear for fear that our levity might overflow and perhaps mar the beauty of the performance. I was all right when he returned, but we didn't see Eaton again for more than half an hour, and when he joined us he was on a broad grin in spite of his best efforts to keep a sober face; but he got out of it in very good shape by telling us an anecdote that he had that moment thought of. Although the story was rather funny, I fear that both of us gave it much more than its meed in the way of laughter. After this, whenever Mr. Boyden was in this vicinity, especially if some one else was present, the story was told and the ground was stepped over again. He, of course, was perfectly sincere in his belief that he killed the bird, as he did not see me and the noise of my gun was drowned in the report of his. Although I heartily enjoyed this at the time, I did not quite like the idea of vouching for so long a shot as I was obliged to do every time we came to the place; but rather than spoil the evident pleasure that Mr. Boyden took in the recital of the story I quieted my conscience with the assurance that this was but a few paces beyond what I had often heard told by those who I knew knew better, and I also knew that they did not have the excuse of attendant circumstances that Mr. Boyden did to justify them in making so remarkable a shot.

Mr. Boyden, Eaton and I were shooting in the maples, a noted resort for game in these days, and were working toward the big spring to eat our lunch, when a grouse rose wild, and crossed to another run nearly in our rear. Mr. Boyden proposed taking our game and going direct to the spring, while Eaton and I followed the bird; so after unloading our pockets, we started and soon had it, and we then followed the run, which ended near the spring; but when we arrived there we saw nothing of Mr. Boyden, and were wondering what had detained him, when we heard his gun some twenty rods away, and at once started in his direction; but before we reached there we heard from him again, and soon after we saw him in an open meadow just as he had finished reloading, and as the cover we were in was favorable, we lay low and watched to see what was up.

Taking a step or two, he kicked at a heavy bunch of grass, and then moving on to the next bunch he kicked that, when out went a quail that made for the opposite side of the meadow; but it had not gone 10yds. before bang-bang added speed to its flight, and just as it was disappearing over the fringe of hazel that bordered the meadow, Mr. Boyden with a surprised tone, ejaculated, "See-e-him-go!" Then he reloaded The performance was repeated, the only variation that we noticed was that he appeared to be still more surprised, as he straightened up and repeated, "See e-him-go!" After one more round he appeared to be weakening, and we broke cover, and approaching him, asked what was up, just as though we had at that moment come upon the scene.

"Quail are up," said he, "and they are so wild that I can do nothing with them; let us go and eat our lunch and then we will show them what's what."

It was more than three years after this performance before Mr. Boyden knew that I had any knowledge of the affair. A meeting of the Massachusetts State Sportsmen's Association, of which organization he was president, was held at Worcester, but he had been quite unwell for some days, and was not expected to be present, but he came, however, and as I saw him enter the hall all bundled up and bent over, I crossed over to him, and with a surprised tone ejaculated: "See—e—him—go!" It would have done you good to have seen the change that came over him as with a comical expression he shook hands, then pitching his cane into the corner, he took off his overcoat and said that he came there a sick man and intended to stay but a minute or two, but that his friend from Connecticut had with a few magic words effected a complete cure. He then called the meeting to order and gave us a rousing speech, that every one who heard it said was much the best he ever made. After the meeting adjourned he came to me and remarked that he had thought until this evening that he alone had enjoyed that bit of fun with the quail.

Once when coming down for a shoot he brought with him his friends, Bowker and Coburn, and as they were both jolly good fellows, we had a most enjoyable time.

In working over quite an extensive cover Boyden and Bowker took one side while Coburn and I took the other, and as a small screech owl alighted near us Coburn shot it, and after we had examined it he put it in his pocket. When we met the others it was time for lunch, and we crossed over to a spring and spreading on the grass a napkin we arranged our lunch and proceeded to enjoy ourselves. The game bags were thrown in a heap, and I noticed that Coburn was busy with them for a short time, but thought nothing of the matter. When our repast was finished and the pipes were all going Mr. Boyden asked us what luck we had, and after we had given the particulars he recounted their adventures, giving full details of each and every bird started, and when he had disposed of every one Mr. Bowker added that he had also killed a quail, the only one that they had seen, and that it was a very handsome one, and he reached for his game bag, and putting in his hand pulled out Coburn's owl.

I think that I would give more for a photograph of that group than I would for any hunting scene that I have ever witnessed, although I hardly believe that any one kodak could have reproduced the look of surprised wonder that came over Bowker as he turned the little screech-owl over in his hand, then as he emptied the bag and searched in vain for that quail amid the shouts and screams of his delighted audience, then to see him again pick up the owl and turn him around and slowly shake his head with the look of perplexed wonder still holding its own—was almost too much for us; but there was yet more to come, for as he somewhat recovered he solemnly averred that the dog pointed it and when he kicked it out of the grass it flew just like a quail, and he really thought that it was a quail, but when the dog brought it in Boyden was some distance ahead and calling to him, so he hurriedly put it in his bag with only a glance at the bird, which he thought to be an unusually handsome one, then with a deprecating glance at us as though he thought that we had made noise enough over a little thing like that, he added, in a tone that was intended to be careless as well as cheerful: "I don't believe that we would have had one-tenth part of the fun we have had over this little fellow had I killed fifty quail."

After we had rested awhile and partially digested our feast of owl, Mr. Boyden proposed that we visit a famous grouse cover some half mile away, and we at once took up the line of march in that direction. Just before we came to the cover there was a very steep side hill, and at the foot of it was a bit of meadow some ten rods in width. Our course down the hill was by a cart path that at an easy grade led down to the meadow; but when we climbed the fence where the cart path begun, somehow Mr. Boyden slipped his trolley, and before we knew what was up, over the brink he went; and such a getting down hill I never saw. He first tried it end over end for two or three turns, then he went sideways a short distance, but this did not seem to quite suit, and he doubled up and rolled part of the way; in fact, he went pretty much through the list of known gymnastic performances and then struck out into the unknown, and I will say that for striking effect and originality I have never seen the performance equaled. We stood there spellbound gazing at the rapidly gyrating form, and the least that I expected was to hear the familiar bang! bang! of his gun and to see him break himself in two. But it is always the unexpected that happens, and how he ever got down the 50 or 60ft. of steep side hill in that style without doing himself serious damage is more than I can account for; but get there he did, and in first-class condition, striking the meadow square on his feet, and headed straight for the cover without a scratch on his gun or rent in his clothes. There he was, as straight as a ramrod and marching with even step in the proper direction, with his gun on his shoulder in proper position, with not even the suspicion of a turn of his head or a single sign that anything was at all out of the common.

He had gone at least twenty steps before we recovered our faculties, but when we did come to a realizing sense of the condition of affairs, we had to hold fast to each other to keep from following his example down the slope, and as shout after shout rang out our mirth was not diminished as we saw him keep straight on and make no sign, and soon he disappeared in the cover toward his allotted stand on the opposite side.

When we came together again and began to jolly him about his tumble he put on a deeply surprised look, and in his driest manner allowed that we fellows took the queerest notions into our heads of any crowd he ever met; then in a very straightforward, off-hand manner he explained that as he had to go further than we did he took the shortest cut, adding very dryly that he found it considerably nearer than the east path and much more expeditious. Of course we had nothing more to say, and proceeded in search of fresh adventures: but to this day, whenever I hear that word "expeditious," I am again standing on the brow of that slope breathlessly watching a struggling mass of wildly gyrating arms and legs as they expedite down the hill at a speed that fairly makes me dizzy.

Mr. Boyden and I were shooting in the maples and had spread our lunch near the big spring, and were about to seat ourselves when some one flushed a grouse about 75yds. below us that flew toward us, when quick as a flash Mr. Boyden grabbed my gun, which was leaning against a tree near him, and as the bird was passing some 20yds. distant he let go and brought it down, and then pulled the other trigger, but as he had only cocked one hammer, this portion of the performance was an utter failure. Then he looked at the gun with a critical eye, poised it in his hands and bringing it to his shoulder began taking a sight over the barrels at different objects. Finally he set it down and turning to me said that it was no wonder that I killed my birds, and that any one could do so with a gun that hung like that, adding that he would have his gun altered to match mine at the first opportunity, so when the season was over he wrote me to send him my gun, which I did, and he took it with his to the best gunmaker he knew and succeeded in getting a first-class job done, but the wrong article was altered over, as I could see no difference in the result obtained. SHADOW.

SPRINGFIELD, Mass.

IN THE MOUNTAINS.

COLUMBIA FALLS, Mont.—My cousin Joe Rogers arrived here Oct. 1 from Nebraska on an extended visit. As it was his first experience in the mountains, you can well imagine, dear readers (especially those of you who have been there), something about it.

Being very busy on the ranch when he came, we didn't get off on our hunt until Oct. 30. Early that morning found us starting up the North Fork of the Flathead River, fully equipped for a two weeks' outing. We had three pack horses, two saddle horses and, above all, the camera. Joe is an amateur photographer, and I got more real enjoyment out of that camera than I did out of my gun.

On the night of the 31st we camped at the Coal Banks on the North Fork, thirty-five miles north of Columbia Falls. We saw nothing of note along the trail; got some fool-hens each day, thus we had fresh meat from the start. These were the first fool-hens that Joe had ever seen, and having just come from a quail country he found the difference was so great that he went so far as to examine their intellectual parts, to see if it was not impaired.

Nov. 1.—It snowed in the morning, so we stayed in camp till about noon. When the weather cleared up, we rustled the horses and moved across the river toward the main range of the Rockies, four miles.

Here we struck the Long brothers trapping camp. As soon as the horses were unsaddled they were turned loose, as we did not expect to use them again for a week. There was no danger of losing them, as the feed was good and they had been there before.

The younger of the Long brothers, Aaron, made us welcome. The elder brother, Ed, had gone to Columbia Falls to buy the winter supply of grub, and was not expected back for several days. After a hot supper of fat venison and coffee, we sat around the fireplace making plans for the hunt. During our discussion Aaron remarked, in a smiling way, that I had better devote my time to fool-hens and rabbits, as they were about the right size for the caliber of my rifle; a .32-40 single-shot. Aaron used an old Sharp's .45-70. He, however, had great respect for the little .32-40 when the hunt was over. Joe used a .40-65 Winchester, which is as good a rifle for all-around hunting as is made, I think. Joe wanted to kill a deer and take some pictures. I didn't care so long as we had fresh meat in camp, and as Joe had a good time, so Aaron proposed that, as he had just taken up his traps preparatory to moving them to the second camp for the winter, he might go with us, to which we readily agreed. In the morning we caught up a horse, and packed up five days' rations for three men, blankets, camera, and struck out, Aaron leading the way. After traveling four miles through the timber, up one ridge and down another, we came to the foot of Logging Creek Lake. Here we unpacked and turned the horse loose; he went right back to the horses he had left three hours before.

We saw numerous deer tracks on the way up, but no deer; about 2in. of snow was on the ground. We built a fire and boiled coffee, fried some venison, which we brought with us from Aaron's camp.

After dinner we piled our outfit into a "dug-out" (some might call it a canoe by mistake), which had been made by a trapper the year before, and all three of us got in, with the dog, an eight-months-old pup, on his first trip. The boat was so heavily loaded that an inch to the right or left would swamp us; so we sat still, looked straight ahead and said nothing, while Aaron paddled the dug-out carefully along. We couldn't stand it any longer, so Joe, myself and the dog got out and walked along the shore, while Aaron paddled the dug-out. We made six miles in about three hours. It was then about 4 o'clock, so we camped.

We soon had supper cooking and camp fixed up under a large spruce tree. Joe thought it was just fine, and as

Aaron and I had camped that way before a good many times, we thought so too.

Early the next morning, after a hearty breakfast, we got into the dug-out, with dog, rifles and camera, and started for the head of the lake, two or three miles distant from camp. Just as we rounded the last point before reaching the head of the lake, I saw a white-tail doe standing on the shore nibbling at some brush, with her stern toward us. I motioned Aaron to stop paddling and whispered to Joe to see the deer. He was holding the rifles and I the dog. Just at that moment the doe looked up and, as deer always will, looked over her shoulder and, of course saw us. She turned partly around, gazed at us for a moment and was gone; thus Joe had seen his first wild deer.

A few minutes more of paddling brought us to the head of the lake. The weather had turned colder and clouded over, so we left the camera at the boat, and each man set out for himself to get a deer. I struck up the mountains, thinking there might be some blacktail there.

After going some 500yds., I struck the trail of five or six deer that had been along the day before, and were working along the side of the mountain, going east.

Thinking they might be in or just across the ravine to my right, I decided to go up a little higher, cross and then come down the other side.

As I went about 200yds. further I struck the largest Rocky Mountain goat track I had ever seen, and I have seen quite a good many, too.

To use an expression commonly used here, "It looked as though a cow had lain down," every time it stepped. The track was fresh, going east along the side of the mountain The snow was about 6in. deep, and the more I looked at the track the more I desired to have that goat, if possible. I followed his track to the edge of the ravine, and there I could see he had gone across to the other side and on around a point of rocks, so I kept straight on up the ravine about 400yds.

I calculated then to work up to the rocks on my right and come in above him, but before starting to climb up further I sat down to eat lunch and figure as to where I would find that goat.

I had eaten about half the lunch when I heard some small rocks rolling down in a little draw to the right, which I could not see into. The dog kept looking up that way, so I suspicioned that my goat had seen me and climbed up on the rocks above, though I could not see him.

In a few minutes my suspicions were confirmed by seeing three goats appear above me, and at least 600yds. away, almost straight up. They looked down at me, and then walked along that rocky ridge very complacently, stopping occasionally to look at me. I suppose they imagined themselves as safe as a fool-hen does when it flies from the ground and lights on a limb 10 or 15ft. over your head, and cocks one eye down at you. I watched them as they moved slowly along, until they came to where the ridge ended in a peak, which rose some 300ft. straight up. There they stopped, and two lay down while the old ram stood up, looking down at me occasionally, but he seemed contented.

I hardly knew what to do; I didn't think it policy to cross over and follow up the same ridge they had gone up, as they could get down either side. I decided that taking the draw to the left would shut me out of their view, and enable me to get above them. Then by going to the left of the pinnacle, I could work around and get close to them. The snow was deeper as I ascended, and was knee-deep when the summit was reached; and to my chagrin the mountain was so steep on the other side that I could not get around.

I then had to go back some 200yds. and work to the right, under the backbone of the mountain and across the head of the ravine which came out on a level with where I saw the goats last. By this time it was quite late, and what was done must be done in a hurry. I worked along on a shelf of rock until I came to a point where I could get no further. Here I expected to see the goat close on the other side. I craned my neck as far as I could, and was rewarded by seeing a horn, an eye and about half the face of a goat which seemed to be in about the same position that I was in, and trying to see what was making the noise behind those peaks, for occasionally a small rock would slip under my feet and go rolling down the mountain. The wind blew hard and it was so cold that my mittens were frozen stiff, and as I had to take them off to shoot, it was a poor chance to shoot well; but it was the only show, so I shot, and missed of course. I loaded as quick as I could and tried it again, for the goat was in the same position. That shot was closer than the first, as the goat got out of there, and I could hear it scrambling up some rocks to the left, but I couldn't see him. I went back a few yards and down on another shelf which led to where the goat stood; not seeing anything there I scrambled back up where the goat had climbed, thus coming upon the same ridge that the goats went upon. On looking down the ridge I saw two goats working their way down, the "big billy" and a smaller one. They were about 150yds. away. As I pulled up to shoot they stopped, the small one was in the lead, and as it turned partly around to look at me, I shot. It wheeled quickly and ran down the ridge, the big goat following. I tried to get a running shot at the big one, but could not, as the ground was so uneven.

They ran about 75yds. and disappeared behind some rocks. I waited a full minute for them to come out; as I could see all the country around there they couldn't get away without my seeing them. I soon came to the conclusion that the small one must be dead, and the big goat was close by. I started down and had gone but a few steps when the big goat emerged some distance below the rock and walked across a little sag in the ridge. When he got to the top I shot, and at the crack of the rifle he jumped down the other side and was out of sight. It was a broadside shot at a distance of 200yds., as nearly as I could judge. I then went down to where I had shot at the other, and saw that I had hit it. I followed the trail and found it a few yards from where I had seen it last, lying dead on a wedge-shaped rock about 20ft. above the sag where the big goat had crossed. The bullet had entered just in front of the shoulder and ranged toward the stern. I pushed it off the rock, then went down to see what had become of the billy. I saw he was hit, but was afraid the bullet had struck too far back. I could see his trail down the mountain on the left-hand side for 200yds., then it disappeared.

As it was growing dark, I knew I would have to hurry to get off the rocks before it grew too dark, and I did not care to camp all night on top of the mountain. So I struck out for camp, and just did get off those rocks by dark. I went on down through the fallen timber, reaching the lake about two hours after dark. Joe and Aaron had got tired of waiting, and had paddled back to camp. I walked along the shore, and got to camp about two hours later, tired and hungry. After supper we talked over the events of the day. Joe had seen no game by noon, so he went back to the lake and took some photos. Aaron had shot three blue grouse, and thus ended the day.

The next morning we struck out early, and paddled to the head of the lake. I left my rifle; Joe took his rifle and I the camera; then we went up the mountain to the scene of the goat hunt. We got up there about noon, took a picture of the goat and surroundings, then proceeded to skin the game, taking the head and feet also. The head we shall have mounted, as it is a good specimen of the female. The feet are to be made into a footstool; the hide into a rug.

We then started after the "billy," which we found about 400yds. down the other side of the mountain. He was lying down; but looking at us. Joe took a shot, but shot over him; and before he could reload the goat got up and disappeared over the rock on which he had been lying. We worked our way down carefully, and could see his trail for a few yards and no more, so we thought he must be somewhere close by.

Seeing where his trail went around under a rock, we got down very cautiously on that rock, and on looking down, saw him not over 20ft. away. Joe shot him through the head, and put him out of misery.

We were going to take a photo of him, but the weather was so squally just then that Joe couldn't make a success of it. We rolled him down the mountain, and followed as best we could. On reaching the foot, we skinned out the game. By this time it was 4 P. M., and there was no chance of making camp that night, as it would be dark in an hour, and we were on the opposite side of the mountain from camp. Joe shouldered the big goat hide, while I took the smaller one together with the camera and rifle, and we started for the second lake, which is three miles above the head of the first lake. It grew pitch dark on us before we were within a mile of the lake, so that we could travel no further over the windfalls and through the brush, and we had to camp. We broke some dry brush and started a fire, and put in the whole night breaking more brush to keep it going, the ground being so steep that there was no chance to lie down.

It was a tough experience for a starter, but Joe stood it like an old-timer, and said: "A man who would hunt goats at this time of year must expect to get the worst of it."

Morning came at last, and after taking up about four holes in our belts, we shouldered packs and made the second lake in an hour, and kept working on down until we came to the head of the first lake, where we had left the dug-out.

Great was our joy to find the boat where we had left it the day before. We threw in our packs and headed for camp, which we reached in a short time.

Aaron had a pot of beans cooked, some grouse fried and coffee made, and we "went at it." Joe said it was the best meal he had ever ate in his life.

That afternoon we started back to the foot of the lake. Aaron went down to his camp to get a horse and come back the next morning to pack out our baggage.

Joe and I fixed up camp for the night, made a good bed of pine boughs, and having plenty of blankets, we slept better than we would have slept on our spring beds at home—far different from the night previous, anyway. About ½in. of snow fell that night.

Aaron came back about 9:30 with the pack-horse. He saw two deer along the trail, but didn't have his rifle with him.

He was in a hurry to get back the same day, so we hustled around and got back to the main camp at 12:30.

The rest of the day was spent in fixing up our goat hides and helping the boys get ready for an early start the next morning. They were off at daylight with their pack outfits. Joe and I agreed to stay until they came back, and see what we could do with the white-tails. There was just snow enough to see the tracks.

The snow was almost as wet as rain when it fell, and had frozen, making still-hunting impossible. Joe hunted until noon, seeing nothing like game he went back to camp and took some photos around camp. I stayed with the white-tail until nearly night, and had one of those experiences that makes a fellow feel as if he were sent for and couldn't come, having seen four deer at different times during the day, and only a flash each time; not enough to shoot at.

I began to think I had lost my "grip" on the white-tail altogether, when suddenly I saw a buck coming on a trot along the side hill below me and about 40yds. away. Evidently he was on a doe's track. I pointed my rifle at a little opening, calculating to shoot when the deer passed through it; but he stopped just before he got there, and I could just see his hips, the rest of him being behind some fir-trees. I kept the open space covered, as he would only have to take a step or two to reach the open space. But he didn't come out, so I took my eye off the sights to see what had become of him, when he gave a snort and went down the hill like a cyclone, keeping the bunch of trees between us so that I could not get a shot.

I decided it was not my day out, and feeling blue went to camp. The next day we tried it again. Joe had the same luck as before, except that he took in a couple of partridges. My luck was better, for I shot a two-year-old doe which was very fat.

The next morning I caught up an old stand-by pack-horse, Pedro, and then we started after the doe, Joe taking his rifle.

We packed the doe on to the old horse and started back. We got nearly to the creek, when a young buck jumped across the creek and ran through a little opening. Joe was behind the horse, and I spoke to him to shoot that deer. He could not see the deer from where he was, so he ran up the creek bank. As luck would have it, the buck stopped when he reached the timber. Joe shot, and away went the buck. The way he ran and the noise he made as he went through the bush, showed plainly that the buck was hard hit. We went to where the buck had stood when Joe shot; found hair and blood from the first jump. Following up about 60yds. we found the buck, dead. First we looked for the bullet hole, and found it just where it should have been—close behind the shoulder and through the heart. We dressed him and paced the distance shot, and found it was 102 paces. Not a bad shot, you will say, nor any chance for the buck ague to win, either. Joe said it was all done so quick that he hadn't time to think of buck ague.

We loaded both deer, a pretty heavy load, on old Pedro, and tied up the hackamore rope and started him for camp, while Joe and I followed behind; two happier beings would have been hard to find.

On arriving at camp Joe took a snap-shot at the deer on the pack horse, and there being some large yellow ponies in the background it made a fine picture.

We soon had a fire going in the fire-place and dinner progressing rapidly. In about an hour the Long Brothers came in and horses loaded with over 1,200lbs. of supplies, which they think will last them until next May. The rest of the day was spent in getting ready for our trip home. The next morning we left, after promising the boys we would come back this winter when the snow-shoeing was good and bring the camera with us, and take some winter scenes.

We crossed the river and went to the Coal Camp, then went on to Coal Creek Park and camped. There was a trapper camped there with whom we stopped that night. He had several marten, a lynx and three bear, the result of his falls catch. The next morning we moved on homeward.

The trail was rough, having frozen hard since we came up. Our progress was necessarily slow; but we were in no rush, so it didn't make any difference.

That night we camped under a large spruce tree, not thinking it necessary to put up the tent, as the night was clear. The next day we reached Columbia Falls by 3 P. M., and went on down to the ranch, five miles below, where we arrived in due time, found everything all O.K., as we left them.

Thus ended our two weeks' trip. We didn't get much game, as you see, but enough. I never could see the object in trying how much game one could kill in a certain length of time. But there are people who kill all the game they possibly can. Yet they are not true sportsmen in my estimation. Joe and I are going to take another hunt about Dec. 1 and see if we can get two or three whitetail to mix with the fat pig for our winter's meat. BERT.

CHICKEN SHOOTING WITH THE APOSTLES.

I WAS in Minnesota this fall, where I had gone to get rid of St. Louis weather and incidentally do a little shooting. Soon after my arrival a trainer came back from the Manitoba trials, and sent me a kind invitation to come out and shoot over the dogs he had in training, as I had, for the first time in my life, gone hunting without a dog. I felt awkward, driving off across the prairie with nothing but a gun and some plain provisions, but when I arrived at the trainer's temporary stopping place and saw a two-horse spring wagon, crated and roofed like a stock car and literally crowded with dogs, my feelings improved. Think of going a-shooting with a wagon load of dogs and a field-trial trainer to handle them! Albeit, a barrel of water to water them with, and you to do all the shooting! For, during the time I hunted with him, he left his gun at home and attended strictly to business, which with him, I soon observed, was the training (not breaking) of dogs. It was the first time I had ever seen a simon-pure dog trainer at work, and as I reflected how interesting it all was, and how many FOREST AND STREAM readers there might be to whom the sight would be equally novel and interesting, I tried to remember what happened. It must be said by way of preface that the dogs he had run in the trials, and some others wanted for this season's chicken shooting, had taken the most of his attention, and the dogs he was now starting in to work with in earnest were partly trained only. He said they were within a month of being trained.

We started across the prairie, and had driven our respective equipages side by side to within gunshot of a stubble, when Spark struck a faint scent. We stopped, and A. got down among the three dogs at once, I following at his suggestion, slipping a couple of shells in my gun as I did so; and reflecting with a slight feeling of regret that my old Parker had not been cleaned since last spring, when I won the little gold medal (not so all-fired little either) for keeps with a straight score, and then lost the $400 medal (which Mrs. Kennedy said was too big to wear, anyhow) by having four birds in succession fall just about 2ft. over the wire. Spark trailed to the stubble and pointed, the little black and white pointer backing nicely, and Matthew coming in on the swing, quickly stopping to a point. A. walked quietly among them, and patted them and spoke to them almost in a whisper. A single bird rose and I killed it, after having made that imperceptible pause which one has to learn to make in order not to tear chickens to pieces. Spark dropped, the pointer stopped, and Matthew made a start forward, which was checked by a sharp "toho!" but which was still uttered in that, to me, surprising conversational tone. Spark was a second-season dog, and had been taught, by means of the choke-collar, to retrieve, which he did at command in a perfect manner, after which the dead bird was shown to the timid pointer and the frivolous Matthew, who made much of it, and who were made much of by their trainer the while. Sent on, they made game in the stubble, and two more birds flushed wild, one of which I shot at and which went gyrating off to the other side of the grass hill, flicker fashion, where he went down with a pitch.

Shortly after this A. got down again from his seat on the roof of his wagon and watered the three dogs and put two of them in the wagon, leaving Matthew still out; and let out the Fargo dog and Luke, together with a liver-colored pointer, full grown. This last-mentioned dog went off like the wind and was soon hard to see. He is the kind of dog corresponding to a "rogue" elephant. He had been well trained by some one, sold to a stranger and had then taken to flushing, and had been sent to A. for re-training. He had two dogs of this class on hand when I was there. The other was a beautiful orange and white setter—a fine ranger, good nose, perfectly staunch on a point, but who had become, in the hands of his then owner, not simply a shot breaker, but a shot bolter. He not only ran in when the birds rose, but chased them out

of sight. We became satisfied that the first dog had taken to flushing through jealousy, for he was a very jealous dog, as will presently appear. The other dog had taken to chasing birds through excess—growing excess—of enthusiasm, for some dogs do not get their full measure of hunting passion in their early years. They both looked to me like hopeless cases, but A. said he would have them all right in a couple of weeks. And before I left the liver-colored pointer actually pointed, far off on the prairie, although before we got there he flushed the covey, a very large one. The trouble with the first of the apostles, as I have intimated, on the other hand, was that he was too much of a puppy. He would just as soon hunt butterflies as birds. Soon after the exodus of the liver-colored pointer, Matthew showed the entire catholicity of his predilections by starting off full tilt after a jack rabbit, taking Luke and the Fargo dog with him. The latter two were readily recalled by the whistle, but the dog with the biblical name did the "Song of the Brook" act.

"Now," thought I, "we will see an imitation of a dog getting a licking," as there came into my mind the conventional idea of all the whippings a dog must receive by the time the trainer has sent him back "trained."

Well, he came back after a while, and when he came near A. got down from his chariot and met him, whip in hand, not a great way off. The dog came on, apologetic, but unsuspicious. Had I been Matthew then I should have cut for home.

"Mat," in broader Scotch, "shame on ye!"

And Mat looked sorrowful. Whereupon the man raised the whip and the dog sat down. The whip was then pressed upon Mat's back—not struck, mind you, but pressed—while there floated from A.'s whistle a far-away little counterpart of his previous whistle. This was repeated three or four times, with a few sorrowing murmurs from the man in the intervals, which the dog received with becoming abjectness.

"A.," said I, "why didn't you whip that dog?"

"Man, I'd be fit to lose my occupation if I did. I've been lattin' them all chase rabbits and everything else all summer. They'd be no gude else."

Presently the liver-colored pointer was put in the wagon, and Mark and May let out; soon after which a broken covey flushed wild and went off across the level prairie, near some stacks about a mile away. The liver-colored pointer was feeling sore at being back in the wagon, and the added chagrin of birds a-flying, and the strange man with the gun missing a pretty fair shot at a bird which came back by the vehicles, was too much for him, and he inaugurated a dog fight with Spark; the other dogs, used to the occurrence, crowding to the rear of the wagon and leaving them plenty of room. A. now came up and opened the door at the rear, reached forward and dragged the culprit out by the hindleg and gave him a good trouncing. At intervals during the time I was with the outfit this performance was gone through with. The dogs in the wagon crowded constantly to the front, where they were interested observers of the hunt, which, when it became fast and furious, they greeted with howls and lamentations. And when patience gave way, the pointer pitched into Spark, or, if he was not in, then the next best fighter present. He was not a fighter at other times, but that was his way of overcoming grief, especially when A. was off from the wagon, as he was sure to be when birds were near. When we got near the stacks May found one of the birds, which flew over A., who dropped promptly to wing, seeing which, I killed the bird. May tipped me a merry wink, and looked as if it did her little heart good to see the old man take his own medicine.

We stopped at the stacks and fed the horses, watered all the dogs and proceeded to take our nooning, which consisted in a light repast of beer and sandwiches, a smoke and a long nap, the latter broken once or twice by A. going after his team, which he had unbridled and let graze, and which now and then got too far away with the precious freight of dogs. The team was a typical dog trainer's team, stopping of their own accord the minute the dogs got on a point, and safe to leave standing alone a mile away while we followed the birds. Sometimes we would signal to my driver, and he would attach the check cord to them and come to us with both teams, saving us the walk back. When we awoke from our last nap it was 4:30 o'clock; the hot wind had gone down, and it was getting cooler. We started up a neighboring stubble, when one of the broken covey rose at my left, and I killed it from the carriage, as I was on the watch for him. "Good kill," said A. So I got out and stepped it, and found it was 67yds. A. was at the bird with the dogs before I was, interesting them with it; first allowing them to find and point it, then showing them that it was dead, and allowing them to nose it; handing it especially to Matthew, the frivolous, and to the black and white timid pointer, if they were out. Then, if the wagon was near by he would carry the bird over there and pass it along the slats to the row of dripping jaws and noses stuck out sideways. Sometimes a clinging, coaxing paw was insinuated toward the bird, striving to hold the dear, delightful fragrance yet a little longer. It was a very fetching sight, and, needless to say, one enjoyed it more than killing the bird. Another spectacle was the calling out of a fresh contingent of dogs. Of course, they all wanted to be let out each time, and felt it was their turn always; but the bunch would be pushed back and A. would call out: "Mark!" and straightway Mark would come driving through or over the other dogs and "fall on his neck;" and the next instant would be 50yds. out, while at the call of "Luke!" the performance would be repeated. They all knew their names, and made no mistakes. Some time after this a rare thing happened. Two chickens were found in oat stubble. It may not be rare with others, but it is the only time I have ever had it occur. May and Mark found them. "There's nothing here," said I, "this is oat stubble."

"That little May is hardly ever mistaken."

And sure enough, she was not. She was easily the best dog of the lot. Not so large as her four clerical brothers, and perhaps not so fast as Luke, but withal a rapid and far ranger, and as sure as an old campaigner, and full as careless of stinkbirds and gophers. Added to this, she was the prettiest Gladstone setter one would meet from St. Paul to Devil's Lake in September. Two blue-black ears tinged with tan, black and tan rings about the eyes, and similarly colored trimming about the jaws and from the ears, back ticked black and white in even, dollar-sized spots. Such a dog, according to convention, would be good for nothing but bench shows and killing chickens.

One has to hunt in this way, with a whole wagon load of dogs, to come to a proper realization of the marked individuality of dogs, despite breeding and despite training. Some of those dogs will be always troublesome and hard to handle, despite the best of training at the outset; while some will be a joy forever and, to my mind, would have been, with even the indifferent training of the amateur, not bad dogs. Many of them, however, would have been wholly ruined by anything short of the gentle, persuasive treatment they received. With such treatment, however, they are good dogs, and, if their future masters continue the same reserve and gentility, will remain so. The thing which struck me all of a heap about the dog training business was that dogs trained with a mild voice and a slow temper are very apt to be spoiled by the man who gets them. He is apt to depart from what have been the methods of training and shock the poor dog's sensibilities by too much forcefulness when the man himself is all the time thinking he is not loud enough and severe enough. Another thing: this kind of training is all directed to the development of the animal's hunting sense, and he is not bothered much by whistling and commands, and if he falls in with a drill master he will be all at sea. They are using their heads, and haven't room in them to listen to Annie Rooney on a calliope. If a dog that has been trained in this way cannot find the birds without your explicit directions when you get him back from one of these B. Waters's plan trainers, it is because you sent the trainer a sow's ear from which to make a silk purse.

There might well be a sliding scale of prices for training dogs, for the timid dog requires twice the pains and is not likely to become a valuable dog at that. How would it do to send a trainer a batch of pups and tell him to train the good one and send the rest back as soon as possible? He would send you some of them before long, and the money spent on the remaining one or more would not be misspent, and you would have more good dogs in the end and more puppies to give away. Another thing, while I am at it: it occurred to me that sometimes a puppy is made timid by the strange and sometimes pugnacious company he is thrown with when he leaves home. The trainer should make it his business to protect the weak until they get their courage; and those that are not born fighters should be kept separate from the scrappers, to the end that their finely organized nervous systems be not injured in this manner. It may be that many dogs thus innocently enough come to be ruined. To a young dog that has been raised with other dogs, a dog fight is merely an incident; whereas to one that has been raised by himself, a dog fight, particularly if he happens to get the worst of it—and which, by the way, is most likely—is a tragedy, and it may affect him accordingly. This occurred to me possibly because the black and white pointer, a beauty of a dog, was very timid, and the trainer told me that several of the dogs I saw had been similarly afflicted, but had recovered. It may be a reflection upon the practice of Mr. A., and for all I know of other trainers, of housing all the dogs together and allowing the bold and strong to oppress the weak; but I am not writing for Mr. A.'s benefit, but in the effort to let others see what I saw, be it good or bad, of this dog training business. At any rate, it is a little thing to say, where all the rest is in his favor, or rather, in favor of the modern methods practiced by him. One word more: there were a number of dogs there owned by one man, who had taken it upon himself to provide food of his own choosing for them, the basic property of which was "cracklings." It was manifestly an inappropriate dog food, for the dogs fed on it were constantly getting out of order. Either the feeding should be left entirely to the trainer, or else, when the dog is sent to him, there should be sent along with it a supply of dog biscuits sufficient to last during his absence. The expense is trifling compared to the value of the dog one hopes to get back; and by this means the proper feeding of the dog is put beyond a peradventure. The trainer will be satisfied, and ought to be more than satisfied, and glad to see that none of the food is improperly or improvidently disposed of. Mr. A., before coming to this country from Scotland, was a gamekeeper, as was his father before him; and during our noonings I was much interested in his description of the way they preserve game and propagate it. He said a gamekeeper with a well-equipped "pheasantry" can raise and turn out 2,000 young pheasants per year. The difficulty in the way of this work in this country seems to be more imaginary than real. A "pheasantry," viz., hatching houses, netting, yards, etc., costs about $1,500. The gamekeeper and his two or three assistants (boys) ought not to cost more than that much per year, and with the eggs procured by the gamekeeper, who would know how to get them at small cost compared to the cost if procured from dealers, two or three years would stock a place so that good shooting could be had from that on. True, pheasants have to be fed on corn partly, but this is a cheaper and simpler thing than first appears. The corn is put in iron boxes fastened to trees in the coverts, having lids which effectually keep out other birds and all vermin. When the pheasants require other food than that which they find in the woods and fields they go to the feed box, alight on the part of it which causes the lid to fly up, take the corn out and hop off, whereupon the lid falls back in place. The young birds are all accustomed to the workings of the feed box before being turned out, and soon learn to stay in the neighborhood of the boxes, so that they do not really scatter throughout the countryside when turned out, but confine their movements to the radius of the feed boxes.

GEORGE KENNEDY.

Maine's Deer Supply.

MACOMB, Ill., Nov. 5.—*Editor Forest and Stream:* I have just returned from Bangor and Orland, Me. It is truly wonderful that the hunters have killed so many deer in the Maine woods this year. It is estimated by those who have a chance to know that there have been over 4,000 deer killed there this fall, and not less than 3,000 hunters have been in the Maine woods this fall. How long can the deer stand such a slaughter as this? I was at Bucksport, and stood on the spot where a bear was shot three weeks ago. He was killed on one of the principal streets of the town, about three blocks from the business part of the village. It is supposed that the bear strayed away and got into the town, and became bewildered.

W. O. BLAISDELL.

THE LONG ISLAND DEER FRAY.

THERE is deer hunting and deer hunting, and as time passes we of course have reason to conclude that the last deer hunting would be better than the first, and the ways of the aged deer hunter would be more dignified, correct and sportsmanlike than the ways of the young novice, with his impetuous nature and imperfect training to condone his infractions of sporting rules and plead his excuses as well. And about that center of culture, New York city, we would expect the refinement which comes from long study of sporting ethics, gentlemanly emulation and the higher training of centuries, the nobler ways of sportsmanship, and in all this we are not disappointed.

The higher sportsmanship can be seen in its full play on any Wednesday in November in the deer country on Long Island about Center Islip and contiguous country, where the deer have multiplied so satisfactorily in the past few years. This year, as all know, each Wednesday in November was an open day for deer shooting on Long Island, which, it is said, was good in itself for the sportsman who lived far and near, and particularly good for the local resident, who could kill a deer on any day, and if caught with it in his possession could plead that it was killed on the last Wednesday, thus making the law a dead letter.

So keen are these local sportsmen in deer protection, these resident sportsmen of Long Island, that they will not let an outsider hunt on any day of the week, if he should be so unwise as to take his own commissary along with him, that being a violation of the Monroe doctrine, inasmuch as it is an unfriendly act. It is a cleavage of social and sporting ties which is a total taboo. It is a violation of the tenderest feelings of the community. Against the invader the grounds are posted, the residents are unsympathetic and unresponsive pleasingly, not to say hostile. But let the visitor come in sportsmanlike fashion, stop with a farmer or resident, and he is no longer an invader, he is a guest. From having every man's hand raised against him as an enemy to the public weal when he brings along his own commissary, he rises at once to the dignity of a brother who owns the deer in common with them if he can get it first and hold it afterward.

So long as the guest stops with a farmer and pays well for his accommodations, he ranks in the neighborhood as one of the family, with all the privileges, usufruct, good will, citizenship and brotherly love thereunto appertaining; under other circumstances he is an unfriendly eyesore to the community.

Let us now assume that the outsider arrived on a Tuesday night of November, and qualified according to the honored exactions of the community by evidence of good faith. His farmer is forthwith a friend so soon as the financial arrangements are concluded, and the plan for the next day's slaughter are minutely unfolded, and the visitor then becomes an active force in the local sportsmanship, and the following is the experience of one, told in his own words:

We rose in the morning early according to our prearranged plans, and immediately started by lantern light for the grounds to get a good stand, the center of operations being at a famous cut in the railroad, an embankment a short distance east of Center Islip. Our group went to a good stand and proceeded to settle itself, when dark figures arose and in tones of firmness told us that we might move on to some other stand; we couldn't have that one, since, having sat on it all night, sleeping on their arms as it were, it was their stand. We moved on from one good stand to another with the same result, till at last, finding one of the best second choice stands, we ensconced ourselves for the deer hunt, if hunt it may be called, when a fellow waits for the deer to come his way.

As dawn crept over the world, I had a chance to observe the array of deer hunters as they are at the end of the century. They were an aggregation of groups pressed as closely as they could be one to another near the main deer pass in all the different points of vantage, whether of concealment or commanding position, or chance possibilities; and the later comers had to take what was left outside, till they made a line up and down the railroad a distance of about three miles. Some of the parties had dogs, and the dogs of one party were of different kinds, and the dogs of each party were different from the dogs of every other party. There were hounds that could trail, there were dogs that could bark, and others that could fight anything which offered; and there were still others which did any impulsive thing that added to the excitement, and still others which were calm and looked wise, but didn't know a thing.

There were men arrayed in sportsmen's costume or in the plain clothes of the farmer, which had the composite shape of straight lines and curves made by constant use, by the wear at work and at home for so many years that a change of clothes would be a change of personality and of character; there were men tall and short; lean and fat; frank and furtive; generous and selfish; gentleman and clown; some with whiskers which were but little younger than the owners were, and men who never had any whiskers at all. Some had guns which loaded at the muzzle, others had breech-loaders, and they were all lengths, bores, makes and conditions, quite as much so as the hats, caps, boots and clothing of the owners; but whatever the variegated features of the hunters, their groups, positions, etc., they all seemed to have a common purpose, and that was the killing of the deer and getting possession before any one else could do so.

There was thus a kind of good-fellowship, and yet there wasn't. They were deer hunters first and sportsmen afterward. If one was bigger and huskier and had a deeper bass voice than the other, he presumed on that to rule on what was the correct procedure of others and what he should reserve for himself; in short, he was a sportsman. The men who owned dogs at last scattered out through the country, first covenanting that of the deer killed they were to have the head and horns, the meat going to the killers. Of the three miles of sportsmen lying perdu or semi-perdu or less so, each group had an ample supply of creature comforts, stimulants to keep up their hopes, good nature or skill, according to the needs of the individual; for the same alcoholic thing seemed to answer for many different purposes, and the different kinds of bottles were only matched by the different kinds of whiskers, guns, dogs and costumes.

But the deer is started. There is a babel of confusion. There is a *qui vive* along the whole line. The elderly man with long gray whiskers has an avaricious gleam in his fishy eyes as he fingers the triggers of his muzzle-loader. The young man has a heightened color and thinks of the honor if he can but kill. The man who has some ideas of sport wonders where the old man and the young man are going to shoot, but thank goodness rifles are barred, and it is not so bad to be killed outright by a bullet as it is more leisurely by a buckshot. The deer comes toward a certain point in the

line. The railroad bristles with guns. There is a motley array of heads, shoulders and arms down the ragged line. The deer breaks through. It sounds like an engagement. Guns crack and bang and roar. Some belch forth a crash and a cloud of smoke—black powder; then a second bang—more smoke. Others crack fiercely—a load of nitro. It is as if a battle were on.

There are shouts and imprecations. The hot fusilade about the center of action spreads down the line and the guns are emptied bravely. It is a seething caldron of sportsmanship. It might seem like a war to the calm spectator, but it is only a line of sportsmen three miles long killing a deer. The deer falls. Men swarm in, charging toward it. The first to arrive claims it. The next claims it. So does the next. The first says he shot it. The second says the first is a liar. The third says he will have it and hold it, too. The turmoil thickens. Men who were too far away to kill or too far away to shoot are clamorous in their claims. There is bullying and loud talk, and hard words and bad blood. But they are deer hunters. They are out for sport. Good fellowship is elsewhere. They are the people of the end of the nineteenth century.

The killing of the deer may end in several ways. It may end in an ill-natured division of the deer among the most quarrelsome, or it may end in a fist fight, as it has done before. Some genial claimers go so far on occasion as to threaten bloodshed. But should one man kill the deer, there is the same swarm of motley, noisy claimants. They will have deer or trouble. The more gentlemanly the man, the less chance for anything but defiance, though he might kill a dozen deer. At every repetition here and there in different parts of the line, there is the same blaze of infantry fire, volleys of guns with different powders, loads, etc., the same breaking cover in the charge on the dead deer, the same unseemly rumpus, and the same common devotion to the different battles. It is a phase of deer hunting at high pressure, a kind that is without a parallel, a sport that embodies all sports, the greatest sport being the sport after the deer is killed.

The hunt being over, a few wagons loaded with eatables and fiery drinkables finished up the gentle and exhilarating display of sportsmanship, made up of men and freaks, *sui generis* dogs and oddly collected guns, and the day's sport was ended, and I had no deer. C. D.

SIX GRAY SQUIRRELS.

"Say, Templar, let's go shoot some squirrels."

"Squirrels your grandmother! We can't find any squirrels near here."

"Take our bikes then, and go where we can find some."

"Have to make a century run if you do," I protested. But Hartford insisted that he knew where there were some squirrels, and I finally gave in. Immediately after dinner found us wheeling along a little valley leading southward from the village, I with my gun slung across my back like a cavalryman, Hartford, who is something of a trickster on a wheel, carrying his tucked under one arm, except when snatching it out by way of amusement to aim at objects along the way, meantime sending his wheel over the rocks and ruts of the rough road as recklessly as a cowboy.

Four miles from the village we come to a logging road leading through pine woods out toward a high, oak-clad mountain. Dismounting here, we trundle our wheels a little distance into the woods and continue on foot, our step considerably quickened by the hoarse bellowing of a bull near by.

Three minutes' brisk walking, and the ground rises toward the mountain in a steep slope, covered with a mixed growth of beech, maple and hemlock. The bull, confident that he is master of the field, has ceased his bellowing now, and we are slackening pace, when a more welcome sound from ahead urges us into the double quick again. It is the barking of a gray squirrel. We push ahead as noiselessly as possible, but the squirrel sees us first, and starts off through the trees up the slope. We both give chase, and come out in clear pasture land at the crest of the slope, just in time to see him disappear in the top of a big oak at the edge of the woods. "We'll nail him when he comes out," says Hartford, as we crouch breathlessly down within range of the oak.

Now, some squirrels when driven into hiding will reappear after a few minutes of quiet, while others, that have been under fire a few times, have a way of wearing your patience threadbare before they venture forth again.

Fortunately this fellow is one of the accommodating sort. We hardly sit ten minutes when there is a stir among the branches. "I see him," whispers Hartford, raising his gun. At the report of the gun a squirrel drops from Hartford's side of the tree, dead, while on my side (to my surprise) two other squirrels, very much alive, rush out and tear off like mad through the trees.

Of course I give chase. There is a wall with a barb-wire attachment in my front. I tumble over it somehow, right myself and listen. Great Scott, how they go! One is snapping the branches ten rods to my left, the other fully as far, but in sight, dead ahead. I take for the one in sight, tearing my way through brush and undergrowth, and tumbling and pitching over stumps, hummocks and hollows; now catching a glimpse for a moment of a gray blotch streaking it through the branches, still far ahead; now losing sight of everything in a thicket dense as a tropical jungle.

It takes but a few minutes to decide the race. I suddenly realize, as I pause to look and listen, that nothing in the shape of a squirrel is to be seen or heard. I am thrown fairly off the trail. Crestfallen, I return to Hartford, whom I find where I left him. "Another squirrel came out of the same tree while you were gone," says he; "but he went so I couldn't draw bead on him."

"They can go a little," I say, dryly.

While I am relating my experience to Hartford, a partridge comes puttering along on the further side of the wall, but the undergrowth is so thick she gets away without a shot.

After this we move slowly up along the edge of the woods, still keeping in the clear. Soon a gray comes along through the trees, running right up to Hartford, who brings him down with a shot. Then we climb over a wall into an old road running along the base of the mountain. On the upper side of the road there is a thick fringe of small maples and birches, and beyond this a heavy growth of oak sweeping up to the very summit of the mountain.

As we work along the road, a little distance apart, I fire at a squirrel through thick branches; but miss, to judge by the manner he scurries away. There is a barb-wire fence between us, and it is useless to chase him. A little further on I miss again. But soon after, by firing two shots, score my first kill.

Meantime Hartford has fired two shots, and they seem to be getting scarce here, so we climb up the mountain a piece, among the oaks. Generally, the most squirrels are to be found where the oaks are thickest; but now, to our surprise, we sit nearly an hour without seeing a squirrel. On looking around we find the explanation—there is not an acorn on tree or ground. This is why all the grays are on lower ground. They have had to resort to the same diet as their red cousins.

Regretting the time wasted here, we move back the way we came. As we climb back into the pasture we see a squirrel in a big maple quite alone, and by a sharp run make him prisoner. I undertake to shoot him while Hartford stands guard at the foot of the tree, but the moment I see him and raise my gun the shy little fellow springs around the tree, and by shifting as fast as I try to steal around to him, keeps himself safely covered. It is when Hartford takes a position opposite me that I am able to bring him down.

Next we move down near the top of the slope, up which we ran the first squirrel, and seat ourselves by the big oak which proved such a Klondike before. I soon shoot my third squirrel here, on the ground. A little later two come into the favored oak. Remembering my previous experience here, I suggest waiting until we can both shoot at once. They seem to suspect our presence, however, and keep on the further side of the tree, playing among the branches, and meantime a third squirrel appears in the top of a tall maple at the crest of the slope. Night is now coming on and something must be done, so Hartford tries to get a shot at the new comer, while I look after those in the oak. But the wary fellow thwarts him by the same old trick of keeping behind the tree until I finally go to his aid, when he soon brings him down.

Thinking he is done for, I shout "Now for the others," and start back toward the oak. But the moment he strikes the ground he springs to his feet and darts down the slope like a fox, and with a muttered imprecation Hartford takes after him.

I shudder as I watch him go! For 100yds. the ground falls away steep as the roof of a house, broken and strewn with stumps, brush and boulders. But without slackening pace a bit, Hartford makes smooth work of it all. In three seconds he is lost to view, in a wake of flying leaves and lashing bushes; but I can still hear him pounding and crashing along, twisting and turning among the tree trunks, on and on, like a rock down a mountain, until finally the climax comes in a terrific crash in a brush heap and all is quiet.

Is he stove into kindling wood, I wonder. No, now he is up and at it again. I begin to laugh now, and presently I hear Hartford coming back up the slope. But I don't dare to let him see me laughing until I find he has the squirrel. Of course, the grays in the oak have taken their departure, and as darkness is now falling we hurry down to our wheels and start for home And by the way, brother sportsman, you who know nothing about the bicycle, but think it's something that doesn't amount to much, anyway—if you could realize half the comfort of having one waiting for you after an afternoon's hunt, with four long miles of road between you and home, some dealer would have a customer in you forthwith.

Twenty minutes after mounting Hartford and I are back in the village, well satisfied with our string of six fine squirrels. Templar.

Cornish, Me.

NOTES FROM NEW BRUNSWICK.

Now that an occasional flurry of snow gives promise of revealing the hidden haunts of the wary buck and the evanescent doe, the deer-stalker is abroad in the woods. The dead leaves and the low-lying brush are covered with a mantle of immaculate white that seems to intensify the natural stillness of the forest, and yet speaks eloquently of the game that seeks seclusion there. In places where, during the months of summer and early fall, only the eye of the practiced hunter could detect the presence of game, the hardwood ridges and the frost-bound brooks tell a tale of many chapters punctuated with the comely tracks of moose, deer and caribou. Three years ago the shooting of a deer in the vicinity of Fredericton was a feat which the local press made haste to chronicle at length; now it is a matter of daily occurrence, and is dished up in the same perfunctory style as the runaway, the market report, the muffin struggle and bazaar. In December last the writer hunted for a week in one of the best deer districts in Maine, and he believes that in the river counties of York, Sunbury and Queens the red deer are now as plentiful as they are even in the Megantic and Moose River regions of that State. Perhaps the largest buck shot in New Brunswick this fall fell to my lot on the 13th inst. After being bled and brought into town he was carefully weighed and tipped the beam at 260lbs. Before his last fatal illness he must have aggregated 275lbs. On the 24th I dragged in another buck, which weighed, after all his interior economy had been removed, 166lbs. I should think he must have been good for about 215lbs. when he undertook to run a race with the portable lead mine which I unloosed in his locality. Now, here is a nut for the knowing ones to crack. It took just one shot from a .45-90 Marlin to double up the big buck, while the smaller candidate for taxidermistic honors failed to succumb until he had been hit six times—the same rifle being used! Did I condemn the rifle and negotiate a trade with the junkman? No; I concluded that both the deer and the shooter were playing in hard luck. Don't blame the rifle; try and put your shot in the right place.

Yet I am moved by the very excellent letter of Mr. E. M. Stark in your last issue to make one or two remarks on the subject of hunting rifles. It is my opinion, after having given a great deal of consideration to the matter, that none of the popular makes of American hunting rifles are just what is required for game like the moose or the grizzly bear. I have had no personal experience with the latter animal, but I should certainly make for the nearest tree if I were called upon to face him with any rifle now made upon this continent known to me. I believe I could kill the bear, but I would not take the chances. It is undoubtedly the fact that hundreds of moose (which animal has a marvelous tenacity of life in the autumn months) are annually slain in New Brunswick, Maine and Nova Scotia with these rifles, but what about the many that are wounded and get away only to die a lingering death and make food for the bear, the lynx and the fox? It is hard enough to defend, upon logical grounds, the position of the man who kills game for sport—it seems to be human nature, that is all, but that position becomes absolutely indefensible when it involves the wounding and maiming of these noble animals, and in many cases the leaving of their carcasses to rot in the woods. Within a space of a little over a year I have come upon no less than three such carcasses in the woods of this Province—where the moose, having been wounded, could not be overtaken, and finally died of his injuries. Mr. Gordon Parker, whose exceedingly modest and entirely unvarnished tale of his experience in New Brunswick this fall appeared in your issue of the 20th inst., frankly relates the deep regret he felt at the escape of a monster moose after the animal had received, at short range, four .45-70-500 bullets. The fault was not with Mr. Parker, who is a skillful marksman; it was with his gun, which was not sufficiently powerful for the work it was called upon to do. Mr. W. H. Allen recently informed me that in the rump of one of the moose shot by his party on Little River, last September, they found a .44cal. bullet, which had evidently been placed there some time before by one of the disciples of Col. Clay. The bullet had penetrated the flesh to a depth of about 4in. and then become encysted. One of the most intelligent guides of Maine stated to me that he believed that in the early autumn months hundreds of deer were annually killed by sportsmen in that State, which ran off and either died where they could not be found or else suffered for many weeks until they had recovered from their injuries. In the November number of *Outing* is an account of a moose hunt in Quebec, by Dr. Parker Syms, in which occurs the following instructive paragraph:

"His tenacity of life was something wonderful. He did not succumb till he had received nine wounds through the chest, any one of which would have proved fatal eventually. After shooting him several times at very close range in the hope of dispatching him, Jabotte said it was no use; that he would not die while we were in sight because he was 'mad'; so we withdrew behind a clump of bushes. After awhile the moose ceased to struggle."

Facts like these can be multiplied *ad libitum*. They show that it is the duty of the sportsman who does not wish to stand as a criminal at the bar of nature and humanity to provide himself with weapons by which such needless suffering and destruction may at least be reduced to a minimum.

Briefly, my idea of a gun for big game, especially for moose, is one that would combine the excellent repeating mechanism of the standard American rifles with the deep grooves, quick twist, heavy patched bullet and ample powder charge of the typical English express rifle. Such a weapon would have a very flat trajectory, immense penetration and shattering force, and would admit of rapid firing. This is an age of improvement, and it is a mistake to suppose that any one individual or combination of individuals knows all there is to know. Let our good friends, the Marlin or Winchester people, give us a .45cal. repeater with the Henri rifling, say with 85 or 90grs. of black powder and 450 or 500grs. soft lead bullet (with either paper patch or hardened base), and we will not hear of so many moose getting "mad" or dying of peritonitis.

One of the finest caribou heads that has come into Fredericton this fall is the property of one of the youngest of our local sportsmen—Charlie Randolph. Charlie went into the Cains River district a week ago to-day for a three days' hunt, Arthur Evans, of Zionville, acting as guide. They came upon the track of a caribou, followed it four or five miles to the Bantalorum barrens, where Charlie secured a raking shot at a range of about 50yds. The weapon used was a .45-85-480 Martini rifle. The bullet struck the caribou slightly in advance of the right hip, passed through and pulverized the left shoulder, and went on its way rejoicing. The horns were very high and symmetrical, and had twenty-six points.

Mr. Stark is quite correct in saying that the best caribou heads to be found anywhere come from Newfoundland. Just north of New Brunswick, though, is a portion of the Province of Quebec known as the Gaspe Peninsula, where sportsmen are seldom seen, and where caribou, little if any inferior to those of Newfoundland, can be found in countless numbers. The range they inhabit is known as the Shikshauk Mountains, which are easily accessible from Campbellton.

Frank Bartlett, an excellent guide, who resides at Doaktown, is in town to-day with three unusually good specimens of caribou, two of which he shot a few days ago. The finest pair has twenty-six points. He reports that caribou are now very plentiful on the barrens; he saw last week a herd of fully fifty individuals, none of which, however, had horns of any magnitude. The male caribou sheds his horns earlier than the moose or deer; by the first of December they have all been shed except those worn by females and young bulls. The sportsman who wishes to hunt caribou on the snow can hardly do better than locate at Mr. Bartlett's ranch, where he can hunt on the barrens every day and return to the house at night.

Mr. Albert Massie, one of the keenest rifle shots in the Province, and most popular of Canadian commercial men, has just returned from the Nepisiguit region, where he brought down a big moose on Tuesday last. The antlers measured 53in. and bore the unusual number of twenty-nine points.

Jordan Prosser, of Windsor, the local papers state, shot a large moose last week on the Nashwaak, back of Hartland, the horns measuring 49in. and being perfect in their form. The head was purchased by George Saunders, of Woodstock.

Mr. Carnall, the St. John taxidermist, has this fall received for mounting twenty-three moose heads, nearly all of which were shot in this Province. The widest head measured 54in. The best caribou head came from Milton Dayton, of Edmundston, county warden of Madawaska. Mr. Dayton will this winter have eight or ten special wardens patrolling his district to prevent the killing of moose in the deep snows.

John Fullarton, a lumber cruiser, has just returned from the head waters of Rocky Brook, where he has been for the last month, locating parties for the winter's operations. He reports 18in. of snow now at that place. John had a lively encounter the other day with a bull moose. He was going through a thick clump of bushes which were loaded down with snow, and came in contact with the moose, which was in there for shelter from the storm then raging. John, when he saw the moose standing his ground, backed up, with the moose closely following him and had to climb a tree and remain there for nearly

three hours, when the moose seemed to tire of standing guard and left John to descend, much cramped by his awkward position.

It is still persistently claimed by people living on the Tobique that Hon. John Costigan has shot a moose up there with an antler spread of 70in. As the honorable gentleman is still encamped on the headwaters of the river, and has not yet produced the head, it is impossible to verify the statement. I am skeptical.

Dr. Heber Bishop, of Boston, with his friends Messrs. Charles Williams and Seth Perkins, are expected to reach here Dec. 3 for a trip to the Crooked Deadwater region.

Some excitement is being caused at Harvey Station by a large animal, supposed to be a panther, which has at different times been seen in the woods near the Lake road, about two miles from the station. There is talk of organizing an expedition to hunt it down.

Now that deer are becoming very plentiful, the "lucifee" is taking a hand in. Henry Payne, a Kingsclear farmer, trapped an unusually large one last Saturday, weighing 43lbs.

John Sargeant, Roger Lawlor and Joe Petrie, of Newcastle, had excellent luck on their recent trip to the goose grounds of Tabusintac. They brought home over 100 geese and brant.

Fred Townsend, of Buffalo, and William Chestnut, of this city, have just arrived from Arthur Pringle's grounds on the Northwest. They brought out five bull caribou, the best spread having twenty eight points. William bagged two fine others with his rifle. They saw thirty-two caribou on the trip and report moose quite scarce. There is nearly 2ft. of snow in the Miramichi woods, which, as they were not provided with snowshoes, made traveling very laborious.

FRANK H. RISTEEN.

FREDERICTON, N. B., Nov. 26.

CHICAGO AND THE WEST.

Cause for Thanksgiving.

CHICAGO, Ill., Nov 25.—I was just sitting around and figuring to-day whether I ought to be thankful for being alive this year, and I have concluded that I ought, by a large majority, and so ought everybody else who has had anything like so lucky a year. In the first place, I had a good trip after big game, and got my sheep and goat, and had a lot of snowshoe work, which I like so much. Then I came home and had a fine trout fishing trip in Michigan and a good bass fishing trip in Wisconsin. In the fall I had a nice day's duck shooting in Dakota and a half day of very pleasant chicken shooting in Minnesota. Now I am just back from Michigan, where I helped kill some very nice bags of ruffed grouse and quail over good dogs, and in this case, as in all the foregoing cases, with the pleasantest of companions. This, I submit, is enough to make any decent fellow a whole lot thankful. Incidentally, I have also occasionally done a little work as I went along, and I hold it to be cause for especial thanksgiving that this work has not injured my system nor undermined my constitution to such an extent that I feel incapacitated for the duties of another year. I hope for as large a slice of the FOREST AND STREAM luck for every other member of the family.

Hunting Calamities.

Nov. 27.—At Iron Mountain, Mich., a point much visited by deer shooters, the record of deer hunting calamities has this season been unusually startling. The local newspaper has the following calm comment on one of these sad affairs:

"Fred Cawling, aged twenty-six, one of the most popular young business men of this city, was shot dead four miles from Channing yesterday by a hunter named Wamsley, who mistook him for a deer and shot him in the back, the ball passing through his heart, causing instant death. Cawling was manager of Wright Brothers' cedar business and had been in the employ of the firm for eleven years. This makes the fifth fatality since the deer season opened a week ago."

The record of deer shooting accidents is quite as bad for Minnesota as for Wisconsin, indeed perhaps worse. A gentleman recently returned from Minnesota says that a man was accidentally shot and killed near his camp, although he did not learn names or particulars. Mr. Charles Christadoro, of Minneapolis, Minn., in a personal letter to a friend, which the latter took the liberty of showing to me, speaks very forcibly of the growing number of accidental shooting affairs in the deer hunting country. He mentions more especially the increased danger from the new small-bore nitro rifles, and his words are so pertinent that I make bold to quote them:

"How the boys are plugging each other in the woods with .303 bullets! It's all a man's life is worth to go hunting deer in the Minnesota or Wisconsin woods. Anything that moves 'goes'; so the only hope for a man is to stay out of the woods, and buy his venison and then say he shot it.

"To put a .303 smokeless in the hands of a 'Greek' and turn him loose in the thick woods is a crime. And while the 'Greek' would pump all day at a deer and miss every time, he shoots the other hunter plump through the head or heart every time—a dead shot every time.

"Well, as I don't intend going into the woods, I presume I need not lie awake nights over it, I am sure. But it is tough on a fellow who wants to spend a day among the pines near home stalking deer. I guess the law will have to put them all back to bows and arrows, or perhaps buckshot blunderbusses."

A St. Paul, Minn., newspaper prints the following dispatch from Maine, under the pertinent heading "Needed in Minnesota":

"AUGUSTA, Me., Nov. 10.—A bill will be presented to the next Legislature to punish sportsmen who accidentally shoot or kill men in the woods. The measure is prompted by the number of fatalities which occurred during the present season. It is claimed that the hunters who kill persons are as a rule green sportsmen, who become excited and blaze away at any moving object they may see."

There are four States, or, if we include New York, five States which are overrun by shooters during the deer season, these being Maine, Michigan, Wisconsin and Minnesota. I do not know how many fatalities have been recorded in Maine and the Adirondack country. I presume the deaths in Wisconsin of men shot for deer would be more than five, and I believe Minnesota this year furnishes even more cases than that of accidental shooting. The total number of such casualties would be startling were it known, though, of course, it is the exception when the facts of such an affair become known, the matter usually being hushed up as speedily as possible. Of course, it is of no use advising caution or giving advice, and about the only thing clearly to be deduced is that the struggle for the remaining American game is a very hot one

As to the number of deer shooters who went out this fall, to call them an army would not be stating the facts too much in large. The one city of Minneapolis, Minn., outfitted over 400 men for deer hunting trips in that State the past month. The number of men who went to Minnesota for big game shooting this fall no doubt ran up into the thousands.

Non-Resident Kickers.

So much for the struggle for the remnant of the game. The other side of the picture, the struggle to give all these people, resident and non-resident shooters, something to struggle over, is hardly so large, numerically speaking. The closing days of the Minnesota season were hard ones for Agent Fullerton, and he met the non-resident kicker in great abundance. The latter gentleman was usually a man who had come into Minnesota free of license, and killed his game, and who was then unwilling to comply with the reasonable State law asking him to accompany his game to its point of destination. On one day Warden Fullerton seized five different parcels of venison. One case especially angered him—that of two Ohio deer hunters who killed eight deer in Minnesota and consigned them direct to a St. Paul commission house, which destination, it is cheering to remark, they never reached. Three other parties consigned deer to St. Paul commission houses and also lost their venison. On the whole the work of protection was thankless, as it always is, though perhaps it did its share in the long, hard lesson of common sense in game laws.

How the Dealers Observe the Law.

Under the Minnesota law, partridges cannot be shipped. The following circular, sent out by a St. Paul commission house, will show how those law-abiding business men, the game dealers, observe the statutes enacted for each and every citizen of the State:

To Partridge Shippers: The weather has turned quite cold and partridges ought to arrive in good condition. We have a good stiff, firm market and a good demand for undrawn birds. Drawn partridges sell slowly at $3.50 to $3.75 per dozen, while undrawn partridges sell readily at $4 per dozen. We want you to ship us all the birds you can. Pack in light boxes, billing direct to me. Do not put your name on the tag; simply advise me by mail of your shipment, and it will be promptly and safely attended to at this end, and we will remit you just as soon as the game is received. You know the house is perfectly responsible, and that whatever we tell you you can depend upon. Game of all kinds is in good demand, and we can handle all you can ship. Do you intend handling venison this season? If so, write me for special shipping instructions.

Under the Minnesota law, venison found in the possession of dealers is liable to confiscation, and possibly this interpretation of the statute will henceforth be enforced. Here is another circular, from another St. Paul commission house, which will further show how the law-abiding game dealer observes the law of his State:

Partridges very scarce. We must have more to fill our orders. Ship in tight boxes and use our numbered tag.

Venison Shippers: You are well aware that the season this year opened Oct. 25, running to Nov. 15, with five days after that to clean up, giving you a total of twenty-five days. You can either make your shipments direct to me or ship to your own order by express. Secure from the railroad company an express receipt showing that you made this shipment; mail the express receipt to me and we will be able to get shipments promptly. If you do not accompany it be sure you mark your tags as follows: "Owner accompanies." See that your venison is properly handled—we want it—any amount, and will be able to get you good prices. Ship all you can. We want every bird and every saddle you can get. Guarantee you top prices and returns same day goods are received.

How the Indians Observe the Law.

It is stated that some of the leaders of the Chippewa Indians of Minnesota believe that the Indian Commissioner has exceeded his authority in his order obliging the Indians to observe the game laws of their State. They claim that the Commissioner thus commands the State of Minnesota to disregard the terms of the treaty made with the Indians when they ceded their land. Some of the Indians will obey the order, but others will not, and the situation remains somewhat involved. It takes a fighting man to handle the work of game protection in a State like Minnesota, which is the scene of one of the intensest struggles for the remnant of our American game. It is not likely that we will find a better man than Warden Fullerton to push this fight, and I hope that he will be continued in office. Recently he summed up some of the difficulties of his position in the following statement, which is very well worth reading and remembering by sportsmen who are interested, or who pretend to be interested, in matters of actual game protection.

"With the dealers offering a big premium for game, the people up North in sympathy with the violators of the law, the express companies aiding all they can to get the stuff into market and protect the shippers, supposedly honest sportsmen taking a hand in the business, Indians killing our wardens for interfering with their wholesale schemes of slaughter, and everybody turning in and abusing those who are trying with all their might to enforce the law, one can gain some idea of the difficulties the Fish and Game Commission of Minnesota is laboring under to enforce the game laws of the State. I tell you it is a very discouraging state of affairs, and I am dead sick of my job."

How City Officials Observe the Law.

The following paragraph, taken from the Minneapolis *Journal*, is sent to me by Mr. T. A. Devereaux, of Syracuse, N. Y. The latter asks a few pertinent questions about the non export law and the twenty-five birds limit law. The item will go to show the way in which the State game commission is upheld by its resident brethren, and will incidentally show how the city officials of one of the main cities of Minnesota observe the law they are sworn to respect at home:

"The City Hall Nimrods who have been dodging deputy game wardens around Lake Irvine, near Church's Ferry, N. D., returned yesterday morning. They bagged 537 ducks, 538 geese and twelve cranes. The party managed in some way to bring their birds home. Frank T. Moody did the most killing, with Bob McMullen a close second. All are veteran hunters, however, and each one gave a good account of himself."

How South Water Street Observes the Law.

Mr C. H. Jones, of Chicago, also asks some interesting questions about certain features of the supply of venison in Chicago.

"Can you," he asks, "explain the following facts for me? Coming to business this morning, I counted ninety-one deer carcasses on South Water street. What a wholesale slaughter this must mean, when we consider that these are but a 'few of many!' How do they succeed in getting them out of the States where killed, when we poor sportsmen cannot bring home our one honestly killed quarry that has undoubtedly cost us at least $100, counting license, guide, etc., etc.? Is this the game protection which we are advocating and paying for? A reply, giving me a little light on these subjects, will be greatly appreciated by an old reader and lover of your and our old FOREST AND STREAM."

I wish that I or anybody else could give Mr. Jones some satisfaction on this head. Of course, the laws of States other than Illinois are violated in the case of this venison shipping. Wisconsin, Michigan, Minnesota and other States all lose more or less game, smuggled out by the freight or express companies contrary to the State laws. It has been found thus far practically impossible to check this absolutely, though it has been shown capable of modification and very great restraint, as witness the record of FOREST AND STREAM'S reports on these matters. The one conclusion almost irresistibly forced upon a thinking man is that we shall always have illegal game and a sportsmen's constituency robbed of their rights, until the platform of FOREST AND STREAM has been established—"Stop the Sale of Game." If it were illegal to sell this game in Chicago at all, the enforcement of the law alike in Chicago and in Wisconsin would be a simple matter. It is the loopholes that make laws inoperative.

Albino Deer.

Only one albino deer has been reported for the West this fall, that killed near Augusta, Wis., by John King, of Milwaukee, Wis. This animal was about two years of age, and a very fine specimen of albinism, being pure white. It is on exhibition at Higgins's place, on Mason street, Milwaukee.

Ducks.

Mr. M. J. Eich, of Chicago, is back from his shoot at Hennepin Club, on the Illinois River. He averages about a dozen birds a day, his biggest bag being twenty-one, mostly mallards. The Powers brothers, of Decatur, who were also shooting at Hennepin Club, on one day killed ninety-one birds, mostly mallards, two of them—one being Chan. Powers—bagging also fifty-eight on one day and thirty-nine on another.

Good Hunting.

Mr. D. J Hotchkiss, of Fox Lake, Wis., writes very nicely about the game resources of his region, which has been earlier mentioned as a very fair one for all-round shooting at small game. He says of the season just ended for this fall:

"The duck season is closed here, the lake having frozen up yesterday, and the birds have gone South. We had very good shooting, especially in the early part of the season, but the latter end was so full of mudhen hunters that they scared the ducks off as fast as they came on the lake. There have been lots of squirrels and rabbits shot here this fall, and no one could ask for better territory for that sport. We also find quite a few grouse in the woods, and jacksnipe and yellowlegs were fairly plenty. Taken all around for ducks, prairie chickens, grouse, snipe, squirrels, rabbits, etc., I don't know where one can find a more satisfactory section for sport if a man is satisfied with a reasonable amount of game."

Gossip from Gokey.

I have received from Gokey, of Dawson, the following interesting gossip on game matters in Dakota. It will be observed that, to his other accomplishments, Judge Gokey adds that of *chef de cuisine*, and I have no doubt his recipe for cooking a duck will be read with interest by many. Without wishing to subtract anything from Gokey's reputation, I want to say that when we were at his house for dinner we all supposed that it was Mrs. Gokey who cooked the ducks. Be that as it may, we may regard the advice as *ex cathedra*. Gokey goes on to say:

"The season for ducks and geese is closed, and the birds have left. There have been more ducks and geese here than for the past eight years. The geese were not hunted on the lakes, and this made the field shooting better.

"A party of three came from Fargo and hunted with me, and one afternoon we got eighty-two geese. Bags after bags have been made of over fifty geese.

"Mr. S. S Lyon, Mr. George Scofield and Mr. Nichols, all of Fargo, were with me a few days and bagged over 200 ducks and a few geese.

"Mr. George Pierce and Mr. John Rinchler, of Fargo, also were here and had good shooting. A funny thing happened to Mr. Pierce: he shot a goose which fell 300 or 400yds. from the pit and started to pick it up, but saw the bird trying to fly. A big wolf was chasing the bird, and soon caught it and ran off with it. Mr. Pierce said: 'D—n that dog!' and started after it on the run, but the wolf got away with the goose all right. He did not see at first that it was a wolf.

"Mr. William Rinchler and a friend, both from Fargo, shot with me one day and we bagged thirty-seven fine geese, nine of them Canada honkers, some of which weighed over 14lbs. each.

"Mr. W. A. Wheatley, of Memphis, Tenn., wants me to tell his wife how to cook a duck, and I will take this way of telling him how we do that here: Take a good fat duck and dress it in good shape, and put it to soak in salt water over night. In the morning take it out of the salt water, and if you wish to cook it at once rinse in cold water and dry on the outside. Then get the oven very hot before the duck is put in. Let it cook twenty-two minutes not more than twenty-five. The duck must not be stuffed, but seasoned to taste, and in this way you get a duck fit for the royal table.

"Mr. Wheatley also wishes to know what is good feed for ducks. The best feed is wild rice and wild celery, the latter best of all, but it will not grow in all waters. Wild celery wants a sandy bottom and so does wild rice, to grow well. I have stocked several lakes about here with wild celery and it all is growing well, and lakes where the canvasbacks and redheads once never fed now have those birds all the time. The way I did was this: I went to a large lake where the wild celery grew and pulled up lots of roots, and picked up lots of bulbs, and took them to the lakes I wanted to plant. The bulbs I pushed down in the bottom, and the same with the roots, and I found the next season that it had all taken root and was growing in good shape. In three years my new lake was full of wild celery and full of wild ducks, as you know the canvasbacks and redheads are very fond of wild celery and will stay where it is."

Personal.

Dr. Clarence H. Wright, of Chicago, has returned from a hunting trip to Itasca county, Minn., and describes the Big Fork country as a delightful region. He saw some deer and also plenty of sign of moose, although no moose were lo-

cated. Of ducks, fish and partridges the party had abundance and the country is spoken of as abounding in small game. Dr. Wright this winter goes on a trip to the Isthmus of Tehauntepec, and will investigate the sporting resources of that somewhat remote precinct.

Mr. George A. Losekamp, of Billings, Mont., has returned from a trip to Lake Brevoort, near Moran, Michigan Upper Peninsula. He and his friends had very successful duck shooting.

Mr. A. W. Adams, of Chicago, leaves next week for his regular annual trip to Texas, where he is in the habit of

THE SPOTTED SANDPIPER.
From the Original Portrait by John James Audubon.

passing the winter. He will try Dallas and Ft. Worth, then Waco and San Antonio, until he finds a climate that suits him.

Mr H. S. Canfield, formerly of Texas, but now of Chicago, will be one of a party of nine men who will start for the Klondike region early next spring. They go by boat from Seattle to the mouth of the Yukon, and will hunt bear along the west coast of Alaska and in the Copper River country. They take their own steamer, the Diana, 42ft. length, with them by rail from Chicago to Seattle. The expedition will be called the "Diana expedition," and will be one of the best equipped that ever left for the gold country of Alaska. They carry along a diamond drill and a suction dredge, with a year's supplies to each man. Mr. Canfield, who is an old shooting companion of Oscar Guessaz in Texas, has written the latter and asked him to join the party. It is not unlikely that Mr. Guessaz and his Alaska partner, Dick Ware, will modify their existing plans and join the Diana party. I am also asked to join and I am trying very hard not to do so.

Mr. C. A. Bramble, of Buffalo N. Y., often known as "St. Croix" in the columns of FOREST AND STREAM, has come to Chicago, and will probably engage in journalism here

Exclusive in "Forest and Stream."

Mr. Stanley Waterloo, author and journalist, of Chicago, has been having correspondence with parties in Central America, and says that he has discovered that the wild pigeon, which was once so abundant in this country, is still to be found in great numbers in Central America, to which country it seems to have migrated for keeps. A large roost is known in that country. E. HOUGH.

1206 BOYCE BUILDING, Chicago.

RHODE ISLAND GAME.

PROVIDENCE, R. I., Nov. 29.—*Editor Forest and Stream:* Representatives of the Game Protective Association have been waging an active campaign in the southwestern part of this State, known as South county, against violators of the game laws. The presence of spies and the prosecution of offenders have aroused a determined opposition among the farmers of that section. Recently four farmers were arrested in Charlestown, charged with erecting, setting, repairing, maintaining and tending certain trap, net and spring snares for the purpose of taking, killing and destroying quail and partridges. The trial took place in the District Court before Judge Whipple at Westerly Friday. There was not sufficient evidence to convict the defendants. Hereafter the

THE NIGHT HERON.
From the Original Portrait by John James Audubon.

farmers propose to fight every case in court. They assert that they have a perfect right to hunt and shoot upon their own land in whatever manner they wish, and they consider the interference of the special officers as uncalled for. This view of the matter will be vigorously opposed by the Game Association, for upon the decision in a great measure depend future prosecutions and the preservation of game under the existing laws. One thing, however, is positive: should the present law prove inoperative in this respect, the coming session of the Legislature will be called upon to enact suitable laws to cover the loophole.

This State is getting quite a reputation for freak adventures in the game line. A week ago a deer was seen in the pasture land about Limerock, and later it was found dead on the banks of the murky Moshassuck, a bullet having struck it and killed it after it had escaped from the hunter who was loth to allow a deer to be roaming in this little State. Then two fishermen off Newport found a deer off Gooseberry Island, about two miles out to sea, and after two hours' hard work succeeded in capturing it alive and took it to Newport. Not to be outdone, George Johnson, a hunter, of Kenyon, succeeded in killing two black otters in Great Swamp, Shannock. With the persistency that game is followed in this State, there is no fear that it will become overstocked in the near future.

Frank Hines, a well-known Cumberland huntsman, with two companions, have returned from a two weeks' hunting trip in the Maine woods. They brought home with them three deer and two caribou. This did not represent the entire capture by them, as they claimed to have killed nine deer, three caribou and a moose.

The Roger Williams Park, of this city, has recently been presented with a valuable addition for its menagerie, the famous collection of rare East Indian animals from O. H. P. Belmont. This includes a herd of sacred cows (zebu), Indian deer, muntjack deer, white ring-tailed monkey, black Indian monkey, Reese monkeys, Egyptian storks, jungle fowl, mongoose, Mongolian ring-necked pheasants, macaws. In addition to the Belmont collection, the menagerie includes an elephant, three moose, twenty-seven deer, a tiger, three lions, pair of leopards, pair of jaguars, pair of panthers, pair of ocelots, a black bear, striped hyenas, raccoons, monkeys and a peccary.

The first snowfall of the season set the fox and rabbit men on edge, and for a couple of days the woods were merry with the music of the hounds. It was rather a dry snow for tracking, and the day following the storm was too cold. Nevertheless the hunters were on hand for the first snow-hunt. A warm spell followed, and those who cared to run their chances of getting wet on Friday succeeded in having the best day of the season thus far. Edgar Roberts, a former resident of Pawtucket, and Jason Lawrence were out one day, and secured seventeen rabbits. On Friday Mr. Smith, of the Protection Beagle Kennels, of Woonsocket, and John Dennet, of South Attleboro, had a day with their crack dogs and killed ten rabbits. W. H. M.

MINNESOTA MOOSE.

Editor Forest and Stream:

Knowing your many readers would like to hear something of the results of the five days' open season on moose in Minnesota, I have taken the trouble to inquire how many have been killed and brought into Duluth. The first day seven were offered at the markets, showing that the wily hunter must have known just where the moose called for breakfast; and each day until the season closed every butcher had moose on sale. One morning as I came by the market, two moose, one large black bear and twelve deer hung out in front.

I find that thirty-one moose in all have been killed around Duluth, eleven at Grand Rapids, and eight at Tower. But the majority were two and three year olds, and very few good heads have been secured; seven were all I saw that one could call first-class, one of them a very fine one. The weather maker must have been in with the moose, as the fall has been simply ideal, with but little snow, and so dry that it was next to impossible to still-hunt.

The many parties from other States, together with the local hunters, have been reinforced by every boy big enough to carry a gun; so that hunting has become more a game of looking out that you don't get shot than of shooting the game. A man from Indiana was killed by one of his own party at Grand Rapids, and an old sportsman told me he had twelve rifles pointed at him in less than a mile while walking up an old trail, and finally he shouldered his gun and sneaked back to camp. With so many hunters, they have kept the game moving, and those familiar with the crossings and trails have been the lucky ones.

I have no idea of the number of deer killed, but it must have been enormous. I have changed somewhat in my opinion of the law prohibiting the shipping of game out of the State, and don't see just how it could be managed. So many sportsmen come in here from the East, spend their money and time, and after killing game are unable to take any of it home, that it does not seem right. All of us here would be in favor of having the law read that each sportsman should be allowed at least one deer to ship to his home; and yet the trouble would be that that market hunting pest would get in and spoil all. A physician friend of mine who lives in Wisconsin came in from the Bow String country with a lot of game, and although, as I know, he would sooner cut off somebody else's leg than sell a head of it, he had to leave it behind.

And another change of opinion I have, and that is that the 30-30 is plenty big enough to kill any game in America. Last Sunday I saw Dr. Magie kill a buck at 340yds. with the little popgun, and it made me feel a little cheap after lugging around a 40-65, and the buck turned sideways and seemingly smiled after I had plugged away at him four times. And I vowed right there that I would never carry a heavy gun again. DR. N B. MCNULTY.

In Virginia.

WOLF TRAP, Va.—*Editor Forest and Stream:* The article of A. D. McCandless in FOREST AND STREAM of even date reminds me of the condition of game protection in Virginia. The Virginia Legislature of 1896 saw fit to stop the killing of Virginia quail for two years in order that they should not become extinct; but, as usual, there being no one to file information, the killing goes on just as if there was no law on the statute books.

While the law is very rigid, it is impossible to find any one who will file the necessary information, as no one wishes to get in a fuss with his neighbor; and those who do not shoot because of conscientious scruples, misses all of the sport.

All true sportsmen the country over should club together for game protection, we might then find game in abundance in countries that have as much waste and idle land as is found in Virginia. 'Possum and coon are very hard to find in this country, but then there are men here who do nothing from Oct. 1 to March but tramp through the woods after them.

Over one-half of the land here is woods and fields laid out, and game of all kinds should be here in abundance was it not for the constant work of the poachers. If they do not get overbold some true sportsman may have a good day's sport here after Oct. 15, 1898. I know now of three coveys of quail within gunshot of my door, each composed of from twenty to forty birds. These I shall endeavor to protect, enemies or no enemies. H. P. W.

THE STAR RETRIEVER.

When Jack Frost's busy fingers have begun their work in the valleys and on the hill ides Fred comes up to see me. We have hunted far and near, and when the sere and yellow leaf warns us that autumn is well on the road, the cares of business no longer bind us, and we take down a brace of trim 12 gauges and saunter forth. This year was no exception, and so a matter of three weeks ago Fred came up to ee me.

Fred dotes on dogs. A dog has great charms for him, whether it be the mange-stricken cur of a Canuck or the bluest-blooded hound in Vermont. And as sure as Fred walks in on me he straightway brings forth the best dog for birds in Vermont. Last year the wonder was a plain "yaller dorg." But Fred said: "You couldn't beat him for partridges." And so it proved, for though beaten with everything, from a birch sapling to a gun barrel, not a bird was shot over him during our two weeks' hunt.

This year the new dog was labeled retriever, and warranted to swim a mile for a duck; a dog that Fred said had just returned from the Dakotas, where So and So had been shooting. The dog looked all right, and appeared to be a dog of good morals and tremendous appetite. The last virtue nearly did for him, for he undertook to eat our lunch one day and nearly choked himself to death on a string that was wrapped about the parcel.

Of course it was criminality to let the dog's great hunting faculties remain so long dormant, so one fine morning in a drizzling mist Fred and I set out for the Lamaille River, a famous place for ducks. A hasty survey of the stream from a nearby knoll disclosed a fine flock of ducks feeding in the shallows near at hand, and then, with caution and skill that would have done credit to an Apache Indian, we wormed our way in a very wormlike fashion through a patch of luxuriant thistles, a bog hole, and several alder thickets, to a point where we were within gunshot of the flock.

Springing to his feet, Fred let both barrels fly into the flock, and to his great delight four birds floated dead on the surface, while the rest lit out for pleasanter climes. At the sound of the gun the dog made for the game, and after a long struggle brought a bird to land, and then gravely commenced an impromptu meal, the other three ducks in the meantime drifting down stream at a rapid rate. By dint of a club and some strong language the dog was once more launched, and this time when he reached the bird, instead of returning, he pushed on to the opposite shore in spite of stones, clubs and a volley of remarks from Fred, none of which, however, the sagacious animal minded in the least. The opposite shore reached, he landed and sat down contentedly to a meal of raw duck, while we watched his motions with anything but pleasure that was not in the least heightened at seeing the remainder of our bag lost to view down the stream. Whistling, scolding or coaxing alike he heeded not, but kept right on with his meal until fully an hour elapsed, when he deliberately swam across and with an extremely self-satisfied air, where he was welcomed with open arms and a club. We were disgusted and so was the dog, and as we wended our way homeward we ruminated over the fickleness of the dogkind in general. After that, on our hunts, Echo (for that was our beast's most appropriate name) remained at home, and we went back to the old-fashioned way of getting our duck with a pole. Fred went back to the city soon after, but has been out ducking since. The dog works better, he says, or to quote his letter: "I have rigged up a light pole with reel and trolling line, and when I drop a duck I cast Echo; he nabs the duck and I reel him in." A genius is Frederick.

Milton, Vt., Nov. 25.

MAINE DEER AND MOOSE.

Boston, Nov. 27.—Mr. Dana J. Flanders, General Passenger and Ticket Agent of the Boston & Maine Railroad, with his shooting friends, Eugene Nelson, H. G. Jordan and Dr. Libby, have recently returned from a successful deer hunt in Maine They went to Ashland, the end of that branch of the Bangor & Aroostook Railroad, and from thence into the woods for many miles into a good moose country. A moose was the prime object of Mr. Flanders, as well as every other man in the party, but the weather conditions hardly favored them. They got into camp a day or two before the snowstorm of Nov. 12. The first day in there was just a little damp snow, but worth nothing for tracking. The second morning when they arose there were 16in. of snow on the ground. The guides admitted that it would be hard tramping, and the hunters really found it so. The next day still more snow had fallen, and still it either snowed or rained nearly every day they were in camp. They secured a buck deer apiece, but no moose; the tramping was too hard for following them Mr. Flanders says that the beauty of the forests, with the 16in. of snow, on that second day was sufficient to have paid for the whole trip, even if no game had been obtained.

A big moose was killed near Andover, Me., last week, said to have weighed 1 000 bs. A son of Mr. Auger is reported to have been the lucky hunter. Mr. Herb Knapp has killed a big bull moose just below the summit, on the Rumford Falls & Rangeley Lakes Railroad, within a few days ago. This moose was killed not many miles to the east of where the one taken to Andover was taken. There are a few moose left in that part of Maine. Several have been tracked in the vicinity of Metallic Point. When the beginning of the open season on moose was put forward to Oct. 15 it was thought that the number killed in the State would be greatly lessened for the season. But, as mentioned above, the number has been increased in the section of Andover and Rangeley, since none were killed in that section last year. The records of the Bangor & Aroostook Railroad show that during the last fifteen days of October there were killed along the line of that road fifty-five moose, while the total for the whole month last year was but fifty-nine. The hunters have been much more earnest and the guides have been employed to locate moose early even if they have not killed them and had them ready for the sportsmen. The snows have also been very favorable this year. Special.

North Carolina Ducks.

New Inlet Club, New Inlet Life Saving Station, N. C., by way of Hatteras.—Plenty of fowl of all kinds, but no weather and no water in the Sound. Edward Banks.

Water Lily, Currituck Sound, N. C., Nov. 22.—As predicted by your correspondent on Oct. 27, the opening day was a good one; some old-time bags were made and almost every hunter was successful. One of the oldest hunters here informs me that the shooting has not been better at any time during the past ten years. There are two good reasons for this, which prove the great importance of game laws. First, our rest days—Sunday, Wednesday and Saturday—are rigidly kept. The second is that the brackish water caused by the autumn storms the past two years has caused the wild celery to grow in abundance. Some of the bags made on the first day were as follows: Pierce Hampton, one of our best hunters, 130; James W. Hampton 107, John S. Midgett 70, L Barco 140, Seth Ballance 145, Wallace O'Neal 80. They were principally redheads and ruddy ducks; but there was a sprinkling of canvasbacks and other kinds. The ducks were very poor on arrival, but are in fine condition now. The shooting last week, the third one of the season, was quite as good as the first. Currituck.

Mount Airy, N. C., Nov. 17.—As so many sportsmen are misled by exaggerated statements about game in different localities, we desire to state for the benefit of our brother sportsmen that we have struck a place where quail are found in great abundance, and where we can get all the shooting we want.

We left Irvington-on-Hudson on last Thursday, and arrived at Mount Airy, N. C., on Friday afternoon. Saturday we walked to the hunting grounds, and at no time during the day were we more than one mile from the town. We found twelve or fourteen large coveys of well grown, fat birds Monday we took a team and went four or five miles out, and met with equally as good success as on Saturday. To-day we went in another direction, and had even better success than before, returning to-night with well-filled bags.

J P. Woodriff.
E. J. Whitehouse.

Thurman, N. C.—I went turkey hunting on Nov. 12, and saw lots of turkeys. I made the worst shots I ever did make in my life, shooting six times, only killing one turkey, which weighed 10lbs. I was all alone in the woods, and wished for some one to be there to share in the fun.

There are lots of quail, more than I have ever seen before, and they are the largest ever seen in North Carolina.

Mr. S. Haskett was out one day last week looking for some cows and jumped up three deer. He snapped at them, but his gun failed to fire.

I was out last Wednesday night and caught three coons.

John S. Hardison.

The Fox as Game.

Editor Forest and Stream:

I believe you profess to be strongly in favor of game protection and the promotion of all legitimate sport in the line of hunting. You would say that the man who would trap or snare any kind of game birds was a foe to sport and sportsmen.

Now it may be that one class of sportsmen is more worthy and deserving of consideration than another class; but I think that it makes no difference what game a man hunts if he does it in a sportsmanlike manner. There is a large class of sportsmen (and I think you will not deny that they are the equals in all respects of any other class), which finds its chief sport in the use of the foxhound and the pursuit of the red fox.

If the fox were hunted only in a legitimate manner, this sport might be prolonged indefinitely, but under the abominable work of the trapper the number of foxes is steadily growing less, and in the course of twenty-five years the grand old sport of foxhunting will be almost unknown in the northern part of the United States. Yet notwithstanding this, such a paper as Forest and Stream advertises a wonderful fox trapping secret.

It hardly seems possible that such a paper as Forest and Stream, which takes such a high stand in matters of game protection, should, for the sake of a few paltry dollars which may be obtained from the sale of the book containing this secret, be willing to assist in the extinction of the gamiest animal in the United States, and thus deprive a large class of sportsmen of the best sport on earth.

I know the fox is not protected by law, but in some sections of the world, notably in England, there are unwritten laws which prevent the trapping of foxes as certainly as would the strongest written law.

Willard H. Sullivan.

Clinton, Me.

Ontario Deer, Grouse and Bass.

Belleville, Ont., Nov. 26.—The deer hunting season in this district was a fairly good one Nearly all the parties closely approached the legal limit of two each, and several bears were shot. While a considerable number of fawns were killed, some very large bucks also fell to the hunters' rifles, among which were two giants of the (reported) weights of 351 and 306lbs. respectively. I do not vouch for these figures

Ducks have not been so numerous in many years—particularly black ducks. Even thus late in the season there are large numbers of them in the Bay of Quinte, and they are in prime condition.

Ruffed grouse have been very scarce, owing to a heavy rainstorm which occurred when the chicks were too young to find for themselves.

As to black bass fishing, it was beyond precedent. Wm. Ormond, our most famous angler, caught eighty fish which would average nearly 2lbs. on one day in September, and two days later his catch numbered sixty. As soon, however, as the fishermen learned the facts, their gill nets were set on the bars, and catches were small thereafter. It is to be regretted that the law does not prevent such vandalism.

R. S. B.

A Waterproof Match Safe.

New York.—*Editor Forest and Stream:* Sporting and woodcraft books advise everyone away for an outing in the woods to provide himself with a waterproof match safe. You might get drenched by rain or by capsizing from a boat. If the nearest dry match is twenty miles away you are in a sad plight indeed. Men going to Klondike need dry matches quite as much as food a nd clothing.

I searched New York city for two weeks this fall for a waterproof match safe, and learned there is none in the market. I inquired in the largest sporting goods houses and in rubber goods stores; one house referred me to the other. I repeat: there seems to be no such article in the market.

I was bound to have one, notwithstanding. I found it with John Campbell, 218 Lexington avenue (surgical instrument maker). He calls it an iodoform duster.

It is a screw-top, hard-rubber case. Remove the sieve from screw top, put in a leather washer, and you have a pocket case that will contain thirty matches absolutely waterproof. It has cylindrical shape. 2⅝in. long and ⅞in. in diameter. Costs 75 cents. F. M. Bauer, M.D.

Sea and River Fishing.

Proprietors of fishing resorts will find it profitable to advertise them in Forest and Stream.

The "Game Laws in Brief."

The current edition of the *Game Laws in Brief* (index page dated Aug. 1) contains the fish and game laws for 1897, with a few exceptions, as they will continue in force during the year. As about forty States and Provinces have amended their laws this year, the *Brief* has been practically done over new. Sent postpaid by the Forest and Stream Pub. Co. on receipt of price, 25 cents. All dealers sell it

THE NEW YORK AQUARIUM.

BY FRED MATHER.

(*Concluded.*)

Then we go to the fresh-water tanks in the gallery, and see enormous bullheads and albino bullheads; pirate perch, suckers, Irish roach, golden tench, tadpoles, crayfish, white perch, Swiss lake trout, brook pike and yellow perch from Prospect Park, Brooklyn, which look to weigh 1½lbs., the largest that I ever saw. Here is a tank of "mud puppies" from the Great Lakes, perhaps a dozen of them lying huddled in a corner next the glass, and only betraying the fact that they are alive by the waving of their prominent outside gills. Naturalists call this beast "proteus," because it has occasionally changed its form, and has a dual development, just as if a tadpole could breed without changing into a frog and breed in that state also. As in the case of the hermit crab, I could write a volume on this larval salamander, but will only say: Imagine an animal about a foot or more long, with four legs and a tail, much like a hellbender, with a mass of brilliant red gills outside its head, which are in constant motion and are entirely unprotected. The tadpoles of the salamanders and other reptiles are in the same condition for a short time only, but this animal may grow to its full size, live, breed and die in the tadpole state, or may absorb its gills and appear in a new role. In the latter case the older naturalists gave different names to this curious beast, which is capable of reproduction in its immature state, and so we have the names siredon, axolott, amblystoma, etc., for different species of this same "mud puppy" which the fishermen on the Great Lakes call "lizard."

In this connection I wish our schools would teach children that a lizard has scales, lives on land and climbs fences and trees, while similar forms with smooth skins live in the water or under rotten logs or leaves, and are properly known as salamanders, newts, efts, etc., the latter name being sometimes corrupted into "evet." A tank or two of salt water is found on this side of the gallery, and one contains those delicate little things known as sea horses, because their heads are so like those of the "knights" in a set of chess men. Sometimes it needs a long search to find the little fellows among the seaweed, where they cling by their prehensile tails, and only move their pectoral fins to pass the water from their gills. When they swim they stand upright and use the dorsal fin as a propeller. Surely they are funny fellows, but they don't know it. At least, the male sea horse never suspects it, for in the place of an anal fin, which Mrs. S. H. has, he has a pouch like a kangaroo or an opossum, into which purse Mrs. Sea Horse drops her treasures in the shape of eggs and then goes off to gossip among the kelp and bladder wrack while her lord (?) not only hatches the little sea horses in his incubator, but actually starts out with about fifty of them twined about his tail, nose, neck, and those many projections on his anatomy that possibly may have been put upon him for this purpose and not for ornament. After a careful study of the sea horse I think his lot far superior to that of the Brooklyn father who patiently trundles a baby carriage, in that city where the baby carriage has the right of way and the pedestrian has none.

But the anemones and the living corals claim attention, and what is more beautiful than the sensitive sea anemone? They are literally the "flowers of the sea"; rooted to the rocks, expanding when seeking food with their many tentacles, or shrinking to a flat bit of jelly when sated or alarmed. They are among the most interesting invertebrates; they vary in size, shape and color, as well as in their disposition to display themselves.

Before reaching the salt-water tanks in the gallery, we come to some table tanks, and find both fresh and salt-water tortoises and turtles. There are the two species of soft-shelled turtle from the Lakes and the West; the savage snapper and the yellow-bellied "slider" of the South, which is used to extend and expand the terrapin stew in Baltimore, Philadelphia and New York, where the genuine article sells for $60 to $90 per dozen for "counts" which measure 6in. on the under shell. I do not blame the "slider" in the least for passing for a "diamond-back" in this case, and I would do the same under the circumstances. With this in mind, the green turtle, which has only its green gelatinous "calipee" to distinguish it from "mock turtle," made from calves' heads, seems to be a poor relation, although it often attains a weight of over 600lbs. Then there is the hawksbill turtle, with its shell-plates overlapping, like shingles on a roof. I said: "Although men refuse to eat your flesh, they value the plates on your carapace. You are the only member of your tribe which contributes anything in the way of ornament to mankind, and now the makers of celluloid articles imitate your shell so closely that only an expert can tell the difference, and, therefore, you are not much in demand to day."

Passing to the salt water side of the gallery the naturalist becomes more interested. The fishes are not so large and that is one of the charms. Here we come upon many familiar species and others which are strange. Without enumerating them all we will look at the toadfish, not handsome, but owning a good open countenance into which it can take small fish, crabs, or any other form of aquatic life. The oysters and clams are uninteresting unless one has time to observe the way they create currents in the water in order to pass food to their mouths, and the casual visitor never notices that Young horsefeet not over 3in. broad scramble over each other and get thrown on their backs, where they struggle for a long time before they can right themselves in their clumsy way, and the porgies swim above them in perfect contentment, never noticing their troubles.

The sculpins and sea-robins demand attention and they get it. The long pectoral fins which seem fitted for flying in the air and the "fingers" used for crawling over the bottom cause the least curious observer to halt and look at them, while the sea-raven with its ornamental appendages always challenges attention, if only by its brilliant colors.

Passing the young bluefish, or "snappers," the spot, or Lafayette, the banded codling, sticklebacks, hake and other species which are more or less interesting, we come to the boxfish, which are built in some ways like the trunkfish, but are round and have spines sticking out all over them. They can only move their fins, their mouths are longitudinal slits which seem to have bony lips that are rigid; but the boxfish is ornamented with many dark stripes which seem to be put on to make it conspicuous while the spines would make it an undesirable mouthful to most fishes.

The swellfish, or puffer, which we catch in the salt-waters about New York, is familiar to the boys who go down to the fishing banks. They catch one, tickle its belly with a knife or an oyster shell, and the fish inflates itself into a ball, when the boy, without fear of the Cruelty Society, jumps on the fishy balloon "just to hear it pop." In the Aquarium the boy may look at the puffer, but must content himself with what he thinks he would like to do.

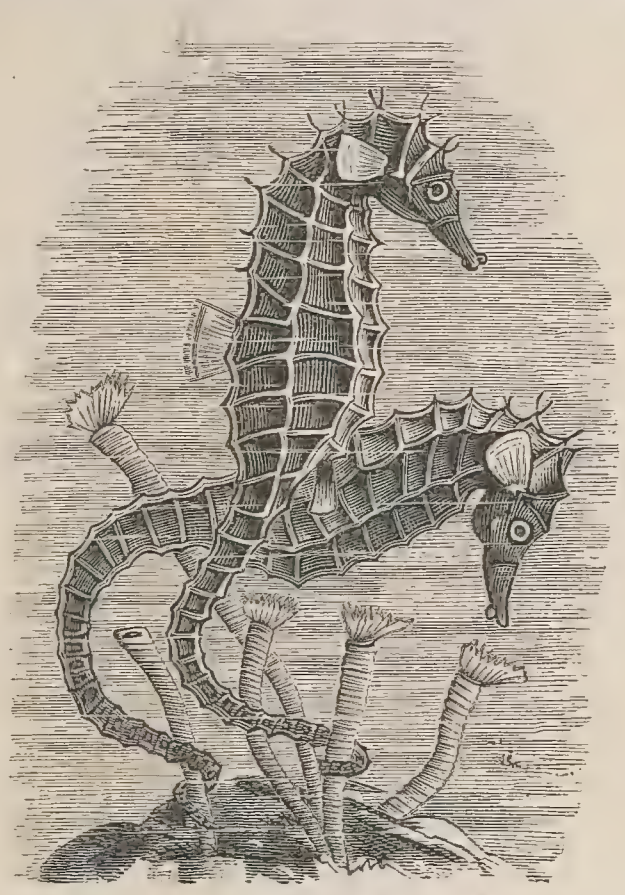
There are filefish, funny little puffers, and dozens of other things to be seen in the Aquarium, which would take a week to tell about. The remora, which has a sucker on top of its head by which it attaches itself to a dogfish or shark, and so catches its food without the exertion of travel, has actually learned to move and seize food when it is offered. Young whitefish have learned to live upon minnows, and this discovery has brought to light the fact that men in Canandaigua Lake, N Y , have been taking a species of whitefish out of season on set lines, using minnows for bait.

The bearded codling will attract the attention of the casual visitor by its prominent row of white spots and the long, streaming rays from its pectoral fins, but people often laugh aloud when they see the funny little puffers, the adults having been previously described; but in one gallery tank are some young specimens about 3in. long, and they are comical.

Fishing for the Aquarium in the waters about New York has shown the unexpected presence of Southern species ip Northern waters, for the Aquarium fishers use finer meshed nets than the market fishermen and fish in shallows, among weeds and other places where the seeker after edible species does not haul his nets. A couple of months ago, while fishing near Sandy Hook, a young barracuta was taken and it was all of 1,000 miles from its home. There are several species of this family on our Atlantic coast, none of them abundant north of Florida except *Sphyræna borealis*, which is often abundant in North Carolina waters and has been taken further north, even as far as Wood's Hole, Mass., but only young specimens, which seems strange. Some barracuta, or barracuda, are taken in the West Indies 8ft. long and weighing 40lbs., for it is a long, slim fish that can eat a man as well, or better than a shark, and is as much dreaded; yet it is said by Prof. Jordan to be the best food fish on the coasts which it inhabits. In shape it resembles the pike. Dr. Bean's specimen is about 8in. long and looks as wicked as so small a specimen can.

The filefishes, which are common in tropical and subtropical seas, and breed somewhere in mid-ocean, have been taken near New York by Dr. Bean, but only young specimens. These queer, excessively compressed fishes have a dorsal spine which is rough and gives the name to the filefish, although it is also called foolfish. Sometimes they are of an orange color and at others they are tawny, but will always claim attention. Their strong jaws can crush most mollusks and they even damage beds of pearl oysters.

It is of interest to see the fish fed, but as this is done after the visitors leave the building, one has to have permission to remain. This has never been denied me, nor do I think it would be denied to any one who manifested interest enough to ask for it. Watch the pike and the pickerel. There are some minnows in their tank, but they know their danger. They huddle in the corners, where a pike doesn't care to risk bruising his nose to get them, yet I have seen them quietly nose them out and then give chase. But the unseen attendant has dropped in some new ones, and they dodge for the bottom, and if not seized at the first rush the pike will point its game like a bird dog, steadily approach with a slow movement and with a blazing eye make the rush which is usually the last of the minnow, and for the benefit of anglers who believe that a pike always throws out a minnow taken tail first, in order to turn it, I will say that a visit to the Aquarium at feeding time will prove their theory incorrect, for there they will see the pike at close, and at better advantage than they ever saw it feed before, and will find that, heads or tails, it's all the same to the pike or pickerel.



Watch those fresh-water gars take a killyfish. The gars are among the few ganoids which somehow escaped destruction when the rest were made into fossils, and they are anachronisms which really ought to have been abolished with the rest centuries ago. They are about 3ft. long, and are built like a torpedo boat, being round-bodied and about 3in. in diameter. When they get it into their antediluvian minds that a minnow is in sight and is needed in their internal economy, they don't rush with indecent haste after food. The gar goes quietly about it. Its long, narrow snout is run about 4in. past the unsuspecting minnow, just as a bit of eelgrass might drift by it, there is a quick side motion of the head, a snap of the long jaws, and the minnow lies across the jaws in the embrace of sharp teeth, which leave all hope behind. The gar is in no hurry, it never was, and it awaits its time; a few moves forward as it loosens its hold, and the minnow still lies crosswise, but is getting feeble; then the prey is somehow slewed about lengthwise and swallowed, head or tail, as in the case of the pike. A peaceful expression comes into the eye of the gar, and the curtain is rung down on the tragedy.

The trout rush for their food, and sometimes pursue it, for they are fed minnows, and it is interesting to note how often they miss their mark. The misses are so frequent as to cause an angler to recall the many times he has seen a trout miss an artificial fly which was being very slowly drawn across the water, and to cause him to doubt the accuracy of the trout's eye when it misses a fair-sized minnow, which is completely submerged. Then he no longer wonders at the missing of a fly which is on the surface of the water and seen against the sky or the bushes, often when the ripple distorts its shape, and perhaps its place.

All the inhabitants of a great aquarium cannot eat minnows, and so a variety of food must be prepared, and in different shapes to suit not only different tastes, but different sized mouths; and great judgment must be exercised in the use of food which is not alive, in order not to put in more than the inhabitants of a tank can eat at the time, unless there are crabs or other scavengers in it; but there are fishes which will eat crabs as fast as they are put in; and so, as I have said, there is more knowledge required to run an aquarium than to manage any other collection of animal life, and there is yet much to be learned by the best aquarium men.

There are all kinds of quacks, and there are aquarium quacks, men who have secrets for keeping fish alive. One came to the old Aquarium on Broadway, and wanted to sell some secret. Mr. Coup asked my opinion, and I said: "Put him in a tank, and keep his head under water, put in some of his own stuff and see how long he will live." He failed to make a sale, and I never had any idea what these fellows had to sell, if anything, and let it go. Recently I have seen it stated that "Dr. Sedlitzky, of Salzburg, recommends the addition of four drops of a solution of one gram of saliaylic acid in 300 grams of water to every 100 grams of water in the aquarium, and says this will keep the fish healthy without changing the water." I have used salicylic acid in experiments in killing fungus, but do not know saliaylic acid, which may be a misprint.

There is a most charming retreat for a student to spend an hour, in a room which is not open to the general public, which would rush through it with hardly a glance at the jars of water and weeds. To me this long room is the most interesting part of the Aquarium. Here are the "balanced" tanks; glass aquaria about 14in. in diameter and perhaps as high, in which the water is never changed, year in or out, the loss by evaporation being all that is added. The principle is that plants absorb carbonic acid gas and throw off oxygen, while fish reverse this process, and so it is an even trade by means of which both live, if the proper proportions of each kind of life balance; if not, one dies. An ordinary farm pond which has neither inlet nor outlet presents the same conditions, and the balance tank is merely one of nature's methods on a smaller scale, but trout and some other

SEA HORSES.

fishes are not adapted to such a life; they require more oxygen and even have to call in the refrigerating apparatus, which was put in last summer, and has a capacity of 10 tons of ice daily.

The climbing perch might be an interesting fish if it would only climb. The single specimen in the Aquarium is a quiet fellow, about 7in long, and is kept in one of the jars where the oxygen it gets comes from plant life, and not from the passage of water through air. As I see it, there is little to interest one in the fish, unless he knows and believes the stories told of it. It has a single dorsal fin with both hard and soft rays, the former seem to predominate, and the same may be said of the anal fin. The color is dark, and the fish seems to enjoy months of rest after its travels. I have read that this fish, whose climbing propensities, and whose Greek front name of *Anabas* and Latin specific one of *scandeus*, both refer to climbing, has a sort of water reservoir in plates or pockets above its gills, to keep the latter moist when on a journey. Looking into "Johnson's Cyclopedia," I read: "Species are found in southeastern Asia and Africa. One, the *Anabas scandeus*, found in India, etc., is especially remarkable for a limited power of climbing. Unlike the eel, which passes over only moist ground, *Anabas* takes its journey over hard, dry and dusty roads, and frequently up steep ascents heated with the burning beams of the noonday sun, and does not seem to feel any serious inconvenience from these. It is even asserted by some writers that this fish is able to climb a tree."

I have seen pictures of it climbing a tree by means of its pectoral fins and coarse scales, and have wondered what he did it for, if he did it. Please remember that I don't vouch for any part of this yarn. I've seen the fish; only this and nothing more. Last week I told how I let my imagination loose to an admiring crowd at Blackford's, and told how the angler fish ate young goats and sucked cows, while a friend told how they climbed trees. We thought that Munchausen, Ananias & Co. were not in our class, but some fellow has said: "Truth is stranger than fiction," and there is such a weight of evidence for all that is claimed for this strange fish that I can only say: "I'd like to see him do it."

I hereby issue this challenge to Dr. Bean: Next summer, when the asphalt walks are hot and the grass in Battery Park is dusty, I will match an adult eel against your climbing perch for distance in a given time. The second match to be a Belt Line car horse against the perch in tree-climbing; and a third that this vaunted tramp from India cannot sit in the sun on a park bench as long as an unknown tramp which I will produce. Best two out of three to win, and the loser to pay for a dinner at Del's. This is a friendly challenge to the Doctor, purely in the interest of science, and if it comes off I sincerely hope that I will lose, for we have to pay for our education and I will be glad to contribute to mine, which in this case means to the education of the whole world of science.

Let us seek comrade Spencer and get him to show his treasures and talk of them. He loves to do both if he knows that the visitor is really interested in his hobby, but when he finds one who is not only interested, but has some knowledge of it, he is delighted. I have only to hint that a view of his pet department would be a favor, and the veteran leads the way with the step of a boy. We reach the fresh-water tanks first, few in number because not so rich in forms of life. The plants are those which grow with submerged leaves, except the duck-meat, which forms a mat of its tiny leaves on the surface and sends its roots a fraction of an inch below; they are the hornwort, cabomba, sagitaria and myriaophyllum. Here we find the European loach, a bearded, spotted, sluggish bottom fish, our pearl-sided sunfish, and that pretty-banded sunfish which is so small that anglers seldom see it. The interesting sticklebacks are only represented by the five-spined species, the nest-building two-spined fellow being absent.

All the time we spend at the few fresh-water tanks Spencer looks bored. They are interesting to a moderate degree, but as we leave them his eye brightens, he begins to talk, and we listen. "Now here is a colony of Northern coral from the coast of New Jersey. It came three years ago last June, and many of the polyps are still living, as you can see. The coral has not grown any, and some of the builders may have died and others been bred; we can't be certain about that. This tank contains four species of sea anemones. That bright red one which is closed up is as beautiful as a jack rose when it is opened, and that more modestly colored one in ecru is as beautiful as a Quaker maiden in drab. Just note the two species of barnacles near the anemones. This common ivory barnacle opens its shell and grasps with its plume-like fingers as if it were beckoning food to come on, and it is so sensitive that we can't feed it. At the least disturbance of the water they draw in and the food passes by. No so with this other species, which grows larger and attaches itself to turtles, whales, and other things, as well as ships; this species puts out its curious landing-net and slowly revolves it until something strikes it. There! See it take in that tiny bit of clam which I dropped; that's the way it feeds."

"That seems to be a singular rock that the barnacles are fast to."

"Well, they were on a piece of wood with the bark on. I split off the bark, shaved it down as close as I dared, put it on a flat stone and then poured a little cement around them, about the thickness of half a dozen sheets of letter paper; and there they are, happy as ever, and if the bark decays the cement will be a bond of union. They have lived in that way for a year and a half."

Then we came to interesting colonies of hydroids, ascidians or sea-squirts; shrimps which flit through the water in a ghostly manner with their semi-transparent bodies only faintly outlined, while they seek particles of food fish which have escaped from the immovable animals in the same tank. There are no currents to bring food to the anemones, barnacles, ascidians and other forms of life which are incapable of moving, and under these artificial conditions such scavengers are necessary or the water would become foul. Mr. Spencer might feed ever so carefully, and it might miss the rooted animal or it might be rejected if it did not happen to be hungry. The food in this case is too fine to recover with wooden nippers, and siphons are not used, but the shrimps, snails and the small hermit crabs which have not outgrown the small snail shells, take care that nothing is left to foul the water, and here comes in a knowledge that cannot be imparted. If the scavengers are overfed the water will get foul, for they are not working for the Park Board, Dr. Bean nor Mr. Spencer. They knock off work when they have had a big dinner, just as I do on Thanksgiving Day, but with this difference; their world is smaller, and if they do not devour all food in sight their world becomes foul and will not support them, while if I don't work I can go to the markets and look at the canvasbacks, venison steaks, grouse and 'possums without a threat from Dame Nature that if I do not devour all these things they will breed a pestilence which will destroy me and my kind, as will be done in that miniature world which we set up and call a "balanced aquarium." It is a delicate thing to run, not only to adjust the quantity of plant life to animal life, but to select the kinds of animals which will live together.

The younger spider crabs have a way of disguising themselves, which they abandon as they grow older, and this has given them the name of "decorator crab." They pluck the different seaweeds and by means of saliva they fasten the plants upon their backs to deceive the skates, dogfish and other enemies, and they remind one of Macduff's host bearing Birnam wood in the advance upon Dunsinane.

The plant which is relied upon to give aeration in the salt-water jars is the sea-lettuce (*Ulva latissima*), but the active inhabitants of the tanks will not allow it to root below and so it floats on top, giving shade as well as oxygen, and the crabs also tear up the red rockweeds, but cannot destroy their anchorage and they grow along in the old place. There are the tube worms, called serpula, which make twisted calcareous tubes, and the sabella, whose retreats are leathery, and both send out their feathery heads and dodge back quickly if alarmed. The serpula tubes are easily broken and a colony would often be scattered but for the fact that a colony of bryozoa usually settles on it and binds the twisted tubes into a solid mass. There are tons of these masses in Great South Bay, Long Island, where they are known as "cinder beds," and are famous fishing grounds. The bryozoa coat many objects with a thin film of beautiful lime work finer than frost patterns and then build layer on layer, as the coral polyps do. Then along comes one of the boring worms, species unknown to me, which drills straight holes through the mass. Mr. Spencer has fine specimens of this work.

There are little horsefeet or horseshoe crabs, which were hatched in the Aquarium and are now two years old, but not as large as a half-dollar, and there is a complete series of their cast shells, from the size of almost nothing up to the last moult.

The star exhibit in the balanced tanks is the ship worm (*Teredo navalis*). A specimen of its work is shown in a piece of a pile which was only two years in water, and is so eaten that "honeycombed" will fairly express it. The holes are long, about the diameter of a lead pencil, and are lined with shell. But the living animal, encased in a bit of wood, throws out two white siphons, the longest about 1in. long, and that is its connection with the outer world. Mr. Spencer had two of these and could not learn what they were. Scientists saw them and drawings of the wood and the siphons were sent to many persons, but no one could name the animal. Then Mr. Spencer determined to find out, and he carefully split the wood away from one specimen, and behold! there was a teredo 9in. long, and it lived three days

afterward. His living animal is quiescent for several weeks at a time and then resumes boring, as shown by the sawdust thrown out. He thinks that the worm does not eat the wood, but bores for a retreat and to find a mate. This is what the carpenter bee does when it bores for a home and a nest, and the theory seems sound. There is a boring mollusk, not unlike a soft clam, which drills into stone, and I was shown a specimen of its work with a dead animal in it.

This is an account of what may be seen at the Aquarium, but the public see but little the first time they go; a second trip will surely bring a third, and then the aquarium habit is formed. It is not a place to rush through and say, "I've seen it all," and never go again. It is a place to stop, watch and study; to one who does this, new beauties will appear, new surprises will come, and he will depart a wiser man, but not a sadder one. I go there often, and always learn something.

Of the building itself I can find no detailed history in any of the books on New York. It was built by the United States in 1807 and called Fort Clinton; ceded to this city in 1822, and became a place of amusement, and got the name of Castle Garden about four years later. From 1845 to 1849 minstrel and theatrical performances were given there, and the next year Jenny Lind gave it world-wide fame by singing there. The Commissioners of Emigration took it in 1855, and on July 9, 1876, it was burned nearly to the ground, but was rebuilt. It is now of more use and interest than ever it was before in its various characters of fort, playhouse and emigrant depot. Under a new rule, it is to be opened from 12 to 2 on Mondays and Tuesdays, days on which it has been closed to the public.

In my last article I neglected to say that the illustrations were loaned by Mr. E. G. Blackford.

A CARIB ALLIGATOR.

In Pearl City were more dogs and cats than were needed. In Pearl lagoon were alligators which we wanted. So we considered whether we could exchange dogs and cats for alligators.

We got a dog one evening, by help of a Flobert. We tied him to a stake set, some 200ft. from the pierhead, in the shallow lake. A line was fastened at one end to the pier; the other end to the strong hook that was modestly hidden under that dog. An alligator came, took hold of that dog, pulled that hook straight, and the dog went off with the alligator.

There were other dogs, and stronger hooks. And cats, too, with other hooks and lines. The alligators grew fat and happy. Mayhap they thought we were running a charity affair. They took our bait, and kindly left the hooks For hooks cost hard cash; but cats and dogs might be had for the taking—if the owners were not there.

'Twas a shame that Yankee ingenuity couldn't get ahead of an alligator, particularly of that mossy-backed patriarch that might well have been the grandfather of all alligators. So we pondered deeply. We discussed all plans offered, then discussed the imbecility of those who offered them. At last there was none so bold as to hint that he had a scheme that would fit our case.

Perhaps it may be easy to see now why there was a hasty movement when the Jamaica boy shouted:

"Hi! He's got 'im! He's done got dat 'gator foh suah! Bigges' 'gator ebber seed!"

The duty of the United States to Cuba was left to take care of itself. The superiority of the Carib pineapple over all others known was left to the cold world to discover for itself, and a quiet little game in the corner with ten cents up was suddenly abandoned. The Doctor caught up a lancet and started for the door, then laid the instrument on a shelf. The trader caught up a hat that lay on the table, and put it off his head as soon as he saw that it belonged to the Doctor's little Dottie. For traders are constitutionally unable to take anything that doesn't belong honestly to them. The manager went down the stair three steps at a jump, then bawled to his wife to bring down his rifle. And she would rather handle a —— well, a scorpion or a snake, than touch a gun. But we all reached the pier, and there stood the quiet man, encouraging a gang of darkies and Waiknas.

"Steady, boys, steady! A long pull, a strong pull, pull all together! Easy! Pull him in easy!"

"I reckin 'tain't 'zeasy 's yo' t'ink t' pull 'im in easy, boss!"

No less that a score of darkies and Indians were dragging at that rope; but they certainly didn't find it easy to pull him in. For he was in shallow water, where he could get a hold on the bottom. The dead weight of that 'gator would have been a load for them to drag; but it wasn't his dead weight they were pulling at. No, indeed! It was his exceedingly live weight, instead.

He absorbed bullets rapidly, for a while. Bullets from all the rifles in Pearl City, from the .45 to the Flobert that would have been choked to death by a medium-sized pea. The load of lead became too much to carry, and the patriarch of Pearl lagoon alligators gave up the fight for life. Everybody had a hand in dragging his enormous bulk upon the sandy shore.

"How did you do it, Governor?" That after we had foregathered in the Doctor's office.

"Yes. Tell us how you got to windward of the old fellow!"

"Have another, Governor, and tell us how in thunder you ever put the noose 'round his neck."

"Well; there's nothing much to tell. You see, a notion struck me; but I thought it better to try it by myself. You fellows made it so hot for anyone who offered a plan, you know."

"Yes; but they were such fool plans!"

"Maybe. Anyway I thought better to flock by myself. So I got a hoop off a big barrel, and borrowed that dog that used to howl o' nights back of my place. I took a long piece of new manilla and the other things to the pier, and made a running loop in the line. I tied that with thread to the hoop, so as to keep the loop open, and fastened that dog in the middle of the hoop. Then we drove three stakes in the bottom of the lagoon, and let the hoop, the loop and the dog lie on top of the water between the stakes. Of course I made the hoop fast to the stakes.

"Well, old grandad came nosing about, as I expected. He tried to get at the dog, but that hoop was in the way. The more he tried, the more eager he became to get the tidbit, for 'gators do love dog. At last a bright idea got into his thick head, and he sank under the hoop. When his jaws came up each side of that dog we gave a mighty pull at the rope, the loop broke loose from the hoop and closed around the jaws back of that dog, as you saw it when we dragged him ashore. You saw that he was more than half drowned when we landed him. E. L. Peritara.

A Shark's Meal.

Sometime in the 50s, when I was living in Highland-on-the-Hudson, there came a man in the village who, it was said, had been a sailor. He seemed to be rather reticent, but somehow he chose to make a confidant of me, and drawing me aside one evening while we were in a store, related the following incident of his seafaring life in an undertone that savored of apprehension, either for himself or the captain of the vessel in which he sailed.

He said that while on the way to America with a cargo of slaves—men, women and children—the vessel one day was becalmed, not a zephyr ruffling the surface of the sea. The weather was excessively hot, and the decks fairly blistered the feet. The mate being a good swimmer, and withal very fond of a bath, concluded to "cool off," and forthwith plunged into the sea and swam a considerable distance from the ship. It so happened that the captain glanced in the direction of the man, when, to his horror, he discerned the fin of a "man-eater" cleaving the water at some distance beyond, and surely marking the mate for his prey.

But the captain's presence of mind did not forsake him, and with wonderful self-control and decision born of the occasion, he turned to his crew, and with terrible meaning in every lineament of his face, exclaimed, "Let no man dare to open his mouth." If I do not forget, he had drawn and displayed his pistol. In the next instant he called loudly to the mate, not, however, to apprise him of his danger, for that would have so paralyzed him with fear as to deprive him, in all probability, of his strength; hence his command to the crew to maintain silence. Taking out his watch and holding it aloft, he shouted: "Jim (so we will name him), if you will reach the ship in two minutes, I will give you this gold watch. Now!" At once, with a mighty effort, he started to gain the prize. With bated breath and countenances aghast with intense emotion, the crew now saw the occasion of the captain's stern command to them. It is an unequal race, for the shark gains rapidly. Will the sea-demon close his terrible jaws upon the man, or will he reach the ship in time to escape? No, the shark is within a few lengths of him, and is turning over to grasp the prey. "He's lost!" No; a dark object rushes through the air, and strikes the water with a ringing splash between the man and fish. The shark, with a vicious plunge, seizes it, and the dark sea is the grave of another human being. The captain had picked up a negro child that stood near him, and cast it into the sea, and thus the mate was saved. N. D. Elting.

The Discovery of Salt as a Remedy for Fungus on Fish.

In one of Mr. Hough's very interesting letters to Forest and Stream the following lines occur:

"The superintendent of the hatchery (of the State fish hatchery near St. Paul, Minn.), Mr. W. H Morgan, is a very skillful man at his business, having had many years of experience in the United States hatcheries One of his discoveries for the treatment of fungus on the fish was that a salt bath is nearly always efficacious. Now, when a fish is observed to be dull, and to show the customary white growth which afflicts so many specimens in confinement, it is at once removed to the salt tanks and given a pickle which makes it gasp for the time, but feel good afterward. We saw many young fish which had been thus doctored or were in process of doctoring."

If Mr. Hough will kindly refer to page 227, "Domesticated Trout," fourth edition, he will see that the use of salt as a remedy for fungus on fish is not a very recent discovery, but that it was discovered and the subject thoroughly worked up nearly thirty years ago by Mr. Stone, the writer of the book. I may add that the use of salt as a destroyer of fungus on fish has been practiced continuously from that time to this. S. A M.

Fish Nomenclature.

New York, Nov. 25.—*Editor Forest and Stream:* In Forest and Stream for Nov. 27, Von W. uses the past tense in speaking of the Ojibwa names for fish. The Ojibwas to-day are a numerous people—their fish are abundant—and men who employ the Ojibwas for guides can be found almost anywhere by a "twist of the wrist," so I am sure that many readers of Forest and Stream would corroborate my points on nomenclature if they only took the trouble to do so. At this moment, while I am writing, several thousand people are talking Ojibwa to each other; and the Hudson Bay Company's agents, missionaries and hunters galore know that "mash" means strong; that "kinope" means pike; that "winin" means fat; that "iche," diminutive added to "winin," means lean; that "winne" means unclean, etc. It is not necessary to consider what these Indians "used to say," because they are saying it to-day, before breakfast. Robt. Morris.

The Black Bass Record.

Mr. Samuel Hentall writes from Bristol, N H: Your correspondent G. C. C. in Nov 20 paper, under heading "A St. Clair Flats Bass," asks "What is the largest small-mouth black bass you have any record of?" I confess I was surprised to note Forest and Stream's answer: 'A 10-pounder, taken in New York State." I had thought I was high line around these waters for small-mouth bass, and I think I am anyhow for New England States with a 9lb. small-mouth black bass, taken by me in Sunapee Lake, near George's Mills, in the year 1894. It was weighed in the store at the mills within one hour of landing him, length 24in.

Landlocked Salmon House.

Cascapedia Trout.

Mr Frank L Hall, fishing the Cascapedia River last summer, had a remarkable take of trout, killing 48 which averaged 3lbs. each. On two successive casts he caught four fish whose combined weight was 17lbs. The first of these doubles weighed 6½ and 2½lbs., and the second ran 5½ and 2½lbs. The fishing was on rapids and the sport was of high class, surely. H.

Nebraska Fish Commission.

The Nebraska State Fish Commission has been reorganized with R. S. Oberfelder as president and J. S. Kirkpatrick as secretary.

The Forest and Stream is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

Camp-Fire Flickerings.

"That reminds me."

When I was eleven years of age I was the proud possessor of a $3 gun. I used it early and late upon squirrels, and now and then a partridge was added to my list of game. Now, the cheap lock of my gun had become so worn that the hammer would not always stay cocked. To overcome this defect, I was accustomed to hold the hammer back with my thumb, only letting it go when I had got the gun "lined" upon the game. Of course this was an extremely reckless arm for a boy, but then I felt perfectly safe, knowing its peculiarities.

There was a large maple tree near our house which was often visited by both red and gray squirrels, and I kept my gun behind the chamber door, loaded and ready for instant use.

Very early one morning and before I had left my bed my father, hearing a chattering in the old tree, got the gun and started for game. Pulling back the hammer, which by chance "caught," and holding the gun in readiness to shoot when the gun was sighted, he walked carefully around the tree, scanning every branch when all of a sudden the gun fired, and to his astonishment down came the squirrel, stone dead.

I had not informed him of the dangerous condition of the gun, knowing I would be forbidden using it. It is needless to say that I received a scolding and the "instrument of death" was confiscated. However, I soon had another and a safer one. A. J. M.

The Kennel.

FIXTURES.

BENCH SHOWS.

Nov. 30.—Washington City Kennel Club's show, Washington, D. C.
Dec. 8.—Rhode Island Poultry Association's show, Pawtuxet, R. I.

1898.

Feb. 15.—New England Kennel Club's fourteenth annual show Boston.
Feb. 21.—Westminster Kennel Club's twenty-second annual show New York.

FIELD TRIALS.

Nov. 29.—Dixie Red Fox Club's third annual meet, Waverly, Miss.
Dec. 6.—Texas Fox-Hunters' Association's meet, Hinson Springs, Tex.
Dec. 8.—Hoosier Beagle Club trials, Danville Ind.

1898.

Jan. 10.—U. S. F. T Club's winter trials, West Point, Miss.
Jan. 17.—Continental F. T. Club's trials, New Albany, Miss.
Jan. 24.—Pacific Coast Field Trial Club's trials, Bakersfield, Cal.
Jan. 31.—Champion Field Trial Association's Champion Stake, Tupelo, Miss.
Feb. 7.—Alabama Field Trial Club's second annual trials, Madison, Ala.

THE U. S. F. T. C.'S TRIALS.

The trials of the United States Field Trials Club began at Newton, N. C., on Monday, Nov. 15, and lasted three days. The conditions of weather were unfavorable, there being no rain, and the grounds having been used the previous week added to the unfavorable conditions.

The judges were Messrs. Wm. Tallman, Greensboro, N. C.; W. B. Stafford, Trenton, Tenn., and C. E. Buckle, Charlottesville, Va.

The Derby was for all setters and pointers whelped on or after Jan. 1, 1896. The All-Age Stake was for all setters and pointers which had not won first prize in any All-Age Stake in any recognized field trial. The prizes in each stake were the same—$250, $150 and $100. Total fees to enter and start, $30.

There were few visitors, nearly all leaving as soon as the Eastern trials ended. Prof. Edm. H. Osthaus, Toledo; Dr. Fitzgerald, Baltimore; W. L. Steele, Rockingham, N. C., followed the trials a part of the time.

The judging, as a whole, was very well done, the All-Age Stake being commendably well decided, though the competition in it was rather disorganized at times, as it was in the Derby also. The handlers were allowed to separate too much and work wide apart. There was too much noise, too much hurry when on birds, and too much changing of plans as to where to go. But as the results were mostly correct, the manner of arriving at them may be considered but briefly.

The Derby.

The competition in the Derby was of a very commonplace grade, there being nothing in it of noteworthy merit in the way of field performance. Most of the competitors ran in the Eastern trials last week. There were ten starters, as follows:

Pierre Lorillard, Jr.'s, b., w. and t. setter dog Why Not (Eugene T.—Miss Ruby), C. Tucker, handler, with Tyro Kennels' l. and w. pointer dog St. Clair (Rob—Ripsy), Capt. C. E. McMurdo, handler.

W. G. Graham's b. and w. setter dog Dick Bland (Sam Gross—Maud Rogers), J. H. Johnson, handler, with Dr. M. F. Rogers's b., w. and t. setter bitch Pearl R. (Sam Gross—Donna Inez), D. E. Rose, handler.

Pierre Lorillard, Jr.'s, b., w. and t. setter bitch Maiden Modesty (Eugene T.—Maiden Mine), C. Tucker, handler, with Wm. Elliott's l. and w. pointer dog Doctor Tassie (Hal Pointer—Kent's Star), Geo Richards, handler.

Pierre Lorillard, Jr.'s, b., w. and t. setter dog Wise Child (Eugene T.—Maiden Mine), C. Tucker, handler, with J. J. Odom's b., w. and t. setter dog Sport McA. (Tony Boy—Blue), D. E. Rose, handler.

Dr. J. R. Daniels's l. and w. pointer dog Sam's Bow (Plain Sam—Dolly Dee II.), Geo. Richards, handler, with Pierre Lorillard, Jr.'s, b., w. and t. setter bitch Lena Belle (Sam—Mamie B.), C. Tucker, handler.

Sport McA., first, showed natural dash and range, but his work was lacking in finish to the gun; in short, he was only about half broken, and much the same could be said of Pearl R., second.

Doctor Tassie, third, made by far the best competition considering reliability, training and work to the gun, and in his work on birds he was more trustworthy.

Monday.

The weather was hazy, calm and close. There was a prevalence of the unfavorable dryness of the preceding week. Birds were found in sufficient numbers, but most of the opportunities to work on scattered birds were in unfavorable places. The performance of the dogs as to point work was far short of the opportunities. A start was made at the Conover end of the grounds.

First Round.

Why Not and St. Clair started at 8:44. Neither dog ranged wide nor used good judgment. Why Not pointed and the bevy flushed wild; Clair pointed or backed. The birds flew but a short distance. The setter pointed a single and was steady to shot. Up at 9:27.

Dick Bland and Pearl R. began at 9:41. Both dogs were difficult to handle, and the heat was a rare noisy one, there being much scrambling, loud ordering and blowing of whistles. The performance was far short of the opportunities, and there was a general air of insubordination about what the dogs did do. On some marked birds, Dick pointed a single bird. Sent on. A bevy on bare ground flushed ahead of Pearl. Dick pointed and Pearl backed; they moved on and Pearl pointed and Dick backed; both were steady to shot. Sent on. Pearl pointed a bevy. Each made two points on singles. Dick flushed one. Up at 10:28. The handlers worked quite as hard as the dogs did. It was rather a wild, excited heat.

Maiden Modesty and Doctor Tassie started at 10:34. Doctor flushed a bevy in the open. Working on the scattered birds, both pointed and a single was flushed close by. At the edge of woods Doctor pointed a bevy. Modesty pointed and was backed; nothing found. Up at 11:29. Doctor was the more workmanlike.

Wise Child and Sport McA. started at 11:40. On some scattered birds of a bevy in woods, nothing was done. Sport pointed on bare ground; nothing found. Sent on. Sport found and pointed two bevies. On scattered birds, each made several points. Up at 12:25.

Sam's Bow and Lena Belle started at 1:47. Bow pointed a bevy in corn. Then Lena pointed and Bow backed. Bow pointed on scattered birds. Sent on. Sam pointed in bottom; he moved on and both dogs made game. Nothing found. Sent on, each flushed a bevy. On the scattered birds both lost many opportunities. Bow pointed a single, and next he pointed a bevy. Up at 3:05. Both ranged fairly well, the setter maintaining her range the better.

Second Round.

Dick Bland and Wise Child started at 3:42. Child pointed a bevy in run, and made a point on a single in woods. Dick was very headstrong. Both showed good speed. Wise Child had the better of the heat.

Pearl R. and Doctor Tassie began at 4:36. Doctor pointed a bevy nicely in open. Next, Pearl ran through a bevy in open field. Pearl next pointed a bevy in the open field. Sent on, Doctor caught scent, then drew to a point on the bevy; Pearl backed uncertainly for a moment, then seemed to catch scent and pointed, the birds being near her. Doctor made three points on singles on dry leaves; Pearl flushed a single, pointed one, and next pointed a bevy. Next she pointed by the edge of thick briers, made game, and nothing was found. She was headstrong and hard to handle. She also was lacking in reliability when on birds. Doctor had much the best of the heat. This ended the day's work.

Tuesday.

The weather was clear and cool, but this condition added nothing to the quality of the competition, for the ground was dryer, and birds seemed to be more difficult to locate and point than they were in any previous day.

Sport McA. and Sam's Bow were cast off at 8:34. Sport was difficult to handle, and was working out of bounds part of the time. Bow was held up once while Sport was being searched for, an act which had the result of Sport securing a point without competition. Sent on. Sport was found pointing a bevy. A bevy next flushed near Sport in corn. Bow flushed a bevy down wind. Sport pointed two bevies; Bow coming in ahead of the second point, roaded to a point on the same bevy. Up at 9:39. The work on scattered birds was weak. Sport had the better speed and range, but he showed a decided lack of finish in his ranging to the gun, and in his training.

Sport McA. and Pearl R. were allowed to rest till after lunch, the All-Age Stake being taken up in the meantime. They were started at 1:01. The heat was not noteworthy for any work above the commonplace as to quality, and as to quantity it was meagre. Pearl pointed a single well. A bevy was marked down in the open. Sport pointed, and Pearl backed; Sport roaded to a point on a single. Pearl, going down wind, flushed the bevy, and next she flushed a single. Up at 1:38.

The All-Age Stake.

There were a number of noted dogs in this stake, many of which had competed in the E. F. T. C. trials in the previous week. There were twelve, as follows:

Edw. A. Burdette's b., w. and t. setter bitch Ann of Abbottsford (Gladstone's Boy—Bohemian Girl), Geo. W. Richards, handler, with J. W. Dunham's lem. and w. pointer dog Elgin's Dash (Kent Elgin—Mack's Juno), D. E. Rose, handler.

D. E. Rose's (agt) b., w. and t. setter dog Hurstbourne Zip (Tony Boy—Dimple), agent, handler, with Geo. E. Gray's (agt) b, w. and t. setter dog Sarsfield (Rodfield—Opal), agent, handler.

P. T. Madison's b, w. and t. setter dog Rodfield's Boy (Rodfield—Sue Gladstone), J. H. Johnson, handler, with H. Ames's b., w. and t. setter bitch Christina (Blue Ridge Mark—Lou R.), D. E. Rose, handler.

Eldred Kennels' b., w. and t. setter dog Tony Gale (Antonio—Miss Nellie Y.), D. E. Rose, handler, with C. B. Pineo's l. and w. pointer dog Young Rip Rap (Rip Rap—Pearl's Dot), Geo. E. Gray, handler.

P. Lorillard, Jr.'s, b., w. and t. setter dog Count Gloster (Eugene T.—Gloster's Girl), C. Tucker, handler, with Fox & Blythe's b., w. and t. setter dog Dave Earl (Count Gladstone IV.—Dan's Lady), J. H. Johnson, handler.

E. A. Burdette's b., w. and t. setter dog Cincinnatus Pride (Cincinnatus—Nellie), Geo. W. Richards, handler, with P. M. Essig's b., w. and t. setter bitch Saragossa Belle (Gleam's Pink—Maud E), J. H. Johnson, handler.

Cincinnatus Pride won first on a very sound performance, sound in work to the gun, in the excellence of his locating and pointing, in his range and judgment and in the quantity of work done. He particularly excelled in work on running birds, or birds difficult to locate, and the judges put him to a most severe test. He is a handsome dog, a bench show winner, and the excellent manner in which he repeated shows that he has a high class of merit.

Tony Gale, second, ran with speed and fire some of the time, while at other times he let down in his range and needed urging to keep him at work. Some of his point work was excellent, some of it false and inaccurate, and the quantity of it was meager. In locating his birds he was very inferior.

Count Gloster, third, ran prettily, but he picked out the easy going and did not excel as a finding dog. Some of his work on scattered birds was very good. He pointed inaccurately sometimes. His strongest qualities were his speed, stylish way of going, and wide range, the latter conducted with poor judgment.

First Round.

Ann of Abbottsford and Elgin's Dash started at 9:52 Both pointed a bevy in corn, the bird presumably being Ann's. A bevy was seen to flush near them in corn. Ann pointed a single; Dash backed. Up at 10:28. Both ranged fast and wide, Ann the better in range, judgment and work on birds. She ran a very good heat.

Hurstbourne Zip and Sarsfield began at 10:44. Zip made a false point; then sent on, he flushed a bevy. Sarsfield was lost much of the time. He seemed to be diligently seeking birds, but out of bounds. Up at 11:31. The heat was a poor one.

Rodfield's Boy and Christina started at 11:41. Christina flushed a single, then failed to locate the bevy. Rodfield's Boy bolted and was not found till near the end of the heat. Christina ranged moderately well and showed poor judgment in ranging. Up at 12:21.

Tony Gale and Young Rip Rap were cast off at 1:54. Gale pointed a bevy in corn. Next Rip pointed, and the bevy flushed after Rip had moved on. Rip pointed a single. Up at 2:26. Both ranged moderately well. The heat was a poor one.

Count Gloster and Dave Earl began af 2:37. Dave false pointed several times, and Count did so once. On scattered birds, each pointed a single. Count was the faster and wider ranger. Dave exercised little judgment in his work. This heat had weak competition. Up at 3:51.

Cincinnatus Pride and Saragossa Belle started at 4:02. Belle was sometimes inaccurate in her points. Pride pointed in the open, then roaded very skillfully and accurately up a hill into woods and pointed a bevy nicely. He next pointed a single. Belle found and pointed a bevy. On scattered birds, Belle pointed; Pride backed; Belle moved on and Pride shot rapidly ahead and pointed the bird. Pride showed an excellent class of all-round ability in his work, though the quantity of work was light, there being limited opportunities.

Wednesday.

The morning was sharply frosty, and a cool north wind blew throughout the day. A start was made at the Conover end of the grounds.

Second Round.

The second series was very fairly selected.

Count Gloster and Tony Gale started at 8:46. Both went with dash, and ranged wide. Count picked out the easy going as much as possible, over wheat fields and plowed ground, and was romping much of the time. Tony was working with judgment, and seeking diligently. He pointed; nothing found; Gloster backed. Gloster pointed a bevy, and was nicely backed. Tony next pointed a bevy in weeds, and Gloster backed. On the scattered birds each made a good point, and afterward each made a point to which there was nothing. Gloster next pointed a bevy in open weeds. He next made two points, to which there was nothing, and Gale made a point and a flush on singles. Up at 9:54.

Young Rip Rap and Ann of Abbottsford were cast off at 10:06. The heat was a poor one. Rip was hard to handle, and was much of the time beyond control, while Ann was frivolous and unreliable, she being in season. Rip pointed a bevy in pines. Ann pointed some birds in woods, then flushed them willfully. Next she pointed a single nicely. Next in woods she pointed; Rip backed; nothing found. Up at 11:11.

Cincinnatus Pride and Elgin's Dash were cast off at 11:24. This heat was the best working heat of the stake. Dash flushed a bevy, and made two points on singles, and a find and a point on a bevy. Pride pointed four bevies, made another point or back and flushed one single very awkwardly, Dash pointing at the time, and Pride drawing by him. This was Pride's worst error. Other birds were seen to flush near the dogs, but it was impossible to determine the offender, if such there were, though there were grounds for suspicion that Dash was not an honest worker when out of sight. Down 1 hour.

Count Gloster and Cincinnatus Pride were cast off at 1:54, after lunch. Pride showed much the more useful range and judgment, though Gloster went quite as wide. Pride was being led on chain out of a bottom when he pointed a bevy. Up at 2:31. Pride had the better of this heat.

Tony Gale and Pride were started at 2:37. This was a hard trial for Pride, it being his third consecutive heat. He nevertheless was going with undiminished speed and range, far excelling Tony, the latter going with little interest, beating out his ground without any plan, and coming in frequently to his handler, who ordered and encouraged him to go on. Tony pointed a bevy which he found without much effort in seeking. Immediately afterward Pride pointed a bevy. Both were steady to shot. Up at 2:49. This ended the trials.

THE BROOKLYN DOG SHOW.

The bench show of the Metropolitan Kennel Club, held in Brooklyn, beginning on Nov. 24, had 738 entries. It was nicely managed, and nearly all the judging was completed by the evening of the first day. The attendance was fairly good, particularly on the first day, though as to it being good enough to make the show a financial success there is some doubt. There were many noted fanciers, among which were: H. G. Trevor, Dr. Huidekoper, A. C. Wilmerding, C. D. Bernheimer, James Watson, Woodruff Sutton, H. W. Huntington, O. W. Donner, A. Goode, F. H. Mulvey, G. Muss-Arnolt, A. B. McGregor, James L. Kernochan, Perry Tiffany, H. L. Kreuder, Henry Jarrett, Mrs. Meacham, Joe Lewis, Dr. Glover, Thomas Turner, Frank Dole, German Hopkins, Alfred Boote, Fred Lewis, Charles Heath, W. W. Watrous, M. A. Viti, I. F. Holt, Dr. J. B. Blossom, J. Blackburn Miller, Dr. Richard Derby, Dr. S. J Bradbury, J. W. Appleton, Henry C. Beadleston, Winthrop Rutherford, O. P. Amend, and others.

Mr. James Mortimer superintended, and Mr. G. W. H. Ritchie and Dr. H. T. Foote assisted in such matters as they could.

Foxhounds were few in numbers. A. B. McGregor's Songster won first in English hounds. American hounds were inferior in quality, only one prize being awarded in the open class, first to Dr. C. A Foster's Jim Corbett.

The pointers were noticeably light in numbers, though in point of merit they were pleasingly strong. Furlough Lodge Kennels took the kennel prize. George W. Lovell's Shotaway was first in challenge class, 55lbs. and over; George W. Gould's Ridgeview Comet taking first in the challenge class for dogs under 55lbs., while his two bitches, Georgie Brackett and Miss Rumor, won first respectively in the challenge classes for bitches 50lbs. and over, and under 50lbs. The winners in the heavy-weight dogs were. first, George S. Mott's Prince's Lad; second and third, F. R. Vernon's Bill V. and Timothy respectively. In heavy weight bitches George J. Gould's Ightfield Diana and Furlough Bloom were first and second, third going to F. R. Vernon's Isabella V. Under 55lbs., dogs, had the winners, first, George J. Gould's Furlough Bang; second, A. M. Hopper's Tick Kent II.; third, J. Roger McSherry's Faust J. In bitches, under 50lbs., Wilcox & Fairbanks's Fay Templeton won first; second and third, George J. Gould's Furlough Maid and Furlough Miss.

English setter winners were as follows: Challenge classes—J. Brett's Cactus in dogs, Henry Pope's Maid Marion in bitches Open classes—Dogs: First, J. Brett's Orangeman; second, F. G. Taylor's Admiral Drake; third, D. J. Peters's Robin Goch Bitches: First, Alfred Boote's Juno; second, W. L. Harris's Mamie Wilson; third, Joe Lewis's Furniss Maid.

Irish setters: Challenge classes—J. M. Bullock's Pride of Patsy first in dogs, and Joe Lewis's Duchess was first in bitches. Open—Dogs: First, P. F. O'Neill's Hunter; second, J. M. Bullock's Rockwood; third, J. B. Blossom's Bronx II. Bitches: First, E. W. Tynan's Ruby Glenmore II.; second, J. B. Blossom's Rosamond; third, Joe Lewis's Red Bell.

Gordon setters had the following winners: Challenge classes—J. B. Blossom's Heather York first in dogs, his Heather Bee first in bitches. Open classes—Dogs: J. B. Blossom's Heather Bruce and Doc, first and second; third, A. W. & C. R. Swain's Brandy. Bitches: First and second, J. B. Blossom's Sally Beaumont and Venus; third, E. H. Morris's Pinemont.

Beagles won as follows: Challenge classes—Dogs: Hempstead Beagles' Florist. Bitches: Miss Anna Lewis's Sova. Open classes—Dogs: First, Hempstead Beagles' Nimrod; second, H L. Kreuder's Lee III.; third, H. T. Peters's Windholm's Directum. Bitches: Hempstead Beagles' Oxonsay Matron first, and their Purity second; third, H. T. Peters's Totteridge Lovely. Dogs (13in. and under): First, H. Jarrett's Why Not II.; second, Hempstead Beagles' Laughter. Bitches (13in. and under): First, H. L. Kreuder's Floss K.; second, Hempstead Beagles' Fearless.

The quality of the spaniels was good and they were in fair numbers. The prize winners were as follows: Clumbers—Dogs and Bitches—First, Glenwood Greeting, H. Jarrett. Irish Water Spaniels—Open Dogs and Bitches—First, Venus, Miss Anabel Green. Puppies—First, Dublin; second, The Yellow, and third, Cork, Miss Green. Field Spaniels, Black, Open Dogs—First, Wardleworth Sweep, Miss Anabel Green; second, Dark Despair, same owner; third, Woolton Ebony, C. T. Mead. Open Bitches, Black—First, Honey, Miss Anabel Green; second, Tipsy, and third, Zulu, same owner. Any Other Color—Open Dogs—First, Napoleon, and second, Woolton Wonder, C. T. Mead. Any Other Color—Bitches—First, Saybrook Cypress, R. P. Keasbey; second, Woolton Dagmar, C. T. Mead. Cocker Spaniels, Black or Liver—Challenge Dogs and Bitches—First, Havoc, George Douglas. Challenge Bitches—First, Woodland Belle, George Greer. Any Other Color—Dogs and Bitches—First, Lorraine, George Greer. Open Dogs, Black—First, Premier, Geo Douglas; second, Figi, George Greer; third, Mepal's Mohican, Mepal Kennels. Open Bitches, Black—First, Miss Jerry, Mepal Kennels; second, Jeanette Ferrill, George Douglas; third, Floss Obo II., Walter Batts. Open Dogs, Red or Liver—First, Red Mack, Geo. Douglass; second, Brookside King, Geo. Greer; third, Goldbrick, John H. Herbertson. Open Bitches, Red or Liver—First, Brookside Queen, George Greer; second, Sadie B., S. W. Mallory; third, Daisy B., same owner. Open Dogs and Bitches, Any Other Color—First, Lofty II., W. T. Payne; second, Watnong Terry, Mrs. Grace McDonald; third, Mirge, W. T. Payne. Novice, Dogs and Bitches—First, Jeanette Ferrill, Geo Douglass. Dog and Bitch Puppies—First, Mepal's Opal, Mepal Kennels; second, Maxim, George Douglass; third, Mepal's Natty Bumpo, Mepal Kennels.

A Dog Show Stock Company.

Editor Forest and Stream:

At the Brooklyn show the idea was broached of organizing a stock company with a capital of $10,000 for the purpose of backing and holding dog shows under the auspices of local clubs throughout the country. The exhibitors took to it more than kindly, and there seems no doubt about raising the capital. The most experienced and popular manager in the country will be identified with the project, and the prospectus of the new company is promised at an early date. The advantages of the scheme are apparent: an increased number of shows, and the relieving of a few enthusiasts in each locality of responsibility and possible loss. With proper management such capital would in all probability prove remunerative to the stockholders in the near future. We are awaiting further particulars, which will, no doubt, be of considerable interest to exhibitors. Brooklyn.

Champion Field Trial Association.

Owing to the disbandment of the Union Field Trial Club, the Tupelo trials of that club have been declared off, and the directors of the Championship Association have placed the date of the trials of that Association, Jan. 24, 1898. They are to be run at New Albany, Miss., instead of Tupelo. Entries for dogs now eligible to close on Dec. 15 next, with $15 forfeit. W. B. Stafford.

POINTS AND FLUSHES.

The date of the Champion Stake has been changed to Jan. 24, and the place for running it will be New Albany, Miss., instead of Tupelo. There is already much interest manifested in it, and there is every probability that the affair will be a success.

Mr. Geo. Richards goes to Vinton, Miss., for the winter. Mr. Geo. Gray will locate somewhere in the South for the winter, probably in Mississippi or northern Alabama. Mr. J. H. Johnson returns to his home in Carlisle, Ind., and later will train all winter at Saltillo, Miss. Mr. C. E. Buckle goes to northern Mississippi to train for the winter.

The handlers thought seriously of taking up the trials where they were abandoned by the defunct Union Field Trials Club, and running them at Tupelo, Miss., but on mature deliberation the matter was dropped.

While beating about for scattered birds in a heat in the Eastern trials, one of the handlers stopped and in a beseeching tone said to Col. Merriman, who was judging: "I don't know where these birds are." "What have you got your smell dog for?" said the judge. The handler then went on searching for birds.

Rip Rap K., a son of Rip Rap, dam Croxie Kent, died in California on the 15th inst. Much was expected of him in improving the breeding of pointers of the coast. He was owned by W. C. Kennedy, of Fresno. Distemper caused his death.

St. Hubert's Inn, at Newton, N. C, won the good opinion of the sportsmen guests, the lunches in particular for their excellence breaking all field trial hotel records.

Capt. C. E. McMurdo was warmly received by his old friends after an absence of two or three seasons from the field trial competition, and as to his old friends, they are everyone who ever met him. He will train at Tyro Shops, N. C., this winter.

Mr. C. E. Buckle goes to Mississippi soon to locate for the winter, to train the youngsters of the Charlottesville Field Trial Kennels and to compete in the winter trials.

After his recent experience in judging at Newton, he confessed that judging was much more difficult than it seemed.

The popular handler, Mr. Frank Richards, was much missed at the trials, both for personal reasons, he having many friends, and for the strong competition he was expected to make.

The *Courier-Journal* devotes liberal space to a pair of Irish wolfhounds imported by Mr. Roger D. Williams, and gives a lengthy description of the breed and its qualities. This information is exceedingly valuable, and will be gratefully received in England and Ireland, where nothing definite is known of the characteristics of the breed, yet where authorities agree it became extinct at a time beyond the memory of man.

The *Stock-Keeper* (England) of Nov. 19 states that the shipping department of Spratts Patent has this week exported to America a setter from Mr. T. Herbert, four fox-terrier puppies from Mr. F. Redmond's kennel, and to Sydney, two fox-terriers from Mr. H. Grove. The firm supplied all the traveling appliance and food for the voyage.

At a committee meeting of the English Kennel Club it was decided "that Captain Hargraves be censured for his conduct in introducing a live rabbit into the St. Bernard ring at the Lancashire and Northern Counties Kennel Club show, held at Liverpool." In this country we still cut off horses' tails, dogs' ears and tails, to gratify the love for animals implied in the term fancier, though such mutilations are against the law of the land. However, the legal punishment would seem to have been sufficient in Capt. Hargraves's case. It is a hardship to punish a man twice for the same offense.

The value of hounds as an aid to the officers in the pursuit and capture of fugitives from justice is so well known that they are much used in different sections, particularly in the Southern States. The Charleston *News* mentions the public demand for a trained pack which is kept at Florence, and of the moral effect of such an accessory to the law it says: "The most important testimony to their value, however, is afforded in the statement as to the effect of their presence in reducing crime. The mere fact of 'having these mere trailers on hand,' we are told, 'has been a great thing for Florence,' as shown by the marked decrease in the number of cases of burglary and incendiarism alone, to say nothing of other serious or lesser crimes. A similar equipment should be a greater thing for other towns or counties for the same reason, and when its small cost is considered it is really strange that every county is not provided with one."

KENNEL NOTES.

Kennel Notes are inserted without charge; and blanks (furnished free) will be sent to any address. Prepared Blanks sent free on application.

SALES.

Mr. F. L Cheney, Pittsfield, Mass., has sold
——, Irish setter dog, whelped Sept. 12, 1897, by Shamrock's Don—Little Lorna, to Mr. W. H. Withington, Brookfield, Mass.
——, dog, same litter, to Mr. Albert Kenyon, Pittsfield, Mass.
——, dog, same litter, to Mr. F. C. Clapp, North Brookfield, Mass.
——, dog, same litter, to Mr. W. L. Haskell, North Brookfield, Mass.
——, Irish setter bitch, whelped March 6, 1897, by Finglas—Little Lorna, to Mr Jas. C. Wrinkle, Lee, Mass.
[Mr. Cheney writes that these five sales were made through his advertisement in FOREST AND STREAM's Kennel Special columns.]

Ready Reckoner Slips.

Editor Forest and Stream:
Please send me one "ready reckoner" slips for computing cost of kennel special ads Have lost the one I have been using. I always get good results from these small advertisements. W. P. AUSTIN.

WHERE TO GO.

ONE important, useful and considerable part of the FOREST AND STREAM's service to the sportsmen's community is the information given inquirers for shooting and fishing resorts. We make it our business to know where to send the sportsmen for large or small game, or in quest of his favorite fish, and this knowledge is freely imparted on request.

On the other hand, we are constantly seeking information of this character for the benefit of our patrons, and we invite sportsmen, hotel proprietors and others to communicate to us whatever may be of advantage to the sportsman tourist.

Yachting.

As the yachting journal of America, the FOREST AND STREAM *is the recognized medium of communication between the maker of yachtsmen's supplies and the yachting public. Its value for advertising has been demonstrated by patrons who have employed its columns continuously for years.*

NEARLY ten years have passed since the yawl Cythera sailed from Staten Island for the West Indies on the eve of the great March blizzard. In all this time nothing authentic has been heard of the yacht or her crew, but now comes a strange story told by a Scandinavian sailor, Ilak Engleson, at present in a hospital at St. Louis, Mo. This man, who claims to have been cook on Cythera, states that after being out for seven days in very bad weather the yacht was in collision with some unknown object and sank almost instantly. The narrator saved himself by clinging to a door, and after a night afloat was picked up by a steamer bound for Rio Janeiro. At this port he shipped for Madagascar, and since that time has been in remote quarters of the globe, only landing in San Francisco a year ago.

While much latitude must be allowed for the ignorance and forgetfulness of the average Scandinavian seaman, the story as reported is so far from the known facts of the case as to suggest that it is not a true personal experience, but only recounted at second hand.

A CABLE from London states that a meeting of the Council of the Yacht Racing Association has been called for Dec. 2 to meet Messrs. Jarvis and McDonough, of the Y. R. U. of N. A., who are now in London.

THE annual general meeting of the Y. R. U. of Long Island Sound will be held on Dec. 7 at the Fifth Avenue Hotel, New York, at 8 P. M. The business before the meeting includes the action on proposed amendments, report of the Council, arrangement of dates, and election of officers.

IT now appears that the report of a new Watson cutter for the Prince of Wales was based on no better foundation than that a building shed was being erected at the Henderson yard. Mr. Watson has denied that any such yacht was ordered. What will really go up under the new shed is a schooner yacht of 115ft. l.w.l., designed by Mr. Watson for an unknown owner.

YAMPA, schr., has been sold by R. S. Palmer, through Tams & Lemoine, to a foreign owner, it has been reported, no less a personage than the Emperor William. The report lacks confirmation, but the sale of this fine yacht is interesting in connection with the construction of a Watson schooner of similar length.

Yacht Racing Union of the Great Lakes.

SECOND ANNUAL MEETING, SATURDAY, NOV. 20.
Detroit, Mich.

THE annual meeting of the Yacht Racing Union of the Great Lakes was held at Detroit on Nov. 20. All the associations in the Union were represented, the Lake Yacht Racing Association by E. H. Ambrose and J. E. Burroughs; the Interlake Yachting Association by F. B. Hower, E. W. Radder and S. H. Jones; and the Lake Michigan Yachting Association by E. C. Berriman; Mr. Ambrose also had a proxy from Æmilius Jarvis, the chairman of the Union, who is in England. On motion of Messrs. Radder and Berriman, Mr. Ambrose was appointed chairman of the meeting and Mr. Burroughs acted as secretary.

The principal business was the discussion of the amendments, of which notice had been given.

Mr. Radder moved, seconded by Mr. Jones, that paragraph 1 of Rule XV. of the Racing Rules be amended by substituting the following as the limit of crews in the classes mentioned:

52ft. class	10 persons.
42ft. class	8 persons.
37ft. class	7 persons.
32ft. class	6 persons.
27ft. class	5 persons.

Mr. Radder explained that the object of the amendment was to limit the crews to just a sufficient number to work the boat and minimize as far as possible the use of crews as live ballast. Com. Hower thought that the present limit of crew was small enough except in the 27ft. class and possibly the 32ft. class, while Mr. Burroughs thought that no reduction should be made except in the 27ft. class and moved in amendment, seconded by Com. Hower, that the reduction be in that class only.

Mr. Burroughs's amendment was carried.

Mr. Radder then moved, seconded by Mr. Jones, that the following be inserted in paragraph 3 of Rule XV. of the Racing Rules, between the words "Corinthian" and "and" in the second line: "who must be a member of a recognized yacht club belonging to one of the associations of the Union."

Com. Hower thought that some explanation should be given in the rule of what was meant by a yacht's "regular professional crew," and moved, seconded by Mr. Burroughs, that the following be added to Mr. Radder's motion:

"And that all words after 'not more than,' in the fourth line, be struck out and the following substituted therefor: 'the number of professionals regularly employed on the yacht, and not more than two in any case.'"

Mr. Radder accepted Mr. Hower's addition and the motion, as amended, was carried.

Mr. Radder then moved, seconded by Mr. Jones, that the words "galley fittings and," in the third line of paragraph 1 of Rule XIV. of the Racing Rules, be struck out.

The motion was carried.

Mr. Ambrose moved, seconded by Mr. Radder, that Rule VI. of the General Rules be amended by substituting "second Saturday in October" for "first Saturday in November" in the third line.

The motion was carried.

Mr. Ambrose then explained that three amendments of which he had given notice were dependent one upon the other, and that he desired them considered together, and moved, seconded by Mr. Burroughs, that Sec. 1 of Rule III. of the Racing Rules be struck out and the following substituted therefor:

1. Yachts shall be rated for classification and time allowance by racing length, which in the case of yachts built prior to Nov. 7, 1896, and in the case of yachts built or brought to the Lakes after that date, the area of the immersed midship section of which, when in racing trim (inscribed within a parallelogram which shall touch its extremities), shall not be less than the percentage of the area of such parallelogram in the following table:

First class	35 per cent.
52ft. class	35 per cent.
42ft. class	35 per cent.
37ft. class	35 per cent.
32ft. class	35 per cent.
27ft. class	20 per cent.

shall be determined by adding the load waterline length to the square root of the sail area and dividing the sum by 2, subject to the provisions of Rule VIII., Section 2.

Formula:

$$\frac{\text{L.W.L.} + \sqrt{\text{S.A.}}}{2} = \text{R.L}$$

Yachts built after Nov. 7, 1896, or brought to the Lakes after that date, the area of the immersed midship section of which, when in racing trim (inscribed within a parallelogram which shall touch its extremities), shall be less than the percentage of the area of such parallelogram in the table above shall have an equal percentage added to their length and sail area measurements above mentioned.

The formulæ to be used in these cases will be:

In the first class, 52ft. class, 42ft. class, 37ft. class and 32ft. class:

$$\frac{\text{L.W.L.} + \sqrt{\text{S.A.}}}{2} \times \frac{125 - \text{C.}}{100} = \text{R.L.}$$

In the 27ft. class:

$$\frac{\text{L.W.L.} + \sqrt{\text{S.A.}}}{2} \times \frac{120 - \text{C.}}{100} = \text{R.L.}$$

C. in formulæ represents the coefficient of the midship section, and expresses its relation to the parallelogram within which it is inscribed.

Example in the 42ft. class:

$$\text{L.W.L.} = 37;\ \sqrt{\text{S.A.}} = 47;\ \text{C.} = 28.$$

$$\frac{37 + 47}{2} \times \frac{135 - 28}{100} = 44.94\ \text{R.L.}$$

The largest transverse vertical cross section shall be taken as the midship section, and the parallelogram shall be taken to the lowest part of the vessel at this point or forward of it; of any greater depth which may be found aft of this, one-third shall be added to the depth of the circumscribed parallelogram. The parallelogram shall not include the centerboard if it be not a board weighted for ballast.

2. That Rule IV. be struck out.

3. That the words "300lbs. of ballast permanently stowed under the platforms or in lockers, or have a beam of not less than one-third of her L.W.L. length," in Definition II., be struck out, and the following substituted therefor: "The quantity of ballast specified in the following table:

First class	10 tons.
52ft. class	10 tons.
42ft. class	7 tons.
37ft. class	4 tons.
32ft. class	2 tons.
27ft. class	1,800lbs."

Mr. Ambrose went into a very full and lengthy explanation of the objects of his proposed amendments. He referred to the fact that a year ago the Union had legislated against the fin-keel, and that the reasons for this were principally two: (1) That a yacht built one year might be practically useless the following year by reason of being outbuilt, and (2) the expensive construction which was possible in the fin-keel type, and which only the rich man could take advantage of. He did not think that when the restrictive rule was passed it was felt that it would be permanent, but that it was then recognized that the rule of the future would, in addition to the length and sail area measurement, impose a tax on want of displacement. No formula in this direction had yet received general approval, but Mr. Ambrose contended that his proposed rule did away with the first objection to the fin-keel to which he had referred, and the table of scantling which was before the meeting, and which he felt sure they would adopt, disposed of the other. Mr. Ambrose urged very strongly the desirability of permitting a man to build any form of boat he desired, so long as he was taxed for any advantage obtained, and so long as the boat was of a desirable and seaworthy type and construction. He illustrated by a number of examples the effect his proposed rule would have, and how, so far as could be judged from the examples now on the Lakes, the tax appeared a fair one, if not excessive, as against the fin-keels. He did not discuss the different standards proposed, but deferred the explanation of this until after the principle of the rule had been approved. He contended that, as the first amendment would put a penalty on a small section, and consequently would in any event in the smaller classes encourage boats of a "big Glencairn" type; that the third amendment was necessary to meet this, and although he felt in no way positive as to the minimum quantity of ballast, he thought that it should be of such a quantity as no good modern yacht capable of making the circuit of the Lakes would be without.

Mr. Radder said that he would not in any way express an opinion against the rule, but that he would oppose it because the yachtsmen of his lake were not in favor of changes in the rules being made any oftener than could be avoided.

Com. Hower saw considerable merit in Mr. Ambrose's first amendment, and was prepared to support this, but strongly opposed any minimum limit of ballast. He contended that good, seaworthy and desirable yachts could be built without any ballast at all or with a very small quantity, and that the Glencairn type of boat was no more likely to be built under the proposed rule than under the present rule. He urged Mr. Ambrose to separate his amendments.

Com. Berriman said that the more he considered the matter and listened to the explanations and illustrations given the more he felt that the rule was a good one. He did not commit himself as to its approval, but looked very favorably upon it.

Mr. Burroughs was unalterably opposed to fin-keels or to permitting their construction, and had only seconded the motion to bring the matter before the meeting; but the third amendment, providing for a minimum of ballast in the several classes, had his hearty approval.

Mr. Jones agreed with Mr. Radder that the rule adopted last year should not now be changed. After a recess Mr. Ambrose replied to what had been said, and the discussion lasted several hours, until it was seen that the meeting was not prepared to carry all the amendments, but preferred to wait to see what action would be taken by the Yacht Racing Union of North America, and it being moved that the motion be laid on the table, it was agreed that the matter should stand till the next meeting.

Mr. Ambrose then moved, seconded by Mr. Radder, that Rule VIII. be struck out and the following substituted therefor:

"1. There shall be no time allowance in class races except in the first class and except as provided in paragraph 3 of this rule. Time allowance when used shall be calculated on R.L. according to the appended table.

"2. In races between boats all of which do not belong to one of the classes mentioned in Rule VI. the upper limit of the class to which each yacht belongs shall be taken as the R.L. of such yacht except in the first class, and except as provided in paragraph 3 of this rule.

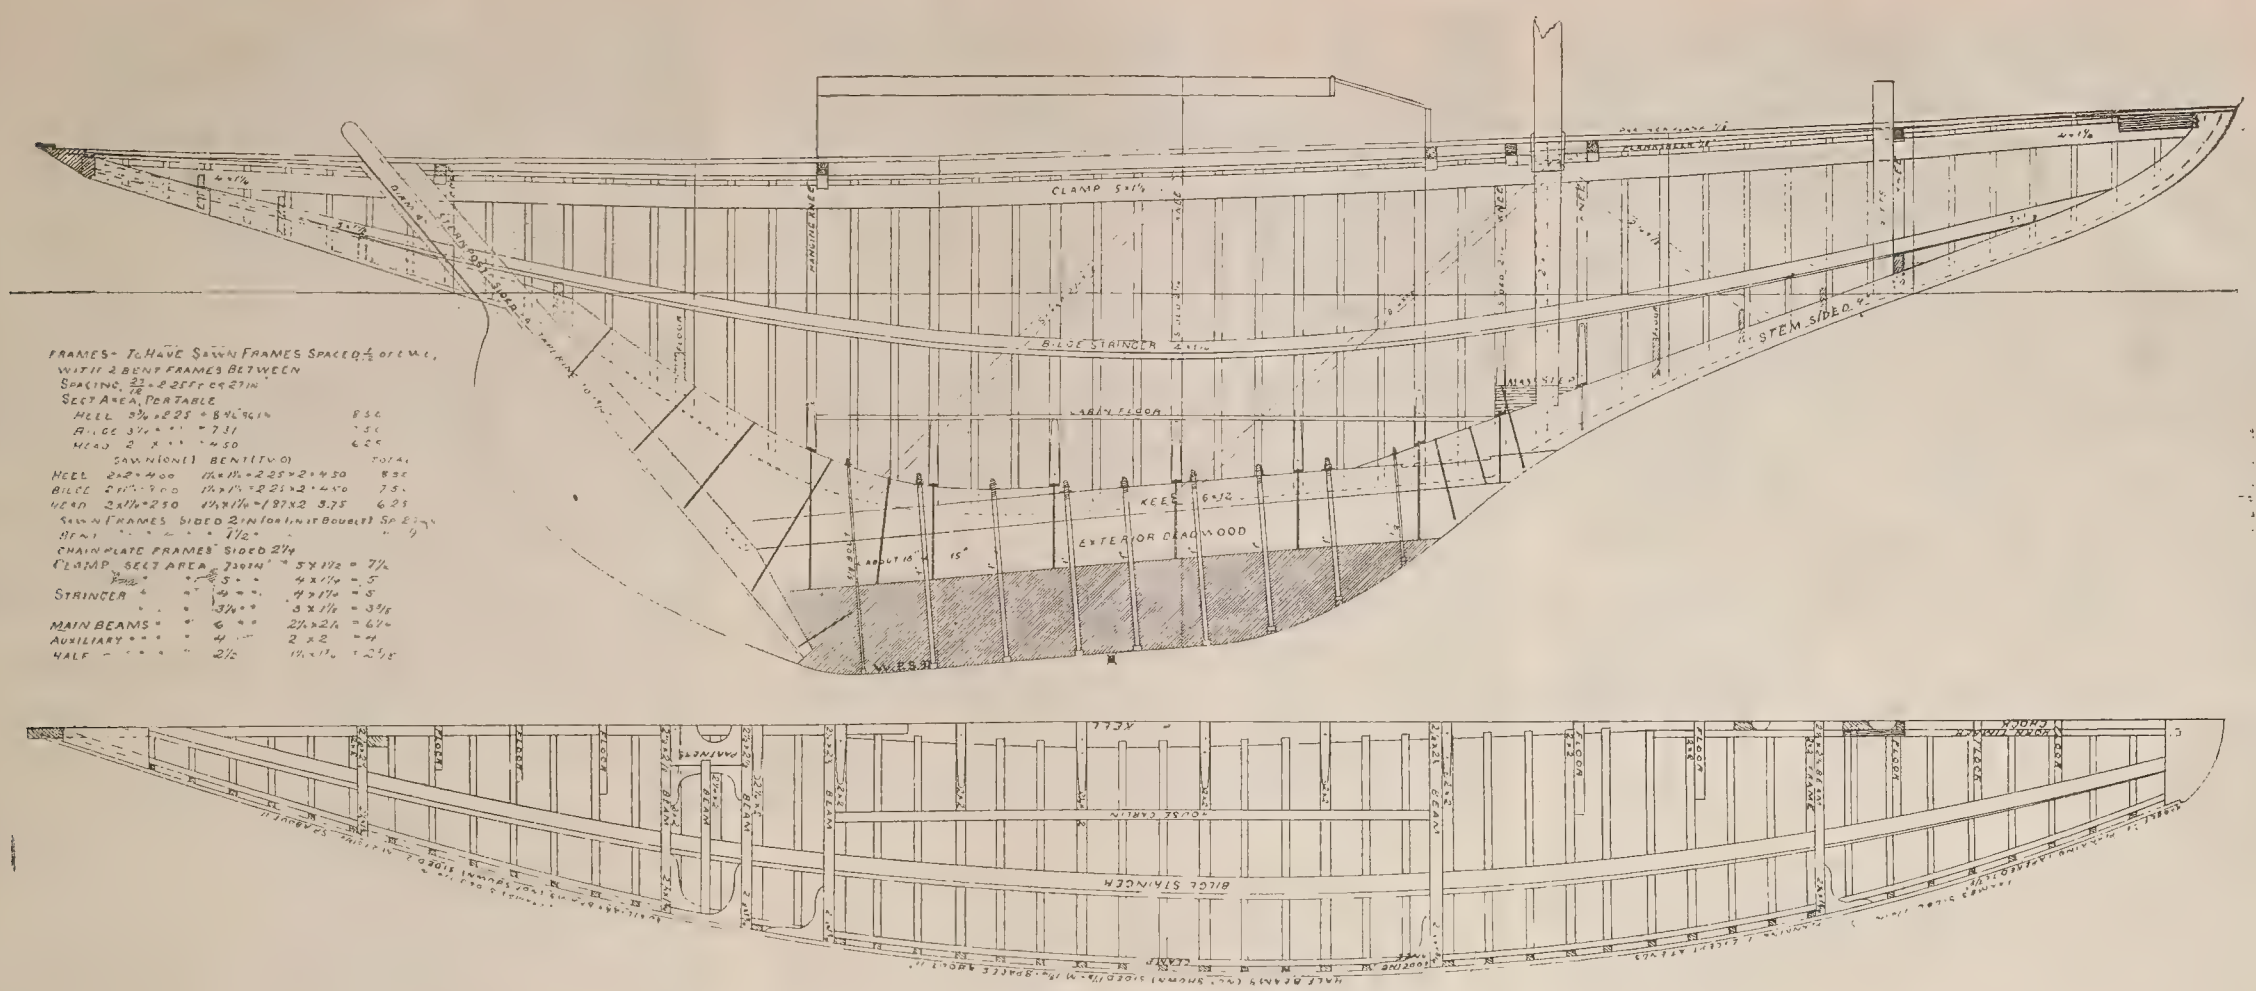
"3. The Council may from time to time require that any yacht built prior to Nov. 7, 1896, the immersed midship section of which (inscribed within a parallelogram which shall touch its extremities, as provided in Rule III.) shall be less than 35 per cent. of the area of such parallelogram shall have an equal percentage added to its R L. (as provided in Rule III.), and give time allowance from the increased rating, but such increase of rating shall affect the R.L. of such yacht for purposes of time allowance only, and not for purposes of classification."

All the representatives present at the last meeting had understood it to be the intention of doing away with time allowance after this year, but Com. Berriman said that it had not been so understood on Lake Michigan, and that such a rule would kill racing in their clubs. The matter was allowed, therefore, to stand for another year, except that the words "but such increase of rating shall affect the R.L. of such yacht for purposes of time allowance only, and not for purposes of classification," were added to Rule VIII., Sec. 2.

The table of scantling, prepared at the request of the Union by W. P. Stephens, of the FOREST AND STREAM, was then taken up, and this and the specifications, etc., accompanying it were adopted and made part of the rules of the Union. A resolution recognizing the very thorough manner in which his work had been done was adopted, a copy to be sent to him.

It was then moved by Mr. Radder and Com. Hower that the chair appoint a committee, as suggested by Mr. Stephens, which shall devote itself to the question of construction, and report to the Union any suggestions it may have to make. The motion was carried and the Chairman appointed Æmilius Jarvis, L. Y. R. A.; E. P. Warner, L. M. Y. A., and E. W. Radder, I L. Y. A., as a committee.

It was decided that the Union should join the newly organized Yacht Racing Union of North America.



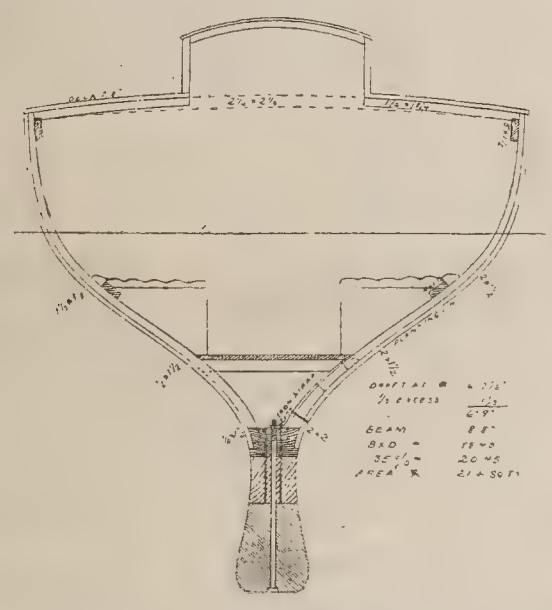
The election of officers for the ensuing year followed, and Com. F. B. Hower, of the Buffalo Y. C., was, on motion of Com. Berriman, elected Chairman, and Mr. J. E. Burroughs Secretary.

After the customary votes of thanks to the Chairman and Secretary the meeting adjourned.

General Specifications and Explanation of Table.

Those portions in italics are compulsory; the others are only suggested.

THE sizes in the accompanying table are based upon the assumption that the construction, as a whole, is planned by a competent naval architect, with the usual complement of minor members not specifically called for in the table; that the



SKETCH OF POSSIBLE CONSTRUCTION OF 32-FOOTER.

yacht is built under cover; and that the materials and workmanship are what is commonly called "first-class"—namely, all wood sound, well seasoned, and free from loose knots, shakes and sap, all knees and crooks being cut with the grain; all metal work properly wrought and neatly finished; all parts carefully fitted, with adjoining surfaces in actual contact throughout the full area; and all fastenings carefully selected with regard to their relative strength and the sizes and material of the parts they are intended to unite, and that they are properly located and driven.

A—*Stem.—The minimum siding (thickness) measured at the rabbet at highest point on stemhead, no decrease of siding allowed.*

Apron—In some cases an apron is necessary inside of

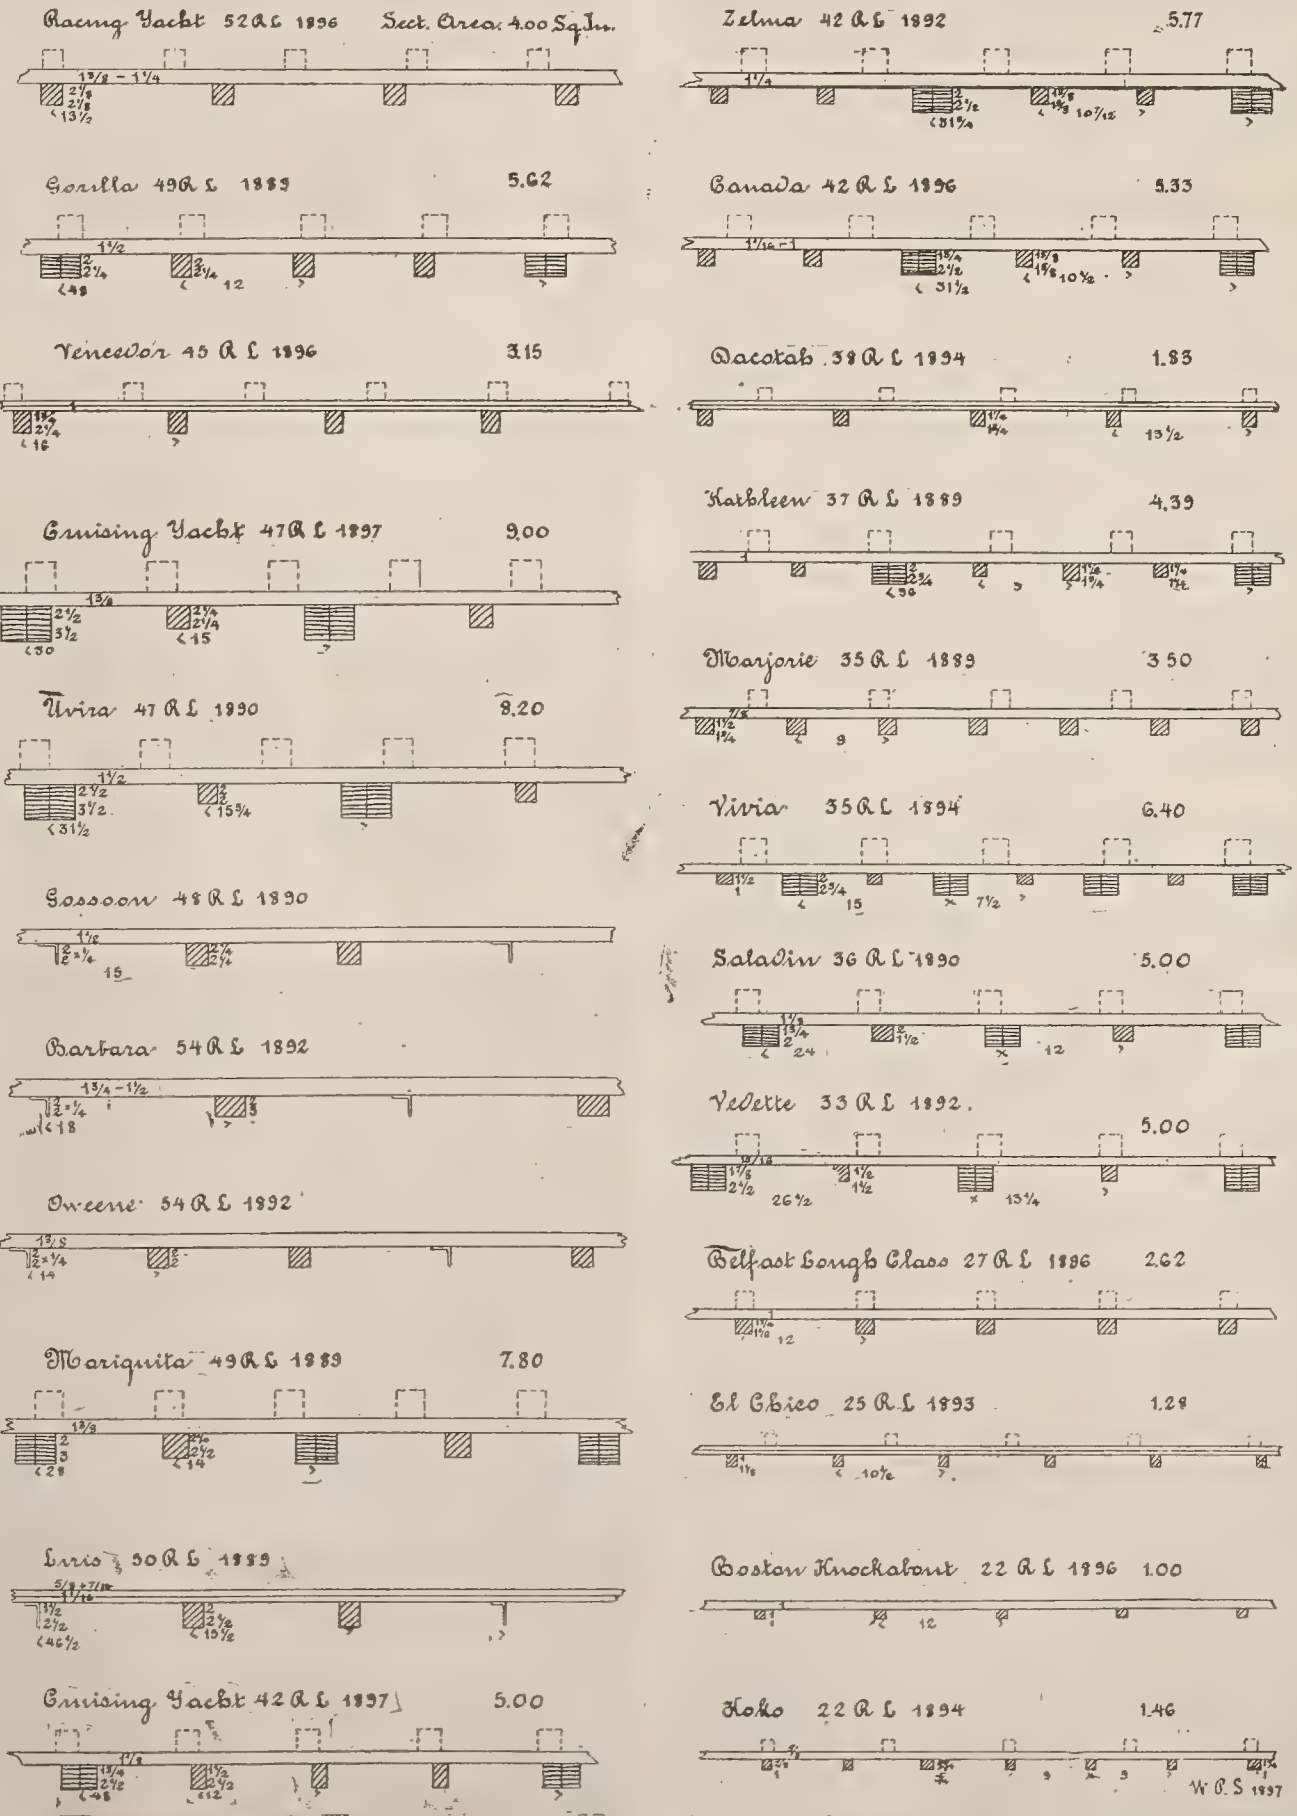
stem, with breasthook, and in the larger classes with knightheads.

B—*Sternpost.—Minimum siding at tuck (the crossing of the rabbet).* The siding may diminish from tuck to heel. *The rudder stock, if of wood, to be equal in diameter to the siding of post.*

C—*Keel.—Minimum depth allowed for middle.* With the usual iron or lead keel and good floor construction, there is no necessity for a great depth of main (wood) keel to secure vertical strength. The depth called for in the table is intended to secure sufficient wood outside the rabbet for the proper caulking of the garboard seam, for the depth of rabbet, and for additional wood inside up to the bearding line, as well as for scarphs. *The minimum of sectional area (breadth multiplied by depth in the middle of keel)* may be made up, if desired, by a deeper keel. The breadth of keel will taper from point of greatest section to siding of stem and sternpost.

Keelson.—In keel yachts of moderate depth a keelson is not absolutely necessary, and the required strength may sometimes be obtained to better advantage by the floor construction alone. A keelson may be worked to advantage over the throats of the floors in some cases, the centerline bolts of metal keel passing through it. In centerboard yachts, especially in the absence of a deep metal outside keel, side keelsons should be worked over the heels of floors, or the bedpieces of the trunk should be of ample scantling and worked well fore and aft of the slot, to serve as keelsons. No absolute sizes of keelson are laid down.

D—Frames.—The many different methods of framing now in use, and the possibility of new methods in the future, make it impossible to prescribe exact dimensions or spacing. Both sizes and spacing necessarily differ with the various methods of all sawn frames, in futtocks and tops, doubled; of single sawn frames, from knees, in single lengths; of all bent frames of uniform size; and of combinations of sawn and bent frames.



The sizes laid down in the table show the minimum sectional area of frames (the siding multiplied by the moulding) at three points—the heel of frame where it is boxed into the keel, the middle of frame about the flat of the floor and turn of bilge, and the head, at plankskeer. The sectional area is that of a single frame for a uniform spacing of one foot in each class. This required area may be made up of smaller frames spaced closer together, or larger frames further apart; or of combinations of large and small frames with appropriate spacings. This minimum sectional area shall apply to a space of at least two-thirds of the L.W.L. length in the center of the vessel; forward and aft of this, the sectional area may be reduced 20 per cent. Two adjoining frames abreast each mast, and one at each runnerplate should be increased in size in proportion as they are cut by the chainplate fastenings.

Where bent frames are used in combination with sawn, the bent frames may be of uniform scantling from end to end; *but the sawn frames must be large enough to make up the required average sectional area at the heels where they are cut by the fastenings of floors.*

Spacing of Frames.—The maximum spacing of frames, as given in the table, is based not on the size of frames, this being variable, but on the thickness of planking allowed for the class; being the greatest spacing that will insure a tight seam with the usual caulking for the minimum thickness of planking allowed.

E—Floors.—The many varieties of floor construction make it difficult to establish any standard, but there should be *at least six strong floors in the center of the vessel in way of the metal keel, and two at each mast step.* The table gives the minimum sectional area over centerline of keel, of wood floor-knees, and the equivalent sizes of steel angles, with approximate spacing. The arms of the main floor should run up to a length at least equal to the spacing given in the table, to allow space for fastening through heels of frames. In yachts of S section with all bent frames, the arms of floors should run up at least to the height of the waterline. Provided that the main floors are of ample strength, the floors on the smaller frames in the middle of the vessel and on all frames in the ends may be of flat iron or straight-grained plank. All floors should be thoroughly bolted to the keel, stem and horn timbers. It is not essential that the main keel bolts should pass through the floors, as the large size of the holes weakens the knees unnecessarily. The keel bolts may set up on top of the wood keel, in which case the floors should be very thoroughly fastened by smaller bolts to the wood keel; or a keelson may be worked over the throats of the floors, and the keel bolts may set up on it.

F—*Shelf or Clamp.—The minimum sectional area given for the middle shall cover a length of at least one-half of the shelf (or clamp) and in the middle, a taper being allowed to the size given at each end. The ends of deck beams may be jogged into top of shelf a distance not exceeding one-third of their own depth. If a beam clamp is used, fitted close up to the plankskeer, the beams being thus jogged in for their full depth, the sectional area shall be increased in proportion.*

Examples of Framing. Sections through Frames and Planking about Turn of Bilge.

G—*Bilge Stringer.—The minimum sectional area at middle shall cover at least one-half the full length of bilge stringer, with taper allowed at the ends. At least one bilge stringer must be run on each side, at about the lower part of turn of bilge,* and two are recommended in any case, the sectional area of each being at least one-half of that of the single stringer. In yachts whose extreme beam exceeds twice the greatest depth from underside of deck to upper side of keel, two such stringers on each side should always be fitted.

H—*Deck Beams.—The minimum sectional area of deck beams shall cover at least the middle third of the beam, allowing a taper, in the moulding, to each end. There must be one main beam at the bitts, two at each mast (partner beams), one at fore-end of cabin trunk, one at after-end, two at each skylight, hatch and companion in flush-decked vessels, and one at transom. The auxiliary beams and the half-beams abreast of house, skylights, etc., may be of the smaller areas given for each. The beams may be spaced at will, provided the maximum distance between centers does not exceed that given in the table, which is based upon the thickness of deck planking The beams should be jogged into the shelf of clamp a distance equal to one-third of the moulded depth of beam at ends.*

I—*Planking.—The dimensions given in the table are the minimum thicknesses allowed, after final planing, over a distance in the middle of the vessel equal to at least one-half of the over-all length.* It is not compulsory that the garboards be of greater thickness than the rest of the planking, but this is sometimes desirable, especially in the larger yachts.

The rabbet from the waterline upward on the stem, and along the horn timbers, may be cut to the depths given in the table, the hood ends of the planks being slightly tapered to this reduced depth.

It is recommended that wherever practicable, the planking shall be in single lengths, without butts; and that where butts are unavoidable they should be made, not on the frames, but on butt-blocks between the frames. Butts in adjoining strakes should be at least 6ft. apart, and butts in the same space should be separated by at least three intervening strakes. The planking should be worked in narrow widths, especially in the topsides.

J—*Decking.—The thickness given for the deck plank applies also to the plankshеer (covering board), and the partner planks. The ends of the deck plank should be well supported, and in no case should they be wrought to a shim edge, which will crush down in caulking.*

K—*Keel Bolts.—The sizes given are the minimum diameters for the main (center line) keel bolts when spaced 12in. apart. The sizes and spacing may be varied as long as the equivalent strength is maintained.* These sizes are sufficient for the average metal keel, of about 50 per cent of the total displacement, but if the keel be deep and narrow it is recommended that the side bolts, of smaller size, driven diagonally from each side in alternation, be used in addition in the spaces between the main bolts. Where considerably less than 50 per cent. of the total displacement is carried in the metal keel, all bolts may be reduced in proportion. *For yachts to be used only in fresh (lake) water, steel bolts may be used, without galvanizing, both with lead and iron keels.*

It is recommended that the outside metal keel, whether of lead or iron, be cast before the wood keel is worked out; the contraction of the iron or lead is more or less an unknown quantity, and the keel, when finally cast, may not be of the exact dimensions intended and may not fit the wood keel as worked from the plans.

L—*Metal Centerboards.—Solid plate centerboards not exceeding the thicknesses given in the table shall be allowed. In built-up metal boards and wooden boards weighted with metal, the total weight shall not exceed that of a solid steel plate of the same superficial area and of the thickness allowed by the table.*

General Details.—It is recommended that diagonal straps of steel be worked across the deck frame in way of masts and runners, being scored into the beams; and that similar straps be worked across the main frames, two at the main chainplates on each side and one at the runner plate. The deck frame should be specially strengthened about the bitts and masts, and ample provision should be made for the pull of the halyards on the bitts, blocks and hooks around the mast. For this purpose bolts may be run from deck to keel, or iron braces may be fitted below deck, well bolted to the mast. At least three hanging knees should be worked on each side, and in the larger yachts there should be hanging knees on the main beams at bitts, partners, middle and after end of house and transom. Lodging knees should also be worked about the partners and at either end of house.

The shelf or clamp may be reinforced by fore and aft pieces abreast of the channels, worked inside the shelf and up under the deck beams and covering at least six frame spaces. Similar pieces may also be worked lower down, to take the lower bolts of the main chainplates.

To the Council of the Yacht Racing Union of the Great Lakes:

GENTLEMEN: In compliance with the instructions received from you to prepare a table of scantling to govern the construction of yachts for your fleet, I herewith submit the following report and table.

It is evident that any attempt to impose restrictions in yachting, whether in the rules for measurement and classification, in the direct limitation of special features, or in the regulation of construction, must of necessity tend to encourage not all types or methods of construction alike, but some one in particular at the expense of others. In dealing with the subject of construction, it is absolutely necessary at the outset to determine which one, of many possible methods, is to be selected as the standard and awarded the first consideration. The various methods of construction now followed by yacht designers and builders are: First, the old all wood construction found in all of the Lake yachts up to a dozen years ago, practically ship construction, with a great bulk of wood, a heavy ceiling throughout the vessel, and too frequently inadequate fastenings; second, a lighter and more scientific wood construction, such as is found in the Burgess yachts Merle and Wona and the Cary Smith yachts Oriole and Cinderella; third, the still lighter and stronger wooden construction, with numerous but light members well placed and fastened, introduced to the Lakes about 1891 in the Fife yachts Yama, Zelma, Nox and Vedette; fourth, all-steel construction, as found in Sultana and the Watson Vreda; fifth, composite construction, with steel frames, floors, garboard and deck stringers, beams, etc., and wood keel and planking; sixth, the very light wooden construction of the last few years, as in Vencedor, Siren and Vanenna, with frames all bent, and with the beams of small size and spaced closely together, and double skin.

The first two methods may be dismissed as obsolete, and it is not necessary to consider steel construction at the present time, as it is of advantage only in larger vessels than are included in the Lake classification. In point of speed alone, the double-skin methods, both composite and the all-wood construction with very light bent timbers, possess some advantage over such a good all-wood construction as that of Yama and Zelma; at the same time the cost is materially greater, the work can only be properly done by a builder accustomed to it, with an adequate plant and a force of skilled workmen; and its durability is at the best no greater than that of good all-wood construction.

Neither of the two methods, as exemplified on the coast in Wasp, Syce and Norota, and in the fin-keels Niagara, Drusilla and the special 30-footers, has yet been introduced on the Lakes save in Vencedor, Siren and Vanenna, of the Lake Michigan fleet. Considering the limited advantages of these two methods, their heavy cost, the facilities for building as they are to-day in most Lake ports, and the general conditions of Lake yachting; there seems to be no immediate call for the introduction of either to the practical exclusion of the ordinary good all-wood construction. Any small deficiency of the latter in point of racing speed is more than compensated by the cheapness and facility of construction, within the powers of ordinarily good mechanics; and greater durability.

With such success for your Association as may be reasonably looked for in the near future, and with a resulting increase of racing and building, it will in time become necesesary to extend the limitations of scantling to cover both composite and the lighter all-wood construction; but, apart from the difficulty of doing so at the present time, the welfare of yachting on the Lakes would only suffer by the immediate introduction of a limited number of extreme racing yachts that would of necessity outclass others less costly, superior in many respects, and in speed inferior but to a slight degree.

In default of exact and definite instructions as to the scope of the task committed to me, I have, in view of the above considerations, attempted to deal only with the now existing method of construction in your fleet.

Whether dealing with one method of construction only or with several, it is necessary to establish a certain standard of strength, according to which the sizes of the various members may be determined. Taking practical examples from your fleet, such yachts as Aggie, Zelma, City of the Straits, Eva and Yama, while fairly light in construction, are amply strong; and on the other hand, it is clearly recognized that in the newer Canada a safe limit of strength and durability has been exceeded in the effort to gain extreme speed. In determining the specific sizes of the different members for each class, a large number of examples of each method of construction and in various sizes have been studied, and the practice of all the leading designers and builders has been compared. The standard aimed at has been a strength about equal to that of Yama and Zelma.

TABLE OF SCANTLING FOR YACHTS OF THE GREAT LAKES, PREPARED FOR THE YACHT RACING UNION OF THE GREAT LAKES BY W. P. STEPHENS, 1897.

CLASS RACING LENGTH.	52 Feet.	42 Feet.	37 Feet.	32 Feet.	27 Feet.	22 Feet.
Average length and sail	45—3481	36—2304	32—1936	28—1296	23—961	19—625
A—Stem, sided at head	1½	1⅜	1¼	1	⅞	⅝
B—Sternpost, sided at ruck	5½	4½	4¼	4	3½	2¾
C—Keel, minimum thickness	6	5½	5	4½	3½	2
sectional area	100	75	60	50	40	10
Keelson	7½	6¾	4¾	3¾	3	1½
D—Frames, sectional area, heels	6½	6	4	3¼	2½	1¼
bilge	4½	3	2½	2	1½	1
heads	15	12	12	12	11	10
spacing	15	12	10	8	6	4
E—Floors, wood, sectional area	2×3×¼	2×3×¼	2×3×¼	2×3×¼	2×3	1½
equivalent steel L	24	24	22	20	16	12
spacing	16	12	8½	7	5	3
F—Shelf or clamp, sectional area, middle	12	9	6	5	4	2
ends	13	8	5½	4	3½	2
G—Bilge stringer, sectional area, middle	10	6½	4½	3¼	2½	1½
ends	10	8	7	6	5	3½
H—Deck beams, main, sectional area	6	5	4½	4	3	1½
auxiliary	5	4	3	2½	2	1¼
half-beams	15	13	12	11	10	9
spacing	15	1¼	1⅛	1	⅞	¾
I—Planking; to finish full	1⅜	1⅛	1	⅞	¾	⅝
hood-ends, above L.W.L.	1⅛	1	1	⅞	¾	⅝
J—Deck, to finish full	1¼	1⅛	1	⅞	¾	⅝
K—Keel bolts, spaced 12in.	1¼	1⅛	1	⅞	¾	⅝
L—Metal centerboard, thick	¾	¾	¾	¾	⅝	½

All dimensions in inches.

The examples on which the accompanying tables are based have been selected from the British fleet as well as the American coast fleet, and in determining the final figures the following facts have received due consideration:

As concerns the British yachts, they are, as a rule, vessels of less power, smaller sail area, and of more moderate proportions of beam and depth; consequently permitting a somewhat lighter construction than in American yachts of equivalent measurement.

As compared with the yachts of the Atlantic coast, the Lake vessels of equivalent sizes, practically all under 52ft. R. L., are subjected to harder service, and require a rather stronger construction. While on the coast yachts as small as 36ft. racing length as a rule confine their racing to one locality, it is quite a common thing on the Lakes for a 27-footer to make the entire racing circuit of one Lake or to go from one to another, and even the small 22-footers sometimes make long racing cruises. In order to be fit for the long port-to-port passages on the Lakes, a yacht, especially if of small size, must be thoroughly and durably constructed, and to this end the standard has been placed somewhat higher than the examples of the salt water fleet would warrant.

Looking at the same question in its local bearings, it has seemed in every way better that the yacht which makes the racing circuit every season should be allowed a weight of material necessary for ample strength, even if the yacht built solely for harbor racing in one locality be compelled to carry a somewhat greater weight of construction than is absolutely necessary for such service.

Other things being equal, the success of any yacht construction depends upon the quality of the material and workmanship; if it can be assured that only the best run of material will be used, it being carefully culled over in the working, and that each individual workman will carry out skillfully and honestly the terms of the specifications, a material reduction of size is possible; but such favorable conditions cannot be relied upon implicitly in general building, and unless a special price is paid for the highest possible grade of work the scantling must be heavy enough to allow for the inevitable small imperfections.

The accompanying tables are based on two assumptions: first, that it is the desire of the Council, and of the yachtsmen which it represents, to produce craft of modern construction, and intended primarily for racing, but at the same time capable of standing the strains of hard racing service for a reasonable term of years, and afterward to be capable of further use as cruisers. While every effort has been made to allow some scope for improvement, and for the ingenuity of the designer, at the same time preference has been given to materials and methods involving moderate rather than excessive cost.

The second assumption is that both materials and workmanship will be what is called "first class"; and, while it is obviously impossible to specify exact sizes for all of the numerous members of a yacht, that the dimensions and arrangement specifically called for in the table are supplemented by the full complement of other details, as indicated in the accompanying description of parts.

I have not been unmindful of the desirability of conciseness and simplicity in the enumeration of members; but it will be seen on slight consideration that one result must inevitably follow any such spirited and continued racing as is looked for by yachtsmen. The first yachts built to the new limits will probably have, in addition to the members specifically demanded, others such as knees, straps, etc., that have been denied specific mention for the sake of simplicity. In the effort to outbuild, however, designers will soon find a way to omit all parts not specifically mentioned, thereby sacrificing to speed the immediate strength and permanent durability of the yacht, and thus completely nullifying the efforts of the Association. An instance of this evasion of a well-intended restriction is found in the Boston 21ft. knockabouts; the few and simple restrictions originally laid down served their purpose until the competition became very keen; then practically everything but the specified members (frames, planking, decking and lead keel) was omitted, the result being a mere racing machine. To avoid such a conclusion as this to the laudable efforts of the Y. R. U. of the Great Lakes in a new field, it has seemed desirable to deal with many more details than would otherwise have been necessary.

Assuming that the present attempt shall prove successful for the time being in producing a fleet of strong and durable yachts, it even then cannot be considered perfect or final. Not only will it ultimately require to be extended to cover composite and steel construction, but some provision must be made for probable improvements in all-wood construction which will call for amendment of the present tables. To this end I would suggest the appointment by the Union of a standing committee of three or more yachtsmen who shall devote themselves to this subject of construction. It should be one of the duties of such a committee to pass upon special plans of construction not strictly in accordance with the terms of the table, but possessing equal merit, when such plans are submitted by designers; to suggest amendments to the table when the advance of design makes them necessary, and in time t extend the tables to cover other methods of construction.

In preparing such a table as that called for by the Council, there is very little that is useful as a guide, nothing of a similar nature having thus far been attempted by yachting bodies save in two ways.

As long ago as 1875 the efforts of a few English yacht owners and builders resulted in the inducing of Lloyds' Society to extend its system of survey and classification to yachts; and with excellent results, so far as they went. For some years past, however, Lloyds' scantling has failed to meet the requirements of modern racing construction, and the leading British racing craft are not built to Lloyds rules or subject to their survey. An inspection of these rules shows that they are in no way applicable to the present case, as at best they would not extend below the 37ft. class; and they recognize but one system of construction, with all sawn frames, doubled, which is practically obsolete to-day in racing yachts.

Apart from Lloyds' Society, the only other efforts at the limitation of construction are those made independently by many individual clubs within the past three years in the "restricted" or "one-design" classes, each under special restrictions as to dimensions and usually as to details of construction as well. A careful examination, both of Lloyds' tables and of the rules of the various special classes, discloses very little material that can be utilized in drawing up a general and comprehensive scheme of scantling adapted to even one form of modern racing construction.

The dimensions here laid down for the various parts are based strictly on the best current practice of designers so far as this could be harmonized and tabulated. A study of a large number of yachts of from 20ft. to 60ft. racing length and of different types and dates, disclosed a wide diversity in the practice of different designers; in the one detail of scantling and arrangement of frames, many different combinations of sawn frames, single and double, in single lengths or futtocks and tops, bent frames of uniform scantling and spacing, and sawn and bent frames together, are found. Each of these methods possesses certain advantages and disadvantages of its own, and the designer should be free to choose at will from them. In dealing with this detail the sectional area of each frame, small or large, for a space of several feet in the length of the yacht, has been measured; and from these has been computed the sectional area necessary to give the same strength in frames all of the same size and spaced 12in. apart uniformly. A number of examples have been thus treated in each class, and from them has been deduced the average sectional area for a spacing of 12in. necessary in this class. As stated later in detail, so long as this minimum of sectional area per foot length is not exceeded, the designer is at liberty to employ any size or sizes of frames and spacing. A similar method has been followed throughout in deducing from actual yachts an average of sizes for all members.

The dimensions for each class, as determined independently, when plotted in one table disclosed various discrepancies in reading from class to class across the table, making it necessary to revise them in order to obtain a general harmony in the intervals between the classes. In doing this, it was at the same time necessary to follow the ordinary working fractions of the inch as used by mechanics. In explanation of any apparent discrepancies in the table, it may be said that the mere detail of thus harmonizing all classes after each was comparatively satisfactory in itself, proved a matter of some difficulty.

In Lloyds' rules the scantling is proportioned on the basis of a nominal "tonnage," obtained by multiplying together the length from the fore part of the main stem to the after part of the sternpost on the range of the upper deck, the greatest external breadth, and the depth from the top of upper deck beams to the top of the keel, the product being divided by 100. By this measurement Yama would come out about 31 tons, and a yacht of the 32ft. class would measure about 27 tons; the smallest class named in Lloyds' tables being "Under 27 Tons," the next being 27 to 36 tons, then 36 to 54 tons, 54 to 72 tons, etc., up to 350 tons. In the present case the existing classes of the Union, based on racing length, offer the best practical basis; the yachts which may be built under the table being limited to the regular classes of the Yacht Racing Union of the Great Lakes, as follows:

Class.	L.W.L.	Extreme draft.
52ft. R. L.	45, 46, 47ft.	10ft.
42ft. R. L.	35, 36, 37ft.	9ft.
37ft. R L.	31, 32, 33ft.	8ft.
32ft. R. L.	27, 28, 29ft.	7ft.
27ft. R L.	23, 24, 25ft.	6ft.

The lengths assigned for the L.W.L represent about the range of present practice on the Lakes, and it seems unlikely at the present time that any material departure will be made from them.

All of these classes are subject to the restriction of the area of the midship section to a percentage of not over .35 of the circumscribing parallelogram.

The Lake fleet at the present time is made up very largely of keel yachts of moderate beam and draft and an easy S section, such as Zelma, Yama, Eva, Vivia and Vreda. The fin-keel type, of which a few examples are found on Lake Michigan and in the smaller classes on Lake Ontario, has been definitely barred by the recent action of the Union. The centerboard yacht has hardly figured as an important factor on the Lakes for several years past, but there are now indications that the very liberal allowance of crew in the racing rules of the Union may bring in a shoal and wide centerboard craft, "big Glencairns," as they are already described. Whether keel or centerboard, the yachts of the immediate future on the Lakes promise to be of great over all length and moderate or large beam, the majority with a marked S section and comparatively limited depth of hold. As far as was possible, these probable characteristics have been kept in mind in proportioning the various members.

The leading characteristics of this modern type are extreme over all length and overhangs, with limited depth save in the center, making practically a girder of considerable breadth and limited depth, demanding careful and thorough stiffening in a vertical direction except in the plane of the keel. At the same time the superfices of topsides and deck are very great as compared with the under-water body and the displacement. It is thus desirable not only that strength should be secured with the least weight of material, but that the proportion of weight beyond the ends of the L.W.L. should be diminished as much as possible.

Of the many modern expedients for reducing the weight of construction, none is more laudable and legitimate than the careful shaping of each separate member with reference to its position and use in the structure, as in the decrease of sizes of frames, increase of spacing, and tapering of clamps and stringers, in going from the middle to the ends. In this way there is secured a maximum of strength amidships and a minimum of weight at the ends. Such decrease of dimensions is naturally of far more importance in the vessel of today, with very long overhangs, than in the old type, with plumb stem and short counter. For these reasons, while the effort has been made to secure ample strength in the middle of the vessel, a material reduction of sizes has been allowed for in the ends.

The accompanying sketches of construction details will, it is hoped, aid in making the meaning of the table plain to all. The sketch of the 32-footer is not intended to show the fastest possible yacht or the lightest construction under the table, but merely to illustrate the practical application of the table in designing. So far as my time will permit, I shall be happy to give any desired information to those about to build.

Respectfully submitted,

W. P. STEPHENS.

THE INSIDE ROUTE TO FLORIDA.

BROOKLYN, Nov. 15.—*Editor Forest and Stream:* Several descriptions of the inside route to Florida have been printed.

To those who have really made the trip, these accounts are chiefly notable for their glaring inaccuracy.

The account of the route sent herewith is the result of actual experience while in charge of several yachts.

The accuracy of the tables of distances given can be depended upon, as they have been carefully verified.

While the account is chiefly the result of rough notes made by the author, he has copied freely from whatever Government or other publications that were available.

The trip is a most pleasant and interesting one, full of fine opportunities for shooting and fishing, and it is strange that more yachtsmen do not make it.

Small steam yachts of light draft are most suitable for the voyage, though, if time admits, it may be made quite as well in a shoal-draft sail yacht.

THOMAS I. MILLER,
Sailing Master Steam Yacht Egret.

The Inland Route to Florida.

Part First.

NEW YORK TO CHARLESTON.

Briefly described, the so-called inland route to Florida is as follows:

From New York through the Kills to Perth Amboy, and thence by way of the Raritan River to New Brunswick, N. J. Here you enter the canal, and run to Bordentown. From Bordentown down the Delaware River to Delaware City. Here you again enter a canal, and run to Chesapeake City. From this point you reach Chesapeake Bay, via small rivers.

It is plain sailing, with plenty of harbors between, down Chesapeake Bay to Norfolk, Va.

From Norfolk through the Elizabeth River to the canal, and thence, back of the much dreaded Hatteras, across Albemarle and Pamlico Sounds to Core Sound. Through Core Sound to Beaufort, N. C.

From Beaufort it is practically outside work to Charleston, S. C. From Charleston to Jacksonville it is all inside, and safe for even the smallest craft.

Unless very unfavorable weather is encountered, a small steam yacht can run from New York to Jacksonville in three weeks' time.

Five feet six inches draft is about the greatest for the route described. About 3ft. 6in. will be found most suitable.

TABLE OF DISTANCES IN NAUTICAL MILES.

New York (Battery) to New Brunswick, N. J.	30.50
Delaware and Raritan Canal to Bordentown	44.00
Bordentown to Delaware City	58.50
Chesapeake and Delaware Canal	13.00
Chesapeake City to Norfolk, Va	181.00
Norfolk to canal entrance	10.00
Albemarle and Chesapeake Canal	7.25
Canal to North River Light	39.00
North River Light to Harbor Island Bar Light	83.00
Harbor Island Bar Light to Beaufort, N. C	35.50
Beaufort to Southport, Cape Fear	106.50
Southport to Georgetown Bar	83.00
Georgetown Bar to Charleston entrance	42.50
Charleston to Savannah	134.50
Savannah to Fernandina	131.25
Fernandina to Jacksonville	41.00
New York to Jacksonville	1040.50

TABLE OF DISTANCES—DETAILED.

21	Tybee Roads to Jupiter Inlet	1887	.75

In addition to above charts and pilot books, get the "List of Beacons, Buoys and Day Marks," for the third, fourth, fifth and sixth districts.

CANALS.

DELAWARE AND RARITAN CANAL.—Locks 210ft. long and a width to pass clear 23ft. 4in.

Greatest draft of water allowed is 7ft.

CHESAPEAKE AND DELAWARE CANAL.—Locks 220ft. long and 24ft. wide.

A draft of 9ft. can be carried through the canal.

ALBEMARLE AND CHESAPEAKE CANAL.—Allows passage of vessels 208ft. in length, 39ft. beam and 8ft. draft.

One lock.

On these canals all bridges have draws which open.

Spars and stacks can be left standing.

From New York to Norfolk no special sailing directions will be given.

The charts and pilot books published by the Government cover the ground fully.

From Norfolk to the canal entrance navigation is intricate.

The buoys cannot be kept painted their respective colors, owing probably to the large number of timber rafts which run down the river and frequently foul them.

The best way to proceed is to use the chart and buoy book, checking off with pencil the buoys as they are passed.

CORE SOUND.

On Harbor Island, at the entrance to Core Sound, there is a gunning club.

You can carry 6ft. of water to its dock.

Mill Point, from the eastward, appears at first as a low point to the S.W. Then high trees will be made out, with two white houses and a barn to the W.

Piney Point is a low, marshy point, and the channel runs close to it.

At times the channel seems marked with more stakes than shown on chart No. 421.

The channel appears well marked until you get to Davis Island and Bell Point. From here to end of Sound the beacons are further apart.

In turning the N.W. end of Harker's Island stand well to the N.W. before turning, as the shoal seems to extend further than chart shows.

On arriving at Shackleford Banks' Buoy it is well to anchor and await a pilot.

The passage from here to Beaufort is intricate, and many yachts have grounded through lack of local knowledge.

The pilot's fee is $5.

BEAUFORT HARBOR.—Anchor off the railroad dock at Morehead City, lying E.N.E., about 150yds. from its end. The anchorage is not very good, owing to the hard sand bottom. It requires a heavy and sharp-fluked anchor to hold well here. Shelter from a northeast storm may be had in the lee corner of the dock, close to the shore. The water is deep there, but the berth suitable for a boat only about 50ft. in length.

INLETS BETWEEN BEAUFORT AND CHARLESTON.—The coast from Beaufort entrance to Bogue Inlet has a general trend of W.¾S. For five miles to the westward of Beaufort entrance, the shore shows a range of sand hills partly covered with coarse grass and scrub, over which show the heavy woods on the mainland. To the westward of that stretch of five miles, a growth of scrubby woods begins on the shore, and extends to within half a mile of Bogue Inlet. Bogue Inlet is considered a good inlet. Eight feet can generally be found on the bar at low water. Run in by keeping in best water, and anchor behind the eastern point of entrance.

NEW RIVER INLET.—Good for high water only. About 6ft. of water will be found on the bar. There is a big sand hill on Turkey Point, the western point of entrance, which serves as a landmark.

TOPSAIL INLET.—Fair inlet. At high water about 8ft. of water will be found on the bar. The sea breaks right across this inlet when the wind is at all heavy from N.E. Eastern point of entrance is a low sand spit. There are some high sand hills on western point of entrance. When you open the inlet clumps of trees will be seen inside on the higher mainland.

MASONBORO INLET.—About 8ft. of water at high tide will generally be found on this bar. A big house with cupola on its west side is a landmark when in this vicinity. From a long distance it looks like a sail on a vessel close to the shore.

CORNCAKE INLET.—This is a fair inlet when the sea is smooth. About 8ft. of water on the bar, but it shoals up inside. The channel is narrow. By running in this inlet about sixteen miles of outside running is saved and the Frying-Pan Shoals avoided. About 5½ft. can be carried among the marshes back of Cape Fear.

LOCKWOOD'S FOLLY INLET.—About one mile east from this inlet there is a high, bare sand hill that shows plainly and is a good landmark. It is called Lockwood's Folly Hill. This is a good inlet, with about 10ft. of water on the bar and deeper water inside. Look out for old wrecks in entering. To run in, follow along the western side, leaving the shore about 150ft. away. When in, turn to W. and N. and anchor inside Sheep Island.

BACON'S INLET.—Some houses are seen in shore on the mainland near this inlet. At high water it frequently breaks clear across, and is a poor inlet.

SHALLOTTE RIVER INLET.—In approaching this inlet from the eastward two high bluffs with trees are seen ahead. From a distance they look like islands. These high sand hills with trees on top are about two miles west of Shallotte Inlet. There is about 7ft. of water on the bar at high water. Run in heading about N. and anchor inside east point of entrance. Vessels of 4ft. 7in. draft can go fourteen miles up the river where there is a bridge without a draw.

TUBBS INLET.—A poor inlet and good for high water only. After getting in over the bar track the east prong and anchor inside east point. There are some high woods back of inlet and houses to left. The sand hills are not high here.

LITTLE RIVER INLET.—This is said to be the best inlet between Cape Fear and Georgetown. At low water on the bar about 5ft. 6in. of water will be found. There are two openings in the beach at the inlet, called the West Bar and the East Bar. Between the two there is a bare patch of sand called Bird Island. The channel is crooked and said to be very changeable.

MURRILL'S INLET.—This is said to be a good inlet at any tide. There is generally 6ft. of water on the bar. Go to the north after getting in.

From Georgetown it is possible to run inside to Charleston. Unless the sea is very bad outside, it hardly pays to make the run. Pilots may be had in Georgetown, or one might follow the local sternwheel steamer which runs to Charleston.

The route is given, as it is not indicated on the chart.

TABLE OF DISTANCES.

Inside Route Winyah Bay to Charleston.

Winyah Bay, through Mosquito Creek to North Santee River	8.00
North Santee River, through Six Miles Creek, South Santee River, Alligator Creek, Ramshorn Creek, the Needles, Romain River, Bull River and Bull's Bay to Bull's Harbor	40.00
Bull's Harbor, through Bull's Narrows, Santee Pass, Capers Inlet, Bullyard Sound, Dewee's Inlet, Long Island Narrows, Breech Inlet and Sullivan's Island Cove to Rebellion Roads, Charleston	21.00
Winyah Bay to Charleston	69.00

[TO BE CONCLUDED.]

Boats at the Sportsmen's Exposition.

ALL sportsmen know the value of a good boat, and are interested in the latest developments of the makers. Hardly one who will visit the fourth annual Sportsmen's Exposition in Madison Square Garden, Jan. 13 to 22, but will find lots to interest in the exhibition of punts, boats, yachts and vapor launches. It will be the most extensive display ever brought together at one time in New York, or in fact in any place. From the cheaper models to the expensive ones that run into thousands of dollars will be shown. The sight of these alone will be worth a visit.

Arrangements have been nearly completed for the amateur billiard tournament that will take place in the concert hall during the week of the fourth annual Sportsmen's Exposition in Madison Square Garden.

Success is assured for the Sportsmen's Exposition and Bicycle Show to be held in Madison Square Garden Jan. 13 to 22 Never at any time was it thought but what it would meet with popular favor, yet it is somewhat in the nature of a surprise to know that two months before the date of the opening more than enough space has been taken to make it profitable.

Trap-Shooting.

Leading dealers in sportsmen's supplies have advertised in our columns continuously for almost a quarter century.

If you want your shoot to be announced here send in notice like the following:

FIXTURES.

Dec. 1-2.—Kewanee, Ill.—Western Illinois Trap-Shooters' League tournament. First day, targets; second day, live birds. A. S. Kellogg, Sec'y Kewanee Gun Club.

Dec 4.—Philadelphia.—Monthly tournament Philadelphia Trap-Shooters' League. Events open to all. Grounds Sixteenth and Courtland streets.

Dec. 6-11.—Watson's Park, Chicago, Ill.—*Dec. 6*—Heikes-Grimm match for the Cast-Iron badge. *Dec. 7*—Elliott Gilbert match for the Kansas City *Star* cup. *Dec 8*—Sweepstakes, open to all. *Dec. 9*—Elliott-Gilbert match for the Du Pont trophy. *Dec. 10-11*—The Kansas City-Chicago team race.

Dec. 13-15.—Indianapolis, Ind.—Tournament of the Limited Gun Club. First day, sparrows; last two days, pigeons. Grand Central handicap, 25 pigeons, $25, birds extra. Entries close Dec. 9, with a forfeit of $10; post entries, $30. Handicaps, 25 to 32yds. Royal Robinson, Sec'y

Dec. 16-17.—Charleston, S. C.—Tournament under the auspices of the Charleston and Palmetto Gun Clubs. Targets. Purses divided Rose system—four moneys. $200 added. G. H. Peterman, Sec'y.

1898.

Jan. 18-20.—Hamilton, Ont.—Grand Canadian Handicap. Live birds; $1,000 guaranteed. For full information write secretary, H. Graham, American Hotel. Hamilton, Ont. Can.

March 22-24.—Elkwood Park, Long Branch, N. J.—Interstate Association's sixth annual Grand American Handicap. 25 birds, $25, birds extra; $1,000 guaranteed to the three high guns; all surplus added

March 29-April 1.—Reading, Pa.—Annual tournament of the Pennsylvania State Sportsmen's Association, under the auspices of the Independent Gun Club, of Reading. A. Knauer, Sec'y.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed. Ties in all events are considered as divided unless otherwise reported. Mail all such matter to Forest and Stream Publishing Company, 346 Broadway, New York.

The Palmetto Gun Club and the Charleston Gun Club announce a tournament to be held at Charleston, S C, on Dec. 16 and 17, under the joint management of these clubs; $200 in cash will be added, and the Rose system for the division of purses will be used. Price of targets, 3 cents each deducted from purse. Professionals are barred from participating in purses, but can shoot for targets. Ammunition, etc., sent to L. W. Bicaise & Co., delivered at grounds free of charge. There will be ten target events on each day.

The injury to Mr. Neaf Apgar's foot, from the accidental discharge of a friend's gun while out shooting recently, is much less serious than was stated in the accounts published in the daily press. No amputation will be necessary, nor is there reason to believe that any permanent injury will result. The charge of shot took effect across at the base of the toes of the left foot. It is bad enough, but in view of the possibilities of maiming or death, we congratulate him on his lucky escape.

A live-bird handicap will be shot at C. Zwirlein's shooting grounds, Yardville, N. J., on Thursday, Dec. 2. The conditions will be 20 birds, $15 entrance, birds included at 25 cents each. Trains leave New York at 9:10, Newark at 9:36, Philadelphia at 12.

St. Louis Trap-Shooters' League Tournament.

St. Louis, Mo. Nov. 26.—The first tournament of this new organization was quite a success, notwithstanding the inhospitable weather, which reminded one very forcibly of the last San Antonio Midwinter. There was not a day during the shoot which could have been classed as propitious, and this no doubt kept many of the local shooters away, while again many were game shooting, this being just the heart of the quail shooting season in Missouri There were plenty of experts present to make the affair a success, as those who came shot right through The principal object of this tournament was to create a renewed interest in the sport, and this it accomplished in an admirable way, as some of the local papers gave the shoot extensive notice, and the *Republic*, in particular, did much to boom the sport. Mr. Richard Collins, the sporting editor on this paper, devoted much space to the shooters and the shoot. The St. Louis Trap-Shooters' League has reason to feel gratified over the success of the first effort in the tournament line.

THE PRINCIPALS.

The Winchester Arms Co. was strongly represented by R. O. Heikes, of Dayton, O.; J. A. R. Elliott, of Kansas City, Mo., and Capt. B. A. Bartlett, of Buffalo, N. Y. The Du Pont and Hazard powder companies had that great trio of Iowa cracks present, Fred. Gilbert, of Spirit Lake; C. W. Budd, of Des Moines, Ia., and C. M. Grimm, of Clear Lake. Then there was J. C. Fanning, formerly of San Francisco, but now of Batavia, N. Y., looking after the interest of Gold Dust. Harvey McMurchy, of Fulton, N. Y., was in evidence, as was also the L. C. Smith gun. S. A. Tucker, of Meriden, Conn., Parker Bros.' representative, assisted by Charley Budd, succeeded in demonstrating that the Parker guns were still in the game. Col. A. G. Courtney, of Syracuse, N. Y., the Remington Arms Co representative, was extolling the merits of their new ejector with no little degree of success. The irrepressible J. L. 147 Winston, of Washington, Ind., was continually impressing those present with the figures 1-4-7. Add to the above list Frank Faurote, of Dallas, Tex.; W. G. Sergeant, of Joplin, Mo.; John J. Sumpter Jr., of Hot Springs, Ark.; C. C. and W. H. Herman, of Kansas City, Mo.; Dr. E. S. Winbingler, of Alexis, Ill.; O. J. Howell, of Alton, Ill.; R. H. Stockton, of Hannibal, Mo.; Herman Herschy, of St. Paul, Minn., and the local cracks, Kling, Dr. Smith, Nold, Chase, Taylor and the two Cabannes, and one can readily see that the game was a hot one, notwithstanding that the weather was cold.

ACCOMMODATIONS AT DU PONT'S PARK.

These were excellent, and far above par. The grounds are located a good ways out, as is the case in all the large cities, but the facilities for reaching them were not very good. They are not just on the car line, but Messrs. Gardner & Corray, the proprietors of the park, have a conveyance to meet the cars and take the shooters to the grounds free of charge.

There were two sets of traps used in the target events; both of these were arranged on the Sergeant system. Bluerocks and universal targets were used, and there was no perceptible difference to be noticed. The background on the lower set of traps is a very trying one, and it was generally on these that most of the shooters came to grief, as the grounds here slope up, and a line of trees fringe the little stream that runs along here. On the other set of traps, which stand directly in front of the club house, the shooting is not near so difficult, and on these most of the shooting is done, the others having only been pressed into service for this occasion. The pigeon grounds are located on the slope of the hill, and get the benefit of any wind that may be stirring. The traps used here are King's latest automatic, and all other arraugements are first class. A nice hot lunch was served each day at reasonabte prices, while on Thanksgiving Day a fine turkey dinner was served free to all the visiting shooters, so that none need imagine that those who attended missed their Thanksgiving turkey. The meals were served by Messrs. Gardner & Corray, assisted by Miss King, each of whom is also a trap-shooter. Naturally the shooters enjoyed the victuals with considerable more relish.

STRAY SHOTS.

Gilbert shot at 68 pigeons during the shoot and scored 67, but on targets the clever Iowa lad was not up to his usual high standard. He attributes this in some measure to his not having shot any targets during the last three months. On his present form he will most likely give Elliott a very stiff argument of those trophies next month.

The two Cast Iron disputants, Heikes and Grimm, tied in the 25-bird race with 23. This should be a hot race when they meet to settle that little argument.

In the big race there was a two-men three-cornered team race for a supper, the teams being composed of Heikes and Budd, Gilbert and Bartlett, and 147 and Faurote. The race was originally between the two first pairs, but Winston wanted some of it, and chose Faurote as his running mate. Heikes, Bartlett and 147 were first to the score and each scored 23, so it remained for the remaining three to decide who should pay for the supper. Budd scored 25, which gave his team 48; Gilbert got 24, and this made his and Bartlett's total 47; Faurote got 22, so he and Jack had 45. The supper will be eaten during the Grand American Handicap.

There was a carrier pigeon found among the lot supplied for this shoot The band on his leg bore the inscription: "K 25,912." The discovery of this very likely saved the bird's life, as he was liberated at once and was soon lost to sight

Fanning shot targets very indifferently, but on live birds he was in rare form. This is one time he got over that unlucky 14th round, and the result was that he was the final winner in the main event. He had a run of over 100 straight to his credit; that 99 score was made when it was absolutely necessary to win.

John J. Sumpter, Jr., is making plans for a big shoot at Hot Springs in February; the inducement will be $1,500 added money. There are to be four days targets and one live birds.

Faurote was much handicapped by a very sore arm, and was in no shape to do himself justice. There was a very large raw place on his arm, which became very much irritated by the recoil of the gun.

Bartlett gave an exhibition of fancy shooting for the benefit of the lady shooters on the last day, and showed them and others just how rapidly a Winchester gun can be manipulated.

Dr. Smith, the local shooter, is rapidly coming to the front, and by next summer he will be able to more than hold his own in any company. He displayed plenty of nerve and judgment in his race with Fanning, but 99 out of 100 is a hard score to go up against. It is no discredit to be beaten by such a score, while that 97 of his will win 90 per cent of matches.

Kling was in no condition to shoot, but he pluckily shot in every event, and made it especially agreeable for the visiting shooters; he, Nold, Taylor, Dr Smith, Chase and Conrades were untiring in their efforts to make it pleasant for the visitors.

Billy Nold is another one of the locals who is rapidly developing into an expert; there is a marked contrast in his shooting now and when we first met him at the Missouri State shoot last May Nold assisted to keep things moving, and it is rarely that shooting and hustling can be combined with good results. The latter also applies to Taylor.

The visiting shooters requested me personally to thank the officers of the St. Louis Trap-Shooters' League, and Messrs. Gardner and Corray, the managers of the park, also the ladies, for the kind and courteous treatment accorded them, and to assure them that it will be a source of much pleasure for them to attend any tournament they may see fit to hold in the future.

Wednesday, Nov. 24.

The weather moderated some to-day, so that up until about 2 o'clock it was not too cold, then it clouded up and grew colder.

The entries ran about as yesterday; there was no falling off and no perceptible increase in this respect. This, however, evidenced the fact that those in attendance were well satisfied with the manner in which the shoot was conducted. Rolla Heikes is again on top, and that with a much improved percentage. Then comes Faurote, the only other who made an average of 90 per cent.; Elliott being third with 88.6. Heikes made three straight scores of 20 and one of 25, his best run being something over 50 straight. He was also very fortunate in winning several firsts alone, were Tucker, Sergeant and McMurchy.

Twenty seven took part to day, and of this number twenty-four shot through, two more than on the previous day.

Events:	1	2	3	4	5	6	7	8	Shot at.	Broke.	Per cent.
Heikes	18	20	13	20	13	20	25	18	150	142	94.6
Faurote	14	19	13	18	13	20	23	18	150	138	92
Elliott	13	15	13	19	13	18	23	19	150	133	88.6
Budd	14	16	14	17	13	17	23	17	150	131	87.3

FANNING—SMITH.

In addition to the regular programme events, there was a 100-bird match between these two. This was made up during the day, and shot after the conclusion of the regular events. The conditions were not favorable to the birds, as it was cold and bleak, and too late in the day for the birds to fly good, most of them being slow to start. Fanning was the first to fall down, his 8th falling dead out of bounds. Then he developed a remarkable streak, finishing out with a run of 92 and the excellent total of 99. The Doctor held the lead until the 16th round, when he too lost one dead out of bounds Then he lost his 28th, after which he made a run of 45 straight, which was broken by his 75th dying out of bounds. From this on he killed out, finishing out with 97, an excellent score, but unfortunately it did not win on this occasion. Of the 200 birds shot at in this race only one escaped, the other three being dead out of bounds.

The conditions of the match were: 100 live birds per man for $100 a side loser to pay for the birds. Mr. C. M. Grimm acted as referee, and Col A. G. Courtney was chosen to score. Everything passed off without a hitch or a jar, and the utmost of good feeling prevailed throughout. At the conclusion of the match the Doctor congratulated Mr. Fanning and very cordially shook hands with him

Thursday, Nov. 25.

St. Louis, Mo., Nov. 25.—The participants in to-day's events were not very numerous, but nearly all of those who were present shot through the entire programme events. The attendance may perhaps have been kept down by the cold weather, for while the sun shone brightly it was disagreeably cold, and it was not until about noon that the ice, which had formed on the brook that ran close to the grounds, began to thaw. Add to this a raw wind that blew into the face of the shooter at the score, and some conception can be formed of the conditions under which the contestants labored. Plenty of warm clothes were necessary, and then it was difficult to keep comfortable.

A glance at the tabulated scores will show that the averages were rather low for the class of talent engaged, as no one was able to make an average of 90 per cent. This is all the more surprising, as many of the best professional and expert amateurs were present. Heikes leads with 88 6., followed by Grimm with 88, he in turn being followed by Gilbert and Elliott with 87.3.

Straight scores paid well, as there were but few scored during the day. Heikes made straights in all of the 15-bird events, and Gilbert had two straight scores of 20 and a 15; Nold got one 20 straight; Bartlett took first alone in the sixth event on 19.

There were five extras shot in addition to the regular programme events, and altogether there were 5,280 thrown during the day. There was also a miss-and-out at live birds. This had twelve entries. This was $2 entrance, birds extra, and the money was cut up by Gilbert, Bartlett and Winbingler on the 12th round.

The table below shows that twenty-six participated in the regular events, and of this number it is worthy to note that twenty-two shot through the entire events, which must have been exceedingly gratifying to the management, as such is rarely the case.

Events:	1	2	3	4	5	6	7	8

GENERAL AVERAGE.

At this tournament the management very wisely set aside the neat sum of $45 average money to be divided equally by the five high guns, so there was something besides the mere honor of excelling to strive for. This kept up the interest in the shoot from start to finish, as all were striving to land a part of this money. As is very often the case, it once more fell to Heikes's lot to lead the procession, this time with 91.6, he being the only one of the many good ones to reach 90. Faurote, the Dallas, Tex., amateur, is next with 89 3; Elliott is third, 88 even; Grimm, fourth, 87.3; Budd, fifth, 87. These are the ones who divided the $45.

	1st Day.	2d Day.	Shot at.	Broke.	Av.
Heikes	133	142	300	275	91.6
Faurote	120	138	200	268	89.3
Elliott	131	133	300	264	88
Grimm	132	130	300	262	87.3
Budd	130	130	300	260	87
Gilbert	131	128	300	259	86.3
Bartlett	123	131	300	254	84.6
Sergeant	128	115	300	243	81
Nold	128	114	300	242	80.6
Tucker	116	126	300	242	80.6
Chase	110	121	300	240	80
Smith	120	119	300	239	79.6

Howell	108	109	300	217	72.3

LIVE BIRDS.

There were two events of this kind on the programme scheduled for Thanksgiving Day, one a 15-bird event and the other a 25-bird race This proved to be too much for one day, owing to the unfavorable weather and the large number of entries in the big event, there being only one set of traps used Both events were class shooting, not high guns. Four moneys in the 15-bird event and five in the 25-bird race. The 15-bird event was disposed of first, and then the main event was begun This made it about 2 P. M. when it was started, and as it was apparent that it would be impossible to finish it that day, those who were unable to remain over were permitted to shoot their score out. Thus, Sergeant, Heikes, Bartlett, Elliott, Grimm, 147, Winbingler and the two Hermans finished and Fanning, McMurchy, Sumpter and Conrades shot 16 birds, they withdrawing and deciding to remain over. There was very little wind at this time, and the birds were only fair. But those who did finish shot their last 5 birds when it was almost too dark to see; so that the shooting at this time was considerably a matter of guesswork. This is largely responsible for Grimm's two losses. C. C. Herman and Bartlett each made a very sensational kill, the Captain especially. His last bird was a dark one, and he shot the first load somewhere in its neighborhood; but it did no good, and the bird seemed lost in the gloom He held his last shot until the bird had almost flown out of bounds, when he caught a glimpse of it, and by a quick snap shot killed it close to the wire.

Those who shot their score on Friday got considerably the worst of it in the birds. During the night it turned very cold, and in the morning there was a fierce gale blowing. This hampered the shooters greatly, as it was difficult to keep warm, while the wind made screamers of nearly all of the birds. Those that came from Nos. 4 and 5 traps were invariable right-quarterers that had a peculiar twist and went down with the wind, so that unless killed close to the trap they were frequently carried out of bounds, although s one dead. Dr. Smith lost 2 birds in this manner, as did a number of others

The best shooting in this event was done by Budd, as he killed all of his birds under these conditions Fanning shot 9 of his birds on this day, while Sergeant had finished with a straight on the previous day, having a run of 40 straight to his credit.

These three divided first money and shot off for the $100 diamond watch charm, Fanning finally winning by a score of 14 out of 15. The birds in the shoot-off were an especially hard lot, everyone a corker, and sensational kills were in order right along. Sergeant went out on the 6th round on a bird that the shooter and all present supposed could easily be gathered, but it struggled over the dead line when the boy all but had his hand on it. Fanning and Budd were still a tie when 10 birds had been shot, but in the next string Budd lost 2 and Fanning 1, which gave the latter the trophy.

There were but two 24s, McMurchy and Gilbert. The former shot at 16 birds on the first day, losing 1 and then killing out on the second day. Gilbert shot all of his birds to-day, the one he lost being as fast as ever left the trap.

Twenty-three's were numerous, as were also 22s.

The conditions were 25 live birds, $15 entrance, $75 added, five moneys.

The trap type will tell the rest of the story:

E. C CUP SHOOT.

Nov. 25.—The E. C. cup shoot was held on the Bergen County Gun Club's grounds at Hackensack to-day. Getchell won the cup with 44 breaks, Bell was second with 43, and Capt Money and De Wolf tied for third place with 41 each. Getchell also captured the club trophy with 21 breaks and an allowance of 4. The scores.

Intercity Shoot.

CHICAGO, Ill., Nov. 29.—*Special to Forest and Stream:* The intercity shoot team committee met to day. The Chicago team will be W. R. Morgan, Dr. H. H. Frothingham, George Roll, L. E. Willard, W. P. Mussey, W. W. McFarlan, E. Bingham, J. A. Ruble, O. von Lengerke, Dr. W. F. Carver. Alternates will be C. E. Felton, R. B. Organ, M. J. Eich, Abner Price, Dr. S. Shaw, T. P. Hicks, F. H. Lord, Geo. Franklin, C. B. Dicks, Henry Ehlers, Geo. Kleinman. Captains, R. B. Organ, C. E. Felton and Abner Price. Team practice begins at once. Executive committee meets Tuesday afternoon. E. HOUGH.

Chisholm Defeats Darton.

PORTLAND, Me., Nov. 20.—A 50-target race was shot here to-day between H. A. Chisholm and W. B. Darton, of the Portland Gun Club. The former won by a score of 43 to 34. The day was cold and windy, with a light snow falling the greater part of the time. The score:

Chisholm	01111111111011100111010111111111111111111111111101—43
Darton	01101011110111001100111011100110111111101111010 1101—34

ESCULAPIUS.

Pennsylvania and Yale.

NEW HAVEN, Nov. 27.—The Pennsylvania Gun Club has challenged the Yale Gun Club to shoot a match this autumn, either at Philadelphia or New Haven.

Western Traps.

CHICAGO, Nov. 26.—The Calumet Heights Club held its regular weekly contest, on its grounds at Grand Calumet Heights, Ind., Oct. 21. The attendance was small, many not being present on this day on account of the final contest being held within a few days, being on Thanksgiving Day, the 25th inst.

Little shooting was done by those present, as all were busy arranging traps for live-bird contests.

Following are the scores, which were shot in a high wind blowing directly on the face of the traps:

Medal contest, 25 targets, known traps, unknown angles:

Paterson (A)	10111010101111101111111111—20
Metcalfe (A)	11111111110111111101111011—22
Norcom (B)	10111111111101101110111110—20
Schmidt (C)	01111110110111110011011111—19
Davis (C)	11100111011001111101101111—18

Metcalfe wins in Class A; Norcom wins in Class B; Schmidt wins in Class C.

	Fifteen targets, known traps, unknown angles.	Five pairs, expert.	Ten pairs, expert.	Same.
Paterson	111111110110111—13	5	9	5
Metcalfe	111111110101101—12	3	9	4
Norcom	111010101111111—11	.	.	.
Schmidt	111011111111110—13	.	.	.

THANKSGIVING DAY AT CALUMET HEIGHTS CLUB.

The Calumet Heights Club held its final shoot on the club's grounds at Grand Calumet Heights, Ind., on Thanksgiving Day, Nov. 25, and was attended by forty-three persons, including ladies. Thanksgiving Eve was spent in playing progressive cinch for prizes, and was participated in by sixteen couples

The prizes were won by Mrs. Dr Hunt, Miss Rose Harlan, Marcus Harlan and Dr. Davis.

Thanksgiving Day proved not to be a most pleasing one so far as the elements could be considered, as it was without sun the entire day, with a misty atmosphere and occasional rain storms. Still it can be said that the shoot, even under such admixed conditions, was a successful one throughout.

The shooting continued from 9 o'clock A. M and only ended when it became too dark to find the targets thrown from the traps, allowing time for dinner, however.

The medals and other prizes were awarded during the evening to their respective winners on the ten best scores at targets of the year in each class: Class A, won by A. C. Paterson; Class B, won by P. D. Norcom; Class C, won by Dr. A. W. Harlan.

In the live-bird events of the season Geo. H. Knowles won highest average and the grand prize on a percentage of four scores, killing 49 out of 50 live birds, or 98 per cent.

Following are detailed scores in live birds. Event No. 1, medal contest, 10 live birds; distance handicap in classes; entrance $2; American Association rules:

Paterson (32)	2122••1022— 7	Metcalfe (30)	2111121220 — 9
Houston (32)	2112200121— 8	Boedker (30)	2211222111—10
Norcom (32)	11100221•0— 6	Harlan (27)	2020211120— 7
Knowles (32)	2221121111—10	Davis (—)	22•0110.20— 6
Marshall (30)	2121010102— 7		

No 2, medal contest, 25 targets, known traps, unknown angles, classified:

Class A.

Houston	01111111101111111111101111— 22
Young	11101110011111111110111111— 21
Metcalfe	11110111011101011111101101—20
Paterson	11110111101111101111111111—22

Class B.

Norcom	10111111100010100000111100—14
Boedker	00101011110111010111111011—17
Marshall	10111100110111111111001111—19

Class C

Harlan	11111110111011101111111111—22
T McMichaels	10010000111000010010111111—12
Schmidt	11110011100111111101111111—20
Davis	01111110101110010100110 00 —16

Paterson wins A, Marshall wins B, Harlan wins C.

Sweepstakes:

No. 3, 15 targets, known traps, unknown angles: Houston 14, Metcalfe 11, Boedker 11, Norcom 12, Harlan 10, T. McMichaels 4.

No 4, 10 targets, snipe: Paterson 8, Houston 7, Young 5, Metcalfe 8, Boedker 7, Norcom 5, Marshall 8, Harlan 4, Davis 4.

No. 5, 50 targets, known traps, unknown angles; A class, scratch; B class, 54; C class, 60: Paterson 43, Houston 47, Young 31, Metcalfe 37, Boedker 35, Norcom 28, Marshall 38, Harlan 43, Davis 36.

Extra event, 100 targets, known traps, unknown angles, for dinner: Harlan, 82 out of 110 targets; Paterson, 86 out of 100 targets.

No 6. 20 live birds, $6 entrance, distance handicap, three moneys, ties divided:

Booth (32)	21111112101110122221—18
Knowles (32)	12112122220010102 21—16
Norcom (32)	12121111001121112100— 16
Houston (32)	1102222 22•2•2222122—17
Paterson (32)	10111222111202100211—16
Boedker (30)	20022120C2102121 00011—13
Marshall (30)	11121110011011221112—17
Metcalfe (30)	120 :12112010222212 11—17

This is the first time during the year that King traps have been used in the live-bird contests. The birds were very good and a general satisfaction prevailed.

EUREKA, OF LYONS, ILL.

The Eureka Gun Club, of Lyons, Ill., held their live-bird and target tournament on the club's grounds at Lyons, Ill., on Thanksgiving Day, Nov. 25 The day was quite disagreeable on account of the misty atmosphere and overcast sky, though enthusiasm prevailed among those present. The honors of the day were carried off by D. Chicken, who killed all of his birds, one out of the 25 falling dead out of bounds. Following are the detailed scores:

No. 1, 10 live birds, $2 entrance, $2 added:

D Chicken	122•2112•1—9	F Kuhlman	022•02212•—7
F Hofmann	2102121022—8	Wm Brown	2102200122—7
A Metz	2220222122—9		

No. 3, 5 live birds, $1 entrance, $1.50 added:

D Chicken	22112—5	F Kuhlman	01110—3
F Hofmann	22012—4	J Opper	00210—2
C Fredericks	22220—4		

No. 3, 20 targets, known traps, unknown angles, entrance $1, and $1 50 added money:

D Chicken	01110111111101011110—15	F Kuhlman	11111010110001100110—12
F Hofmann	01100110010011110000— 9	Fredericks	11001111111111111110—17
T Brulin	00110000111101001111—10	Gold Dust	11011111100111111110—16
A Metz	10100211110010000011— 9		

No. 4, 10 live birds, $2 entrance, $1.50 added:

D Chicken	2212122212—10	F Kuhlman	1122122120— 9
F Hofmann	1221220121— 9	L Leonhardt	2111201200— 7
C Fredericks	2220110202— 7	C Reece	2210020110— 6

GARFIELD GUN CLUB

The Garfield Gun Club, of Chicago, held its first shoot at live birds of its winter series, for medals, at Watson's Park, Burnside Crossing, Ill., Nov 26, 1897. While about one-third of the club's membership signified their willingness to participate, there were but nine of them in attendance.

The day was a most perfect one, with a bright sunlight and a cool, crisp atmosphere.

The wind was slight and not noticeable to any extent.

The birds were good, strong ones, but did not get away as on a day with strong wind.

Following are detailed scores:

Twenty live birds practice:

S Palmer	122•2221212212021021—17	Emory	11221112211020111112—18
D Russell	20000100012212101202—10	Workman	0210102011100201101 —11
M J Eich	10011111210111111212—17		

Medal contest, 20 live birds, handicap:

Dr Shaw	22221221220202021011—17	T Hicks	11111012102101121121—18
H Wiley	01121222222222222202—18	R Kuss	22212222222212120022—18
D Russell	21121221202222011110—17	S Young	00211200111111022212—15

Rasme	22021 —4	Eich	122212 —6
Workman	000200—1	Wiley	102 —2

LAVERGNE, ILL.

The race between W. R. Morgan, holder of the E. C. challenge cup, and A. C. Paterson, challenger, was to have come off Saturday, Nov. 27, at 2 o'clock P. M., on the grounds of the Douglas Gun Club, Lavergne, Ill., and was to have been at 50 pairs (targets) from three known traps and angles

Mr. Paterson being on the grounds at the required time, ready to shoot the race, and the failure of Mr. Morgan to appear to defend the cup, a forfeit was declared

It is understood that Old Hoss Stannard will issue a challenge to the winner of this cup, the race to be shot some time during the month of December. Some of his associates feel great confidence in his ability to win and hold the cup, but as there are many other shooters of Chicago looking for a contest, lively times are expected to follow. A. C. PATERSON.

KANSAS CITY—CHICAGO INTERCITY SHOOT.

CHICAGO, Nov. 27.—The Chicago committee selected for the purpose of choosing a team to represent this city in the intercity shoot next month to-day brought in the names of five shooters, who will constitute the first half of the team. These names are as follows: L. E. Willard, W. P. Mussey, George E. Roll, Dr. H. H. Frothingham and W. R. Morgan. These members will meet at 2:30 on Tuesday afternoon, Nov. 30, at Mussey's billiard hall, and will then complete the selection of the team, the five men above named selecting a sixth, they six the seventh, and so on until the full ten have been chosen.

The *personnel* of the Kansas City team will be as follows: Jim Elliott, Jim Riley, Chris Gottlieb, Andy Thomas, Ed Hickman, J. L. and J. B Porter, J. M Curtice, C. C Herman and G. W. Stockwell.

Practice is going on at both ends of the line.

The betting is in favor of Kansas City.

It is now thought that the Kansas City delegation will number about thirty men.

The executive committee and entertainment committee of the Chicago shooters will meet next Tuesday to transact business connected with the big shoot.

NATIONAL GUN CLUB, OF MILWAUKEE.

The tournament of the National Gun Club at National Park, Milwaukee, had a good attendance, and showed some good scores. Weather on Nov 25, Thanksgiving Day, was wet and foggy, so that long runs on live birds were possible. Target shooting continued throughout the second day as on the first. In the target scores high guns were Johnson, Haertie, Schuchardt, Plankinton, Sayle and Williamson. In the live-bird match first money was divided by Marks, Bush, Williamson, Schuchardt and Browall.

The following are the scores for the third and last day, Nov. 26:

No. 9, 10 live birds, for Plankinton trophy: Kabo 5, Marks 9, Browall 9, Bogart 6, Plankinton 8, Shea 8, King 7, Himmelstein 9, Thomas 7, Bosworth 7, Rogers 9, Porter 8, Williamson 8, Deiter 7, Sayle 7, Bush 6. Klapinski 8, Reed 7, and Carroll 8.

No. 10, team shoot, 10 live birds: National No. 1—Bush 8, Vose 7, King 10, Carroll 5—30; National No 2—Collins 8. Klapinski 8, Keifer 7, Burnaham 9—32; Eau Claire—Kabo 8, Browall 8, Johnson 9, Marks 10—35; National No. 3—Sayle 8, Porter 8, Reed 7, Rogers 10—33; Wisconsin—Phillips 9. Weidner 8, Slaybough 7, Farber 9—33; North Milwaukee—Wulf 6. Bosworth 9, Duval 7, Egan 10—32; Bay View—Van Etts 9, Abels 6, Okerhauser 7, Krock 8—30; National No. 4—Thomas 7, Plankinton 7, Deiter 10, Williamson 10—34.

STONY ISLAND THANKSGIVING SHOOT.

The following are the scores made by the Stony Island Gun Club, of Chicago, at their Thanksgiving shoot on the grounds at Ninety-fifth street and Stony Island avenue:

No. 1, 15 targets: Shepherd 7, Larimore 13, S. G Zimmerman 10, A. Sjogern 10, E. Sjogern 7, Siegel & Cooper 13.

No. 2, same: Hanson 6, Dr. McLaughlin 5, E. Sjogern 7, S. G. Zimmerman 7, Larimore 9, Siegel & Cooper 9, Dr. Campbell 9, Dr. Swan 2.

No. 3, same: S. G. Zimmerman 11, Larimore 11, Dr Campbell 10, E. Sjogern 9.

No. 4, 15 targets, $1: S. G. Zimmerman 10, Larimore 8, E. Sjogern 9, Siegel & Cooper 12, Dr. Larkin 10, Dr. McLaughlin 6.

No. 5, live birds: Shepherd 16, A. Sjogern 15, Dr. Swan 4, S. G. Zimmerman 3, Larimore 5, Dr. McLaughlin 9, C. B. Sjogern 5, Goodrich 5.

No. 6, live birds, practice: Willard 21.

No. 7, 10 targets: Dr. Larkin 6, Goodrich 6, Larimore 6, Siegel & Cooper 7, S. G. Zimmerman 6, Willard 10.

No. 8, 10 live birds, $4: Dr Larkin 9, Willard 10, Larimore 10, S. G. Zimmerman 10, Dr. McLaughlin 7, Goodrich 9.

No 9, 10 live birds, $4: E Marsh 8, Willard 9, Dr. Larkin 9, Larimore 6, S. G Zimmerman 10.

No. 10, 15 targets: Larimore 10, S. G. Zimmerman 12, Goodrich 11, Hanson 5, Siegel & Cooper 12, E. Marsh 5, Willard 11.

No. 11, live birds: Willard 15, E Marsh 15, Larimore 5.

No. 12, targets, private match, $5, loser to pay for birds: Siegel & Cooper 20, Goodrich 19.

U. OF M. GUN CLUB.

Students of the University of Michigan, at Ann Arbor, Mich., have organized a gun club which will be under the auspices of the Athletic Association. There are but few college gun clubs in the West, but more of them would be no detriment in the gentlemanly education of the youth of the land. E. HOUGH.

1206 BOYCE BUILDING, Chicago.

House of Lords Medal.

JOPLIN, Mo., Nov 23.—The third championship live-bird shoot for the House of Lords gold medal occurred at the Joplin Gun Club grounds yesterday, and for the third successive time W. E Morgan, city marshal of Joplin, and champion amateur live-bird shot of the Southwest, won the trophy, getting 22 birds out of a possible 25, and killing one bird that fell dead out of bounds. J. L. Horn, of Galena, Kan., who shot against Morgan, got 18 birds out of 25, and lost 3 which fell out of bounds.

The House of Lords medal was put up as a trophy, to be won by the champion amateur live-bird shot at the Missouri-Kansas shooting tournament last September It was won by W. E. Morgan, who killed 25 birds without a miss. One of the conditions provides that the medal is subject to contest, and the winner of it has to accept all challenges from amateurs in this district until it shall have been successfully defended three times in succession, when it is to become the property of the winner. Morgan has successfully defended the medal twice, once with Horn on Nov. 22, and on Nov. 17 in a match with Taylor Cox, of Galena, Kan., in which Morgan killed 22 birds out of 25 to Cox's 17.

W. G. Sergeant, champion amateur clay-pigeon shot of the Southwest, has challenged Morgan to shoot for the medal. The challenge has been accepted, but the date not yet fixed. If Morgan wins this match he will own the medal. ERLE

Forester Gun Club.

NEWARK, N. J., Nov. 25.—The Forester Gun Club held an enjoyable shoot on Thanksgiving Day. Four of the events were for turkeys. D. Fleming won two, J. Fleming took one and Tarlton one. The scores follow:

WESTMINSTER KENNEL CLUB.

Nov. 25.—Thirty members of the Westminster Kennel Club took part in the Thanksgiving Day shoot of the club, held at Babylon to-day. The birds were very fast, and good scores were rare. The first event was a handicap sweep at 5 birds, $5 entry. No. 2 was the allowance cup shoot; all shooters at 29yds. and back, miss-and-out; 28yds., 1 miss to count as no-bird; 27yds., 1 miss as a kill; 26yds. and 25yds., 1 miss as a kill and 1 miss no bird. No. 3 was for the fixed distance cup, everybody at 28yds. No. 4 was the Thanksgiving Day cup handicap, 10 birds. The scores:

No. 1: J. G. Follansbee (25) 2, E Wright (26) 1, C. M. Chapin (29) 2, J. S. Williams (29) 2, H. Redmond (27) 1, G. De Forrest Grant (28) 1, G. B. Magoun (28) 1, G. S. McAlpin (32) 5, Robert McCook (26) 5, F. P. Magoun (27) 1, W. W. Watrous (28) 1, Wharton Ferguson (28) 1, J. Coleman Drayton (28) 2, Col. Butler (29) 1, Herman B. Duryea (27) 5, H. G. Gilbert (31) 1.

FALCON GUN CLUB

Nov. 26.—The Falcon Gun Club had six members out at its regular club shoot at Dexter Park to-day. The club shoots under the points system, a first-barrel kill counting 1 point, and a second-barrel kill ½ point. Moller won the club event with 5½ points, Vagt and Voge tieing for second place with 4½ points each. The team race was won by Voge's team by half a point. The scores:

Moller	½	1	0	1	1	1	1—5½	
Vagt	1	½	1	0	0	1	1—4½	
Voge	½	1	0	1	1	1	0—4½

Carleton Rifle and Shotgun Association.

CARLETON, Mich., Nov. 18.—Inclosed find scores made at our target and live-bird shoot held on Nov. 17 and 18. The attendance was large both days, considering that this is the open season for ducks and deer in these parts. The shooting was continuous from early morning until dark. Lunch was served on the grounds by Wallace & Madison. Manager Ben. O. Bush, of Kalamazoo, deserves great praise for his good management. There were many valuable merchandise and cash prizes.

John Parker, of Detroit; J. H. Hulbert, of Shiphewona, Ind.; Ben. O Bush, Kalamazoo; Sam Gay, Rockwood, and Prof. Ames and C. L. Edwards, of Carleton, did the best shooting for the two days.

The scores follow:

Nov. 17:

Events:	1	2	3	4	5	6	7	8	9	10

Keystone Shooting League's Tournament.

HOLMESBURG JUNCTION, Pa., Nov. 25.—The Keystone Shooting League handicap was shot here to-day. Three men tied for first money with clean scores; four tied for second with 1 miss, and third money was tied for by four men with 2 misses each. The conditions of the handicap were 20 birds, $10 entry, three guaranteed purses; $75 to first, $50 to second, $25 to third, with extra purses of $20 for every two entries over fifteen. The birds were an extra good lot, and the high scores are only accounted for by the excellence of the entries. Scores:

Hallowell (30)	12111122111111112212—20
Dolan (30)	22222222222222222222—20

Sweep, 5 birds: H. Thurman 5, Coldren 5, Norton 4, Stevenson 4.

Reading, Pa.

THE annual fall event of the South End Gun Club, of Reading, was shot Nov. 25. The first event of the day was a live-bird match, which was participated in by seven of the members, Hurlingham rules, 21yds. rise, and 50yds. boundary. Considering the threatening weather and bad background in consequence, a good score was made. The birds were a selected lot, and each man shot at 10 birds. Owing to the condition of the wind, the birds presented right quarter shots. The score is as follows:

Hill	1010010000—3	Downs	0101111000—5
Eshelman	1101011111—8	W Texter	0111011110—7
Shultz	0001000000—1	Willson	1010101010—5
P Texter	1111000011—6		

In the afternoon bluerock targets were shot at over the magautrap. The sky was even more heavy than in the morning, making high scores impossible. The various events were witnessed by a good-sized audience:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17

JOHN B ROGERS.

Nov. 25.—Inclosed you will find the scores of our Thanksgiving Day shoot, also the scores of the first shoot for the E. C. and Schultze Powder cup, also the match for the President's cup, which was shot to-day. All the scores were very good, considering the light. The next shoot for the President's cup will be on Christmas day. J. M. Servin has challenged J. B Rogers, the holder, and the challenge has been accepted. The light was very poor, and a strong breeze blew all day.

No. 1, 10 unknown bluerocks: Ogden 9, Rogers 6, Servin 4, Welch 3.

No. 2, 15 unknown bluerocks: Ogden 14; Dunning, Lines, 12; Rogers, Welch, 11; Welling 10; Servin, Williams, 7; Edsall 3.

No. 3, 10 unknown bluerocks: Ogden 9; Dunning, Lines, 8; Welling 7; Williams, Edsall, 6; Servin 4; Rogers 3.

No. 4, 10 unknown bluerocks: Dunning 10, Lines 8, Ogden 7, Williams 3.

No. 5, 10 unknown bluerocks: Ogden, Dunning, 9; Servin 7; Williams 6; Lines 4. Tie: Ogden 9, Dunning 10.

No. 6, 5 unknown bluerocks: Rogers, Lines, 4.

No. 7, 10 unknown: Lines 8; Rogers, Servin, 6.

No. 8, 10 unknown: Lines 7, Servin 6, Rogers 3.

No. 9, 10 unknown, prize 1lb. can powder: Dunning 9; Welch, Ogden, Williams and Welling 7; Rogers and Servin 6, Edsall 2.

No. 10, 10 unknown, prize 1lb. can powder: Dunning 8; Edsall, Lines, Welling, Ogden and Welch 7; Servin 6, Rogers 5.

No. 11, 10 unknown: Lines 9, Ogden 8, Dunning 7, Welch 6, Williams 5, Edsall 4.

No. 12, 5 pairs: Ogden, Dunning and Lines 6; Williams 4, Servin 2. Tie: Ogden 3, Dunning 2, Lines 1.

No. 13, 10 unknown: Dunning 8, Ogden 7, Welch and Williams 5, Wisner 3, Edsall 2.

E. C. and Schultze cup, 50 birds: Lines 45, Rogers and Dunning 42, Ogden 38, Welch 37, Servin and Welling 33, Williams 32, Wisner 27, Edsall 22.

President's cup, 100 birds, unknown angles:

C. L. E., Texas.—As there are none of the breed of dogs advertised which you mention, we are unable to give you the information.

W. W C., McKeesport, Pa.—Is it not against the Pennsylvania law to sell game? We can buy game of all kinds here to-day. Ans. The law reads: "That it shall be unlawful at any season of the year to kill any elk, deer, fawn, wild turkey, pheasant, grouse, quail, partridge or woodcock for the purpose of selling the same."

PUBLISHERS' DEPARTMENT.

Florida, Augusta, Aiken—The South.

THE season is open for Southern travel. The Southern Railway announces the most perfect dining and sleeping car service for all Southern cities and winter resorts for the season of 1897-98. The two Limited trains—the Washington and Southern Limited and United States Fast Mail—are operated daily, every day in the year, giving the most superb service. New York to New Orleans, Aiken, Augusta, Asheville ("the Land of the Sky"), Savannah, Jacksonville, St. Augustine, Tampa, Atlanta, Memphis, Chattanooga, and, in fact, any point South or Southwest. Effective Jan. 17, the "Florida Limited" will be resumed—a most magnificently equipped train built especially by the Pullman Company for this service, and will be operated solid between New York and St. Augustine, composed exclusively of dining, library, observation, drawing-room and compartment sleeping cars. Leaving New York daily, except Sunday, at 12:10 noon, reaching St. Augustine following afternoon for lunch; also attached to this train will be most perfect service New York to Aiken and Augusta; also Brunswick, Ga., and Jekyl Island. For full particulars, etc., call on or address Alex. S. Thweatt, Eastern passenger agent, 271 Broadway, New York.—*Adv.*

THE Peters Cartridge Co., of Cincinnati, O., are now prepared to distribute through the trade, free of charge, their new calendar for 1898. About two thirds of the large card (16×25in.) is devoted to a reproduction of a very spirited water color, by the artist, Mr. Fred Achert. It is entitled "His Last Leap," and portrays the death of a deer, which, shot while drinking, whirls about and springs in a death leap toward the shore. The creek in which the deer had been drinking stretches away in a

A STATE DEER PARK FOR LONG ISLAND.

ON Long Island, within sixty miles of New York city, is one of the most wonderful natural deer preserves in this country. Here, in spite of pursuit which has been continuous since the settlement of the country, and in spite of the proximity of the largest city of the continent, with its hosts of sportsmen and market hunters, the native stock of deer has persisted and remains to-day in a supply which is on the increase.

That under existing conditions the stock should multiply is not remarkable, for these conditions are favorable to that result. The game is protected all the year through with the exception only of four days, the Wednesdays of November. Adjoining the open deer range are the fenced grounds of the South Side Sportsmen's Club and other preserves; and when the shooting begins on the opening day the deer flee for refuge into these protected harbors of refuge, crowding in through some of the gates "like a flock of sheep," as eye-witnesses have described it. Thus, while in a single day, as this year, a hundred deer may be killed by the army of sportsmen who turn out for the first Wednesday, large numbers escape to the park shelters, where they are shut in. The following Wednesdays show decreased scores. The entire number killed in the four days of last month was estimated at from 175 to 200.

The number killed in 1897 was practically that of 1896, while the stock of game, according to the testimony of those who are informed, was larger this year than last. Persons familiar with Long Island know from observation that the deer have increased within the last fifteen years, and that the present rate of increase is steady and continuous. The explanation of this is found in the two facts: The first is that the hunting season is so short that it does not permit destruction which can effect a diminution of the supply to offset the increase. The second fact is that the deer are in a state of semi-domesticity, which is highly favorable to fertility, so that they are breeding as domestic stock do in security and tranquility. The open season of four days, separated by week intervals, is not so alarming as to disturb the game and make it wild. The hunting din and fusillade through November are as purely incidental in their bearing on the wildness of the game as is the incursion of the small boy in the chicken yard to run down a rooster for Sunday's dinner. Before the surprised and terrified deer begin to suspect what it means for them the campaign is over.

Under existing conditions, then, the maintenance of the Long Island deer stock is assured. Nevertheless there is heard annually the cry that the supply is being exterminated. This perhaps is not to be wondered at when one is confronted by a total of 100 deer killed in a single day. The facts, however, show, as we have said, that, notwithstanding the army of gunners who make up the skirmish lines in November, the deer actually are in numbers more than before. Moved by the reports of a highly sensational nature which the daily papers have given from time of the Long Island hunting, various well-meaning individuals have suggested that all the wild deer country should be taken up by private individuals, and converted into a great preserve, to the end of "saving the deer;" and names of prominent land owners on the Island and others have been mentioned as having such an enterprise in view. Of this it is to be said that there is no necessity of any such undertaking for the sake of "saving the deer," nor would there be any justice in inclosing those remaining lands now open to the public and shutting the people out from the privilege of deer hunting. The deer in the country which is still open to the public belong to the public, so far as hunting privileges are concerned, and there would be no justice nor anything other than selfish aggrandizement to justify one person or a number of persons in fencing the deer land. A very large number of people are interested in Long Island deer hunting, and interested equally in degree with those who have preserves or who could afford to take up new preserves.

It may be, however, that the Long Island deer, being partially a domestic animal, might properly be treated as such in some way to make the surplus stock of advantage to the State at large. If any new deer preserves are to be established on Long Island they should be provided by the State Fish and Game Commission for the purpose of increasing the game supply of the Catskills and other regions which the Commissioners are endeavoring to restock. Then when the season opens, and deer rush like sheep through preserve gates, they could be taken by the Commission for breeding purposes or for immediate transportation to Sullivan county, the Catskill Mountains and elsewhere. Such a State park could be established without in any serious degree restricting the hunting privileges now enjoyed by the public. It would give a wise solution of the Long Island deer problem.

FIELD TRIAL TRANSITIONS.

PROFESSIONALISM in sport is business in sport. When professionalism has insidiously incorporated itself as a part of legitimate sport, it has always proved to be detrimental and sometimes ruinous to it.

However cunningly professionalism may be colored as a part of sport or cloaked to conceal its rapacity, it has but one earnest purpose in its efforts: the purpose of money getting. It is the business of making the most money out of the men who foster and follow sport for the pleasure of it.

As a business necessity, the professional devotes his whole time, or a large part of it, to perfecting himself in his specialty, so that he may so excel the sportsmen in skill that his own business success, once he is able to participate, is assured. To the men who seek sport as a diversion from the mental and physical labors of business routine, the highest attainable degree of skill in sport is neither a necessity nor a possibility. A reasonable proficiency is sufficient to insure a reasonable degree of success in the moments the sportsman can spare from business.

While all professionals in sport seek to make the pleasure of others their own capital in business, there is a wide difference in them individually. A few are conservative and moderate in their money seeking, while others have a rapacity which would hardly be satisfied if it absorbed everything.

Professionalism in its own sphere has its own mission. It accomplishes much as a useful accession to sport, but it is not the sport itself, nor does it emanate from the class which makes sport an institution. And yet there are few institutions of sport which are not followed as a business by some professionals. No apparent harm may follow, as nearly all branches of sport have sufficient vitality to sustain a certain degree of parasitic drain without visible signs of harm from it.

Probably no form of legitimate sport has been so persistently preyed upon by an element of professionalism as has that of the dog and gun. Field trials in particular are a lesson in the rapacity of an element of professionalism, ever hungry and unsatisfied, and in the harm of it when it has its way unchecked. The first field trials, inaugurated in the 70s, were symbolical of true sport, of a spirit of friendly emulation among men who loved the pleasure of sportsmanship for its own sake. From this as a starting point there were rapid transitional stages from pleasure to business. There was a transition from cups to cash prizes; from trophies which commemorate a victory and perpetuate a glory, to cash which represents the profit of the moment. It is a significant period in sport when the winner demands cash for his victory in the same manner that the tradesman demands cash for his wares, or the laborer pay for his services.

In the late 80s thousands of dollars were offered each year in prizes at the field trials, and nearly every field trial interest became commercial. Judges were paid large sums for their services, and many times they were professionals in the business. The professional secretary later dawned upon the scene. For the service of doing the clerical work of a club, a mere incident of business, he demanded and received as much as some men receive for a year's salary for constant work.

The trials then consumed weeks of wearisome time in their running. It was laborious sport with an entire commercial significance. Out of this evolved the "field trial dog," a wild creature, in most instances half broken or less, and always much given to hunting for his own pleasure, as is the way of such dogs. The dog which would work reasonably well to the gun belonged, in the jargon of the cult, to the class of "plug shooting dogs."

The distinction served a good commercial purpose in parading that no one could hope to own anything really "high class" unless it had on it the field-trial stamp of approval. No dog which worked pleasantly to the gun could ever hope to be "high-class." The boom in prices followed. There was much studying and mixing of pedigrees, and learned disquisitions on breeding by men who had become breeders and sportsmen on the previous day. The mushroom hordes who embraced sport as a business proposition abandoned it after the boom collapsed—as all booms in time do—but there was much money made, nevertheless, by a few who were more skillful in pedigree twaddle with its commercial bearing than were others. Puppies with any satisfactory claim to fashionable breeding sold from $50 to $250 when a few weeks old. Trained dogs of like kind sold from several hundred to a thousand or two thousand dollars.

Still professionalism was unsatisfied. It advised or dictated as it could in the matter of grounds, of the selection of judges, of the amount of prizes, and it was particularly conspicuous in the columns of the sporting press other than FOREST AND STREAM. There were malignant controversies and columns of advertising vented in weekly series. Yet it was still unsatisfied. It invaded the club membership itself. Every interest of the sport was then directly under the professional influence. Field trials began to decline.

There were but two clubs which closed their membership doors to professionals; those were the Eastern Field Trial Club and the Northwestern Field Trials Club. Many clubs have had their rise, progress and decline since those clubs were formed. As professionalism entered the clubs their non-professional members dropped out or their interest became dormant. They could find sport for themselves, sport free from parasites. In nearly all the clubs in which professionals secured membership the non-professional members withdrew to such an extent that the club was in the hands of professionals, and prestige and patronage were largely lost.

There came a time when the evil began its own cure. A strong sentiment has grown against the professional club member, the professional secretary, the professional breeder, who endeavor to foist themselves on sportsmen as the true article of sportsmanship, though always talking shop. Professionalism, with its tentacles in every branch of field trial interest where money could be gathered, nearly strangled it.

Professionalism in its place we recognize as of sterling worth, but professionalism as a parasitical industry we are opposed to. It is gratifying to note that the prospect for the proper regulation of professionalism in sport, whether at the trap, bench show or field trial, is now more promising than it has been in many years past.

FREQUENT allusions have recently been made in the daily press to the project said to have been set on foot in Tunis for breeding egrets in confinement, the intention being to rob these birds of their plumes during the breeding season, much as ostriches are deprived of their feathers. A writer named Jules Forest is quoted as having written to the *Revue Scientifique*, of Paris, an account of this project, in which the supposed breeder inclosed a considerable area of ground with a wall and covered the space with wire netting. Young egrets are said to have been procured in 1895 and in 1896, the number of adult birds is said to have been 400. It would seem that the birds started in at once to make the merchant's fortune, and were working hard for it.

The birds are said to be fed on horse and mule meat, worn out animals being purchased at the cost of a very few francs each. The breeding mothers are said to be supplied with small minnows.

The distant location of this "heron farm," and the fact that their breeding in confinement would be opposed to much that we imagine we know about the heron's life history, warrants the public in waiting for something a little more definite about this project before accepting these newspaper statements as true.

Read that account of the St. Louis game market and of the industrious hunters who supply it. The story is one which has all the more interest because it is written without prejudice. The statistics are instructive, and not less so the frank avowals of St. Louis dealers that their hired hunters begin their campaigns long before one close season has expired and extend them long after another close season has begun.

The Sportsman Tourist.

THE NATIVE AMERICAN HUNTER.

IV.—A HUNTER HUNTED.

This happened a long time ago. One time at the end of the summer a party of Cheyennes started out to look for camps of their enemies to take horses from them. There were about thirty-five men in this party and they were hoping that they would find a camp of Shoshones or of Bannocks from whom they might take some horses; for the Shoshones and Bannocks had good horses and many of them.

The Cheyenne village stood on a little stream flowing out of the Black Hills toward the east, and these men started from there on foot, going through the Black Hills and coming to Powder River near the Pumpkin Buttes. From here they followed up Powder River. In those days the Snakes and the Bannocks lived all through the mountains and often came out on the plains to hunt buffalo, but the Cheyennes did not often go into the mountains.

One night these people camped at Powder River Cañon and slept there, but very early in the morning, just as the sky was beginning to get gray, they got up and built a fire and cooked some food and started to travel onward, walking one behind the other. A few of these people had guns, old smooth-bore muskets, but most of them carried bows and arrows.

They had started and were traveling along slowly, and it was now full daylight, only the sun did not yet shine down into the cañon, but they could see the line of its brightness creeping down the mountain to the west of them. Just as they were going up out of Powder River Cañon, Dog Head, the leader, looked up on the mountain to one side and saw a big ram come out into sight and snort. It stood on the edge of a cliff, among the grass and brush and pines that grew there, and they could only see its head and neck and its big horns.

All the men stopped and looked at this ram, and said to each other: "See that mountain sheep. I wish we could get closer to him and kill him, so that we might have him to eat." For a little while the sheep stood there, turning his head slowly one way and another, looking all about him, and the war party stood still and watched him. Then presently the ram drew back and disappeared, and the party started on again. Before very long they saw the sheep come out again on the edge of the wall further along, as if he had trotted along the shelf and then come out again to look at the men traveling. Again the Cheyennes stopped and looked at the sheep.

Out of sight of the Cheyennes something was creeping very slowly and softly along the shelf of the cliff on which the sheep was standing, and as the men stood there looking they saw an animal fly through the air and alight on the back of the sheep as it stood there looking down on the travelers. It was a mountain lion. The lion sprang on the sheep's back and caught it around the neck with one paw; but the sheep, instead of turning to run back, sprang forward, and both came tumbling down through the air to the foot of the cliff.

They fell a long way before they struck the rocks, and after they struck them their bodies rolled far down the steep mountain side. The Cheyennes quickly ran forward to the place where they were. There they found the mountain lion trying to get away. Two of his legs and some of his ribs were broken, and they killed him. A little way off they could see the mountain sheep, but when they went up to it there was something queer about it. The skin seemed loose, and when they took hold of it and lifted it up they found inside the skin a person.

The head and neck of the sheep were stuffed with grass, and balls of clay were put in it for eyes. The rest of the skin was drawn over the man's head and body, and his arms and legs were rubbed with white clay. In his left hand he had his bow and in his right a sheaf of arrows.

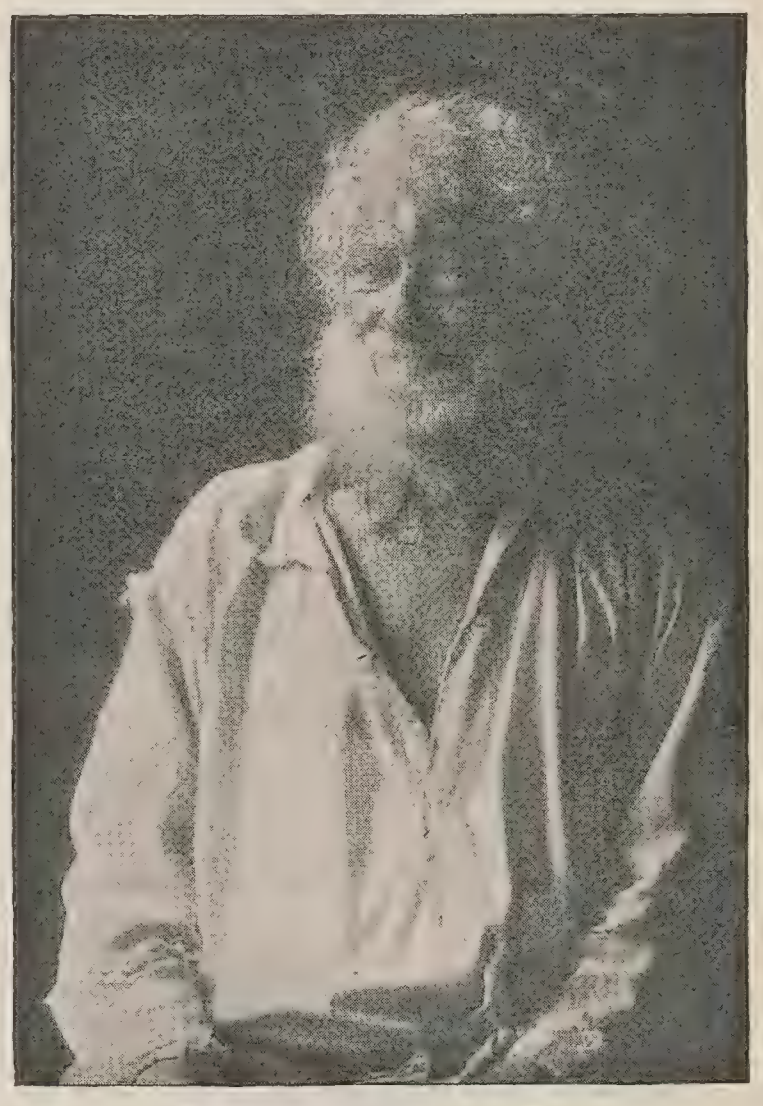
It was in this way that he hunted through the mountains. If sheep or deer saw him they thought him a sheep, and he could walk close to them.

The Cheyennes did not know who this man was and did not find his camp, but they thought him a Shoshone or a Bannock, so they took off his scalp and brought it home with them.

Geo. Bird Grinnell.

THE EXPERIENCES OF A DEER HUNTER IN VERMONT.

I am exceedingly fond of sport, yet do not consider it worth the cost of bodily comfort. It does not seem to me that it pays to be frozen for the sake of getting shots at wildfowl, nor would I endure the privations and discomforts of rough camp life for the chance of killing a deer, though that has long been my chief desire. The establishment of an open season for deer in Vermont, and the glowing accounts given of the abundance of that noble game there, seemed to offer the opportunity for which I had waited. Where deer come into the gardens of farmhouses, and even invade the village streets, one certainly need not endure great hardship in hunting them. A friend secured lodgings for me at a farmhouse where deer were said to be most abundant, and Oct. 1 found me installed there armed with suitable weapons and supplies, with such creature comforts as were not likely to be provided by my host.



My host was past middle age, of plain manners and speech, and a countenance so honest that I was at once inspired with confidence in all his statements. He told me that deer were frequently seen on the farm, in the pasture with the cows, and in the grain fields, and that more than once an old buck had come into the garden from which he had to be "shooed out to keep him from eatin' up the garden sass," as my entertainer expressed it.

My neatly furnished room, which had been fitted up for the departed summer boarder, overlooked the garden, and I spent a whole day sitting in an arm chair at the window watching for the coming of the antlered monarch of the hills. But I waited in vain, and in vain did I arise at an unearthly hour morning after morning and accompany the cowboy to the pasture in the hope of finding him or one of his fellows there.

Thus an unsuccessful week passed, and then my kind host advised going to the woods, where, he said, "The' was allers more deers 'an what the' was in the lots. You'll like 's not find 'em in 'mongst the spruce trees a-gummin'. They'se terrible critters for chawin' gum when they hain't chawin' nothing else, and you might find one stuck, with his teeth sot in a gob of gum as he couldn't pull off." This was a fact in natural history quite new to me, and I expressed some surprise, yet no unbelief; for how could I, as I looked in the guileless face of my informant and he emphatically reiterated, "Yes, sir; you'll allas see deers a-chawin' gum when they hain't a-chawin' nothin' else." I remarked that this was possibly what I had seen the cows and sheep on the farm engaged in while they were at rest, and wondered that the horses and pigs had not become addicted to it; but my honest friend assured me that it was wads of grass that the cows and sheep chewed, not gum, which was less easily obtained, and that it "someheow didn't seem to come handy for hosses and hawgs to chaw stiddily without swall'in'." I wonder if this habit of gum chewing was not learned of the deer by the people. Every one who does not chew tobacco chews gum.

I at once proceeded to range the border of the adjacent spruce forest, but the most careful research failed to discover a deer, though there was plenty of gum which should have attracted them. What I did find was only bitter disappointment.

One day my attention was attracted by the movement of some undergrowth about 50yds from me. As I caught sight of a patch of blue which, as I had heard of deer being in the blue coat, this I was sure belonged to the game I was in quest of. I leveled my rifle and, taking as steady aim as the tumultuous beating of my heart would permit, I pulled the trigger. Imagine my consternation when I beheld, not a noble buck plunging forward, but a man clad in an old army overcoat come walking forth swearing outrageously, calling me opprobrious names, and demanding in the name of blanks too venomous and unseemly to mention, "what I

JOHN GOMEZ.

Born in the year 1781, now living on Panther Key, Florida. From a photograph in 1897 by Tarpon.

was a-shootin' at." He was very impolite and unreasonable, for I had only shot a hole through the skirt of his miserable old coat. When I gave him $1 to mend it his manners improved materially, though he declined an invitation to hunt with me.

Next day I was out in the woods betimes, but saw nothing worth a shot till near noon, when, as I was standing in some undergrowth at the back side of my host's farm, I heard the approaching footsteps of some large quadruped. Cocking my rifle, I kept perfectly still, with my eyes fixed in the direction of the sound, and presently saw the tops of a pair of horns moving slowly above the bushes which quite hid the body of the animal from my view. I could not doubt that it was a buck, for what else with horns could be in the woods? As the direction he was taking would not bring him in plainer sight, I calculated the position of the shoulder, and taking a careful aim a little behind it fired, the distance being not more than 20yds. The report of the gun was followed by a bellow of mortal agony, such as I had not expected to hear from a deer; still I doubted not that such it was upon which my .32-45 had done its fatal work. The stricken beast went crashing through the underbrush at a tremendous pace straight toward the open field, for which I was thankful, as it would make the finding of my game easier. There was no difficulty in following the trail of blood, nor even the hoof prints, which were distinctly marked in the mold and very large, I thought, already exulting over the size of my trophy. I soon came to the pasture, where I easily followed the trail of blood, constantly looking forward in expectation of seeing the buck, but he was nowhere to be seen on the cleared slope that reached its crest half a mile before me. To this I hurried on the trail, and from it beheld about 200yds. beyond me the great carcass of my victim. Two men stood near it, whom I recognized on my approaching them as my host and his hired man. I could not withhold a triumphant whoop, and called out to them to congratulate me on my success, but they did not seem to share my enthusiasm at all; on the contrary, my host looked exceedingly glum, and addressed me in a tone of corresponding severity.

"Is this 'ere some o' your duin's?" he demanded, pointing his thumb over his shoulder at the dead animal.

"Certainly, I shot the deer over yonder in the edge of the woods," I answered, not a little puzzled by his manner, which I attributed to nothing but envy. "Isn't it all right, Mr. Palmer? He had horns, he was not chased by hounds, he was not at a salt lick, and I haven't killed but one of them," I added, with my mind on the restrictions of the law.

"Deer!" Ezekiel Palmer laughed a bitter, resentful laugh, and the hired man grinned so widely that his big hand could not cover the corners of his mouth. "Look! Don't you know a deer from a two year-old steer? Wal, you hev cut up a dum purty caper!"

Alas! it was too true, as I saw on coming closer to my victim, and from the height of exultation I fell into the depths of humiliation.

"However, I s'pose you're willin' tu settle it 'thout makin' no extry cost," Ezekiel said, softening his manner. I assured him that I was, and asked him to name the terms.

"Wal," he said after some consideration, "I wouldn't ha' took less in forty dollars for that are critter; but seein' it is you un' it was a mistake, if you'll gi' me thirty we shall be square, an' I'll du what I kin wi' the meat an' hide. The meat's spoilt, probably, an' the hide's got a hole in't; but I kin git a little somethin' for 'em, an' you wouldn't want tu bother wi' 'em."

I gladly accepted his proposal, and paying for the steer and $8 for a week's board, at once returned to the city, though urged by Ezekiel to prolong my stay. He seemed quite willing to risk his steers. "Arter all," he said, "it's considerable cheaper for ye 'en if yu 'd shot a doe or a fa'n."

Considering my two shots simply as shots, I do not think them bad ones.

Adolphus Dobbs.

AMONG PROTECTED GAME.

Gardiner, Park County, Mont., Nov. 22.—*Editor Forest and Stream:* I got back with Mr. Rogers late in October. We came in ahead of the packs, but saw very little game until we reached the point of the hill at the junction of Cache Creek and East Fork (Lamar River). There we saw a splendid band of about ninety elk, only one large bull with them. I had been telling Mr. Rogers that we would see elk, or ought to, but that they were on the ridges. We saw three more as we turned up Soda Butte Creek; the sun was just down and elk were coming down to water. We saw some very heavy trails made during the deeper snow of Oct. 16 and 17, but when we came in the snow was all off the lower levels. We stopped at the Stage Station that night.

We left Soda Butte early, but saw no game—only trails—until we turned off the road on a "cut-off" at Little Spring Creek. In the edge of the timber, in little parks and in the timber we could see hundreds of elk, most of them lying down. Wishing to see how many there were, I whistled with my hands, trying to imitate an elk. You don't have to come very near during the running season to get an answer, as they will answer most any kind of a noise. I was quite successful; the bulls were all around the cows, on hillsides in the timber, and gulches on ridges and openings—all whistling.

Soon the cows began to move. Then you would have thought a thousand children were just out of school; cows and calves calling one another. Such a racket I suppose you have often heard, as there were from 800 to 1,000 elk in the band. They did not move fast; we did not see one run or trot, but we could hear them long after they were out of sight. On the other side of the ridge we saw another band of several hundred, but did not pass very near—at a quarter of a mile distant, I think—so did not disturb them at all. On our way to Gardiner I think we saw not far from 1,500 elk.

We struck the head of the Turkey Pen at dusk. Riding down a little draw, we saw outlined against the sky a doe and two fawns, with their great ears looking like small wings. We talked to them, told them they were very pretty, and assured them of our good intentions; they did not move while they were in sight, though we rode within 50ft. of them. We reached Gardiner after dark, and had to ford Gardiner River—a nasty stream for that. The bridge had been torn out by Col. Young's orders, to prevent the pasturing of town cattle and horses in that part of the Park where the antelope usually winter.

Soon after my return the Park antelope started to leave, crossing the Gardiner River and keeping along the foothills in front of the town, where they spent the night. I could hear coyotes running them all night, and once they came so close my house I thought they would go past it. The next morning some of the men here went down about a mile and a half and killed four antelope. This turned them back into the Park. Later some went below and were killed. Now those that are left are in the foot hills not far from Gardiner. There were about thirty soldiers with an officer down one day from Fort Yellowstone, trying to drive them further back in the Park. I do not think they were very successful. I saw the antelope break back once. I think there are now about 125 left in the Park. If it were not for the coyotes, there ought to be 1,000 or more.

An effort is being made to kill off the coyotes, and a few have been disposed of, yet I think there are now more coyotes than antelope. It could not have been anything but coyotes that caused them to leave the Park, as the feed is very good and free from snow.

The bears that were chained up at the Springs and fountain (four in all) have been released. The five elk at the Mammoth Hot Springs are still in the inclosure, but are liable to be turned out, as they are not wanted at the park in Washington.

E. Hofer.

Old John Gomez.

Tarpon Springs, Fla.—I had meant to write up the cruise for Forest and Stream, but we had such infernal weather that it took all the write out of me. In a twenty-eight days' cruise we had one day and a half fair wind, the rest of the time it was a dead fight to windward, and for a good part of the time half a gale.

I send you a photo of old John Gomez, made in September. I could see that old John is failing, and I doubt if you will ever see another picture of him. If this one is fit I wish it could be reproduced in Forest and Stream; there are many who would like to see it. You said once of one of old John's pictures that the skin did not show great age. Take a reading glass and look at this one and tell me what you think,

Tarpon.

The Forest and Stream is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable

Natural History.

VISITORS AT MY CAMP.

These are notes of a trip in the Forest Reservation, in Wyoming, east of the National Park.

At one of our camps, where we were located for forty days, the small animal life was most interesting. In numbers the little chipmunk was first, the wee ones of the Rockies. Others were the pine squirrels, campbirds (gray jays), Clark's crows, a bluejay (once we had two), mice, mountain rats, wrens, woodpeckers and other visiting birds, and at night a few owls. We had a large camp, with a camp-fire—not the cooks—and some seven tents and a lodge up. The dining room was very comfortable, with benches and a slab table.

The squirrels were everywhere in the trees after pine nuts, working from early morn until almost dark. The chipmunks were not as hard workers, but were very busy while they were at it, and so tame that at times they would come up on the table when only one or two were eating there. They would sample everything. Once there was a four-quart pan half full of stewed raspberries there. A chipmunk got on the edge of the pan, reached down in the juice and got a berry. After tasting it he concluded it was good, and just the thing he was looking for. It was not long before a dozen were at it, dipping down and fishing out the berries, the dark juice wetting their arms and bodies. Soon, with their running back and forth, they had the table so stained that it had to be cleaned with an axe, and such a dirty lot of chipmunks I never saw before.

The place where the cook threw the slops and garbage was alive with them. It was fun to see one get a large piece of apricot and sample it, turning it round and round. A piece the size of a half-dollar was nothing for them to handle, but they were sure to sample the whole edge. I saw them hide a few things in trees, but usually they took them to their nests. The pine squirrels and birds used to come to the dump too, and all were very busy taking what they liked away. After that they would steal from each other's caches. Quite a distance from the fire, where we had it under netting, the cook used to trim the meat, throwing the waste on the ground. This the birds and squirrels used to eat and cache. I have often seen a squirrels carry a piece weighing 1 or 2ozs. and cache it out on a limb. He would have to watch it though, as the birds would steal it. I have watched them, and as soon as a bird came near if the squirrel saw it he would hurry to his cache and drive the bird away, scolding and chattering all the time. Usually the Clark's crows would carry the meat off.

I often watched to try to determine how long the squirrels left the meat in the trees. I think only long enough to dry fit to take to their stores. It is a very common thing for them to dry mushrooms and other fungi. Once we watched a squirrel digging in the smooth ground about 20ft. from the camp-fire. Soon we saw him get something white, eat a little and carry some up a tree. Investigating, I found part of what we call a devil's snuff-box. It had not broken ground, yet the squirrel found it. I saw the chipmunks eat some of the very dry meat, but did not see them carry off any large pieces. One squirrel used to have regular fights with our netting. In his attempts to get at the meat he would rush at it, try it time and again, then would try to get a mouthful of netting and carry it off, getting tangled up and scolding away at a great rate. I think he swore some when he was baffled at last, muttering and talking very earnestly about it.

The bluejay was the meanest thief about the camp. He seldom gathered for himself, but stole the camp bird's caches. The bluejay and the Clark's crows carried their plunder further from camp than the other birds. It was amusing to see the birds trying to protect their stores and at the same time taking advantage of other birds, and putting in all the time possible adding to them. At first all the chipmunks looked alike, but after a while we could see quite a difference between them. One little fellow used to visit my lodge. One day I was reading, while he was helping himself to a few oats I had scattered for him. Just then the cook came in. The chipmunk ran all over me without showing any fear, but being pressed hid between our beds. The cook caught him and put him inside his shirt, where he stayed for two hours, sometimes peeking out from a hole in the elbow, or another on the shoulder, from the neck and waist. Only when the cook bent over did he appear to be uncomfortable. Finally I had to help get him out, when he ran off chattering, but came back the next hour.

The birds and squirrels would carry off every bit of cloth they could get hold of. Once they took all Mr. R.'s gun cleaners—square pieces of cloth he had for wiping his rifle. He left the box open one day for a short time, but long enough for the squirrels to cache it up in a nest, where one of the men found it with a few other little things missed from camp.

We never attempted to kill anything about camp except mice and a mountain rat. They would not only steal from us, but cut our clothing, blankets, saddles and shoes, if anything was left for any length of time in the same place. Once I found a nest under my saddle made from the fringe of some of my towels, wool from my blankets and cotton from a comfort. One night I was startled by having something large run across my face. Getting up, I could hear the peculiar noise made by a rat when he gives warning by stamping his foot. I lit a candle and found him in my pack. I did not kill him, but hit him with a rock as he went under the lodge door. I never saw him afterward. Mr. Roosevelt calls these pack rats. Well, they won't pack off anything they can't move, but that's all that's safe where they are.

There are many little things one sees around camps like ours that one would like to tell about, but at the same time it seems trifling, I suppose, to others. For instance, I was cleaning a bear hide, throwing bits of meat in the camp-fire; some of the pieces, falling in the hot ashes, were frying. The birds could not only see but smell this, and for a time thought they must have it. They did get some, but must have burned themselves a bit. They would dive down and try to take some of the large pieces, fluttering in the hot ashes and smoke and scolding about it, until I threw the pieces out where they could get them without danger. I did not want to see them cremated, still the whole thing was of interest only to one who loves to watch the animal life in the woods. I suppose you like to have mice run over your tent in the night. I don't. I often used to hit at the place they were with a stick, and once heard one strike the ground several feet away after a blow. I wonder what it thought about it. Possibly it concluded there was an earth or tent quake about then.

We made many side trips from our main camp. Saw some very rough country, grand and interesting, but nothing grander than the Tetons.

Have you heard the story about the cat putting a black bear up a tree at the Fountain Hotel, Lower Geyer Basin? I won't swear to it, but believe it. A cat had some kittens near by, and objected to one of the bears coming too close, humping her back and showing cat anger. The bear saw the cat, but did not fear so small a thing; but the cat was brave. It made for the bear, who sat up to fight it; but the cat was too much for the bear, and it turned tail, when the cat landed on its back, where it stayed until bruin went up a tree. Here the bear watched the cat parade around, daring it to come down, but the bear concluded it was better off sitting on a limb 20ft. from the ground than down there where that combination of claws was. I give you the story as I learned it. I believe it. I saw some pictures Mr. Thompson drew to illustrate it, and had all I could do to keep from stealing them. The pictures were drawn from imagination. I don't think the story was.

It's been quite warm here this fall, so warm that there is very little snow on the lower levels, although considerable has fallen.

I have seen several mule deer along the Gardiner River, but no sheep as yet. They won't come down until there is more snow. E. Hofer.

Does the Red Squirrel Store Food?

Jacobstaff says of the red squirrel: "He lays up nothing." I take it that Jacobstaff means that he does not store his food for winter.

We do not have the blacks and grays with us any more, yet no later than the middle of October, when in the woods on the shore of Lake Ontario, fifteen miles north of this city, I found in a hollow black walnut tree nearly half a bushel of the nuts, and those that I examined showed marks of the teeth of some animal; my companion took every one of those nuts, as he had brought a bag for that very purpose. The hollow of the tree was large enough for a person to stand in and extended into the roots; the nuts were stored as far into the roots as possible. A week later I was passing the same tree and thought I would examine to see if more nuts had been stored; and I found just one lying in about the center of the tree, but noticed that every inch of space had been dug up, as if the owner of the pile of nuts had been looking for them, and, becoming disheartened at not finding them, had left the one he had brought to add to them; this nut also showed teeth marks.

Now, my conscience troubled me a little for being an accessory to the taking of that half a bushel of nuts (I held the bag), and as there were as many or more on the ground under that very tree, I gathered and placed them as nearly in the same place as those taken; and to make sure that no human eye would see them, I covered them with the yellow leaves from the tree, and sprinkled the rotten wood over all.

I was passing there again a week ago, and on looking in the hollow tree found the nuts missing. There was about 1in. of snow, in which were the tracks of the red squirrel, and I do not doubt that he had removed them to a more safe place, notwithstanding Jacobstaff's assertion that "he lays up nothing." I have also found the nest of the red-eyed vireo nearly filled with beech nuts, and would ask Jacobstaff what animal other than the red squirrel would have put them there. J. L. Davison.

Lockport, N. Y., Nov. 27.

The Linnæan Society of New York.

Regular meetings of the society will be held in the American Museum of Natural History, on Tuesday evenings, Dec. 14 and 28, at 8 o'clock. The papers will be:

Dec. 14—Edwin I. Haines, "The Nesting of Brünnich's Murre (*Uria lomvia*) at New Rochelle, N. Y." Postponed from November meeting Ernest Seton Thompson, "The Mammals and Summer Birds of the Yellowstone National Park." Postponed from November meeting.

Dec. 28—Frank M. Chapman, "An Exhibition of Lantern Slides of Birds in Nature."

Walter W. Granger, Sec'y.

American Museum of Natural History.

A White Meadow Lark.

Lockport, N. Y., Nov. 12.—Last month a Mr. Deibold, of this city, reported to me seeing a white meadow lark in the adjoining town of Pendleton, and said that he tried for three hours to shoot it. I informed him that it was against the law to kill meadow larks at any time. He said that he knew it, but would take the chances on that bird, and was going for it on Monday. (I presumed that he meant between Saturday and Monday.) I told him that he had better not let Dan Pomeroy, our efficient fish and game protector, know it if he succeeded in getting it. I also told him that I would go as far as Pendleton to see an albino meadow lark; but he would not give me the location. J. L. Davison.

A Red English Sparrow.

Lockport, N. Y., Nov. 12.—While walking down Locust street this afternoon I saw a bird fly across the street and alight among some English sparrows that were feeding in front of a grain store As it looked to light-colored for *Passer domesticus*, I crossed the street to examine it, and found that it was of that species, but of abnormal color; being about the color of the fox sparrow (*Passerella iliaca*). I called the attention of a number of people to it, who said that they had never seen the like of it before. As it was not white, I suppose it cannot be called an albino, but merely a freak in color. J. L. Davison.

A White Deer.

Williamsport, Pa., Nov. 27.—Mr. Geo. Lipp, of Huntersville, Lycoming county, Pa., killed a white deer a few days ago. It was a spike buck, and weighed 108lbs. He wishes to dispose of the skin, which is pure white and very handsome. S. W. Morse.

The Forest and Stream is put to press each week on Tuesday Correspondence intended for publication should reach us at the atest by Monday, and as much earlier as practicable.

Game Bag and Gun.

The "Brief's" Pictures.

There are twenty-nine illustrations in the current edition of *Game Laws in Brief*, most of them full-page half-tones, and all admirably printed. The book is a beauty, and well worth having for the illustrations which, Mr. Charles Hallock says, so well represent America's wilderness sports. The *Brief* gives all the laws of the United States and Canada for the practical guidance of anglers and shooters. As an authority, it has a long record of unassailed and unassailable accuracy. Forest and Stream Pub. Co. sends it postpaid for 25 cents, or your dealer will supply you.

THE ROVING CARIBOU.

The "roving caribou," truly. Well is he so called, as this account will prove. On Nov. 14, after many and grievous mishaps and delays, I managed to shake myself clear from the pleasures of business and, as another writer has pleasingly called it, the "debts, duns and deviltries" of civilization. With all my goods and chattels, weighing just 201bs. exactly, wrapped in a blanket, ready for carrying many a weary mile—the rifle, snowshoes, and last, but not least, the little camera—I took my seat in a sled such as is common to the North Woods, pulled by a fine, strong team of horses, and started out on a thirty-seven-mile drive. The portage road, though good in name, was certainly very bad. We started at 11 o'clock at night, and by noon the following day, in the midst of a driving rainstorm, arrived safely, though sore and aching in every joint, at Camp Pringle, where we found my guide waiting. Pleased as we were to see him, we were infinitely more pleased to see and taste the tip-top dinner he had ready waiting for us.

Taking into consideration the rain, which was coming down in torrents, and the fact that the frozen river precluded any attempt at canoeing, we gave up our plan of proceeding to Camp Crawford that afternoon. The morning broke fine and clear, with about 8in. of fine snow on the ground—too light for the snowshoes, and enough to make the walking, especially to the greenhorn, beastly bad. However, after a hearty breakfast we got away on our fifteen-mile tramp to Camp Crawford, and before long the inevitable annoyances of a first day in the woods became apparent one by one. The carrying strap would not sit right; the bundle would hang low; a year's sojourn up in the den at home had put some kinks in the straps; and a fellow's shoulders anyway have to get used to the thing. It is amusing how quickly you can get out of practice; and again, if you are strong, how soon you can carry a load which would a few days before have fairly killed you. Then the moccasins were new and had not the set of the foot, consequently a slippery place on the ground meant a sore place on one's body, and so on *ad infinitum*. But finally about 4 P. M. we arrived, tired and bruised, scratched and torn, at Camp Crawford, very prettily situated on the left bank of the Northwest Miramichi River. It is a fishing camp, owned by a New York gentleman, who spends a week or so here every summer salmon fishing; and, unless having seen it, one can scarcely understand the peculiarity of finding a nice little frame house planted there in the midst of nature and so far from human habitation.

Having spent the night here, the next morning we started off into the wilderness proper, and had gone but a short distance when we came upon the tracks of a very large moose, not more than a day old. However, our game was caribou, not moose, and we kept on. We lunched on the side of a small lake, which, my guide told me, contained some monster trout; as the previous spring, while passing that way just after a violent storm, which had piled the ice all up on one shore, he found hundreds of dead trout of immense size strewn along the shore. I wanted to see some such trout, and after a voyage of discovery among my pockets found a big hook and bit of line, which, baited with a piece of fat pork, succeeded in dragging two fish in quick succession through a hole cut in the ice for that purpose. We quickly photographed them in two positions and returned them to the water, as it was close season and at least one of the fish was full of spawn. I am sure the biggest one weighed 5lbs.; he was a perfect beauty.

After lunch we kept on and shortly came upon two fresh tracks of caribou, the first we had seen. Another hour's traveling brought us out on barren ground, and good feeding ground also, and here the tracks became so numerous as to excite no attention. About dark we arrived, leg-weary, it is true, but not very tired, at Smoky Camp. About this camp hangs a tale. It was put up some eight years ago by those veteran trappers Pringle and Braithwaite, and owing to its unexcelled ability to smoke out any tenderfoot it was dubbed "Smoky Camp." However, years of use and abuse have so altered it that it smokes no longer, and henceforth should be called Camp Lonesome, for a more desolate spot would be hard to find. Immense somber pines surround it in every direction—nothing but a gloomy forest, with not a place for a beam of sunshine.

It was indeed a fit place for the tragedy we read on the snow at our camp door—a few bits of rabbit fur, some bones, the snow stained red, and leaving on its truthful surface the marks of rabbit and sable tracks. A short distance up the line is a sable trap; let us look into it. Ha! there he is, and a beauty too; retribution in this case came sure and swift. His furry coat, it may be, is destined to adorn the neck of some city belle, who will little know or dream of the tragedy there so plainly pictured to a woodsman's eyes on the snow.

To this camp, one night in the early spring on his first trip for the year, Braithwaite had come, utterly tired out, just at nightfall; and fatigue caused him to lie down without fire and without supper. In the night something pulling at his blanket roused him to a semiconscious condition, and he gave utterance to several "eheu's" and again went sound asleep. Next morning on waking, to his utter and unbounded astonishment, he saw leading from the circle of woods to the camp door a bear track; and going back was another. But in place of having retired, as a bear ought to retire from a nocturnal raid, it made away with a succession of tremendous leaps. Investigation revealed the fact that the bear had cleaned out every particle of grub and gear which had been stored all winter at

the camp. Such an adventure would, I think, effectually prevent me from ever making my bed in the woods minus a fire.

After mending a rent in the bark roof, made by some other bear within a few weeks of our going there, we had a hearty supper, and then turned in with great expectations for the morrow. What was our chagrin on opening the door in the morning to find that rain had fallen, and then a frost had made a nasty crust on the snow. We started out to the open ground with hopes at zero, and kept studiously to it, as to hunt in cover on such a day would have been worse than useless. Fortune was with us, and about 10 o'clock away to our right we spied some caribou feeding. Then began some still-hunting which was still-hunting in the fullest sense of the term—man's ingenuity against the alert and ever watchful senses of the animal. A slight rise in the ground enabled us to get within 200yds. of them by crawling along slowly and painfully on hands and knees, gently breaking the crust with our hands, and removing it to make room for our bodies. A bitterly cold wind was blowing, and snow has little heat in itself. There we would be, one hand down in the snow, the other in the air perhaps, when one of the caribou would look our way, and there we had to remain, motionless as statues, for mayhap five minutes at a time.

We crawled in this manner about an eighth of a mile; then our cover was gone completely. We were on top of the rising ground; they were below us, 200yds. away. Every movement we made would become instantly apparent to them. We lay and watched them some little time, and a pretty picture they made pawing away the snow, to reach the favorite moss concealed below. There were four old bulls with their white necks, two cows and a calf. Only two of the bulls had horns, the others having already dropped theirs. But, what's the matter? Every head is thrown in the air. A moment, and all seven are bounding away, but after half a dozen jumps they stop, as is the manner of caribou when startled, to find out the cause of alarm. What a tumult of conflicting emotions surged through me at that moment! Must I, for the sake of being sportsmanlike—for the sake of the tender feelings of some of my American cousins, who on a previous occasion took me to task for committing an act such as would better befit a hungry butcher than a sportsman—must I for that reason see the long-sought quarry run away, and never try to stop it? Again they start away when "Shoot!" said my guide, and flinging to the winds all sentiment, I fired.

To my intense satisfaction down went the noblest buck in the herd, the patriarch of them all. But then (and loath I am to admit it) I got rattled as completely as would the veriest greenhorn. Buck ague was no name for it. Several shots, sent in quick succession, went whistling after the flying herd, when it suddenly struck me that I was shooting *a la* shotgun, completely ignoring the rear sight. Of course, the caribou went away, and they deserved to get away from such a hunter. They were pretty though. It will be a long, long time before the picture presented by the caribou, running away over the barren ground, will fade from my memory. Their dark, mouse-colored bodies so clearly outlined against the snow on the hillside, as they gradually but rapidly vanished from sight over the hill; the white necks of the bulls, the extreme grace and agility with which they moved, all combined to make a most beautiful picture.

However, from poetry we must come down to reality, and get our caribou skinned and dressed, a good hour's work, and not to be delayed when the mercury is hovering around zero. When the task was done, and skin and head were arranged in such a way that they could freeze without damage, we built a fire, boiled our kettle and had a well-earned lunch, and time for mutual congratulations on our luck. A long and weary carry brought us back to camp with our trophy and a portion of the meat, which we immediately sampled for supper.

The next morning the weather, although fine, was still unfavorable for still-hunting, and for the day we saw no caribou. But if we did not see them, we certainly found their traces. In one feeding ground, about two acres in extent, there was scarcely a foot of snow not tracked and pawed over, with here and there the beds of some which had been lying down clearly defined. Surely such a sight was almost as good as seeing the game itself. We also came on three very fresh moose tracks the same day, and following them a short distance saw where the game had run. I think the noise we made, slight as it was, must have started them. On the way back to camp we visited some beaver traps, set by my guide; but some wandering musquash, having got into the traps, had saved the beaver for that time at the expense of their own lives.

The next day we took a bushed-out trail through the thick woods for Caribou Camp, at the Bald Mountains, where we arrived at nearly dark. The only interesting notes of the tramp were of several fine marten we found in the traps, and the tracks of a moose which we thought had been started by our noise. It was a most unpleasant day, raining heavily all the time.

That night we had more snow, and the next morning proved an ideal one for the still-hunter. However, luck was not with us. We went out on the barren ground back of the mountain, but the caribou were not there, and as we had not time to seek new pastures that day we got back to camp early and had the only easy day on the whole trip.

The next day was fine and clear and cold, and capital for still-hunting. We took our way shortly after daybreak to a valley some five miles from camp, and there we did indeed find caribou in front of us, to the right of us, to the left of us; yes, and behind us too. They were everywhere, although concealed by the thick growth. Going back on our track at one place a short distance, we found where a big bunch had crossed a place on our track which we had gone over ten minutes before. But what is that moving ahead? A careful investigation reveals a bunch of six cows and calves lying down; we leave them unmolested and keep on without disturbing them, when—good gracious, what horns! Two reports and the horns were ours: it was a noble beast. Many and many a time have I dreamt of such a pair, but here was realization. How we admired them, and went over the thirty-four points again and again before we were content to begin the task of dressing it. Though this was heavier than either of our other heads, it felt the lightest while carrying it out. Surely one such animal was game enough for one day, and in the bigness of our hearts we allowed several others that offered shots to go on unharmed. I am quite confident that on that day alone I could have killed six or seven caribou had I been so minded.

The following day we started out, and had a hard carry without any fun all that day and the next, when a fine, big bull, with the finest brow antlers I ever saw, gave me another by no means to be despised trophy.

The next day we went out on our old hunting ground with the camera, and endeavored to get some pictures of the live caribou; but as luck would have it, we could never approach near enough to get a good picture, although the previous day in the rain we had had several good opportunities, but bad light. We followed one bunch heading toward the camp; they actually went within 50ft. of the camp door, and had anyone been there it would have been an easy matter to get a fine picture.

It was a marvelous country altogether. The roads of the caribou could be seen everywhere, almost 6in. or so deep, trodden right down to the ground, and evidently so much traveled in the summer and fall as left not a vestige of vegetation growing on them.

The rubbing was another great feature; in some places almost every tree showed the effects of the caribou horns on them.

Glancing over the preceding paragraphs, any one will say: what splendid luck! Yes, it was fine luck, I will admit; but then, mind you, there was also an immense amount of splendid work about it.

The hardship of walking through snow some 12 to 18in. deep—too fine for snowshoes, and so deep as to give legweariness with a vengeance—I have already spoken about. Carrying out the heads, horns and skins was work with a vengeance to any one unaccustomed to such exertions. Not but what it was pleasant work, because it was, as it could not fail to be with one of the largest caribou ever shot in New Brunswick on one's shoulders.

Then again: creeping on to a band of caribou, perhaps lying flat on your face, hitching yourself along on your elbows, the snow getting down your neck and up your sleeves, the thermometer dancing about down at zero, or the rain falling in torrents—prolong this form of amusement for say two hours, and then let any one say he feels comfortable. It certainly is no fit amusement for our friend whose health is broken down and who wants to recruit. Possibly we arrive at camp some night all wet and weary, and some hours after dark; wood has to be got, the fire kindled, some tea made, and then we must get dried out. It looks nice on paper, roughing it, truly. I would rather be excused myself, although when it has to be done I am not the one to funk.

Another night you are sleeping in a bark lean-to. In the middle of the night you wake, half frozen. The fire has burned down. You get up and replenish it, but you can't get warm. Your back may freeze while your opposite side roasts, or your feet are burning and your ears freezing. Great fun, I assure you.

Here we have a beautiful day, all nature seems to be rejoicing, and a man is glad that he is alive and able to be out with nature in the beautiful woods. Hello, here is a little stream to cross. No! I am afraid the ice will not bear your weight. Well, we will fell a tree across it. Good, and I start across. "Take care now," I hear Arthur sing out, "it would be mighty nasty to get a cold plunge bath to-day." The other side is reached in safety and Arthur follows; half way across he sways ominously, first one way and then the other; he has to go, can't help it, one foot and leg must get wet, and we are miles from camp. Oh, how nice!

Coming out with our trophies was not all hard work, though. One day we spent on the river in our canoe will long linger in my memory. A heavy rain the previous day and night had caused the stream to rise so that the ice, which before was strong enough to bear a man's weight, was all driven out, and a furious, rushing, boiling stream, between iced-up banks, was the scene of our pleasure and sport. For sport it was to have our long 25ft. canoe fairly leaping toward a place where the river, turning at a sharp right angle, would cause the water to pile up against the bank on one side with a swirl and rips which would make any one but an old hand pretty nervous. Or again, we come to a place where the river is to all appearances completely barred by immense boulders. There is no apparent passage through which to go. However, we are in the rapids and must face the music. A quick turn here, snub her up sharply there. Now a good push. There is a sharp rasping sound for a moment as we graze the side of a rock, and looking back we see the nasty place quickly receding, and for a few minutes we have a rest as we float down a slow reach of quiet water.

It was a pretty sight, running down the river. All nature seemed to be locked in the winter's cold, silent, icy grip. Nothing but the water seemed to be moving. We ourselves were the only living things. Surely this was enough to lift one's mind away from all thoughts of city life and cares, and to give one that feeling of perfect rest and contentment which takes some people to the woods.

Every few miles we came upon some new object of interest. Here was a famous crossing place for moose, and over there the place where, earlier in the season, two canoemen belonging to another party had seen a big bull stand in the water and watch them as they paddled toward him, and then calmly walk out of sight; needless to say, they had no gun. And so on right down the river. However, we at length reached our landing place back again at Camp Pringle, and contemplating the river for a moment after landing, my guide says: "Well, better than walking, ain't it?"

"I should say it was a good deal better than walking. I hardly like to consider the idea of carrying our heavy loads all that way on our backs. I was well satisfied to come by canoe."

An hour or so after our arrival my portage team arrived, and after a good night's rest we started out for home. On our way we shot a few partridges to take home to friends. They were very tame indeed and would allow us to come so close that the trick of shooting their heads off with a rifle would have been no trouble at all, even to a poor shot. I did not shoot any thus, however, as I think it spoils their appearance too much.

An all day's ride and part of the night landed us at Newcastle station, on I. C. Railway, where we met the train for home at 2 A. M.

I had a great deal of trouble with the railway officials in order to get my game home; in fact, I came within an ace of having to leave it behind me, so it is not only our American cousins who have inconvenience with the autocrats in the guise of railway officials. However, once on board the train the hunt was over, and it can fairly be called a success from beginning to end. There was not a day but what was full of pleasure, and I enjoyed it thoroughly. I intend to return to the same district and will devote my time wholly to securing a big moose head. The moose are there, of that I feel sure, and I will look until I find my big one.

I have shot more moose and caribou in my comparatively short experience than a good many much older hunters, and for the future I am going to let them alone until I find a bigger specimen of either than I already have. Goodness knows, big game is getting scarce enough, and it ill befits one who has had success in the fullest sense to continue the slaughter of game which would furnish sport and more keen enjoyment to less lucky hunters. I took a camera with me for the first time this trip, and in future shall certainly never go without one if I can help it; I would almost as soon go without my rifle. Owing to inexperience, my pictures were not very good, but next year I think I can promise FOREST AND STREAM readers some pictures of live moose and caribou in their native wilds such as they do not often see. I do not want any one to run away with the idea that this is written either to advertise the country or my guide. I am under no obligation in the world to Pringle, but can truly say that a better woodsman I have never met, and any one going alone, as I did, will find in him a most congenial companion.

As to the country, there is lots of game and lots of room in it for many a hunter; still I hope the day is long distant when one party up there hears the dull and distant boom of some other parties' rifle. TRAM.

HALIFAX, Nova Scotia.

REMINISCENCES OF AN OLD SPORTSMAN.—VI.

(*Continued from page 444.*)

One-Eyed Shots.

ONE October morning Mr. Boyden came down for a shoot rather unexpectedly. I was suffering untold agony from a stye on the upper lid of my right eye that was as large as a robin's egg, and over it was a poultice larger than my hand; so, after giving all the facts in the case careful consideration, I came to the conclusion that I was not in first-class condition for a tramp through the brush, but Mr. Boyden appeared to be so disappointed that I finally agreed to his proposal that I should go and work the dog while he would attend to the shooting. Binding up my sick eye with a handkerchief, we started for a favorite woodcock cover where I knew we would find two or three birds, and I thought that these would just about keep him busy for the day unless we should lose track of them, as I did not believe that he would kill one. When we arrived at the cover the dog at once pointed, and as Mr. Boyden took position in a little opening I went in to flush the bird, when I saw by the fresh markings that there had been a new arrival, and more than ever I wished that my eye was all right and that I had my gun. But I had not much time for thought, as the birds began to rise and he began to shoot. Indeed, I am not quite sure that I did not hear his usual bang—bang! before a single bird left the ground; at any rate, the two events were so close together that it is possible I may have been deceived. Three birds flushed from the first point, and two from the next one a short distance further on, and before we came to the place where the first ones went down we had seen seven others, making ten in all in one small corner of the cover.

After this I could not keep tally, as birds that we had started had become mixed up with fresh ones, but I judged that there were at least twenty birds in the cover, and I do not think that one of them escaped at least two barrels, while some of them had three or four times this number. But never a feather had we to show and I was in quite a state. Mr. Boyden appeared to take it easy and only complained that he was a little off, and blazed away at every opportunity regardless. Finally he declared that the gun had become too hot for effective work and proposed that we eat our lunch and give it a chance to cool off. So we sat down on a big rock and discussed the morning's work with our repast, and came to the unanimous conclusion that unless there was a decided change in the programme our proposed game breakfast on the morrow would lack some of its essential features. After Mr. Boyden had uttered this self-evident truth he appeared to realize the condition of affairs, and after turning it over in his mind a short time his face lighted up as he turned to me and proposed that I should take the gun and try my hand at it, as I certainly could do no worse than he had, and as I always shot with both eyes open I might by chance secure enough to keep us from starving.

Now, I had been wishing for my gun, and thinking that possibly I could once in a while hit one even if my best eye was tied up in a handkerchief, and as his gun hung precisely like mine, I agreed to make the trial, and with hope renewed we again started, and soon had a point when I stepped in front, and as the bird topped the birches I pulled for him and was delighted to see him tumble. Soon after I brought another one down, and then tried to have Mr. Boyden take the gun, but he refused, saying that this was the most wonderful performance that he had ever seen, and he wanted a little more of it. So I kept on and in a short time we had eleven of the beauties, with only three or four misses. Boyden always told the story eleven straight, but as he was always a trifle mixed on the question of misses, his shortcomings in this line should be looked upon with lenient eyes.

Four years later Mr. Boyden by appointment met Mr. George Ashmun and myself at Holland, and as we were walking from where we had left the team to the sawmill cover Mr. Boyden repeated the tale to Mr. Ashmun, who received it as a gentleman should, but we could both see that he took but little stock in its truthfulness. When the dog found a bird I requested him to allow me to bandage his right eye in order that he might see just how it was done. As he also shot with both eyes open, I had no fears for the result, and after securely tying on my handkerchief he walked up the bird and grassed it as neatly as he could have done with the use of both eyes. "Why," said he, "I did not believe that story, and you must pardon me for my unbelief. While I thought the feat impossible, it is a very easy thing to do."

Upon this occasion Mr. Boyden refused to take a shot when with us, stating that he preferred to see us shoot; but when he was away from us and flushed a bird we heard from him, and as on each occasion I slyly passed him a bird Mr. Ashmun never mistrusted that he was not as good a shot as he was companion.

Broiled Woodcock.

It was upon this occasion that Mr. Boyden ate his first broiled woodcock, although he was greatly shocked when Mr. Ashmun proposed that we have some cooked in this way. Mr. Ashmun had a national reputation as a good judge of what was good and proper to eat, but Mr. Boyden thought it almost sacrilege to cook the royal bird in any other way than to roast it in a hot oven. I forget just how many minutes, but Mrs. Kinney—our hostess at Holland—knew to a second, and they always came to the table done to a turn.

Mr. Boyden was also a pretty good judge of good living, and he and Mr. Ashmun had quite an argument on the question, which was finally left to my decision. This I promised to give that evening at the dinner table. And in order that the grounds upon which I decided the question might be understood, as we arrived at the hotel I went upstairs to the north window—where we always hung our game—and selected three plump birds, which I plucked, and then going to the kitchen I obtained a saucepan, into which I poured two teacups of milk, to which I added a piece of butter the size of an egg and set it on the stove, and ordered three generous slices of toast; then drawing my birds, I carefully washed the trail and dropped it into the saucepan with the milk and butter. I then split the birds on the back and wiping them dry with a soft cloth placed them on the gridiron, and as the fire was just right they were soon done to a turn—not dried up or burnt, but cooked through, and then removed and seethed for a couple of minutes in the milk, which was nearly but not quite at the boiling point. Meantime the toast had been placed on a platter of the proper size, and the birds were now laid upon it, breast up, and the contents of the saucepan poured over them, after adding about one-half of a level teaspoonful of salt. Then dinner was announced, and I carried them to the dining room steaming hot, and placed them in front of Mr. Boyden. He looked at them rather disdainfully; then helping Mr. Ashmun and me, he took the remaining one on his plate, and as he made an incision with his knife, I could see his face gradually change from its half-concealed look of disdain to one of pleased surprise. Then he cut off a morsel and placed it in his mouth, and as his jaws came together he rolled up his eyes, laid down his knife and fork, and with beaming countenauce turned to me and exclaimed: "You have missed your vocation, you should have been cook to the Queen; that is the very best cooked bird that I have ever tasted."

Col. Skinner.

A few days after this occurred the Springfield Club had a game supper, and in the menu was broiled woodcock. Col. Skinner, of the *Turf, Field and Farm*, published a scathing article upon the sacrilege, as he called it, of maltreating the royal bird in this manner, and held up our club to scorn, and called them anything but sportsmen for allowing such things to be done with their sanction. Mr. Ashmun came to my office with the paper, and read me the article, and charged me upon my next trip to New York to call upon the Colonel and tell him that he was an unmitigated old fool.

Soon afterward I was in New York, and calling at the office asked for the Colonel, and as he was pointed out to me I approached him and said that I was commissioned to call upon him and tell him that he was an unmitigated old fool; then I stopped long enough to note his fast rising choler and the amazed looks of those who had heard the remark, and added, by the Hon. George Ashmun, who said that he was ashamed to acknowledge any one as his friend who did not know that broiled woodcock was a dish for the gods. As the Colonel and Mr. Ashmun were the best of friends and old companions together, of course Mr. Ashmun's name set everything straight, and the Colonel promised to put to the test my method, which I gave him, and I have no doubt that he found the new dish to his taste, for he tendered a handsome apology in the next issue, and allowed that age was no bar to attaining knowledge, and intimated that no one except an unmitigated fool would refuse to acknowledge a mistake, especially when so prime an article as broiled woodcock was in question.

Woodcock—Maryland Style.

Speaking of broiled woodcock reminds me of an incident that has often amused me since, although at the time it did not amuse me at all. I was quail shooting in the northwestern part of Maryland, near the Potomac River, and was stopping at the house of a small farmer. One day while crossing a small creek one of my dogs pointed a woodcock, and after bringing it to bag I turned down the run and in a short time I had seven of them. The next morning, when I was about to start, I asked the farmer's wife if she would broil those birds for supper, and as she gave a ready assent and said that she knew how it should be done, I gave the matter no further thought until it was nearly night, and I was returning tired and hungry, when I thought of the toothsome dainty awaiting my coming, and my wearied frame at once braced up and the tired feeling left me, although my hunger rapidly increased.

Upon arriving at the house I found supper nearly ready, and hurriedly fixing up I was soon seated at the table, and you can imagine my feelings, for I have never been able to express them, when I found that the good wife had mistaken the word and boiled the birds instead of broiling them. She had put them in the kettle with the potatoes and turnips, and all were boiled together. I remember that I experienced a deep feeling of pity for the poor little things as they laid there among the potatoes and turnips, with their necks curled up in disdain and their legs pointing straight in the air, as though they were calling upon heaven to punish the foul wrong that had been done them; and I also remember that I had no woodcock for supper, but fell back on the mutton. One of them I took on my plate and tried to eat it, but had to give it up, and in order that I might not wound the feelings of my hostess I smuggled the larger portion of it into my pocket, and that evening, as I wandered along the banks of the Potomac, I silently committed the bird to the calm depths of the beautiful river. The next day I found two of them in my lunch, and I dug a grave under the green turf and laid them side by side, their little necks still curled in disdain and their little legs still pointing straight toward the heavens. What became of the remaining four I never knew, but I do know that since that day, whenever I order broiled woodcock, whatever the cook does to them she does not boil them.

An Iowa Lunch al Fresco.

How well I remember my first broiled woodcock. I was in Iowa, some twenty miles northwest of Davenport, shooting chickens. As it was a hot September day, I quit shooting about 10 o'clock, and driving to a creek where there were a few scattered small trees, I selected the largest one, which afforded quite a respectable amount of shade, as a halting place, and turning my horse loose to get his dinner, I proceeded to make preparations for my own. I always carried a box in the wagon which usually contained ample materials for a lunch, but when I had time and was not too hungry I very often built a fire and made a pot of coffee and broiled a chicken or teal, and as on this occasion time and appetite were in about the right condition, I gathered some dead branches and started my fire, and selecting a brace of the youngest chickens I proceeded to dress them by pulling off the feathers, skin and all, and soon had them ready for the gridiron, which was a piece of coarse wire netting about 15in. square. I had had this made to order, and always carried it with me, and found it to be one of the most satisfactory articles in my kit. After the chickens were dressed, I remembered that there was a woodcock in the wagon that I had killed the previous day, and thinking that it had hung long enough in the warm temperature then prevailing, I dressed it and placed it on the gridiron with the chickens, and as my fire had burned to coals and was ready, I cut some forks from the tree and stuck them in the ground in a square inclosing the coals, laying over each one the wire loop on each corner of the gridiron. With a sharpened stick about 3ft. in length I proceeded to turn my birds, and then to turn them again until they were done to a turn, when I sprinkled a little salt on each and piled them in a pyramid upon a tin plate of crackers, and as the coffee was boiled and settled dinner was ready.

The lunch box was also my table, and a newspaper served as table-cloth. This arrangement, I flattered myself, was about as handy and convenient as could well be planned; for when I wanted pepper or salt or anything else that was in the box all I had to do was to take off the dishes and table-cloth and open the box, and then I was without the trouble and fatigue of getting up and going to the wagon after them. My carpet was a brown linen lap-robe and my chair one of the wagon cushions, so you see that my outfit was a combination of simplicity and usefulness that bordered on the luxurious. My plates were tin, unbreakable, easy to wash, and the four took up no more room than one earthen one would. Napkins I always picked off the trees, as this saved washing as well as wear and tear. In the matter of cutlery I must own to rather an extravagant outlay, as I had six knives and as many forks. The main reason for this lavish display was that I could not buy less than this number without paying the same price that I had to pay for the six, so in order to have my money's worth I took the whole set. I made it up in spoons, as one of these did duty for all hands, and at meal time was always to be found in the sugar bowl, which was a tin cup, unless I had too much company, when it was a piece of paper. I had but four of these tin cups, but they served a threefold purpose, as they were used for tea, coffee and water, as occasion required. These articles, together with two tin shakers for pepper and salt, comprised the outfit—not a very elaborate layout, but it was satisfactory to me, and I never heard a single one of my numerous guests find a word of fault with it.

I was about to sit down to my frugal repast when I saw not more than ten rods away a horse and carriage, in which were a gentleman past middle age and a young lady, and as they were coming directly toward me I suspended operations until they arrived, and the gentleman inquired the direction to Davenport, stating that they were driving from Tipton and had somehow lost the road, and for an hour had been driving across the prairie in various directions without finding a single trace of civilization or seeing anyone until they saw my team, when they came over to obtain the desired information. I pointed out the proper direction and then gave them a cordial invitation to take dinner with me. The gentleman hesitated, but I saw the young lady nudge him with her elbow, and, although I was quite young in years, I was old enough in such matters to know that I should not have to eat my dinner alone. The result proved that I was right, for I quieted his fears that they would be robbing me of my dinner by pointing to the plate of birds and telling him that I had plenty of crackers and cheese to help out with. They both very gracefully accepted my invitation, and alighting from the carriage he introduced himself and his daughter, and we were soon seated around the festive box. I carved that broiled woodcock in my very best style, and placing each half upon two crackers in their tin plates I passed one to each of my guests and then helped myself to half a chicken, all the time keeping a bright lookout to see just how broiled woodcock tasted.

The gentleman was the first to satisfy my curiosity, and as he put a piece in his mouth I was satisfied that it was excellent; but when, a second or two later, the young lady placed a morsel between her lips, I knew it was the most delicious and toothsome dainty that I had ever tasted. How those black eyes did light up, and as she flashed them on me they went through and through me something like the X rays. Then she extolled my skill as cook until I blushed—I often blushed in those days—then she begged me to tell her just how it was cooked, assuring me that she had often cooked game, but had never succeeded in producing anything so exquisitely nice as this. That settled the broiled woodcock question so far as I was concerned, and to this day whenever I am so fortunate as to enjoy the luxury, I again see the flash of those wondrous black eyes and again experience sensations that, when blended with those that come from the perfect enjoyment of this perfect gem of gastronomic art, leave nothing to be desired, except perhaps another glance from those brilliant orbs and another bit of that toothsome, dainty, broiled woodcock.

Now, I am not writing a cook book, nor giving points for the benefit of Delmonico's *chef*, whom I hold in great esteem and have a profound veneration for his great wisdom in this line only if he could be induced to hold his hand with that dash of Chartreuse or Burgundy and serve his woodcock in their own delicious, natural flavor. I, for one, should esteem it a special favor, and I have no doubt that many others also, whose palates are not vitiated by frequent contact with these and similar chemicals, would be pleased with the omission and unanimously vote him the *chef* of cooks. I am merely jotting down these notes for the benefit of such good fellows, as I have often met, who do not know that when they are far from the "madding crowd" in the recesses of the trackless forest, or on the boundless prairie, with scant rations, they can in a short half hour, with the aid of a fire and a trifle of salt, conjure up a sumptuous feast that cannot be excelled by even Delmonico's famous *chef*.

SHADOW.

[TO BE CONTINUED.]

THE ST. LOUIS GAME MARKET.

MONETT, Mo., Nov. 27.—*Editor Forest and Stream:* I inclose a report from the St. Louis *Post-Dispatch* of Nov 7. Please note what is said of quail shooting and sale of game in close season. Your paper is very popular in St. Louis, and some notice should be made of this in your editorial columns.

G. T. S.

This is the inclosure: That St. Louis is the principal game market in the United States, a walk along Third street in the produce and commission district will show. More rabbits are shipped to St. Louis, sold in St. Louis and eaten in St Louis than in any other city on this continent.

The West, the Southwest, the Northwest, and at some seasons of the year every State in the Union contribute to the pampered palates and the appetites of the people of St. Louis.

From St. Louis venison, bear meat, quail, pheasants and wild ducks are shipped broadcast around the country within a radius of several hundred miles. St. Louis rabbits find their way to New York and help make that city the second greatest rabbit consuming market in America.

If all the venison that is shipped to St. Louis during any business day in December were combined and made into one animal that deer would be 40ft. high and 60ft. long.

For five months of the year the local receipts of rabbits will average 1,000 dozens, or 12,000 rabbits per day. Combine all these rabbits into one and he would be 165ft. long and 92ft. high, big enough to make a stew which would feed the population of a city.

The receipts of ducks will average 200 pairs a day. These would make a water fowl 24ft. long and 9½ft. high, big enough for a man who never saw a gun to scatter shot into on his first try.

During the game season 400 dozen quail are daily shipped into this market. These would make a Bob White 46ft. long and 23ft. high, big enough to eat up half a dozen pointer or setter dogs at a gulp as easily as a quail of the ordinary size would pick up half a dozen pine cones.

Of pheasants 200 dozen a day come into the market. They would make a bird 41ft. long and 16ft. high, a bird big enough to fly for miles with forty men perched upon his back.

The open season began last Monday. Quail, grouse and venison cannot be killed after Jan. 1 in this State, and in those two months the local dealers receive enough to last the consumers until about the first of April. Of course it is frozen and stored in refrigerators.

Ducks, wild turkeys, rabbits and squirrels can be slaughtered until the first of March. Rabbits for the St. Louis market come from Missouri, Illinois and Kansas. The black-tailed Montana jacks find a readier sale than do the local cotton-tails only because they are better lookers. Rabbit eaters say the meat is no better.

Quail come from Missouri, Illinois, Kansas and the Indian Territory. Nat Wetzel, president of the St. Louis Game and Poultry Co, who is considered the best-posted game man in town, says his advices are that birds have not been as plentiful in twenty-five years.

Wild turkeys come principally from Arkansas, but many are shipped here from old Mexico and other far Southern points.

The bulk of the venison comes from what is called local territory—that is, the woods and swamps of Missouri, Kansas, Arkansas and the Indian Territory. Bear meat comes principally from Arkansas, but the black bears of Minnesota are bought by commission men because of the value of the fur.

Until the Dingley tariff law went into effect a great deal of game was shipped in from Mexico. Now there is a tariff of 2 cents a pound levied on game importations, and very little comes in from Mexico as a consequence.

Canvasback ducks come from Chesapeake Bay, with a few from Southern waters. Teal ducks come from Utah, and redheads, a toothsome and tender variety of good size, are killed on the bays and inlets of the coast of the Gulf of Mexico.

Pheasants come from several States, but Texas supplies the greater proportion. J. J. Long, a dealer in general merchandise at Mobeetie, Tex., has a dozen hunters in his employ, and for several years he has shipped more prairie chickens than any man or firm in the United States.

Most of the big St. Louis game dealers have their own hunters at work killing for them.

"We have ninety hunters on our staff," said Mr. Wetzel, "and they keep us pretty well supplied with game of all kinds. They generally begin shooting quail thirty days before the season opens and keep it up from thirty to sixty days after its close. We have three branch houses and a hunting house-boat on the St. Francis River. The game is generally shipped to us in refrigerator boxes packed with ice, and we put it through a regular course of refrigeration, just as meat is treated. This refrigerated game can be kept a year or two if necessary.

"I regret to say the refrigerating facilities of St. Louis are not good, and most of our game has to be shipped to Chicago for the freezing process.

"The way we get our ducks is quite interesting to those who do not understand. Ducks summer in the North, and with the first cold weather begin their winter migration South. They follow the cold weather South, and our hunters follow the ducks. Thirty days ago our men were watching the ducks on the Northern lakes and in Canadian waters. When the ducks started South the hunters started down with them. Ducks stay in the same water a week or two on a stretch, or until the weather changes drive them on. When they stop flying, on these pauses in their journeys, the hunters shoot. By the whereabouts of our hunters we can tell where the ducks are until they wind up, about Christmas,

in the waters of the Gulf of Mexico and the south Atlantic."

The ninety hunters employed by Mr. Wetzel some are paid regular salaries, but they are trustworthy men who have been shooting for the market, or "pot-hunting," as it is called, for years. Most of the men are paid so much per head for game, or receive the proceeds of the sales less commissions and expenses.

Fremont Houston, a celebrated shot and all-round woodsman living at El Dorado, Kan., is one of the best and most successful hunters in Mr. Wetzel's employ. He leaves this week for the hunting grounds in the Indian Territory, where game of all kinds is very abundant this season. He will spend the winter shooting in the Territory. Another of the successful hunters is Charles Wolf, of Clearwater, Neb. He pots any amount of prairie chickens yearly for the St. Louis market, and is one of the best shots in America on prairie chickens.

J. A. Abrams, of Arkansas, the celebrated "pump-gun shot," Mr. Wetzel would back against any duck hunter in America. Abrams is a typical Arkansas hunter, and would put to shame any velvet-coated sportsman in a half-hour's work among the ducks. He shoots a repeating shotgun, and can pump five loads of shot into a bunch of ducks every time they fly over him, and he never gets less than five ducks.

But Mr. Wetzel has never heard of Jake Untreiner—a big, raw-boned, chills-and-fever German, who lives in the marsh in Mobile Bay, and who raises children and "truck," and shoots ducks in the winter. The wild celery that grows in the fresh-water lagoons around Mobile Bay makes that one of the finest duck-shooting places in the country.

Down there ducks are hunted so much they become educated to their danger. They keep out of range of the deadly blinds behind which are men with guns in boats, and they can tell the wooden decoys as far off as they see them bobbing on the water.

The ducks roost on the water at night in great numbers, and feed at the first break of day. Untreiner rigged up a pirouge, a narrow boat made from a hollowed log, for a crusade against the ducks. He fixed a sweep from the stern, and rigged up a 6-bore specially manufactured double-barreled shotgun on swivels in the bow.

By stretching himself full length in the bottom of this boat he drifted with the tide down on the ducks. He had no difficulty in steering his boat with a foot through a loop on the handle of the sweep. His boat looked like a log floating down in the night and, as it was noiseless, he had no difficulty in getting within range. Where he saw a blacker surface on the black water there the ducks were. Without moving he aimed his howitzer and fired one barrel.

In an instant, as the unkilled or unmaimed ducks arose, the other barrel was let go. In the morning Untreiner picked up ninety-two dead ducks. He doesn't know how many gars and other fish pulled down.

The hunter got two shots at the ducks every night that season, and they became such a drug on the market that they brought but two bits a pair. For a year or two after that ducks were scarce in Mobile Bay.

BLACK RIVER ASSOCIATION.

Editor Forest and Stream:

The annual meeting of the Black River Fish and Game Protective Association was held this evening. W. E. Wolcott, Secretary of the Association, presented his annual report, which was as follows:

The members of our Association, in common with all other advocates of wise and efficient protection for our forests, fish and game, have reason to feel exceedingly well satisfied with what has been accomplished in this direction during the past year. To those who have labored so long and unceasingly for the preservation of the Adirondack wilderness, and so earnestly urged that the State should own that entire region, it is particularly gratifying to know that the Commonwealth now holds title to over 200,000 acres more land there than it did seven months ago.

At the last session of the Legislature $1,000,000 was appropriated for the purchase of lands within the boundaries of the Adirondack State Park, and a commission known as the Forest Preserve Board was appointed by Gov. Black to take the matter in charge. The board consists of Lieut.-Gov. Woodruff, State Engineer Adams, and Forest Commissioner Babcock, and by their prompt, energetic and discreet action the members have demonstrated to the public the wisdom of the Governor's selection. With the funds at its disposal the board has purchased 220,000 acres of land in the Adirondacks, much of which is worth far more than the prices paid, and will probably increase this to a quarter of a million acres by the time the balance of the appropriation is expended. It is expected that the next Legislature will be asked to appropriate another million dollars for the same purpose, and it is earnestly hoped that it will do so.

The action of the last Legislature in prohibiting the hunting of deer with jack-lights or with dogs for a period of five years meets with the hearty approval of all true sportsmen. Owing to the greatly increased number of hunters, the Adirondack deer were being rapidly depleted under the old law, and to prevent their utter extermination the only alternative seemed to be to stop the most destructive methods of killing them. At the annual meeting of the Black River Association three years ago it was decided to recommend to the New York State Association an amendment to the game laws abolishing both floating and hounding, and we have never ceased to advocate it. The State Association received the suggestion with favor and accorded it cordial support.

The Legislature of 1896 scored a point for protection by limiting the time for the use of jack-lights to the first fifteen days of September, and hounding to the first fifteen days of October; but it was left to the Legislature of 1897 to administer the knockout blow to deer butchery by enacting the absolutely prohibitory law mentioned, by which jacking and dogging are made illegal for five years. This is a victory over which the friends of protection may well feel exultant. We believe that the wisdom of this law will become more and more apparent as time passes, and that before the five years have elapsed there will be a stronger sentiment in favor of its renewal than there was for its original enactment.

For several years the season in which deer could be legally killed has commenced on Aug. 15. Our Association has favored shortening the season by cutting off the first fifteen days, but this step has been opposed by some, who argue that many visitors to the Adirondacks would thus be debarred from hunting, as their vacation period closes on or about Sept. 1. There are strong arguments in favor of it, however, and there is good authority for the statement that deer should not be killed until after the middle of September.

Ruffed grouse, or partridges, as they are commonly known, have been exceedingly scarce in central and northern New York this fall. Now and then one hears of a sportsman who has succeeded in killing a few old birds, but young birds are seldom, if ever, seen. This fact is attributed to the cold, wet weather which prevailed during the nesting period this year, and which it is thought prevented the eggs from hatching, or proved too severe for the fledgelings. Woodcock continue to decrease in numbers year by year, and their animated and animating whistle is no longer heard in many of their old-time haunts. They are migratory birds, and the protection afforded them in New York State is inadequate to prevent their becoming extinct if they are so mercilessly slaughtered in the South as they have been in the past.

At the annual meeting of the State Association, held in Syracuse last winter, your secretary addressed the convention on the subject of forest protection, read an original poem entitled "The Lumberman's Request," which was heartily applauded, and offered the following resolution, which was unanimously adopted:

Resolved, That the New York State Association for the Protection of Fish and Game hereby signifies its hearty approval of past legislative enactments which have enabled the State to obtain title to Adirondack lands, establish a forest preserve, and protect the timber thereon. It strongly urges the Senate and Assembly to take such further action along this line as in their judgment may be most expedient, with a view to the ultimate acquirement of the whole wilderness region. It is our belief that in the future purchase of lands in the Adirondacks special efforts should be made to secure title to the watersheds of the State reservoirs

As has been our custom for several years past, the Black River Association made application to the State Commissioners of Fisheries, Game and Forests this year for 200,000 brook trout fry for the purpose of stocking Oneida county waters. Although unable to allow us the full number asked for, the Commissioners granted us the finest lot of infant fish that has ever been received for distribution in central New York, and our thanks have been expressed to them and to Superintendent of Hatcheries Annin for their courtesy. The fish arrived on June 11 last from the Caledonia hatchery, and the shipment included twenty cans or 1,000 yearling brook trout, twenty cans or 50,000 brook trout fry, and thirty cans or 75,000 brown trout fry. These were taken in charge by members of our Association immediately upon their arrival at the several points where they were to be distributed, and carefully deposited in the different waters. The apportionment made was as follows: For streams in the town of Marcy, five cans of yearling trout and five cans of brook trout fry; for Holland Patent, Trenton and Remsen, each five cans of yearlings, five cans of brook trout fry and ten cans of brown trout fry.

A few weeks ago notice was received from the State Association that suggestions regarding changes in the game laws should be forwarded to R. B. Lawrence, chairman of the legislative and law committee, not later than Nov. 20, and your secretary sent the following:

1. Making the open season for partridges, woodcock and black and gray squirrels begin Sept. 15 and end Nov. 15.
2. Prohibiting the sale of speckled trout and game killed in this State.
3. If it can be done constitutionally, prohibit the owning or harboring of dogs of the breed commonly used for hunting deer for a term of four years from June 1, 1898, within the limits of the Adirondack State Park or in other forests which deer inhabit. The amendment should be to section 44 of the game laws, we presume, the prohibited period to correspond with the term specified therein when said dogs shall not be permitted to run at large in forests inhabited by deer.
4. Allowing ten days for the possession of venison after the deer shooting season closes.

The report of the secretary was adopted, as was also that of Treasurer H. A. Pride, which showed the Association to be in a sound condition financially.

The following resolution was adopted:

Resolved, That it is the sense of this Association that the boards of supervisors of the several counties of the State should have the power to enact such laws regulating hunting and fishing in their respective counties as may not conflict with the game laws of New York State.

The following officers were elected for the ensuing year: President, John W. Hicks; vice-president, Simeon R. Fuller; secretary, W. E. Wolcott; treasurer, H. A. Pride; directors, George G. Chassell, Simeon R. Fuller, H. A. Pride, William P. Dodge, W. E. Wolcott, John H. Williams, Benjamin Saunders; delegates to the State sportsmen's convention, Messrs. Pride and Wolcott.

W. E. Wolcott.

Utica, N. Y., Dec. 3.

THE NEW BRUNSWICK SEASON.

A St. John (N. B.) *Telegraph* reporter the other day called on Chief Game Commissioner L. T. Knight and learned some interesting facts. So far this season has been the most successful, both in revenue to the Government and game to the hunters, who have had a glorious time with large game, while the partridge has been very scarce—the reason given by experienced sportsmen is because of rainstorms last fall, and in the spring the young birds and the eggs were destroyed. From the line at Madawaska to this county comparatively few partridge were found.

Mr. Knight says large game is increasing all through the Province, and a great deal more interest is being taken in the game both by the native guides and the average business men. In localities where hunting parties have set out for game the storekeepers have greatly felt the benefit of the cash purchases made of them. At one time on the Tobique this season such an interest was taken in hunting that the guides and canoes were all in use, and a late comer could not get either. The moose are gradually working their way southward, and are extending all over the lower end of the Province, and the caribou are doing the same.

Places where these animals have not been in any numbers for the last thirty years they have been quite plentiful this fall. The caribou are to be found in goodly numbers in certain sections this season. Deer are also very plentiful in the lower end of the Province, but are not found so plentifully in the north.

American sportsmen are almost in utter ignorance of the vast amount of hunting to be had in New Brunswick, and the country needs a great deal more advertising in that respect.

Queens county Mr. Knight considers one of the finest counties in New Brunswick for moose hunting, and it is only about four or five hours' ride from this city to the moose-hunting grounds. Here can be found James F. Ryder, of Hunter's Home, and Syras Kierstead, of Fork Stream, two noted guides and strong supporters of the game laws. The hunting grounds can be reached quite easily—steamer in the early season and by railway all the year. The county wardens for Queens are H. O. Branscombe, of Cumberland Bay, and Special Warden S. E. McDonald, of Cherry Vale. Both are very attentive officers in every respect and a credit to the Province. The county wardens in other counties are as follows: Restigouche county, Mr. J. S. Bassett; Gloucester county, William Gray, Jr.; Northumberland county, William Wise; Special Warden, R. H. Armstrong; Westmoreland county, C R. Oulton; Kent county, H. Bertha; Carleton county, P. Corbett; Charlotte county, W. F. Todd; Special Warden, Samuel Orr; Kings county, O R Arnold; Madawaska, Milton Dayton; Sunbury, S. T. Burpee; William Johnson, Special Warden; Victoria, Asa Marston; York, Frank Bird; also S. L. Tracey, Tracey Station; York county, W. H. Foster, North Lake; Alvin Stitham, Canterbury; Samuel McDonald, Cherryvale, Queens county.

The following is a list of the licenses sold up to Oct. 31 this season:

NON RESIDENT LICENSES.

Crown land office, Fredericton	26
Northumberland county	10
Edmunston	15
Andover	18
Restigouche county	1
St. John county	6
	76

RESIDENT LICENSES.

Queens county	28
St. John county	10
Restigouche county	21
Andover	30
Madawaska	7
Crown lands department, Fredericton	16
Northumberland county	9
Total	121

RECEIPTS FOR LICENSES UP TO DATE.

York county	$680
Victoria county	420
Queens county	57
Restigouche county	62
St John county	142
Northumberland county	218
Madawaska county	314
Gloucester county	20
Total	$1,913

In regard to fines and penalties the following brief statement will give a fair idea:

In September, 1896, H. M. Church, of New Bedford, Mass., killed a bull moose in Queens county without having taken out a license. The head of the animal was a beauty, and at the time was spoken of by the *Telegraph*. The head was seized, and brought $120 at auction. The head was sent to Fredericton, and from the capital was sent to Bisley Cottage, London, England, where it is now admired as it adorns the walls of the Canadian cottage.

Early in September, this season, two quarters of a cow moose were seized in Hammond's stall in the city market. The meat was shipped to this city by Mr. McKnight, of Havelock, and on inquiry of McKnight the latter claimed to have got it from a man named Alward, of Canning. The meat was sold for $8. Action was taken against Alward before Justice Roberts at Cody, Queens county, and Alward was fined $100 and costs of $44. The fine was allowed to stand, and he paid the costs.

Dr. U. S. Rainsford, of New York, killed a cow moose in Restigouche county, and claimed to have done it by accident, stating that he was ignorant of the fact of the animal being a cow moose, and on notification he paid a fine of $100.

Fred. Manuel, John Curry, Arthur Everett and Arthur Allingham, of Woodstock, were brought before Police Magistrate Dibblee on complaint of shooting moose without a license, and a fine of $20 each was imposed, but allowed to stand, while they paid the court charges.

Two boys were arrested for shooting ducks on Sunday at McAdam, on Nov. 1, and a fine of $20 was allowed to stand pending future good conduct.

Thomas S. Larette, of Campbellton, was convicted of killing three bull moose and one cow in October, and was fined $100 for the cow and $20 for the three bulls, with costs of court. Several cases are still unsettled, and charges are to be made to close up the year.

On the Northwest Miramichi River, June 28, a moose was seen swimming about the river. A number of men turned out, and with guns, axes and stones cruelly butchered the animal.

As a result Messrs. Keating, McLean, Scott and two men named Jones were reported. One of the Joneses, McLean and Keating pleaded guilty and were fined $50 and costs each.

Chief Commissioner Knight has been very busy this season and is quite proud of the season's work as far as it has gone and hopes for a far better season next year. He speaks in the highest manner of the different wardens throughout the Province, all having been very attentive to their duties. Mr Knight has a large number of very kind letters from American sportsmen who have corresponded with him in regard to game.—*St. John Telegraph, Nov.* 29.

IOWA ITEMS.

Nevada, Ia., Dec. 1.—*Editor Forest and Stream:* The chicken hunting in central Iowa was not as good as usual this year, although the prospects last spring were flattering but for some reason the young birds were scarce when the season opened. The prairie chickens here have not only the "sooner" to contend with, but their natural enemies the mink, hawks and crows, seem to be increasing in number. The low price for mink fur for years past has been the best kind of protection for this savage little beast. Crows, I believe, are one of the worst game exterminators we have.

A farmer told me a short time ago of an incident which came under his own observation. He had discovered a prairie chicken's nest in the field where he was plowing, and had plowed around the nest in order to spare it. One afternoon, while working near the house, he discovered a crow circling around over the chicken's nest, cawing loudly. In a few moments the crow alighted, and dropping his work the farmer went directly toward the nest. When he came within a short distance of it the crow flew away. Investigation proved that the crow had broken every egg in the nest. Did the crow, by his continual cawing, scare the chicken off her nest? And how many chicken eggs are every year destroyed by the thousands of crows in this vicinity? These are questions which naturally arise.

A friend and myself made a ten days' trip to northern

Iowa and southern Minnesota, leaving here Oct. 28. We were at East and Center Chain Lakes, Minn. The duck shooting was poor. Up to the time we left there had been no flight of Northern ducks, and Mr. E. T. Alderman, who was near Fergus Falls, Minn., duck shooting, informs me that there was good shooting in that vicinity at local ducks, but the "Northern flight" failed to materialize. I shot a rabbit the other day with a .22cal. rifle, firing but one shot. When I skinned him I found six bullet holes in his hide. He was nestled down in a bunch of grass, facing me; the bullet entered near the eye, passed out through the back of the head, entered the shoulder, passed out again near the back ribs, entered the thigh, and came out again at the lower part of the leg.

I have always "prided" myself on my careful handling of a gun, and never had an accident in my twenty years of using firearms. However, my "pride" received a severe shock last week. I was walking along holding my new repeating shotgun at an angle of about 45°, muzzle up, the hammer at half cock, when to my surprise the gun was discharged. How it happened was a mystery which puzzled and worried me extremely. There was no question about the hammer being at half cock, as not more than one minute before I had let the hammer down from full cock. I am positive that nothing touched the gun but my own hand, and my right hand grasped the barrel midway between the sliding forearm and the hammer. Examination of the exploded primer showed that the indentation was not more than one-fourth of the size ordinarily made by the firing pin when the hammer was at full cock. After study, and thinking the matter over for some time, I came to the conclusion that I had solved the problem. After numerous trials I finally succeeded in catching the sharp, wedge-shaped upper part of the trigger on the point of the notch that holds the hammer at full cock. The jar occasioned by walking was sufficient to release the hammer, and thus was the mystery cleared away. So, after twenty years' experience with firearms, I have learned another thing, viz.: when letting down the hammer from full to half cock, be sure you hear the click of the trigger as it enters the half-cock notch on the "dog" of your gun lock.

JOHN O. BRIGGS.

HUNTING RIFLES AND THE WOUNDING OF GAME.

Editor Forest and Stream:

The subject of hunting rifles is one which has been discussed to a great extent through the columns of FOREST AND STREAM.

Whether or not all the talk on hunting rifles has accomplished anything seems doubtful. It is difficult to convince some men that a large, expanding bullet, driven by a heavy load of powder, would certainly kill anything that a smaller, solid bullet, driven by a light load, would, and that the larger bullet would kill in many instances where the other would only wound.

Several years since I thought I would vary the shooting I had constantly been doing each season on ruffed grouse and woodcock, and try for larger game. I practically knew but little about a hunting rifle for large game. At the time I carefully read Van Dyke's "Still-Hunter," and was much interested in what was said about hunting rifle. Mr. Van Dyke spoke of rifles which would wound game and of rifles which would kill game, and I decided that I wanted the killing sort, and I ordered a .45-90 Winchester with half magazine. I tried the rifle with various open sights, and settled on the Lyman hunting sights. I then kept constantly practicing at various targets, rocks, stumps and such objects in all kinds of places, in the woods and out on open ground, to get used to the rifle, and also to try different lights and to learn to estimate distances. At first I used the solid and the hollow pointed express bullets. I did not like the latter, as I found they would sometimes tip on long shots, and on three deer I afterward killed I could see no signs of expanding. I wrote the Winchester Arms Co. about an expanding bullet, and they sent me some of the Keene express bullets with split points. I gave these bullets a careful test on targets and found them accurate and with good penetration. I was so well satisfied with the rifle and the Keene bullets that I have used both on all my hunting trips, killing three moose, five caribou, four bears and one deer with them, and I used eighteen cartridges to kill them. None of the animals went 50yds. after being hit and the larger part did not go 10. I had good chances usually from 40 to 70yds., but often had to shoot quickly, as the animals were moving.

A companion on a trip to Nova Scotia had a rifle exactly like mine and used some of my cartridges. He shot one afternoon on a barren two moose, one at 295yds. and the other at 175. He had plenty of time to estimate the distances, as the moose were standing broadside. The first moose dropped at once, got up and staggered a few yards and went down to stay. The Keene bullet had struck a trifle high, just back of the shoulders. I wanted very much to find the bullet, but it made such a mess of the interior of the moose that although we looked carefully we could not find it. The second moose was struck at base of the ear and dropped in its tracks and never got up again. In this case the bullet went two-thirds of the way through the head, and we only found a few pieces of it. My companion said he was surprised to see those moose drop so quickly, and that in the future he should have great faith in the Keene bullets. Our Indian guides in Nova Scotia and some men I met in Maine, and who saw the results of some of my shots, said they did not like the way those bullets worked, as they spoilt too much meat; but I prefer spoiling some meat and killing my game quickly to chasing after wounded animals.

Your correspondent Mr. Risteen speaks of the amount of game which is wounded and seldom found. There probably always will be more or less wounded animals which are lost. No doubt poor shooting is accountable for a good deal of it. No matter how killing the rifle may be, it is better to put the bullet in a vital place. I think, however, that the wounding of a good deal of game is on account of trying long-range shots. In the "Still-Hunter" Mr. Van Dyke speaks plainly on this subject. He says the chances in most cases of geting nearer is better than the chances of killing at long range. I bore this in mind on the last caribou I shot. A companion and I were on a lake in Maine, when we saw a caribou coming on the ice. The caribou was so far away that it did not look larger than a fox; but it was coming toward us, and I expected an easy shot; but when some 500yds. away it turned to go across the lake. My companion urged me to shoot, saying, "You can hold high and hit him before he can get across." I said no, I might hit him, but most likely only wound him, and would wait until he went into the woods, and then follow and get a better shot or none. As soon as the caribou entered the woods I took after him, and after following about a mile got a shot at 70yds., killing him with a single shot.

Mr. Risteen evidently has not as much faith in the small-bore smokeless rifles as some men who have never yet shot any large game seem to have. I heard of a man who, I think, has never shot a deer telling about his new rifle with smokeless cartridges and saying that he could kill a deer at 1,000yds. Nevertheless the new .30cal. and smokeless cartridges will find favor with many would-be slayers of moose, caribou and deer. The light weight and slight recoil will appeal to men who are afraid of carrying a fairly heavy gun and who also think the latter will kick. Just after getting my .45-90 I looked at the stock of rifles in several of our large gun stores and found that very few of the .45-90 or 50cal. were kept in stock. Several salesmen told me they seldom had any call for them; men coming to buy a rifle to take to Maine or elsewhere preferred something lighter, using smaller cartridges, and also something carrying a good many cartridges in the magazine. Their theory evidently was, that if the air was filled with flying bullets some of them ought to connect with the game.

I heard recently of a man just home from the Maine woods who shot at fifteen or sixteen deer, claiming he hit every one; he killed two. There never was or never will be made a rifle which will instantly kill everything it hits; but if a man is a fair shot and does not get rattled, and will use a rifle which will kill when the bullet is in or very near a vital spot, and will only take reasonably fair chances, there would be much less needlessly wounded game.

DUNBARTON, N. H.

COMPASS POINTS OF NATURE.

Editor Forest and Stream:

I have read with much interest and profit the article recently printed in FOREST AND STREAM, from the pen of Mr. Dearborn, on the subject of woodcraft as applied to ascertaining the points of the compass. If I had had that paper in my pocket on one or two occasions that I can remember I would have been spared some laborious miles of travel. It is the most definite and concise statement of facts that I have ever read; but there is one point as to which I am still in doubt, as it conflicts with what I had supposed to be true; I refer to his remarks concerning the large limbs almost invariably being on the south side of a tree.

Two years ago Mr. Eugene Bruce, of Axton (near Saranac Lake), who now holds a responsible position with the Dodge-Meigs Lumber Co., and, as many readers of FOREST AND STREAM can estify, was formerly known as one of the best guides and one of the most intelligent woodsmen in the Adirondacks, called my attention to the fact that the tops of the big pine trees make a decided dip toward the north, which of course means the sending out of one or two prominent branches in that direction. I saw so many instances of this that I would unhesitatingly use the sign as indicating the north direction. I am therefore particularly interested to find out whether this is correct, as no man is so hopelessly lost in the woods as he who follows the wrong sign in the confidence that it is the right one. Getting lost is so serious a matter—especially for those who have little inherent sense of direction or faculty for taking care of themselves when alone and astray in the woods—that absolute knowledge, so far as it goes, is most essential.

In attempting to follow the signs in the forest I think some allowance should be made for the "lay of the land," so to speak. For instance, in a valley or slope with an eastern exposure, and where the cold winds draw in from the west, the indications which would usually be found on the south side of the tree would prevail on the east side. I have always believed that, as a last resort, the best way to get out of the woods is to strike running water and follow it down stream, no matter how difficult it may be. Sooner or later a man is thus bound to come out somewhere near civilization, and at least avoid the danger of traveling in a circle. The subject is a very interesting one, and I hope we shall have a further discussion of it in the columns of FOREST AND STREAM. ARTHUR F. RICE.

PASSAIC, N. J.

THANKSGIVING QUAIL.

Editor Forest and Stream:

The quail crop is being harvested here, and a few shooters have been fairly successful. The general complaint among sportsmen is that most farmers will not allow shooting on their premises. As the law prohibits marketing quail, we who have not been invited out, and do not care to be set down as poachers, have to content ourselves with the recollection of how pleasant quail was to our palates years ago. Just before the open season they were at my threshold. They tripped along my stone pavement, and flew from one property to another. A large covey once flew up the street past my place of business when the street was thronged with people, and separating rested themselves on the tops of the buildings. They were everybody's and at the same time nobody's quail then.

The morning before Thanksgiving I said to my wife that I preferred quail to turkey, and that I would take a day off and shoot some for a Thanksgiving dinner. I drove out four miles to the home of a friend who had invited me out to shoot rabbits "when it snows." I put the horse in his stable, and getting into shooting togs went down through the fields to where he was husking corn. He said he was sorry, but he could not go with me, as it was a busy day with him; but that I should go ahead and hunt, and when the bell rung come to the house for dinner. There was no snow, and I had no dog, but I tramped around and finally got away from his farm; and about 10 o'clock I was counting rabbit beds in a small, weed grown wood lot, but in point of fact was hunting quail. If I had been hunting rabbits I would not have walked so close to a big fellow as to cause him to scamper away before I saw him. But the rabbit probably did not know that, and lost no time in hiding among the tall weeds. I did not get that rabbit for the simple reason that I missed him. The cause lay in my having to shoot while he was too near for the shot to scatter, or not shoot at all. But the report of the gun had the effect of waking up a lusty youth on an adjoining farm, and he came tearing across the field and stood on the partition fence looking at me. I asked him if he was looking for me, and he said no, he was looking for some boys that were there the day before and who had talked saucy to him. His father had told him if it were those boys to get on a horse and go to town and have them indicted, and he had thought it a possible chance to get to go to town. He took occasion to add that they did not want their quail killed, and they had some colts in the adjoining wood lot. I did not like that very well, and replied that I was not shooting colts; that I had handled a gun some.

When I made myself known by stating that I had sold his father the farm he was protecting, he warmed up and proposed to help me get some rabbits. Now it was not rabbits I wanted. What I wished most was that this young man was needed up at the barn, where they were baling hay. But he seemed disposed to serve me in the capacity of beater, and I could do nothing but receive his services with the same good grace it was tendered. At this distance I am not so certain that his seeming friendliness was not a mask covering a deep laid plot to save the quail. However, he took the liberty to beat the weed patch for me and flush a fine covey. I could not at the moment satisfy my mind as to whether I was justified in shooting some of those quail or not, so gave them the benefit of the doubt, but with the mental reservation that if that boy went on home I might conclude to pick up some of the birds yet. The boy, however, did not go home.

He beat about and flushed the nearest of the quail a second time, causing them to fly into the wood lot among the colts; then he told me we could get a rabbit in a weed patch over in their field, and very kindly led the way. We did not find the rabbit, but just as we finished the weed patch a very large covey of quail flushed about 15ft. in front of me and sailed away directly toward the colts that were still browsing in the adjoining wood lot. I stood and watched them until they settled down among the timber, then turning toward the boy said I was going home. He did not answer, but looked as though he was sorry for me, and I may be doing him an injustice by expressing even a suspicion that my failure to secure a Thanksgiving dinner of quail was not attributable so much to bad luck as to this boy's shrewdness.

INDIANA.

CHICAGO AND THE WEST.

Illinois Game Law Declared Invalid.

CHICAGO, Ill., Dec. 4.—Something of a bombshell, or what at first sight would appear to have something of that nature, was this week exploded in the camp of sportsmanship in this State by Judge Ramsey, of the Circuit Court, at Sterling, Whiteside county, who declared that the Illinois game law as at present spread upon our statute books is invalid, and that all the game law we have is the old one dating back to 1879, under which the prairie chicken date is Aug. 15. Thus the war is carried into Africa, and instead of quarreling over the dates of Sept. 1 or Sept. 15, those who do not love any game laws may now temporarily exult in the fond delusion that chicken killing may begin Aug. 15, before all the birds are fully out of the shell. I say temporarily exult; for no sane sportsman will for an instant believe that this bit of judicial wisdom will be allowed to stand without further proving. Warden Loveday will at once take steps for carrying this case to the Supreme Court of the State, which will pass upon this remarkable situation before the absurd date of Aug. 15 will be admitted by the thinking sportsmen of the land.

The facts of this case are as below: On Aug. 27, 1897, State Warden Loveday caused the arrest of John O'Rourke, of Whiteside county, on the charge of shooting prairie chickens before the open season. This case was one of five made at about the same time, all five of which appealed to the Circuit Court. Yet others will now perhaps attempt to get their cases heard by Judge Ramsey, and of course should there be no check to this in the Supreme Court the law would in effect be ruined and we should have a still worse state of affairs in this commonwealth of things odoriferous in matters of game protection.

O'Rourke was represented by Attorney Caleb C. Johnson, who set up the old claim that the game law was invalid by reason of technical error. The judge held this to be the case, and handed down the following decision:

"The defendant admits the shooting of prairie chickens within the county of Whiteside on Aug. 27 last, and for his defense claims that the alleged amendment to the game law now sought to be enforced was not properly passed by the Legislature and insists that the old law on that subject is still in force. It seems that the amended law as published is not in harmony with the intention of the two branches of the Legislature expressed and finally determined by those two bodies as shown by the records of their proceedings. The House passed a bill March 8, 1889, which made it lawful to kill or otherwise destroy pinnated grouse or prairie chickens only between Sept. 15 and Nov. 1 of each year. That bill was duly reported to the Senate, which body on May 23 amended said House bill by making it lawful to kill such game between Sept. 1 and Nov. 1 of each year. Said House bill, thus amended, was on May 25 duly passed by the Senate and afterward concurred in by the House as amended. Thereupon said bill as amended was duly ordered enrolled and signed by the presiding officers of the two Houses and offered to the Governor for his signature. As a matter of fact, when said bill was enrolled and presented to the Governor for his signature the word 'first,' so placed in said bill by the said amendment of the Senate and concurred in by the House, was omitted and in its place appeared the word 'fifteenth,' which left the bill as originally passed by the House. In this form the Governor signed the bill, which is the alleged amendment to the game law now sought to be enforced. The Governor did not sign a bill which had 'the concurrence of the majority of the members elected to each House, as required by the constitution,' and it therefore never became a law. I therefore hold the amendatory act invalid and that the old game law is still in force, which permits the shooting of prairie chickens between Aug. 15 and Dec. 1 of each year. As the shooting complained of in this case took place on Aug. 27, the issues are found in favor of the defendant.

"The provisions with reference to close seasons in the two laws, that of 1889 and 1879, the latter of which would be revived if the former finally be invalidated, are as follows:

"1889—Wild buck, doe, fawn, wild turkey, Jan. 15 to Sept. 1; pinnated grouse, prairie chicken, Nov. 1 to Sept. 15; quail, ruffed grouse, Dec. 1 to Oct. 1; pheasants, partridges, Dec. 1 to Oct. 1; woodcock, Sept. 15 to July 15; squirrels, Dec. 15 to June 1; geese, ducks, waterfowl, April 15 to Sept. 15.

"1879—Wild buck, doe, fawn, wild turkey, Jan. 15 to Sept. 1; pinnated grouse, prairie chicken, Dec. 1 to Aug. 15; quail, ruffed grouse, Jan. 1 to Oct. 1; pheasants, partridges, no dates; woodcock, Jan. 1 to July 4; squirrels, no dates; geese, ducks, water fowl, May 1 to Aug. 15."

Early Amendment Impossible.

Warden Loveday had this case in charge with others, and naturally was displeased with the result, but has no disposition to attach any great importance to it beyond one of temporary annoyance. He feels sure the Supreme Court will reverse Judge Ramsey, and meantime we shall in all probability have an amendment to our game law setting all these things straight in a permanent fashion. It was at first thought possible to bring this question of a new game law before the special session of the Illinois Legislature, which is called for Dec. 7, but Gov. Tanner says that this cannot be done, for if this branch of legislation were opened the body would be besieged with a flood of bills, which would prolong the special session indefinitely, and cause a great amount of trouble. Meantime the would-be law-breaker of course can take his chances. If he has plenty of money to hire a lawyer, and is lucky enough to get into Judge Ramsey's court, he can secure a decision somewhat similar to the above; but if, meantime, the law is ultimately decided to be valid as it stands, he is liable under the penalties of that law, and his case may be briefly stated as thus: In, seven under-done prairie chickens that could not fly; *per contra*, out, a fat fee for a lawyer, plus a good stiff fine for violation of law and decency.

Local Sentiment.

The state of local sentiment on game law matters at the town of Sterling may be gathered from a letter sent me by Mr. Jas. S. Greenough, of that city, a gentleman who, by the way, does not train with the O'Rourke class. Mr. Greenough sent in a copy of Judge Ramsey's decision, with the following comment:

"It is almost an impossibility to do anything with the violators of any game or fish law in this county. The fact is, I could buy prairie chickens on the street in this town as early as July 15 this year, and in fact any year for a long time, and I understand it is the same case in Dixon. As far as fishing is concerned, Rocky River from this place down has been seined until there is not enough fish to make it worth while to own a seine. I last week saw some men haul a seine where five years ago they would have got more fish than they could land, and they only got one small-mouthed bass that probably weighed 3lbs. These same men have seined this part of the river all summer and have scooped it dry, and it is the same all along down to the mouth of the river. I like to fish and have been at it all summer on this river, and I have only got three bass and one wall-eyed pike. I was down the river last week after quail, and dined with an old lady who has lived on the same farm for thirty years, on the river bank, and she told me that before the river was seined, as it has been for the last few years, when she wanted some fish for dinner she took an old pole and line the boys used, and either got a few grasshoppers or took a few minnows that the boys kept in the horse trough, and went down and got a mess of fish, just as she did when she wanted a chicken and went to the hen house and got one out. Now if she wanted any fish she had to buy them of a seiner, and then they did not always have them.

"It is a shame to have our prairies and rivers depleted of the food they once offered, and by the class of things that are doing this; for all the money that comes from this poaching goes mostly to the saloons. And it does seem that the great State of Illinois, when making laws to stop this wholesale slaughter of fish and game, should furnish the means to enforce those laws, and not ask individuals to put up their own money to do it. The board of supervisors in this county refused to pay a constable his fees in the case of the People vs. Laithe, illegal seining, and I paid them myself."

Lethargy of Sportsmen.

Warden Loveday, when interviewed to-day, was also pronounced in his opinions in regard to the lethargy of sportsmen in practical protection. He thinks the sportsman prone to lie supinely on his back and ask for the good things of shooting and fishing without getting up to help corral them. Mr. Loveday has more than once asked the good folk of Peoria to nominate a man for warden for that city, which under the law should be given such a State warden just as much as Chicago; but he can get no word from President Fahnestock, of the Illinois State Sportsmen's Association, nor any suggestion from any other citizen of a man for that responsible position. One man cannot cover the whole State, and the late incumbent at Peoria has done nothing at all in the way of work at arresting violators. At Quincy, the third city entitled to a State warden, there is such a personage, but I do not get any word about his work among the law-breakers. It has been the wish of the Chicago warden that the local sportsmen would take active interest in this protective work, and would do all possible to secure him the sort of men he needs to assist him. The local sportsmen do not always see it in this light, and not all are so generous and active in practical protection as Mr. Greenough, of Sterling, whose example is one worth emulation.

The Passing of Mr. Blow.

It may perhaps be borne in mind that this department of FOREST AND STREAM for some time waged a little war on our late lamented State game warden, Chas. H. Blow. Possibly there were some who thought it wrong to go back on the warden in this way, or some who thought a game warden was a sacred thing and could do no wrong. I had all along a very definite notion of what I was writing about, and was positive the man was not entitled to any better treatment than he got. At the present writing Mr Blow is somewhere in Wisconsin, engaged in a fish business, it is said. There is a State warrant out for him here in Illinois. A while before his departure from office Mr. Blow went to a certain club of anglers in this State and represented himself as the State Fish Commissioner, and said he would stock the club waters for the sum of $75. The club could raise only $68, which Blow pocketed, thereafter forgetting all about the stocking proposition. Messrs. Bartlett and Cohen, of the State Fish Commission, have sworn out this warrant for Blow, and propose to find out whether or not the latter was really the cook and the captain bold and the crew of the captain's gig. There was a certain sincerity about Mr. Blow such as to command one's respect. He and the French monarch were much alike, and the belief of each was: "The State, it is myself." Which, being interpreted, is to say that Charles and Louis each devoutly believed himself to be the whole thing. I trust the State Fish Commission may get Mr. Blow, but I doubt very much whether the club will ever get its $68.

Game and Fish Work.

Deputy Game Warden Goelter has recently received his commission as fish warden also, this on account of a bit of good work he did at fish wardening. For a long time two parties at Fox Lake, Ernest Sayle and Mathison Lincoln, had made a practice of seining in the lake near the outlet, the ground where they drew their seine being covered with dead little pike and bass. No local fish warden could do anything toward catching them, so Warden Loveday sent Goelter up from his force, and the latter after watching two days landed his men. They got $50 each, and had their 300ft. net confiscated.

Officials Shoot.

Gov. Tanner, Clerk Van Cleave, Warden Loveday and two local shooters of Wayne county, Ill., had a couple of days' shooting at quail this fall, with the extraordinary result of 360 quail to the five guns. These birds are very abundant in Wayne county this year, and numbers of prairie chickens were also seen. Mark this down in your note book for next year.

The steamer Lotus, State fish commission, was last week in commission on her closing trip of inspection. Gov. Tanner was expected to join Commissioners Cohen, Bartlett and the State warden, but the Governor failed to appear. The boat had been outfitted with a view to the gubernatorial visit, and the party actually present didn't do a thing with the supplies.

Illegal Quail Seized.

Mr. D. O. Whitcomb, of South Water street, this city, had twenty-six dozen illegal quail taken away from him yesterday by the game warden. Mr. Whitcomb thinks it very sad for his private business to be interfered with in this unpleasant manner.

The dealers have lost a considerable amount of illegal Illinois game this season, the express companies having given the deputies very great assistance in locating shipments of such game.

Without a Country.

The rich lands of the Indian nations were bound to fall into the hands of the white man, who only grants concessions to the Indian with the view of getting them all back again after awhile with a slice in addition; but it was hardly to be predicted that so soon in the history of these tribes the red men were to be not only without lands, but without a country. The following singular dispatch would seem to warrant the latter conclusion:

"MUSKOGEE, I. T., Nov. 29.—The Choctaw and Chickasaw Indians, who have been in session at Antlers, I. T., for the past week, have determined to organize a colony and emigrate to Mexico. They have been offered lands by the Mexican Government very cheap. Not being able to agree on a leader to conduct them to the promised land in their own nation, United States Agent Wisdom was finally selected. The Indians propose to sell their lands to the United States and with the proceeds purchase new homes. The Dawes commission is authorized to negotiate for the Indian lands. Agent Wisdom has not yet decided whether to accept the offer."

The Ute Difficulty.

The difficulty out in Colorado over the Ute arrests and killings by game wardens has not yet all died away. A number of Utes have asked hunting leave from their agent and a good many have taken it without asking. We may expect to hear of a few white men being killed in revenge. The Indians have made a statement about the affair in which the killing took place. They say only four bucks were in camp, and that the wardens took hold of two of the bucks by the wrists. A squaw ran up to help the prisoners, and other wardens fired, killing the two bucks and shooting the squaw in the arm and the back of the head. The Indians say they have not at any time fired a shot at the wardens.

The Size of the Sea Otter.

For the benefit of others, who perhaps know no more about the sea otter than I did, I should like to present a part of the information sent me by Mr. G. L. Ainsworth, of Racine, Wis., who writes me thus, and compels me to believe that the sea otter is a good deal of a ballooning old fraud:

"I quote below from report of Henry W. Elliott to U. S. Fish Commission, and published in 1887:

"An adult kalan is an animal not much larger than a mature and well conditioned beaver. It will measure from the tip of the tail, which is short, to the extremity of the muzzle 3½ to 4½ft, the tail not being over 6 to 8in long, and it has a proportionate girth of a little over 2ft. The skin lies upon it, however, in a very different manner from that peculiar to the giant rodent above cited, with which I have just compared it as to size; for the folds of the other's hide, when seized by the hand, seem to stretch and rise from the body, just as does the skin on the scruff of a puppy's neck. In other words, the skin of the animal seems to be big enough for a creature twice its anatomical bulk. * * * When the skin is taken from the body the native makes but one cut in it, and that is at the posterior. The body is literally turned inside out. The skin is next air dried and stretched, so that it then gives the erroneous impression of an animal at least 6ft. and over in length and disproportionately lesser girth, suggestive of the shape of a weasel or mink. * * * The feet are so small that really nothing of the whole expansion of the sea otter's skin is lost when they are cut off. I should say, however, that the hind flippers evidently are the swimming or propulsive organs. They, compared with the impotent, tiny forefeet, are large and strong, and webbed between the toes like those of a duck. * * * The natives assure me that as these skins, taken during every month in the year, never show at any season those signs of shedding and staginess so marked in the seal, they do not renew their pelage by that process, but that it grows and falls out just as the hair on our heads does.

"The above I have copied from Section V., Vol. 2, of 'The Fishery Industries of the United States,' published by the U. S. Fish Commission in 1887."

Michigan Grouse and Quail.

CHICAGO, Ill., Dec. 2.—Which he was the mayor, and they called him Pirate Bill, and he asked me to come along of him, so I came along. We took the train and rode and rode till we got to the edge of the world, a place where the lumbermen had long since robbed the earth and left only stumps and burnings and slashings, all overgrown with hardwood trees and thickets and briers and brush, and with here and there a sad and solitary corn or wheat field thrusting out into the wilderness, where some farmer had gotten stranded and hadn't money enough to get back to his wife's folks. It was good, crispy, fall hunting weather. We had two good dogs—Bob, a Gordon, and Jack, an old, old, old-time meat-dog, a pointer over thirteen years of age, with both front feet swelled out of shape by rheumatism and a jowl pendulous with age, but with a heart untamed by anything. We had to help Jack over the fences, and he could only waddle a few yards ahead of us, but he kept on waddling right into points on grouse and quail, and when we killed a bird he would go and bring it in like a gentleman. I had just come from some field trials, and of course the subject of retrieving is taboo at a field trial. But at sight of this venerable old meat dog, with his waddle and his point and his retrieve, I felt that the world was not without its recompenses after all.

The Pirate said he didn't care for any quail, and that he was going to show me some ruffed grouse, with a lot more fun. And we did find the grouse, plenty of them as that sort of thing goes—I think perhaps we put up fifteen grouse that day and bagged only five between us. But we had so much walking and so much fun with these fellows that we hardly stopped to think about the quail. Once in a while we would blunder over a bevy of quail at the edge of a slashing we were working for grouse, and would mark them down a quarter of a mile in the thicket—I never saw quail fly so far—and then we would go after them till we put up a grouse and followed off after him. Toward evening we concluded to pick up a few quail, and we found a bevy on every stubble field that we struck. We would get our double shot on the rise over the point on the stubble, old Jack and young Bob both doing handsomely for us, and then we would follow the singles into the worst sort of cover. It was hard shooting, but we found the pockets getting fuller little by little. The Pirate was a corker of a field shot, and he was fully posted on the local wrinkles of getting at the birds, so we had a lovely day. One odd little bit of shooting I remember very well. We had marked a bevy down at the edge of a little open wood, and killed one or two singles as they went up. All at once four birds sprang out together from the edge of a brush heap. Three went straight ahead and the fourth twisted over our heads and went back of us. We fired first at those going in front, and I killed with each barrel and the Pirate killed the third. Then he swung around quickly after the fourth bird, which had gone back of us, and with a pyrotechnic sort of shot killed that one also, a long way back of us, as it was topping the woods and going like a ghost. I do not think this little piece of work, on all four of the birds, would be soon seen repeated, even by so distinguished a pair of shots as ourselves. Anyhow, we did it.

At night we counted up our birds and found that we had twenty-six in all, five ruffed grouse and twenty-one quail. We had gone over very good quail country that had not been shot very much, and we thought that we could have killed fifty birds between us if we had cared to hunt quail. Our friend, Mr. McCarthy, had poorer luck on his round, and got but few quail. Two other gentlemen were shooting at the same place, and one, Mr. Davis, with his guide, killed, if my memory serves me, nearly fifty quail that day. Mr. Davis did not care to hunt grouse. The other gentleman was Mr. Stone, who also had a local guide, and they got some twenty or thirty birds, I believe; so that all in all we had a grand lot of game.

The next day the Pirate and I again took up our system of exterminating all the grouse, and we exterminated them just about the way we did the day before, bagging five more glorious big fellows, everyone fully earned and fully enjoyed. This was the finest ruffed grouse country I was ever in during all my life, and though we did not see more than a dozen or a dozen and a half of these birds in all we had plenty to do with these. We missed but one fair or easy shot, where I let a bird get away which Bob had pointed right under our feet at a log, and which went up in broad daylight and in full view, for a wonder. This bird I think had had a leg broken by an earlier shot from my companion's gun, but you have to break a leg or two on a grouse before it forgets how to fly, so we never got this fellow at all, much to our sorrow, though we put him up again in thick cover. We did not strike such good quail country this time, for the bevies had been shot into and broken up, and the birds were wild as hawks, flying to all sorts of distances when put up. Our bag that night was five grouse and only sixteen quail, I think. Mr. McCarthy improved his score this day, and our friend Mr. Briggs had better luck, getting five grouse himself and over a dozen quail. Mr. Davis and his guide had top bag, if I recollect, about sixty quail, and Mr. Stone and his man brought in over a dozen each, if the figures remain in memory correctly. I know the total was a very large one that night, and showed very plainly that we were in a remarkably good game country.

The next day the Pirate went home, and I went out for a little hunt with Mr. Davis and Archie, his guide, an old market hunter. The latter I found to be a rattling good field shot. He used a Winchester pump gun, close choked, but he never lost any time getting on to his bird, and when he fired he usually got meat. I always think that a man who kills half his quail is a good shot, and that three out of five is excellent. Whether Archie can always do it or not I do not know, but I am sure he killed over 80 per cent. of his birds that day, in all sorts of cover. I don't think I ever saw any man shoot quail so well. So much could not be said for Mr. Davis and myself, who each had a bad streak. The dogs, Monk of Elmo (Tony for short) and Doc, performed perfectly. We bagged to the three guns—mostly Archie's—forty-two birds that day, I think, and of these nine were ruffed grouse. Think of that! We killed three grouse almost before we got started. Then Archie got off from us in the wood and put up four grouse, and only killed them all! A while later we heard him shoot once, in a bit of brush near by, and perhaps half an hour afterward thought to ask him what he was shooting at.

"Pa'tridge," said Archie.

"Why didn't you kill it?" (This in would-be derision of him.)

"Oh, I did kill it," said he, innocently. And in fact we found that when he shot at a grouse he rarely did anything but kill it. It is all right to talk about the wonderful skill of this bird in evading man, and it is certainly a hard bird to kill, but after this it is in my mind forever shorn of its glory. It can not only be killed easily and in good average, but it can be killed in a great big per cent. by a man who knows how to shoot. Archie did not miss any more grouse than he did quail, and he shot a close choked gun at that. I learn more about these things as I get older. Had Mr. Davis and I shot as well as Archie did, we would have had more birds than I should have liked to see. Mr. Stone and his man shot near us, but in poor luck, only getting about a dozen birds. This closed my trip, a very pleasant one indeed, with quite enough shooting in it to make it eventful.

But this does not end the record of that country, as I shall go on to show. Since my return the Pirate has written me about a little further shooting he has had in the same spot. When I saw him last he was a very sad and penitent man.

He said he had been neglecting his business shamefully, and he wished that people like me would stay away and let him make a little money to keep the wolf from the door, and not be pestering him to go shooting all the time. At any rate, not under any consideration would he go hunting again that season, for he had had enough, and knew when he had enough. Such is the disposition of man! Who has not made similar resolves? His letter does not bear quite the same tenor, for he seems to have gone out for "just one more day," and then two or three more, according to the evidence.

"We had two pretty good days, didn't we?" he says. "I enjoyed it immensely. I feel, however, like an old bum that has deserted business entirely and become a backwoodsman. I just got back last night from seeing the season out, and am glad the shooting is over with. Between now and the 1st of May, when brook trout are ripe, I may be able to establish a reputation for hard work and attending to business; but it has been sadly shattered for some time.

"My friend Dr. S. showed up on the Friday noon train. It rained all that day, but the next morning we took the train for our place, with Briggs and McCarthy along. Archie went with the Doctor and myself, Gladwin with Mr. McCarthy; Mr. Briggs, who likes to shoot alone, going by himself.

"We no sooner got over the fence than old Bob made a rush across the fields, head up. He quartered it in good style and came up like a rock; but the new dog that the Doctor had brought with him had never seen a quail before, and he lit in the middle of the covey in about ten jumps, so we did not get a chance at them. Then we got into bad territory; we got up lots of birds, but they got into pieces of woods like that one you and I struck that night where we stood on some high logs, and after knocking down two or three birds we gave it up as a bad job.

"In the afternoon we got into better territory, and got a covey scattered in short brush, and my black dog worked to perfection (I had left old Jack at home), and bird after bird was picked up; I think only one got away. Pretty soon Bob began roading, and picked up a second covey right in the same patch; they scattered close by, and we began trimming them out, when up got the third covey. We were shooting fast and furious; I never had anything like it. I have forgotten just how many the three of us trimmed out, but I think it was seventy-one birds that we had in our pockets that night. At any rate, all told, the party had ninety-six, and I am quite certain that I had my share of them (I did Archie up brown that day)

"After that Archie went with Mr. Davis, and we hunted by ourselves. Mr. McCarthy was laid up with a stiff back one day, and another day there was such a wind blowing that it made it almost impossible to do anything, your fingers would get so numb; but we put in our time just the same, making four days, and we divided our birds fair and square last night and had sixty-two quail and four partridge each, that is for each of the four. The rats or cats had gotten at one of the strings in the barn, and must have used up a dozen of them. Pretty nearly slaughter, wasn't it? But the birds were there just as thick when we quit as in the beginning, and we can do it all over again another year, and I hope you will be able to enjoy some of it.

"I have not forgotten how we knocked down those four birds that left the ground at the same time. McCarthy and I came pretty near it; three got up and we got all three of them, then struck a bunch of five partridge. We killed the first three that jumped, the other two got away while our guns were empty. We followed them up and got one of them.

"*Dec. 2.*—I dictated this letter yesterday, but there was so much to write that it did not get away. I learned of something that really makes me feel sad, unless McCarthy is stuffing me. He sent word last night that I missed one day of the hunting season; that the law reads: 'the 1st of December, inclusive;' at least he says so; whereas I supposed we could only shoot up to the 1st of December. Now, isn't that too bad for a fellow that is so sadly in need of exercise and hunting as I am? It is meaner still for McCarthy to twit me about it.

"By the way, the last day, in the afternoon, I ran across a bit of cover that seemed to have a good many ruffed grouse in it. The first one I flushed among some burnt logs, while I was hunting out a bevy of scattered quail. I went in the woods a little further and old Bob made a fine point; the bird was killed, and he went after it. When he came in about half way he stopped, threw his head to one side, and then made as stiff and pretty a point as you ever saw, with this great, big grouse still in his mouth. This produced another bird. A little later on he made another point, which was also added to the bag. I think if I had had time to hunt that patch of wood I could have found twelve or fifteen grouse easily enough."

The foregoing record is a large one, though more surprising in the grand totals than for the daily scores. An average of over fifteen birds to the gun for four days is an unusual one nowadays. Many may ask how it comes that such a shooting country still exists in the North, but I may reply that this is a result of a close protection. These few guns did well this year. Throw this little country open to all the guns, and half a dozen birds to the gun would be above the average. The shooting there is still good because the market hunting has been stopped there, but I do not think the locality can stand even so heavy a drain as is above mentioned for very many seasons, nor do I believe that such shooting is to be predicted for any unpreserved country in the North for any very great length of time. I enjoyed most of all the sport with the grouse, of which I had never before seen so many on a hunt. E Hough.

1206 Boyce Building, Chicago

Iowa Game Export.

Algona, Ia., Nov 27.—*Editor Forest and Stream:* I notice in the Forest and Stream of Nov. 27 an article stating that a New York game dealer is quoted as saying to the reporter of the *Evening Post* that he had received 350 dozen grouse and 400 dozen quail from Iowa.

Any one who knows anything about Iowa game knows that that is all talk. Iowa game laws are well observed, and no such amount of game has left the State this season. There is a class of people who like to see our game laws violated, but they are few in numbers. I should judge that the New York game dealer was one of that crowd.

John G. Smith,
President of the Iowa State Association for the Protection of Fish and Game.

An Undesirable Industry.

Mr. Charles Hallock writes a timely word of caution to the people of eastern North Carolina respecting the conservation of their deer supply. He sends this letter to the New Berne *Journal*:

I notice in your paper of recent date a statement to the effect that "the continued shipment of bear meat and venison to Northern markets is assuming the aspect of an industry," and that carcasses are expressed almost daily over the A. & N. C. R R bound northward.

This new movement, I may say, is easily accounted for by the fact that Maine, Michigan, Wisconsin and Minnesota, from which market venison has hitherto been principally drawn, have forbidden the shipment of deer meat beyond the State limits, and that the game wardens are strenuously enforcing the law, under the stimulus of big pay and large rewards. Market hunters have therefore changed their guests to eastern North Carolina, which they find even easier of access than their old stamping grounds, and although the deer are not more than half the size of their Northern kindred, they are at present easier to capture and ship, and upon the whole more remunerative.

Now, although I have sought, conscientiously, for seven years past, to attract legitimate sportsmen to your section, and am even now pressing the purchase of Bogue banks upon a select club as a game preserve of unequaled attractions, yet I confess that I am sorry to see that the remorseless market hunter has found his way thither, for he will soon make a barren and a desolation of every present haunt of game. The only possible chance to save the deer now, and all lesser game afterward, is to interdict his efforts, and no county law or legislature enactment will stop them so promptly and completely as a strict enforcement of the common trespass law. Let every owner of marsh and forest lands post them forthwith, permitting shooting at discretion (and better far for a fee than for no compensation), and bravely prosecute offenders at sight, relying upon the conservatism, providence, and self-interest of the community to back him.

I pray that you may see fit to indorse this proposition editorially and that every journal in interest may copy it. By-and-by it will be too late.

I have lived in your section, and call myself one of your people, and I have made a life study of game and forest problems. Hence I feel sure of my position when I declare that unless this wholesale slaughter of deer is stopped in your section, right away, there will be no deer left for sport two years hence. Mark these words!

Heretofore your neighbors have had all the vension they needed for meat, at any season of the year; and seldom has any animal been wantonly killed. I had rather depend upon the common sense of a conservative community for my close and open seasons than upon the State or county laws. The game will fare better, and everyone, farmers as well as sportsmen, will have more sport. I do not hold modern legislative enactments in the highest esteem, by any means. They irritate every one they touch: hunters, middlemen, and consumers alike, and in general they defeat the objects which they claim to wish to promote. I have always looked upon eastern North Carolina as a primitive Eden, where no tempter landed, and where no threats from tables of the law disturbed the peace and pastime of the people. I am sorry, then, I say, that the hedge is already broken down, and a breach been made in the closing.

Let us station timely guards thereat, and protect what is left. I am sure that if responsible parties of means would only purchase Bogue banks, which can be bought for less than $1 per acre, it could be preserved as a nursery and refuge for hundreds of deer for decades to come. And if farmers would only make a practice of protecting their outlaying lands, and leasing their shooting privileges to applicants at discretion, they would be able to realize a nice little income for the permits they issued, which should in all cases be printed.

The Maine Game Industry.

The Bangor & Aroostook R. R. Passenger Department has sent out this game record for October and November, 1897. The table shows the amount of game shipped from our stations during the above months. Moose shipments were from Oct. 15 to Dec. 1:

	October.			November.		
Shipped from.	Deer.	Moose.	Caribou.	Deer.	Moose.	Caribou.
Caribou	3	2	..	..	..	..

In Central New York.

Cayuga County, N. Y., Dec. 5.—Partridge shooting in Cayuga county is usually fair, excepting that this year, where last year there were a dozen birds, this year there are none. Shooters say it is due to the cold weather last spring.

Ducks on Cayuga Lake and Seneca River are quite plenty, some fair bags being made. Rabbits and squirrels are fairly plenty in some parts; rabbits are ferreted and squirrels shot six weeks before the open season begins. If the sale of game could be stopped game would soon be quite plentiful again and old-time shooting had. I. C. U.

Ruddy Ducks.

Currituck Sound, Nov. 29.—It has only been a few years since this delicious and now famous little duck was not considered valuable; in fact, I have often let them swim around among my decoys for hours at a time, not considering them worth a load of shot. To-day the demand far exceeds that of the canvasback, and the price, considering the size, is quite equal. Did you ever try a ruddy duck breakfast? Split on the back, leaving the breast whole; season with pepper and salt only; place inside a hot stove or range; cook fourteen to eighteen minutes. Serve with hominy, and you have a breakfast for any one. About nine years ago we had the pleasure of helping to introduce the ruddy duck to some of the members of the Manhattan Club, insisting at the time that they were quite as good as the canvasback, if killed at Currituck or Havre de Grace, and it has only taken those few years to convince the general public that we were right.

This little bird, when its value was not known, as we have said, was very tame, but now the schemes resorted to for their capture are numerous and novel. One of the plans largely resorted to is to place a battery or sink-box in the line of flight, placing the iron ducks inside the box and tying them underneath the platform, using no decoys at all. The shooter then places his feet to windward and shoots the game going before the wind. The best practice for this kind of shooting is to have a baseball pitcher stand twenty paces away and throw balls straight at your head. The general average for our best shots at Currituck is one killed in three shots, but some of them claim to kill half of the time. There are many other schemes resorted to, but I have 100 ruddy duck decoys and use nothing else. They are a very proud duck these late years, and rarely associate with redheads or canvasback decoys.

Some fine bags have been made during the past week, and the condition was never better. Should the reader decide to take our advice, from now until Christmas is the best time. Redheads are still rather scarce, but canvasbacks were more plentiful during the past week. Currituck.

Widgeon Point.

Kingston, Mass, Nov. 27.—The shooting at the ponds in Plymouth county, Mass, is not so good this year as it has been in the last two or three. At Silver Lake the leading stand is Widgeon Point, as usual, with eighty-one geese to their credit up to the present time. They have a good lead over the others, and Mr. Arnold says they will have no trouble in keeping ahead. There was a pleasant party at this place last week, when the club entertained Mayor Williamson and friends from Brockton. With the Mayor were Dr. Riply, chairman of Board of Health; E. M. Low, Wm. H. Shaw, and also J. A. Curtis, from Reading, Pa. There were also present friends from Boston and the members of the club. Mr. C. H Carey, secretary of Board of Health of Brockton, who with Mr. Theo. Arnold, of North Abington, are the largest owners in the club, received the party and conducted them to the dinner table, which was set for twenty-one. It was a game dinner, and was prepared by Millard Churchill, assisted by Oliver Bryant, two cooks hard to beat when wildfowl are to be served. The party was entertained with stories by Mr. Bryant and also by Mayor Williamson, and Mr Churchill related some of his war experiences and army life.

Everything was enjoyed to the fullest; and George and Herb. tried to get some geese for the crowd to shoot at, but the best they could do was to see two flocks, and the friends had the pleasure of seeing the decoys work.

The club hopes that with some cold weather the birds will fly again, and then they will run up the score. For a good time and a first-class fellow, I will recommend Widgeon Point Club and Theo. Arnold. F. E. W.

Death of Fayette S. Giles.

Fayette S. Giles, the founder and promoter of the Blooming Grove Park Association, died at New Berne, N. C., from heart disease on Sunday. Mr. Giles had not been in robust health for some time. He was on a hunting trip to North Carolina and had been visiting his relatives there. In 1870 Mr. Giles conceived the idea of establishing a large and suitable game preserve within easy reach of New York. Within a year he had selected a site in Pike county, Pa. By 1871 he had effected the organization of the Blooming Grove Park Association. The Association now owns or controls over 20,000 acres, one-fourth of which is timber land, besides many miles of the adjoining streams.

Black Duck Decoys.

Cape Cod, Mass.—Black duck decoys can be bought on the Cape from most of the shore gunners. They are small black duck decoys bred from the wild black duck, and the best all-round decoy I have ever used.

I have owned some gray call ducks, but they never were so satisfactory as the ones the gunners use here; besides they would not breed to the extent of the ones here.

The black are a merry lot, and as noisy a lot of ducks as any one would want. Shooters generally use about twenty to thirty of them in their stands on the shore of ponds or lakes. The prices that most of the gunners here ask for them range from 50 to 75 cents apiece when the season ends.

Theo. Gray.

But is there any Game there?

Alliance, Nov. 30.—A farmer living just over the line in Mahoning county from this city, contrary to the actions of his neighbors who have forbidden hunting or shooting on their farms, has posted the following notice:

"Hunt and shoot all you want to on this farm, and when the bell rings come in to dinner."

Books for Holiday Gifts.

The Forest and Stream Publishing Co. invites attention to its list of works on outdoor life and sport as including many books which are admirably adapted to be given as Christmas or New Year's gifts. Mather's "Men I Have Fished With," Whitehead's "Camp-Fires of the Everglades," Robinson's Danvis books, Grinnell's Indian books, the Boone and Crockett Club's series, Kunhardt's "Small Yachts," and the "Supplement" to it—these are some of the volumes which are in subject and examples of fine book making certain to be valued. The list is given on another page. Orders should be sent in such season that they may be filled in time for the holidays.

THE MAN IN THE CLOCK TOWER.

I'm the man up in the clock tower. As I have to be here day and night, right on the tick, I have no time to go shooting or fishing myself, but have to take it out in "the next best thing." Between hours I have time to read FOREST AND STREAM, and when the mood is on to write. Taking advantage of the editor's standing invitation for those of us who have anything to say to say it, I am to have a column or two to myself—for how long I don't know—to talk of things as I see them.

The New School of Hunting.

A Cincinnati *Commercial-Tribune* came to me a few days since with a full-page account of the trials of the National Fox Hunter's Association, recently held at Cynthiana, Ky., and after reading it through to the end I found there a signature of a lady, which at once explained why a full page was necessary to describe the weather, the sunrise, the costumes, the glories of Kentucky, the unapproachable Southern etiquette, the personal beauty and pedigrees of the visitors and —nothing of the meet proper. It goes without saying that any gentleman who is so ungallant as to differ from a lady, particularly on any matter pertaining to sport, and specifically sport in Kentucky, is no gentleman; therefore I will not differ from the fair writer, though at the same time suggesting that the art of writing requires fine discrimination as to what not to write as well as what to write. To this one should add at least a smattering of knowledge of the subject. Here are some extracts from the story in question:

> Most of the hunters had seen the sun rise before, and were obliged to resort to flasks and camp-fires by the roadsides for warmth.

This was a marvelous gathering. Some of them had been so active as to have already seen a sunrise—and what a consequence! they were obliged to resort to a flask or camp-fire for warmth. The ones who never had seen the sun rise before probably didn't know the difference between the flask and the fire.

But the ways of the red fox, as set forth by the accomplished writer, are far more valuable than would seem in a passing notice. Heretofore the fox has been considered the embodiment of cunning—an animal of infinite resource in devising means to evade his pursuers. He availed himself of the fences, of sheets and streams of water to throw off the hounds, and there are well authenticated instances where the fox ran round and round in a large circle, thus making a consecutive trail, on which the hounds ran after the fox had abandoned it; also of foxes which ran in relays, one relieving another when too closely pressed by the hounds. Whether this be true or not, the terms fox and cunning have long been held as being synonymous. But the fair writer says:

> The red fox is a very wild and cowardly animal, although beautiful enough to make him coveted for his beauty's sake. He trusts nothing to cunning, but everything to heels.

And cowardly! what animal would not run with a pack of crying hounds after it? Yet it is well known that a red fox will often turn on a single hound and fight it.

But on matters of logical deduction the fair writer is no less precise. Here is how the hounds catch the fox:

> He will get up as far ahead of the hounds as possible and continue to distance his pursuers until he gets far enough ahead to maintain his advantage at his natural gait, which is a long leap. If permitted to pursue his own gait, the devil couldn't catch him, for he could run a week. To overcome all the advantage always in favor of the pursued, you must have dogs that will push ahead on a faint scent, and make quick and rapid casts ahead on the line of chase, and speed enough, with a good, high scent, to push the fox to his utmost rate of speed. If your hounds have got the bottom and endurance to keep him up to his rate, he is bound to strike his flag to them in from sixty minutes to two hours.

You see, it's all very plain. The fox runs away from his pursuers till he gets as far ahead as he chooses. He can run faster and longer than the hound, but the hound chases the fox real hard and catches him in a little while, although the fox can run a week. It's all very clear.

The true manner of fox hunting the talented writer gives from a high authority, as follows:

> If your dogs are well bred they will need no encouragement. You must never halloo when you see the fox and your dogs are running or coming to you. It will detract their attention and take them off their nose, and will probably cause them to lose or at least be at fault for a while. You must sit still and let them pass, and then, if they seem tired and you think encouragement is needed—or if you can't help it—give a few short screams and ride beside them a little way.
>
> When dogs are some distance from you, it does them no good to halloo to them—they don't hear you, but the fox does, and quickens his pace. We signal on the horn to each other, and I train my dogs to a certain signal when I see a fox and want to get them close after him.

Again from the same authority:

> The mode and object of hunting the fox in the South differs materially from that of the North. Our style partakes more of the English. We use horses that will and do take fences and stone walls. They are bred to stand our hard cross-country riding.

And again it is a little confusing to understand how one could "sit still" while the hounds ran by if one were riding hard across country after the English style. It's very pretty reading if one doesn't stop to think.

But the ladies, bless the dears! We men, of every section, are as one with our brothers of the South in our adoration of the fair sex. But I fail to see the relevancy of the following in the description of a fox chase:

> The Kentucky man likes to have his womenkind with him. He never feels that they are in the way. He protects as well as compliments. The Kentucky girls do not go chaperoned into the field—there is no need of chaperons with all those grizzled heads—and, anyhow, Kentuckians have a quick way of settling things that is not exactly conducive to presumption or overdaring on the part of rash youth. The Kentucky man has always taken care of his womenkind, and he always will "till the sun grows cold and the stars are old."

But as to what the dogs did, which one won, what he won, and how he did it, I am as yet in the dark. But fulsome self-laudation as an art, with a fox hunt as a pretext for the outpour, I now know all about. A fox hunt is made up of pretty feathers and ribbons, exaggerated compliments, history of bygone splendors, chivalry, chit chat, and visionary theories.

The Homing Instinct.

I read the other day of a Long Island deerhound which strayed away on the first day of deer shooting, and was finally tied up on the grounds of the South Side Club, gnawed the rope in two during the night, and made his escape and arrived home all right on Sunday, "having traveled the intervening forty miles with no other guide than instinct, as he had never been over the ground before."

Such incidents find frequent place in the newspapers. The greater the absurdity of a proposition, the more grave attention as a news feature it receives. Not that dogs do not find their way home, but that they do not do so by instinct is what I believe. For my faith therein I have very good reasons. Every shooter, who has had much to do with dogs, knows how easy it is to lose a dog, and how easy it is to pay $5 or $25 for his recovery. Sometimes a dog will lose his master when out with him in the fields and will sit with nose pointing skyward giving vent to the most hopeless howlings. When dogs are lost in prowling about, they may come across some place where they have been before, and which they recognize; then the return home is easily accomplished. If it were an instinct it would be present in all dogs.

Formerly it was believed that the carrier pigeon found his way home by instinct from long distances. It is now known that it is from a matter of knowledge that they are able to return. The birds are many times successively released at a distance from home, further and further each time, yet at no time too far for them to recognize known objects when the birds rise to the first high altitude for observation at the beginning of the flight, so that learning a route more and more, they at last can take it home from any point with which they are familiar. The common honey bee was for a long time considered the best examplar of the homing instinct, but naturalists now hold that they fly home on a route which has been learned from observation. The manner of starting on a homeward flight, whether it be that of pigeon or bee, indicates that a sight of some familiar object is sought for guidance. There is much more homing instinct in the pen of writers who are writing on space than there is in both pigeon and bee.

"The Fox as Game."

No better examplification of the fact that the point of view from which all is seen and measured is within one's self is necessary than the position taken in FOREST AND STREAM of Dec. 4 by Mr. W. H. Sullivan concerning foxes as game. He makes a scathing rebuke on those who take foxes in any manner but the legitimate one, that is to say, hunting them for sport. He overlooks the fact that the fox is a predatory animal, which, when it so pleases, does much harm among the farmer's fowls and sheep. That he affords sport to the sportsman is true; to such it is a game animal perhaps. To the farmer, on whom it inflicts loss, it is vermin, and he takes such measures as are resorted to in destroying vermin. Thus in one locality the fox may be entirely game, in another entirely vermin, accordingly as the locality gains the most sport or suffers the most loss of property. Wolves afford much sport in their pursuit, yet their predatory habits condemn them to destruction in any manner it can be accomplished. The rabbit is generally considered as being game, but the rabbit in certain localities is a pest and thus pertinent to the point under consideration.

The trapping of rabbits should also be denounced by Mr. Sullivan, yet it is infinite glory to the farmer's boy to trap one. That is his point of view. With age, experience and knowledge his point of view will change. At no time will his point of view be everyone's else point of view. Still he may pursue the fox as sport, and again he may kill him as vermin; it all depends on the point of view.

"Killed a Man for a Deer."

With the regularity with which the daily press recounts, day by day, deaths caused by that terror of the woods and fields, the man who sees a movement and shoots, the stereotyped plea is: "I thought." It is not a good plea. It is an aggravation of the offense. The fact that the killer vaguely saw something moving was a warning not to shoot till he knew absolutely whether it was deer or man. When shooting in settled communities or with companions, the shooter should never shoot till he knows beyond doubt that he is not shooting a man or a domestic animal. The New York *Sun* of Friday of last week has the following:

> PITTSFIELD, Me., Dec. 2.—For the thirteenth time since the hunting season opened last September a man was mistaken for a deer and shot dead in Detroit to-day. The victim was Dana M. Gray, a farmer, of Plymouth, and the hunter who shot before he looked was Benjamin R. Cross, of Detroit. Both men were out hunting deer on the newly fallen snow, and were following tracks when Gray came up over the brow of the hill about 100yds. from Cross, who raised his gun and fired. Gray threw up his hands and fell dead on the ground with a .45cal. bullet through his heart. He was picked up by George A. Small, who was just behind him, but life was then extinct. The coroner decided that the shooting was purely accidental, and that no inquest was necessary. Cross, who is regarded as eccentric, has been almost demented since the accident, and it has been necessary to use force to prevent him from taking his life.

What an appalling record! And what an absurd coroner's decision! What a ridiculous use of the term accident! Anything which can be prevented by reasonable forethought or present care is not an accident.

The Deadly "I Thought."

Is it possible that there are men, who, gun in hand, care nothing for the life or limb of their fellows? Have they a craving for blood so great that the lives of others may be risked or sacrificed, or their bodies maimed, that such craving may be gratified? The events of the present season answer the questions. Those events emphatically indicate that there are such men in plenty, and that, moreover, there are men so criminally ignorant in the use of firearms that that of itself is an offense.

No sportsman is involved in this matter, for no sportsman would call anything sport which always had impending the death or injury to a fellow-being, or the death of domestic animals. Such is not sport. By no stretch of the fancy can the term be made to cover such mad use of the gun.

Never before in the history of peaceful times in the United States has there been such a succession of killings, called accidental, within its borders. Not a day passes but the press narrates the killing of one or more men in field or forest, with the monotonous reiteration by way of excuse—though excuse it is not—that the killer "thought he saw a deer." This newcomer with a new gun, or an old ignoramus with an old gun, whose "thought" was sufficient warrant for him to shoot and kill, has in one season effectually put in the shade the stanch, reliable imbecile of the past, who, with a penchant for mischief and an unhappy success in its execution, could only say when the killing was done that he "didn't know it was loaded."

There are some conditions which have contributed to the pleasure of the merry, merry men who "thought it was a deer," who "killed a man for a deer," some of which are the opening of sections of country long closed, such as Vermont, Minnesota, etc., and the further condition that nearly all sections are now more or less densely settled by man. The opening this season of so much new deer country was in a way similar to the exodus to the Klondike gold region, in that there was a great rush. Of the men who invaded the deer country some were in every way qualified to hunt for sport, to hunt with skill and safety to their fellow-men, and in view of events and reports it is certain that there was also a hoard of irresponsibles and novices whose desire was to kill something, it mattered little what, if their craving for blood could but be satisfied. No doubt there also were some who were thoughtless, some who were stupidly ignorant of the dangers of firearms, others who were vicious.

The Long-Range Rifle.

General conditions have changed. The deer country of to-day is not the deer country of years ago, when a rifle ball, taking its flight, could not endanger the life or limb of man, for he had not then made the deer country his home. Bullets could then do no harm, for there was no harm possible. What a contrast between then and now! Hunters have multiplied by hundreds. The deer ranges to-day where the highways lead to and across the country, from village to village and from city to city, with the domiciles of man everywhere where agriculture or art will support him.

No sportsman would be guilty of the reckless act of shooting a long-range rifle in such settled communities. The use of the latter arm has greatly aggravated an already bad state of affairs. The average range in deer shooting is less than 200yds., and it is a vicious act to shoot a weapon with a range of two or three miles when one with a range of 300yds. is ample. The latter will spend its effects well within the range of the shooter's vision; the former goes on and on, far beyond his vision, knowledge or control. In the wilderness the senseless long-range fad would be harmless; in a settled community it is criminal. Imagine the direful portent of an excited novice with a longe-range rifle in a section where there are deer, and where there are also people and horses, and cattle and houses, etc. Nervous, foolishly expectant, impulsive, raw and ignorant, is it to be expected that he will kill a deer sooner than he will kill something which is protected by law from everything but himself?

Legal Restrictions.

The reckless firing on moving objects, partially concealed or otherwise, in sections no longer a part of the wilderness; the reckless use of rifles with a range terrible to contemplate when discharged regardless of consequences in settled communities, and the general overrunning of agricultural property, with little or no regard for the rights of ownership, can have but one result in the course of time: that is to say, there will be such legal restrictions on the use of firearms as will subserve public policy. Life and property will be protected. This could be accomplished in several ways, as by the imposition of a license on the ownership or possession of firearms, or on their use, or by making more stringent trespass laws, or by all combined.

There might be further restrictions, prohibiting entirely the use of firearms by those who had insufficient knowledge or skill to guarantee a reasonable assurance of safety to the public.

"But," say several citizens all together, "we have a constitutional right to own guns and shoot them as we please." And this echoes a common though fallacious belief that every person has a constitutional right to own and use a shotgun and rifle as he wills. And yet he has nothing of the kind. The second amendment to the Constitution of the United States reads as follows, and most of the States have clauses in their constitutions in accord with it: "A well regulated militia being necessary to the security of a free State, the right of the people to keep and bear arms shall not be infringed."

The reader will at once perceive that the amendment has wholly a military significance. The right to bear arms has a direct reference to the military, and therefore refers to such arms as are fit for military purposes. The carrying of arms, as commonly understood and practiced, is not a right at all. It is merely a privilege resting largely on the traditions of the past and the indulgence of the present, which is a very far remove from a constitutional right.

In the early days of the United States we all know how necessary was the ownership of firearms to hold at bay the hostile savages, and to secure the needed sustenance where all depended more or less on the vocation of hunter. Without weapons, life then would have been short. No such necessity for their use exists at present. The law has already placed its ban on some weapons. It prohibits the carrying of knives, knuckles, slungshots, sandbags, etc., and some States forbid the sale of certain weapons entirely. The carrying of pistols is regulated, it being illegal to carry them concealed in all States; and in at least one State, Texas, it is illegal to carry them at all in certain places and at certain times. That the people of to-day are permitted to carry the shotgun and rifle openly and at their pleasure is not because there is any constitutional right protecting the individual in doing so. It rests on the intangible and insecure ground of public opinion.

The bearing of arms is dear to us. It is a part of our traditions and intimately associated with the birth of our national freedom. Nevertheless, the bearing of arms in the eye of the law is viewed from a military standpoint. We have no great military system such as rules in European countries, yet the common use of arms may take the place of such schooling, imperfectly, it is true, but infinitely better than no schooling at all. But let there be a common and flagrant abuse of the privilege, endangering life, limb and property to such a degree that the rifle and shotgun are a menace to public safety, and the privilege may have an ending or a curtailment. Once start the matter of restriction going in a legislative way and no one can forecast where would be the end.

The man who enters on the lands of another is a trespasser. It is an easy matter to make the trespass laws so stringent that trespassing would then be a serious offense. Such as the following do much to hasten the coming of such law:

"The farmers of Vallejo township, just east of Petaluma, are up in arms against the numerous San Francisco hunters who come up on Sundays and invade the country. They pay no attention whatever to the hunting notices and run the country to suit themselves. On Sunday last one party was evicted from five different ranches where they hunted in spite of the notices. The farmers have stood all they can endure and next Sunday officers will be on hand to arrest every trespasser caught."—*Petaluma Courier.*

Neither the sportsman nor any other man owns any property in game. It is not a rare occurrence to hear a man speak of his "share of the game," as if he had a certain defined ownership of a fractional part more or less clear in his mind. While the game is the property of the whole people, no one owns a share, or a part of a share, till he reduces the game to his personal possession, and then the ownership may be qualified as the State sees fit.

Thus the tenure of the sportsman, from a legal standpoint, is neither broad nor deep. He owns no share in the game; he is a trespasser when he enters on another's ground; he has the privilege of bearing arms only by toleration, and he can only bear such arms as are permitted by law. He is tolerated more for his possible usefulness to the State as a soldier; his personal pleasure as a man who is fond of sport weighs little with public policy.

Therefore he will perceive that it behooves him to discountenance the maraudings of the horde who are masquerading in his name and in his habiliments, to raise his voice in condemnation against them, and if need be to secure legislation to restrict them, that his own days as a sportsman may be long or longer in the land. THE MAN IN THE CLOCK TOWER.

Sea and River Fishing.

ANGLING NOTES.

A Record Fiend.

FROM time to time something has been said in this column about people who fish for the purpose of making a record, without any regard for the number of fish slaughtered and wasted in making the record. To-day I was on a railroad train, going to meet one of the United States Fish Commission cars that was coming to plant a lot of yearling landlocked salmon in Lake George. A gentleman left his seat, and came and seated himself beside me as though he were bursting with indignation. With a hand-shake and a how-do-you-do, he began to unburden his mind:

"Seeing you come in the car at once reminded me of my experience in the Yellowstone Park last summer, and that experience makes me angry to this day whenever I am reminded of it. My brother came over from England for a visit, and together we did the Western part of this land quite thoroughly, and the National Park came in for considerable attention. While we were at Yellowstone Lake we met a man who had just come in from fishing, and we heard that he had caught a certain number of trout in a certain specified time during the morning of the day that we reached the hotel. He was not quite satisfied with the record, and was preparing to try it over. He went out on the lake, and in an hour and twenty minutes, as I remember the time, he caught forty-two trout weighing 56lbs. I remember the number of trout and the weight distinctly, for I am quite sure that the most of the fish, as well as the most of the fish he caught in the morning, were absolutely wasted. They could not be eaten, and they could not be brought out of the Park, and so they were killed and practically thrown away for the purpose of doing something to boast of afterward. There was another man there, and he went out fishing with two flies on his cast. He told me that in three casts he caught six trout, two at each cast, one on each fly that he used. While he was proud at his success, he said that he was more proud that he put all the trout back alive in the water. How long will Yellowstone Lake stand such fishing as the first-named man did that day?"

I answered that I did not know, but it would seem that the National Park could be protected against such record makers, for it is directly under the control of the National Government and guarded by a detachment of the U. S. Army. What rules the superintendent in charge may make or has power to make I do not know. He could not, as in a private club, exclude a guest who violated all the laws of decency by killing trout uselessly; but it is more than likely that some remedy can be provided for cases such as I have mentioned, for it is heart-breaking to attempt to stock waters with fish for food or sport and then have the fish killed and wasted to furnish a record for a man in whom conscience slumbers and sleeps.

The Solway Fishery.

In a recent letter from Mr. J. J. Armistead, founder of the Solway Fishery, Dumfries, Scotland, and author of the particularly valuable book, "An Angler's Paradise and How to Obtain It," he tells me that he has just published a "Handy Guide to Fishculture," and the demand for it was so great that the edition is practically sold out. This would indicate that the desire for a knowledge of practical fishculture is growing, and that more and more there will be a demand for works of this class. We have a goodly supply of books on how to kill fish by angling, and now we need works upon how to breed and rear fish, and they should be in a form to reach and interest the great mass of people. I suppose if the truth were known that some of the record-breakers, such as I have mentioned in the previous note, take no thought of the supply of fish, how it is obtained and how it is maintained.

If the people can be educated to understand that fish are not of mushroom growth, and that they are not always to be found in the water no matter how much it is fished, and that the supply can be cut down by unbridled fishing, and that fish have to be cultivated in the same manner as any other food supply, there will be a better outlook for fish in the future. Of the work at the Solway fishery Mr. Armistead writes, his letter being dated Oct. 29: "We are in full swing with our spawning operations now, and have some splendid lots of ova in our hatcheries. The season goes on for two months yet. The first eggs we took were some *S. fontinalis* on Oct. 7. A few days later we took the first *S. levenensis*, Oct. 10 a couple of fish too ripe to remain over until Monday, 11th, on which day we practically had our first good take of ova. We have had a very wet, rainy season here during last summer, and fishculturists have suffered as well as agriculturists. Potatoes are small—so are yearling trout, decidedly below average. Fruit crops are adversely affected by the excess of rain, and fish are not yielding the same number of ova that they do after normal atmospheric conditions. These things are interesting and are worth noting. We are having now some of the finest and most genial autumn weather, and by careful feeding and regulation of the water supply yearlings are pulling up, and will later on be up to the average, but not without careful feeding."

Manual of Fishculture.

The United States Fish Commission has just issued a Manual of Fishculture; a more pretentious work than the "Handy Guide," which I have not yet had time to read; but a glance through its pages is enough to show me that it will be in demand (in fact, I am informed from Washington that it is now in great demand) and prove an educator to all who are fortunate enough to obtain a copy, provided they will read it. A condensation of the manual, giving the principal features of fishcultural work in a form to be carried in the pocket and which could be sold for a small sum, would prove to be a greater educational lever, for it would be within reach of thousands that will never see the manual. Fishing clubs could do missionary work by distributing such a volume free if the Government could not spread them, as it were, broadcast. The people are ready to be educated about fish and fishculture if the means can be found to do it. Last summer it was decided at the last moment almost to have a small fish exhibit at the State Fair. I went out there to investigate the water supply, temperature, etc., and found the officers of the Fair Association very enthusiastic about making an exhibit, even under adverse circumstances. There was but little time to do anything, and the season was not the best to transport and exhibit adult fish, particularly *salmonidæ*, but the Fisheries, Game and Forest Commission did make an exhibit of four tanks of trout of different species and of different ages. The week of the fair I went into a sleeping car at Montreal to go to Quebec and found several Syracuse gentlemen, and one and all declared the fish show was the feature of the fair; that people crowded around the tanks all day long as they crowded about nothing else.

Witness the crowds at the New York Aquarium, at the fly-casting tank at the Sportsmen's Show at Madison Square Garden and wherever fish or fishing are on exhibition, if any one doubts that the people are ready to be educated upon all that relates to fish, fishing and fishculture.

One of the United States Fish Commission cars was in the railroad yard of the town where I live hatching shad. I told a reporter that any one who desired to see how the fish were hatched could visit the car. The town simply turned out and came to the car. The public school and academy pupil came—came with their teachers in classes—and I explained the operation of shad hatching every fifteen minutes for about two days, and there was scarcely time to eat a meal on the car until the continuous show closed at night each day during the stay of the car; and these are not isolated instances of the interest shown in fish and fishculture by the people, for they will display an interest when and where they have the opportunity.

Powers of Salmon.

A problem presented itself to me and I was trying to determine the pressure to the square inch that salmon could overcome in ascending a proposed fishway. While I could not disprove it, I was quite sure in my own mind that the engineer's plans provided for a pressure that the fish could not successfully overcome, and I modified them to what I believed would be within the limit of pressure that the fishway should present to the fish, and submitted my figures to Mr. Livingston Stone, knowing he had had vast experience with salmon on the Pacific Coast. His letter of reply contains some interesting matter, and I quote part of it: "Your letter called up a subject that I have been much interested in, but about which I could never collect much in the way of exact data. At Spokane Falls and at the Falls of the Des Schutes I have seen the Chenook salmon make some wonderful jumps, but I had no means at the time to measure the distances. At Baird Station, Cal., a salmon once jumped over my shoulder as I stood on the bridge where the rack was, the bridge being about 2ft. above the surface of the water and the water shallow. The fish must consequently have jumped about 7ft. vertically through the air. What has seemed the most wonderful thing in this line to me occurred also, I think, at one of these falls.

"I there saw several salmon hold themselves in a perpendicular fall of water for several seconds, half way between the brink and the surface of the water below. This must have involved a marvelous rapidity of fin movement and a sustained resistance to great pressure under most unfavorable circumstances. You have doubtless seen trout do something similar. Allow me to add, by the way, that the Atlantic salmon seem to be decidedly stronger and more muscular than the Pacific salmon. I agree with you in believing that salmon can accomplish the feat described in your letter." When I first heard of trout swimming up a perpendicular fall of water I could scarcely believe it, and it was some years after I learned it before I wrote of it, and more years before I witnessed the feat myself. After I did witness it I began to make inquiries to find if salmon had been known to do the same thing, but I got no favorable responses and dropped the matter from my mind, and now Mr. Stone furnishes me with the information, quite unexpectedly, that I once sought earnestly for without avail. It is a wonderful power displayed by salmon in passing waterfalls, and Mr. Stone's personal observation will, I feel sure, be read with interest, and it will help to solve some problems concerning the ascent of rivers by salmon planted therein.

Salmon Habits and Salmon Teeth.

A gentleman writes me from Boston as follows:

"I had much pleasure last June in taking a salmon of 29½lbs. with a mark on the adipose fin, and the day after of being informed by a gentleman who fished the next river that he had so marked some fish taken in his river and returned alive to the water. On communicating with him I found that the fish was taken and marked in 1893, and then weighed not over 9lbs. The change of rivers by salmon is now a well-established fact, at any rate, the occasional change, but it was a great satisfaction to have the proof in my own hands. I have seen lately in FOREST AND STREAM statements of the loss or change of teeth by mascalonge.

"I think you wrote something about this a few years ago, when the theory was advanced that salmon lost their teeth in fresh water and that fresh run fish would be found to have firm teeth, and those which had been for a time in fresh water would be found with some teeth gone and other teeth loose, and those longer in the river would be found with no teeth. When I read this I counted it as one of the usual fish stories, but on testing it I came to the same conclusion myself. Is it possible that this is a kind of painless dentistry that many or all kinds of fish resort to? If found to be true of two species of fish so different as the mascalonge and salmon, why not in other species?"

It is a confession that I do not like to make, but until I read the letter I have just quoted from I was not aware that FOREST AND STREAM had said anything about mascalonge losing their teeth. A brief search of the file revealed the fact that Mr. Hough had mentioned the shedding of mascalonge teeth and invited me among others to rise and say something on the subject, and that in a later issue of the paper he confirms what had previously been speculative in regard to the shedding of teeth in the big pike.

Mr. Hough has answered his own query, for certainly the mascalonge does shed its teeth, and perhaps that is all that is necessary to be said, but what I do not know is how long it requires for the new teeth to grow. Desiring to get a tooth from a big mascalonge, to be set as a scarf pin for an English friend, I searched the mouths of a number of fish and examined some mounted heads. Fish that were said to have been caught early in the season seemed to have their full complement of teeth, but it was not until late in the season that I got a big head (it was early in September, as I now recall the date) and the teeth were gone. I examined mounted heads and fish from Clayton to Ogdensburgh, and some had a full set of teeth, some had lost a few teeth and others were decidedly short of teeth.

Presumably it is safe to assume that the new teeth form before the breeding season in the spring, for I also presume no self-respecting mascalonge would go courting with his mouth shy of teeth. It is several years since I wrote about salmon shedding theirs, but it is a well-established fact now that they do. In all that has been said about salmon or other fish shedding their teeth, jaw teeth only have been referred to; but Dr. Day has demonstrated that salmon, trout and char shed their vomerine, palatine and tongue teeth as well. He says: "They are frequently shed and as constantly renewed by others appearing from beneath or else on one side of the discarded ones. As age creeps on the number of their teeth become more and more reduced, the teeth bearing portions of the bones diminishing in extent more rapidly in such forms as frequent the sea than those which pass their time in fresh water." It will be observed that Dr. Day's conclusions apply to the fresh-water trout and char and the sea-going salmon, and he has made a closer study of the structure of trout and salmon and their habits in connection therewith than any writer that I have read.

In regard to salmon straying from their own rivers, I am quite sure that I have quoted in this column from the experiments of one of the Scotch fishery inspectors, who tagged a lot of salmon in Norwegian rivers for a period of years; and while it was proven that occasionally one did stray and was taken a long distance from the stream in which it was tagged and liberated, the instances were not common as compared with the number that returned to the river in which they were marked. In Canada the Upsalquitch flows into the Restigouche, and early in the season Restigouche fish have been known to run a little way up the tributary stream; but it is believed that they return after a while and proceed up their own river, for they have not been found far up the first-named stream.

I fished the Upsalquitch this year when salmon were first running up the Restigouche, and the owner of the pools, Mr. Archibald Mitchell, fished it before and after I did; but not a fish was raised there until the fish of that river began to run in July, although Mr. Mitchell and the late Mr. John Mowat have killed Restigouche fish in it, the pools being within pistol-shot distance of the main river.

Ouananiche.

While the spelling of this name is under discussion, I notice that Mr. Rudyard Kipling has fallen afoul of it in his poem, "The Feet of Young Men," and he spells it as I have written it:

"Who hath worked the chosen water where the ouananiche is waiting,
Or the sea trout-jumping crazy for the fly?"

A great many people have worked the water referred to, and judging from my own experience not one of them cares a brass button, while the water is being worked, how the name of the fish is spelled if they respond to the wiles of the worker.

Landlocked Salmon.

To get on safer ground, I will write of landlocked salmon, although the fish is not landlocked in its original habitat, when I refer to two plantings of the fish made during the past two weeks in northern New York. On Nov. 13, 5,000 fingerling salmon, some of them over 6in. long, were planted in Lake George. They came from the U. S. Fish Commission station at Green Lake, Me., and were brought to Lake George in Car No. 1 of the Commission. On this occasion the car was fitted on one side with sixty-gallon tanks, and on the other with the ordinary round-shouldered fish cans, holding ten gallons. There were 500 fish in each tank, and 100 in each can, so that the 500 in the tanks had sixty gallons of water and the 500 in the cans had fifty gallons of water. During the journey about 200 salmon died, and the fatalities were all in the tanks. The tanks and cans had the same water and air circulation from the steam pump in the car. The fish were taken from open ponds at the station and placed in the cans and tanks. The cans were open at the top—that is, the covers were removed—and the tanks were covered with a wooden lid. On previous trips with landlocked salmon of same age loss has occurred in tanks and none in the cans. The open cans admit some light, but the light does not vary during the journey except from daylight to darkness. When the covers of the tanks are lifted light is admitted to the entire surface of the water, the tank being 27×27in. Again and again I noticed when the covers were raised that the fish darted from side to side, as if frightened at the sudden admission of strong light, and then some of them would turn on their sides, as if injured. It was in this way that all the fish lost came to their deaths.

The car returned to Green Lake and brought on 5,000 fingerling salmon for Lake Champlain, and they were planted near Port Henry on Nov. 21. For this trip the tanks were taken out and all the fish placed in cans. I went to Port Henry ahead of the car to arrange for planting the salmon, and when the car arrived a few hours later there were no dead salmon, and there was no loss in transit. Capt. James, in charge of the car, was satisfied that the fish injured themselves by striking the sides of the tanks when frightened by the sudden strong light admitted on raising the tank covers, and it seems the only solution of the death of the fish.

Monsters.

In hatching the eggs of the salmon family, fish with two or more heads, deformed bodies, etc., are produced, and are called monsters. Dr. C. G. Seligmann, of St. Thomas's Hospital, London, with a colleague, has been making a study of monsters to prepare a paper on the subject. I have had correspondence with him during the past year which will not be of general interest here in advance of the paper, which I hope to say something about later, but in his last letter he gives me some data which I can use now. From a lot of eggs of domesticated brook trout, *fontinalis*, he found nearly 1 per cent. of two-headed monsters and 3 per cent. with deformed bodies. Hybrids, *fontinalis* and *fario*, nearly 2 per cent of monsters. Wild *fario* eggs gave less than 1 per cent. of monsters. A. N. CHENEY.

MEN I HAVE FISHED WITH.

LX.—Hon. Amos J. Cummings.

Wilmurt Lake nestles on a mountain top and is a perfect bowl, in whose clear waters every passing cloud is reflected and each long-legged heron that stands on its shores seems to be doubled. It is one of the most charming of Adirondack Lakes and one that is but little known, for its waters have not been open to the public for many years. It was owned by Hon. O. B. Matteson, of Utica, N. Y., and was reached by a thirty-mile drive from several stations on the Utica & Black River R. R. Ten or a dozen years ago I fished it frequently, in company with your correspondent Piseco and others.

After a steep two-mile climb, up which horses could hardly scramble, but could slide down, one could enjoy the crystal gem in its setting of hills while waiting for the boat and regaining breath. There was quite a party of us at the lake some dozen of years ago: Mr. John D. Hewlett, of Cold Spring Harbor; Hon. E. G. Blackford, U. S. Senator Warner Miller, and others. A bugle note sounded at the landing, and we were speculating who it might be as they embarked. I took the field glass and said: "That's Amos Cummings, but I don't know the other man," and when he stepped ashore he introduced us to Frank Lincoln, a professional entertainer and humorist, who made things very interesting for all, especially for Eliza, the colored housekeeper, and the only woman on the mountain. She looked under the house for cats, dodged ventriloquial bumble bees and ran outdoors to see who called "'Liza!" "I 'clar' to goodness, I doan on'stan' 'bout dese yere things. I spects I'se gittin' 'witched."

"Fred," said Amos, "Frank Lincoln wants to take a trout. He never saw one until he watched one of the boatmen cleaning some. You know the lake, and I want you to put him where a trout never comes. I will not trust him with my fly-rod, but I'll cut him a sapling, tie a line to the end of it, put on a worm, and then we'll give him advice—one on each side."

"But there are no angleworms in this thin soil of the garden, which probably freezes down to the rock, although the men have planted them here. There are none in the woods."

"Didn't anyone bring worms?"

"No," said I, and then added: "Perhaps Senator Miller may have some, but I wouldn't ask him. He came in his last night with some fine trout, and as I looked 'em over I saw what I thought to be a small portion of a worm, but it might have been part of the tail of a newt which a trout had bitten off and threw out when caught. Why not rig your friend up with a fly? We can give him more advice about casting than about worm-fishing, and so get more fun out of him. He seems to get fun out of everything, and I'll help you get some out of him."

Amos went off and cut a pole that was fit to do duty in a hopyard, and said: "Here, Frank, is a rod for you. It's light and springy, and I'll rig you up a line and fly."

Lincoln lifted it, shook it with great apparent labor, and asked: "How many feet of lumber would this thing make?"

Amos appealed to me, and I assured Mr. Lincoln that Adirondack trout were the strongest fighters known; that there was no compromise between a limber bamboo rod and a stiff pole, "for," said I, "if you get a big one, it will break any intermediate thing, and no angler likes to lose his largest fish, although he often does."

He watched me closely. Evidently he suspected Amos, for he knew him, while I was a stranger and might possibly be honest. Amos put on the biggest black bass fly in my book, and we took our fly-rods and the novice to the lake. I had selected a shallow place near some drift stuff, where there was less than 2ft. of water, and we cast. "Don't thresh your fly on the water as if you were pounding out rye with a flail," said Amos, and he landed a fly lightly on the water 50ft. away. "That's the way to do it."

"Yes," said I, "give your fly time behind you, and then when the line is—"

"I've got one," said Lincoln, and he actually snaked in and landed a trout that weighed 2lbs. Not a fish weighing over 1½lbs. had been taken from the lake that summer, and as Amos and I walked mournfully up to the cottage we made no remark. Lincoln was exultant when he learned that his fish was the largest of the season. The party was arriving in boats from different parts of the lake, and when all were in he addressed them in this wise: "Gentlemen: Luck has struck a greenhorn after its usual fashion, and that trout will be sent to the Lamb's Club, in New York, in the morning. They will never believe that I caught it unless I can send your signatures to a statement of fact that I did catch it, and I think it will go if you'll all be good enough to sign it except Cummings." After Pete had boxed the fish and the paper had been signed, Lincoln read it over and remarked: "There's a heft o' good names there as witnesses, but I think it'll take more than that to make the Lamb's Club believe it."

When we were alone I said to Amos: "The worst of it is that we were casting proper trout flies in a proper manner while guying Lincoln, one each side of him, and we did not get a rise, while he slapped out a big bass fly and, having the longest pole, knocked the persimmon."

"'A fool for luck' is an old saying," said Amos; "and while Frank is a bright fellow, he may be classed with the fools, as far as fishing goes. But you must remember that we were showing off to him, and casting away beyond his big trout in order to try his ambition to get out a line alongside ours. The big trout happened there, saw his fly, but did not see ours, and he got the prize. Still, it is ever the same. Gamblers fear a greenhorn more than a fellow who knows something of the game, and as smoke in camp is said to follow beauty, so luck is apt to favor the novice. Let us impress upon Lincoln that it was solely by our advice, born of long experience in the ways of trout, that he captured the big fellow."

We could easily get Amos started to talk of Horace Greeley, and he had a fund of anecdote relating to that eccentric editor who infused his strong personality into his paper and made it an engine of great power in shaping the destiny of the country. Amos was a peripatetic printer at an early age. Born in Broome county, N. Y., May 15, 1841, as the encyclopedias say, he was an apprentice in a printing office a dozen years later, and then started out to set type and fish in every State in the Union, and wound up as an assistant editor on the New York *Tribune*, where, as the confidant of Mr. Greeley, he acquired a fund of anecdote which he relates with a droll humor tinctured with caricature, for of Amos it can be said, as Hamlet said of Yorick: "A fellow of infinite jest, * * * that were wont to set the table in a roar." A good part of the Greeley stories were political and depended somewhat on the Greeley drawl and would lose in type. But the printing case and the editorial desk gave Amos all the education he has, and it is a broad one. I've heard him at the festive board, listened to his camp stories and then have wondered if it was the same man who hurled statistics at Congress when he was working to build up our navy.

"My time is limited," said Amos, "and I came up here to take a few trout and hurry back. I want you to put me on the best water in the lake to-morrow, for I must leave next morning, and I know that you are working for Matteson, helping him to sell this lake, and if there is any good fishing here I want to have one day of it."

"Did Matteson tell you I was working for him?"

"Not in explicit terms, but he intimated that you knew the lake better than anyone now on it, and that I should see you. I see you now—life size—and what do you propose to do?"

"I propose to go out with you in the morning and try and

AMOS J. CUMMINGS.

put you where there are some good trout; but, Amos, my boy, just get hold of the fact that June is passing, and as the shore and surface water warms up the trout go into deeper waters, and when they do this they do not rise freely to the fly; they are too deep to see it, or if they see it they don't care to rise through the warm water for it. Frank Lincoln's big trout would not have been found there a week from now, and fly-fishing on Wilmurt is about ended for the season, except in the spring holes."

In the morning we took a turn up the lake before breakfast, for Eliza had declared: "'Less you gemmen bring in some trout I dunno 'bout breakfas'; dey ain't a bit o' ham no' a aig in de camp, an' Pete he done gone down to de Mountain Home fo' to get p'ovisions fo' dinner, an' I spects he'll get a lamb an' some ham an' aigs, but dat ah 'll be on'y in time fo' dinnah." And so it was a case of necessity that we should fish for an hour or more. We passed Senator Miller and Mr. Blackford; both reported a few fish, but we went up to the further end, where there were several springs, and took half a dozen good trout in about half an hour.

"We've got our breakfast," said Amos, "let's go in; Blackford has started already, and the Senator has his landing net under a fish. How is the water where he is fishing?"

"He is anchored just where he can cast to his right near the bunch of grass, where there is 4ft of water, or a little to his left, where there is 15ft. He knows this lake better than I do, or better than any man now on it. Pete and the other man employed here don't seem to know much about the depth of water and the location of the springs."

I was rowing and Amos sat in the stern, where he could see ahead. "I remember what you said about bait yesterday," he said, "and I've been watching the Senator. He makes a cast occasionally and lets his fly sink, if he has a fly, and I don't know but he is fishing in the deep water; his boat hangs so that it is hard to tell."

At the landing there was a general show down of trout, none over 1lb., but plenty for a hungry lot of anglers. Amos handled the Senator's rod, examined his boat, and then when we were alone said: "His flies are all right and soaked, there was no trace of a worm in the boat, nor of a bait box in his clothing. If he is using bait he is doing it very well."

While we were in the boat we compared our youthful vagabond days, and I learned that while I was in Kansas lamenting that the fighting was all over, and thinking of joining William Walker, the filibuster, in Nicaragua, Amos was there with him on his last expedition to that country. I knew much of his editorial and military career, but nothing of his filibustering life, and we had much in common. We had been restless young men, seeking adventure rather than wealth, only wanting to know where a fight was going on in order to be in it. I knew that he had been the editor of the New York *Tribune*, under Greeley; of the *Sun*, under Dana, and of the *Express*, under Erastus Brooks; that he had been Sergt.-Major of the Twenty-sixth N. J. Vols., and had a medal of honor from Congress for gallantry on the field; but that he had been with Walker in 1857, when he was only sixteen years old, proved that he had the true spirit of the adventurer—that spirit which we admire in those old Norsemen, pirates if you will, but pirates in a day when every man's hand was against all who did not speak his language. Those were the days when the children of the coast of Cornwall prayed: "God bless daddy, God bless mammy; God send a ship ashore before morning." But the viking in his supplication said: "Oh, Lord, I do not ask thee for riches; I only ask to be put within sword's length of the man who has them." There was no universal brotherhood of man in those days, and it is only a theory to-day. Nations have monopolized the freebooter's trade, but shoot the individual who practices it. Amos and I, with our love for adventure, which might include a little fighting, would have enjoyed life hugely about four centuries ago; but then we would not be enjoying life to-day, and so there are compensations for all things, good or evil.

So far our tastes were alike. Amos is a politician and I am not. He is a member of the Tammany Society, was a delegate to the Democratic National Conventions of 1892 and 1896, and will have served twelve years in Congress when his present term expires. He has been chairman of the Committee on Congressional Library, and as often as his party has been in the ascendancy he has occupied the important position of chairman of the Committee on Naval Affairs, and here his most important work has been done in earnestly advocating a navy which shall be sufficient to protect over 7,000 miles of sea coast, if we include Alaska. He has steadily combated the idea that, because we can put two millions of men in the field at the tick of the telegraph, we are secure from attack; for our extended coast, with its wealth of cities, is our vulnerable point if attacked by a hostile fleet.

"Amos," said I, "in your wide experience in fishing, tell me, what do you recall as the most enjoyable of all kinds, or in what State or Territory did you cast your lines in the most pleasant place?"

"That question requires a review of a lifetime of frequent fishing. I have fished from almost every dock in New York and Jersey City; off Robin's Reef; the Romer Shoals, in Prince's Bay; the Great and the Little Kills; the headwaters of the Arkansas; San Lorenzo Creek, Cal.; Magdalena Bay, Lower Cal.; on the nor'west banks of the Miramichi; in Lake Ontario; the Yosemite Valley; the Wasatch Range; Mobile Bay; Mosquito Lagoon; Indian River; Lake Worth; all over the Adirondacks, and in more places than I could name at one sitting. There were days of good fishing and days when the fish were not there or not in the humor to bite—every angler has met such days—but they were all enjoyable at the time and again in retrospect, but I could not single out a day nor a place as affording the most enjoyable fishing. Can you name such a time or place?"

"Yes. The time was every Saturday in the fishing season when I was a schoolboy, and the place the river and streams near Albany, N. Y. I go out now with such rods and tackle as I never saw in those days, travel night and day to get to a lake or stream and enjoy it; but somehow there is not the enthusiasm of boyhood in it, and I'd give this whole trip for half a day with my schoolmates of half a century ago on the old Popskinny Creek, hauling in perch, bullheads, shiners, and an occasional eel."

"I see," Amos replied, "some one has written:

> "'What are life's triumphs we struggle to win,
> To the first little shiner we caught with a pin?'

"I don't know that I quote correctly, but that's the sentiment; and I agree with you about the charm of boyhood fishing, for my youthful fishing from the docks holds a place in memory equal to the fighting of a big trout in rapid waters, in later years. But you forget that as time changes we change with it, and I could not sit on a dock to-day and fish, and the chances are that you would not enjoy the fishing of your boyhood."

I realized that what Amos said was true, but his philosophical view of it had somehow never occurred to me before, and it caused me to wonder if I had really changed so much that I would not enjoy the fishing in the old ways, in the old places, and with the old boys, which seemed at that time to be all there was in life beside the dull routine of the schoolroom. Ah, me! I fear it may be so, but I don't wish to believe it.

Perhaps I said something like that, for after awhile Amos remarked: "When I was about seven years old my people moved to Honesdale, Pa., and one day I ran away with some older boys and went to Bunnell's Pond. They cut me a pole and rigged it with line and bait, and we fished from a boat which was fast to the shore. I soon pulled up a sunfish which was actually bigger than Joseph H. Choate's hand, as I remember both, and I ran three miles in the hot sun to show the fish to my mother. I doubt if I ever had greater pleasure in fishing than on that day. In 1869 Gilbert Lowe, then a well-known politician, taught me to use a rod and reel for weakfish and striped bass in Prince's Bay, and I became an enthusiastic fisherman, writing up my exploits each week for the *Sun*, and after taking salmon in the northwest branch of the Mirimichi and other fishes in the places I have told you of, the memory of that big sunfish in Bunnell's Pond lingers as my grandest effort in the way of fishing."

Somehow I always think of myself as a boy, and when a man is a candidate for President of the United States and his age is given at many years below mine I wonder if

he is old enough to take the responsibility. I am not old enough—that's sure—and might not be with a century added, but when I go to church—as I do sometimes—I am instructed in theology by a man half my age—one who was not on earth while I was playing the parts of hunter, trapper and soldier; and yet this young man talks to me as if I were a sinner, which I deny. I have been provoked to say this because the Hon. Amos J. Cummings, Sergt.-Major of the 26th New Jersey Volunteers, who is eight years younger than I—a kid who would not have been permitted to carry my fish when I was sixteen years old—is now a member of Congress; and when his party has been in the ascendant he has been chairman of the Committee on Naval Affairs. When his party was in the minority he was still a member of that committee and has worked hard to build up a navy that will have to bear the brunt of our next war, for we will have no more internecine wars on this continent, now that there is no cause for such a war.

These thoughts float up as I think that Amos Cummings has done such work in Congress; has been proposed as a candidate for Mayor of New York several times, barely missing it last fall, when a nomination would have been equivalent to an election; and I look down on him as a boy who was not fit to follow me on a fishing trip when I was half way to the proud distinction of being a "big boy" and he was only a "kid," but in the whirligig of time the big boy gets set back among the "has beens" and the kid comes to the fore.

I have fished with Cummings many times, before and after the incidents related, and for a jovial companion in camp, let it be wet or dry, the fishing good or bad, I know of no one who would enliven the company with song or story better than my friend the Hon. Amos J. Cummings; and, if he had his violin with him—which he never has—the musical experts would move their ears forward and ask who was the virtuoso who was, by the aid of rosin, drawing the horsehair over the bowels of the cat and making such a concord of sweet sounds.

CHICAGO AND THE WEST.

Illinois and Florida.

CHICAGO, Ill., Dec. 4.—The Governor of Florida last April issued a call for a National Fishery Congress to meet at Tampa, Fla., Wednesday, Jan. 19, 1898, and to sit one week. Gov. Bloxham's letter of promulgation was sent to the Governors of all the different States of the Union, the following specification being embodied as aid in the appointment of suitable delegates:

"The *personnel* of the Congress will consist of delegates from the National and State Fish Commissions, representatives of State and foreign governments, members of angling and fishery associations, and of persons interested in the commercial fisheries, fish protection and fishculture. Special sessions will be devoted to the consideration of fish, oyster and sponge cultivation; fishery protection and legislation; the economic fisheries and angling. All persons will have free access to the sessions. The actual participation of all delegates in the proceedings is invited. Those who intend to present papers are requested to communicate as soon as possible the titles of their addresses."

Gov. Tanner, of Illinois, has not yet announced any name for the post of delegate to this convention, but informal talk with the State game warden leads to the conviction that the efficient member of the Illinois Fish Commission, Dr. S. P. Bartlett, will represent this State next month in Florida.

Great Northern Pike.

The angling waters of Minnesota have yet to receive their proper exploitation. Years ago a friend of mine told me that FOREST AND STREAM should some day get up into the chain of lakes running off above the Leech Lake system into the Rainy Lake region. He said he had a friend living up in there who told him that the fish grew so big that no man could catch them, they tearing up any sort of tackle that could be found for them. At the time I thought these were muscallonge, and were perhaps being pursued by a man who did not understand the game. To-day I am not sure that they were not the Great Northern pike, which in some of those waters attain great size. Some of the lakes of that region contain both the pike and the 'lunge. Mr. H. G McCartney, of Kabekona Camp, brings in a photograph of a take of Great Northern pike made in Thunder Lake, Cass county, by Dr. West, of Council Bluffs, Ia., and his friend W. L. A. Waddell, of Kansas City, one day last summer. These gentlemen got trace of no 'lunge in that water, but said the pike were good enough for them. Weights of 15 to 25lbs. were not unusual, and they said the fish fought well. I do not have at hand data of the exact weights of the fish shown in the photograph handed me, but the fish appear very large, the great depth of body being very noticeable. The catch shown must have offered sport fit for the most fastidious angler.

E. HOUGH.

Smelt Fishing in Boston Harbor.

BOSTON, Dec. 4.—*Editor Forest and Stream:* The smelt fishing season hereabouts is almost over, and in the main it has been up to the average of past years. To many who can only get a day off now and then smelt fishing offers rare sport, and it is availed of by a much larger number than anyone has an idea of, scattered, as they are, over a large field of operation. When smelts are running they are to be found in all the little bays and creeks from Nantasket to the Nepanset River, and boats containing from one to three persons are found on all convenient waters between those points.

During the fall I have been playing in great luck—what Br'er Hough would call FOREST AND STREAM luck—in regard to this great sport. Mr. John N. Roberts, called Commodore, and properly too, by his friends, invited me to be his guest at his cottage on Peddock's Island, opposite Hull, whenever I chose; and it is needless to say that I "chose" frequently, staying from one to three and four days, as circumstances and the smelts permitted. The Commodore's cottage is a most comfortable one—the best of beds, a good larder, an excellent cook (the Commodore himself)—and all a guest has to do is to get himself down there, the genial host does the rest; the guest is expected to do his share at the oars, and if he is too much of a tenderfoot to do that he is liable to get "roasted." I found that out early, and soon got to be fairly good at the oars.

When the tide served right for the early morning fishing the alarm clock was set for the hour of 4; a hasty but sufficient breakfast was soon dispatched, and we were on the fishing grounds before sunrise. On none of my visits did we fail to get smelts, and on several days we had great fishing; on one occasion we caught 43lbs. in five hours. The last time I was down the weather was pretty cold, but we had fine fishing, getting a run of much larger fish than usual, and we made up several packages of handsome smelts for friends in the city. Altogether I have to thank Com. Roberts for lots of sport this fall.

WILLIAM B. SMART.

A Prize Lobster.

ONE of the sights of Quincy Market is a 24½lb. lobster, which is set up at the stall of Shattuck & Jones. The fish was caught in Dorchester Bay about six weeks since in a perch seine. Its length is nearly 3ft., and it is very handsomely mounted under glass, representing the fish as being served on a platter. The small lobster traps now used are of little use to catch a mammoth of this size. The fish attracts great attention, and is said to be the largest on record, which with its perfect proportions makes it a highly prized trophy of the deep.—*Boston Evening Record.*

HYDROPHOBIA.

THIS paper is presented more with the idea of calling attention to enforcing the fact that there is a reliable remedy for animal poison than to offer any new developments in regard to hydrophobia. Little that is new and undisputed has been discovered since the report of the American Medical Association in 1856. We are still confronted with contradictory theories and strange anomalies, which are only to be explained from the vantage ground of one who realizes that disease is not an entity, but rather a remedial effort, and that relief comes only by our ability to recognize and assist the vital forces in their inevitable conflict with all foreign material.

Although hydrophobia is one of the rarest and most fatal of acute infectious diseases, and is produced only by inoculation of a specific animal poison, which manifests itself by symptoms due to a disturbance of the central nervous system, it is mitigated by the more important fact that the period of incubation is longer than that of any other acute specific disease. This period is variable, rarely less than a month, in some cases reaching nine or twelve months, the average being six or seven weeks, which gives opportunity for remedial measures that, as we will endeavor to show, are ample to eradicate the poison.

The etiology of hydrophobia is so well known that it needs but a few words of description; mainly coming from the saliva of dogs, rarely from cats or other animals, it is a well recognized fact that the disease never originates in the human species. Its spontaneous origin is confined to the lower animals that do not perspire. The investigations of scientists all over the world have as yet failed to determine the true cause of this terrible malady, although the fact seems to be well settled that the disease occurs much more frequently among the male than among the female dogs or other animals. Inoculation may arise from a bite, scratch, or from a lick upon an abrasion. Instances have been given where the disease came from the lick of a dog that was not mad.

A puzzling case occurred some years ago in England. A boy fourteen years of age, while playing with a Scotch terrier, was bitten slightly on the hand. Three weeks later he became ill, and died in terrible convulsions. The physicians pronounced it a genuine case of hydrophobia; but a girl who had been bitten by the same dog appeared to have suffered no harm, and, more remarkable still, the dog was examined by a competent veterinary surgeon and pronounced perfectly healthy. Such cases are not uncommon.

When preventive measures are adopted as soon as possible the larger number of persons escape. Children are the greatest sufferers from being helpless and more exposed, and their cases are not open to the charge of simulated or spurious disease, and at the same time they are a complete refutation of the theory held by some authorities that there is no such disease.

The fact that during the period of incubation there are commonly no symptoms is liable to lead to a sense of false security. But that is the time to adopt vigorous measures of prevention. Occasionally there is pain or discomfort at the seat of the wound, and sometimes mental depression, which may arise from anxiety regarding possible consequences. Even the onset of the disease is rarely attended by pain or inflammation in the wound. The first evidence of the impending disorder is usually mental depression, disturbed sleep, discomfort about the throat, with difficulty in swallowing liquids; even the attempt occasions spasms, which soon involves the muscles of respiration. The intensity of all these symptoms increases within a few hours, until the mere sight of water will cause a spasm. The reason is frequently lost, and the end from exhaustion is assured in from one to six or eight days.

The varieties of this disease are as great as in any other, because each case is modified by the condition of the system and the vital reactive powers of the individual.

If there is a prospect of relief from the horrors of hydrophobia, this relief may well claim our earnest attention. It is well known that from the bite of a rabid dog there is a period varying from seven days to six months before the more acute symptoms manifest themselves This gives ample time to eliminate the poison from the system. In "Todd's Clinical Lectures" occurs this passage: "Large evacuations by sweating may be employed more freely and with less disadvantage to patients than by any other secretion." This is also demonstrated by the fact that many diseases are daily being cured by some form of sweating bath, and that physicians are more and more using that form of treatment. In China and other countries, as well as our own, sweating has been successfully used in the elimination of malarial poison. Another proof is that in some Eastern countries the sweating bath is used to cure the poison of snake bite, which is much more rapid in its action than the poison from the saliva from a rabid dog. It will also readily be seen that treating this malady from the outset is a very different thing from waiting until the poison has become absorbed and permeated the whole system, and the paroxysms have set in, when in truth there is little hope of cure under any treatment.

Hydrophobia belongs to that large class designated as ferment diseases, which depend upon the introduction and development in the system of ferment germs. Enteric fever and erysipelas are familiar examples. Simple absorption has sufficed to inoculate the patient, but in the majority of instances the skin receives more or less abrasion, and the germs are either implanted in the epithelium beneath or introduced directly into the circulation. The abrasion may heal kindly, but in a varying time, depending upon many factors; an irritation at the seat of the abrasion, accompanied with darting pains, announces the onset. Unlike other diseases, the blood appears not to be a good soil for the development of the germs, which, however, circulate with it until they find the soil or tissue best adapted to them, and then the real havoc begins. In the dog and the man the three pairs of salivary glands, the parotid, submaxillary and sublingual, appear to furnish the required conditions, and to be the main seat of the lesion. The congestion of the nervous centers that so directly ensues is probably consequent upon changes in the structure of these glands. Every physician knows well how speedily severe nervous symptoms follow such changes, how intimate the sympathy is between the glandular organs of the mouth and throat and the nervous centers at the base of the brain, and what violent hysteriform seizures often ensue in such cases. With the involution of the great respiratory tract of the nervous system come difficult respiration and its train of associated symptoms. At the same time it is more than probable that the nervous system suffers from the more direct poisoning caused by the presence of germs in the circulation, but not because they are a specific nerve poison; for when a full dissection is performed, no evidence of it is found in the nerve centers, and this excludes the nerve poison hypothesis.

In the McCormick case, as reported by Dr. Hammond, June, 1874, microscopic examination revealed disease of the cortical substance of the brain, disease of the medulla oblongata, and disease of the spinal cord, also disease of the pneumogastric and hypoglossal nerves. The nerve elements were broken down and oil had taken their place, and this has been found the general direction of the disease, with slight modifications in different cases. Fatty degeneration of the nerve substance was a marked symptom.

The question quickly arises, what best can be done to arrest the action of this poison? Nature does everything possible by arousing every emunctory to action, and, as in all cases of poison or morbid matter in the system, the leucocytes are called upon for their most vigorous action to relieve the patient. It is claimed that immediate suction of the wound has saved many patients Good authorities believe that the virus remains localized, for a time, in the cicatrix, and that cutting it out even after the original wound has healed may serve to avert the disease.

To diminish the production of rabies in the dog, Fleming, one of the most distinguished veterinary surgeons, recommended that dogs should be muzzled, except in times when the disease is epidemic; that they should be placed under good hygienic conditions, with a heavy tax upon every animal, and that all vagrant dogs should be killed. It is claimed by some, among them Fleming, that rabies has spontaneously originated in the dog in consequence of exposure to extremes of heat and cold, ungratified sexual excitement, maltreatment, insufficient food, etc. Roucher, another authority, also maintained the same idea.

Opposed to this is a long array of eminent authorities who claim that rabies does not originate in the dog otherwise than by inoculation with the virus of a rabietic animal.

In the pathologic anatomy of the disease we are also involved in a mass of contradictions. Careful microscopic examinations of the brain and spinal cord, by medical experts, have been attended with entirely negative results. In some few cases there was found fatty degeneration of the nerve cells, notably that published by Dr. Hammond in 1874; in others simple congestion of the vessels, but in the whole list there was no lesion found that was peculiar to hydrophobia.

In reporting this condition of things, the *Medical Record* stated, May 25, 1878: "We are forced to the sad conclusion that, with the present means at our command, every case of hydrophobia is necessarily fatal."

Dr. Hammond, in his report previously referred to, indorsed the plan suggested by Bourrel and also detailed by Fleming in his treatise on rabies, of having the incisor teeth blunted. So far as dogs treated that way are concerned, this was claimed to be an absolute preventive, but non-rabid dogs have been known to communicate the disease. It is a well-known fact that the germs of this poison are sometimes present in the saliva of dogs that are apparently healthy, and particularly frequent in that of the spitz. It is also known that the bite of a man in anger may inoculate a man whom he bites with poison that produces disease, if not hydrophobia. Instances are on record of a woman while in anger nursing her infant, thereby bringing on convulsions and endangering the life of the child.

The pathologic changes in the nerve substance are but the local exhibition of the general systemic poisoning. In the effort to throw off this poison a small amount of morbid matter adjacent to living structure is dissolved by the leucocytes, and is forced out of the system by way of the natural emunctories. When the system is in the throes of a vital struggle with this morbid material, there can be no excuse for thrusting upon it more of the same material, even though it be in attenuated form. The human system, when laboring under morbid influences, needs but those elements which can add vigor to the vital resistance, and the fluid which patrols the entire body should be strengthened rather than further decomposed and disorganized by the addition of extraneous and poisonous matter.

The Pasteur treatment is the accredited method for those who have been bitten by a rabid animal; but this, like the antitoxin treatment, is simply sending one poison after another in the system, and whatever the result the victim is the chief sufferer. The Pasteur treatment has not proved uniformly successful, and in those cases where it was apparently so it is open to question whether the patients might not have recovered without any treatment.

It is well known that during the first few years of the experimental inoculations for rabies so many deaths occurred among the patients that Pasteur himself became alarmed at his own work. Since that time, from the improvement in the treatment, the death rate has lessened, due to the dilution of the curative lymph.

It is well enough, and most commendable, to discover the microbe which, as stated, appears "to be the veritable and sole factor in the malady," but facts go to show that the microbe is the result of the disease, except in inoculation.

Pasteur found no indication of an incubation period shorter than seven days, and he never claimed that he had discovered a cure for hydrophobia, but simply that a person who had been bitten by a presumably mad dog, and within a few days was inoculated with attenuated virus, would not develop hydrophobia; if a certain time had elapsed after the bite this preventive treatment was of no use whatever.

The London *Lancet* of Oct. 31, 1885 says: "We cannot but think that Pasteur's inferences are sanguine and premature." In the year 1895 the *Lancet* published a statement from Dr. Magner, in which he pointed out that Pasteurian statistics were very misleading, and quoted from a report of the Registrar-General of England to show that in the five years preceding the establishment of the Pasteur Institute the number of deaths from hydrophobia were 155, whereas in the five years thereafter they reached 159. He thought that was a strong argument that the Pasteur Institute had no effect in diminishing the deaths from hydrophobia. An article in the Paris *Journal of Medicine*, by Prof. Peter, stated that the inoculations pretended to be antirabic by M. Pasteur were in principle nonsense, and in practice deceptive. Statistics have shown that the mortality from hydrophobia in and around Paris, the seat of the Institute, has not been in any way lowered, but, on the contrary, has increased ever since Pasteur began his inoculations. In 1895, 272 persons died of hydrophobia after undergoing the Pasteurian treatment, which ought to have saved them from any attack of the malady. * * * In 1866, a girl named Pauline Kiehl was taken to the Institute, but as hydrophobia had already set in Pasteur declined having anything to do with the case. The girl was then taken to Dr. Leon Petit, of Paris, who cured her by the vapor-bath treatment. * * * Dr. Lutaud, editor of the *Journal of Medicine* of Paris, with straightforwardness asserts that Pasteur does not cure hydrophobia, but he gives it. * * * In 1894, Dr. C. W. Dulles, of Philadelphia, made a report to the Pennsylvania Medical Society of his special study of hydrophobia, covering a period of over ten years. His figures give an average, from a total of seventy-eight cases, of one per annum to every 4,500,000 of population, with an excess of cases in the vicinity of Pasteur Institutes. In fact, he charges directly that not only have Pasteur's methods "increased the number of deaths from hydrophobia," but that "there has been added to these a large number of deaths due to inoculation of what ought to be called Pasteur's disease." * * * Dr. Dolan, editor of the *Provincial Medical Journal*, taking a general survey of Pasteur's methods and his numerous failures, says that "Not only does Pasteur not protect from the disease under the very conditions demanded by himself, but he has added a new terror to it by the introduction of paralytic rabies."

In Long Island City, on April 25, 1897, a strange dog severely bit a six-year-old boy named Charles Silk. Two days thereafter the child was taken to the Pasteur Institute in New York and a course of treatment commenced at once, which lasted fifteen days. After completing the course at the Institute the mother of the child was told that her son was insured against dog bites for ten years to come, but three weeks from the day of being bitten the boy died, a pronounced case of hydrophobia.

Better than Pasteur Institutes, and better than all other remedies, or rather preventives, would be what is proposed by an eminent English writer, Mrs. Maynell, in the London *Chronicle*, and that is the utter extinction of the canine race, holding that the life of one child is of more value to the world than that of all dogs, and that one of the inevitable results of our advancing civilization will be their extinction. While the dog forms a prominent feature of the domestic life of our day, the services he renders are by no means an adequate offset to the danger with which his presence continually menaces the community.

The Pasteurian treatment is a grevous mistake, although it is as yet the only method that has medical sanction. There is a simpler, safer and more scientific treatment for the dreaded disease, based not upon the old-fashioned practice of putting foreign matter into the system, but on the more modern and exact principle of eliminating the poisonous taint. That is the hot air or vapor bath treatment as practiced in many lands, but particularly by Dr. Buisson, formerly of Paris. By this means patients have been cured, even after hydrophobia had set in.

In the year 1826, Dr. Buisson was called in to attend a woman attacked by hydrophobia. According to custom he bled her, and happened to wipe his hands on her handkerchief, covered with saliva. "Perceiving a mark on the first finger of my left hand," he writes in a book published in Paris in 1855, "I became aware too late how imprudent I had been. As soon as I reached home I cauterized the wound with nitrate of silver. On the seventh day I experienced a sharp pain in the region of the scar. Imagining, however, that it was in consequence of the cauterization, I paid no great heed to it, but the pain became so intense that I was obliged to put my arm in a sling. The pain grew more and more acute, commencing at the first finger and following the radial nerve till it mounted to the forearm. The paroxysms lasted two or three minutes, with intermissions of five or six minutes. At each paroxysm the pain spread to the length of several centimeters; when it passed the elbow it became intolerable. My eyes were extremely irritable, and felt as though likely to start out of their sockets. I was painfully affected by light, and consequently by all luminous bodies, such as glass and metals. My hair seemed to stand erect. My body seemed lighter than air; I believed that by springing from the ground I could have lifted myself up to a prodigious height. I had tightening of the throat, constant nausea, salivated much and expectorated incessantly. I felt that my sublingual glands were swollen, but when I wished to assure myself of the fact by looking at them in a glass I was unable to carry out my design on account of my eyes. I had a constant longing to run and to bite, and my only alleviation was to walk quickly up and down my room, biting my handkerchief the while. I had a horror of water."

Ordinarily there is but one result to such a condition as this. "For some time past," continues Dr. Buisson, "I had been persuaded that a vapor bath was able to prevent, but not to cure hydrophobia. My thoughts being occupied solely with death, I sought that which was the most prompt and least painful to put an end to my life. I resolved to die in a vapor bath. I took a thermometer in my hands, fearing that the heat I desired might be refused me. I had been but a few minutes in the bath before I felt a change for the better. This gave me hope. At 127° F. I was cured. At first I believed it was merely a long intermission from pain, which would be terminated by contact with the air outside the bath. After the bath I dined and drank with ease, and went to bed and slept well. From that day to this, nearly twenty years, I have felt no sort of pain or uneasiness."

Dr. Buisson again says: "Experience has proved to me that hydrophobia may last three days. The cure is sure by following my system the first day, uncertain the second, impossible the third. Who would wait for the last day, knowing my means? One would not even wait for the malady, one would always prevent it.

"Hydrophobia never shows itself before the seventh day after the bite, and one can then go a long journey to procure these baths, called Russian."

The *Lancet* says: "Hydrophobia was cured by the late Dr. Buisson in his own and eighty cases by vapor baths, raised rapidly to 135° F., and more slowly to 145° F." "A vapor bath," writes Dr. Buisson, "prevents the development of hydrophobia and cures the malady when developed. In order to convince all sensible persons that I am really in earnest, I offer to inoculate myself with the disease. This fact should be a sufficient guarantee of the certainty of my method of cure."

It is interesting to state that in London there is now established a Buisson institute, under the care of a qualified physician, for the gratuitous treatment of hydrophobic cases. A number of cases of undoubted hydrophobia have been successfully treated by means of these baths in India, and the Viceroy of India has notified Mr. F. E. Pirkis, R.N., of the London Buisson Baths, that the Government will afford facilities for the placing of Buisson baths for the treatment of hydrophobia in Government hospitals and dispensaries in India. Twenty baths for that purpose are being immediately dispatched. In looking over a late paper from Calcutta, it was noticed to contain an advertisement of thirty-four Buisson baths, located in different parts of India, where that treatment could be obtained free by needy sufferers.

There is no possible doubt as to the value of the Turkish bath in all disorders of the ferment class, and whether it is competent to the complete eradication of the poison, or to arrest destructive tissue changes when once they have thoroughly begun, will appear doubtful only to those who are not familiar with the wonderful restorative action of heat when used in its higher potency. The simple treatment of a hot-air bath has actually cured the disease in the last stages and restored the patient when in the extreme horrors of rapidly approaching death. A prompt use of the hot-air bath in every case of a bite from a dog cannot but do good, even if there is no question of the animal being rabid, and when the animal is mad it is a safe and effective remedy. Whoever is willing to investigate the merits of the hot-air bath will soon learn that it has a valid claim to the title of certain cure for hydrophobia.

In Brooklyn, N. Y., June, 1874, a case came under my supervision. A suspected dog was confined, but broke away, and in his career of biting other dogs also bit a Prospect Park laborer, one George Wagner. As the dog was to all appearances suffering from rabies, he was immediately killed. The man's wounds were cauterized with nitrate of silver, and on the third day thereafter he was brought to the Turkish bath. He was bitten through the palm of one hand and partly through two fingers. He complained of what seemed like neuralgic pains in the hand and arm, which were swollen, and also pains in the head, back and throat. He underwent the process of the bath twice daily during one week and once daily for two weeks longer. The baths were administered with exceptional vigor in his case. Soon every unpleasant symptom vanished, and for many years afterward he was well and hard at work.

Dr. M. Hermance, also of Brooklyn, N. Y., in 1877 saved a boy from the agonizing death of hydrophobia by the use of the vapor bath, which was applied while the patient was tied down in bed. In about three-quarters of an hour after beginning operations a profuse perspiration was induced. When he began to sweat freely signs of returning consciousness appeared, which increased as the perspiration was continued, until in the space of about two and a half hours he was fully restored to consciousness, with a perfect relief from all his hydrophobic symptoms, the pain in the bitten hand and arm included, of which he had complained very much in the intervals of consciousness between his convulsions.

There is almost positive evidence regarding this form of treatment from Wilmington, Del. In the year 1869 three children of that place were bitten by a rabid dog. This dog also bit a heifer, a cow and two other dogs. The four animals soon afterward died of hydrophobia. The children were placed under the care of Dr. John Cameron, of that city, and by him were taken to Philadelphia and there subjected to the Turkish bath daily for two weeks. Although the wounds were very severe and the discharge from one of them was of the color of verdigris for several days, they healed without difficulty and no symptom of the malady has been manifested since.

In 1866 Rev. J. J. Curran, of the Industrial School, Arlington, N. J., published a case which occurred under his care. One of the pupils named Klee was bitten on the hand by a dog on Jan. 2. As the wound healed rapidly nothing more was thought of it, but on Jan. 22 unmistakable symptoms of hydrophobia manifested themselves and increased for two days, when there appeared no possible hope for him. Then a small kerosene oil stove was lighted and placed on the floor; on top of this was placed a pan of boiling water, and over all a chair, on which the boy was seated. Around the chair and boy and vaporing machine were wrapped several folds of blankets, pinned about his neck and fitted so that the steam was retained about his body. He was also given a dose of sweating medicine, and in five minutes the perspiration was streaming from every pore of his body, and in ten minutes after he said: "The pains are all gone!" He was kept in this condition for about half an hour. The result was that the boy was cured, and in two months after he was as well as he ever had been, and so continued.

The natives of Australia, and also of India, have a successful habit of at once taking violent exercise on beginning to feel ill. This is the principle of the Turkish bath treatment—that is, to relieve the system of its impurities by sweating.

Sir John Drummond Hay, who was many years English minister in Morocco, long before Pasteur's time, stated that the Arabs there cured hydrophobia by sweating. The patient was swathed in woolen covering till all but smothered, placed in a small tent (these tents are always of black camel's hair, much more impervious than canvas) and then the tent was closed so as to exclude air as much possible and the patient left until profuse perspiration carried off the poison. This treatment was found invariably successful.

A St. Petersburg newspaper states: "We are informed by good physicians that if the patient, immediately after being bitten, will go into a bath and stay there seven days he will have excellent chances of recovery. The poison in the blood will be eliminated by a steady and vigorous perspiration. Some physicians have attained good results by washing the wound with warm vinegar and then applying hydrochloric or muriatic acid."

There is undoubtedly an hysteric or "mental hydrophobia," as it is sometimes called, induced by emotion, or through fear of the disease after having been bitten, which may lack many of the characteristic symptoms of the true affection and differs from it notably in its rare fatality. Such cases, serious enough to the patient for the time being, would be most easily and agreeably treated by the Turkish bath. Herein would come one of the great advantages to the community, which every city would enjoy by having, what would be most desirable to all, a public Turkish bath that would be open to such cases as well as to any other. A few days', or, at most, a few weeks' treatment at such an establishment would put the patient out of reach of any danger from hydrophobia.

Some twelve years ago four children living at Newark, N. J., were bitten by a dog supposed to be rabid, and more than $1,000 was subscribed to send them to Paris that they might undergo Pasteur's treatment.

If the people were only awake to their best good, and would subscribe liberally for public Turkish baths, they would have a better and surer remedy right at their own doors.

On March 28, 1897, Dr. Frank D. Gray, in Jersey City, was bitten by a St. Bernard dog that had shown some slight symptoms of rabies. Evidently not knowing a better way, Dr. Gray sailed for Paris to take the Pasteur treatment. Had he been aware of the eliminating power and healing virtues of the Turkish bath, he could have remained at home and saved himself the mental torture as well as the expense incident thereto. It is very pleasant and desirable to go to Paris, but to "wash and be clean" is much more desirable.

The conclusion that is forced upon us by these facts is that in all cases of infectious disease our chief efforts should be directed to promoting the eliminating power of the patient. This is working in harmony with and assisting the vital resistance to disease. Whatever tends to invigorate the individual enables him the more quickly and surely to surmount the difficulty. Herein lies the most important element. When it is understood that in the proper application of heat—and in that we recognize all forms, whether it be the use of hot water, the Russian bath, or the above all most desirable Turkish bath—and the fact remains that in heat we have an agent capable of counteracting the poison of rabies, then it may well be asked: what poisonous influence can resist its potency? Knowing this, we should do all in our power to arouse the public mind to the value of the public Turkish bath, which should be established by the people in every city in the land, and so conducted that its blessings would ramify through every stratum of society. Thus would we hasten on the time when hydrophobia will cease to be a terror in the land, and disease will not be the inheritance of every child, but rather that good health will be the pride and possession of every citizen.—*Chas H. Shepard, M. D., in the Journal of the American Medical Association.*

THE INTERNATIONAL FIELD TRIALS.

Stevensville, Pa.—*Editor Forest and Stream:* I have just read Mr. Hough's graphic and highly entertaining report of the International field trials, held at Mitchell's Bay, Ont., and while it is somewhat sensational and very flattering to some of the dogs and their owners, I cannot concur in many of the decisions of the judges, nor agree with the conclusions drawn from inference by your reporter. I have no wish for newspaper notoriety, and will not be drawn into a public controversy, but there are some things connected with the judging of the International field trials of 1897 which I wish to say, not because I feel especially aggrieved, but because I believe in a spirit of fairness in everything connected with field sports, and that absolute fairness and impartiality are the vital parts of their existence.

Mr. Hough dwells at considerable length on the age and experience of the judges, and while I have nothing but respect for old age and ripe experience, I cannot but think that we lay too much stress at times on what has been, and too little on what is; that is, we dwell too much on age and its supposed coadjutor, experience, and too little on our own observations and careful discriminations. Experience does not always beget wisdom, and old age is not necessary to a large experience. Close observation and careful discrimination sometimes carry a very old head on very young shoulders.

As to the judging, we will first look at the Derby as reported by Mr. Hough, only adding a few remarks from present observation, and leaving the question as to whether the dogs were rightly placed or not to the discrimination of the unbiased reader.

The winner of first, after being down in all two hours and forty-nine minutes under the most favorable conditions of birds and weather, finally "jumped into a grand bevy-point," his only point in three long heats, with birds aplenty and flushes where "possibly he may have been pointing."

The winner of second blinked her birds continuously, as per Mr. Hough's report. The winner of third hadn't a known point to her credit, unless a find by handler and an effort on her part to get at the birds in a brush fence with an animated tail are called pointing. The winner of fourth was down in all one hour and fifty minutes, and had to his credit six points, with some "sloppy work mixed in."

Now as to the All-Age Stake, taking again Mr. Hough's report, and deviating therefrom only in matters that came under my own personal observation. Before reviewing the running and judging I will in as brief a manner as possible preface my remarks by stating that after the close of the Derby and before the drawing for the All-Age Stake, the question was asked the judges whether point work and bird work would be considered, or whether the stake would be run on speed and range alone. The answer was "that they would all be considered, but that the dog having the most speed and range, all else being equal, would have the preference; but a dog that was under no control, and did not stanchly stand his birds would not be recognized—a very sensible and satisfactory answer; but go with the reporter through some of the heats and then note the judging.

Take the first brace of the first series—Forest Gladstone and Count Vassar. This brace was put down in the worst part of the day (11:41), and yet there was no heat during the whole trials in which there was so much bird work, so much point work and so few errors for the time down as in this heat; and yet neither found a place in the stake, and Forest Gladstone was not even let into the second series, although she had been guilty of no errors, and was ordered brought along by the judges (for what reason is not quite clear, outside of the veil of mystery surrounding the chosen few).

The third brace in the first series—Dash Antonio and Selkirk Whyte—your reporter gives two points, four flushes and three false points, and yet they were "high class dogs" and continued in the stake, as one reporter says, for the reason that "they were believed to be capable of better work." Commendable reason, and one to be referred to in future competitions judging of possibilities "and probabilities." "Oh, consistency! thou art a jewel!"

Let us go a little further with Mr. Hough, and take the second brace in the second series—Dash Antonio and Maud W.—and after a careful review of the work of this brace let us ask the judges and reporter if any dog not a high class dog could be retained in an all-age stake after such a brilliant, independent, self-hunting exhibition? "It was awkward, to say the least."

I had always supposed that a good field trial dog was a good shooting dog, with good speed, good range, good nose, stanch on point, obedient, cheerful, affectionate, and one that worked for the gun and handler; but according to the standard of some field trial judges I find myself in error, and as I am still interested in field trials and ambitious to be a winner, I am now casting about for a kennel of greyhounds and barzoi, and shall probably give up field shooting and devote my time and energies toward the perfecting of a type of field trial dogs that can catch their birds without the aid or incumbrance of an unwieldy gun.

W. W. McCain.

Mr. J. M. Avent, of Hickory Valley, Tenn., writes us that on the night of Nov. 29 his residence was burned. About half his furniture was saved. The house was partially insured. Among the lost property, which he deplores, is a file of Forest and Streams beginning with the first field trials at Grand Junction, Tenn. He further adds: "I am now finishing Mr. H. B. Duryea a beautiful residence for a winter shooting box. He moves from New York on Dec. 10 with a party of friends for the winter hunt here."

Sallie and Maudie.

CHICAGO, Ill., Dec. 4.—Sallie and Maudie request me to thank several readers of FOREST AND STREAM who have come forward with the purpose of the alleviation of Maudie's distress from fleas and Sallie's distress over Maudie's troubles. Mr. J. F. Sharp, of New York city, writes me thus:

"Tell Sallie to make a paste of lard and snuff, equal portions, and rub well into the hair on Maudie, providing, of course, the skin has healed from previous heroic treatment. This will remove the fleas, is 'not good to eat,' and is easily removable with soap and warm water."

Parke Davis & Co., of Detroit, sent me a cake of flea soap, a sort which they think is good and with which they are anxious to experiment further. Since they have known it well mentioned, I will try it on the dog.

The Theo. Ricksecker Co , of New York city, also sent me a cake of flea soap for Sallie and Maudie, which they say will eradicate the fleas and not eradicate the dog. All these different things are receiving thorough trial, and I hope to be able to report on the subject by next spring if Maudie doesn't wear out before then. I never did see anybody fonder of a dog than Sallie is of Maudie, nor have I often seen a more unselfish devotion to scientific research than that displayed in this matter by Sallie in her effort to cure Maudie's fleas. The latter, I regret to say, does not appear to enter into the spirit of this thing as enthusiastically as the rest of us. If you show her a cake of soap she puts her tail between her legs—the best she can, as she is fashionable and wears it short—and runs out of the room in search of sanctuary. I trust, however, that this personal reluctance on Maudie's part will not divert any other friends from their purpose of sending on anything they may have for Maudie's fleas. We are pretty well fixed, but you can use a lot of soap during a winter if you are as industrious with a dog as Sallie is with Maudie. I'll bet she is the best laundried dog in Chicago.

E. HOUGH.

1206 BOYCE BUILDING, Chicago.

Brunswick Fur Club.

ROXBURY, Mass.—The ninth annual winter meet of the Brunswick Fur Club will be held at Barre, Mass., during the week of Jan. 17. The club will make its headquarters at Hotel Barre.

The annual meeting for the election of officers for '98 and the transaction of other business will be held on Monday evening, Jan. 17.

All sportsmen are cordially invited to be present with their hounds and aid in making this hunt the best in the history of the club.

BRADFORD S. TURPIN, Sec'y.

POINTS AND FLUSHES.

"A PRIVATE carriage in which were two women was driven over the north roadway of the Brooklyn Bridge, and frolicking along with it part of the way was a big Newfoundland dog. Near the Brooklyn anchorage the railroad tracks slope down until almost even with the roadway. The third or power rail is nearest to the roadway, and is heavily charged with electricity. Onto this, in one of his pranks, the dog jumped. Then he bounded into the air and fell dead. The carriage rolled on, the occupants unaware of what had happened." So reads an item in the daily press. It seems to have escaped the attention of those who have charge of the matter that a man would have met the same fate as the dog, if he had touched the rail as the dog did.

PORT JERVIS, Dec. 2.—James Spicer, a New Jersey farmer, was in Port Jervis this morning and traded with Joseph Thayer for an old-fashioned bicycle, giving in exchange a horse, twenty-two heads of cabbage, and a rabbit dog. Such is a piece of "news" which graced the front page of one of New York's greatest dailies. The public will rest easier now that it knows that James owns a wheel. But the dog! A rabbit dog being bunched up and traded with cabbage-heads for a wheel. The world is surely degenerating.

Central Park, according to press reports, is infested with an unusual number of homeless dogs this winter. One day last week "a big yellow dog" attacked the sheep, and was shot by Keeper Peter Shannon, to whom is assigned the shooting privileges of the preserve. A day or two previous, "a big black dog" attacked a French waiter who was carrying a tray containing food, presumably sausages Shannon potted this marauder also. The dogs all seem to be "big," but they in color differ, being either yellow or black, thus putting the ferocity in proper press setting.

Field Sports mentions the purchase of the setter dog Luke (Toledo Blade—Cambriana) by Mrs. Cæsar Young, of San Francisco, from Mr. W. B. Wells, and it further states that "This makes nine choicely bred English setters that have been imported into the State during the last year, four of which are field trial winners, and still there are two or three more that we know of, over which negotiations are pending, which will also come. Verily the English setter is having a boom on the coast."

At a meeting of the executive committee of the Collie Club of America, it was decided to perpetuate the memory of the many years' faithful services of the club's late treasurer, John Dobson Shotwell, by opening a subscription among the members for the purpose of providing a suitable memento as a perpetual challenge cup, to be known as the Shotwell memorial cup, to be competed for by American-bred collies, to be shown in braces and owned by club members. The committee headed the subscription with the sum of $50. Those who wish to subscribe to the memorial cup should send their subscription to the club's secretary-treasurer, Mr. James Watson, 203 Broadway, New York.

In our business columns this week A. H Norton, Winsted, Conn., offers fox terriers; B., P. O. Box 2899 New York, offers Gordon setter; J. C Vail, Warwick, N. Y., offers Chesapeake bitch; Fieles & Bro., Christiana, Pa , offers hunting dogs of different breeds; E. A. Spooner, New York, offers pointers; J. Feulner, Cherry Valley, N. Y., offers setters; W. P. Austin, Mansfield, Pa., offers pointers; R. E. Smith, Afton, N. Y., offers partridge dog; W. Howell, Islip, L. I , will board and train dogs; C. C. Beveridge, Newark, N. J., offers broken English setter.

The Forest and Stream Publishing Co. are the largest publishers and importers in America of Books on Outdoor Sports. Their illustrated descriptive catalogue will be sent free on request.

Wheeling.

Communications for this department are requested. Anything on the bicycle in its relation to the sportsman is particularly desirabl

WHEEL AND GAME.

Editor Forest and Stream:

At Philadelphia, N. Y., there is a boy between thirteen and fourteen years old. His letters, besides bearing on school matters, often contain tales of hunting, and as most of the hunting is done with the aid of a bicycle, they may be of interest to hunters who like odd styles of sport with guns. He knows hunting better than most boys of his age, and as well as some men, and when he says, "I don't need so much game to the square mile when I go on my bicycle," it is worth listening to him. He writes in one letter:

"I used to take my 12-gauge," a single-barrel shotgun, "but I don't any more. Too much bother to unfasten it. The target pistol is a lot better. Cousin George has fixed a stock to it and says it's a dandy, and I can plug a cent about every time.

"I go to school five days a week and get out at 4 o'clock in the afternoon—not much time to hunt before supper, but sometimes I go down the road past the graveyard to a bit of hardwood there. It's about two mites, and sometimes I see something—squirrel or partridge. One day I got a big henhawk. It sat on that butternut just above the bass rock where you and Gus Richardson and George fished one time. I rested on the rail fence—what's left of it—and pulled on him at ten rods. Say, he jumped a rod and came down ker-slump in the mud and sawdust. I tied him to the handle bars and rode up through town lickety-split. My! she had nice black eyes, though—I mean the girl who wanted the wings. She got them too, you bet. The boys here would like to hunt too, but mostly their mas won't let them. Jjits!

"I don't need so much game to the square mile when I go on my bicycle. It don't take only a minute to go from one patch of woods to another, and every farm has one off in some corner or other where it's rough or swampy, or anything. I get through one of these clumps in about three minutes, up one side and down t'other. The partridges here fly a mile when they are put up, and it don't pay to try to tree them. Never had such fun as hunting gray squirrels. I never saw only those you got. One day I was riding up the road toward Antwerp, past Roy Ashley's, and I saw something go up a hickory tree there. 'Cat,' I thought, and then I see him again up in the forks of the tree, 'bout three rods up and six rods off. I slid off the wheel and drops on one knee, so's I could rest on the saddle—didn't have any stock then—and I let fly. The bark just over the beast jumped. I shot again and some more times, and he began to get excited (maybe I didn't). He ripped up one side and around t'other, then all of a sudden he leaped clear from the top of the tree and landed about four rods off. He began to run before he hit the ground, and I after him, hollering. He up into another tree 'bout ten rods off, or so, and I broke both his hindlegs high up and then plugged him in the neck. I took him home right up Main street, and I cut the tail off to hang up in my room."

That isn't quite the way Von W. would have done, but no squirrel ever pleased Von W. more. In another letter he writes:

"Oh, say, you remember that swamp up at the Plains, on the road to Carthage, near where the sand blows so and looks like yellow snow? Well, I went off for a ride to-day, and not having any place to go to just went. Course I took my pistol—wouldn't ride without it—and pretty soon I was near that swamp, and I went into it, and left my wheel in a brier patch, where they gets some blueberries. I went around them; and there was runways—rabbit runways—in the moss just like in Worden's swamp, or up to Pete Smith's, or anywhere. I followed around in there, and pretty soon there was a rabbit sitting up, Crack! went the gun. My, how he did run! He was the worst scared rabbit you ever saw. Didn't have no cause to be, though. I couldn't have hit a house. I seen another one, but never touched him. One place where it was sandy I see a fox track, and found some bluejay feathers under a low, thick pine. A hawk didn't get that bird.

"Well, after a while I thought I was hungry, so I started back to my wheel, where I had my lunch on the carrier. I went and went, and kept going, and every time I'd see any briers I'd think that was the place, and by and by I got scared. Couldn't find my wheel. Then I went to the road and found my track—the only one, because nobody but a darned ijit would ride where it was sand; and when I came to the place where I left the road I found the brier patch and forty hundred stumps that looked exactly like the one I had left the wheel at. I looked very careful, and pretty soon, by walking around, I caught a glimpse of something shiny, and there it was. Betcher life, I'll tie a handkerchief to a stick when I leave my wheel again. Aunt Ann don't want me to go there again. I told her I see some signs just like what Bill Pardy called bear tracks, and I wouldn't be surprised if I'd get a wildcat some day. I had to tell her I lied before she'd let me go again. I'm going next chance I get."

The next chance came two weeks later. Then he writes:

"Yesterday I went up to the Plains. I had a puncture before I got to Stirlingville, some horse had left his shoe with some nails in it. Finding horseshoes ain't good luck; I know, I've found them. I fixed my tire, though, and went ahead. Had to pump up about three times a mile. I left my wheel by a fence and stood a new tomato can on the post so it would shine, and circled back about half a mile. It's awful lonesome. Nothing but moss and sand and little bushes between the woods, and the woods are all dark and down in the gullies. I didn't see anything at all, only a hawk and some crows, which I couldn't steer my bullets into. An old pine tree had laid across that little white water brook with the nice, clean bottom—you know where I mean, below that shanty what's going to be buried with the sand some time—and I sat down on that. A little clump of brush was about three rods off and trees all around, little, crooked, second-growth trees, with branches every which way. Then I see something: a dirty, creeping, little tuft of yellow hair sneaking through that little clump of brush; slow, just like a snake shaking the swale grass a little. It made me shiver. I couldn't see what the thing was at first, then I knowed. It was somebody's cat, and anyhow it wouldn't be missed. I aimed and pulled. 'Yeow!' The cat jumped, and say, I was froze stiff. Gosh, I never saw anything like it—such tearing, spitting, clawing the air and reaching for things as that cat did. I was scared; I pushed three cartridges under the barrel and jammed the pistol so I couldn't shoot.

"By-and-by the beggar just kicked and slewed around in the grass and laid still. He was the biggest cat I ever see. All gray and yellow-like, and a tail as big as your arm, and about 7in. or so long. I skinned him when I got out to the bicycle and took the hide to the house, and put some saltpeter, salt and alum into a pail. I'll work it dry to morrow night, I guess; I ain't going up there again—not with the little popgun again, I tell you."

He did though, and got a good bit of sport:

"You know I told you about getting a cat up to the Plains the other day. Well, I was up there again to-day, and had quite a time. I was going along on the moss which grows there instead of grass, and all to once I see bird right beside a bush crouched down close to the sand there. I rode right past about three rods away from it, and when I was about twelve rods beyond I got off the wheel and sneaked back with the pistol. I kept an old stump between me and it, and pretty quick I looked over, and there was Mr. Bird. I aimed at his back, and knocked him into the dirt. It was a woodcock. Now I always thought they stayed down in swamps and swales, but here he was in the sand, and where he could see a mile in any direction. On the way to the wheel I killed a little green snake. Oh, I forgot! On the way up I saw a big flock of wild ducks. Going to the St. Lawrence I guess, because it was a warm day.

"I found some bird tracks in some sand across that field a ways, and tried to put them up, but couldn't; so I went on till I came to a wire fence. I hung a pine branch on it and left my wheel while I went up through a little gully I could just see beyond. There were a couple of cows there, and while I was going around one I fell over a log in the briers, and when I got up I heard something run. I looked, but couldn't see anything 'cept some bushes waving. Rabbit, I guess. I followed after a while, but couldn't see anything. When there are woods there on the Plains they are awful thick. You have to go through edgeways all the while. I'll bet a fellow with a good dog would get a lot of them. I've heard some fly, but couldn't see them for the briers digging in my eyes

"They say there are lots of foxes here. I never saw but one, and a dog was after him. It was up to the Plains the day I got the cat I was going along across a mile or so of marsh when I heard a dog beller out. I looked back, and there, about 30 rods off, was a fox Too far to shoot and the riding wasn't so bad, only all hummocks. I lit out after him and went as fast as I could. He ran too, ran like lightning, with his tail out behind him. I got about eight or ten rods of him before he saw me. I guess he was scart. I'd 'a' caught him if I hadn't run into deep hole and raised on the far side of it clear out of the saddle. The ground up there is soft all over, and even the logs are rotten and crumbly and dry. You can't ride over one, though. It ain't safe to ride fast, either, because you go through grass, and that hides holes. Sometimes you can ride a long ways right off across country, then you fetch up in briers or a gully."

Another time he writes: "I went down toward Coon's mills yesterday, and turned up toward Theresa, and went 'way off toward—I don't know where, to the west, though. I went through all the woods I could see, and took my wheel with me most of the time. It was a hard job in places. I had to carry it right up a steep rock with trees on it, and went till I got lost. I saw a few partridges, and one sat still too long. He sat up, with his black feathers showing, and I shot his head off. I lost my lunch somewhere off my wheel, and was most starved; so I took and skinned the bird and dressed him. Some farmer had salted his sheep in the pasture there, and I made a fire and ete roast partridge—yum, yum, but it was good. I ete him bones and all almost. I cracked some butternuts and had some apples, and saved the wings so I could prove I had the bird. I got the wishbone yet. I had to ride seventeen miles before I could get home again, and I was pretty tired too.

Once in a while he writes of going with some one to hunt. One of these is as follows, so far as the hunting went:

"You know that little girl who I give the hawk wings to one time. Well, I took a rabbit over there one day for her ma to cook 'cause George had enough for us, and I said that down where I come from the girls all know how to shoot them. Then I asked if Millie knew how to shoot. Of course she didn't. I knowed that, but after a while her ma said she might go if she wanted to; so last Wednesday there wasn't no school and so we went in the afternoon. You just ought to see her ride; she is a flyer. Well, we went down to the graveyard woods, and I put up a mark and showed her which way not to shoot and where trigger and hammer weren't alike, and by-and-by she could hit a stump as big as a barrel 'bout every time. Considering she's a girl, that's pretty good, isn't it, for the first time? Next night we shot another box up, and Saturday afternoon we went down to the graveyard woods again. While we were riding over the bridge a flock of ducks went over the hill, and sailed in back of the woods and circled back, and then out of sight again. I knowed what that meant, so I hustled down to the woods and hid the bicycles behind the fence, and down below the woods was seven black ducks.

"They weren't six rods from where we were behind those alders, right where George got that big pickerel that summer you was here. Well, I put in a .22 short smokeless and got the pistol into the fork of a bush and the twigs all out of the way and told her to squint through the sights. She did and wanted to know what she should do then. Well, after all that monkeying she pulled the trigger. I don't know which one she aimed at, but I guess it was at a log fourteen rods down stream. Anyhow she plugged a duck right in the breast and he rolled over. She started to squeal, but I shut her up and shot two more before the darn fools knew what was up. Then she'd been wiggling around so much that the ducks was 'tracted to where we were and they jumped up 'bout 6ft. and flew off—never see anything like that before. Well, I went and waded out at the rifts just below, and when the birds came down I got all of them, and we went home after we'd shot some at a target. She was tickled, I tell you, when she found she'd killed a duck. She wouldn't know a bluejay from a hen hawk.

"Sometimes," he writes on another occasion, "I shoot at fence-posts as I ride past them. It ain't hard to shoot, but it is to hit. Once I shot at a fool crow what let me get close to him on my bike—missed him 'bout a rod, and he jumped right up straight and went as though to break his neck.

RAYMOND S. SPEERS.

NEW YORK.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practiable.

Yachting.

As the yachting journal of America, the FOREST AND STREAM *is the recognized medium of communication between the maker of yachtsmen's supplies and the yachting public. Its value for advertising has been demonstrated by patrons who have employed its columns continuously for years.*

WE learn from our English exchanges that a meeting of the committee of the Minima Y. C. was held on Nov. 23, at which the secretary was instructed to cable to the Royal St. Lawrence Y. C. as follows: "Confirm Brand's challenge, conditions 1897." It has taken just three months for matters to progress thus far, and in the meanwhile the challenge of the Seawanhaka C. Y. C. has been accepted.

AT the meeting of the Y. R. A. on Dec. 2 the proposal to alter the rule for the smaller classes was rejected by a vote of 21 to 6. As the Council refuse to recommend the proposal, it could only have been passed by a three-fourths vote. Mr. Æmilius Jarvis was present at the meeting of the Council on the same day, and the subject of international agreement in rules was discussed by him and the Council.

AFTER several years of remarkable success in the sailing as well as designing of small yachts, Mr. Linton Hope has rejoined the canoe sailors, and is now winning races in the Royal C. C.

IT is conjectured that the owner of the new Watson schooner, which will be nearly 165ft. over all and 115ft. l.w.l., is one of the Orr-Ewing family, famous Solent yachtsmen.

THE annual general meeting of the Yacht Racing Union of Long Island Sound is held as we go to press, on Dec. 7. At a meeting of the Council on Nov. 24 it was decided to recommend that the name be changed by the substitution of the word "Association" for "Union" in order to avoid any conflict with the Y. R. U. of N. A. It was also recommended that the rules of the latter organization be adopted.

IT is reported that the Buffalo Y. C. is about to challenge for the Canada cup, won by Canada from Vencedor in 1896 and since established by the owners of the former yacht as a perpetual international trophy for fresh water. Such a contest in 1898 will do much to revive racing on the Lakes, where stimulus of some kind is quite as badly needed as on salt water. Last year there was very little racing, even on Ontario, and that almost entirely on the part of Canadian yachts. Should the proposed challenge be issued, it will be in the 32ft. or 37ft. class, both popular sizes on the Lakes. An early challenge in either class, allowing ample time for building, should bring out a number of yachts for the trial races, which will presumably be held by both defender and challenger. Under the present Lake rules, the coefficient of midship section and the scantling both being limited, the resulting yachts could hardly fail to be of a type that would be permanently useful and, for several years at least, capable of good racing.

It is most desirable just now that the yachtsmen on both shores of the Lakes should work together in building up one strong class, either the 32ft., 37ft. or 42ft.; and the best means to that end is through a challenge from one of the United States clubs to the Royal Canadian Y. C. for the Canada cup.

INLAND ROUTE TO FLORIDA.

Part II.

CHARLESTON TO JACKSONVILLE.

FROM Charleston to Jacksonville the route is mainly through small creeks and rivers, and is indicated on the charts by a dotted line.

The streams connecting the inlets and sounds are all subject to tidal ebb and flow, and receive their waters generally from both ends; at the meeting of the tides there is usually a shoal, called the "divide."

In most of the streams the ebb tide forms a shoal in the eddy below the points, and the sharper the bend the longer the shoal. These are called "ebb tide shoals."

As a rule, the bottom is soft, except where there are oyster beds and in the phosphate rock bottoms.

From Charleston to Fernandina a draft of about 7 or 8ft. can be taken, but such a draft requires high tide at many places.

From Fernandina to the St. John's River there are places with only 1¼ft. at low water. At high water about 4ft. can be taken through.

Vessels of over 100ft. in length sometimes experience difficulty in rounding some of the sharp bends which are encountered in the passage, the channel of which in some places is extremely narrow and crooked.

A little experience will enable one to tell at a glance "by the lay of the land" just where the best water is.

Taking any one of the crooked rivers as an example, a careful study of the chart will show the law which governs the formation of shoals.

It will also show how the ebb tide scours out a deep channel.

All compass bearings and courses are magnetic and all distances are in nautical miles.

Leave Charleston at half flood.

Run up Ashley River, and when opposite the mouth of Wappoo Creek steer for it on a course S.W. by W. ¼ W. Keep two tall chimneys in Charleston in range astern.

On north side of creek, at the entrance, there is a large building, on which is a sign, "Acid Phosphate."

After entering, for deepest water in the first reach keep left side of creek best aboard. Just before reaching woods on left side haul over to right side. Make turn, steering about N.N.W., and keep right side about 10yds. off for best water.

On point to right and ahead are seen two houses. Go to that side, then make for point to left, running along close to left shore. Keep middle of creek, as piles are seen ahead on left side.

Turn to left through New Cut, which will be seen ahead. Steer through middle of cut until two stakes are seen to right, then cross to left side.

ELLIOTT'S CUT will now be seen ahead. Some high trees are on each side, with rather higher banks. Steer through middle of cut, running out into Stono River on same compass course.

STONO RIVER.—When the Stono River opens up to the left, run in on a course about W. ½ N., keeping left bank best aboard to avoid sandbars to right, as the chart shows. When reach to north is well opened and a large grove of trees is abeam to left, cross gradually to right bank, steering about N.W. by W. ½ W. Steer straight for dock on first phosphate mill seen on right side ahead. When abreast of this, steer for and follow along left side. Course about W. by S. Near here is a sign on a mill, "St. Andrew's Phosphate Co."

When up with a small creek to the southward and the points of the next reach are open, change gradually to the northward of west, rounding the point to the north, about 150yds. distant.

Now steer a course about N.W., the next point showing on your port bow.

When the reach beyond this point is open, steer about W. by N., leaving the left bank 75yds. off.

When abreast a small creek on the port hand, cross the river to round the point to the north, passing along right bank on a course N.W. ½ N., leaving shore 20yds. away.

When nearly up with point on left side cross again to that side of river.

Now keep left bank best aboard, afterward steering to middle of river.

A little past here is Rantowle's Creek. Head for mouth of it, then make for left shore.

From Rantowle's Creek to Church Flats keep middle of river.

CHURCH FLATS.—When nearing Church Flats a small settlement is seen under some tall trees. It is called Wide Awake.

A dock just west of settlement is Wide Awake Landing.

Church Flats begin at the white house on a bluff, with dock making off from it.

In running through Church Flats keep to the left after leaving white house just mentioned. When abreast of last small cabin with chimney on west side of it, which is seen to the right, the water deepens. Channel well to left here. From here keep rather to left of middle. Tides meet at Church Flats. It is a "divide."

There are wrecks and stumps on west side of Church Flats.

Slow down when you see well inshore a small cabin on the right side. There are some wrecks here just off the mouth of a small creek near this cabin.

NEW CUT.—When running through New Cut some large white buildings are seen ahead, which at first appear to be on right side of river. They are later seen to be on the left side, and the settlement is New Cut Landing.

Church Creek is seen to the left when nearing the settlement. Keep left side best aboard from Church Creek to buildings at New Cut Landing. There is a store and post office here.

WADMELAW SOUND.—When out of New Cut steer along left bank. Openings to the right will be seen here. Ahead a point will be seen to the left. White houses on mainland with dock making out. There is a house on the dock. At this house to the left you open up Wadmelaw Sound. Two range stakes will be seen ahead and they mark the shoals.

Steer to right of first one, leaving it 50yds. to port. The shoal well to S.W. of first stake is bare at low water. Then steer to south, crossing between stakes, leaving second one 50yds. to right.

Steer through about S.S.W. at low water.

On page 22, "List of Beacons," etc., it will be seen that three beacons have been established here. The above was written previous thereto.

Now round to westward, passing small settlement to left, then a clay bluff, keeping about 100yds. off, and steering for middle of low woods seen ahead. Gradually round to N.W. by W., then N.W. ½ W., when you will open up some houses to south.

Steer for white house on the dock ahead at Enterprise, leaving low, marshy point with stakes on it 20yds. to left, and steering about S.S.E. ½ E.

Steer along half-way between the dock with house on it to left and marshy point to right. Right here you will see a large house to the left with two trees on west side of it. Gradually round to W., then W. by N., keeping about 75yds. away from the left shore.

Some houses will be seen ahead, with heavy grove of trees to left of them.

Steer along W.N.W. for north edge of woods. When a creek opens to north of you and white houses bear S.W., steer along W.S.W., then gradually round to S. about 200yds. off right shore. There is a yellow clay bank here. Then steer S.S.W. for highest building seen ahead on Young's Island. Railroad station, post office and stores here.

Steer for end of wharf, then steer S. by E., leaving point of Young's Island 20yds. off.

Leave next point 25yds. to left, steering S.W.½S. Then steer S.W., shifting to S.W. by W. for Martin's Point, which will be seen ahead. This is a long, low, marshy point, and appears to head you off to the westward. Gradually round to W.S.W.

WADMELAW RIVER.—When to west of Martin's Point, round it, leaving it 75yds. to left, and then head about S.S.W. When 75 or 100yds. off land ahead steer along with it, making about a S.E. by S. course, and leaving marsh point 75yds. to right.

When end of point to right bears S. steer about S.E. by E., gradually rounding to S.S.E., leaving point 150yds. to right. A low, marshy island is seen ahead. Leave the south end of this island 75yds. to the right of you.

Now steer about S.W. by W. for round tree seen over marshy island ahead, afterward rounding to W.S.W.

Steer along, leaving marsh island 30yds. to left. Steer about W.S.W. ½ W. around point to left, after rounding which steer S.W.

A broad expanse of water is now seen ahead.

NORTH EDISTO RIVER.—Bluff Point to left is a bluff about 20ft high, with trees and houses on it. Away off in the distance Wadmelaw Point is seen. It is a long point of marsh.

Some stakes off Bluff Point mark the edge of the shoal water. Steer about S.W. for opening seen ahead, which is the

DAWHO RIVER.—Large, scattered trees are seen beyond the Dawho River. The entrance is between two marshy points.

It is shoal off the southwest point at the entrance.

Enter, steering fairly close to White Point, and when inside steer about S.W. by W. for Marsh Island, seen ahead. There are stakes on edge of this island. Leave the island 40yds. to left.

After leaving island gradually round to S.S.W. and opening will be seen to right, ahead, with stakes to left before you reach it. When stakes are abreast round to W. by N., then W.N.W., then N.W., giving point to right a berth of 100yds. On some low ground ahead a settlement is seen.

There are high trees back of it. This is White Point Plantation.

When point of marsh to left bears W. and is 100yds. off, commence to round it, going to right of the small marsh islands.

Steer W., then W. by N., leaving all these islands 150yds. to the left.

Steer N.W. by N., running over to right side of river as the reach opens. When past there islands you are in the narrower part of the river. The water is now good in middle of the river until you reach the

SOUTH EDISTO RIVER.—After running out of the Dawho River, follow along the left bank of the Edisto at first, and from here to the mouth of Mosquito Creek use the chart.

There is good anchorage ground to south of Marsh Island near Dawho entrance. The water is always fresh here, and it is a good place to fill tanks.

MOSQUITO CREEK.—A small cabin and a tree are on the west bank of the Edisto at the mouth of Mosquito Creek.

The shores of the Edisto are low and the tree is a good landmark in the night time.

Some houses are on the right bank of the creek near its mouth.

Mosquito Creek runs almost dry at low water, with the exception of a very narrow channel. It is one of the most difficult parts of the passage. Take high water to pass through. Take middle of creek from the Edisto to the Ashepoo.

Mosquito Creek is very narrow. When woods to right are passed you are in the shoalest place. The creek widens after passing here.

ASHEPOO RIVER.—When you run out of Mosquito Creek turn to left and steer for some piles seen on left shore. Steer down first reach, leaving left shore 40yds. off. Then keep middle of river to its mouth.

After leaving buoys at mouth of river steer S.S.W. for old tower seen ahead in St. Helena Sound. This is an old and abandoned lighthouse.

ST. HELENA SOUND.—Run across the Sound as per chart.

COOSAW RIVER.—The land on each side of the entrance to this river is low and marshy.

A short distance up the river dredges are seen at work on the phosphate beds.

Use the chart in running up the river. Parrot Creek is around a low, marshy point to the left. When near Parrot Creek steer W. by S. for buoy seen ahead.

When up with buoy No. 1 a large white building will be seen on Ladies Island to the S.W. This is a cotton house. A little north of this is a dock with a building nearby on the mainland. This is the Custom House.

The north point of Ladies' Island is a low marsh. From buoy No. 5 the entrance to Brickyard Creek is just around point to the left, with high trees back of it. The point is low, with scattered trees, among which is a white house.

BRICKYARD CREEK.—Make red and black buoy to east of creek, then steer about west for the entrance.

Coosaw Mining Co.'s works are N.N.W. of this buoy. Here there are machine shops, marine ways and a post office.

Head into creek about W. by S., leaving left point 75yds. off.

Follow along the left shore, leaving it 60yds. off. The course is about W.S.W. Just around point to left a dock will be seen, with houses back of it. Pass about 20yds. off end of dock, which is called Brickyard Store.

From the point on the port hand at the end of the first reach steer about S.W. for the point on the west side, being careful not to close the points astern (the one just left and the one at the northern side of the entrance to the creek) until well across toward the west bank. As you approach it change course to about S., heading for the houses which will be seen in that direction, hauling gradually to the westward as you approach the southern bank. Follow this side until you are heading about W.S.W., when you must edge across again, hauling to the southward and to the southward and eastward, passing close (within 30yds.) to the eastward of a small islet situated in the center of a bight on the west bank.

Then follow along right-hand shore, steering about S.E. by E. for clay bank seen ahead.

Now steer in to left shore, leaving clay bank 40yds. to left. After this hold middle of creek, except when rounding points.

BEAUFORT RIVER.—Use chart for this river.

PORT ROYAL SOUND.—When between buoys Nos. 4 and 7 at the mouth of Beaufort River, steer about S.W. by S. until up with Paris Island Spit Buoy (red and black), when change course to W. ¼ N., passing Daw Island Spit Buoy (red and black) close aboard.

From this position steer W. by N. for the entrance to

SKULL CREEK, which heads you a little to south of edge of woods seen ahead.

When left point of entrance bears about S.W., run in to west course, gradually rounding to southward and westward as mouth of creek opens away off inshore.

Do not approach left point nearer than ¼ mile, or go as follows:

Having arrived off Skull Creek, bring the extremity of a small wharf, situated on the south side of the creek at Seabrook, just open of the northwest side of Bobb's Island, and stand in for the middle of the creek on a course about S.S.W. ¾ W., and as you approach the western entrance point follow along with that side best aboard. As you get in the mouth of Skull Creek, three or four houses are seen among trees on left point—Seadrift Landing. When these houses are ⅛ of a mile off, head W.S.W., following along north or right shore, and leaving it about 50yds. off.

Follow right shore clear around, passing inside of small shell bank seen to left with stakes on top of it.

When ¼ of a mile past this, give the shore a wider berth, heading S. by E. and running over to left shore.

Just as you get here, is a bad spot. Steer S.W., going by a creek which makes in from north. When just past this creek, steer about W.S.W., keeping middle of creek.

Steer along about W.S.W., when two small cabins will be made out on point ahead. Keep right shore 60yds. off, rounding to S.W. as point nears. Three or four higher buildings will be seen on left shore ahead. Keep in middle as you near these houses, steering S.W. ½ W.

A dock is now seen on left-hand side on Jenkins Island. Head in close to left shore as you near the dock, then follow left shore, afterward crossing to right shore and leaving it 50yds. off.

A row of palmetto trees, with cabins, are seen to right as you near the mouth of Skull Creek.

CALIBOGUE SOUND, TYBEE ROADS AND SAVANNAH RIVER.—No written directions are necessary. Use the chart.

If too rough to enter Savannah River by way of Tybee Roads, it is possible to go more inside by way of the Cooper River and connecting streams.

The sailing directions are given in "At. Local Coast Pilot," sub-division 20, page 149.

The wreck at mouth of Ramshorn Creek does not show above water when tide is three-quarters flood. Go close to south point.

SAVANNAH.—If possible, leave Savannah on the first of the flood tide.

SOUTH CHANNEL.—Having arrived off the northern entrance of the South Channel (leading to St. Augustine's Creek), keep close to the obstructions on the starboard side at the entrance: but when passed, cross the channel to within about 25yds. of the Elba Island shore, and hold that shore until the single palmetto tree on St. Augustine's Creek opens clear of the western point of the creek; then steer for the entrance about south and enter it with the western point close aboard.

When fairly inside, edge out into the middle of the stream, and hold it until you reach the Wilmington River.

Pass through railroad bridge, always using the east side of draw, afterward steering to right.

After a time the buildings at Thunderbolt will be made out.

Good artesian well water may be had at a dock in Thunderbolt.

The route through Romerly Marshes has been abandoned.

WILMINGTON RIVER.—Use chart for this river.

NEW CUT, WASSAW CREEK AND ODINGSELL RIVER.—Use chart for these waters.

Keep to the left all the way through Wassaw Creek after leaving New Cut.

ADAMS CREEK.—Use chart for this creek.

In running out of mouth of creek keep left bank 10yds. off (Little Wassaw Island) until southern side of marsh to starboard, is well open. Then steer W.S.W. The chart is incorrect here. Leave island 200yds. off, heading S.W. by W., as you approach its western end.

Give its western end a berth of 100yds.

Now steer west for entrance to

HELL GATE.—Entrance to Hell Gate is to right of sand-

bank, on marsh to left side and ahead. Raccoon Key has low trees on it.

Make turns as shown on chart and run up the

OGEECHEE RIVER, steering along right side and keeping it 50yds. off.

Hold right shore until you approach point to right with grove of palmetto trees, on somewhat higher ground.

Then entrance to Florida Passage will be seen to bear S.W. by W. to right of low marsh point seen ahead, with high trees away off in the distance.

FLORIDA PASSAGE.—Steer for middle of entrance, W.S.W., and use the chart.

BEAR RIVER.—Use chart for this river. Just other side Kilkenny Creek, sandbank and higher land shows ahead.

When you open the last reach in this river and see the open waters of St. Catherine's Sound, steer about E. by S.

On this course you will sight black buoy No. 1 (on Medway Spit) on the starboard bow. Pass this buoy on your starboard hand and steer W.S.W. between Medway Spit and the Middle Ground.

Round the red buoy as chart shows and steer for

WALBURG CREEK.—There is a beacon on the west point of entrance to this creek.

Work the creek as the chart shows and run down to

JOHNSON'S CREEK.—Entrance to Johnson's Creek is through low marshes. As you open the mouth of creek high woods are seen ahead. Steer in about S.E. by E. Keep middle of creek until you near its southern mouth, then take the left bank as the chart shows.

SAPELO SOUND.—Cross Sound as the chart shows, heading for

MUD RIVER.—The entrance to this river is buoyed. Sapelo Island, to the left, is covered with high trees.

Having passed black buoy No. 3, steer S.W. by W. ¾ W. until you open the western shore of the island to the southward of High Point. Then steer S.W. ½ W. for Mud River buoy (black No. 1).

One-half mile S.W. ½ W. of buoy No. 1 is a stake to mark the shoal to south. Go to right of it about 20yds. Keep course S.W. ½ W., and steer for stake on point of marsh ahead and to right. Keep 40yds. off right shore as you near the stake.

This stake has a round barrel head nailed to it which is painted white. Follow along same course until you make a smaller stake (about 100yds. to S.W. of barrel head). When up with this steer S.S.W. for entrance to

NEW TEA-KETTLE CREEK.—Leave left point 50yds. off as you enter, and keep to middle of creek for best water.

The large lumber mills and other buildings at Doboy show as you run out of Old Tea-Kettle Creek.

DOBOY SOUND.—From the mouth of Old Tea-Kettle Creek steer about S. for the red buoy, and turn to right, drawing in to the right bank.

NORTH RIVER.—At Doboy Island dock there are stores, a post office and good artesian well water.

When you open the passage between Commodore and Doboy islands, steer for the western point of Doboy Island, and follow along its western side about 50yds. distant until up with its southern point.

You will then pass from the North into the

BACK RIVER—Steering a course to the eastward of south, and gaining the eastern shore before you are up with a small island situated in this reach about half a mile beyond.

Hold the eastern bank close aboard until you are up with the point at the junction of South River, when you must cross to the western bank with Sapelo lighthouse astern.

LITTLE MUD RIVER.—Keep left shore 25yds. off at first, afterward leaving it 40yds. off as the mouth of the river is neared.

ALTAMAHA SOUND.—Some high trees are seen ahead as you open this Sound. When Little Egg Island opens it will bear about E.S.E., when you must steer S.S.E., crossing Little Mud River Bar, where you will find 4ft. of water at low tide. As you cross the bar, looking about S.S.W., you will see two marshy points just opening. The channel passes to the westward of the more distant one, but a direct course to it cannot be taken.

After you have crossed the Mud River Bar and have deepened your water to 10ft. or more, steer S.E. ½ E. for half a mile, heading for the northeast point of Egg Island.

Then change course gradually to the southward and westward, and as soon as you deepen your water to 18ft. or more steer W.S.W. and hold that course nearly ¾ of a mile, passing into the opening between the two marshy points mentioned above.

When you make out the one on your port bow distinctly, bring it to bear about S.W. and steer so as to pass it close aboard (20yds. off).

The channel to the westward of this marsh island is very narrow, but 9ft. is the least water to be found in it. The land right ahead is higher. with some bushes on it.

Steer W.S.W. along St. Simon's Island, keeping left shore about 50yds. off.

BUTTERMILK SOUND.—As you near this Sound steer N.W. ⅓ W. for Broughton Island, leaving point to right with low bushes on it 70yds. off.

One Mile Cut will be seen open and ahead.

Follow along Broughton Island, leaving the shore 75yds. away.

FREDERICA RIVER.—When the left point of entrance to Frederica River bears about S.E. by S. steer over for it. This point is rather high, with bushes on it.

Keep left point 25yds. off. Follow along left shore, steering about S.E. Work river same as others, giving all points a good berth.

As you run on last stretch of Frederica River you see the lumber mills of the St. Simon's Island Lumber Co. to the left. There are some large saw mills here.

ST. SIMON'S SOUND.—When abreast of black buoy No. 1, at mouth of MacKay's River, steer about S. by E. for the north end of Jekyl Isl nd, and when nearly across the Sound change course to the westward of south, passing to the eastward of red buoys in the Brunswick River.

JEKYL CREEK.—From red buoy No. 10 a white shell bank with beacons on top of it is seen at the mouth of this creek.

From red buoy No. 10 steer about S.W. by S. until up with the buoy off Jekyl Creek.

From this buoy you will see two tripods in range to the westward of the mouth of creek. Steer about S. ¾ E., holding this range until the mouth of the creek opens, when change course to the eastward and enter the creek, keeping in the middle up the first reach.

As the creek widens out, go 40yds. to the left of the two small hammocks seen to the right.

When abreast of smallest hammock steer over to cupola of club house, afterward steering inside of point ahead, as the chart shows.

Good artesian well water may be had at the club house dock.

Run balance of creek as chart shows, keeping Jekyl Island best aboard.

ST. ANDREW SOUND.—After rounding the south point of Jekyl Island steer S.E. until up with a red and black buoy on east end of Horseshoe Shoal and N. by E. from the lighthouse.

When up with this buoy steer S.W. by S. into the

CUMBERLAND RIVER.—Follow the Little Cumberland Island shore until the lighthouse is shut in by the woods, when steer S.S.W. ⅝ W. for the extremity of the high point of Cumberland Island.

When abreast the long wharf on this bluff point change course gradually parallel with the shore and continue around the point and to the end of a small strip of shell beach nearly abreast the lower end of the woods.

Cross the mouth of Brickhill River, steering about S.W. ½ W., keeping well to the eastward of the middle of the Cumberland as you approach its southern entrance point; but when up with it edge across to the western bank, toward the mouth of Shellbine Creek.

Follow the western bank best aboard until you have turned the point one and a half miles below and are heading a course to the southward and eastward, when you must cross to the port hand bank.

About one and a half miles below this you will see the mouth of Delaroche Creek, with a small marsh island a short distance to the northward of it.

When nearly up with the marsh island, with the eastern bank close aboard, steer for Delaroche Creek, crossing the river, and when nearly up with it change course gradually to the eastward, crossing its mouth and holding the right-hand bank close aboard.

After following this side about one-fourth of a mile cross again gradually to the eastern side.

You will now make out to the southward and eastward a cluster of small, marshy islands. The channel lies along the east side of the most eastern island.

Leave the east side of this island 30yds. off, and when its southern end is reached turn to starboard and run along by the south end of all these islands until point of mainland ahead is reached.

Follow closely along this right-hand shore for 150yds., or until a pile of stone ballast is reached, when turn sharply to port, and steering S.S.E. a small marsh island about 15ft. in diameter will be seen ahead and in range with the end of a marshy point just beyond. When you near this islet turn to south as chart shows, leaving a small island about 150yds. to the right.

Then steer S.S.W. ⅛ W. until you are about 150yds. from the shore of the next large island, to the southward of the small one.

From this a course of S. ⅛ E. must be steered, crossing to the other side of the river As you approach this port hand side you will see to the southward a large marsh island lying in the middle of

CUMBERLAND SOUND, below King's Bay. Steer with the northern end of this island a little on the port bow, and as you near it steer to pass along its western side and to the westward of the next island to the southward.

When you are abreast the latter you will see another island nearly ahead (about S. by W.). Continue on the same course until you are within one-fourth of a mile from the island ahead, when change course a little to the eastward of south.

When abreast the northern point steer about S.E by S. for half a mile, after which follow the Cumberland Island shore until you sight the red and black buoy on Tiger Island Spit. Pass to the northward of this buoy and enter the

AMELIA RIVER, keeping the eastern shore until you arrive off Fernandina.

From Fernandina to the St. John's River is a difficult piece of navigation.

It is better to take a pilot.

After leaving Fernandina you go through County Bridge, just before you get to railroad bridge shown on chart.

The water is shoal to the left just before you go through the County Bridge.

As you run out of Kingsley's Creek it is very confusing.

Keep to the right for channel. It is staked on banks to right as you run for main shore to starboard.

As you enter Gunnison's Cut two or three palmetto trees are seen to left and about one-quarter of a mile from shore.

When near the entrance to Breward's Cut there are some wide places. The channel is to left, and there are shoals in the middle.

There are numerous oyster banks in the Sisters, and at the mouth of it the navigation is too crooked to be described.

THOS. I. MILLER.

The L.W.L. Rule.

PLYMOUTH, Mass., Dec. 1.—*Editor Forest and Stream:* Referring to your article of Nov. 27 on the Massachusetts Y. R. A., your position does not seem to be clearly defined. You say: "We are pleased to see that the proposal to reduce the crew limit was not carried"; and you say further, "We are strongly in favor of reduced crew limits in all classes to the number of skilled men required to handle a reasonable rig for the length in each class." These two statements seem to conflict. The only explanation to the contrary I see is that you may think that taking one man from the crew of each class may leave more crew than necessary for some classes.

Those who favored reducing crew by one man may not have considered the reduction to be enough for all classes, but to be as great a reduction as it would be desirable to make for a trial year.

NATHANIEL MORTON,
Ex-Com. P. Y. C.

[The advocates of a length measurement with sail untaxed, both in the East and elsewhere, have for some time pointed to the success of the Massachusetts Y. R. A. as a conclusive argument for their side. So far from this being the case, the successful racing of the past two years is due, in our opinion, to several causes which are entirely disconnected from the question of L.W.L. only versus L.W.L. and S.A. as factors of the rule. In order to test this question conclusively, it is necessary that new boats, especially designed for the L.W.L. rule and to the full class limits, shall be built and raced. This will be done next season, and (through the retention of the old crew limit) under the same conditions as have existed in the past. If the limit had been changed this fall, as proposed, the result of the building and racing would be far less conclusive as to the extreme type promoted by the L.W.L. rule, as the limiting of the crew necessarily acts to restrict sail area.

As the rules and general conditions now are in the Mass. Y. R. A., with a large crew limit and everything free except L.W.L., there is every inducement to the racing man to build a poor type of boat, of great beam (to carry the crew well to windward), of limited draft and displacement, excessive over-all length, extravagant sail plan and the lightest possible construction. Such a "splasher" is likely to prove the winner in all the classes of the Mass. Y. R. A., to the exclusion of all honest craft, of which there are still quite a number in the racing. The experiment of 1891-2, in the 21ft. class, failed of conclusive results through the excellence of the Herreshoff Alpha, the low-powered boat of the class, and the special skill of her three owners; and, on the other hand, from the inferiority in design of the high-powered boats. The same experiment will be tried in 1898 under very different conditions, and in a number of classes, and it is likely to dispose finally of the claims of L.W.L. as the sole factor of measurement, and to open the way to a new formula and a reasonable crew limit.]

The Miramichi Y. C. Rule of Measurement.

Editor Forest and Stream:

I used to think our rule of measurement in the Miramichi Y. C. was rather primitive, though very convenient, but some of the great yachting associations are moving in our direction. We do not tax sail, and I note that the Massachusetts Y. R. A. does not now tax it; that it is taxed at only one-half its area under the new English rules for large yachts, and that it is not taxed, or recommended for non-taxation, in the smaller British classes.

Our rule is very simple. We add two-thirds of the L.W.L. to the extreme beam and get the racing length.

It has encouraged the building of yachts of moderate beam and consequently of moderate sail area—a very nice type of handy and serviceable boats. The wide skimming dish is discouraged. The measurer has so very little to do that he asks for no fees. Everybody carries all the sail he can handle with the limited crews allowed. There are no restrictions whatever except on the number of men and against the shifting of ballast.

Oriana, a boat of very moderate proportions, with small sails, being three and a half beams on the load line, and absolutely safe from capsizing in any wind, an ideal cruiser, has won the championship pennant for three successive seasons, though sailing against larger yachts—won it in light winds, in reefing breezes, in smooth water and in rough.

This rule would encourage the building of fin-keels, and render them certain of success if it were not for the fact that deep draft is so inconvenient on a tidal river course that nobody cares to be bothered with it. But it would be easy to amend it in such a way as to meet the fin-keel problem. Add, for instance, to the racing length all of the draft, or a certain percentage of the draft in excess of, say, two-thirds of the beam. This would permit a yacht of 6ft. beam to draw 4ft. without tax on draft, and one of 9ft. beam to draw 6ft., and by adding any excess of draft to the racing length the carrying of low-down lead bulbs on metal fins would be discouraged.

Is not the rule, with an amendment in the line of my suggestion, a very simple and effective one, meddling very little with the designer, and not at all with the sail-maker?

J. L. STEWART.

CHATHAM, N. B., Nov. 26.

Lake Y. R. A. Annual Meeting.

HAMILTON, ONT.
Saturday, Dec. 4.

THE annual meeting of the Lake Yacht Racing Association was held at the Royal Hotel, Hamilton, on Dec. 4, all the enrolled clubs being represented. Notice had been given of several amendments to the measurement rules, all dealing with the coefficient of the midship section, but after long discussion no changes of importance were made. Provision was made, however, for a restricted class of cabin knockabouts in addition to existing classes.

The tables of scantlings prepared by W. P. Stephens were adopted, with a vote of appreciation of the care and labor bestowed on them. Kingston was named as the next place for the annual meeting, and Com. Strange, K. Y. C., was elected president of the Association. The question of a circuit next year was left to the Council. In the evening the visiting delegates were entertained at dinner by the Hamilton Club. A fuller report will appear next week.

YACHTING NEWS NOTES.

Catania, steam yacht, the Duke of Sutherland, has been chartered by Cornelius Vanderbilt, who joins her at Marseilles, on Dec. 10, for a cruise in the Mediterranean.

White Ladye, steam yacht, Mrs. Lily Langtry, was sold at auction on Nov. 24 by Thompson & Campbell, London. This magnificent vessel brought but £11,200 ($56,000), the purchaser being John Lawson Johnston. It is very cruelly said that when Mr. Johnston recently purchased Britannia from the Prince of Wales, he did so in the belief that she was a steam yacht; and that, being now undeceived, he has purchased White Ladye for his cruising.

The Seabury Co., at Morris Heights, has an order from a New York yachtsman for a steam yacht 103ft. over all, 83ft. l.w.l., 15ft. beam, and 8ft. draft, with flush deck and schooner rigged.

At New Rochelle Thomas Webber has commenced work on a 51-footer of his own design for Mr. Baird, of Philadelphia, for whom Mr. Webber built the successful Surprise last year. The new yacht will be a centerboard craft, and designed for racing in the class.

Katrina, cutter, has recently been sold, and Messrs. Smith & Barbey are making a new sail plan for a yawl rig.

Intrepid, schr., designed by A. Cary Smith, and built by Poillon in 1878 for Lloyd Phoenix, has just been under survey preparatory to a winter cruise to the West Indies, having recently been purchased by E. T. Hunt, of Brooklyn.

Varuna, steam yacht, Eugene Higgins, sailed from New York on Nov. 20, with her owner and friends on board, for Bermuda, Madeira, Gibraltar, and then through the Mediterranean for several months. She arrived at Bermuda on Nov. 30.

A yacht club has just been organized on the Hackensack River under the name of the Bergen County Y. C., the officers being: Com., John Wallace, New York city; Treas., Louis Mangin, West Hoboken; Sec'y, Henry C. Quelch, Jersey City; Treas., Robert Woodman, North Bergen; Board of Trustees: Henry J. Rippas, Charles C. Aimone, Robert Woodman, Van O. Nevins, August Mangin, Gratien A. Vinger and William V. Collins; Regatta Committee: Louis Mangin, Van O. Nevins and William V. Collins; Membership Committee: George P. Breakey, Emil Frantz and Emil Angot. The sailing course will be on the Hackensack, between the Plank Road and Little Ferry, five miles. A club house will be built at the bridge. The club will hold regular races for small craft.

Canoeing.

AMERICAN CANOE ASSOCIATION, 1897-98.

WESTERN CANOE ASSOCIATION, 1895-96.

Commodore, C. F. Pennewell, Detroit, Mich.
Vice-Commodore, Nat. H. Cook, Chicago, Ill.
Rear-Commodore, E. H. Holmes, Milwaukee, Wis.
Sec'y-Treas., W. D. Stearns, Detroit, Mich.
Executive Committee: R. M. Lamp, Madison, Wis.; C. J. Steadman Cincinnati, O.; F. W. Dickens, Milwaukee, Wis.

Com. Dunnell has appointed a new committee, to be known as the Literature Committee, composed of four members, one from each division. The duty of the committee is to furnish Association news to the official organs of the A. C. A. The members are: Atlantic Division, H. H. Smythe; Central Division, F. G. Mather; Eastern Division, E. J. Burrage; Northern Division, E. B. Edwards. We have not yet heard from the committee, but our columns are at its disposal.

As appears from the proposed regatta programme recently published, there is a misunderstanding as to the exact nature of the amendment to Rule 1 adopted at the annual meeting of the executive committee. The question of the minimum limit of depth for one-man canoes provoked a long discussion, the proposal, as formally printed in advance, to make the limit 12in., being strongly opposed by some members, who favored but 10in. As both parties declined to give way, and there was still much work to be done, we proposed a compromise on 11in., which proposal was discussed and, as we understood, finally adopted in place of the amendment calling for 10in. It is now claimed that the latter amendment was the one adopted. Under the circumstances it was very difficult to keep track of the exact proceedings, but we certainly understood, and so noted at the time, that the 11in. limit was voted on and adopted. The matter is not a very important one, but it should be clearly understood what the official limit is.

The proposal of Mr. Palmer, published this week, is one that we can heartily second, having advocated a similar plan several years ago. The regatta committee (by the way, the term "race committee" is now coming into general use in yachting, and is much preferable) should be a continuous body, at least one member of the old committee being on the new one. The folly of putting into office a lot of new and untried men each year has been so often shown that it is a wonder that the system has been allowed to exist so long.

It is probable that, as Mr. Palmer suggests, the plan which has worked so well in the creation of the board of governors would answer in the case of a race committee: four men in all, one from each division, one retiring each year.

As to the specific duties of such a committee the rules are already complete; the only trouble is that the committees, year after year, have ignored them. It is now the duty of the retiring committee to report to the annual meeting all amendments proposed by the committee or members. It seems hardly necessary to go into minute detail as to how this should be done; it is self-evident that if a proposal is to be voted on it must be made in such proper form and exact wording that it may be understood and discussed by the members at the meeting. A mere crude suggestion that a rule be amended is so utterly useless as to call for no attention from the committee.

The chairman of the 1898 regatta committee is now ready to hear from all who are interested in the races of the next meet. There were a good many who were sufficiently interested in the races at the last meet to kick vigorously at the programme of the committee, and not a few who opposed the efforts made in good faith at the annual meeting to improve the rules. These are the gentlemen who should now come to the front and say what they think of the proposals of the new regatta committee. These proposals have cost the committee some thought and labor, and they are given out now, nearly eight months in advance, so that canoeists may make themselves familiar with them and call for alteration in good season. We hope that the racing men will appreciate this fact, without making it necessary to call upon the new literature committee to extract the opinions of the different divisions.

The A. C. A. Races.

If there be any particular change needed in the constitution of the American Canoe Association, it is the formation of a permanent committee, to have control of the racing regulations in much the same manner as the Board of Governors controls the Association finances.

It has been the custom of the outgoing regatta committee to recommend to the executive committee of the Association that certain changes be made in the racing regulations, and also for members to publish proposed amendments in the Association's official organ. These proposed amendments then come before the executive committee for action at its annual meeting, when there is so much business to be transacted in its one day's sitting that the matters relating to changes of the racing rules, or for that matter to the constitution or by-laws of the Association, are left for attention at the last moment, only to meet the fate which awaited them this year, when there was a large mass of conflicting proposals to be acted upon in a short space of time, and this by some twenty men, selected not in consequence of a knowledge of the requirements of racing, but because of their fitness to generally represent their respective divisions.

The result of this method of procedure has been a demand for many changes each year. This year the committee unknowingly changed the old-time maximum limit of beam for the sailing canoe while intending to change only the minimum beam of the paddling canoe. This result was entirely unlooked for and undesirable.

A permanent racing board, as suggested, would be composed of one representative from each of the four divisions of the Association, each elected for a term of four years except for the first terms, which would be one, two, three and four years respectively. The members of this committee would be selected with a special view to their fitness as racing experts. They would carefully consider the racing regulations as a whole, and submit to the executive committee from time to time such changes as a careful consideration of the matter would lead them to deem advisable after having published the proposed changes as now provided for.

The executive committee could then either adopt or reject the proposals as submitted. Appeals from the ruling of the regatta committee would also come before them for final decision, which would result in a great saving of time at the annual meeting of the executive committee, and insure the prompt settlement of such appeals

This plan, if carried out, will fill a long-felt want, and will undoubtedly stimulate the interest in racing through a stability in the rules and regulations which cannot now be depended upon for any length of time.

The proposed programme for the 1898 meet, considered as a whole, is far from satisfactory. The double-blade paddling men are at a loss to know why this committee has dropped the tandem paddling event for decked canoes, which not only has the merit of being an exceptionally good race, but has also been well filled during the past. It is to be hoped that it will be on the completed programme, as it has much in its favor, and also seems to promote club entries. The argument in favor of the tandem single-blade event should hold equally well for the decked canoe. If the total number of events is to be reduced, either the swimming race, tail-end race, or the tournament might better be spared.

The open canoe has one sailing and one combined event. There seems to be no good reason for making a change in the distance of the combined event from one mile to one mile and a half. It is the intention of the committee to have this event around the triangular 1½-mile course, two sides of which will be covered under either sail or paddle, but which for the mile and which for the half has yet to be decided. Half a mile is enough for the paddle and half a mile is enough for the sail; nothing can be gained by the proposed change of favoring either one or the other. It will be better to leave the race as it was this year, but if a change must be made just for the sake of a change, then put a buoy midway between the buoys of the second leg and let sail be either lowered or hoisted there.

In the sailing race for open canoes, event No. 14, it is proposed to permit the compromise type of canoe, the one with the addition of partial decks and high coaming, to enter. It is to be hoped that the committee will not adhere to this ruling, as it is thoroughly unjust to the owners of the open canoe proper, who probably outnumber those of the half-decked craft ten to one. It cannot be doubted that the half-decked canoes, with their high coaming, will have a very decided advantage in sail-carrying power; and as they are so few in number, they might better either be barred altogether or else given a special race.

Two good events are promised in the hurry-scurry and in the relay races, which latter appears for the first time, and in which the regatta committee again discourage the use of the decked canoe. There is no good reason why a man should not have a choice of boats as he has of paddles. To make the most of this event the men must have a free choice of boats, as many clubs may not have three open canoes in camp. In the tail-end race a limit of inches should be made for the position of the crew, otherwise canoes with long end decks will be in demand.

The committee still adhere to the unpopular turn in the paddling races, to which so much objection has been found. If one or two paddlers were on the committee a change to a straightaway course would quickly be made.

Lincoln B. Palmer.

The thanks of the regatta committee are offered to Mr. Palmer, who has so pertinently criticised the proposed schedule of events. Mr. Palmer probably voices the opinions of very many members of the A. C. A. It will be very desirable to the committee to hear from others their opinions and suggestions on various points. The committee is the servant of the members in all matters relating to racing, and will do things in the way most desirable to the majority of proposing contestants, and will undoutedly make changes in the schedule. Never before, that I am aware of, has opportunity been offered to the members to criticise and suggest points in the programme before its publication in the Year Book, and now that the chance is offered, should the racing men fail to take advantage of it, no blame can attach to the regatta committee if the programme as finally adopted is not satisfactory to all.

The chairman will be very glad to receive any communications, and the sooner they are received the better he will be pleased.

All criticisms and suggestions, with the replies thereto, will be published in the official organ in the near future.

P. F. Hogan, Chairman,
243 Pearl street, New York.

Kingston, Nov. 29.—*Editor Forest and Stream:* In response to your request for comments on the regatta programme as laid out by the 1898 committee, I beg to draw attention to a discrepancy between the dimensions for paddling canoes, as given in the programme, and those adopted by the executive committee, reported in your issue of Oct. 23. The depth was to be not less than 11in. and the beam not less than 30. The depth was a matter important enough to give rise to spirited discussion, and I understand that 11in. was a compromise. With the recollection of this year's disputes fresh in memory, no doubt the 1898 regatta committee will see the advisability of making everything plain beforehand. I would suggest that in the combined sailing and paddling for open canoes it would be advisable to make the contestants do two legs with the paddle, as a race is arranged over the same course for the same boats under sail.

Can any one suggest a scheme for preventing fouls at the second and third buoys in the relay race?

The regatta committee is to be congratulated on making so early a start with its work. R. Easton Burns.

[Our understanding at the meeting was that the limit of 11in. was adopted, but we are informed that the 10in. amendment was the one approved.]

A. C. A. Membership.

Applications for membership may be made to the purser of the division in which the applicant resides on blanks furnished by purser, the applicant becoming a member provided no objection be made within fourteen days after his name has been officially published in the Forest and Stream.

ATLANTIC DIVISION.

Name.	*Residence.*	*Club.*
Addison Wilmurt	New York City	

Rifle Range and Gallery.

The Sportsmen's Exposition Tournament.

The second annual championship rifle tournament will be held in Madison Square Garden, New York city, Jan. 13-22, under the auspices of the Sportsmen's Association. This tournament will be carried out on a much larger and a more improved scale than this year's initial effort. The tournament of March, 1897, was simply an experiment. It proved such a success, however, that the management of the Exposition has given the rifle tournament committee practically *carte blanche* for its tournament of 1898

The programme issued for this event is similar in nearly every respect to the one carried out in March last. A move, however, has been made in the right direction, and any .22cal. rim-fire cartridge is allowed in all the competitions. Messrs. Zettler Brothers will have charge of the ranges, and will furnish rifles and ammunition free to all competitors; all kinds of .22 rim fire ammunition will be on hand.

The contests will be four in number, and are open to all.

No. 1 is the Individual Championship match, 100 shots in strings of 10, off-hand, 100ft. range, 25-ring target, entrance $5, including season ticket of admission to the Exposition ($2), only one entry allowed. The first prize is $20 in cash and a handsome trophy. There are eleven other prizes, ranging from $25 down to $5.

No. 2 is the Continuous match, off-hand, 25-ring target, 100ft., 50 cents per ticket of 3 shots, best two tickets to count, re-entries unlimited, but only one prize obtainable by any one shooter. The first prize is $50, second $25, and so on, there being in all thirty prizes, the lowest of which is $2 The following premiums are also offered: For the best five tickets, $5; for the second best five tickets, $4; for the third best five tickets, $3. The above makes a total of $303 donated as cash prizes in this competition.

Competition No. 3 is on the Honor Target. This, like all the others, is off-hand, 25-ring target, 100ft.; entrance $2 for ticket of 3 shots; no re-entries. The cash prizes will be $100 in cash divided into fifteen prizes from $25 down to $2, and all other merchandise or cash prizes donated by members of the different clubs and their friends. All such prizes will be announced as soon as received.

No. 4 is the favorite Bullseye Target. Off-hand, 4in. bull, 100ft.; entrance 50 cents per ticket of 3 shots; re-entries unlimited; best single shot by measurement to count; only one prize obtainable by any one shooter. The cash prizes are fifteen in number, and range from $20 down to $2. A total of $97 in cash is donated for this competition.

The grand total of cash donated for prizes in this tournament amounts to $640; there are also to be considered various merchandise prizes and the individual championship trophy.

Programmes can be obtained by addressing J. A. H Dressel, secretary treasurer of the Sportsmen's Association, 377 Broadway, New York city; or the secretary of the tournament committee, Edward Banks, Forest and Stream Publishing Co, 346 Broadway, New York city.

San Francisco Rifle Scores.

San Francisco, Nov. 29.—The Germania Schützen Club held a turkey shoot yesterday at Shell Mound Range. Three shots allowed. Scores:

J. Utschig 68, D. B. Faktor 67, C. Thierbach 65, L Bendel 56, H. Helburg 61, J. Daly 34, W. Morken 36, J. Peters 64, G. Alpers 40, H. Zecher 61, E Aigelting 24, F. P Schuster 55, H. Huber 57, J. Huber 55, N. Abrens 62, J. De Wit 50, J. Tiedeman 64, M. Wreden 26, C. Nobman 39, J. E. Klein 57, F. Rust 51, B. Wehle 32, L Haake 54, J. A. Jungblut 60, J. Siebe 52. D. Salfield 54, G. H. Bahrs 53, R. Finking 58, L. Ritzan 49, J. Young 36. D. Heise 59, E. H. Goetze 64, J. Thode 37.

The San Francisco Verein held a bullseye shoot, with the following result:

1, La Maire. 71 points; 2, Aigeltinger, 184; 3, S. Alpers, 186; 4, H. Koch, 303; 5, W. Moiken, 349; 6, J. Tiedemann, 353; 7, L. Haake, 394; 8, H. Huber, 396; 9, A. Jungblut, 502; 10. A. H Pape. 507; 11, C. Thierbach, 548; 12. E. H, Goetze, 558; 13, L N. Ritzau, 606; 14, H. Zecher, 612; 15. J. D. Heise, 687; 16. John De Wit, 704; 17, J. Gefken, 788; 18, D. Salsfield, 819; 19. O. Burmeister, 863; 20, G. Schultz, 876.

The Columbia Club's attendance was light, but some good scores were made.

Rifle re-entry matches, open to all comers, 200yds., Columbia target, F. H Bushnell rifle medal and cash prizes, 3-shot scores: A. H. Pape, 7, 11, 7; F. O. Young, 9, 10, 9; O. A. Bremer 10, A. B. Dorrell 16.

Cash prizes on flags (inch centers) during the month, Bushnell medal: A. H. Pape 10, F. O. Young 7, A. B. Dorrell 3, Dr. L. O. Rodgers 3.

Glindemann military medal: E. Jacobson 2, F. O. Young 1.

Pistol re-entry matches, open to all comers, 50yds., Columbia target, Gordon Blanding pistol, medal and cash prizes, 3-shot scores: C. M. Daiss 6, 9,

Diamond pistol record, medal and cash prizes, 10-shot scores: J. E. Gorman 35, 36.

Howard Carr, any revolver, medal and cash prizes, 6-shot scores: A. B. Dorrell 28, 30.

Achille Roos .22-rifle medal, ladies' trophies and cash prizes, 5-shot scores: Mrs. L. J. Crane 13, 21: Mrs. C. F. Waltham 15, 18. Roell.

Thanksgiving Day at Calumet Heights.

Chicago, Ill., Nov. 25.—The following scores were made to-day by the lady rifle shooters of the Calumet Heights Club. Mrs. Schmidt won the medal contest, and also took the Class A prize in the prize contest; Miss M. Gillespie won in Class B:

	Medal Shoot.	Prize Shoot.								
Mrs Schmidt (A)	3345434643—39	1	3	5	3	3	5	3	6	3	9—41
Mrs Marshall (A)	3236331364—31	7	3	4	3	2	3	0	2	2	2—28

Patti.

Trap-Shooting.

Leading dealers in sportsmen's supplies have advertised in our columns continuously for almost a quarter century.

If you want your shoot to be announced here send in notice like the following:

FIXTURES.

Dec. 13-15.—Indianapolis, Ind.—Tournament of the Limited Gun Club. First day, sparrows; last two days, pigeons. Grand Central handicap, 25 pigeons, $25, birds extra. Entries close Dec. 9, with a forfeit of $10; post entries, $30. Handicaps, 25 to 32yds. Royal Robinson, Sec'y

Dec. 16-17.—Charleston, S. C.—Tournament under the auspices of the Charleston and Palmetto Gun Clubs. Targets. Purses divided Rose system—four moneys. $200 added. G. H. Peterman, Sec'y.

1898.

Jan. 1.—Colorado Springs, Col.—Tournament of the Pike's Peak Gun Club. $100 added money.

Jan. 18-20.—Hamilton, Ont.—Grand Canadian Handicap. Live birds; $1,000 guaranteed. For full information write secretary, H. Graham, American Hotel, Hamilton, Ont., Can.

March 22-24.—Elkwood Park, Long Branch, N. J.—Interstate Association's sixth annual Grand American Handicap. 25 birds, $25, birds extra; $1,000 guaranteed to the three high guns; all surplus added

March 29-April 1.—Reading, Pa.—Annual tournament of the Pennsylvania State Sportsmen's Association, under the auspices of the Independent Gun Club, of Reading. A. Knauer, Sec'y.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed. Ties in all events are considered as divided unless otherwise reported. Mail all such matter to Forest and Stream Publishing Company, 346 Broadway, New York.

The Sherbrooke (P. Q., Can.) Gun Club evidently appreciates the good done by the Interstate Association in Vermont by its tournaments in 1896 and 1897 at Burlington and Montpelier, respectively. We have received a letter from J. G. Walton, of the Sherbrooke Gun Club, to the following effect: "Our club has decided that it is important enough to claim the attention of the Interstate Association, and has written the Association's manager, Mr. Shaner, asking for a tournament next summer. We would prefer the dates of June 30-July 1, Thursday and Friday. July 1 is Dominion Day, a holiday, and our regular tournament day. The railroads give reduced rates from Thursday to Monday. The three Montreal clubs, and the dozen or more clubs in the townships, all within fifty miles of Sherbrooke, can be depended on, as they like to come to Sherbrooke. Our club consists of some twenty-five members. The average attendance at our weekly shoots, which are held with wonderful regularity, being from ten to twelve. We are poor shots as experts go, but have lots of enthusiasm. We believe that a large number of the shooters of this Province will be glad of a chance to see the professionals shoot, and to compare their own work with that of the crackerjacks in actual competition. Our present grounds, although beautifully situated, will be excelled next season, as we are about to move to a location reached by electric cars. As the aim of the Association is to stimulate the growth of the sport in new ground, we look for its support with confidence. We are in communication with the customs authorities, and are assured that the outfit of the Association will be admitted duty free. It is doubtful if ammunition could be sent in advance, but shooters from the States attending our shoots in the past have never had any trouble with personal baggage in the shape of guns and shells. We will be able to give authoritative information on this point shortly. Canada is a grand ground for the dealers to work. Our ammunition is mostly American, with the exception of shot. Shooters, who have in the past had only scarce game to shoot at, have used cheap foreign guns; now that they require a strong wearing gun, they are buying Parkers, Smiths, Winchesters, etc. We believe that we can turn out a larger field than any seen at the tournaments of the Association during the past season, and 'we shoot through.'" In the above letter Mr. Walton presents a very strong case for the Interstate Association to consider. We believe too, from information received from those who have personally attended shoots at Sherbrooke, that every claim made by Mr. Walton can be easily substantiated.

Writing to us from Hotel Morris, Alabama, Nov. 29, A. W. du Bray says: "While in Memphis the other day I had a pleasant time pigeon shooting with some of the members of the Memphis Gun Club. Frank Poston is of course shooting in his usual splendid form, while J. C. Neely, Jr., and Judge Walker have greatly improved. In fact, one has no walkover at all in Memphis nowadays. I think they will shoot pigeons a great deal there this winter, as there are several very enthusiastic members on the club's roster. At Shreveport, La., recently I had two most enjoyable days with my friend Sam Endres, of duck shooting fame. We bagged sixty-eight on one day, and forty-five on the other; about one-third of them were mallards. Had there been as much water in Cross Lake as is usual at this time of the year, we would have bagged say from 200 to 300 in all probability; certainly 200. On my way into Texas I will try to have another outing with Sam, and then I hope to send you a sure-enough report of a successful shoot. Reports as to quail are very conflicting. However, it seems generally agreed that when frost and rain have withered up and beaten down the leaves, the shooting will be good."

We wonder if the secretaries of clubs that are going to hold shoots on Christmas Day, Saturday, Dec. 25, will remember that we go to press the following Tuesday? And if they will also remember that to enable us to give the news, when it is news, reports of all such shoots should be mailed to us not later than that same Saturday night? Mail early and avoid the rush and the waste basket!

We left New York Nov. 15, and did not return until Dec. 2. During all that time we never saw a newspaper of any kind. It was therefore not until Dec. 3 that we read with deep regret of the death of our friend John T. Mascroft, of Sutton, Mass., who died on Nov. 18. The following clipping from the Worcester, Mass., *Spy* of Nov. 19 gives a brief account of Mr. Mascroft's career as a trap shooter, and also shows how deeply imbued he was with the love of dog and gun even to the last: "John T. Mascroft, one of the most widely known bird and trap-shooters of this vicinity, died at his home in Sutton last night from creeping paralysis, with which he had been afflicted for some years. He was a member of the Worcester Sportsmen's Club, the Worcester Gun Club, the Worcester Fur Club and other kindred organizations. He was regarded not only as one of the best shots in Worcester county, but also had a high rank among the crack shots of the country. For years he had been a familiar figure at gun club shoots and tournaments far and wide. He had met on these occasions such well-known men as Dickey, Gilbert, Van Dyke, Upson, Elliott and many others, and he never failed to make a good showing. The paralysis which finally closed his life did not seem to affect his shooting qualities, and he retained his skill with the gun until the very last. He was at the North Pond range of the Worcester Sportsmen's Club the past summer. Mr. Mascroft's legs were first affected by the fatal disease, but long after he was unable to walk about he continued his favorite sport of bird shooting by driving about the country in his carriage. A year ago this fall he shot eleven partridges in this way, the birds having first been flushed by his dog from the roadside. He had one of the finest private collections of guns in this vicinity. Some eight or ten years ago Mr. Mascroft caused a sensation in this vicinity by winning a $30,000 cash prize in the Louisiana lottery, and a little later was lucky enough to win $1,200 more. Unlike many men who suddenly acquire money, he did not lose his head, but on the other hand made good use of it With a portion he bought a place in Sutton, where he has since lived in comfort. He also bought a cottage at Falmouth Heights, where he spent several summers, and was at one time postmaster of the place. The balance of his money was safely invested, in a way that gave him a comfortable living. Mr. Mascroft was fifty-eight years of age, and had lived in Sutton many years."

In the interuniversity trap-shooting contest held at Travers' Island, the home of the New York Athletic Club, on Saturday last, Dec. 4, Princeton defeated Yale by a somewhat small margin. There is, however, considerable feeling between the rival teams, not on account of Yale's defeat, but due rather to a peculiar train of circumstances that led Yale to understand that her rival could not get a team together, and would forfeit the trophy. When Mr. George S. McAlpin, Yale's coach, was assured almost up to the last minute, on what was supposed to be the best authority, that Princeton could not get a team together, while all the time the orange and black representatives were practicing at the Travers' Island traps, it looks as if a very serious error had been made somewhere. In speaking to Mr. McAlpin on this point, he assured us most earnestly that he held his informant absolutely clear from all blame in the matter. As it was, Yale went to the traps for the match with practically no practice whatever. There is another curious feature about this contest. The conditions, as we were told, called for 60 targets per man, unknown angles, A. S. A. rules to govern. How, in the name of all that is learned, could such conditions be interpreted to read: "One man up, three unknown traps, known angles"? Yet such were the conditions under which the match was shot!

The Lakeside Rod and Gun Club, of Burlington, Vt., held a successful shoot on Thanksgiving Day. Several of the prizes were chickens, etc. Prior to the above date the Burlington *Free Press* had made a note of the proposed shoot Mr Geo. H. Waldron, the president of the Vermont Humane Society, happened to have his attention called to the advertisement, and wrote the club on Nov. 20 that it would render itself liable to prosecution if it held the shoot, and that he should see to it that all violators of the law were punished, closing with the words: "A word to the wise is sufficient" The club immediately wrote Mr. Waldron, inviting him to be its guest on that date, in order that he might see for himself that, in shooting at bluerocks for prizes in the shape of chickens, none of the members of the club were violating the law relating to cruelty to animals. Secretary Denning, of the Lakeside Rod and Gun Club, tells us that the invitation was not accepted. Privately, friend Denning, the following clause taken from your announcement of the shoot is a little puzzling, particularly if the reader thereof is a layman: "Shooting for chickens from straightaway or angle traps or targets, as shooters may choose."

On Thursday of next week, Dec. 16, the Brooklyn Gun Club hopes to be favored with the best of weather for trap shooting. The above date has been set apart for some weeks as the day on which the club will hold a field day on its grounds, Enfield street and Liberty avenue, Brooklyn, N Y. The grounds are very accessible, being within five minutes' walk of the terminus of the Kings County Elevated Road. The programme will be commenced promptly at 10 A. M. The club will have a lunch and cigars on hand, both to be dispensed free of charge. Programmes will be sent out this week; any person not receiving the same, and who is anxious to attend, can obtain a copy of the schedule of events by applying to John Wright, care of Von Lengerke & Detmoid, 318 Broadway, New York city. Some valuable silver trophies will be contested for, each of the trophy contests being a handicap affair. Every shooter will know his handicap before commencing to shoot.

Noel E. Money, secretary of the American E. C. & Schultze Powder Co., is having some good shooting during his well-earned vacation in England. In a personal letter to us, dated Nov 20, he writes: "I have been having some very good shooting in Suffolk. At Henham Hall, last week, we killed about 500 pheasants the first day, 900 the second day, and 1,300 the third day; the above figures are for pheasants only, and do not include the partridges, hares, rabbits and other game killed on the three days. To morrow I go to Shropshire for a week's shooting, and then the next week back to Suffolk again; after that to Melton Mowbray for a fortnight's hunting." Of all the sport that Mr. Money is likely to have, or to have had during his trip, we envy him most that two weeks' fox-hunting around Melton Mowbray.

The Hamilton (Can.) Gun Club has decided to divide up the $1,000 guaranteed to be divided at its tournament, Jan. 18-20, in the following manner: $100 guaranteed in a 10-bird race, $5 entrance, birds extra, 40, 30, 20 and 10; $600 guaranteed in a 20-bird event, $15 entrance, birds included, fourteen prizes, $125 to the high gun; $100 guaranteed in a 10-bird race under precisely the same conditions as the first race; $200 guaranteed in four $50 purses in target events. Sweepstakes will be run off *ad infinitum*. Live-bird events will be all high guns. Target events, with but few exceptions, will be class shooting, with the experts handicapped as at the New York State shoot at Buffalo, 1896. (This handicap means that experts must get into first or second money or be out of a place.)

A special from our Chicago correspondent, which appeared in our issue of Dec. 4, gave the names of the Chicago team for the intercity match. Since the publication of those names, Kansas City seems to be the favorite in this city, although it is recognized that the Missourians will have no walkover. According to the dispatch mentioned above, the Chicago team will be W. R. Morgan, Dr. H. H. Frothingham, George Roll, L. E. Williard, W. P. Mussey, W. W McFarlan, E. Bingham, J. A. Ruble, O. von Lengerke, Dr. W. F. Carver. Alternates will be C. E. Felton, R. B. Organ, M. J. Eich, Abner Price, Dr. S. Shaw, T. P. Hicks, F. H. Lord, Geo. Franklin, C. B. Dicks, Henry Ehlers, Geo. Kleinman.

Mr. C. McL. Clark, of St. Louis, Mo., is spending a few days in this city prior to leaving on Saturday next, Dec. 11, for an extended trip on the continent of Europe. Mr. Clark is an enthusiastic target shot, and was one of the six who braved the disagreeable weather on Saturday last, Dec. 4, for the sake of breaking a few targets on the grounds of the Boiling Springs Gun Club, at Rutherford, N. J. In speaking of the recent tournament of the St. Louis Trap-Shooters' League, Mr Clark seemed somewhat disappointed at the small number of entries obtained outside of "the regulars."

John J. Hallowell, otherwise U. M. C., Jr., left this city on Friday evening last, en route for Chicago and her great week of pigeon matches. Before returning East he will take in the Limited Gun Club's shoot at Indianapolis. It may be of interest to note that he has sent on some "sparrow loads" of U. M. C. factory-loaded ammunition. Hallowell was one of the three straights in the 20-bird race on the grounds of the Keystone Shooting League, of Philadelphia, on Thanksgiving Day. There were twenty starters in that event.

J. D. Gay, of Pine Grove, Ky., has once more taken the Kentucky Futurity under his care. Last year he won this event with a score of 49 out of 50 live birds; this year he won with a total of 48 out of 50. He lost his 9th and 10th birds, finishing with 40 straight. Bland Ballard and Harris were close after him with 47 each; and, curiously enough, Ballard also finished with a run of 40 straight, losing his 1st, 3d and 10th birds Harris lost his 2d, 4th and 29th birds. Mr. Gay used a Parker gun, 3½drs. Hazard Blue Ribbon in a 3¼in. Leader shell, Winchester factory-loaded ammunition.

On Friday last we saw a letter written by Mrs. Neaf Apgar, in which she stated that Neaf was getting along splendidly. In fact, so rapidly was he convalescing that the trained nurse was shortly to be dispensed with. Later reports tell of Apgar's continued improvement, and it is now only a question of time as to when he will be up and about again with both feet.

Ferd Van Dyke has been so closely "chained to business" in the New York store of the Winchester Repeating Arms Co. that many of the trap-shooters of this section fancied he was somewhere out in the woods, filling ruffed grouse and cottontails with lead pumped from one of his company's new "brush guns." Ferd promises to be on hand at Hackensack, N. J., Wednesday of this week, Dec. 8, to make things interesting for those who shoot for the Recreation cup on that date.

The annual meeting of the Interstate Association will be held Dec. 16, at Oakland, N. J. The election of officers for 1898, the plans for next season, the report of the manager, etc , will be the business before the members on the above date. It would be as well if clubs which contemplate holding shoots under the auspices of this Association would make a note of the above, and forward their applications at once to Mr. Elmer E. Shaner, manager, 122 Diamond Market, Pittsburg, Pa.

The geese, brant and other feathered visitors to Pamlico Sound during the past three weeks or so know a thing or two. They early recognized the fact that we were on hand and ready to do business. Taking advantage of a series of exceedingly low tides, they took up their abode on sandbars miles long, and discussed our good looks with honks, purrs and various other musical notes. We left enough for seed.

Tom Keller is spending this week in Chicago. He is probably talking Peters's cartridges and King's Smokeless whenever he finds time to get in a word edgeways during the shooting carnival at Watson's Park. Thus is one more attraction added to the already large list prepared for the delectation of the Kansas City delegation.

During the first week of January next the Newburgh shooters are going to hold a two days' tournament at Pine Point, Orange Lake, near Newburgh, with the intention of tendering the receipts from the same as a testimonial to Neaf Apgar. The first day of the shoot will be devoted to targets, the second to live birds. If, as is more than likely, the ice on Orange Lake is in condition, the members of the Orange Lake Ice Boat Club will give the visitors some ice boating. Full particulars of the shoot will be announced later.

JOHN T. MASCROFT.

The Empire Gun Club was organized at Lacona, Oswego county, N. Y., on Nov. 27 last. The following officers were elected: President, H. F. Baker; Vice President, Virgil P. Corse; Secretary, Tad. W. Harding; Treasurer, Walter A. Barlow; Directors, J. J. O'Connor and Gifford L. Hadley; Captain, W. E. Deremo.

In a postscript fo his letter, which appears elsewhere in these columns, Mr. J. G. Walton, secretary of the Sherbrooke (P. Q., Can.) Gun Club, says: "Broke some 3,000 targets among ourselves on Thanksgiving Day and had a good time. Craig was high gun with 78 per cent."

We learn that Fred. Knopf, for some years manager of the shooting grounds at the Larchmont Yacht Club, has taken charge of the new grounds of the Carteret Club at Garden City, L. I. As Mr. Knopf was a success at Larchmont, he ought to be able to make his mark now that he has a much wider field in which to work.

As usual, Paul R. Litzke, who has so ably represented FOREST AND STREAM at most of the more important shoots in the South during the past few years, sent us last week a readable and comprehensive report of the shoot of the St. Louis Trap-Shooters' League, Nov. 23-25.

Harold Money, the youngest son of Capt. A. W. Money, is now located permanently at Oakland, N. J., in the chemistry department of the American E. C. & Schultze Powder Co., Ltd.

The Pike's Peak Gun Club, of Colorado Springs, Colo., will hold an all day shoot on Jan. 1. The club will add $100 to the purses.

DEC. 7. EDWARD BANKS.

John T. Mascroft.

IN our column of Drivers and Twisters in this issue we give an extract from the Worcester, Mass., *Spy* of Nov. 19, that tells of the death of Mr. John T. Mascroft, of Sutton, Mass. Below we give a portrait of Mr Mascroft in shooting costume, ready to step to the score and call "Pull." The many hundreds of his friends, who are readers of FOREST AND STREAM, will readily concede how true to life a photograph can be.

In our issue of April 24 last, we gave in Drivers and Twisters a brief extract from a letter then just received from Mr. Mascroft, in which he said that he hoped to be at the Newburgh spring tournament, "but not to shoot." There was, however, one portion of the letter which we did not make public at the time; it ran thus: "I feel that my shooting days are over, but I do not like to think about it; so I go into my little room and load some shells, and then I don't think so much." No words could tell more plainly how deep-rooted was his love for a gun.

To what has been written above, and also to what appears in Drivers and Twisters, we can add nothing, save to say that Mr. Mascroft's death has removed from the field of trap-shooting one of the truest sportsmen it has ever acknowledged. He shot simply for the pleasure of shooting, and was grateful for the chances it afforded him of making new acquaintances and renewing old ones of a spirit akin to his own.

Missouri and Kansas Notes.

AT JOPLIN.

LITTLE ROCK, Ark., Dec. 2.—At Joplin, Mo., Nov. 23, W. E. Morgan, of that city, successfully defended the Southwest-Missouri-and-Southeast-Kansas live-bird trophy, defeating J. L Horn, of Galena, Kan., in a 25-bird race by a score of 22 to 18. Both men had two birds fall dead out of bounds.

W. G. Sergeant then challenged the winner. This contest took place on Nov. 30, by which time there were others anxious to have a try for the trophy. Instead, therefore, of an individual contest between Morgan and Sergeant, it resolved itself into a race of six entries, all anxious to secure possession of the trophy. The other entries were Taylor Cox (the one-arm shooter), of Carl Junction, Mo.; Chris. Stienback, of Joplin, and J. L. Horn and Lis. Carney, both of Galena, Kan. The contestants were in fine form, as no less than five scored 24 out of 25, Carney being the only one to drop out, he scoring but 19. It was immediately decided to shoot the tie off at 5 birds. Horn missed his first, Sergeant lost one of his five, while the remaining three killed their 5 birds straight. This tie was not shot off, it being thought best to defer a decision until some future date.

KANSAS LIVE-BIRD CHAMPIONSHIP.

W. W. McIlhany, now of Galena, has challenged C. H. Calhoun, of Weir City, to shoot a match for the live-bird championship trophy of Kansas, now held by him. The latter has accepted, and the match will be shot at Weir City, Dec 13. It will be remembered that McIlhany held the trophy up to the time of his departure for Arizona last February, when he was obliged to relinquish his claims to it As he is now once more a resident of Kansas, he will endeavor to regain possession of it. After McIlhany surrendered the trophy it was put up in open competition, which event took place at Weir City, March 22. Calhoun proved the winner in this event, and has retained possession of the emblem ever since, no one seeming to have the nerve to endeavor to wrest it from him.

THANKSGIVING DAY AT GALENA.

On Thanksgiving Day the Galena Gun Club had a very interesting little shoot. There were no out-of-town shooters present, but the locals turned out in force. There were eight events on the programme, in all of which there were some valuable merchandise prizes hung up The seventh event was at 50 targets, for a handsome little medal which is subject to challenge, and will in the future most likely be conducive of some spirited contests. This resulted in a win for McIlhany on a score of 43; he was immediately challenged by C. M. Sumner.

The principal winners in the various events were McIlhany, Sumner, Leeman, Hoffman, Horn and Carney. There was only one straight score made during the day, and that was credited to Sumner, who scored 15 in the sixth event. PAUL R. LITZKE

The Kentucky Futurity.

LOUISVILLE, Ky., Nov. 25.—The Kentucky Futurity was decided today on the grounds of the Kentucky Gun Club. J. D. Gay, of Pine Grove, repeated his performance of 1896 by again carrying off first money and trophy without a tie. Last year he won with the great total of 49 out of 50; this year he won with a score of only 1 less—another great feat for this brilliant shot. He was never very comfortable, however, as he was hard pushed from the 10th round up to the very last bird by Bland Ballard and by Harris, both of whom ran out with 47 each. Ballard started in badly, losing his 1st, 3d and 10th birds. Harris lost his 2d and 4th and was tied with Gay at the end of the 10th round, Gay losing his 9th and 10th birds. From that point up to the 29th round they kept the tie unbroken, Ballard being only 1 in the rear all the time. Then Harris lost his 29th and Gay was 1 ahead, with the others 1 behind him. All three killed out straight, both Gay and Ballard finishing the match with runs of 40 straight. A more close and exciting finish it would be hard to find anywhere. Hugens led up to the end of the 27th round, having lost but 1 bird—his 24th. He then lost his 28th, finally going out with 45, a score that was tied by Fawcett. Miller, the only other competitor, was low man with 42 kills. Below are the scores:

J D Gay	2222222200222222222222222	23
	2222222222222222222222222	25—48

Bessemer Defeats Crossland.

PITTSBURG, Pa , Dec. 4.—Below is the score of the Bessemer-Crossland match, which took place to-day on the grounds of the Hazelwood Gun Club. The conditions were: 50 birds per man, $100 a side, loser to pay for the birds. Bessemer (J. E. England) lost his first bird, and then ran 49 straight, winning by 4 birds. W. S. King acted as referee.

PITTSBURG.

Parmelee Defeats Elliott.

OMAHA, Neb., Dec. 2.—Frank Parmelee, of this city, and J. A. R. Elliott, of Kansas City, Mo., met here to-day in a race at 100 live birds, $100 a side. A violent snowstorm was raging, which made the work of both men the more remarkable. Elliott was the favorite in the betting, but he suffered a severe defeat by the score of 91 to 97. This is the third time Parmelee has beaten Elliott. To-day the latter was playing in hard luck, losing 5 of his "lost birds" dead out of bounds. The conditions were 30yds. rise, 50yds. boundary, A. S. A. rules. Long runs were: Parmelee, 41 (unfinished) and 43; Elliott, 19, 18, 14, 13 and 11. Scores:

Elliott	2120222221222102221022220	21

Cobweb Gun Club.

NEW YORK, Dec. 2.—Below find scores of Cobweb Gun Club's monthly handicap class shoot held to-day at Baychester. The day was delightful, but, strange to say, there was a very light attendance of members. However, those that did take the journey to the grounds enjoyed themselves as well as at any of our monthly shoots.

The principal feature of the day was the shooting of Gus Greiff, who is at present in his best form and hard to beat, as the scores of the various events will show.

The shooting in the handicap resulted in Greiff winning in class A and Thompson in class C.

Heikes Won the Cast-Iron Badge.

CHICAGO, Ill., Dec. 6.—The Heikes-Grimm match for the Cast-Iron badge took place at Watson's Park to-day. The weather was cold, with sleet falling, with the wind blowing toward the shore. The birds were a lively lot, but there were an unusually large number of incomers. Heikes shot a great race, winning with 91 to Grimm's 87.

Only a few Kansas City men here to date. About twenty-five are expected to arrive on Thursday, and a dozen more on Friday.

E. HOUGH

Western Traps.

THE INTERCITY SHOOT.

CHICAGO, Ill., Dec. 4.—By the time this reaches type the big shoot at Chicago will be well under way. The programme is out this week, detailing what has been earlier published in these columns. There will be two sets of live-bird traps in action, and a lot of good birds from the cold northwest. To resume, Monday next, Dec. 6, will begin the festivities. Sweeps in the morning, and at 2 P. M. the Heikes-Grimm race for the Cast Iron badge. Tuesday, sweeps till 2 P. M. and the Elliott-Gilbert race for the Kansas City *Star* cup. Wednesday, sweeps all day. Thursday, sweeps till 2 P. M. and the Elliott-Gilbert race for the Du Pont trophy. Friday and Saturday, the ten-men team race, in a series of ten individual races between Chicago and Kansas City. Saturday night, the banquet at the Chicago Athletic Association club hall. The team and alternates from Kansas City are as follows, all of whom are expected to be on hand by the close of the match shooting above scheduled: J. A. R. Elliott, J. Riley, C. S. Gottlieb, J. L. Porter, J. M. Cutice, J. B. Porter, A. E. Thomas, E. A. Hickman, C. C. Herman, G. W. Stockwell. These are the substitutes: Dave Elliott, F. A. Lamb, E. F. Swinney, Nels Jarrett, R. P. Barse, J. K. Guinotte, R. K. Campbell, F. J. Smith, Tom Norton, Dr. H. J. Whittier.

THE CHICAGO TEAM.

The Chicago team of ten, as announced in last week's FOREST AND STREAM, was chosen first as follows: W. R. Morgan, Dr. H. H. Frothingham, George Roll, L. E. Williard, W. P Mussey. W. W. Macfarlan, E. Bingham, J A. Ruble, O. von Lengerke, Dr. W. F. Carver. Alternates: C. E. Felton, R. B. Organ, M. J. Eich, Abner Price, Dr. S. Shaw, T. P. Hicks, F. H. Lord, Geo. Franklin, C. B. Dicks, Henry Ehlers, Geo. Kleinman.

This will not represent the actual *personnel* of the team so far as can be told at this date, Saturday, the last day before the beginning of the races, and only four days before the team race. Mr. L. E. Williard has sent in word that he cannot shoot on the team. Mr. Ruble has not yet signified his decision of shooting or not shooting, and in the practice shoots up to this time Mr von Lengerke has shown up in poor form, so that to-day other members of the team stated that he would in all likelihood be replaced by one of the alternates, although this has not at this writing been done. Mr M. J. Eich is now practically certain to be advanced to a place on the team to fill one of these possible vacancies, and Geo. Kleinman begins to receive mention. It may happen that the actual team will not be determined until the middle of next week, the men being watched in their work at the sweeps. Yesterday Mussey and Bingham were in the front in the practice, each running over 30 straight. Gilbert in his practice fell below the scores of both these men. George Roll is showing fairly well, and Dr. Frothingham has one string of 24 out of 25 to his credit. Careful attention to all points of the game may give Chicago a working show for the finals, but at present the candid opinion of the average Chicago man is that the visitors will trim us up. They will have a lot of fun doing so, if they do, and all in all the week bids fair to be one full of interest, and one of the hottest and sportiest events ever seen in these parts.

It is now thought that the Kansas City gentlemen will come unattended with ladies, so the ladies' committee here will receive its discharge. Mrs. W. P. Shattuck, of Minneapolis, will attend, and will have all the birds she wishes to shoot given her free by the Chicago organization.

SCORES AT WATSON'S PARK.

Following are some of the scores recently made at Watson's Park, Burnside, by shooters, some of whom will be on the team next week:

WESTERN ILLINOIS LEAGUE.

The Western Illinois Trap-Shooters' League met at Kewanee in a two days' shoot, beginning Dec. 1. Monmouth, Peoria, Galesburg, Rock Island and other Illinois towns were represented. High wind made the first day unpleasant. Huckins, Baker and Pierce, of Kewanee, did well, as did Hickey, of Galesburg. Kewanee won the team trophy shoot, getting 61; while Galesburg, the nearest competitor, made 56. This was a handicap shoot, the actual number of birds broken being: Kewanee 57 and Galesburg 51. The scores in the team shoot were:

Galesburg: Hickey 14, Gayer 16, Brechwald 11, Gardt 10.
Kewanee: Huckins 16, Pierce 17, Dunbar 12, Sharp 12.
Neponset: Snow 9, Wood 15, Studley 7, Lyle 9.

ELLIOTT-PARMELEE.

Frank Parmelee, of Omaha, on Dec. 2, for the third time defeated Jim Elliott, of Kansas City, at a 100-bird race, the score being 97—91. Elliott lost 5 birds dead out of bounds and is reported to have had tough luck. A blinding snowstorm made the race a difficult and unpleasant one, but this appeared to be good weather for the husky Omaha man, who ran well up to the edge of Grimm's score at Chicago last winter for the Cast-Iron badge, when he defeated Dr. Carver by a score of 98, that race also being shot in a heavy snowstorm.

E. HOUGH.

1206 BOYCE BUILDING, Chicago.

Dec. 4.—The following are detailed scores of to-day's practice shoot at Watson's Park, Burnside Crossing, Ill., of some of the members of the team which are to hold up Chicago's end in the match race of Chicago vs. Kansas City, which is to come off on Friday and Saturday next, Dec. 10-11. The honors of the day were won by Dr. Sirembo Shaw, who killed his 25 birds, 1 falling dead out of bounds.

The shooting was at good birds. The wind was from the left quarter and blew strong. The majority of birds were left-quartering with the wind, and quick judgment was necessary most of the time. Gilbert at times did not seem to get on to his birds with the first barrel, but killed them well with the second. W. P. Mussey has been doing some very clever shooting since he started in on his practice, killing from 42 to 46 out of 50 almost every day, but to-day he was not among those practicing.

Of those present it can be said that Ed. Bingham is doing some shooting of a good average in his practice. Among those of the original team chosen are Lem. Willard, who is laid up with rheumatism, and John Ruble, with malaria, which will make it necessary to use some of the substitutes. Among them we find Dr. S. Shaw, who is shooting in good form; also B. Barto, who generally can be relied upon for from 85 to 90 per cent. Another we have is H. Wiley, who, while a young live-bird shooter, is doing exceptionally good shooting at the traps, and can be relied upon for a good score at any time.

B. A. Bartlett, of Rochester, N. Y., and J. Fanning, of San Francisco, are both shooting every day, and are doing some good work with the boys.

A. C. PATERSON.

IN NEW JERSEY.

FISCHER DEFEATS HASSINGER.

Dec. 1.—An interesting live-bird match was held on the East Side Gun Club's grounds, 673 Ferry street, Newark, to-day, between Jacob Fischer and William Hassinger, two prominent members of the club. Gathered at the grounds were a number of local trap-shooters, and much interest was centered in the result. The weather was cool and sharp, the birds were active flyers. Both men were in good trim, and started into the contest with a determination to come out winner. Hassinger started out with a fair chance to win the match, but Fischer kept cool and deliberate, and at the finish had killed 14 out of his 15 birds, while Hassinger killed only 12 out of the same number. Two sweepstake events followed, one at 7 and the other at 5 birds, as well as a miss-and-out shoot, after which the assemblage adjourned to Henry Henry's hotel, where they partook of refreshments and enjoyed a sociable hour. The East Siders have in contemplation a grand Christmas Day sweepstake shoot, both at live birds and bluerock targets. The scores:

Match:

Fischer.....1102112221111121—14
Hassinger.....1102221211102 10—12

BOILING SPRINGS GUN CLUB.

Dec. 2.—The semi-monthly shoot for the silver tea service donated by the Boiling Springs Gun Club was decided to-day on the club's grounds at Rutherford, N. J. Huck won with 50 out of 55. Scores were:

F Hall (3).....1111111111101011111101111111111101111111111110111111 —44
W H Huck (5).1111111111011011101111011111111111011111111111111—45
11111 — 5—50
G H Piercy (6)1111111011111011011010100110101111111110111011101 —38
Nelson (15)....1100110111010101111111111111111101101100101111101101—33
011110w — 4—37
Dutcher.....1000001010101110001111111001111111011000011001111101 —30

Neither Hall nor Piercy shot at their allowances, having no chance to tie Huck. Nelson withdrew after losing 2 out of the first 6 of his handicap allowance.

Sweeps for practice, with nominal entrance fees, were shot as below:

Events:	1	2	3	4	5	6	7	8	9	10
Targets:	10	10	10	10	10	10	10	10	10	10
Huck	9	8	10	10	9	8	10	8	7	8
Nelson	4	7	9	7	6	7	4	8	10	8
Hall	8	9	10	8	10	8	..	..	7	9
Piercy	6	8	10	8	9	9	10	6	9	8
Dutcher	8	5	5	3	..	7	5	6	7	6

Piercy and Hall also shot a race at 25 targets, Hall scoring 23 to Piercy's 21.

W. H. HUCK, Sec'y.

Dec. 4.—The miserable weather to-day prevented anything like a full attendance at the regular monthly shoot of the Boiling Springs Gun Club. Only five members put in an appearance, the sixth shooter being Mr. C. McL. Clark, of St. Louis, Mo., a gentleman who is making a stay of a few days in New York prior to leaving for Europe on Dec. 11. There were several sweeps shot during the afternoon, but the main event was the club shoot. This was won by Nelson, a comparatively new shot who is fast developing into a good one at targets. Below are the scores in this event:

Club shoot: 50 targets per man, unknown angles, Sergeant system; handicap allowance of extra targets to shoot at:

*Nelson (16)...0101111111101111111110110011001101111111110101111—39
11001111111011w —11—50
W H Huck (0).1110111111101111111111111101111111111111111111111101 —46
E Banks (0)...1111111110111111111111111111111111011111101111111 —46
M Lewis (17)..0011100010010011111001111011111010101110111001110l—31
11111111101101011 —14—45
B James (8)...1011111101111111101001011011101110111111101001110—37
10101111 — 6—43
CMcLClark(0) 0111000011111101111111111110111111100101011111010101 —36

* Nelson withdrew after shooting at 14 out of his allowance of 16, having broken 11, which gave him a highest possible.

Guelph vs. the Rosedales, of Toronto.

GUELPH, Can., Nov. 25.—To-day being Thanksgiving Day, the Rosedale Gun Club, of Toronto, traveled fifty miles to shoot a friendly pigeon match with the Guelph Trap and Game Club, of this city. On the arrival of the visiting team the members of that team were escorted by the reception committee to the Wellington Hotel, where lunch had been provided for them. After lunch the party was conveyed in a special street car to the grounds of the home club, where everything was ready for a start. The toss of a coin sent the visitors to the traps first, their genial captain, Van Vlack, being the first to call "Pull."

The weather was very unfavorable for large scores; it rained very hard all the morning and also at intervals while the match was in progress. The sun came peeping through the clouds just as the shoot was about over. There was a good crowd present to witness the shoot. Scouts were kept at a safe distance from the traps by the high constable, who was in attendance for that purpose. A muster of the guns used showed the following: Rosedale Club: seven Greeners, two Tolleys, one Smith and one Scott. Guelph Club: eight Greeners, and one each of the following makes: Smith, Tolley, Ithaca and Cashmore.

After the match a dinner was tendered the visitors at the European Hotel. A hurried visit was also paid to Lot Singular at his Victoria Hotel, after which the visitors were escorted to their train.

A return match will probably be shot on the grounds of the Rosedale Club on or about Dec. 17; on this date it is to be hoped that the weather will be more favorable for good scores. Below are the scores made in to-day's race, each man shooting at 10 birds. As will be seen, the home club won by 6 birds. Scores:

Rosedale Club.		Guelph Gun Club.	
M L Van Vlack	9	H A Mallory	10
A R Stell	9	H D McConochie	8

GEO PORTEOUS, Sec'y G. G. C.

Pawtuxet Gun Club.

PAWTUXET, R. I., Nov. 25.—The Pawtuxet Gun Club held its annual Thanksgiving Day shoot to-day. The glare from the bright sun on the snow bothered the shooters a bit, making the scores rather low on paper. The main event was at 25 targets, handicap allowance of misses as breaks. Scores:

Handicap:

Sheldon (0).....1111111111111110111111110 -23+0—23
Greener (0).....1011111111111100001101111O—19+0—19

Hawkins (3).....0010100101010000010w

Two 15-target events, both handicap affairs, were shot as below:

No. 1: Greene (0) and Armstrong (2), 13; Smith (1) 12; Arnold (1) 11; Eddy (3) and Adams (4), 10; Greene (0) 9.

No. 2: Smith (1) 14; Armstrong (2) and Eddy (3), 12; Adams (4) 11; Greener (0) and Greene (0) 9; Mooney (1) 6. W. H. SHELDON, Sec'y.

Trap at Gibraltar, Pa.

READING, Pa., Nov. 25.—The shooters at Gibraltar, Pa., had a small gathering to-day, some targets being broken. Two of the events decided were at 10 targets each, $1.50 entrance, two moneys:

No. 1: Lutz 10, E. A. Diefenderfer 9, Gechter and Mountz 8, C. O. Eshelman 7, G. L. Diefenderfer 6.

No. 2: Eshelman 9, E. A. Diefenderfer 8, Gechter 7, Leutheiser 6, Mountz and G. L. Diefenderfer 5.

A match has been made between G. L. Diefenderfer, of Gibraltar, and J. D. Mountz, of Beckersville, Pa., 10 live birds per man, $10 a side. The match will take place some time in December, the place where it is to be shot being decided by the toss of a coin.

A. W. FINK.

Colorado's State Tournament.

PUEBLO, Colo., Nov. 25.—The eighth semi-annual tournament of the Colorado State Fish and Game Protective Association was held in this city to-day. Among the visiting shooters were: D. L. Macaffree, John W. Garrett, W. G. Mason, A. J. Lawton, Arthur Matthews and James Hull, of Colorado Springs; A. D. Mermod, E. E. Teape and John Penny, of Cañon City; T. W. Gibson and A. H. Cawthorne, of La Junta; and E. C. Deibert, of Florence. The day was cold and cloudy, and it was very disagreeable to be out of doors, but the scores made were exceedingly good.

The Individual State Championship medal was competed for, each man shooting at 50 targets (40 singles and 5 pairs); the following scores were made:

W G Mason.11111111111111111111111111111111111111 11 11 11 11 11—50

Cawthorne..11101110111101111101110111111111111 11 00 11 11 11—42

On the shoot-off, at 20 targets, W. G. Mason won with 20 to J. W. Garrett's 19. This is the first time the medal was ever won on a straight score.

In the merchandise event, which was Event No. 9, G. J. Derby won first prize, a Winchester repeater shotgun, given by J. M. Killin. The ties on the other four prizes were settled in the evening at the hotel.

In the team shoot for the Salida State cup, four teams competed, three men to the team. The Pueblo team was victorious, each man shooting at 30 targets (20 singles and 5 pairs). The following scores were made:

Pueblo.

The regular programme events consisted of eleven 20 and one 25-target event; but on account of darkness all the shooters could not finish Event No. 12, which was at 25 targets. The Pueblo Gun Club gave, as added money, $10 on each event, which made a very good programme.

The following scores were made:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	
Targets:	20	20	20	20	20	20	20	20	20	20	20	25	Av.

The total number of targets thrown was 5,190; on account of the shooters not getting on the ground till 10 o'clock, this number was not increased.

John W. Garrett and W. G. Mason, the two who tied with 50 straight in the individual championship shoot, both shoot Winchesters.

The shoot as a whole was a success both to the participants and to the club.

The Pike's Peak Gun Club, of Colorado Springs, will give an all-day shoot at that place on Jan. 1, 1898, with $100 added.

C. L. FUNK.

Trap in Buffalo.

AUDUBON GUN CLUB.

Nov. 27.—The attendance at to-day's regular weekly shoot of the Audubon Gun Club was not as large as usual; neither were the scores up to the standard. The badge shoot (No. 3 in the table below) had sixteen entries. A. Forrester won in Class A, R. H. Hebard in Class B, and Dr. F. Sauer in Class C. Event No. 6 was at 10 live birds; in this event E. C. Burkhardt won with a clean score. Below are the results in all the events decided:

BUFFALO.

Answers to Correspondents.

No notice taken of anonymous communications

J. A. C., Bangor, Me.—Erythema. Observe the strictest cleanliness. Let the bedding be kept clean and dry, and the sleeping quarters well ventilated. Bathe the dog frequently, and apply oxide of zinc in the form of an ointment to the nodules.

PUBLISHERS' DEPARTMENT.

Washington.

HOLIDAY TOUR VIA PENNSYLVANIA RAILROAD.

DEC. 28 is the date selected for the personally-conducted holiday tour of the Pennsylvania Railroad to Washington. This tour will cover a period of three days, affording ample time to visit all the principal points of interest at the National Capital, including the new Congressional Library. Round-trip rate, covering all necessary expenses for the entire time absent, transportation, hotel accommodations, guides, etc., $14.50 from New York, $13.50 from Trenton, and $11.50 from Philadelphia. Proportionate rates from other points. Persons who desire may return by way of Gettysburg, and spend two days at that point by purchasing tickets at $2 additional, which include this privilege.

SPECIAL TEACHERS' TOUR.

A special teachers' tour, identical with the above, will be run on the same date. Tickets for this tour, covering all necessary expenses, including accommodations at the National Hotel, Willard's Hotel or the Hotel Regent, $2 less than rates quoted above.

For itineraries and full information apply to Ticket Agents; Tourist Agent, 1106 Broadway, New York; or address Geo. W. Boyd, Assistant General Passenger Agent, Broad Street Station, Philadelphia.—*Adv.*

WM. W. HART & Co. received the American Institute medal for mounted rugs, heads, horns and skins. They are particularly proud of the honor from the fact that there is no regular medal for the taxidermy and mounted rug branch. A special medal was made for them.—*Adv.*

H. CLAY GLOVER, D.V.S., will send gratis his pamphlet on dog diseases to any one who applies for it. He carries an elaborate line of remedies for the diseases of dogs, horses and cattle. Glover's Imperial Remedies are sold by all druggists. Office and depot, 1293 Broadway, New York.—*Adv.*

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SATURDAY, DECEMBER 18, 1897.

VOL. XLIX.—No. 25. No. 346 BROADWAY, NEW YORK.

NOTICE TO SUBSCRIBERS.

The address label on the wrapper shows the date of the close of the term for which the subscription is paid. The receipt of the paper with such dated address label constitutes the subscriber's receipt for money sent to us.

Subscribers are asked to note on the wrapper the date of expiration of subscription; and to remit promptly for renewal, that delays may be avoided.

For prospectus and advertising rates see page iii.

Readers are invited to send us the names of friends who might be interested in a current copy of the Forest and Stream. We shall be glad to forward a specimen number to any person whose address may be furnished us for that purpose.

IT WILL TELL THE STORY.

THE FOREST AND STREAM in its fifty-two weekly numbers for 1898 will tell the Sportsman's Story of the year—his aspirations, enterprises, adventures, successes and achievements; his disappointments, reverses and defeats; his pleasures, joys, satisfactions and sorrows; in short, the story of his activities by flood and field, on the plain and the mountain, in the North and the South, the East and the West.

No necessity of saying that the story will be brimful of interest from beginning to end, from January to December; nor is any assurance needed that it will be worth the telling, worth the printing, and worth the reading.

THE NEW YORK LEAGUE

AT the meeting of the New York State Association for the Protection of Fish and Game, in Syracuse last week, the name was changed to the New York State Fish, Game and Forest League. A new constitution was adopted, one interesting feature of which is that it commits the organization exclusively to effort in the lines of fish and game protection, excluding altogether the trap-shooting activities hitherto promoted by it. This may be considered a radical step, but in reality it is hardly a new departure, for during the last five years the Association has been working toward just this point.

Formed in the fifties as a union of clubs and individuals interested in securing game laws and their enforcement, the meetings of the Association were in the first years conventions for discussion of the concerns of protection. Then shooting at the trap came in as a diversion from the more serious affairs of the meeting. In time the shooting competitions monopolized the attention of delegates. Then in 1892, at the instance chiefly of Gen. D. H. Bruce, of Syracuse, an effort was begun to restore the Association to its original character and purpose. In that year a form of constitution was adopted which provided for two meetings each year: one in the winter to consider legislation and protection, and another in the summer for trap-shooting. The plan of reorganization, it was explained at the time, "makes ample provision for the two purposes of the Association—game protection and trap-shooting. In the practical conduct of the Association each one of these interests is given its own place, but the two are kept entirely separate. Provision is made for the fullest activity in each, but neither one is permitted to conflict with the other."

Under this plan both of the annual meetings have been well attended, and practical working has demonstrated the wisdom of the arrangement. Now the protective branch of the Association has gone a step further and separated itself entirely from the tournament interests, and has emphasized the new departure by the adoption of a distinctive name. The Rochester Rod and Gun Club, under whose management the Association tournament will be held next summer, declares itself to be strictly in the line of apostolic succession and proposes to hold to the old name. This is something which is quite immateral. Under the old name or a new one the New York summer tournaments or State shoots will continue to be important and successful meetings in the trap-shooting world. But, questions of name and succession aside, it is undeniably true that the two associations are better than one when the two fields of their activity diverse. We hope to see both well supported by the allegiance and active membership of all clubs and associations interested.

THE PLAYGROUND OF A GREAT CITY.

The mammoth city of Brooklyn, separated from New York by a neck of salt water called the East River, has been called the boardinghouse of New York. This is generally accepted as a feeble attempt at levity, but one who watches the rush to New York in the morning hours and the return rush in the evening will be convinced that it is a fact. But as a fact it carries no stigma with it. On the contrary, so envious did New Yorkers become that they concurred in making it a part of Greater New York. With much more appropriateness would the rest of Long Island be called the playground of New York. Probably no section of an equal area in America has such a diversity of sports in existence within its limits. No place has carried to a higher degree of perfection the technique of the sport, the completeness of costume and accessories of the sport

There are lovely roads, smooth and well finished, leading away through meadows and woodland far away to the beach where the salt water beats ceaselessly, or into the woodlands where dwell the deer, squirrel, quail and ruffed grouse. And on pleasant days these roads are fairly alive with wheelmen. The fellow and his best girl on a tandem, dressed in the most correct costume; the wheelmen and women in ones, twos, threes and squads; the family, men, women and children; the bicycle club out on a run—the rider will meet and pass in endless variation during a day's run, till he wonders where so many wheels could be made, and being made, where all the money could be obtained to buy them.

Through this beautiful land of hill and vale, woods and meadows, with its ever-changing picturesque scenery, threads of clear water run bountifully wherever the numerous miniature watersheds and pure springs sustain them. These numerous brooks, which so regularly seam the surface of Long Island, are the home of the trout, which contribute so much to the fame of the island among fishermen. In season they swarm to its brooks and creeks, though not as men who go whither they list, since most of the trout waters are private property. Broad as is the playground, it would soon be entirely overrun and its waters despoiled were it open freely to all. But surrounding the playground are the free waters of the ocean, whereon thousands of people find sport and recreation, and a reward of effort more to their liking; for the fish are larger and more in keeping with hungry stomachs to be filled than with delicate palates to be pleased. Their methods are far from being related to the refinement of the angler's art in luring the wary trout with the deceptive fly, yet they are such as fit their capabilities of enjoyment and their needs inseparable from it. There are streams and ponds and lakes, and the ocean, with fish tiny and great. Could any son of Izaak Walton ask for more?

The yachtsman swarms about the waters of the playground. The duck shooter too has his place and his opportunities. It is a finely fitted playground, since it contains the best of nature and the best of art. As the wheelman rides along one of the best-made roads in the country, he may be skirting along the forest wherein the deer freely roam, or he may skirt along the shore of the great ocean and sniff the breeze untainted from the touch of land.

Several packs of beagles are kept on Long Island for the rare sport which they afford, and these miniature hounds peal forth their chorus with as much merriment and earnestness of purpose as do their greater brothers, the foxhounds, which also have their owners and admirers, who follow them in duly sportsmanlike form.

Everywhere is there something symbolical of the healthful relaxation and diversion of the dwellers in a great city. There is to be seen the protest against the ceaseless confinement to business routine—the struggle for open fields, clear air and personal freedom.

One who rode from Long Island City to New York on any pleasant afternoon this fall could not have failed to perceive indications of the love of sport and its exercise. He would have seen a number of enthusiastic sportsmen in earnest conversation concerning how they captured their buck in the deer section of Long Island; seated nearby was the thoughtful sharpshooter, returning from testing his rifle on the long range at Creedmoor; also the bird hunter with his tired dog and a bunch of quail, the latter the crowning glory of a hard day's work; the less pretentious hunter with rabbit dog, and rabbits taken on the plains; the man with shotgun and no dog, yet laden with ducks from the waters of the Great South Bay; the polo player just from his reckless riding on the polo grounds; the golfer from Shinnecock and Oakdale, with the formidable array of implements of his sport; the noisy boy fresh from the ball field; the padded, brawny youth with the subdued, weary look, indicating a fierce struggle with the football; the rider from the Meadowbrook hunt, and the trap-shooter from one or other of the various clubs.

DOGS AS DRAFT ANIMALS.

ALTHOUGH dogs have been in common use as draft animals from time immemorial in the vast frigid regions of North America, it is safe to assert that but a relatively small number of people in the United States were aware of that fact. At best, it was to them a mere historical novelty; but from that it suddenly developed into a matter of material interest. Through the recent exodus to the gold region of Alaska and Northwest Canada consequent to the news of the great richness of those sections, the difficulties of Arctic travel and the great value of dogs in it for draft purposes have been brought into direct public attention and consideration. The demand, by men bound Klondikeward, for such dogs as were thought to have the requisite size, strength and endurance, also brought to public notice the dearth of material on hand to supply the demand. Out of the hundreds of thousands of dogs in the States—curs and others—there were but a small percentage qualified physically for draft purposes.

In the United States there is an abundance of vegetable food, and the larger and stronger herbivorous animals are consequently used for draft purposes to the exclusion of all carnivorous animals. On the contrary, the Arctic region, with its long winter, heavy snows and dearth of vegetable food, has come to be considered as being peculiarly fitted for the employment of the dog as a means of transportation, or rather that region is considered as being unfitted for the employment of other animals. The interesting description in our kennel columns, however, proves that dogs can be economically employed for draft purposes by people who have a small business and short hauls to make even in some sections of country free from the rigors of the Arctic winter. They fit in in the domestic economy of those sections to a nicety—such countries as have a dense population, many small enterprises, good roads, and a limited land area.

In the United States, where food, vegetable and animal, is abundant, and roads as a general thing are not of the best, the use of the dog as a draft animal, so far as general use is concerned, is far in the future. From a business standpoint he is, without qualification, an appendage to small enterprises in other than the frigid regions.

However small may be the business start of the average American citizen, he never contemplates that it will be small much beyond the starting point; nor does he care to have transportation one whit lower in class than his neighbor; hence the use of the dog as a means of transportation in the States may be considered as still remaining in the realm of novelty.

Game Commissioner John W. Titcomb, of Vermont, holds a theory that a requirement restricting deer hunters to the killing of those only which have horns makes for the security of human life, since the law—sometimes—prompts a hunter to greater caution in determining exactly what he is shooting at. In Vermont this year the number of deer actually reported by postmasters as killed in their towns was 103, and the estimated number killed was 140, while only one man was killed. This is a much brighter record than those of some other States, and if the antler law did it, let us have like laws elsewhere.

It is only the tyro who imagines that he knows it all. The older one grows and the more he learns, and the better his comprehension of the vastness of what there is to learn in any given field, the more does he realize his ignorance. This holds true with all the arts and sciences, including black bass fishing. Some of the fruits of long study of that perplexing and baffling creature are given this week by our contributor Shaganoss. His paper will appeal to old bass fishermen; it should prompt some of those who read it to give us their own experience.

The Sportsman Tourist.

A PENOBSCOT MOOSE.

New York, Nov. 27.—*Editor Forest and Stream:* The last two years I hunted in Hancock county, in the eastern part of Maine, and although the deer shooting there is very good, still one gets tired of that after a while and wants larger game; so last year I determined that my 1897 trip would be for moose, and to explore the country along the West Branch of the Penobscot. I kept in communication with my guide, A. L. Spearin, of Passadumkeag, through the summer, and about Sept. 20 I wrote him to meet me at Greenville Oct. 1.

I left New York Sept. 30 and arrived the next morning at the stated time at Greenville, where I found my guide with his canoe, tents, etc., waiting for me. We immediately boarded the steamer for Kineo, twenty miles up Moosehead Lake, where we stopped for dinner, and to get what provisions we needed for our trip, etc. After dinner we boarded the steamer again *en route* for the Northeast Carry.

At the carry we found a team in waiting, and putting our canoe and baggage aboard, we were soon across and launched on the West Branch.

We camped that night close by the Northeast Carry, and the next morning bright and early we started for Lobster Lake, a very beautiful sheet of water about two miles wide by eight long. On rounding the point from the West Branch into Lobster Stream I saw a spike-horned buck standing at the edge of the stream. I laid down my paddle quietly and picking up my rifle (a .40-82) aimed just under his neck, intending to raise and fire the instant I saw his neck through the sights. It was quite cold, however, and as we had been paddling two miles my fingers were numb, and I pressed the trigger before I was ready and consequently undershot. I knew I had not hit him, so we wasted no time in looking for him, but continued up the stream to the lake. The camp ground we expected to occupy we found had been taken, so we continued up two miles further, where we secured a very fair spot.

Leaving my guide to pitch the tent and get lunch, I walked up an old logging road to see if there were many signs of deer. I found the signs very plentiful, and jumped two. I fired at one of them, and although I hit it pretty hard, judging from the amount of blood that was lost, I was unable to follow it more than a couple of hundred feet. I came back to lunch, and afterward started up with my guide to see if we could find the one I had shot. I left him on the trail and started off in another direction.

While quietly following an old road, and closely watching the brush on either side, I saw what looked like a brown stump. I watched it closely for a while, but was unable to decide whether it was a stump or a deer. I did not want to risk losing a good shot, but I never under any circumstances fire a shot and then afterward go and see what I shot at. I prefer to lose the best shot of my life rather than run the risk of shooting some one else. In about a minute I saw the object move, and immediately a doe's head rose from the bushes. A short time afterward I had a fine, fat, barren doe hung up; so we then had plenty of meat to take with us on our trip. My guide returned without finding the wounded deer.

The next day, Sunday, we spent in exploring the lake and visiting other camps. On Monday we visited Little Lobster Pond, and saw the track of a very large bull moose that had just gone along a wet part in the road, leaving the water muddy behind him. On Tuesday morning we left Lobster Lake and paddled down the West Branch about twenty-five miles to Chesuncook Lake. This part of the river is nearly all dead water, there being very few rapids or "quick water," as it is called, there, the worst part being Pine Stream falls, which is very rocky, and requires considerable skill to run them safely. We saw no deer that day, which was very unusual. We camped that night on Chesuncook Lake, and the next morning, Oct. 5, we started down the lake (which is sixteen miles long), intending to get down to the lower part as soon as possible, and from there take our time on the rest of the trip. Shortly after starting it began to blow quite hard, and after going about three miles we decided it would be unwise to continue further with such a wind (as my guide says, "It is better to be safe than sorry," and I find that a good motto to follow, particularly in the quick water and on the big lakes. There were several men drowned in Maine this year who would have been alive to-day if they had followed that motto). We landed in a cove, and leaving the guide to select a spot for camp I explored the surrounding country, and found that deer were very thick. On that day I saw nine deer.

The next morning I walked about three miles up the lake to a farmhouse to inquire about the general condition of game in that part of the country. The farmer complained of the deer destroying his oats, and said that he estimated that he had lost $150 this season by the deer going into his oatfields. Asked if there were many moose in that section, he said there were not many in that particular place, but he told of a lake not very far off where moose were quite plentiful; but he asked me, at the same time, not to tell anyone else of this particular place. Returning to camp, I told the guide what I had learned. He was not familiar with this part of the country, as he had not been in this section for a great many years. The next morning we started very early, so as to cross the lake before the wind rose. After paddling seven or eight miles we reached the stream running from the lake for which we were bound, and found it very shallow.

I walked up the trail along the edge of the stream, and left my guide to bring up the canoe. It took him four hours to make three miles, as he had to wade almost the entire distance, dragging the canoe along with him. Reaching the lake, we had lunch and then started to look for moose signs. We decided to go entirely around it before we camped. Starting up one side, we went ashore at various places and saw a great many fresh tracks, and by the time we had almost completed the circle of the lake we were satisfied that it was only a question of a few days to get a moose. Then going down the lake on the opposite side, we noticed a hardwood bridge, which apparently was the only suitable spot for a camp. We made for that, and when quite near were surprised to see two canoes drawn up on a little beach, and that somebody evidently was in there ahead of us. We felt rather blue about it, as on those small lakes the first party in is never disturbed by another party.

We decided to visit their camp and see if we could find a suitable place to pitch our tent and then go out the next morning. We went ashore and walked up to the camp, and met with the coolest reception that I have ever met with on any one of my hunting trips. One of the sportsmen was writing a letter, and never so much as looked up from his paper, although we were seventy-five miles from the railroad station, and we either had to find a camp ground very soon or spend the night in our canoe. I spoke to the guides and also to the other sportsman, and received very short answers. I then explained to the guides that we did not know that anybody was on that lake, and as soon as we had found that the ground was occupied, why, we had planned to go out the next morning. I asked if there was any other camp ground near by. The party who was writing looked up from his paper long enough to inform us that the next camp ground was about four miles below, down the stream that we had come up in the morning, and which would be impossible to reach that night. We got into our canoe and paddled down to the head of the stream, and made the best camp we could on the sea wall for that night, and the next morning went down the stream to another lake and pitched our camp there.

About noon one of the guides from the other camp came down and apologized for their treatment the night before, and explained that a few days before he had met a friend who had stated that he had positive information that his camp was to be visited by two deputy game wardens in a few days, and as they were on the lookout for them and had not seen us until we stepped into their camp, they took us for the deputies; and as they had not killed any game out of season, and had no intention of doing so, they had decided to give any wardens a very cool reception. After we had left the camp, however, they had talked it over and decided that they were mistaken, and were very sorry for what they had done.

Our camp was visited a few days later by one of the gentlemen, Thomas Martindale, of Philadelphia, but as I was not in camp, he left a written invitation on a piece of birch bark for me to take dinner with him the next day. The next morning I walked up the stream to the head and there fired two shots as agreed, and waited for him to send the canoe, as it was almost impossible to go through the woods from the head of the stream to his camp. After waiting half an hour without seeing the canoe, I supposed he had not heard my shots and started through the woods, as it was impossible to follow the shore at that point, it being very muddy. I found the woods all he had promised, and was an hour and a half making one mile to his camp, and if I had not had my compass I doubt very much whether I would have been there yet. They were surprised to see me, and asked why I had not fired the shots, and when told that I had said they had not heard them. The trip through the cedar swamp had sharpened my appetite, and I enjoyed a very good dinner, and found Mr. Martindale and his friend Mr. Miller very agreeable companions. They told me that a couple of nights before they had heard a noise outside of their sleeping tent, and the cook got up and walked out to see what it was. He saw a dark object in between two of the tents, and thinking it was one of the guides, called him by name. As he spoke he saw an immense head swing round, and found that it was a big bull moose standing within 10ft. of him. As he had no gun, he retreated in good order, and the moose being satisfied with his investigation walked off.

I returned to camp immediately after dinner, as the next day was Oct. 15, and I wanted to start bright and early for a moose. For three or four days before I had been exploring all around and had located a spot where I knew I could go any day and get a moose by waiting long enough, as I had gone through that section four or five times and had always seen from three to six fresh moose tracks made some time during the day. The next morning after an early breakfast we started for a lake about a mile from the camp. I took my camera with me, as I wished to take some pictures of an old logging camp and a beaver dam. My guide said we had better make a circle of the lake, as we might possibly catch a moose standing out on the shore, and if we did not see one by the time we had come around to the logging camp I could then secure the pictures, and he would take my camera back to camp, and I could go off to the place where I had seen so many tracks.

The lake was about three miles long, and we had gone up one side about two miles when the guide called attention to a dark object at the head of the lake, and said it might be a moose. At the distance we were we could not tell what it was and did not pay much attention to it, but continued paddling quietly along shore. After going a half mile further I glanced at the object again and could see daylight under it, and it looked like a moose. We then paddled a little faster and pretty soon we could see what looked like the horns, but yet could not tell whether it was a moose or a stump. In a few moments, however, we saw the head swing and the sun strike on the antlers, and Lon, the guide, said, "There is our bird." By that time it was blowing very hard, but fortunately straight from the moose to us. We paddled as quickly as we could, but it took us quite a while to get up to him. When about 125yds. from him I laid down the paddle and picked up the rifle, so as to be ready if he should start. My guide had repeatedly told me before to stop paddling and cool off, as he knew this was the first moose I had ever seen in the woods and supposed I would be excited. I acknowledged that my nerves did tingle and were a little unsteady, but it was more from the hard paddling against the wind than anything else. I had no sooner picked up my rifle than the moose turned, and my guide commenced to swear; for, as he told me afterward, there were three deer (a buck and two does) and a cow moose just at the edge of the woods back of the bull, and when I picked up my rifle the deer jumped and started the moose. As the bull turned I fired, but on account of my nerves being unsteady and the canoe jumping (my guide was still paddling as hard as he could) I struck about 6ft. to the right of him. It is surprising at times what thoughts will come into one's head at a critical moment. When starting on our trip my guide very much admired a sheepskin vest that I had for use in cold weather on the lakes, also a hat that I had made to order, with a low crown and a broad brim. While lying in our tent a few nights before this and talking over our prospects of getting a good head, I told Lon if we got a good head I would give him the hat and vest; and when I saw the bullet strike so far from the moose my first thought was, I suppose Lon thinks there goes my hat and vest. He afterward very generously assured me that he had no such thoughts, but was simply sorry to see me miss him, and was beginning to think that I was like a great many others with their first moose.

As the moose started off, however, I got down on my knees in the bow of the canoe so as not to fail again, and fired a second shot, but could not see where it struck. I fired a third shot, but just as I fired the moose jumped into a creek, and the bullet went across his back, and, as I afterward found, touched one of the points of his horns. I got ready for a fourth shot, and waited till he began to climb out of the brook; and just as he was raising we got into still water about 100yds. from him, and Lon stopped paddling so as to give me a fair shot. I aimed right at his hip, and put the bullet exactly where I wanted to, and he dropped on the spot with a broken back. He managed, however, to raise himself and just crawl ashore, and Lon said he was a very accommodating old chap; but, as it proved, he began to crow too soon. We walked ashore and went up as close as we thought it safe, and I shot him again just behind the shoulder; he never winced, but sat there with his front feet spread out before him as if he intended to rise. I shot him again low down to strike the heart, but he paid no attention to that, and we thought it was no use to shoot him any more, as he would not die until he got ready anyhow. In about a minute he gave one grunt, rolled over on his side, and disappeared completely in a mud hole, except one horn, which stood above the water.

The air was blue for a while, and I asked my guide what he was swearing at. He wanted to know if I realized the contract we had on our hands to get that moose out of that hole. I did not realize it fully at that time, but I did just eight hours later when we had finished with him, as it took us just that time to get the hide and head off. Lon got a crutched stick and tried to get it under his head. I told him I had often heard of people shooting moose, but never heard of anyone fishing for moose before; but he said he guessed we would have to fish for this one if we wanted him.

We finally got his head above water, and after hard work succeeded in dragging his head and shoulders up on shore and making him fast to a tree. Then by the aid of ropes fastened to his feet we gradually worked him out further. We had no means of getting him entirely out, so we were obliged to take him out in pieces. We skinned the shoulder and then unjointed it and carried that out, then skinned further and chopped along the backbone and took out a section of the ribs, and so on back to the hip. We then skinned a hindquarter and unjointing that carried it out. We were unable to turn him over, and after taking the head off Lon went into the water almost to his waist, and as I raised the moose and turned him as much as possible he skinned him partly under water. After taking the hide off we hung it up, and it must have weighed over 100lbs. wet, for it was all we could do to raise it from the ground and put it over a pole to dry.

While skinning him I found a .30cal. steel-jacketed rifle bullet that had just gone through the hide and flattened out on the muscles of the hindleg. The lead had flattened and the steel jacket was coiled up alongside of it. After taking his head to camp, and while my guide was cleaning it, I noticed a little bunch on the skin of the neck. I cut it open and found another steel-jacketed rifle bullet, .30cal., that had failed to penetrate the skin. It had gone partly through and had there flattened out, but had not separated from the steel jacket. He had evidently been shot in September, as a small amount of pus had formed around each bullet.

When skinning him I also found that my second shot had struck him behind the shoulder, and after breaking a rib the ball, although very much flattened, had gone through him and was just against the skin on the other side. The ball that struck him in the hip went through the hip bone, and penetrated 2½in. into the backbone, completely shattering it. In the last few years I have had a great many sportsmen explaining the value of a small caliber steel-jacketed bullet, but I think this case upsets all of their theories, as either one of these bullets that I found would have been fatal if it had had weight enough. Before completing my trip I met two gentlemen who had each killed a moose with a .30-caliber steel-jacketed bullet, but in both cases they had shot the game several times between the hip and the shoulder, one of them putting five bullets in his moose before dropping him; but I am satisfied that if either of them had hit the large bone in the hip or shoulder they would have lost their moose.

The next morning we started, and going down the stream saw a caribou standing at the edge of the woods quite a long distance off. I raised my rifle, but the guide thought I would not be able to hit him at that distance; I told him I thought I could, and he said I had better aim a few inches above his shoulders, as the ball would no doubt fall considerable at that distance. I did so, and had the poor satisfaction of seeing the hair fly just from the top of his shoulders, proving that the ball had scarcely fallen at all. In the future I shall put more faith in my gun in long-range shooting. In going down Chesuncook Lake that afternoon we met a gentleman camped at the lower end, with Ernest Davis and Granville Grey as guides. Grey was a taxidermist, and was employed by S. L. Crosby, of Bangor, in winter, and very kindly offered to relieve me of the moose head, as they were going out in a couple of days and would have no carries; and would take it to Crosby while we were just getting to the hardest part of our trip, and would have nine carries in all before reaching Norcross. I was very glad of the opportunity, and accepted his offer. After having dinner with this party we continued on down the lake, and about 3 o'clock in the afternoon had gotten about half way across Chesuncook Carry, between Chesuncook and Ripergenous lakes, when it began to rain.

We stopped in an old camp, and as it kept raining decided to stay there over night. Shortly after dark I thought I heard some one walking up toward the door; I was just about to go out and investigate when we heard a deer blow and scamper off. Toward morning it began to blow very hard, and a fir tree standing alongside of our camp was broken off about 2ft. above the ground. As we were not in a very comfortable position to stay over Sunday, the next morning we started quite early and expected just to cross Ripergenous Lake, where we would have a good place to camp until Monday morning.

It was still blowing very hard, and after going about three-quarters of a mile it was blowing a hurricane and we began to take water over the canoe. We paddled ashore as quickly as possible and barely escaped swamping. We landed in the woods and then had to hunt for a spot to camp temporarily. We found a suitable place about 200yds. further down the lake and transferred most of our baggage there. By this time it was blowing so hard that the trees began to break, and we were afraid we would lose our canoe, so we hurried back and were just in time to save it. We took hold of it, and while carrying it into the woods a fir tree about 1ft. in diameter snapped off about 25ft. from the ground, and the top was whirled over our heads and thrown about 50ft. to one side. We had a very narrow escape. We stayed in camp all that day, and in the afternoon

when the wind had fallen I made a circuit through the woods to explore a little, and inside of a half mile found over a hundred trees that had been broken short off that day.

On Monday morning we crossed Ripergenous Lake to the carry, and then we had work before us, as the carry was three miles long, and we had six loads, necessitating three trips apiece. When we were about half way over we were overtaken by two Indians who had been guiding a party near Moosehead Lake and were on their way home to Old Town. I engaged them and consequently we were across in a very short time. We pitched camp at the lower end of this carry, and I walked up the stream to take some photographs. The three miles between Chesuncook and Ripergenous lakes contain the wildest scenery on the West Branch. In some spots the river passes between cliffs which, although not very high, are only about 15ft. apart. The next morning we were again on the West Branch, but after going a mile and a half we had another carry of a quarter of a mile around Gulliver Falls to the Horse Race. The Horse Race is two miles long and will keep any man busy with his pole to run it in safety. I walked along the shore and my guide ran through without accident except that he broke his pole. Below the Horse Race we come to Nesoudnehonk Deadwater. We had two miles of dead water, then a quarter of a mile carry around Nesoudnehonk Falls, where we camped that night. The next morning, Oct. 19, we loaded our canoe and were soon on our way, but after going about 200yds. we were again obliged to unload and carry about 100ft., as we could not get through the rocks. We then had three miles of fairly good running to Katahdin Brook, where we camped.

As we had breakfasted early that morning and it was about 10:30 when we reached Katahdin Brook, we had lunch, and afterward I told Lon that while he was pitching the tent and getting wood, etc., I would take the trail toward Katahdin Mountain and see if I could get a buck. He said it was of no use to go there, as Joe Frances (one of the best-known Indian guides in Maine) was camped directly opposite us, and with him were twenty-one men (sportsmen and guides), and there would be very little show for any one else. I laughingly told him that they would start the deer and I would pick the one I wanted. He put me across the stream, and I walked up the trail about a mile and a half, when I heard something stepping on the leaves, which were very dry. I stopped and waited, and in a few moments a very handsome four-pronged buck walked out in front of me, and I hit him right in the sticking point. He was not very large, weighing, I should judge, about 200lbs., but had a very pretty head, the horns being even and perfect. I had considerable trouble hanging him up, as the pole I had him on insisted on turning around so as to bring the notches underneath, so the buck would slide to the ground. After three or four failures I cut down a small birch that was a little crooked, and after notching it I managed to hang him on that so as to clear the ground. It took me just an hour and a quarter to dress him and hang him up. I returned to camp and Lon said, "Well, did you get your buck?" I said, "Why, of course; that is what I went for." He would hardly believe it at first, until he saw that my hands and knife were pretty well covered with blood (there being no water handy to wash them).

The next day I climbed Mt. Katahdin. It is just about seven miles from the West Branch at the mouth of Katahdin Brook to the top of the mountain. The first five miles lies through the woods, gradually ascending to the foot of an old landslide. It is nothing but loose sand and rocks, and very steep, about an angle of 45°. The last half mile is simply climbing over large rocks. The way is marked out by small stones placed on the top of the larger rocks. At the top you are obliged to crawl through a hole, or tunnel, underneath two very large rocks, and then you are on top of Mt. Katahdin, over 5,000ft. high. From the top I could see almost 100 miles in any direction, and there were within sight fully 200 lakes. I carried my camera with me, also a rifle, as I thought I might see some caribou on the summit of the mountain, that part being perfectly level for about a half mile in diameter and covered with rocks and moss. The caribou climb up to feed on the moss, particularly in winter, when everything is covered with snow below, as the snow never stays on top of the mountain, the wind blowing it off before it has fairly time to settle. In this level spot on the mountain there is a clear spring that never runs dry, even in the hottest days of summer. While I was there there was 2in. of ice on it. Crossing this level part, I climbed the further end, which is the highest (I believe 5,380ft. above the sea), and added a stone to one of the monuments that has been built by each one who climbs the mountain, adding a stone to a circular pile about 4ft. in diameter. It was just about as high as I could reach, and very soon they will be obliged to build steps to build it higher or start another one. From the highest point the mountain drops off almost perpendicular, and a misstep at that point would send any one down almost 3,000ft.

I have often noticed accounts in the papers, and I have also heard from guides, that almost ever year, and particularly last year, a party of young men would climb the mountain while there was deep snow to shoot caribou that they were sure to find at that time. One guide said that he had seen the carcasses of seventeen caribou that had been shot and left there. I did not see very many, but I saw bones enough and horns enough to convince me that somebody had been shooting caribou simply for fun, or they wouldn't have left the horns. Descending the mountain, I reached camp about 4 o'clock, stopping a few minutes on the way to watch a nice fat doe that walked out within easy shot. She was very fortunate, as we were in no need of meat.

The next morning, Oct. 21, we left Katahdin Brook and paddled down the West Branch to Abell Falls. We had a half-mile carry around the falls to the dead water. We then had two miles of dead water to Pockwockamus falls.

There we had another half-mile carry to Pocwockamus dead water, then we had three miles of dead water to Katepskanegan Falls; there another half-mile carry to Katepskanegan dead water. About two miles down the dead water we came to Joe Frances's home, and camped that night near by to see if we could find a caribou. The next morning, after exploring the country for three or four hours and seeing no tracks, I concluded to give up caribou until next year. We broke camp and paddled down to Passamagamock Falls, where we had another half-mile carry. We then had two miles dead water to Umbajegus Falls, then another half-mile carry to Umbajegus Lake, where we expected to camp over Sunday. We camped there over night, but were in such a poor position that the next morning we broke camp and paddled three miles down to Pemmedumcook Lake. On Monday I explored the country around Pemmedumcook and North Twin lakes, and saw a great many fresh deer signs, but no moose. The next day, Tuesday the 24th, we came down North Twin Lake to Norcross, where I was to take the train for home.

I was twenty-five days on my entire trip, and out of that time there were probably five days when it either rained or I did not go into the woods for some reason or other. In the other twenty days I saw sixty-two deer, three moose and one caribou. I got all the deer and moose the law allowed, and would have had all the caribou also if I had trusted my gun. Besides I could have killed just twenty deer, as I had perfectly sure shots at that number. I notice that there is some talk of reducing the number of deer that each sportsman may kill, but I do not think that any change in the present law is needed, as even the way it is the deer are certainly on the increase. Under the present law the sportsman may shoot one deer, so as to have meat while in camp, and then get another to take home with him; but if the number were reduced he would either have to go without himself or would be unable to take any home.

C. H. STONEBRIDGE.

THE CHESTNUT RIDGE

And Along Its Foot.—X.

A SERIES of papers purporting to be descriptive of the Chestnut Ridge region, that should leave out of the account the most striking event in its history, would seem to be guilty of a strange omission. I refer to the great Johnstown flood of 1889.

Johnstown lies mainly on a low point of land at the confluence of the Conemaugh River and Stony Creek. Nine miles above Johnstown a small stream called the South Fork joins the Conemaugh. About two miles above its mouth a dam was built across the stream by the State, in order to retain a supply of water for times of need in the days of canal navigation between Pittsburg and Johnstown. The basin formed on the South Fork by this dam covered an area of 600 acres, and was calculated to contain 480,000,000 cubic feet of available water. This dam was completed in the year 1853. After the main line of public works passed into the possession of the Pennsylvania Railroad Company, it soon fell into disuse and was neglected. In the summer of the year 1862 this dam partially gave way and the water escaped; but as the water was low at the time and the break was not large, no serious harm ensued.

For some years after this the dam lay thus dilapidated, and instead of the lake that had existed there was only a broad extent of low land with a small stream of water flowing through it. About the year 1879 a company of wealthy men bought the property containing the bed of this former lake. The dam was rebuilt and the lake was restored. It formed a beautiful sheet of water. A number of handsome cottages were built upon its margin, and the place was made a summer resort by the owners. Some of the citizens of Johnstown were always apprehensive of danger from this dam, but people generally were quite indifferent about it. It did not seem probable that the dam would ever give way, or if it did, with such a wide outlet as the river valley afforded the water could not possibly do any great damage.

A widely extended and very heavy rainstorm set in in the night of May 30, 1889. It rained very hard during the night and much of the next day. The streams all over the State and parts of the adjacent States were greatly swollen with water. The railroad tracks in many places were washed out or covered with water, and trains could not run. But while much damage was done in many places, a most appalling calamity occurred at Johnstown.

The streams at that place, which we have already mentioned, were greatly swollen at an early hour of May 31. As the day advanced they rose higher and higher. The rain continued to descend. Great quantities of drift began to come down the Conemaugh and Stony Creek, and much of it lodged against the piers of an immense railroad bridge of stone that stood in the river just below the confluence of the two streams. The water was thus greatly obstructed in its flow, and began to back up into the town. By noon it had extended far up into the heart of the town, while the houses down near the point were standing half their height in the water. The inhabitants had betaken themselves to the upper stories of their houses. They were surrounded, and it was impossible for them to get away if they had so wished.

Between the mouth of the South Fork and Johnstown, on the river, were several towns and villages: Mineral Point, East Conemaugh, Franklin, Woodvale, and Conemaugh Borough. The Pennsylvania Railroad tracks extend along the bank of the Conemaugh between Johnstown and South Fork. By the middle of the day the water had so seriously damaged the roadbed between these two points that trains could not proceed eastward any great distance beyond East Conemaugh, two miles above Johnstown. Several passenger trains were standing on the track at East Conemaugh, waiting, unable to pursue their way.

Among the more thoughtful people there was a good deal of concern and uneasiness about the dam; but most of them thought little about it. People who live constantly in the presence of danger soon become accustomed to it and give it little thought. In the forenoon of that day the civil engineer in charge of the dam became alarmed at the height to which the water was rising, and he set men to work to open a sluiceway for its escape; but the water continued to rise so rapidly that he saw that his efforts would be in vain. At noon he rode down to the village of South Fork, at the mouth of that stream, and telegraphed a note of warning to the people in the valley below. By this time access to the telegraph office at Johnstown had been cut off by the water, so that people generally had little or no knowledge of this warning. Anyhow, few if any of them took advantage of it. This is not to be wondered at. It was cold and wet; there was no place of safety except the barren hillsides, and no one could realize the real character of the danger. Besides, as we have seen, many of the inhabitants were imprisoned in their houses and could not escape. All hoped for the best; perhaps the dam would not break, or if it did it would not do much harm.

It was some time after 3 o'clock in the afternoon of May 31 when the dam gave way. The long pent-up water rushed forth in a mighty torrent. It whirled down the narrow valley of the South Fork in a flood 50ft. high. Across the mouth of the South Fork stood a magnificent stone bridge upon which lay the tracks of the railroad. When the flood struck this bridge it was stayed for a moment, when it rose to a height of 80ft. Under the pressure of this immense body of water the bridge yielded, and the fearful torrent rushed with the speed of an express train down the valley of the Conemaugh. The village of Mineral Point was the first one in its path, and it was immediately swept away.

A few minutes later a locomotive that had been up the road some distance above East Conemaugh came flying down the road at its utmost speed, its whistle screaming the wildest alarm, and only a few yards behind it came the flood. The face of this great wave was not less than 40ft. high. "The waters did not seem to flow along," says an eye-witness; "they appeared rather to be rolling over and over, as if the last could not wait on the first." The town of East Conemaugh shared the fate of Mineral Point. A large round house here, in which were about thirty locomotives, in a moment had entirely disappeared, and the locomotives, some of them weighing nearly sixty tons, were taken up, whirled about like blocks of wood, and carried a mile away. The trains standing here were nearly all destroyed, and many of the passengers were lost.

Just below East Conemaugh, on a broad flat, stood a beautiful town called Woodvale. This town shared the fate of East Conemaugh. The loss of life and property here was almost complete. Below Woodvale and extending up to it lay a large suburb of Johnstown, called Conemaugh Borough. At the connecting point between Conemaugh Borough and Woodvale, the valley, which at Woodvale opens out to a breadth of nearly half a mile, suddenly contracts by the coming down of a high bluff on each side of the river to a width of only a few hundred feet, and then immediately expands again into the broad basin in which lay Conemaugh Borough and Johnstown. These two places adjoined each other. Only an imaginary line separated them; they were geographically one town, and the destruction of Johnstown implies the destruction of Conemaugh Borough.

The mighty flood that had expanded across the Woodvale flat was now choked by this narrow passage, and crowded through in a torrent 30 or 40ft. high upon the devoted town. Its surface was a mass of debris. Almost the first obstacle in its way was the Gautier wire mill. This was an immense establishment; but in a moment it was swept away like a bubble. On rushed the flood, carrying everything before it. The largest brick houses seemed to melt away in an instant, so that afterward scarcely their foundations could be found. The frame houses were whirled along like chips upon the torrent, were dashed against each other and broken to pieces. "I cannot describe the mad rush," says one who witnessed it. "At first it looked like dust. That must have been the spray. I could see houses going down before it like a child's play-blocks set on edge in a row. As it came nearer I could see houses totter for a moment, then rise and the next moment be crushed like egg-shells against each other."

This seething deluge of water, its surface covered with a mass of broken houses, logs, trees, floating furniture, and struggling and drowning creatures, was hurled madly and wildly through the devoted town until it struck the heavy stone bridge. Here was soon collected an immense mass of ruins and human beings, mingled with rocks, earth, iron and almost every conceivable object. The water struck the bridge obliquely, dashed against the foot of a high hill, was deflected from its course in the direction of the Stony Creek, and a mighty current set off up that stream, reversing its usual flow, bearing with it houses and their unhappy inmates, and carrying havoc in its path. The ruins of buildings that had stood at Woodvale, on the Conemaugh, were afterward found far up the Stony Creek.

Meantime evening was closing in. The site of Johnstown was one great lake of water. The few houses that remained standing were filled with people who had struggled in from the flood. The embankment of earth at the eastern end of the stone bridge at length gave way, allowing the water to escape into the valley below. It receded slowly, and the survivors in the houses were prisoners for the night. To add infinitely to the horrors of the time, by some means the houses that were packed by hundreds against the bridge took fire. All night there was a raging conflagration there, and scores of unhappy people who had escaped drowning were consumed in the flames. It was a night of terror and doom in the Conemaugh Valley. The water was strewn with people crying for help. The hillsides were covered with the sad survivors, calling to each other through the darkness. Much damage was done and some lives were lost in the valley below Johnstown, but the Johnstown catastrophe eclipsed everything else.

The Johnstown flood was a dreadful disaster. The railroads were destroyed, and travel through the valley was stopped. The telegraph lines were down, and all communication was cut off. The whole civilized world stood aghast at the magnitude and suddenness of the calamity. It was a period of horror, of excitement and of uncertainty. Wild rumors and exaggerations were everywhere abroad, but exaggeration was not needed, the bare truth was shocking enough. The loss of life was about 3,000 persons; the loss of property was many millions of dollars.

Johnstown was destroyed. Most of the inhabitants that had not perished were homeless, impoverished, without food or clothing. Scarcely a family that had not lost one or more of its members. Many families were utterly obliterated. The whole valley was filled with the dead. At Nineveh, ten miles below Johnstown, over 100 bodies had been drawn out of the water at an early hour the next day.

This great calamity called forth the most magnificent exhibition of public charity in the history of the world. Every community, even remote parts of Europe, vied with each other in their efforts to alleviate the suffering at Johnstown. Train loads of provisions and clothing were instantly collected and on their way to the scene of the disaster. Hundreds of men set to work to bury the dead, to clear away the ruins and to erect homes for the survivors. Money contributions amounting to over $2,000,000 were made.

The ruined valley, through this noble charity, soon recovered from its desolation. Homes were rebuilt, business was resumed, the broken families were reunited as far as possible, and the great Johnstown flood passed into history. It is a sad story, and we have told it reluctantly; but it seemed necessary to tell it.

Natural History.

YELLOWSTONE PARK FISH AND GAME.

Lieutenant Elmer Lindsley has been charged by Col. Young, the Superintendent of the Yellowstone Park, with the duty of protecting the game of that reservation. In order that this important work shall be fully carried, out detailed instructions have been given the troops at different stations in the Park, and these instructions will from time to time be supplemented by others, as may be necessary.

The following extracts from a report by Lieut. Lindsley, dated Nov. 4, 1897, gives the latest information of the condition of game and fish in the Park:

Fishes.

The waters of the Park have been stocked as follows (report of superintendent, 1892):

In 1889: East Fork of Gardiner above falls, 1,000 black-spotted trout; Gibbon River above Virginia Cascade, 990 rainbow trout; Madison River above Keppler's Cascade, 995 Loch Leven trout; Gardiner River above falls, 4,975 brook trout; Yellowstone River above falls, 2,000 whitefish; Twin Lakes, 1,000 whitefish.

In 1890: Shoshone Lake, 24,012 lake trout; Shoshone Lake, 3,350 Loch Leven trout; Lewis Lake, 12,013 lake trout; Lewis Lake, 3,350 Loch Leven trout; West Fork of Gardiner above falls, 7,850 brook trout; Nez Perce Creek, 9,850 Von Baer trout; Yellowstone River above falls, 10,000 whitefish.

All of these plants, except that of the whitefish in the Yellowstone, were made in previously barren waters. No trace has ever been found of the whitefish in either the Yellowstone River or the Twin Lakes.

The rainbow trout planted in Gibbon River seem to have come down over the cascades; but very few are found above the cascades, while below the stream is well stocked to its junction with the Firehole.

No Loch Leven trout have ever been found in the Madison (Firehole) above Keppler's Cascade, but the brook trout are very numerous there. Evidently, through some error, the *fontinalis* were planted there instead of the Loch Leven.

The brook trout in Gardiner River and in the West Fork (Glen Creek) have thriven and bred abundantly, especially in Willow Creek. These streams, however, being easily accessible from the wagon roads, and the brook trout taking the fly so eagerly, have been fished out to such an extent that in August last it was deemed advisable to prohibit fishing in them for a time. This was done, and the order has not yet been revoked; it probably may be revoked next season—for a part of the season at least.

The Von Baer trout in Nez Perce Creek have multiplied abundantly, and not only this stream, but the Firehole River, from the Lower Falls to Keppler's Cascade and Iron Creek, are abundantly stocked, as is also the Little Firehole below Mystic Falls. In the Firehole Basin is also found an occasional brook trout, evidently come down Keppler's Cascade, and a considerable number of the native mykiss. Several good specimens of rainbow trout have also been taken from the Little Firehole, near its mouth. I cannot account for the presence of the rainbow in this locality, as it seems to me plainly impossible for any fish to ascend the Lower Falls of the Firehole.

I have never heard of any fish being taken from Shoshone or Lewis lakes. I have seen fishes of apparently 3 or 4lbs. weight in Shoshone Lake, and a skeleton has been found on the shore of Shoshone Lake of a fish that probably weighed 10lbs. Two soldiers of Troop D, 4th Cavalry, reported having seen schools of trout 2ft. long near the mouth of De Lacy Creek in Shoshone Lake.

In 1893 brook trout were planted in Shoshone Creek, and these have thriven amazingly; the stream is now literally alive with trout from 1½lbs. down.

In 1895, 500 black bass were planted in some small land-locked lakes in the Firehole Basin; nothing has been seen of them since, and I fear that all have perished.

In the Yellowstone and both forks of Snake River, with most of their tributaries, the native mykiss is indigenous and remarkably abundant. In the Madison River and its North Fork the mykiss, whitefish and grayling are indigenous; and in the Firehole River, between its junction with the Gibbon and the Lower Falls, the mykiss, rainbow, Von Baer, *fontinalis*, grayling and whitefish may be taken from the same pool.

I believe that bass would thrive in the small lake near the Gardiner River where ice is cut for the post; also in Moose and Loon lakes in the Falls River Meadows, and recommend that these lakes be stocked with bass. The former can be stocked at any time of year; the latter only in summer.

I hope that a hatchery will be established here, and some employee of the Government instructed in the artificial propagation of trout. A folding canvas boat is much needed for ascertaining the condition of plants made in several lakes remote from a wagon road.

Birds.

Pelicans, geese, ducks, gulls and sandhill cranes are numerous. There are some swans. All of these birds nest here. Ospreys, hawks and eagles are fairly numerous. There are a few sharp-tailed grouse, but in the main the altitude is too great for them. The big mountain grouse is fairly abundant all over the Park, and broods of the ruffed grouse are found in many places. Sage grouse have been seen in the Park, but are very uncommon. The jay family is represented by the magpie in some parts of the Park, and by the Clark's crow, moose bird and crested jay in all parts. The little water ousel, a very curious and interesting bird, is fairly common, especially on the Gardiner and Gibbon rivers. Robins, kingfishers and other small birds abound.

Animals.

Buffalo.—But very few buffalo have been reported this season. The scouts, however, seldom see much sign in the summer, and now the few remaining buffalo are scattered and range in the most remote and inaccessible parts of the Park in summer. I am confident of finding twenty-five this winter when the snowshoe season sets in, and hope there are nearly double this number in the Park. Since Idaho has forbidden the killing of buffalo—as have Montana and Wyoming—I have strong hopes of being able to protect them from further slaughter by poachers. Whether they will still decrease on account of natural causes only time can tell. A strong effort is being made to protect them and to save the remnant, if possible.

Moose.—Moose are becoming quite numerous in the south part of the Park, and particularly in the southern forest reserve, where I believe there are more moose than in all the rest of the Park. There are rumors of a band between Mammoth Hot Springs and Grand Cañon, but this rumor will not be verified before snow falls. I most earnestly recommend that Congress be urged to include the forest reserve in the Park. This reserve is now under charge of the Park management, with orders to protect the game therein. The only practical change which would take place in the status of this strip, were it included in the Park proper, is that the law of May 7, 1894, would then apply to it, and poachers could be prosecuted and punished by law, whereas now it is only under executive orders.

Elk.—Notwithstanding the hard winter of 1896-97, which killed many elk and drove many more out of the Park, there is no perceptible diminution in their number. I believe that more than 5,000 winter in the Park, and that at least 15,000 leave the Park in the autumn to winter in the lower country.

I happened to be at the south boundary of the forest reserve this year, just after the first snowstorm on Oct. 13 and 14. The country about Jackson Lake was literally alive with elk, and from the best estimates I believe that 10,000 crossed the south boundary this fall. Many go down the Madison to winter; some down the Gallatin and some down the Yellowstone. All that survive the winter return to the Park to raise their young as soon as the snow will permit their return. Of those that winter in the Park, the largest herd ranges north of the Yellowstone River, in the country that it has been so often proposed to cut off from the Park. I doubt if any more would ever winter in the Park under any circumstances if this should happen. The Park furnishes an ideal summer range for 40,000 elk, but there is not enough winter range for one-fourth that number.

Sheep.—There are several bands of sheep that range along the higher mountains of the Park. A very fine bunch winters close to the post, on the slopes of Mount Everts. This bunch numbered about thirty last winter. There are smaller bunches in the northeast corner of the Park, some along the range between Swan Lake Flat and the Madison Basin, and a considerable number in that portion of the forest reserve east of the Park. It is difficult to make an estimate of the total number in the Park, because of the inaccessibility of their range, but I am confident of more than 100, and believe there are 200 in the Park.

Deer.—Deer are numerous, and in the summer are distributed over the whole Park. Their protection has as yet offered no difficulties and probably will not for many years to come. Probably 200 winter in the immediate vicinity of the post and are very tame. A few white-tail deer inhabit the lower and more open portions of the Park.

Antelope.—Last winter drove many of the antelope out of the Park, and of the number which left but few ever returned. A year ago there were probably 1,000 antelope in the Park; now I doubt if there are half that number. Their winter range is at the base of Mount Everts, between the Yellowstone and Gardiner rivers. This range has become infested with coyotes, which kill many antelope and worry the rest of them, until I am satisfied that unless the coyotes can be driven away or killed the antelope will be driven from their winter range and will not return.

Bears.—The bears have increased and are quite numerous; the small black bears are very fearless. They frequent the garbage dumps at all the hotels, and are objects of much interest to tourists. If let alone they are quite harmless, and the enjoyment they afford tourists more than offsets the mischief they do.

Wolverine.—Wolverine, while not plentiful, are distributed over a large part of the Park, though they are seldom seen by tourists.

Coyotes.—Coyotes are very numerous in certain sections. They do some damage to the water fowl and kill some of the young elk, but the antelope is the greatest sufferer from their depredations. If a large number of coyotes could be gotten rid of it would doubtless be a great benefit to the other game in the Park.

There are some mountain lions, but these are rarely seen and do no material harm.

Fur-bearing Animals.—The beavers are quite numerous in the Park, and inhabit the following localities: Gardiner River near the post, Lupine and Blacktail creeks, Elk Creek, the Lamar River, Slough Creek, Cache Creek, Soda Butte Creek, a few in Pelican Creek, the Upper Yellowstone, Thoroughfare Creek, a few in Barlow's Fork of Snake River, some in Falls River Meadows, a few about Shoshone Lake. There is a flourishing colony in Nez Perce Creek, a large one near the mouth of Magpie Creek, and a goodly number in the Gibbon River near Norris. There are some in Cascade Creek and in the lake, and all the creeks that drain into the Gardiner River above the falls. The lower beaver dam, opposite Obsidian Cliff, has been rebuilt. I think there are more beavers in the Park now than at any time within the last six years, and if unmolested they will rapidly increase. Their protection, however, is one of the most difficult duties intrusted to the Park management. They are now quite valuable and very easy to trap, and their skins are easily disposed of. The professional beaver trapper leaves almost no sign of his work, and it is very hard to catch him at his work

Otters are fairly abundant and have increased since the barren streams have been stocked with fish.

Marten are plentiful and are widely distributed, as are the Canadian lynx and wildcat.

Mink are quite plenty; foxes are plenty, and there are a goodly number of black and cross foxes. There are some badgers and many muskrats, ground hogs, squirrels, skunks, porcupines and rabbits. Of the last we have the cottontails, a few jack rabbits, many snowshoe rabbits, besides the pika—tiny rock rabbits.

On the whole the Park is a grand success as a game preserve. The variety of species is great, and the condition of most of the species is satisfactory. The exceptions to this are: first, the buffalo, which are undoubtedly away from their natural range, the open plains; and next the antelope, which are suffering from lack of suitable winter range, and from the depredations of coyotes. The elk problem is not a serious one as yet, but it undoubtedly will be in a few years unless more suitable territory is provided for winter range. This territory can now be acquired with little difficulty and at insignificant expense, and if it is acquired promptly there will always be elk hunting about the edges of the Park. The longer the acquisition of this winter range is deferred the more difficult it will be, until perhaps a few generations hence the elk problem will become as difficult as that of the buffalo now. Respectfully submitted.

Elmer Lindsley,
Second Lieutenant 4th Cavalry.

Squirrel Ways.

Editor Forest and Stream:

Messrs. Rice and Davison are right. The red squirrel when he has the opportunity is an indefatigable worker to store up nuts for future use.

Some years ago I went to an unused closet in my country house and I found one of the drawers level full—over a bushel—and another drawer partly filled with butternuts. The outside shucks were peeled off and the nuts nicely packed away. These nuts were taken from an adjoining shed chamber and carried through a hole in the rear of the closet. We afterward saw the squirrel at his work, which we ended with an airgun.

At the time of writing several of these rascals are busy lugging off frozen apples from an outbuilding.

The common woods mouse also lays up a supply of food for winter use; they peel and store in hollow trees quantities of beechnuts. These deposits of several quarts each are often found by woodchoppers in the winter season, especially if it has been a good beechnut year.

A word about the "Compass Points of Nature." In our northern latitudes the tops of the large hemlocks bend toward the northeast, and the moss on hardwood timber is on the north side of tree—that is, the greatest portion of the moss on those trees will be on their northern side, etc.

Stanstead.

Sheldon, N. Y.

Game Bag and Gun.

The "Brief's" Pictures.

There are twenty-nine illustrations in the current edition of *Game Laws in Brief*, most of them full-page half-tones, and all admirably printed. The book is a beauty, and well worth having for the illustrations which, Mr. Charles Hallock says, so well represent America's wilderness sports. The *Brief* gives all the laws of the United States and Canada for the practical guidance of anglers and shooters. As an authority, it has a long record of unassailed and unassailable accuracy. Forest and Stream Pub. Co. sends it postpaid for 25 cents, or your dealer will supply you.

WHAT IS CRUELTY TO ANIMALS?

Editor Forest and Stream:

In Forest and Stream of Oct. 30, Didymus, an old contributor, and one who always writes to the point, touches on the cruelty of drawing squirrels from their holes with the worm on the end of a ramrod, and then throwing the animal to the dogs. In the most barbarous days of my boyhood I never saw nor heard of such a beastly practice. It is, or should be, abhorrent to every sportsman—man or boy. But Didymus goes me "one better" when he decries shaking a coon from a limb among the dogs. A coon—especially an "Ole Mr. Coon"—can take care of himself if dropped among a few ordinary curs such as are used for coon hunting, unless they are backed by the hunters. An old he-coon is more than a match for the ordinary coon dog, even if there are several of him.

A square fight is relished by most men, whether in politics or on a coon hunt. I love to see my terriers shake a rat because I believe a rat should be well shaken after taken, and if they should by mistake get hold of that domestic tiger which we call a cat I do not grieve, because I know that some young birds will be spared. With Didymus I am in favor of protecting all useful life, but man makes war on most wild animals. He kills them for food, for fur or for sport. Coon hunting may be said to embrace all three of these reasons, yet many of us have engaged in it for sport alone. I have arrived at a time of life when I am too tender-hearted to kill a deer or to shoot at a quail, for fear that my dog should bring it in alive and I would have to pinch its head. In that case the contest is over, the blood is cool; and while I do not object to others doing these things, they are not sport for me.

Our tender-heartedness takes unto itself our differing mental faculties. Some well-meaning man had a law passed in the State of New York forbidding public rat killings by terriers, and a gentleman who takes pride in the ability of his terrier to clean up from ten to a hundred rodents in a given time cannot indulge in the pastime without fear of the penitentiary. I may turn over rubbish in order to let my terrier shake a rat, but I must not trap the rat and let it loose in a ring where the dog is to be put. From my point of view this is sentimental nonsense. The terrier may enjoy the sport, but I may not. The death of the rat is quick and painless as much in the one case as in the other; the dog likes the fun and I like it. As I understand the law, it is the instinct of the terrier is to kill rats, and this may be all right in case the dog catches the rat in the open, with or without human aid; but it is brutal for a man to enjoy the killing and to buy rats for the purpose of seeing his dog shake them. That is all that can be said on that side, and the case is weak.

Dog fighting is brutal because it is between domestic animals, and the contestants are usually so well matched that one, or both, often dies. Bull fighting, as practiced in Spanish countries, would be a cheerful spectacle if the poor horses were spared and only the men were killed; but a rat! Every man's hand, boot and gun are ready to help exterminate this enemy of graneries, poultry yards and markets. The bite of the terrier is the quickest and most merciful death it can meet, and I love to see the rat pass from this world in that sudden paralysis which comes from a quick shake by a terrier that dislocates the spine and destroys the nervous system in a moment. It is the happiest death a rat could die. Memory recalls the reply of some noted Englishman, possibly a D. D., who was rebuked for loving fox hunting. Said he: "The dogs love it, the horses love it, I love it, and nobody ever heard the fox say he didn't love it."

All of this I would ask Didymus to consider. I admire the sentiment which he expresses and profoundly respect his views regarding cruelty to animals, but it is possible that each man, especially a sportsman, may entertain ideas which are peculiarly his own on what constitutes cruelty. Surely a few dogs nipping at the hind quarters of a bear and holding him at bay until the hunter can come up is not cruelty. Neither, *me judice*, is the shaking of a fighting coon to the dogs below, from whom it often escapes, a bit of brutality to be enjoyed "as heartily as rowdies enjoy a dog fight."

Didymus has his heart in the right place, and if he is "shocked" at the description which Mr. Louis Benson Akin gives of "fun," that is his privilege. Some monarch gave up his attempt to make several watches run alike, and long ago I realized the impossibility of getting people to think

alike, especially on game protection and on the subjects mentioned in this article.

With Didymus I heartily agree about the destruction of bobolinks and other song birds, and it is only the fact that we "are so near and yet so far" on kindred questions which has brought forth this effusion. We may say with the Bramah that the taking of all life is wrong, but we don't believe it. All our observations on animal life disprove it. The robin devours the earth worm; the hawk feeds on the robin, and the cat will eat both the robin and the hawk, if it can get them. There are beasts, birds and fishes whose only food is other beasts, birds and fishes, and thus we have nature's great authority in the class omnivora, to which man properly belongs, to eat all of them if we choose.

The hunting instinct and love of the chase come to us naturally. The brutality of it has been so modified that we are disgusted with the slaughter of more fish and game than we can use for food or fur, when there is left only the savage exultation of killing. We do not exult over the killing of game by another; it is merely a personal matter. "I killed the biggest moose, elk, bear, coon, trout, salmon, black bass," etc.; the *ego* is at the bottom of it. We are not suffering for the food which we have killed, but we do want the world to know that I, in the biggest kind of type, did the killing which makes the record.

Didymus has kindly furnished a text for this sermon, and now it may be in order to ask: What line may a sportsman draw between legitimate sport and cruelty to animals? Does the man who decoys ducks to his blind, where some cripples get away to be eaten by gulls or mink, come under the ban? Does the upland shooter who wounds a plover or a quail, which escapes to die of blood poisoning a few days later, deserve to be called cruel? If not, then the coon hunter may enjoy his sport and its exciting fight.

Old New Yorkers will remember Harry Jennings's rat pit, where business men dropped in with their terriers and bought from ten to a hundred rats, and the record was kept to the second. The owners of the dogs took great pride in these records, and I know that I'd enjoy a ratting match to-day; but the cruelty society has had it made illegal. There's not a bit of cruelty in it, and, bless me, how the dogs love it!

Years ago a stray dog came to my gate and whined. He was a medium-sized cur, nearly black, with those tan markings over the eyes which denote some terrier blood, and I opened the gate for him and fed him. I did not want him, but he had adopted me and found a home. He seemed to be of no possible use except to wag his tail in a friendly way, and I called him Bungo, a name that has an attraction for a stray cur, for some occult reason; and we were friends. One night there was a commotion in my hen house, and with Bungo and a lantern I started to see about it. The atmosphere dispelled any idea that—

"The woodbine spices were wafted abroad,
And the musk of the roses blown."

And I knew that an essence peddler was the intruder. Just what Bungo knew about skunks I had no means of learning; but he located the perfumer under some planks which made a bridge to the barn door. A plank was raised and Bungo made an assault on the enemy, and came out howling at the first volley from the intrenched foe. His eyes were streaming and he was gasping for breath, but he rolled in the dust, ate some earth, and charged again with the same result. He was suffering, but not demoralized. A word of encouragement, and with a yell of rage he dashed in. There was a shaking of something, a cracking of bones, and he brought out a dead skunk.

We washed Bungo, poured sweet oil and witch hazel into his eyes, and in a week he was all right. His odor was terrible, but he had won the right to bear it, and it would have been cruel to banish him for it, and we combated and endured it.

I had heard it said that with such an experience a dog will never attack a second skunk, but within a month the same thing happened again, only Bungo killed his game in the second attack to which I urged him, and we doctored him in good shape again. These scrapes were cruel to Bungo, the skunks and to us; for we suffered from the mephitic odor of the dog; but I could not shoot the skunks among the beams under the planks, and Bungo was willing to rid me of the nuisance at great personal sacrifice, and I did not doubt his willingness to try it a third time, if necessary. There was no cruelty in the whole proceeding. Bungo was fully rewarded by a few kind words, which testified our esteem for his valor, and many a soldier has done valorous deeds for the same recompense from his superiors.

The minds of men are as individual as their faces, their figures and their stomachs, and if we go on eliminating cruelty from all sports, as has been done since the days when Rome was mistress of the world, we may, a few centuries hence, become so effeminate as to consider the capture of a fish on a hook as cruel. There is the Peace Society, which would abolish war, which is the "natural state of man." It's cruel—yes, so are all of nature's laws; but the philosopher Malthus preached that war is a necessity in order to keep down the population and save it from famine and plague. Imagine the condition of the world to-day if there had never been a war. The Old Testament is largely a history of wars, and the Supreme Ruler seems to have ordered and approved of them. I believe in the Malthusian theory, and think it time that this country had another war. We have at last begun to check that emigration which has overrun the country and built cities where the buffalo and the wolf should be ranging, where we should be holding the land for millions of Americans who are to be born two centuries from now. That's cruelty to the unborn man, who will find himself surrounded by the same conditions that now obtain in overcrowded Europe.

Sport in a Roman amphitheater, when Rome was pagan, consisted in feeding captive lions on Christians, or in mortal combats between either prisoners of war or slaves. The spirit of the age approved it. Bloodshed was the drawing card, and it must be the blood of men or combats of lions and tigers in order to be considered sport. When Rome became Christian there was a modification of these amusements. Boxing with the cestus, a metal ring bound to the fists with leather thongs, took the place of feeding men to the lions; and to-day some men think modern prize-fighting is brutal when the contestants are not slaves forced to fight for the amusement of others, but do it voluntarily for the shekels and the fame which fall to the victor. With the modern 5oz. gloves there is nothing brutal about it; one man gets exhausted, that's all.

That is my view of a manly, athletic game, which is conducted by rigid rules of fair play. Then take a look at the brutality of football, where the contest often degenerates into what is worse than a slugging match. Men are kicked in the face; a man bends to grasp the ball, and a dozen pile on him and break his back. You may say that the game is played by gentlemen (?) students for fame alone, but I will reply that modern prize-fighing is now conducted in a more gentlemanly manner than football, and it is seldom that a man is seriously injured who was physically sound when he entered the ring, and the fatalities in the two games within the past ten years have been nearly ten in football to one in the prize ring. I never saw a prize-fight nor a football game, and my knowledge of these sports is derived from the daily papers.

As we are considering cruelty to animals—a subject which cannot be separated from that of brutal sports, like bear baiting, badger drawing, etc.—the subjects last named naturally come in. If a man of his own free will chooses to stand up before one of the foremost fistic champions of the day, with a full knowledge of what he may receive, and with a belief that he can go him one better, I am not only willing that he should follow his inclination, but would like to see him try it. As a boy my ambition was to fight, and repeated wallopings from stronger boys had no cooling effect. My eyes were often blacked and my nose was skinned when I went home, and an interview with father in the woodshed failed to break up my pugnacity; for if a new scholar came into the old Fort Crailo school the first thing we wanted to know was: "Who can you lick?" Then came the matching and the chip placed upon the shoulder, and the status of the newcomer was decided. Humphrey Crary once said to me: "This new feller 'll put the chip on his right shoulder. Move up yer left hand as if you were afraid, draw it back and come ag'in, and then when you knock the chip hit him under the jaw at the same time, and then follow up with your left and lick him before he knows there's a fight." That is logistics, strategy or what you please, and has won battles where thousands of men were engaged as well as where two schoolboys fought without hurting each other. These things, in my opinion, make a man of a boy, and if the storks had ever brought a boy to my nest I would never have punished him for fighting.

Perhaps he would not be encouraged in it, for his taste might not run that way, and the taste of a youth should be considered before all things. The son may inherit the tastes of some old great-great-grandfather or corresponding relative on his paternal or maternal side, and that is the trouble with boys. Of course girls may be in the same category, but a father wishes his boy will be a second edition of himself, and there his disappointment comes in, because his ancestors on both sides mould the youthful mind, and the father may have little regard for some of his wife's relatives.

Away back in 1880 it fell to my lot to be a guest of the Hon. Andrew D. White, American Minister to Germany, at a reception in his house in Berlin. Mr. White introduced me to a baron who was a noted sportsman and who was a most pleasant gentleman, but whose ideas on the subject of cruelty to animals were so foreign to mine as to be abhorrent. Yet why is not the opinion of one man on this subject as good as that of another? I will try to repeat the conversation.

"You still have some game of the smaller sorts left in the East, and even near the large cities," said the Baron.

"Yes, of the kinds which are not easily exterminated; species which have grown wary, like the ruffed grouse, and will run ahead of a dog, and refuse to take to a tree and be shot at until they are killed, as is their habit where they are not so sophisticated. We have quite stringent laws in most of the older States which protect all kinds of game during the breeding season, and until the young are able to care for themselves, and are strong on the wing."

"May I ask why you have such laws?"

The question puzzled me as much as if he had asked why we forbid murder and burglary; but a look in his face showed that he was in earnest, and was not trying to get some fun out of me, and I answered: "Because we have men who would not only shoot half-grown birds, but would kill the mother if it were not for the penalty which the law prescribes."

"Tell me, why shouldn't they kill birds when they wish?"

Again there was a suspicion that the baron, whose English, by the way, was better than mine, was chaffing me. His questions were such that I could not readily answer. The protection of game during the breeding season had been an article of faith which no man had questioned until now. I looked into his bright, manly face, and put the question: "Surely you would not shoot a mother bird, and leave her chicks to starve?"

"Yes," he said, "if I wanted her. "What is she or the suffering of her chicks to me?"

Prof. Geo. Brown Goode came along and I induced the baron to repeat his opinions and then asked: "If you knew that several young birds would starve if you killed their mother, would you kill her?"

"Certainly I would, if I wanted her. The young are nothing to me, I only want the mother, and I am the one who has the authority in the matter of life and death on my domain; and as I have this authority there seems to be no reason why every man should not take the life of all wild animals as he does of domestic ones. You do not consider the feelings of the cow when you take her calf for veal, nor do you consider other life when you take it for food."

"That is so, baron," I answered, "but the leaving of young to starve is another matter."

"Nothing that I care about," he replied, and there seemed nothing more to be said; our ideas were too far apart to hope for an agreement. I regarded his theory as one unworthy a civilized man, but he saw nothing barbarous in it. The men who turned their thumbs down in the Roman amphitheater, to signify that the vanquished gladiator must be murdered, felt no qualm of conscience, but to-day we are horrified at the thought, all of which goes to show that men have different standards regarding cruelty at different times.

There are men who think the killing of all animals for sport is brutal, but I doubt if Didymus agrees with them; yet he condemns the principal feature of coon hunting, the shaking of the coon from the tree among the dogs. Therefore, if perchance he reads my new book, "Men I Have Fished With," I will advise him to skip pages 265–267, for it tells of a coon hunt much like that to which he objects.

The "Game Laws in Brief."

THE current edition of the *Game Laws in Brief* (index page dated Oct. 15) contains the fish and game laws for 1897, with a few exceptions, as they will continue in force during the year. As about forty States and Provinces have amended their laws this year, the *Brief* has been practically done over new. Sent postpaid by the Forest and Stream Pub. Co. on receipt of price 25 cents. All dealers sell it

REMINISCENCES OF AN OLD SPORTSMAN.—VII.

(*Continued from page 465.*)

ONE beautiful October day we were shooting in Scotland, Conn., three of us, Mr. Boyden, Fred Eaton and myself. We had taken a very early start, as we had twenty miles to drive, and when the sun showed itself we were at the foot of the long hill, within a mile or two of the ground we intended shooting over. Leaving our team at a farmhouse, we were soon in the cover, and as birds were fairly plentiful, we had a most enjoyable time until we camped out for lunch on a birch knoll near a spring, when our troubles began.

I always carried a large trout basket, which I found very handy to carry the lunch; and before we left home I had rolled up in a napkin a generous allowance of cold roast mutton, and in another napkin I had put bread and butter sufficient for our needs; but when we came to open the basket we found that I had neglected to put the meat in the basket, and all we had to satisfy the ravenous appetites of three hungry men and two dogs was a few slices of bread and butter, three hard-boiled eggs, and a little salt and pepper; and it was all in vain that each one of us took a look into the basket, that cold roast mutton did not materialize.

Mr. Boyden was the first to recover his self-possession, and without saying a word he drew a quail from his pocket and began to strip off the feathers, and as soon as Eaton grasped the situation he was also making the feathers fly, while I started for a large ash tree a short distance away, where there were plenty of dead limbs, which I soon had in a pile and blazing for all they were worth; then I cut seven forked sticks about as large as my thumb and 3ft. long, and sharpened both ends, and as fast as the birds were ready I impaled each one on the forks of the spit and stuck the other end in the ground, leaving them hanging over the edge of the fire at an angle of about 45°, and in a short time we had six of them roasting as nicely as one could wish. The birds were split open on the back, and as soon as the last one was in position I took up the first one and turned it by impaling it on the extra fork, and continued this operation until all were cooked as nicely as one could have done with all the modern appliances; and I will venture to say, without fear of contradiction, from Boyden and Eaton at least, that a better relished *al fresco* dinner was never served. Although my skill in cookery has received its full meed of praise both from myself and others, I am not writing boastingly of it. I merely wish to

"Leave footprints upon the sands of time"

that may perchance lead some disconsolate and hungry brother to happiness and peace.

While we were enjoying our lunch we had heard two reports from a gun in a woodcock cover near us that we had intended to explore, and as we were nearly ready to start there came another one just at the edge of the cover near us, and a few seconds later a tall, green-looking boy broke cover not more than three rods distant, and after gazing at us a moment he hesitatingly advanced and, giving us good-day, rested the breech of his gun, which was as long as himself, upon the ground, and requested the gift of a few shot, as he had just fired his last charge. In response to our inquiry as to what he was shooting, he said that he was hunting woodcock, and drawing three of them from his pocket he showed them to us with no little pride. Mr. Boyden looked rather dubiously at the long gun, and remarked that he should think it impossible to handle so long a gun in the brush quickly enough to get on to a flying bird.

"Oh!" said the boy, "I don't shoot flying, and I never saw it done, although I have heard of it. I shoot them on the ground."

This was a new wrinkle to all of us, and we proposed that he should show us how it was done; so giving him a few charges of shot, he poured a small quantity into the muzzle of the old gun, and ramming them down with a bit of newspaper for wadding, he signified his readiness to show us how to do it, and led the way to the cover, while we kept a few paces in the rear and watched the performance with no little interest.

With a stealthy step he crouchingly and slowly advanced, with his eyes incessantly rolling from side to side as he closely scanned the ground, until we had gone several rods, when he suddenly stopped and gazed intently at a particular spot for several seconds; and so realistic was his action, or rather inaction, that Boyden involuntarily gave the signal for a point, which I answered in the usual manner before I realized what I was doing, while Eaton confessed afterward that he stepped into an opening and stood with gun in position, ready for a shot. Meantime our young friend, apparently satisfied with the examination, slowly retreated toward us a few paces, when he brought the old gun to his shoulder, and taking a good long aim he pulled trigger, greatly to the relief of his audience, for the mental strain we were under was too great for us to bear much longer without something giving way.

One very curious incident in connection with this performance was that when he stopped so suddenly both dogs backed him as handsomly as I ever saw them back each other. As soon as the charge had time to travel the length of the gun, our friend dropped it, and rushing to the spot he had fired at he picked up a woodcock and brought it to us in triumph; but somehow neither of us was in the least surprised at this result, as the whole performance had led up to it, and we had already discounted it, and the death of the bird was a foregone conclusion with all of us almost from the instant when he came to a point; but we were greatly surprised at the whole performance; and could hardly believe the evidence of our own eyes, nor did our wonder cease when at our request he again went through the same evolutions, with scarcely a variation, and again killed his bird, when we decided that we had enough, and giving him a generous share of ammunition we bade him farewell and resumed our hunt.

I have often told of this incident, but have never since met the person who could perform the feat, or one who had ever witnessed anything of the kind. Of course, when your dog is pointing a woodcock, patient search will occasionally be rewarded with a sight of the bird; but this is entirely different from undertaking to find them with the eye alone,

While shooting woodcock a bird flushed near me and flew a short distance so low that I did not shoot. Sending my dog in the direction, he pointed nearly 20yds. short, and as I walked in front of him the bird got up wild, and as I was bringing my gun into position another bird that the dog was pointing got up from under my feet and flew between my arm and the gun. I shot at both birds, but never touched a feather. I do not record this as accidental or curious shooting, as I have ever found that in similar cases the shooting is remarkably uniform in results. The only thing curious about it was that the bird should fly through the small space he did when there was no brush to speak of to prevent his taking any other course.

Messrs. Boyden and Eaton were with me shooting woodcock when the dog pointed at the edge of a thicket of scrub oaks and birches, and Mr. Boyden volunteered to go in and drive out the bird. The thicket was nearly square and not more than 30yds. across, so Eaton took up a position at one corner while I stood guard at the opposite, and when all was ready Mr. Boyden drove out a bird to me and I killed it, and was reloading when another one came and settled not 4ft. from me in a scattering growth of hazel, and instinctively, as it were, I threw the powder flask in my hand at it and struck it fair and killed it. Why I should throw the flask at it I could never understand, but the impulse seized me and I could not resist it.

I was once shooting in a cornfield with the late Ethan Allin when a bird flushed near me and flew directly toward him so that I could not shoot, and I called "Mark!" to him, and when he turned the bird was almost in his face, and as he caught sight of it he struck at it with his gun and knocked it fully 10ft., killing it stone dead. This was also a case of impulse, for he stated that he had no intention or desire to bat the bird, and did not realize what he was about until he felt the bird strike his gun and saw it double up and fall to the ground.

There was a friend of Mr. Allin's with us, and he ridiculed the impulse theory and accused Ethan of deliberate, premeditated murder, stating that, as the brain was the mainspring of all action, of course the muscles of the hands and arms could not act until the brain had telegraphed them just what to do, and it was therefore plain that the murder of this woodcock was in his head before he struck the fatal blow. Of course I took the same view of the matter, and between us we very nearly made him believe himself guilty. I have since seen in the report of a celebrated murder trial that the prosecuting attorney sprung this idea on the jury; but, if I remember rightly, he failed to score.

After our murder trial was over we separated to beat out the remainder of the field, and as I came near the edge my dog pointed; and as I stepped in front of him a woodcock rose and fluttered along a few feet, and alighted on top of the fence, which was in the center of a strip of hazel some 10ft. in width, and of about the same height as the fence.

The place where the bird settled was at an angle of the fence where there was a moss-covered stump of a tree that was used as a support for the ends of the two top rails. As the stump was quite a large one, I had no doubt that the woodcock took it for solid ground; at all events he alighted on the end of one of the rails, and walking along it about 2ft., squatted down and appeared to be taking it easy. As I knew that my companions would come that way very soon, I decided to wait for them and show them something new; so I stepped back into the corn a few yards, and when they joined me we swapped adventures that had come to us since we parted and then proceeded to the edge, coming out close to the bird, which was in plain sight; and as we reached the proper position I stopped and raised my hand by way of caution; then pointing to the bird, remarked that I never knew before that woodcock roosted on fences. Now Mr. Allin very much disliked to be beaten, and I saw that he was cudgeling his brains to think of something that would surpass or at least equal this, but it was no go; nothing materialized, and he was forced to agree with his companion that this was something new in natural history so far as we were concerned at least.

After looking at the bird to our satisfaction, I proposed to Mr. Allin's friend that he flush and shoot the bird; but he suggested that Ethan go and bat it with his gun barrels, as that was much the better way; but no sooner had he proposed this than that bird with a surprised whistle darted from the rail to the opposite side of the hedge and flew too low for us until it was out of shot, when it gradually mounted some 50ft. in the air, steered straight for the setting sun, and we never saw it more. Mr. Allin often told of this, and I was frequently called upon to vouch for it, which of course I had to do, although it was my intention to have given all the facts in the case the first time I should hear him tell the story; but he told the tale with so much unction and appeared to enjoy it so much that out of regard for his feelings I kept silent, and until now I have never breathed a word as to the how and the why that woodcock came to roost on the fence.

SHADOW.

Sunday Gunning.

PROVIDENCE, R. I., Dec. 11.—*Editor Forest and Stream:* In the New England States there seems to be a growing unpopularity of the "Sunday hunter." In the State of Massachusetts many arrests have been made this season, and vigilant constables are on the alert to arrest violators of the law, and the offenders find the amusement rather expensive, as shown by the experience which a "Sunday hunter" from this city had in South Rehoboth, Mass., a few Sundays ago. He killed a bluejay, was caught by the game constables and paid $41 for shooting on Sunday and for having the game in his possession.

In Connecticut, I understand, there is strict enforcement of the law against Sunday hunting, every land-holder being empowered to arrest the offender without warrant. In this State there is a statute making the discharge of firearms on Sunday illegal, except it be done on land of owner. There have been a few arrests in this State under this statute, but it has been generally a dead letter.

There is a growing feeling among sportsmen that Sunday shooting should be abolished, and that the laws against it should be more generally observed. This might cause some hardship to those who think that they cannot afford the time to go shooting on other days of the week. But with the increasing scarcity of game it would seem wise to give it at least one day of rest in the week. With us all, in the present condition of the game supply, it requires some sacrifice from all who go in pursuit of it.

F. HARRIS.

A VISIT TO TOWN.

Editor Forest and Stream:

You fellows that are chained to business closely in the cities complain, and we fellows that are chained to business too close here in the mountains are very glad to get out into civilization as often as once a year, and more often when we can scrape up an excuse.

In the eight years that I have been working for the Government here on the reservation I have taken my month's vacation in the winter. This year I thought I would change the time and would go to Spokane in October, during the fair; then I would likely see some old friends from Idaho and from the Walla Walla country.

To me the opening of the fair was a grand sight. The parade, with its many magnificent floats, and the bands of music, was as entertaining to me as is a circus to the country boy.

All that afternoon I enjoyed the fair and admired the display of the products of our country, and of course thought they could not be excelled in any country on this or any other continent.

The mineral exhibit was not very large, but was fine. It would be useless for me to try to give a description; it would have to be seen to be appreciated. Then there was the crowd of street venders, all dispensing bargains to the country folks, and no matter what it was they had to sell there was a crowd around them all day. All were buying, and the old adage, that "a fool and his money is soon parted," could be changed to "A country Jake and his money are soon parted." I was so interested in what I saw, night came before I was aware of it, and I was not glad either. I went and got my supper, and then was impatient for 8 o'clock to come so I could go to the theater, which I enjoyed very much. Although it lasted till half past 11, it seemed to be short. I went to my hotel, and I then realized that I was a little tired. But the night's rest left me in good order for the next day's running around.

After breakfast I was taking in the sights along Riverside avenue and reading everything in sight, when my attention was attracted to a large canvas sign hanging to a street car, stating that there was a grand shooting match going on at the park.

Now if there is any one thing more than another that will cause me to get a good big move on, it is to know that I can go to a shooting match. The car had got too much the start of me before I really understood the meaning of the sign, so I leisurely walked down a few blocks to the gun store and made some inquiries about the shooting match, and was told that it was a team shoot between Washington, Montana and Idaho; and the crackerjacks from all three States were there; that the car would stop opposite the store in a few minutes. I noticed several men standing around, with guns in cases, who I presumed were going to the park. Soon the men with guns started for the street and I followed. The car stopped just long enough to let us on and then started away in a hurry; in fact, everyone in Spokane seemed to be in a hurry. In a few minutes we were crossing the Howard street bridge across the Spokane River just below the falls, which gives a good view of the falls.

It was hard for me to realize that I was now being carried on a car several hundred feet perpendicular over where I had sat and fished thirty-five years before. All was changed. Man has put in some dams to raise the water, as if nature had not done enough; then he has put mill and electric works out over the banks, as if there was not room on the banks for his buildings.

I think the most of the passengers were from the city, as they did not seem to notice anything only that the cars ran too slow. I was not used to this kind of locomotion, and they went fully as fast as I desired to travel, and I would have liked it better if the conductor had stopped and let me read all the signs as we went along.

We were not long in reaching the terminus at the park. Here we could hear the guns popping away, and I found myself hurrying to get to the shooting grounds. To me it was just a little ahead of anything I had ever seen. It was the first time I had seen a bluerock—that was what they called them. There were five traps and about a dozen men. They kept things lively. The shooter would take his position at the trap and put his gun to his shoulder, then say "Pull!" and the target would go so swift it was quite a little while before I could see all the targets. But I soon understood the arrangement, and it was not long before I imagined I could hit some that the shooters would miss. They looked to me to be dead easy. I had taken a seat in the lobby, and could see and hear very well. Soon they called out the squad of shooters that were to shoot the next string, and among them was Pete Hollahan. That name sent an electric shock through my frame. Sixteen years before I had a partner by that name, and had completely lost track of him. I wondered if it could be possible that it was the same. I concluded to sidle around toward the shooters to get a look at Pete. Yes, it was my friend; but how changed he was. When I knew him he cared no more about a gun than I did about the catechism, and I do not think he could have hit a barn at 40yds. unless he had gone in and shut the door.

I waited till that event was shot out, then got tolerably close to him as he went into the gun house to get a fresh supply of shells. He got a look at me; he stopped as if he were in a dream, but soon came up with his hand stretched out and said, "Lew, is that you?" I told him it was what was left. He called to his wife, who was on the balcony of the club house, and he told me to look up; then he asked her if she knew who it was. She replied, "No." Said he, "It is Lew." "What, is it Lew Wilmot?" "Yes," said he. She said, "Come up here." I went up, and after shaking hands with her I was introduced to her friends. When I started up there was quite a fat man followed, and he came up and held out his hand, and he wanted to know if I knew him. I told him if I ever had I had forgotten. He said, "Do you remember the fellow you ran down once, following a wounded elk? You had on long-legged gum boots." I said, "Is this Billy Williamson?" "Yes," said he. He had changed very much from what he was twenty-one years before. He had come to my place in the Clearwater Mountains and wanted to kill an elk. I went with him and several other boys, and Billy had shot and wounded an elk. I followed it a short time, and I told him the only way we would get his elk would be to let it go till it got sick, then he might get a shot at it when we jumped it up. But he was too anxious, and thought we would kill it before it went far.

To please him I followed till it jumped up, and I then knew it would be useless to follow it any further that day; so we turned back, and on our way we killed a deer, which we hung up. The next morning before it was fairly light we were on our way back to where we had left the elk the evening before. Billy had taken Dallas O'Hara's bull dog along, thinking the dog would be able to stop the elk if he could come up to it. On our way I saw quite a big buck deer looking at me, and I took a shot at its head and killed it dead. That pleased Billy very much.

We hung the deer up, and kept on to where we had left the elk the evening before. Then we followed for at least two hours before we came to where it had lain down. Then we soon jumped it, and Billy turned the dog loose and away he went, I after them and Billy after me.

I saw the dog catch the elk, but he could not hold it long enough for me to get a shot. I followed as fast as I could. Soon the dog got disgusted with the treatment he was getting and quit; then I hurried on and soon got a shot, and killed the wounded elk. I dressed it, expecting every minute that Billy would put in an appearance, but no Billy came.

I started on the back track, and had not gone far when I heard Billy shoot, then another, and soon another. I thought he had come across a band of bull elk, and was having lots of fun. I went to where he was, and found him standing by a fire, and he had been shooting to find me. He had tried to take a cut off when we jumped the elk and got lost, and was waiting for me to answer. He was much pleased to think I had killed his wounded elk. We started for camp. I was somewhat tired, as I had been traveling with long-legged gum boots on, and the snow being 8in. deep, they get heavy in an all-day's tramp.

I wanted to know why he was not shooting; he said it was a team shoot and when they got through he would shoot.

He took me down to inspect his guns. He had two: one was $180 and was a beauty, the other $100 and was also a fine gun. He said I could use either if I wanted to shoot. I told him it was the first time I had ever seen bluerocks shot at, but I would like to try. I watched them shoot till noon, then they quit a short time for dinner, then commenced and kept it up till night put a stop to it.

The next morning I was down to the gun store at 8 A. M. ready to go down and see them shoot. They had a practice shoot at ten targets before the regular match began; in this I tried my hand, and I found that it was a good deal easier to break them in my mind than it was when I was behind the gun. I had two get in the way, and I was satisfied that it would take considerable practice before I could break many, yet I stayed nearly all day.

The next day was to be live-bird day, and I was very anxious to see that, as that would be something new to me. The next morning early I was on hand, and when I got to the park they were arranging the traps and making up the squad.

That completed, they began. The first bird got about 2ft. from the ground when the shooter fired his first barrel, and when the bird fell he fired at it again, for safety they called it.

I watched them shoot about forty birds, then I went back to town perfectly satisfied. I did not care to see any more live-bird shooting. Some of the shooters used magazine guns, and those I noticed particularly; not one of them but would wobble off from his bird when he would pump a cartridge in his gun, and the first shot they would shoot too quick. I would like to live near to where they have a gun club, but I would not want to shoot at any live birds.

Out of the many thousands that visited the fair and the hundreds that visited the shoot I do not think there was a man, woman or child that enjoyed their vacation any better than I did.

LEW WILMOT.

OKANOGAN, Wash., Nov. 25.

A STRAY BEAR.

WINDSOR, N. C., Dec. 6.—*Editor Forest and Stream:* There has not been a bear within twenty-five miles of this place in twenty-five years, I am quite sure, until last Thursday night or rather Friday morning about 4 o'clock, when one of the residents in the northern part of our town heard something pulling the pickets off his garden fence. Imagine his surprise when going out later to find a bear's track.

After breakfast I walked up town and was told that a bear had passed through town. Of course the idea was absurd to me and I did not hesitate to say so. My informant, thinking his knowledge of bear tracks was doubted, went off and soon returned with some of the bear's hair left on the fence through which it had passed. This was evidence too convincing to be doubted and I went to investigate for myself.

I found the tracks as plain as could be desired, where the bear had pulled the pickets off the fence, gone across the garden and repeated the performance, gone across the street and pulled the pickets off the next lot, repeating this at every fence until he had reached the base-ball ground, where he had entered a piece of timber. He did not seem to care to get over any fence, but made an opening in every one through which he passed.

The next thing in order was to capture this bear if possible. I immediately sent out in the country for H. to bring in his dogs. My messenger failed to find H. at home, and had to wait some time for his return, which made it 11 o'clock before he reached town. By this time the bear had just seven hours' start on us, and it had commenced to rain quite hard. We reasoned, though, that he had not gone very far before he would take a nap. I took H. in my road wagon, and we headed northwest, the direction taken by the bear. Before we had gone a mile we met a party who said he had seen the bear cross the road six miles out. So away we went as fast as the horses could take us, in order if possible to get the dogs on the fresh trail.

When we reached there we found that every man, boy and dog of every description in the neighborhood had turned out; the men with all kinds of guns, and some with axes, clubs or any old thing. An old man, who was too old to get in the chase, told us the bear had entered the woods just above where we were, and was still heading northwest.

This woods is twelve miles long and four wide, and very thick in places, but there are old log roads all through, and we concluded to drive through if possible.

Everything went well for the first mile. Then we began to encounter fallen trees, which we had to drive over, making progress very slow. We had gone about half a mile more and were nearing the bear hunt when the dogs jumped large buck. The dogs ran off a half mile or so and then

we heard them returning. Just as we were expecting a shot we heard the report of a gun, and in a minute the dogs hushed. We knew some one had our deer. Leaving the horses where they were, we went for that deer, expecting the fellow would sneak off with it, as is often done. When we reached the place, as near as we could judge, we blew our horn and were answered by W., a friend of ours, who was out squirrel hunting, and by chance was just in the right place to shoot the deer, which was a fine buck, with a beautiful set of horns.

We lost so much time in getting our deer out that we failed to reach the bear until after he had been killed.

It was a beautiful, glossy black bear, weighing 175lbs. dressed, and was very fat.

He ran twelve miles and did not attempt to climb a tree. When he had run as long as he could he simply dropped down and allowed himself to be killed, with no show of resistance. I cannot imagine where he came from or where he was going.

We have no bears in this immediate country. I know of one being killed near here about twenty-five years ago.

A. S. R.

NOTES FROM NEW BRUNSWICK.

ONE of the most deservedly popular of American sportsmen who in the autumn months seek for variety and venison in the New Brunswick woods is Mr. Frederick Irland, of Washington. Each hunting season for the past four years has seen him boarding the "bull-moose express," as he calls it, at Detroit, his place of residence, with his baggage checked through to the Crooked Deadwater. Each season has also witnessed his triumphant return from the woods with one or more bull moose and a generous sprinkling of caribou. Fred is not only greatly appreciated here because he always does the square thing by everybody, but because of the generous and sympathetic interest he takes in all matters Canadian. Perhaps there is no other American, and certainly very few Canadians, who know as much about Canada, its early history, its form of government, and its natural wealth of forest, lake and river as, Mr. Irland. His recent contributions to *Scribner's Magazine*, under the titles of "An Untouched American Wilderness" and "To the Shores of the Mingan Seignory," are ably written and describe most faithfully and graphically the material, historical and scenic features of the localities to which they refer. This fall Mr. Irland has been building his camp-fires where those of Champlain were lighted nearly three centuries ago, on the shores of the Upper Ottawa and the Gatineau, and we may expect ere long to read with interest and delight the story of his researches in that region as portrayed by his facile pen.

Mr. Irland states that the Upper Ottawa, though considered a good moose country, is not nearly equal to that of New Brunswick; neither is the Mattawa country, though moose are there abundant. He thinks it would not be exceeding the fact to state that where he was recently hunting with Henry Braithwaite in the Miramichi country a section of five miles square contains, at the present time, not less than 250 moose. He was only on the hunting grounds five days, and still hunting was then very difficult owing to the crust. The first day that the conditions were favorable he shot a moose with the best set of antlers he had ever secured. They measured 53in. across the points, had twenty prongs, and were a very handsome set in every way. To-day there arrived from Boston, for a three weeks' hunt with Braithwaite, Dr. Heber Bishop and his friends Charles Williams and Seth Perkins. They leave for Boiestown to-morrow.

Some of the local guides are in favor of reducing the number of moose and caribou which the sportsman is now allowed by law to shoot. Two moose, three caribou and three deer is the limit at present. The suggestion is to reduce the complement to one moose, two caribou and three deer. I think it not improbable that this proposition, if brought before the Legislature, may be favorably entertained.

Blanchard Phillips, of Bristol, Carleton county, has returned from a hunting trip in which he secured an unusually large specimen of a moose.

Capt. Moir, of Halifax, who has been hunting with the veteran Indian guide Joe Mitchell at Gaspereaux and Salmon River, brought in three caribou yesterday as the fruits of the chase.

In a country which abounds with moose and caribou of course deer are at a discount; and the local sportsman who went after moose and only bagged a deer or two would consider that his trip had been a failure. It may be said, however, that since the snow fell these animals have been industriously hunted, and probably 200 or 300 deer have been shot this season in the river counties.

I saw a buck deer weighing about 160lbs. shot yesterday with a .30-30 rifle. The bullet passed fair through the body from a point about 8in. back of the right shoulder. The hole made was somewhat larger than I would expect from so small a caliber; still it was a clean hole on both sides, the bullet having failed to strike a bone. The deer ran 250yds., and though shot through the lungs left very few traces of blood on the snow. Had there been no snow, he would probably not have been found at all.

In this connection perhaps the following extract from a letter, which I recently received from an American friend, will be of interest:

"The .30-30 is a beautifully accurate weapon, and has the flattest trajectory of any rifle I ever used. The general consensus of opinion among my friends is that it is the 'only' big-game arm; but I occasionally find it absolutely condemned on big game by men who ought to be able judges. Last night I met a gentleman in whose opinion I place great reliance, and that was young Mr. Austin Corbin, who has shot more large game in his late father's park than you and I together ever saw. At first, he says, he was carried away with the .30-30, but after shooting a few moose (he has over 200 in his park), elk, wild boar, etc., he condemned it, and went back to his .45-70 (Gould); and he says most emphatically that the latter is the greatest 'stopper' for big game. His opinion, it seems to me, ought to carry some weight."

The well-known lumber operator, Timothy Lynch, near his camp on the north branch of the Sou'west Miramichi, last week shot a moose weighing 1,100lbs. The horns were not especially large, but were nicely formed, and measured 46in. across the points.

FRANK H. RISTEEN.

FREDERICTON, Dec. 3.

The FOREST AND STREAM *is put to press each week on Tuesday Correspondence intended for publication should reach us at the atest by Monday, and as much earlier as practiable.*

HE WAS A WISE GRANDFATHER.

Editor Forest and Stream:

It makes me sick whenever I read of some idiot's having shot a man in mistake for a deer. Mistake a man for a deer! Stuff and nonsense! All that's needed is for a few of those killers to be prosecuted for either voluntary or involuntary manslaughter. It doesn't matter much whether they're convicted or not; the mere fact that the man that accidentally kills another in the woods must pose as a defendant in a criminal prosecution, must reach into his pocket and pay out his dollars to lawyers for his defense in the endeavor to avoid fine and the penitentiary, will be wonderfully detergent. Why don't the gun clubs take the initiative and prosecute a few of those imbeciles? The man that goes into the woods these days does so at the risk of his life. In Pennsylvania the penalty for voluntary manslaughter is a fine not exceeding $1,000, and imprisonment by separate or solitary confinement at labor (which means in the penitentiary), or by simple imprisonment (which means in the county jail), not exceeding twelve years, and, in the discretion of the court, to give security for good behavior during life, or for any less time, according to the enormity of the offense.

For involuntary manslaughter there is the same fine, and imprisonment not exceeding two years, and the district attorney may charge both willful and involuntary manslaughter in the same indictment, in which case the jury may acquit of the one and find him or her guilty of the other charge. What is carelessness and what is due care are matters of fact to be determined by a jury in each particular case as it arises.—See 1, Brightly's Purdon's Digest, 12th Ed., p. 512, pl. 235–6.

I suppose that the other States have similar statutes; if any of them have not, they should have them as soon as they can

REWARDS OF SPORT NEAR HOME.

A Massachusetts bag of three quail, three woodcock and a partridge, the result of one day's shooting.

be passed. If they have them, then there is no lack of law to protect sportsmen, and to punish the ignorant fools that kill them.

I remember the first time I ever started to the woods with a gun. I'll never forget it. I had a muzzle-loading rifle, a good one too, and as I was about leaving the house my grandfather, who had been of the race of Nimrod, and was as fine a shot as I ever saw put a muzzle-loader to his face, called me to him and said:

"My son, you are a little boy, a very little boy to go to the woods in these days alone with a gun; and I want you to hold up your right hand in the presence of Almighty God and promise me a few things:

"First—That you will never point a firearm at any living creature, beast, bird or man, unless you wish to kill that creature.

"Second—That you will never aim or shoot at anything in the woods or the fields unless you certainly know what it is, and that it is surely what you think it to be

"Third—That you will never shoot at what you think a vacant building of any kind, nor aim or point a firearm in the direction of a human habitation or town.

"Fourth—That you will never point or place any firearm in such a position with reference to your own person that, should it be discharged, you would be wounded or killed thereby.

"Fifth—That you will never hunt, nor go to the woods, with anyone as a companion who is fool enough to do any of these things; and that if you should see anyone point a firearm at you, loaded or unloaded, you will strike him, if possible, with anything you can get hold of.

"Sixth, and lastly—That you will never keep any firearms in condition to shoot, by which I mean put together as a gun or pistol, about your house or office, or any place over which you have control, unless the same is fully loaded; and that you will inform all about you that this is your rule."

I made the required promise and went on my way rejoicing.

The sixth may seem odd, but I have often seen the wisdom of it. I always detach the barrels of my guns when I put them away. I break down my pistols and put them away in that shape. If a gun or pistol is found about my house in such condition that it can be jointed as a weapon, every one of my family and friends knows that it is loaded. There are no "didn't think it was loaded" accidents around me.

I believe my old grandfather's rules of conduct with regard to guns and all firearms to be the best I have ever heard, and if everybody knew and observed them those horrible "accidents" would cease. When one did occur it would be an accident, and the unfortunate that caused it would not be blamed as no better than a murderer.

What do you think of it, Mr. Editor? AMATEUR.

CHICAGO AND THE WEST.

Tolleston Club Goes to Supreme Court of U. S.

CHICAGO, Ill., Dec. 10.—Yearly the litigation over sport and sportsmen's interests becomes more frequent, more weighty and more important. The latest move of the Tolleston Club, which has quietly made the most gallant fight in the West for the rights of sportsmen, is covered by the following dispatch from Indianapolis (the club grounds are located in Indiana, though the membership is made up of Chicago men):

"INDIANAPOLIS, Dec. 8.—The Tolleston Club, of Chicago, to-day filed bond in the State Supreme Court, and on a writ of error carried the case—involving titles to land along the Little Calumet River, and recently decided against the club—to the United States Supreme Court. The ownership was brought into controversy by the suit of John Clough against the club, the latter claiming title to a large tract of land, under a survey by the Government in 1870. The tract was known as marsh land, and the high land contiguous to it had been sold years before, but the channel of the river becoming narrow, it left land between the tracts originally surveyed and sold and the river. Under the survey by the Government the Tolleston Club bought this land, and Clough and others sued for possession. The Supreme Court held that the deeds carried title to the middle of the Little Calumet River, and the question now goes into the United States Court."

A Mere Jag.

"A representative of the fish and game commission of California," says a Coast advice, "has been in Siskiyou county and southern Oregon to look into the wholesale killing of ducks which have been shipped to the San Francisco markets in great quantities. As high as 1,500lbs. have been shipped from Ager in one day." Such a matter as that is but a mere jag in a market. But count in all the jags and it foots up. What has become of our game? Has it "moved further West?"

Quail Seized in Kansas.

Dr. Shultz, the live State game warden of Kansas, on Dec. 7 seized a large consignment of quail shipped from Cunningham, Kan., to a St. Louis dealer. The birds were hidden beneath a top layer of ducks. He will have two counts for each bird against the local express agent.

The Wisconsin Deer Licenses.

The excellence of the executive side of the Wisconsin deer law may be observed by reference to the report on the matter from Madison, Wis., Dec. 2:

"Game Warden Ellarson has received returns from nearly all the counties authorized under the new game law to issue licenses for deer hunting, and the stubs sent in show that over 10,000 licenses were issued. The returns are practically complete from most of the counties, and show the number of licenses issued as follows:

"Adams 121, Ashland 600, Barron 582, Buffalo 62, Burnett 586, Brown 159, Chippewa 1,193, Douglas 488, Dunn 188, Eau Claire 268, Florence 97, Forest 91, Jackson 373, Juneau 15, Langlade 377, Kewaunee 14, Lincoln 427, Marathon 300, Marquette 8, Oconto 221, Pepin 68, Pierce 26, Polk 88, Portage 499, Pierce 531, Sawyer 149, Shawano 549, Taylor 400, Trempealeau 45, Washburn 169, Wood 550, and Door 100.

"There were also issued to non-resident hunters thirty-three licenses at $30 each. Those issued to hunters residing within the State brought in a fee of $1 each."

Now, does anybody for one minute suppose that only thirty-three non-resident hunters shot Wisconsin deer this fall? Probably 1,000 to 2,000 non-residents hunted there, many under resident licenses, this being the favorite way of evading the law in Michigan and Wisconsin. Does Chippewa county turn out 1,193 native hunters? If so, she would be a good one for a recruiting officer to watch in case of war. American game laws are a by-word, as we Americans must admit.

How About This?

How about this, from a Chicago newspaper? How about the deer export clause? Who watches the Wisconsin frontier?

"The famous 'Dad' Greenley has been making a record with his party for deer up near Newberry, Mich. He sent down thirty-two deer carcasses and three hides one day last week."

Local Opinion.

The Marquette *Journal*, Michigan north peninsula, thinks thus about the game laws as they are seen in that neck of woods:

"It is about time that the people of Michigan decided to either abandon attempting to protect our game from extermination or adopted an effective system of affording it real protection. As it is, the State has laws for the protection of game on its statute books and special officers provided for their enforcement, but the laws are openly disregarded and the State game warden and his deputies get the only material benefit that is derived from these laws by anybody, this coming to them in the form of their salaries.

"All over this part of the State deer were killed long before the season opened this year, and the venison was sold to hotels and others who were willing to buy it."

Let us hope Mr. Osborne will get a good man up there next fall and make Marquette sing a different tune.

White Deer Seen.

A white deer has been seen by Indian hunters in Jackson county, Wis. This is the second one ever known in that country. Saw Sommie, a Winnebago chief, is said to have killed a white deer in that region many years ago.

Butter.

Agent Fullerton, of Minnesota, has had another scrap. H. J. Cornelius was his name, and he fought a-plenty. Barrel of partridges marked "butter"; $10 and costs, and birds confiscated.

E. HOUGH.

1206 BOYCE BUILDING, Chicago.

A WILDERNESS DINNER.

Boston, Dec. 11.—One of the most successful, as well as the most pleasing and romantic, Maine hunting trips of the season has just been completed by Mr. W. T. Farley, of this city, and Dr. George McAleer, of Worcester. They went to Ashland, the end of the Bangor & Aroostook Railroad in that direction. Thence they went nearly thirty miles by bobsled over old lumber trails to Leon Orcutt's Round Mountain Camp, half way to the Alagash River. The camp is situated near Round Mountain Lake, truly in the heart of the wilderness, and ten or fifteen miles further into the woods than sportsmen are in the habit of visiting. Orcutt has four camps in this part of the country. His main camp is at Greenlaw Stream, and the others at long hunting distances. The ride and tramp from Ashland was a rough one in the extreme, over a trail so rough that no frame sled could pass over it, and a bobsled had to be used, with trailing poles behind to hold the baggage, much after the style of the Indian rigs in the pictures. With about 2ft. of snow and the mercury down below zero on the way, the stop over night at a lumber camp, with only boughs for a bed, was romantic, if not startling. The hunters say that all they had for supper that night was some biscuits carried in their pockets, some salt pork frizzled over the fire on a green twig, and hot strong tea. In the morning they found that their mouths were frozen up, the steam from their breathing having formed a coating of ice. It took two days to make the thirty miles, the party arriving late in the afternoon of the second day. The remainder of that day was spent in making things as comfortable as possible for a two weeks' stay. Moose signs were the most abundant the hunters had ever seen; evidently plenty of cow and calf moose, but few bulls. It was a bull moose apiece that the two hunters were after. They say that it was no fault of their two guides: Orcutt and the veteran Herb Heald. Weather conditions were generally unfavorable, and when at last a big bull was actually started—the guides camping one night on his track—he went the next day, with the hunters and guides after him, directly toward the camp of another Boston party and was shot by them. But both hunters did get a fine caribou and each two deer. More deer could have been taken, but they had all the law allows, and all they wanted.

They were in the woods Thanksgiving Day, and both have had experience in Thanksgiving dinners under such circumstances. Both delight in birch bark menu cards, and this one was most elaborate. It was framed in a natural wood frame of wild cherry, and handsomely lettered. At the top was sketched a magnificent deer above the party's motto, "*Gratias Agamus.*" One card served for all, and Dr. McAleer will preserve it as a souvenir. The cook was a Frenchman from Fort Fairfield, Dennis Laneway. The party was at the dinner table from 2 o'clock till 4:30; Dr. McAleer, Mr. Farley and the two guides. The meal was served in style, hot and appetizing. The menu is published below, in order to show what may be done in a log cabin, where everything not found in the woods has to be toted thirty miles on a bobsled:

SOUP.
Tomato. Corn.

FISH.
Clam Chowder.

MEATS.
Boiled Deer and Caribou Tongues. Fried Deer Liver and Bacon.

ENTREES.
Roast Rib of Caribou.
Roast Loin of Venison.

The biggest bull moose of the season was shown in Faneuil Hall Market the other day. It was labeled to weigh 950lbs. The antlers were fine, spreading nearly 45in. and nearly perfect. Councilman E. D. Bell shot the animal about forty-eight miles from Bangor. The party—Mr. Bell, F. J. Munson and Louis Urann—went to Patten Station, on the Bangor & Aroostook Railroad, and thence five miles to camp. Here the moose was shot before the close of the open season. Mr. Bell says that he never expects to get another, as the species is rapidly being exterminated.

MISFIT JUSTICES.

Troy, N. Y., Dec. 6.—*Editor Forest and Stream:* I send you herewith an item clipped from the editorial columns of an Albany morning paper of recent date, a paper very friendly to the cause of game protection:

A Travesty of Justice.

That is a pathetic little story which comes from Brooklyn Village, O., of the incarceration of G. C. Millis for the shooting of a meadowlark. For this offense, although he pleaded ignorance of the law, the justice before whom Millis was brought imposed a heavy fine. Finally the court relented sufficiently to allow him sixty days within which to pay his fine. Millis, though wretchedly poor and working for small wages, went bravely to work and tried to save money enough to satisfy the demands of justice offended by his misdeed. He failed to do so within the allotted sixty days, and was sent to jail in consequence.

That was ten days ago. Meantime Millis's wife and five little children, the youngest mere babies in arms, were starving to death at home. At last some merciful man appealed to the county commissioners, and it was expected, at last accounts, that they would bring about the release of the prisoner. The deputy sheriff told a reporter that "the whole affair was one of great injustice. Millis," said he, "is a poor but honest man. He had no idea that he broke any law when he shot that bird. He attempted to pay his fine, but his wages are small. Then the justice sent him to the workhouse and his family to starvation."

And all for shooting a meadowlark! Oh! justice—what crimes are committed in thy name!

The case mentioned in the item is certainly a sad one, but the fault is not so much in the law as the stupid manner in which it appears to have been enforced. The killing of meadowlarks is illegal in many of our States, and wholly wrong in all; but in a case like the one mentioned an arrest, conviction and suspension of sentence, provided this was a first offense, would have fully vindicated the law and satisfied justice.

Several instances have occurred in this State in the past half dozen years wherein harsh sentences have been inflicted for slight infractions of the game law, and in one or two cases to my knowledge by magistrates who had very little love or respect for laws designed for the protection of fish and game. An old but rather transparent trick of these official misfits is to select some poor devil—if he has a large family dependent upon him for support so much the better—who is guilty of some slight infraction or technical violation of the game law and give him the highest penalty possible, in order to bring the law into disrepute. You have perhaps noticed that these same officials are very much given to suspending sentence in cases of some of the very worst violations, without the slightest reason, or where there are absolutely no mitigating circumstances. I do not know that the Ohio justice named was one of this sort, but the fact that the culprit was heavily fined and finally imprisoned for so slight an infraction of the law looks very much like it. There appears to be a desire on the part of such officials to make the game law as unpopular as possible in the eye of the general public, and if possible bring about repeal or modification.

Happily for the cause of game protection, the people are not so easily fooled.

Generally speaking, the law is all right, and if commonsense methods be exercised in administering it no harm nor injustice will be done to any one. M. Schenck.

NEW YORK LEAGUE.

The annual meeting of the New York State Association for the Protection of Fish and Game was held at the Yates House, Syracuse, Dec. 9, President W. S. Gavitt in the chair. Delegates were present from seventeen clubs and associations as follows:

Erie County Fish and Game Association, Buffalo: Percy S. Lansdown. Genesee Valley Fish and Game Association, Rochester: Harry Woodworth, Frank J. Amsden. Honeoye Falls Anglers' Association: Aaron Mather. De Ruyter Sportsmen's Club: R. G. Lewis, A. W. Francis, W. W. Davis, W. W. Owens, W. J. Haight, W. E. Burdick. Black River Fish and Game Association, Utica: W. E. Wolcott, H. A. Pride. Steuben County Fish and Game Association, Bath, N. Y.: Z. L. Parkin. Dunkirk Fish and Game Protectors' Association: Thomas D. Link. New York Association for Protection of Fish and Game: Robert B. Lawrence. East Syracuse Sportsmen's Club: C. F. Ayling, D. N. Lefever, A. G. Courtney, James Boyle, Charles Freeny. New York Central Association, Seneca Falls: George R. Peck, Henry C. Carr, A. M. Schermerhorn, E. G. Gould, Fred. J. Davis. St. Lawrence River Anglers' Association: R. P. Grant, George H. Stroud, W. H. Thompson, A. C. Cornwall. Honest Fishermen's Club, Seneca Falls: E. G. Gould. Canandaigua Anglers' Association: C. D. Lapham. Chautauqua Fish and Game Association, Jamestown: Benjamin S. Dean, C. A. Pickard, Fred. H. Garfield. Niagara County Anglers' Association, Lockport, N. Y.: George W. Weaver, J. E. Simmons. Anglers' Association of Onondaga County: Dwight H. Bruce, George B. Wood, Charles Mowry. Spencer Sportsmen's Club, Lyons: Henry Killick, H. B. Whitney, E. F. Burnett. Among others present was Fish Commissioner Hendrick S. Holden.

Mr. Frank J. Amsden, of the separation committee, reported, and the report was adopted:

"Your committee held a meeting at the city of Syracuse on Oct. 14, 1897, and after a full discussion of the subject it was unanimously voted to report in favor of separation of the two branches of this Association—protective and trap-shooting—and that the former relinquish all rights in the Dean Richmond and other trophies."

Chairman C. B. Lapham, of the committee on constitution, submitted a new form, which was adopted. By this the Association, under its new name of the New York State Fish, Game and Forest League, is intrusted to the management of a board of twelve trustees, consisting of the president, vice-president, secretary, treasurer, legislative and law committee of five, and auditing committee of three members. The objects of the League are declared to be "to create and foster a public sentiment in favor of better fish, game and forest protection; to procure the enactment of laws for the protection of fish and game, and for the preservation of the forests, and to promote the observance of such laws." Any club or association organized for these purposes is eligible to membership; and the League invites the support of all such bodies, the invitation being given in this resolution:

Resolved, That the New York State Fish, Game and Forest League earnestly desires the coöperation of all gun clubs, angling clubs, trap-shooting clubs, and others, throughout the State, interested in fish, game and forest preservation. All such clubs are most cordially invited to enroll themselves in the League as members, that they may have part in its endeavor to promote the common good, and may have share in the benefits gained by united effort.

It was declared that upon adoption of the new constitution, to go into effect at the close of the meeting, "the membership of all clubs and trap-shooting associations now members of this Association be retained." The Governor, the Fish Commissioners and the chief protector were made honorary members *ex officio*. The League will be incorporated.

A resolution adopted unanimously voiced the sentiment of the sportsmen of New York State in this declaration:

"*Resolved*, That it is the sense of the New York State Fish, Game and Forest League that the position of United States Fish Commissioner should only be filled by a thoroughly competent man, and we unanimously wish that Dr. Tarleton H. Bean, now superintendent of the Aquarium of New York city, who is best fitted for that position, should receive the appointment of United States Fish Commissioner. *Resolved*, That this resolution be signed by our president and secretary and be respectfully submitted, with our earnest wish for its consummation, to the President of the United States.

On motion of Mr. C. W. Smith it was resolved: "*Whereas*, In the past local or special legislation has menaced and endangered the utility of the game law and many of its sections, *Resolved*, That we hereby declare ourselves as absolutely opposed to all special or local legislation as to fish and game."

On motion of Mr. Amsden it was resolved: "*Whereas*, The United States Government and New York State are making efforts to restore the whitefish to Lake Ontario, requiring large expenditures of money and much labor; and whereas, the limit of mesh of nets 1½in. bar mesh now permitted by the law is destructive to young whitefish; and whereas, the Canadian market fishermen are fishing on our shore with this size mesh of nets, and are not required to take out license, while our fishermen are required to take out license, therefore we

"*Resolve*, That the Commissioners of Fisheries be urged to secure the following amendments to our game law: 1. That the size of mesh permitted in Lake Ontario be increased to 2in. bar. 2. That the Canadian fishermen be required to take out license the same as our fishermen. 3. That the Canadian authorities be urged to adopt the same size mesh."

Upon motion it was also resolved: *Whereas*, Niagara River, bordering on Erie county, appears to be in a deplorable condition, and without protection, and *whereas*, it is made to appear that seining and other illegal fishing is going on continually therein without detection; *Be it resolved*, that the State Commission of Fish, Game and Forests be notified of this fact by the Secretary of this Association, and that in such communication he advise the Commission that it is the unanimous sense of this Association that the Commission should take such action as may be necessary to remedy such condition of affairs.

The following officers were elected on report of nominating committee:

President, W. G. Gavitt, Lyons; Vice-President, R. P. Grant, Clayton; Secretary, Ernest G. Gould, Seneca Falls; Treasurer, A. C. Cornwall, Alexandria Bay.

Legislative Committee: C. W. Smith (chairman), Syracuse; C. G. Lapham, Canandaigua; P. S. Lansdowne, Buffalo; W. E. Wolcott, Utica; Geo. R. Peck, Auburn.

Auditing Committee—Aaron Mather, Honeoye Falls; Thos. D. Lunt, Dunkirk; Jerome E. Emerson, Lockport.

The committee on finances reported a balance in the treasury of $56.29. Secretary Ernest G. Gould was presented with a purse of $25 as a token of appreciation of his excellent service.

The report of the committee on legislation, and the action of the League upon this will be made public by the new committee.

The Adirondack Forests.

The following report was read by Mr. W. E. Wolcott, and the accompanying resolution was adopted:

This Association has for many years taken a deep interest in the subject of forest protection, and it is but natural, therefore, that we should rejoice to-day over the great progress that has been made in this direction since our last annual convention. The fact that the State has, within eight months, added a quarter of a million acres of land to its possessions in the Adirondack wilderness region is one which should gladden the heart of every public-spirited citizen; and I am sure that it is particularly gratifying to all of those who, by reason of their legitimate and discriminating use of the rod and gun, have earned the distinction of ranking as true sportsmen.

The sum of $1,000,000 was set apart by the Legislature of 1897 for the purchase of Adirondack lands, and a forest preserve board, composed of Lieutenant-Governor Woodruff, State Engineer Adams and Forest Commissioner Babcock, was appointed to attend to this very important work. That the board has efficiently and conscientiously performed its duties is evident to every one who is familiar with what has been accomplished.

Thus far the board has expended $940,000 and purchased 250,000 acres of land. About $26,000 have been paid for timber rights, taxes and expense account, so that the actual cost of the land bought was only $913,000, making the average price per acre about $3 50. Of the total purchase nearly 100,000 acres may be counted as virgin forest land, much of which is worth far more than it was bought for.

The largest tract purchased at one time, and perhaps the most important, consisted of 42,000 acres in Township 15, Hamilton, Warren and Essex counties, and Township 32, Hamilton county, the consideration being $164,000. This property was obtained from the Indian River Company and includes Indian Lake, a large dam thereon, and certain rights of flowage are secured, giving the State title to the most valuable storage reservoir for both the Champlain Canal and upper Hudson. The company is to construct a stone dam on the State engineer's plans and under his direction, and make the lake about twelve miles long. It is proposed to increase the dam so that the flow will be 4,500,000,000cu. ft., whereas it is but about one-quarter of that now. The Indian River Company is to cut and clear the timber to the flow line. The dam will be controlled by the company, subject to the right of the superintendent of public works at Albany to use the water for canals and other State purposes. The bargain with this company insures all the water that the Champlain Canal requires practically free of cost, and is believed to be highly advantageous to the State.

The largest amount paid for any one tract was for 23,873 acres in Township 6, Hamilton county, bought of W. W. Durant, the price being $167,104, or $7 per acre. The land is heavily timbered, and the purchase includes three miles of the Racquette Lake shore and two building sites, for which the owner had been offered $10,000 apiece. This gives the State control of the lake.

From the Adirondack Timber and Mineral Company the board purchased 20,502 acres, including Township 10 and a large portion of Township 9, Moose River tract, Hamilton county. The land is located on the West Canada Creek, adjoining the Adirondack League Club property, and includes Spruce, Metcalf and other lakes. The land is covered with virgin forest and was an excellent bargain at $127,500.

From Dr. W. Seward Webb, 18,625 acres, being about one-half of Township 41, Totten & Crossfield's purchase, and about one-half of Township 8, were bought for $102,281, thus solidifying the holdings of the State in this locality. With this purchase was quieted the title to the balance of the land which the State had or claimed in the same Township 41, and about 9,000 acres near it, over which there was litigation.

Other important purchases included 10,000 acres on the West Canada Creek watershed, between Hinckley and Spruce lakes, and 14,065 acres in the Adgate tract, near North Lake, the latter extinguishing claims amounting to $30,000, which the Adirondack League Club claimed from the State on account of damages to its lands and water and lumber rights.

Most of the lumbered land which the board purchased was secured for $1.50 per acre. The total expense attached to the purchases made by the board was only $15,000. The eminently satisfactory results which have been obtained under Chapter 220, of the laws of 1897, may be attributed in a great measure to the energetic but prudent and intelligent action of the forest preserve board, and to this body public gratitude is due.

Resolved, That this Association does hereby express its hearty appreciation of the interest manifested in the work of forest protection and preservation by Gov. Black, Lieut.-Gov. Woodruff, Commissioner Babcock, Senator Ellsworth, who introduced the Adirondack land acquisition bill, and the members of the Senate and Assembly who supported it. We cordially approve of the purchases of lands made by the forest preserve board under the provisions of the act mentioned, and believing it to be of the atmost importance that the State should continue to add to its holdings within the boundaries of the Adirondack Park, and particularly on the watersheds of the canal reservoirs, we earnestly urge the Legislature at its coming session to make another appropriation for the purpose of the same amount as that made available this year.

The Forest and Stream *is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.*

Emperor William's Exploits.

Editor Forest and Stream:

In your issue of Nov. 27 there appears on your editorial page a comment on a recent cable report which stated that the German emperor had killed 2,000 odd pheasants in an incredibly short space of time.

The reader ignorant of the hunting conditions in Germany would be apt to infer that such slaughter was an every-day occurrence and was a fair example of the conditions prevailing there.

Having enjoyed the hospitality of German sportsmen on numberless occasions, and having, during my five years' sojourn in Germany, had opportunity to acquaint myself with every method employed over there in hunting the various kinds of game, I think it only right that I should refute such a stigma, even if only implied, on the German game and sportsmen.

While it is true that such vast, almost incredible, quantities of semi-domesticated birds, and also of deer, are often killed by the German emperor, and by a few others of the highest nobility (by rank if not by nature), it must be said that the large majority of German sportsmen hold exactly the same sentiments concerning such slaughter as do FOREST AND STREAM and its readers.

They call such persons "shooters" over there, denying them the more honorable title of "hunters."

I remember that once, several years ago, when six or seven of us were assembled in my den, I read aloud from a daily paper the report that the day before, the opening of roebuck season, the emperor, during a two-hours' drive in the park surrounding his palace at Potsdam, had shot nine full-grown roebucks.

The roe deer in the park are perfectly tame, often allowing a visitor to approach within 30ft. of them. The language in which the comments of my friends were expressed on that occasion was more forcible than elegant, and if reported to the authorities would have landed each and every one of them in jail for the awful crime of *lese majesté*.

A full-grown roebuck in his native wilds is as wary as a fox and as quick as a flash, and is worthy of any sportsman's bullet. The partridges, although somewhat larger, greatly resemble our quail in their habits and are game birds. The pheasants also, although inferior to our own ruffed grouse, who are in a class by themselves, afford good sport where they have not been bred and reared in captivity. Even the hares, which are very abundant, are not to be despised, as they are fleet of foot, and with their seven hides tougher than a gray squirrel.

Nay, nay, give every one his due; the game slaughterers are not confined to Europe; we have them here too, and they are not always market hunters, as Hermit truly says. I remember once reading in FOREST AND STREAM that two men, members of a Western club, had killed over 600 ducks in one day.

Sportsmen are sportsmen the world over, and there are always some game hogs to be found for whom it is impossible to stop slaughtering as long as there is anything in sight, and the law allows them.

U. F. BENDER.

Virginia Game.

CHARLOTTESVILLE, Va., Dec. 6.—The rabbit season is at its height just now, and the "slaughter of the innocents" looks like annihilation; but this with the rabbit family is an utter impossibility, for it has been tried, not only in this country, but in Australia, and it has been a signal failure every time. The hunting of rabbits here is prime sport. It takes a quick and sure shot to kill a field rabbit, for they never jump, but "just kinder" slide along the ground. To see one going certainly reminds a person of the movements of a snake in the grass. Two or three hunters have been known to kill fifty in a little while. The negro, as a rule, uses a box trap, and one colored individual brought into this city forty that he disposed of to the grocery stores. Rabbits are bought for 8 cents apiece and are retailed at 10 cents.

Notwithstanding the protection that is supposed to be given the partridge, the pot-hunter has been getting in his work and has killed a great many.

The Legislature is now in session at Richmond, and I notice several bills have been introduced to repeal the law protecting this bird. What is to be gained, only the destruction of this innocent bird, I can't understand. The law as it stands expires by limitation next month, but the old law holds and they are protected until next October. To repeal the law at this time looks like nonsense and a desire to undo all that the two-year law has accomplished. Senator Morris, from this district, the author of the law, we are satisfied will do his utmost to prevent its repeal, and all true sportsmen wish him success.

The average legislator, however, must earn his salary and be doing something for the dear people, without regard to sense or reason. Had we less laws and more common sense the country would surely be better off.

There have been less accidental fatalities among sportsmen in the South than in any other section. We note one peculiar and rather ludicrous accident in a neighboring county. A negro with a coonskin cap on and another colored individual while gunning for wild turkeys became separated, and while trying to sneak on to his game the one negro was "cock sure" he saw a coon, and blazing away at it brought down his brother huntsman with the coonskin cap. Fortunately the shot only perforated the skin, and were flattened against his skull.

Wm. Buracker, a professional hunter over in Page county, caught, not long since, a white coon. The strangest part of it is that it lacks all the well-known marks of the coon family, not having a stripe of any kind about it.

W. O. Watson, the prime mover in the effort to stock our forests with Mongolian pheasants, informs me that it will be successful, and that he will purchase enough of these birds in the spring to give the matter a fair trial. From the experience of others in colder climates, there don't seem any good reason why, with our mild climate and other favorable conditions, our forests should not be teeming with these fine game birds in a few years.

JAMES H. FERGUSON.

News from the Klondike.

MR. M. HERRINGTON, one of the party to the Klondike of which Mr. J. B. Burnham, of FOREST AND STREAM, is a member, has been heard from as recently as Nov. 25. Mr. David Daggett, of the W. R. A. Co., received a letter from Mr. Herrington on Saturday last, Dec. 11, dated from Skagway, Nov. 25. In it Mr. Herrington says there is no difficulty in getting through to Dawson City, and that there is plenty of opportunity in Alaska and her gold regions for good and paying investments. He says that he is still at the White Pass, but is intending to move forward to Lake Bennett as soon as the sleighing is good.

THE MAN IN THE CLOCK TOWER.

Six Days' Bicycle Race.

Toward the northward I can see the tower of Madison Square Garden, and on its extreme top, dim in detail, yet recognizable, is the buoyant, graceful figure of Diana, poised airily on one foot in the attitude of the chase. She, too, is high in air, as becomes a daughter of Jupiter. Since she set foot on the pinnacle of the Garden she has seen some of the greatest gatherings of modern times—some political, some trade, but most on pleasure bent. There are no crowds more cosmopolitan than those of the Garden, and many times they are as distinct in class and purpose as are the attractions which draw them thither. The horse shows, dog shows, flower shows, etc., draw within its walls New York's beauty, chivalry and wealth, gay and happy crowds seeking wholesome recreation or useful instruction. The negro cake walk, a competition in human vanities, afforded passing amusement for high and low. Then again, many times, crowds gather which are made up of hard-featured men, with a light sprinkling of gentlemen who endeavor to be as inconspicuous as may be. The gathering is specially noticeable for the utter absence of ladies. It is a gathering of the lovers of the "manly art." Every man smokes from the beginning of the "entertainment" to its close, and makes bets, with frank openness, with his neighbors on his favorite in the "exposition of science." The expounders compete directly with each other. Each of the numerous contestants slugs his opponent till he is "stopped," the latter a mild term for conveying the fact that he has been knocked senseless by a blow, or was so punished as to be unable to continue the "scientific contest." The patrons of such contests find pleasure only in physical struggling, with an incidental opportunity for gambling. The fight arouses their savage instincts, and the betting gives opportunity to their cupidity, thus they are both in it and of it.

Yet with all the spectacular brutality of the prize ring it is far less brutal than the six days of prolonged torture called a six-day bicycle race, witnessed in Madison Square Garden last week. The former is a contest of minutes, confessedly brutal while it lasts, yet ending when one of the contestants is exhausted or incapacitated. The participants rarely receive more than temporary hurts. While it is a contest in which courage and skill are misapplied, as being against public policy in time of peace, it nevertheless is a contest which stirs up the remnant of barbarian instinct which civilization has not yet eradicated from the people. Reason impels them to denounce the gladiatorial contests, yet instinct, which will not be denied, impels them to watch the bulletin boards to learn at the earliest moment which fighter is the winner. It is the barbarian side of the individual, as wars are the barbarian side of nations. It is the spirit of the soldier in either case, finding expression in different ways.

But of the six days of prolonged torture aforementioned nothing in praise or in extenuation can be said. It taxes human endurance to the extreme of brutality, and after it is all ended it has proved no useful fact to the individual or to the public. As to its benefits, it begins and ends within itself. Its purpose is in the gate receipts only. There it has its inception and its ending. It is made as sensational as possible to awaken public interest. A band of men struggling to do something that men never did before, or to beat the records of all men who had gone before, appeals to the spirit of the masses. It may be said to the credit of human nature, however, that but few of the visitors can perceive the cruelty of the competition. To the untrained eye a number of men riding round and round an ellipse differ in no respect from a like number of riders to be seen at any hour on the Boulevard, save in the matter of costume. The distance and bad light hide the distress imprinted on the riders' faces and in their labored gait. A visit of an hour or two gives no adequate idea of the enormous strain of the week. The trainers' quarters, and in a lesser degree the vicinity of the trainers on the track, give a realistic idea of the brutality of the "races."

On Sunday night, soon after 12 o'clock, thirty-six riders started for the six-day ride. As the days passed, some quit from exhaustion, or accident, or hopelessness. There were 142 hours of torturing effort before the finish.

The ten leaders on the fourth day had ridden nearly all the time. One had slept only two hours, and another had slept seven and one-half hours. The others had slept various lengths of time within these limits. The loss of flesh was enormous, some losing 4lbs. in the four days, some in the same time as high as 10½lbs. Miller, who was in the lead, was so stiff after a short rest on Thursday that he could not mount his wheel. His trainers lifted him bodily to the seat, placed his feet on the pedals and steadied him till he resumed his pedaling. The faces of all the riders were drawn and hollow, though each had a different vacuous expression. Harsh lines seamed some; eyes were red and sunken, and deep-set in their sockets; legs were numb and stiff, and arms and backs were similarly affected, with torturing aches and pains added. The want of sleep was an extreme punishment in itself. The atmosphere was vile and filled with tobacco smoke. The minds of some were affected.

Hallucinations affected one rider. Another would be simple as a child. Irritability and a mania to keep on at all hazards were exhibited by some, while the most intense desire to drop and go asleep were exhibited by others. The trainers urged, cajoled, threatened, and at times used physical violence to keep their men going. The negro, Gray, was kept going for days through fear of his trainer, who threatened him with personal injury if he quit, and betimes stimulated him with the sight of a cane or a whack over the back. Men would go asleep on their wheels and tumble to the floor. One rider's arms and hands were so benumbed by injections of cocaine, used to deaden the aches, that he could not feel the handle bars. He kept his hands closed on them by sight, and despite his efforts he received many falls.

The riders took their food while riding, drinking milk, beef tea, soups, oatmeal, etc., out of canisters, and even while eating and pedaling at the same time their trainers were urging them on. Starting in as strong men, they were gradually degenerating into irritable, unreasoning children. Such pressure was brought to bear by public opinion that a medical examination of the men was caused to be made by the police officials, to determine whether they were taxing themselves to a dangerous degree, and yet the daily press announced that on that day the real test of endurance had only begun. And yet this torture, physical wreckage, mental injury and general brutal spectacle was presented to the public as an interesting spectacle and legitimate competition.

As showing the nature of the sport, it was stated in the daily press that most of the leaders were under contract to business firms, and their competition had a trade significance. Its true purpose was to advertise a certain make of wheel, tire, saddle, etc. The prizes were insignificant in comparison to the thousands of dollars profit made. There were eleven prizes, won as follows: First, Miller, $1,300, and $200 more for breaking the world's record. Second, Rice, $800; third, Schinner, $500; fourth, Hale, $350; fifth, Waller, $300; sixth, Pierce, $200; seventh, Golden, $150; eighth, Gannon, $125; ninth, Enterman, $100; tenth, Elkes, $100; eleventh, King, $75.

The track, which was considered as being one-ninth of of a mile, was found to be short 227.26ft. Miller's nominal record of 2,093 miles and 4 laps when corrected is 1,983 miles and 885yds.

The Squirrel Question.

The points which Mr. Rice makes in FOREST AND STREAM in favor of the red squirrel are many of them to my mind good points; but there is no getting over the fact that he destroys birds' nests, eating the eggs or preferably the young whenever and wherever he may find them. I have known a pair of red squirrels to take three out of a brood of four young robins in a single morning, and this in spite of all the old birds could do to drive them off. In this, to be sure, he is only following out his nature just as the hawk who forages in your poultry yard is following his; but in each case his nature renders the animal injurious to man.

I do not know whether the gray squirrel lays up a store for himself or not. I suspect that sometimes he does, and for this reason: Two small nephews of mine have outside of their bedroom window, on the eaves of the old wooden house in which they live, a box in which each day a handful of nuts is placed for the gray squirrels, which are abundant about the place. The animals come every morning, and take these nuts away till the box is empty. They are often seen to carry them to a hole in the limb of an oak tree near the house, where each autumn they raise a litter of young.

Everyone who has lived in the country knows that gray squirrels in winter dig down through the snow to the ground for food, as stated by Pine Tree. I do not think they do this aimlessly, for I have often seen gray squirrels burying nuts in the ground, and they do it very quickly and neatly, scraping a little hole of just the right size, putting the nut in it, and then covering it up with a very little dirt and placing a little grass or moss on top; patting the whole down so that it is not easy to find the place after the squirrel has gone, even though you may have watched the whole operation.

"The Oldest Inhabitant."

From the top of the high clock tower the man therein can see far away over the heads of many men; far away over the tops of many cities, towns, villages and country places; far away, over many objects, into the hazy distance, where all becomes vague and lost. In every place where the eye of The Man on the Tower can pierce there dwells that universal revered authority, "the oldest inhabitant." And beyond the Man's vision there is probably an oldest inhabitant in every nation, in every city, town, hamlet, neighborhood, and indeed in every house.

The average writer, who feels that his word needs vouching for, when events of the present come in comparison with the events of the past, summarily settles the problem by a line thus: "Never within the memory of the oldest inhabitant," etc., or, if he is pleased to be more ornate and comprehensive, he will say: "Never since the time when the mind of the oldest inhabitant runneth not to the contrary has there been known," etc. And when this calm, dignified and superlative old authoritative nonentity decides with a precision and finality becoming his superlative years, who can gainsay his word or his knowledge?

Any reader of any amiability will concede at once that a writer who in simple terms states that "Never within the memory of even the oldest inhabitant have codfish been so numerous on the Jersey Coast," knows the oldest inhabitant personally, and knows also the things which he, the said o. i., knows. And also that he knows something about codfish.

The oldest inhabitant may be a blacksmith, a saddler, a wagon maker—all useful and honorable callings—and yet he may have a bad memory concerning current events, or no knowledge of all of them, or even no interest in them. In such a way he is an entity. Such is the real man. To the writer who knows nothing of statistics, or who cares nothing for them, that dear old fiction, the oldest inhabitant, does yeoman service. He gives proper emphasis, a tone of authority, to a statement that otherwise would be flat and insipid. Dear old "oldest inhabitant," whom nobody knows and nobody could know, yet who is the benefactor of the world of scribblers, the patron saint of those who need a universal authority for cheap events. Let the "oldest inhabitant" live on. Without him those who write of the weather, hot or cold, or of fish, or fowl, or animal, would be without a beginning or resting place.

THE MAN IN THE CLOCK TOWER.

Christmas Gifts.

AT this season of the year persons residing at a distance from large cities often desire to order a number of different books issued by different publishers. This necessitates writing many letters, and perhaps paying many express charges, and takes time, trouble and money.

To relieve its readers of this burden, the Forest and Stream Publishing Co. will receive and fill all book orders that may be sent to it, purchasing the books, packing and forwarding them, and all this without charge. In all cases the titles of books must be plainly written; where possible the name of the publisher must be given; and the money for the consignment must accompany the order.

As the busy season has already begun, those who wish to take advantage of this offer should send on their orders at once, so that their goods may be sent off in time to be received before the holidays.

Sea and River Fishing.

Books for Holiday Gifts.

The Forest and Stream Publishing Co. invites attention to its list of works on outdoor life and sport as including many books which are admirably adapted to be given as Christmas or New Year's gifts. Mather's "Men I Have Fished With," Whitehead's "Camp-Fires of the Everglades," Robinson's Danvis books, Grinnell's Indian books the Boone and Crockett Club's series, Kunhardt's "Small Yachts," and the "Supplement" to it—these are some of the volumes which are in subject and examples of fine book making certain to be valued The list is given on another page. Orders should be sent in such season that they may be filled in time for the holidays.

POTOMAC BASS.

Washington, D. C.—If one takes occasion to interview Washington anglers he will be surprised to find how many are inclined to the opinion that the small-mouth bass of the Upper Potomac are decreasing to an alarming extent.

The good work of the protective association in saving the bass in the Chesapeake & Ohio Canal last winter and returning them to the river, it was expected, would have some appreciably beneficial effect upon the season's fishing. Then the new close law of last year, it was confidently hoped, would help the spring spawning and much increase the catch. To cap all, came the long-continued floods, which kept the river for months like milk chocolate, and spring and summer passed with never a day when the water was clear enough to cast a fly, and but few hours when it was fair bait fishing. As autumn approached and under the drought the river fell and cleared, we were all sure that records would be broken and that all who cared for it would get wonderful fishing, whether with bob or spoon or fly.

Alas! The low water brought only disappointment. As a sample, two well-known clubmen, who claim they never had a water haul in any previous season, went twice to the Seneca Breaks and found nothing. On their last trip, in four days, with the water just as they wanted it, they took only one small bass. These two particular anglers are convinced the small-mouth bass of the Upper Potomac are gone.

Of course some fish were caught up river, and individuals at one or two localities had good days, but taken altogether all will admit the season was far from satisfactory and far below the average of former years.

Naturally the first solution of the difficulty which suggests itself is that the pollution of the Potomac waters, constantly increasing, has killed or driven away the bass.

In line with this theory was an interesting paper by Prof. Davis, hydrographer of the U. S. Geological Survey, read before the National Geographic Society Nov. 19.

The subject under discussion was such pollution as led to disease in Washington's water supply, but incidentally the tanneries, pulp mills and paper mills along the banks of the river were shown and commented on; a single one near Cumberland was said to be turning daily into the stream 100,000 gallons of refuse, strong with sulphuric, tannic and other acids. To point the moral, a slide was exhibited showing boys in a boat picking up dead fish in the nearby waters.

There can be little question that much is done in this way to the injury of the Potomac as a fish preserve, fatal not only to the fish themselves, but, what is nearly as important, to their food supplies.

History repeats itself, and it is odd to read that a quarter of a century ago the same trouble of the disappearance of the bass was exercising the anglers here and along the river, and that the Fish Commission, then commenting on their scarcity, said:

"It must be remembered too that, however rapidly certain fish, especially the black bass, multiply in new waters, there is a limitation to their increase, as shown by the experience of the Potomac River. This fish was introduced into this stream in 1854. * * * Not many years after the young fish began to distribute themselves in numbers, and in time the entire river became stocked with the new game. Starting at the headwaters of the river, the bass found immense numbers of cyprinidæ, such as chubs, minnows, suckers, etc., as also of crawfish, insect larvæ and the like, which had been previously for the greater part undisturbed, except perhaps by the pickerel, and having an ample supply of food, in accordance with the theory of natural selection, they multiplied to a prodigious extent. Year by year they extended their limits toward the mouth of the Potomac, until at the present time they are found in great abundance near Washington and form a very attractive object of sport.

"I am, however, informed by residents on the Upper Potomac and its tributaries, that the bass are becoming scarce and that their numbers are much less than a few years ago, while as a concomitant the immense schools of smaller fry, formerly so abundunt, have disappeared, a minnow now in some localities being a rare sight. This is a very natural consequence and must produce its result. In the increasing scarcity of herbivorous fish the bass will be driven to feed more and more upon each other, and after a time a certain average will be established, perhaps the same as that existing in the waters of the Mississippi Valley and elsewhere, where, although indigenous, they are in proportion fewer than in the Potomac River."

This might have been written of conditions to-day.

However, it does not necessarily follow that a decreased string means fewer fish in the river; on the contrary, the less taken out, the more ought to be left.

In a recent English volume called "Angling Holidays," and very pleasant reading it is, the author, Mr. Gedney, says of his last day on one of his favorite streams, the Darenth: "There have been times in which my valedictory notes on the closing season have been written with a sense of self-satisfaction and a consciousness that the depleted river deserved a rest; but no such feelings animate me at the present moment, for the season just closed has been the worst I have known in the past twenty-five years, notwithstanding that the stock of trout in the river was never so great as it is at the present time."

Let us hope then that our case is not so bad; that the bass are not dead but sleeping; that they are still here, and that with again saving those in the canal, and observing another close season in the early spring, another year may bring us the old-time strings. No doubt something of the trouble with September fishing was due to the quantities of slime and fungus which filled the long reaches where the currents were sluggish, as a result of the low water and extended drought, which, if they did not destroy or run the fish away or sicken them, did interfere with their feeding and capture, and may have had something to do with the unwonted number of bass which made their appearance lower down and opposite Washington.

Unusual quantities of fine bass were taken in the Monument Pool and at Long Bridge, and into November there were fishermen every day at both places.

Coincident with the decrease of the small-mouth bass in the Upper Potomac was the almost miraculous plenty of the large-mouth bass in the tributaries of the Lower Potomac, way down to brackish water.

They were seen in schools of hundreds, and here their increase and growth is not a question of food, for the tide waters will always be full, but rather a question of permitting them to grow. The creeks are even now being seined and stake nets are set, and nearly every morning may be found in the markets bass so small that their destruction becomes a crime, when it is considered that we spend more of the people's money annually to propagate and distribute food fish than all of heavily taxed Europe together does for the same purpose; and a jolly good job we make of it too, for our methods have been so improved for this culture on a gigantic scale that we beat the world in results. It is not wasted except what these poachers waste who destroy the little ones.

Thousands of pounds of bass weighing but a few ounces each have been sold in the markets here this year at from 2 to 4 cents a pound. (I am quoting one of the largest dealers, who denounces a trade in which he engages against his will.) If this destruction could be prevented it would make all the difference between bad fishing and good in the waters thus robbed.

And if nets are to be blamed for this slaughter of the innocents, what shall be said of men who call themselves anglers putting on their strings and carrying away bass of 6in. in length?

Thomson in his ode to spring long ago said:

> "If yet too young and easily deceived,
> A worthless prey scarce bends your pliant rod,
> Him, piteous of his youth and the short space
> He has enjoyed the vital light of heaven,
> Soft disengage and back into the stream
> The speckled infant throw."

Of these pot-fishers it is some comfort to know that before the season was over some of them were shamed into hiding their catches in their minnow buckets, where they belonged, and apologizing for them when detected. They were not to be envied, when even the small boys gibed at their strings of "speckled infants."

I have neard it said that in a woman's letter the kernel is in the postscript, and so with this paper. What I particularly desire to urge is that in securing further supplies of stockfish for the Upper Potomac, especial attention shall be paid to getting large-mouth bass and crappies. The latter make excellent sport, at times even with the fly, and are withal the best pan fish in the world. They multiply like rabbits and will afford additional feed for the bass. Then the large-mouth bass can feed on the young carp long after the small-mouth bass must give them up, and the carp is one of the most important food supplies left in the river. Besides this, the large-mouth bass will take a fly earlier, oftener and later than his small-mouth cousin.

Henry Talbott.

WHAT I DON'T KNOW ABOUT BASS FISHING.

The sum total or aggregate of what I would like to know and don't know about bass fishing is simply immense.

I have been trying for about twenty years, on and off, to find out the rules or laws which govern the feeding of the black bass of our fresh waters. If I could ascertain just when, as to time or under what circumstances or conditions, they take their feed, I feel at least reasonably confident that I could make as big catches and as many of them I read about in the piscatorial journals of the day, or hear about,

> "When the day is done
> And yarns are spun,
> And the camp-fire burneth low."

I have tried all times, all waters, all ways of hook-and-line fishing; have tried in all conditions of wind, weather and temperature, from 96° or over in the shade to one of those early autumn blizzards in which the snow goes straight across without stopping; and the sum total of the positive knowledge thus acquired, gathered together and added up, includes just two facts, neither of which is of much practical importance, and both of which it will not take very long to tell.

First.—As a general rule our fresh-water black bass will not bite at all during a thunderstorm or violent windstorm, nor for a somewhat variable and indeterminate time immediately before such a storm. A summer shower does not seem to disturb them much, if at all; and a light breeze, sufficient to ruffle the surface of the water slightly, is usually favorable to free biting. But when a violent storm is coming, fish, like most other animals, seem to have some way of their own of finding it out some hours in advance; and, like other animals, they are then apt to go for shelter; and with them the best shelter is deep water, or water so deep that it is disturbed but slightly, if at all, by the wind. After a storm is over, if they are hungry, they seem to get back to their feeding grounds without much delay, and then the fishing is usually good; but if for any reason they are not in immediate want of food, they seem to come back very leisurely—that is, the next day, or the next week, or some other time—in fact, just when it pleases them.

Now this fact as to the non-biting habits of the black bass pending or during a storm is of no particular value as regards catching fish. I cannot catch any more fish on account of knowing the fact referred to. I have merely learned one time when I need not try; all other times remain as before.

Second.—Another fact which I have learned is this: A black bass sometimes, and apparently when he is not hungry, will grab a minnow bait across its body, squeeze or chaw the life out of it and then spit it out, acting thus much as a cat does when killing a mouse which it does not want for food. Its natural animal vindictiveness (or cussedness) apparently leads it to kill everything killable (smaller than itself) which comes in its way. The fish is a wild animal, and seems to possess the leading instincts which belong to the brute creation. Wild land animals frequently kill just for the sake of killing, even when not hungry. And both the cat and dog, though domesticated from the earliest periods of recorded human history, still retain this disposition to kill as an inheritance of their wild ancestors of several thousand years ago.

Now this second fact is not of much more practical importance than the other. It does not help one iota in catching fish. I merely learn from it one reason why at times I can't catch fish—not how I can. And it may be proper to add right here that no man really knows what disappointment is, until he has had his choice minnows chawed up by the black bass when they are in this killing mood.

But it sometimes happens that a bass in thus chawing and killing a minnow bait will—perhaps accidentally—get the minnow's head in his mouth, and if the minnow is hooked through the lips the bass is then liable to be hooked accidentally. And if there is any fun to be had at all in bass fishing, it is apt to begin just then.

Now these two facts are absolutely all that I feel reasonably sure that I know about bass fishing—that is to say, I have found out that there is one time or condition of things when or during which, as a general rule, the black bass of our fresh waters will not take either fly or bait. And I have also found out that such fish are sometimes hooked accidentally as the result of monkeying with a bait they do not want. But as to all other times, circumstances, conditions and surroundings, my ignorance of the laws or rules which govern the biting of the black bass is dense in degree and colossal in magnitude.

Nor is my ignorance due to any failure on my own part to try. I have tried all the rules which I have been able to find in fishing books and in the fishing journals of the day, and besides these I have gotten up a few of my own; but I have never yet found any which, as a guide either as to time when fish would bite, or as to the conditions of wind, weather or water in which free biting could confidently be expected, were worth three smells at the dried-up cork of an empty bait bottle of last year's vintage.

In the early days of my inexperience I read sundry articles written by men who claimed to be post-graduates, as it were, in the science of angling, wherein early fishing was advocated before breakfast—from 4 to 8 A. M., while lazy folks were asleep, while air and water were cool and fresh and balmy, and while nature was in her pristine purity and beauty (whatever that may mean); that this was the feeding time of our fresh-water game fish; that along about daylight they would climb over each other in their efforts to make connection with an enameled, waterproof silk line depending from a 7oz. split-bamboo rod; that early in the forenoon they usually quit feeding, and of course would quit biting; that during the middle of the day they were off in their hiding places or lairs—asleep, I suppose, or repenting of their sins, or perhaps studying up some devilment for the next day. One writer said that after 8 A. M. one might as well fish in a garden.

Another writer said that during the time of full moon fish feed largely at night, and that then—that is, by moonlight—is the time when big catches can be had; and a lot more "tommy-rot" of the same kind.

Following these and sundry other like solemn directions, which seemed to come from experienced anglers (though, as I now think, more experienced with the pen than with the hook), I tried to reduce fishing to an exact science. I found that one might as well try to teach Blackstone to a bumble-bee. In different waters and at different times I tried early fishing and late fishing. I fished by night in the light of the full moon, and tried fly-casting when it was too dark to distinguish between a first-class fish yarn and an act of Congress; I spoiled my temper (what there was of it) and spoiled many a delightful dream by allowing myself to be wakened at 4 A. M. to go fishing. I all but paralyzed a healthy stomach, and got my head into the miserable habit of aching, simply by doing without breakfast for four or five long, mortal hours, in order to take advantage of the alleged early feeding habits of the fish. I have also fished all day, and at all hours of the day (Sundays excepted). I have fished in every variety of atmosphere and wind known north of the Ohio River and west of the Alleghenies to the Mississippi, and have tested a pretty large percentage of the waters within those boundaries, as well as some outside.

And what is the net result? Or, as Holy Writ puts it, "Let us hear the conclusion of the whole matter."

It is briefly this: "The way of a man with a maid," which so puzzled the wisdom of King Solomon, is "dead easy" as compared with the way of a fish with a bait.

I have had equally good and equally bad catches at all hours from 4 A. M. to 10 P. M., and the distribution of good and bad luck, or no luck at all, along during these hours, has been practically so nearly uniform that I actually am unable to name one time of the day as materially better than any other time. And as regards the direction of the wind, whether north, south, east or west, or somewhere along between these points, given a lee shore and equally good fishing waters, I have found one wind to be as good (or as bad) as another. About the only wind that I especially dislike is a head wind, when the line is reeled up and the bow of the boat points homeward at the end of the day. At that time a head wind is positively harmful.

To a man up a tree it would seem that fish, like other animals, might reasonably be expected to bite when they are hungry. I thought so once, but while it may be true, I really am not at all sure of it. But if so, when are they hungry? That is the question, and not being able to answer that question, my piscatorial intellect up to the present time is nothing but "a waste, howling wilderness."

A few years ago, when fishing in the St. Lawrence near Clayton, I found that the bass were at least moderately plenty, as we could see them quite frequently. The spawning season was over and natural food was plenty. My oarsman and I fished faithfully all forenoon in what appeared to be the best waters and under what are regarded as favorable conditions, and caught one—just one—black bass, no more. We naturally attributed our poor luck to the fact that in the abundance of natural food the bass were already gorged, and not hungry; but on cutting open the fish we caught, preparatory to eating him for dinner, we found that his stomach was absolutely empty. Though natural food was abundant, he hadn't eaten anything for probably twenty-four hours. Why? I don't know. I give it up, and meekly take my place at the foot of the class.

Such incidents as this are not at all rare, and I mention this particular one simply because I happen to remember time and place, and the facts as I have narrated them, with rather more than the usual clearness.

Of course, in saying that I don't know much about bass fishing, there are a few things belonging to the A, B, C of the art which, for my present purpose, I take no account of. They are "hornbook" rules which must readily occur to anybody. Just for illustration one or two of them may be briefly stated:

1. A first rule in bass fighting is to find the fish, just as in the old cook book rule for cooking a rabbit: "First, catch the rabbit." But I know of no rule by which the angler can tell in advance where the black bass are to be found at any particular time, whether in shallow water or in deep water, or on sand bottom or on rock bottom, or near shore or hovering about the weed beds, or whether they are somewhere in the middle of next year. They are sometimes in one place and sometimes in another; and not infrequently they may be found at two or more different places on the same day, or, as is often the case, they cannot be found anywhere.

If any bass fisherman will give me a rule for finding the fish other than the rule for finding a needle in a hay-stack, I will deem it a great favor—that is, provided he will guarantee the rule.

2. Another primitive or "hornbook" rule is to keep one's self, with boat, rod, etc., out of sight of the fish, or, if in sight, to remain perfectly motionless at the time when the bait or fly is presented to the fish. But this rule is several thousand years old. King Solomon gives one version of it in his old book of Proverbs (Chap. 1, verse 17); and it was probably a thousand years old when he, as a boy, was snatching shiners out of the brook Kedron, just outside the walls of Jerusalem.

Some years ago, in a period of partial temporary idiocy, I thought seriously of writing a book on bass fishing. At that time I thought I knew a good deal on that subject—a good deal more than I know now or ever expect to know again. I am glad that I didn't do it. The world will never have a chance to learn now how much of an ass I might have shown myself to be. It was a narrow escape indeed. But from that day to this my knowledge of bass fishing has steadily decreased, and with each trip that I make it gets less. The foregoing is about all that now remains of the book I once intended to write. SHAGANOSS.

CHICAGO AND THE WEST.

In Illinois.

CHICAGO, Ill., Dec. 10.—Nat Cohen and S. R. Bartlett, of the Illinois Fish Commission, are in town this week. The new Chicago fish warden, Phil. Goetter, a husky and intent German, wants to see them Mr. Goetter passed the window of Fred Smith, one of the largest of our game dealers. A lot of under-size fish were displayed, and Goetter took charge. Smith said: "I know what you want. You want $25. Come in and sit down." But Goetter did not sit down, and did not want $25. Behold a sample of game-dealer ethics! And won't Goetter warm him up when it comes to court! "I say to him, 'I put my charakkter against his million dollar,'" said Goetter to me in describing this. "I say I want no twenty-fife dollar, but I bin afraid of nopotty." And I reckon that's so, too.

At Kankakee C H. Erzinger had undersized fish in possession. The jury cleared him on the ground that the fish came from Wisconsin. The local paper quotes the law (Mr. F. M. Smith, of Chicago, would better read it too):

"Sec. 6, after detailing the length of fish which may be sold or offered for sale, says:

"And provided further that the possession of any of the above-named species for the purposes of sale, or offering for sale, of less length than above designated, shall be *prima facie* evidence of violation, and subject the party or parties having them in their possession to the penalties of the law hereinafter mentioned."

Nat Cohen, president of the Board of Fish Commissioners, has written Fish Warden Craine a letter of indignation at the above verdict. He says:

"The law says that fish under a certain size shall not be sold or offered for sale in the State of Illinois, and the State of Illinois has the right to make laws to regulate its affairs. You might as well acquit a man of stealing. I would advise you to take the case to the grand jury.

"Don't stop at being beaten. Arrest any one you find selling fish under size. Next time perhaps you can get a jury that respects the law."

In Michigan.

Spearing is permitted on inland lakes of Michigan in the winter months. It is said many such lakes will this winter be practically cleaned out, the larger fish being especially the sufferers.

This week wardens had a circus with two Polish net-fishermen at Ludington, who were surrounded by friends who attempted a rescue. Thirty days in jail; nine nets confiscated.

In Iowa.

State Fish Commissioner Delavan, of Iowa, is adopting with great success the Illinois plan of seining out young fish from drying-up sloughs and bayous, where they would surely perish. He says 125.000 fish so taken cost only $15 to deliver. He has put 200,000 in large Iowa lakes, and expects to get 1,000,000 more before he stops this winter. He works at Sabula, along the Mississippi River.

Near Ft. Dodge, Ia., last week, Deputy Burnam arrested several fishermen for spearing through the ice, and each was fined $5 and costs. Their names were: M. A. Vinsand, Knut Knutson, Martin Gangstad, Herman Gangstad, Peter Knutson and Sever Axness. More arrests are expected to follow. E. HOUGH.

1206 BOYCE BUILDING, Chicago.

Fish for New Jersey Waters.

THE November report of State Fish and Game Protector Chas. A. Shriner tells us that the consignment of black bass received on the 7th was distributed as follows:

Lake Hopatcong, 600; Greenwood Lake, 400; Blackwood Lake, Camden county, 100; Union Lake, Cumberland county, 100; Little Swartswood Lake, Sussex county, 150; Fair View Lake, Sussex county, 150; Grinnell Lake, Sussex county, 100; Pochung Lake, Sussex county, 100; White Lake, Warren county, 100; Boody's and Hewes' Ponds, Gloucester county, 200.

The Delaware and Raritan Canal will be drawn off during December, and all arrangements have been completed to secure the bass, pickerel, perch and other fish which are left in the holes; these fish will serve to fill the applications on hand at present, and there is every reason to hope that every applicant will be satisfied.

Twenty pike-perch were placed in Culver's Lake, in Sussex county, during the past month, and arrangements have been made to secure a supply of baitfish for this lake. A dozen pike-perch and a miscellaneous assortment of bass, perch and pickerel, about thirty in number, were placed in White Lake, Warren county.

Twenty thousand trout, from 2 to 5½in. in length, were distributed during the month as follows:

Mossman Brook, at Newfoundland, in Passaic county, 1,000; Eckhardt Spring Brook, at Newfoundland, in Passaic county, 1,000; Wallkill, at Sparta, in Sussex county, 1,000; Big Brook, at Swartswood, in Sussex county, 1,000; Middleville Brook, at Stillwater, in Sussex county, 1,000; Paulinskill, at different points in Sussex and Warren counties, 3,000; Blairstown Brook, in Warren county, 1,000; Slabtown Brook, at Blairstown, Warren county, 1,000; Hockhockson, Eatontown and Pine brooks, in Monmouth county, 1,000 each; Buckhorn Brook, in Warren county, 1,000; Hopatcong and Roaring brooks, in Warren county, 1,000 each; La Barre and other brooks, 2,000; Pequest, in Warren county, 2,000.

"Men I Have Fished With."

MR. FRED MATHER'S new book, "Men I Have Fished With," is ready for delivery, and many copies have already been sent out to subscribers. Among those who have seen the volume there is but one opinion as to its worth and its beauty, and so greatly are anglers impressed by it that not a few orders have been received from individuals for copies to present to friends. These orders in numbers run from twelve down to two copies. The volume is described in our advertising pages.

The Kennel.

FIXTURES.

BENCH SHOWS.

1898.

Jan. 11.—Butterly Bench Show Association's show, Grand Rapids, Mich. Miss Grace H Griswold, Sec'y.
Feb. 15.—New England Kennel Club's fourteenth annual show, Boston. James L. Little, Sec'y.
Feb. 21.—Westminster Kennel Club's twenty-second annual show, New York. G. de F. Grant, Sec'y.
——.—St Louis Kennel Club's third annual show, St. Louis, Mo. Wm. Hutchinson, Sec'y.

FIELD TRIALS.

1898.

Jan. 10.—U. S. F. T Club's winter trials, West Point, Miss. W. B. Stafford, Sec'y.
Jan. 17.—Continental F. T. Club's trials, New Albany, Miss. W. S. Bell. Sec'y.
Jan. 24.—Pacific Coast Field Trial Club s trials, Bakersfield, Cal. J. M. Kilgarif, Sec'y.
Jan. 24.—Champion Field Trial Association's Champion Stake, Tupelo, Miss. W. B. Stafford, Sec'y.
Feb. 7.—Alabama Field Trial Club's second annual trials, Madison, Ala. H. K. Milner, Sec'y.

TO MY SETTER NELL.

THE fields are all white with frozen dew,
And the stubble and bracken are calling to you
And me, old dog, with their bevies of quails
'Long the course of the creek, by the half-sunken rails
Of that old crooked fence,
And the well-sheltered nooks where the cover's dense.
The soft, glinting rays that the sun has first shed
Make the carpet of grasses a gem-studded bed
For our feet to traverse; and the crisp morning air
Gives promise most cheering that Bob Whites are there.

So away! Let's away! To the fields! Let's away!
And beat out the bush ere oncoming day
Has scattered the dewdrops the air has just lent
To enable you, Nell, to follow the scent
Of those little brown beauties, and locate them there;
And they're flushed and scattered to stubble, or where
The birds can be started one or two at a time,
With nothing to bother the shot, or the rhyme
Of the crack of the gun and the fall of the bird,
And the game bag is filled to the very top gird. B. L. S.

A NORTH CAROLINA FOX HUNT.

HASLIN, N. C.—*Editor Forest and Stream:* Having been tied up with the many duties incident to Southern plantation life at this period of the year, and in addition getting my place in shape for sportsmen during the present season, I had no time that could well be spared from regular routine of work to get afield with dog and gun, or follow an exciting chase with the hounds—two amusements to me which hold untouched charms. Thirsting as I was for this very essential to my contentment, my brother sportsmen can draw a slight mind picture of my delight a few evenings since; when a leisure time had come, and on walking to the front veranda I heard the deep bass voice of Bounce, the long, mellow squeal of Buck, the sharp, snappy rattle of Sanko, ringing out on the calm, crisp air of an autumn evening, each note bearing the message to me that reynard was moving, and that my good friend Jarvis, listening for the familiar whoop from me, was out for sport.

In an instant thoughts were transformed into action, and a notice to Adam to turn Doc and Corker out of their kennel, who had also heard the voices of their comrades and were raising a howl to get "into the band wagon." A few moments later we were moving to join the fray. Soon they met the pack and were lending their shrill tenor voices, and making the woodland ring with the echo of a music that forces the spirit of a sportsman to move with every bound of the dogs.

Now old Prince joins, adding his deep, convincing note to the already enchanting chorus. The pack is complete; away they lead, bounding over ditches, through hedges, leaping a fence—to the woodland reynard makes a grand circle, hard pressed by his followers, the vim of each voice furnishing unmistakable evidence that foxy is only a few paces in the lead. The music is grand; the packing perfect. Reynard circles to the right and toward us. On, on, they come, a continual cry. He passes a little to the right, over a fence, and makes a short double. Now for a few moments a diligent search is made for the trail. Listen! it is Bounce—away out in the cornfield, rushing and screaming, telling the fox that he must plan and execute. Joined now by half dozen as determined dogs as ever ran a trail, each pressing for the lead, we stand and listen, mutually agreeing that nothing could be more enchanting.

Now by closely observing the movement of the dogs, we find that another circle has been resorted to—the dogs seem to double their resolution. And such a chase! A din of eager voices, pressing close to the trail just made by reynard, rushing hither and thither, then away, and the music fades to a low distant whisper. Now all is still for a moment. The sly old fellow has evidently doubled his track in order to gain a long lead when he points his nose toward his native bramble. A long, triumphant scream from Doc informs us that he is right. We soon find this to be the real situation. They all join and head directly for us, coming at a terrible speed, nearer and nearer. There is not a falter. What a union of voices! Each note distinguishable, lending an essential to the completion of the music. Plainer and clearer can we hear them, bearing straight toward us. Reynard is putting all his energy in every move, trying to reach the bramble just ahead, where he hopes to dodge and rest, if not to fully foil the pack. Here they come, full cry. We raise a regular war whoop, and away to the left he dashes; back and around, finally to reach his favorite spot only to get a short rest, when Buck and Corker make it plain that other quarters must be sought. And again away he dashes, with the music of the pack close to his heels; he leads for another test of speed and endurance.

Joined again, the pack makes "night hideous" for Reynard. He dashes out in the open field, across, near the roadway, each voice ringing clear on the still air of a November moonlight night. Around they swing, and down toward us they come. With a rush the fox passes, only a few paces ahead. On they go to woodland. Again driving, pushing and rushing, they force Reynard to circle. The music is grand beyond description. We stand totally oblivious to all save the bounding, leaping compacts of muscle, bone and sinew.

We have stood, listened, have run and enjoyed the scenes of this grand opera, enacted on the beautiful and inspiring stage of nature, for four mortal hours. Now for the first time we realize that soon it must close. As the moon nears the horizontal line of woodland in the west darkness begins to steal over the scene.

We wait a few moments, and the dogs near us, coming quite close—now for the final rush. With a whoop of encouragement from us, they make a determined dive, but lose. We check them, both feeling that Reynard has fought a good fight, and that another bright page has been scribbled down in memory's album. Now we wend our way homeward to dream of the determined rushes of the pack and the successful schemes of Reynard. F. P. LATHAM.

DOGS AS DRAFT ANIMALS.

THE subjoined paper on the use of dogs as draft animals in Belgium was written by Harvey Johnson, the U. S. Consul at Antwerp, and was sent in a report to the Department of State. Since the matter of transportation in the Klondike region has come so conspicuously into the notice of the American people, the paper will have a special interest, although it is intrinsically interesting in itself.

I have been unable to find any official statistics on the subject, except those showing the number of dogs (draft and others kinds) in the cities and towns. There are no "dog farms" in this neighborhood. Men of means do not interest themselves in raising draft dogs as they interest themselves in raising horses, sheep, chickens, etc. The dog business is almost entirely in the hands of the country peasants. The large majority of these peasants are persons who, upon a small piece of ground (almost invariably rented), produce vegetables, fruit, flowers, etc., for sale in the neighboring cities. In addition they raise a few dogs, rarely more than half a dozen. They bring their produce "to town" in carts drawn by their own dogs, and when there exists a surplus of dogs they are brought to the city on "market days" along with the other things and sold.

There seems to have been such a long-continued and indiscriminate intermingling of the various breeds that the draft dog now used in Belgium cannot with propriety be accorded a distinctive name, and must be called, for want of a better name, the "Belgian draft dog."

I can no better illustrate the lack of attention to breed than by narrating an experience which I had while riding on my bicycle in the country about ten miles from Antwerp. Seeing upon the door of a modest one-story brick cottage of a peasant a placard with the words: "*Chiens à Vendre*" (dogs to sell), I dismounted, knocked at the door, and at once found myself in the presence of the proprietor of the premises. After the greetings, and after informing the gentleman of the purpose of my visit, he gave me the following statement, assisted by periodical questions thrown into the narration by myself:

"I have six fine dogs to sell. Three of them have short hair and three are sheared, so as to please everybody. These dogs are just ready for use—strong, healthy, and just a little under two years old. I know these dogs well, because I raised them myself. I want 125 francs (about $25) apiece, but I will take less for spot cash. The breed? Oh, *mon Dieu!* I can't tell you much about the breed; the breed makes no difference. What you want is a strong, well-trained dog, and that's what mine are. However, I may tell you that my six dogs are all from the same father and mother. The father is, if I remember correctly, one-fourth Belgian, two-fourths Danish and three-fourths Scotch, and the mother is, I think, three-fourths Belgian and one-fourth English."

Assuring the gentleman of my appreciation of his remarkable memory and wonderful mathematical ability, and thanking him, I departed.

Seriously speaking, the story of this polite and humble peasant shows very accurately the attention (or rather lack of attention) that is given to the question of breed.

The dog generally in use varies in size and color, but in probably the majority of cases he is, when standing, about 2ft. high, of a dark gray or dark brown color, has short hair and the tail cut. In addition to his work as a draft animal, he is a faithful guardian of his master's home.

The price naturally depends upon the size, health and age. A well-kept dog two years old, 2ft. high, trained and ready for work, will sell for $18 or $20. The same animal at the age of six or seven years will not bring more than $8 or $10.

The service of the draft dog is easily taught by the master and easily learned by the animal. It consists merely in hitching the untrained dog to the cart by the side of his more advanced associate, and in a few days he is prepared for the "battle of life."

It is difficult to say exactly the weight of the load which can be drawn by one dog, for the reason that he is harnessed alone much less frequently than in company with one, two, three, and sometimes four others. In the latter case they are harnessed abreast. In the cities and towns, when employed by butchers, bakers, laundries, etc., to draw their delivery carts, one dog is often used, and is harnessed under the cart. The cart is provided with two handles, like those of a wheelbarrow, which are held by a boy, the boy thus guiding the cart through the narrow streets while the dog pulls. In case of need, the boy assists by pushing the cart as he would a wheelbarrow. Sometimes two dogs are placed under the cart, but not more.

The highest utility is attained where two, three, four or five are harnessed abreast and placed in front of the cart,

which they draw just as horses. It is in this way that the peasants come to town with their vegetables and flowers in the morning, and in this way they return in the afternoon, seated in their carts, happy and smiling when they have been able to sell their loads; and in this contentment the dogs seem to join, as they move briskly along, with their steady, easy trot, toward home. A team of three or four of these dogs can draw 500 or 600lbs. for several hours. The average working life of this faithful animal is said to be about ten years.

The cost of maintenance is inconsiderable. The dogs live generally on scraps from the kitchen, to which is usually added a little milk diluted in water. Like most of the peasants themselves, they are not often treated to meat, but I am informed that they are given a good meat dinner two or three times a month. This special dinner consists of horseflesh or beef of the cheapest kind.

The carts used in the cities differ from those used by the peasants. The former are usually about 4ft. high, with two wheels, are well constructed, weigh about 250lbs., cost about $50, and are drawn by one or two dogs harnessed under the cart, assisted by a boy who guides and, when necessary, pushes. He never rides in or on the cart. This specimen is provided with a solid iron bar, about 1in. in diameter, fastened under the rear end of the bottom of the body of the cart, and going perpendicularly to the ground. This bar touches the ground when the cart is not in movement, and keeps the body of the vehicle at a level while the boy takes out and delivers the merchandise.

The other is the peasant's or country cart, and is about 2 or 2½ft. high, usually with four wheels, not so well constructed or finished as the city cart, weighs about 125lbs., costs from $10 to $20 when new, and is drawn by two, but oftener by three, four or five dogs harnessed abreast in front of the cart. The wife or daughter of the owner is usually the conductor of this equipage, and she usually walks into the city by reason of the load, but invariably rides back home when the load is disposed of.

The harness is relatively the same as that used for horses, and costs $1.50 per animal. Country people, however, often make their own harness from scraps of leather, rope, twine, etc., and in such cases the cost is practically nothing.

I should say, in conclusion, that the Belgian draft dog performs all the duties imposed upon him in a most satisfactory and uncomplaining manner. As a factor in the transportation of merchandise, he occupies a most dignified place in this densely populated country.

In the city he is the trusted and faithful servant of the butcher, the laundryman, the small grocer, the baker and the shopkeeper, while for the poor peasants he is literally the one thing indispensable in placing all their produce upon the market place in the early hours of the morning. He does his work faithfully, steadily, and much more cheaply than the horse. It costs nothing to train him, but little to feed him, and but a little more to possess him. For the peasant who raises him there is no cost at all, and with an expense of $15 for a cart, and a few scraps of leather and rope for a harness, the peasant has a team which answers all demands for ten years. He is not more cruelly treated than the horse, and he endures the burdens imposed upon him equally as well. I really believe the dog suffers less than the horse from overloading. When his load is a little beyond his strength, the dog is always assisted, and in town the weight drawn by him is constantly being decreased.

Regulations in the Province of Antwerp.

In Antwerp it is provided that dogs, when used for hauling purposes, must wear a muzzle of metallic wire; they must be hitched to the pole or shafts or under the cart by harness at least one meter (39.37in.) long, and must be attached to one another by chains fastened to hooks on their collars; these chains must be thirty centimeters (12in.) in length. Dogs may be hitched before handcarts; in case of any other vehicles they must not be placed more than one head's length in front of the pole or shafts. If the equipage consists of more than three dogs, the driver must lead the dog nearest to passing vehicles. Dog equipages must go at a walk in the street, at near corners, in passing vehicles or mounted horses, and at all places where the road is encumbered. The driver must always be within reach of the equipage, so as to be able to control it. Outside of villages the driver may ride, except as hereunder stated, and provided he drives the dogs with leather reins. The driver must keep his dogs as far as possible from the track followed by other vehicles, so as to leave three-fourths of the road free. The wagons must be furnished with a plate giving the name and address of the owner; this plate must be forward of the wheel on the left side of the wagon. During the night a lighted lantern must be carried on the right forward side. When the fog is dense or the earth is covered with snow, one dog at least must be supplied with a warning bell. The driver cannot leave his equipage in the public highway without having first hitched it with a chain. The use of the whiplash is prohibited. It is forbidden to use for draft purposes dogs less than 19½in. high at the shoulder or dogs which are wounded, sick, infirm or pregnant. It is likewise forbidden to ride on a wagon drawn by a single dog, to carry on any vehicle drawn by one dog or several dogs a weight exceeding 220lbs. per dog in harness, or to leave harnessed dogs standing unnecessarily exposed to the sun during the heated season.

Infractions of the preceding regulations are punished by a fine of from 19.3 to 96.5 cents or by imprisonment for from one to three days; in case of repeated offense within a year, by a fine of $1.16 to $1.93 or imprisonment from three to eight days. The foregoing punishments may be made cumulative, in the discretion of the judge.

In the Province of Brabant the regulations, while not so explicit, are generally similar to the preceding. The only additions are that vehicles drawn by dogs must be provided with a T-shaped support under one end, so that when at rest the weight of the load shall not fall upon the back of the dog; and, further, that the harness must always be fastened on a collar round the neck.

The regulations of the Province of West Flanders are much less detailed. The chief variations to be noted are: In the case of well-trained dogs the driver may obtain permission from the local authorities not to lead the dogs; it is forbidden to harness dogs with an animal of any other species; it is not permitted to use harness or muzzles harassing in any way the dogs. The dogcart must always give way to other vehicles and bicycles.

The regulations for the Province of Limbourg are without any special provisions differing from those prescribed by the other provinces.

Kansas City Field Trials.

THE trials of the Kansas City Field Trials Club began at Amoret, Mo., on the 6th inst. Amoret is about seventy miles distant from Kansas City, on the Pittsburg & Gulf Railroad. The judges were Messrs. P. T. Madison and C. P. Baldwin.

The Pointer Stake had eight starters, as follows:

Theodore Fernkas's K. C. Kent (King of Kent—Pearl's Fan) with Rooney's Kent's Don (Bang Bang, Jr.—Kent's Mollie).

J. E. Guinotte's Toscar El Ray (Toscar—Argo's Queen) with L. Scott's Ben (Bertraldo—Nora).

Hersperger's Gypsy Queen (Bertraldo—Rosaline Wilkes) with E. L. Ragan's Flash (Æneas—Gipsy B.).

A. E. Ashbrook's Bart (——— —Fino) with L. Scott's Flossie (Bertraldo—Nora).

This stake was decided on Tuesday. K. C. Kent won first, Toscar El Ray second, Flash third. The winners in the Setter Derby are: First, Mr. Sinock's Sam T.; second, R. K. Campbell's Jack; third, L. Scott's Nora. The All-Age Stake (four starters) winners are: First, H. Carnahan's Lenapah (Capt. Tough—Jet); second, K. Guinotte's Doc (Capt. Tough—Jet); third, T. Fernkas's Nora (Gath's Mark—Mena III.).

Missouri Field Trials Association.

THE trials of this club began and ended on Dec. 8. Derby: First, Don Noble; second, St. Cloud; third, Kate E. All-Age Stake: First, K. C. Kent; second, Lady Webster; third, Glad.

POINTS AND FLUSHES.

The young ladies of the Butterfly Bench Show Association are active in promoting the interests of their forthcoming show, which begins on Jan. 11. Through the efforts of the Association a press committee was formed, which included representatives of all the newspapers in the city. A committee to receive visiting newspaper men was also appointed. The purpose of the show is most commendable and such as to appeal to world-wide sympathy and good will, it being purely philanthropic. The receipts are applied to support the Association's free beds in Butterworth and U. B. A. hospitals, and to establish one in the Children's Home hospital. Mrs. Charles Fox and her assistants are now engaged in preparing the catalogue. Miss Mabel Waters, one of the most efficient and enthusiastic members, who has been conspicuous in the management of previous shows, is spending the winter with her mother, Mrs. D. A. Waters, in Japan.

Two dogs, owned at 722 East 164th street, New York, ended a tempestuous career on Thursday of last week. They had been engaged in several serious scrapes, any one of which would have warranted their death. About six weeks ago they so injured a Miss Hughes that she died. On Wednesday of last week they wantonly attacked a young girl, Miss Elizabeth Cells, and severely mutilated her arm before she was rescued. Her father, a policeman, called the next morning and killed the dogs. It is to be regretted that they were not killed long since. Vicious dogs can not be wafted into the hereafter too quickly.

Mr. C. E. Buckle has moved to Montpelier, Clay county, Miss., to train, there not being sufficient birds at Lake Forest, Miss., for the purposes of training. There are very few streams and springs in the latter place, and the dry summer, it is conjectured, may have caused their death or driven them out.

Wheeling.

Communications for this department are requested. Anything on he bicycle in its relation to the sportsman is particularly desirable

WHEELING NOTES.

Scorching the Scorcher.

IT is reported that a new bicycle ordinance has been put in force in Morgan Park, one of Chicago's most beautiful suburbs. The police therein are required to shoot scorchers if they cannot otherwise stop them, and the report further states that they are to shoot to kill. The last clause unearths the cruelty of the joke on the police, for if they shot at a scorcher with an intent to kill him, all stray dogs, billygoats, poultry, etc., would do well to seek cover instantly. In the art of shooting at man or dog and killing something else, a policeman is unequaled. In days gone by, when the policeman shot at a delectable "mad dog" and killed an over-curious bystander, the dog had a reasonable degree of immunity from violent death, but now that the policeman may make an alleged shot at the scorcher, there may be few dog days.

As to Starting.

Man is full of purposeless efforts when he must needs trust largely to himself in dealing with matters outside of his profession. Still more is he given to purposeless imitation. For instance, observe the average rider start on a morning ride for pleasure. He bends forward, exerts enormous force on the pedals, precisely as does a racer when starting in a desperate contest, wherein every moment lost at start or finish may mean a loss of the race. The average rider, starting thus, subjects the chain and frame to enormous strains, stretching and injuring the former and twisting the latter. But, strangest of all, after starting in the fierce and forceful manner of the race track, he immediately subsides into a calm and easy saunter which is out of all keeping with the flurry of starting. It is such senseless abuse of the wheel which spoils it before it is worn out. It is such brainless riding which makes repair shops thrive. The imitation racer riding for pleasure, he with the mannerisms of the track off the track, is he who has a story to tell of long repair bills and collapses of his wheel far from home.

Dirty Chains.

No part of the wheel is more systematically neglected than the chain, and no part is of more vital importance both to the usefulness of the wheel and to the comfort of the rider if the matter of useless force is worthy of consideration. The experiments on draft and friction, made by Prof. Carpenter at Cornell University, stimulated other investigation. An English expert, testing the difference of loss between a clean chain and one more or less encumbered with grit, found that the frictional loss of the former was a trifle less than 1 per cent., while the gritty chain in about the average condition of neglect indicated a loss of from 30 to 40 per cent.

The Chainless.

A manufacturing house of large pretensions announces that it will have ready by March next a new chainless wheel, which will be placed on the market at $75. It will be similar in mechanism to those already announced by standard makers. Chainless wheels at $50 are also contemplalated.

Pigeon Toes and Wheels.

And now comes forward one man of medicine who solemnly avers that riding the bicycle alters the development of the legs and further tends to making riders pigeon-toed, and that heredity will so affect later generations that they will have these qualities naturally. Of course, the bicycle face, the wheel back, the humped shoulders, etc., will all be perpetuated likewise. Of course, this sort of posterity will be all right awheel, but it will not be a pretty sight at pink teas.

Yachting.

As the yachting journal of America, the FOREST AND STREAM *is the recognized medium of communication between the maker of yachtsmen's supplies and the yachting public. Its value for advertising has been demonstrated by patrons who have employed its columns continuously for years.*

THE Massachusetts Y. R. A. will hold a special meeting, in answer to a call, to reconsider the question of the immediate abolition of time allowance. Under the circumstances this is the wisest course, and best calculated to allay the friction which has arisen within the Association. We hope, however, that a fair and open discussion of the question will demonstrate that the time has really come when all allowance should be abolished. The vested interests which will really suffer by the loss of allowance are too small to stand in the way of such an important reform.

THE Boston *Herald* has done good work in proving the absence of any sound reasons for the retention of time allowance. Of course the *Herald* is strongly in favor of such a useless and obsolete encumbrance, and it has ransacked all yachting, from "The Great 21ft. Class" down to Defender and the America's Cup, to prove the necessity of building to all odd sizes; and the best argument it has thus far adduced is that a man may, for instance, be unable to afford a 25ft. l.w.l. yacht, and should therefore be allowed to build one of 22ft. length and receive time from the larger. This flimsy argument is elaborated to the utmost to show the unjust discrimination in favor of the wealthy yachtsman who can afford a 25-footer, and against the poor man who can only afford one of 22ft. length. The classes in the Massachusetts Y. R. A. are 15ft., 18ft., 21ft., 25ft., 30ft. and 35ft. This wide range of sizes enables a man to build to the top of some class, according to his means, and removes all excuse for building to the middle of a class. The best reason we know of on the side of time allowance is that there are always some who through ignorance of designing cannot build close to a fixed limit, or who through carelessness or contrariness do not do so. There is no reason why any further privileges should be extended to either of these classes.

THE general meeting of the Yacht Racing Association on Dec. 2 resulted in the rejection of the new formula proposed for the yachts of 36ft. linear rating and under, $\frac{L. + 2B. + G.}{2}$, or one-half the sum of L.W.L., twice the beam, and the girth measured around hull and keel from L.W.L. to L.W.L. The Council, at its meeting on Nov. 12, declined to recommend this change, so that a vote of three-fourths of the general meeting was necessary to the adoption of the amendment. The vote actually stood 21 against and 6 for. At a meeting of the Council on the same day Mr. Æmilius Jarvis, of the Royal Canadian Y. C., was present, and the question of a possible international agreement in rules was discussed.

FROM the reports in the daily papers and the telegrams from the other side it appears that some misapprehension exists as to the mission of the American yachtsmen now in London. At the time of the organization of the Yacht Racing Union of North America last month, two of the organization committee—Mr. Jarvis, of the Y. R. U. of the Great Lakes, and Mr. Macdonough, representing the Pacific Interclub Y. A.—were about to sail for England on business, by chance being booked on the same steamship. It was suggested that while in London they should consult with representatives of British yachting interests as to the possibility of an international agreement in measurement and other yachting rules. Beyond being acquainted with the general drift of discussion of the measurement question here, they had no formal proposition to lay before the British Y. R. A., and there was no possibility of anything further than a *pour parler* to establish closer friendly relations in matters in which both nations are interested. On this side there is at present no definite proposition for a new measurement rule; and on the other side the whole matter is in a very uncertain state; so much so that there would be nothing to gain here by the adoption of the existing Y. R. A. rule. At the same time the trend of opinion on both sides is such as to lead ultimately to the same class of rule; and there is probably no serious reason why a satisfactory rule for one side of the Atlantic will not answer equally well for the other. Of course the climate and conditions are not identical; on this side a larger sail spread is carried; but it does not follow that this presents an insuperable obstacle to the satisfactory operation of one common rule. One of the Americans—Mr. Macdonough—was called to Paris, and consequently could not be present at the meeting.

IF, as now appears, the Emperor of Germany has really bought Yampa, it is possible that he may depart from the policy he has thus far followed in the treatment of American yachts, excluding them from all entry for the various valuable prizes which he has offered for international (European) competition. The spirit of narrow-minded exclusion with which he has sought to protect English and German yachts from American competition is of a sort to awaken wild transports of envy in the breasts of such Americans as Messrs. Payne, Frye and Bates, in spite of all that they have attempted and achieved in restricting and annoying American yachtsmen. That he appreciates such a vessel as Yampa is ample proof that the Emperor knows something of yachts, and the possession of such a craft makes it almost impossible for him to discriminate against others who may own vessels of the same nationality.

RUMORS are rife of challenges for the Canada cup, not only from one but from all points of the Lakes, Buffalo, Chicago, and Detroit. We hope that some one of these will take actual shape before many days, with a resulting series of trial races which will enlist the support of the entire southern shore of the Great Lakes. It is reported that Mr. Berriman, of Chicago, who raced Vencedor against Canada in 1896, is about to challenge, provided fair terms can be made, and that the Detroit yachtsmen are only deterred by the fact that the terms are unfair, and that if nothing else can be done they will challenge for the Mabley trophy, a cup valued at $600, also won by Canada in her races with Vencedor.

The terms of the Canada cup, published in the FOREST AND STREAM, are perfectly fair in securing equal rights and privileges to both parties, and under the existing rules of the Y. R. U. of the Great Lakes, which must govern the match, both are on exact terms of equality in designing and building. It is true that it is impossible for either defender or challenger to build a fin-keel or a yacht of extreme light construction, as of aluminum for instance; but the limitations of type and construction are only such as to compel the building of staunch and serviceable yachts that will have a

permanent place in the Lake fleet; and they do not in the slightest degree favor the defender rather than the challenger.

This talk about unfair conditions, whoever may be responsible for it, is very similar to what has been heard before from the longitude of Chicago, and taken in connection with the actual terms of the deed of gift it looks as though there was very little desire to put in a challenge that will be accepted.

At present there is a good outlook for a revival of building on the Lakes in some one of the smaller classes, the 32 or 37ft. Short of some advertising syndicate there are no yachtsmen on any of the Lakes who are prepared to keep up racing machines, even in the 42ft. class. An international race for the Canada cup next season in the 32ft. or 37ft. class would start matters in the right direction, with the construction of half a dozen yachts for the trial races of the challenger, representing several different cities; and these yachts, apart from this immediate purpose, would be kept in service for regular racing instead of being sold to salt water, like Vencedor, or kept ashore for want of a class, like Canada.

THE annual race record of the Yacht Racing Association of Massachusetts recently sent out is about as powerful an incentive to competition as could well be devised. The neat pamphlet, for whose appearance much credit is due to Secretary A. T. Bliss, shows beyond possible question just what each yacht of the racing fleet has done during the year. The records of every race are corrected and preserved, and thus officially published at the end of the season. The diploma of the Association for 1897, won last year by the 15-footer Elsa, goes to the 24-footer Hoodlum, an open boat designed by J. R. Purdon for A. H. Higginson and R. Boardman. The bronze medal and pennant for the highest percentage in each class go to Ida J., owned by F. E. Beckman, in the 29ft. class; Hoodlum in the 24ft. class; Muriel, designed by J. F. Small and owned by Herbert N. Nute, in the 24ft. cabin class; Rooster, designed by J. R. Purdon and owned by C. E. Adams, d, in the 20ft. class; Vitesse, designed and owned by C. D. Mower, in the 17ft. class; and Gosling, designed by Geo. F. Lawley for Messrs F. O. North and L. M. Clark, in the knockabout class.

The Association percentages of these yachts are: Ida J. 66⅔ per cent., Hoodlum 92 4-13 per cent., Muriel 65 15-19 per cent., Rooster 78⅓ per cent., Vitesse 76¼ per cent., Gosling 46 2-13 per cent.

The official list of the Association numbers in the 29ft. class 22 yachts; in the 24ft. class, 10 open and 25 cabin yachts; in the 20ft. class, 37 yachts; in the 17ft. class, 33 yachts; in the knockabout class, 13 yachts—a total of 149 yachts. The list of races runs up to 41—including resails—and covers a district between Provincetown and Newburyport. The greatest number of starts was made by Privateer, the second boat to Muriel, 27 in all; but Little Peter and Fantasy each started 24 times, while Arab did one better.

The knockabout class shows an excellent record of persistent racing: Fly, 27 starts; Gosling and Hazard, each 26; Mongoose and Sally III., each 23; Cockatoo, 20.

The Classification of Knockabouts.

IN view of the popularity of the original 21ft. knockabout class and the general adoption of similar yachts in different localities, the yachtsmen of Boston and New York are working to establish a set of uniform regulations for the different sizes and types of knockabouts. The Boston Knockabout Association adopted, at a meeting on Nov. 18, the following regulations for a 25ft. class:

DEFINITION AND RESTRICTIONS OF A 25FT. KNOCKABOUT BOAT.

DEFINITION.—The boats of this class are intended to be comfortable cruising vessels, not to include fin-keels, of good accommodation and moderate sail area, the aim being to encourage cruising and racing in a seaworthy type of boat.

1. LENGTH L.W.L.—The length on the load waterline not to exceed 25ft., to be measured with all fixtures and equipments as specified, on board and in position, and with crew aboard, averaging 150lbs. to each man.

All boats to be marked at points of immersion on bow and stern by measurer, with marks easily distinguishable.

2. BEAM, L.W.L.—The greatest beam at load waterline to be not less than 8ft. for a keel boat, and 8ft. 9in. for a centerboard boat. The measurer to mark the position of this point by a small copper nail or other mark 3in. above L.W.L.

3. FREEBOARD.—The freeboard not to be more than 30in. at point of greatest beam.

4. BALLAST.—Outside fixed ballast to weigh not less than 6,000lbs. for a boat of 8ft. L.W. beam, and for each full inch of increase in the load water beam the outside fixed ballast may be decreased 50lbs.; provided, however, that the outside fixed ballast for any keel boat shall not weigh less than 5,500lbs., and for any centerboard boat shall not weigh less than 4,500lbs. Certificates shall be furnished to the inspector by designer and builder as to weight of ballast.

5. CENTERBOARD.—The centerboard, if of wood, must not be weighted more heavily than is necessary to sink it readily. If of metal, must not exceed ⅜in. thickness. The board or the box must not come through the cabin floor.

6. DRAFT.—The draft for keel boat shall not exceed 6ft. For a centerboard boat the draft, exclusive of the board, shall not be more than 4ft. 9in., and board must be entirely housed when up.

7. MAST.—Forward side of mast at deck shall not be less than 5ft. from forward end of L.W.L.

8. DECK.—To be wholly decked, except the space taken up by trunk, cockpit and hatches. The cockpit to be watertight, with scuppers draining outboard.

9. CABIN HOUSE.—The cabin house or trunk and fittings must be permanent; its inside length shall not be less than 10ft.

10. CABIN FLOOR.—The cabin floor shall be continuous for the length of cabin, with greatest width of at least 2ft. 4in. between opposite frames. The top of floor to be not less than 4ft. in a keel boat and 3ft. 9in. in a centerboard boat, below the level of the under side of plank sheer at any cross section.

11. HEAD ROOM.—The least vertical height from any point amidships on cabin floor to top side of house beams to be not less than 6ft.

12. FIXTURES.—The cabin to be at least 8ft. in length and at each end to have substantial partitions of wood. To be furnished with lockers and permanent transoms or berths for the accommodation of two persons. The forecastle to have at least one folding berth. Each boat to have a suitable water closet, refrigerator and dish locker.

13. RUDDER.—The rudder shall extend below the waterline to a point within 6in. of the greatest draft of the boat, and shall be hung against the sternpost, deadwood or ballast the entire depth of the rudder.

14. SCANTLINGS.—Frames oak not less than 1¾ × 1½, to be spaced not more than 12in. on centers. Deck beams oak not less than 2sq. in., finished, to be spaced not more than 12in. on centers. If the frames are spaced closer than 12in. on centers a proportional reduction in size is allowed.

Beams of cabin house oak 2sq. in., finished, to be spaced not more than 12in. on centers. Bilge stringers and deck clamps to be required. There shall be suitable floor timbers spaced not more than 12in. on centers from mast to aft of ballast. The construction generally to have sufficient strength to insure seaworthiness.

15. PLANKING.—The planking deck and hull to be not less than ⅜in., finished. Planking of top of house to be not less than ⅝in. thick, finished.

The outside of the hull to be planked with Southern long leaf pine; if planked with mahogany, cedar, soft pine or other soft wood, the thickness to be 1in., finished.

16. SAILS.—The rig to be restricted to lower sails of not more than 800sq. ft., of which not more than 640sq. ft. of actual sail area shall be in the mainsail. Storm sails may be substituted for working sails, and a triangular spinaker may be used, but not as a balloon jib. Previous to measurement the owner shall cause distinguishing marks—black bands, 1in. wide, painted around the spars—to be placed on the mast, boom and gaff at corners of mainsail. On the forestay, level with the head of the jib, a suitable mark shall be fixed. The halyard block for the spinaker shall not be more than 30ft. from the deck.

The area of the jib shall be considered to be the area of the forward triangle, viz.: the product of one-half the distance from the attachment of the tack to the boat to the forward side of the mast at the tack mark of the mainsail, multiplied by the distance from the upper edge of the said tack mark to the jib stay mark.

No part of the mainsail shall at any time extend beyond the inner edges of the marks. No part of the jib shall extend above mark on stay.

Any rounding or roaching of the edges of any sail shall be included in the area of sail.

17. SPINAKER BOOM.—The length of spinaker boom, from outhaul attachment to center line of boat, as in use and swung out square, must not exceed 25ft.

18. EQUIPMENT.—In addition to the fixtures, etc., before specified, the boat shall be provided with a complete cruising equipment, all of which must be on board and in their proper places when the boat is measured, and no part of which shall be removed or used to change the trim for racing.

Two anchors, the total weight of which shall be not less than 100lbs., one of which is to be kept forward.

Thirty fathoms of 1½in. cable or 5-16in. chain to be kept forward, and suitable windlass or capstan. Also fifty fathoms of 2½in. cable.

Water tank of at least thirty gallons capacity, with proper connections.

Stove and utensils for cooking for four persons.

Table, dishes and ware, and other necessary articles.

Boat-hook, bucket, compass and binnacle, side and anchor lights, fog horn, pump properly rigged for immediate use.

Two serviceable life preservers.

The cabin transoms or berths to be provided with cushions or mattresses, and four pairs of blankets.

19. CREW.—The crew is limited to four persons, including the helmsman, who must be an amateur.

Not more than one shall be a professional. Boats existing Dec. 1, 1897, which comply with these restrictions to satisfy the board of judges, may be admitted to the class.

At the same meeting it was decided not to admit centerboard yachts to the present 21ft. class, nor to allow spinakers.

The proposal to measure and class by L.W.L. only, instead of by length and sail area, came up at last in definite shape before the Sound Y. R. A. last week, though its principal advocate was backward in offering the amendment. No very strong arguments were advanced in favor of it, the principal ones being that it would place New York in uniformity with Boston, and that it would nominally bring together a lot of yachts which now race in different classes. After a general discussion the proposal was lost.

So far as we can see, the only ground for the movement to establish an obsolete and antiquated system of measurement rests on the fact that the rule which has been so long in general use, and under which so much has been accomplished in the reconstruction of the American yacht fleet, has within a few years past failed to meet the many changes and complications of yacht racing. The advocates of a length rule have thus far offered nothing to prove that it would meet the case any better than the length and sail area rule; and, on the other hand, there is the evidence of years of racing under the old length rules to prove the evil results that inevitably follow from the taxation of but a single element of speed.

As thus far put forward, the proposal to measure L.W.L. only is on a par with the foolish limitation of draft adopted last year and backed by the same vague and general promises of great good to yachting.

The question of a suitable rule is entirely too serious to admit of any further blind experimenting with alleged panaceas and cure-alls; and when any positive step is taken it must be done on some more substantial grounds than have thus far been advanced in either of these two cases.

If those who favor a measurement by L.W.L. desire to secure a general and favorable hearing for the scheme, we suggest that they set forth in plain language what they consider to be the defects of the existing yachts of to-day, and how far these defects are due to the bad influence, active or passive, of the present rule, and how much to outside causes. Also, what general type of yacht it is desired to encourage by a new rule.

With this much clearly settled, it will then be possible to discuss intelligently the probable effects of a L.W.L. rule on proportions, form, displacement, construction, etc., as compared with the similar effects of a length and sail area rule.

To do this calls for some general knowledge of the subject of yacht measurement and for some careful thought and study, and it is a good deal easier to merely decry one rule and praise another in general terms. There are always some who accept any statements against the existing order of things without going below the surface of the matter, provided they are strongly enough made; but we believe that the majority of American yachtsmen to-day are capable of weighing arguments, pro and con, on the questions in which they are interested, and that they prefer to use their own judgment rather than to accept the unsupported dictum of any authority. Discussion, thought and light are all needed in the measurement question; a leap in the dark, such as is now proposed, can only defer the adoption of a good rule while several seasons are being wasted in an old and useless experiment.

The principal argument thus far advanced for an L.W.L. measurement is that it has worked well in Boston; but it must be said, on the other hand, that the Boston fleet has grown up mainly under length rules of various kinds—"mean length," length plus one-third of overhang, length measured some distance above the true L.W.L., etc. In abandoning many conflicting methods of length measurement for a single one (and that, of L.W.L. in racing trim with crew on board, the only fair and reasonable one), the Massachusetts Y. R. A. has made a great step forward. It has attained true uniformity, such as is essential to general interclub racing, and it has recognized the modern yacht, with untaxed overhangs; while it has stopped the trickery that was encouraged by measurement in other than true racing trim, with crew on board. These changes of themselves are sufficient to account for all that has been accomplished by the Y. R. A. in so short a time. The length an sail area rule has never been popular in Boston, and, though adopted at times by different clubs, it has never been built to generally by the clubs which now compose the Massachusetts Y. R. A. Most of these have clung to some form of length rule and built to it. All that has been done under the present Y. R. A. rule of L.W.L. could have been done as well under the same measurement of L.W.L. with sail included as a factor.

The argument used in New York, of uniformity with Boston, amounts to nothing of itself until it is shown that the Boston rule is in some way better than the present rule; and not only for small craft, but for all sizes of yachts. The question in Boston is purely a local one, of the classes of 35ft. l.w.l. and under; no larger yachts are raced in the East to-day. The question in New York is very different; the first consideration is a suitable rule of measurement for large yachts. Whether this rule will also cover the smaller yachts, of 35ft. l.w.l. and under, or whether some other rule is needed for them, must be decided later. While the proposition, as made to the Sound Y. R. A., covered only the smaller sizes, the advocates of a L.W.L. rule have in no way limited themselves, but have urged its general adoption as the standard rule of measurement for all yachts. Even though it should work well in the smaller classes, it would not answer in any way for large yachts.

The proposal to abolish all time allowance for next season came very near to adoption by the Sound Y. R. A., the first vote being a tie, and even now it is to come up again at the March meeting. We quite agree with all that has been said against time allowance; though we unfortunately neglected to patent the idea some twenty years ago, when we first advocated the universal building to class limits, we have always opposed the American custom of building to the middle or bottom of a class. When the allowance tables were altered a couple of years ago by the change from 50 to 60 per cent., we pointed out that the result would be to encourage the building of smaller boats for the sake of the added allowance.

In common with half a dozen other needed changes that have long been opposed by American yachtsmen, the abolition of time allowance has very recently been taken up and pushed with vigor, so that it is now an assured fact. The yachts built this year in the Massachusetts Y. R. A. and the Sound Y. R. A. receive no allowance, and are considered as measuring to the top of their classes. In Boston the circumstances of the case fully justified the immediate abolition of allowance; so far as vested interests were concerned, there were few old boats that suffered any material impairment of their chances of winning, most of the older and faster boats going to the top of the newly arranged classes. The one argument for the retention of the allowance for another year was the understanding that this was to be done if other changes were made. Under the circumstances, as we understand them, the abolition of allowance by the Y. R. A. last month was a breach of faith, and for this reason a mistake.

The proposal as made to the Sound Y. R. A. took on a very different form, as it covered all classes and rigs. So far as the smaller yachts were concerned, time allowance might as well be abolished now as at any time; comparatively few yachts would suffer. When it comes to the larger classes, however, the case is quite different. While the racing yachts of over 42ft. racing measurement are few in number, at the same time they cannot be entirely disregarded; they must be recognized on the race programmes of some of the clubs, even though few of them race. It would be very poor policy at the present time for the Sound Y. R. A. to go out of it way to legislate in a way that would awaken the active opposition of the owners of large yachts. These yachts cannot race without time allowance in some form, even as a basis for putting two or more classes together, as is often necessary. Anything under the name of a handicap is unpopular, and however imperfect and inadequate the standard allowance tables may be, they are accepted as the best possible basis for the racing of large yachts of different sizes.

The Sound Y. R. A. has thus far acted with good judgment in all its legislation, working to improve the racing rules without unnecessary injury to any yachts or the creation of ill feeling and opposition on the part of owners. To go to work now in a summary manner with legislation that is distinctly hostile to the larger yachts would be a serious mistake. In the smaller classes time allowance must go; in fact, it has gone; but for some time at least it will be the only means of matching the large yachts of differing sizes.

Mr. Brand's Challenge.

THE following is from the *Yachting World* of Dec. 3:

Matters in connection with Mr. J. Arthur Brand's challenge to the Royal St. Lawrence Y. C. for the Seawanhaka cup are, now that the Minima Y. C. has officially confirmed his action, progressing very favorably. It will be remembered that when the idea of a British challenge was first mooted we expressed the hope that Mr. Linton Hope would co-operate with any syndicate which might be formed, and give those concerned the benefit of his experience in small boat racing and designing.

Mr. Hope, we are glad to announce, has consented to do so, and on Wednesday he had a long interview with Mr. Brand, the practical outcome of which is that he will design a couple of 20-footers for the syndicate, and go out to Canada with Mr. Brand to assist in sailing the boat which is to be selected to race for the cup.

Mr. Brand is anxious to form a syndicate, with a capital of not less than £1,000, so as to insure a really representative craft being secured for the race. This syndicate, it is proposed, will build two boats, and race them against two or three others which well-known yachtsmen have decided to build. Special prizes will be offered for these races, and it is expected that the leading clubs will make an extra class for the boats, which will, of course, not be eligible to compete in the regular Y. R. A. classes. Racing could be continued until after the Royal Yacht Squadron week in August, as the selected boat need not necessarily be shipped from Southampton until the middle of that month. The races for the cup will not take place until about the middle of September. This will give ample time to test the merits of the various probable challengers, and to insure that the boat ultimately selected is a really representative craft. At the time of writing the composition of the syndicate has not been decided upon, but we are informed that Mr. T. Harrison Lambert has already consented to join it.

In view of the above, we can only regret that Mr. Brand has not displayed the same promptness and energy in challenging that he did in protesting, but has allowed the matter to drag for over two months, with complete disregard for the rights of both the Seawanhaka C. Y. C. and the Royal St. Lawrence Y. C. Of course, the matter has been settled some time since by the acceptance of the Seawanhaka challenge after repeated failures to obtain any satisfactory response from Mr. Brand. Many will regret, however, that the enterprise as above outlined, with Mr. Linton Hope as the designer, has fallen through for the coming year.

New Steam Yachts.

WITHIN the week the Erie Basin Dry Dock Co. will lay the keel of a steel steam yacht for E. W. Bliss, of Brooklyn. The yacht will be similar to Marietta III., and by the same designer, H. J. Gielow. She will be 180ft. over all, 142ft. l.w.l., 20ft. beam, 11ft. hold, and 7ft. 1½in. draft. The forward deck house will be 25ft. long, and the after house 18ft. The engines will be 14, 21, 24 and 24 by 18in., with two Roberts boilers. The work will be under the direction of Capt. W. D. Dickey, superintendent of the yard, who has constructed Sultana, Sovereign and Marietta III.

The Lawley & Son Co. will build from their own design a steam yacht for a Baltimore owner. She will be of composite construction, 110ft. over all, 91ft. l.w.l., 15ft. 6in. beam, and 6ft. 6in. draft, with triple compound engines.

Lake Y. R. A. Annual Meeting.

HAMILTON, ONT.

Saturday, Dec 4.

THE annual meeting of the Lake Yacht Racing Association was held at the New Royal Hotel Hamilton, on Dec. 4, at 2.30 P. M. President Ambrose was in the chair, and, in the absence of Secretary Gray, his place was filled by W. Q. Phillips. Delegates presented their credentials as follows:

Buffalo Y. C.—F. B. Hower, N. O. Tiffany and E. R. Sharpe.

Kingston Y. C.—H. H. Gildersleeve, with two proxies.

Oswego Y. C.—J. T. Mott and R. A. Downey, with one proxy.

Queen City Y. C., Toronto—Owain Martin and Wm. J. Foy, with one proxy.

Rochester Y. C.—J. E. Burroughs, with two proxies.

Royal Canadian Y. C., Toronto—G. H. Gooderham, J. Carl Reid and G. T. McMurrich.

Royal Hamilton Y. C.—E. H. Ambrose, J. H. Fearnside and J. F. Monck.

Victoria Y. C., Hamilton—Wm. Burnside, T. L. Stephens and E. A. Fearnside.

The financial report showed a small balance of $37.48 on hand, but liabilities amounting to $71.65, the balance of which will have to be met from the current season's receipts. The Bay of Quinte Y. C., of Belleville, was dropped from the membership list. The Association now includes five Canadian and three American clubs, all in good standing.

After routine business the various amendments to the rules and constitution were taken up, those offered by the Royal Hamilton Y. C. being considered. The first was to change the date of the annual meeting from the first Saturday in December to the first Saturday in November. This was carried, together with another amendment making the dues from each club payable on Nov. 1 instead of Dec. 1.

The next amendment referred to the percentage of immersed midship section, and in order to understand its intention it is necessary to refer to the measurement rules as amended in November of last year. These provide for a classification and time allowance by corrected length, based on the usual length and sail area measurement, with no restrictions on midship section in the case of yachts built or brought to the Lakes prior to Nov. 1, 1896, unless named by the Council, as in the case of the 42-footer Canada, named at the request of her owners. For yachts built or brought to the Lakes after that date, or named by the Council, the minimum percentages of the immersed midship section (inscribed in a paralellogram touching its extremities) are, for the first, 42, 37 and 32ft. classes, 33⅓ per cent.; 27ft. class, 20 per cent., and 22ft. class, 12 per cent. Any yachts affected by the rule with immersed midship sections falling below the limit must add a percentage equal to the deficit to their racing length and give time allowance accordingly, but such increase does not count for classification. The amendment proposed to raise the percentage from 33⅓ to 35 per cent. in the four higher classes, leaving the others unchanged, and to make any addition to the racing length count for classification, in order to leave a clear course for another amendment proposing to abolish time allowance in class racing.

To the amendment on its merits no particular objection was offered, and in fact the 35 per cent. as against 33⅓ per cent. was afterward adopted in another form. The discussion, however, was long and complicated, the whole question of the restriction of the midship section being overhauled and great diversity of opinion expressed. With regard to the larger classes some delegates were by no means certain that the fin-keel should be suppressed, as with proper construction it gave a strong and seaworthy form of hull at a moderate cost. The claims of the fin and bulb in the 32 and 27ft. classes were strongly urged, one delegate stating that a 27-footer such as Kestrel could be built for two-thirds of the cost of a boat of heavier displacement, while she was as seaworthy and had good accommodation. Mr. J. H. Fearnside pointed out that, as centerboards were not included in describing the contour of the midship section (unless weighted for ballast), it gave such craft an unfair advantage over fin-keels, and of the two he considered the latter more seaworthy, especially when their construction was governed by a proper table of scantlings such as was about to be adopted. In fact, with proper construction much of the objection to the fin-keel type was held to disappear. In addition, it was urged that unless centerboards of all kinds were regarded as a factor in determining the form of the section, the minimum percentage rule was of no avail whatever against the Bonshaw type, with an immersed section of probably 90 per cent., and quite practicable in the 27ft. class.

The amendment was laid on the table to consider another, offered by the Queen City Y. C. This proposed to retain the 33⅓ per cent. clause in the larger classes, but to fix the minimum of immersed midship section at 12sq ft. in the 27ft. class, and 9sq. ft. in the 22ft. class, with a formula for an addition to the corrected length of yachts with sections below the limit, such addition not to affect classification. This was aimed at the Bonshaw type, and craft of light displacement generally. The mover, Owain Martin, himself the owner of a 22-footer, saw no reason why the class should be given over to the unrestricted racing machine, especially as it was necessary to make passages from port to port in order to enjoy a fair season's racing. Good cabin accommodation was not to be expected in so small a size; but open boats of a seaworthy type had cruised around the lake for years, and could do it again.

After further discussion an amendment to Mr. Martin's amendment was introduced by Mr. J. Carl Reed, providing for no restrictions whatever on midship section in the 22 and 27ft. classes, but a new class of small cabin knockabouts to be established, as a separate class, the racing length not to exceed 22ft. and to sail without time allowance (except as hereafter provided). All boats built or brought to the Lakes for this class after Dec. 4, 1897, to have an area of immersed midship section of not less than 10sq. ft., and each owner to file with the measurer at the time of measuring a certified drawing to scale of such midship section from the builder or designer of the boat. Yachts of 22ft. racing length or less, built prior to Dec. 4, 1897, the area of whose immersed midship section exceeds 6sq. ft., may race in this class, but shall give a special time allowance in accordance with their lack of displacement; the formula to be used in measuring such boats (for the time allowance only) shall be:

$$\frac{L. + \sqrt{S. A.}}{2} \times \frac{10}{D.}$$

D is the area of midship section plus .4 of the difference between such area and 10sq. ft. This class to be separate and distinct from the present 22ft. class, and yachts entered in one class not to be eligible in the other. Some doubt was expressed as to whether such a class would fill, but Mr. Reed assured the meeting that he knew of two men who were only waiting for its recognition to build, and in addition it would take in a number of craft now out of the racing. After further discussion the amendment was carried unanimously, this, of course, disposing of Mr. Martin's original amendment, while the Royal Hamilton amendment was withdrawn except as regards the change from 33⅓ to 35 per cent. in the four larger classes, which was adopted.

This ended the discussion, and further amendments were carried without loss of time, and may be briefly summarized as follows: Time allowance will be abolished in straight class racing, except in the first class. In mixed class racing the upper limit of the class to which each yacht belongs will be taken as the racing length, and time allowed accordingly, except in the first class. In mixed class racing also, where yachts are subject to a restriction on the midship section, 35 per cent. will apply to all classes. Yawls will be rated at 93 per cent. instead of 94 per cent. of their racing length, as formerly.

The rule requiring galley fittings on board during a race was rescinded. A Corinthian must steer yachts of 32ft. racing length and under, and in addition he must be a member of a yacht club belonging to the Association. Measurement protests must be accompanied by $5, to be forfeited if not sustained; but if sustained, the owner of the yacht will be fined a similar amount.

The Association decided to join the Yacht Racing Union of N. A., but instructed the secretary to communicate with sister organizations on the Lakes with a view to all being represented together

The tables of scantlings prepared by W. P. Stephens were adopted and incorporated in the rules, the meeting expressing its cordial appreciation of the work and care expended in their preparation.

The following were elected representatives of the Council of the Yacht Racing Union: Æmilius Jarvis, J. F. Monck and J. E. Burroughs. Mr. Ambrose was nominated, but declined to stand. On recommendation of the Association officer $40 was appropriated to purchase buoys, etc., for laying courses at ports where there is no yacht club.

The election of officers for the ensuing year resulted as follows: Pres., Frank Strange, Kingston Y. C.; Vice-Pres., R. A. Downey, Oswego Y. C.; Hon. Sec'y, Frank M. Gray, Royal Canadian Y. C.; Council: Com. Hower, Buffalo Y. C.; Com. Martin, Queen City Y. C.; F. E. Woodward, Rochester Y. C.; E. H. Ambrose, Royal Hamilton Y. C.; T. L. Stephens, Victoria Y. C.

The question of next year's racing programme was left to the Council, but Kingston was named as the place of the next annual meeting.

The meeting then adjourned.

The 21ft. Knockabouts.

THE new class of 21ft. knockabouts, with 600sq. ft. of sail, is described as follows by the Boston *Globe:*

The new 21ft. knockabout class, with 600sq. ft. of sail, is a very promising one, even though it will not produce strictly a "knockabout." The carrying of a short bowsprit will take the boats out of the strictly "knockabout" type, but at the same time the increased speed by reason of the larger sail plan, and the more advantageous disposition of sail allowed by the bowsprit, will more than compensate for the loss of the name. The complete restrictions for the class as formulated by a special committee of the Knockabout Association follow and make interesting reading.

The present standing of the matter is that the report of the committee will be presented to the Association. And if that body shall see fit to take charge of a third division within its membership the boats of the class will be built under its jurisdiction. If the Association feels that it has its hands full with the 21ft. keel knockabouts and the 25-footers, a new association will undoubtedly be formed. The yachtsmen interested in the new class are thoroughly in earnest in determining to build something faster than the present knockabout, and there is a prospect of nearly a dozen boats.

The main idea in starting the new class is to secure a faster boat, and one in which better racing can be done without sacrificing any of the cruising qualities of the old type. In fact, the cruising qualities will also be improved, since a fair-sized cabin is one of the requirements. It was also desired to admit centerboards, so that yachtsmen who do not always have deep water off their club houses could have a chance.

As at present drawn the restrictions seem to meet all requirements. Any of the old knockabouts may be changed in sail plan to suit the new class, while at the same time the new boats cannot "outbuild" them in construction, since hull and ballast requirements are the same as ever. The Buzzards Bay class of the Beverly Y. C. is admitted to the new class, so that the centerboards of both may race together, keels being barred for Bay racing. The boats will cost practically nothing more for their increased speed, and will be more desirable in many ways.

The type will be a specially good one for the Boston Harbor clubs, and the writer wishes the new class success.

The following are the complete restrictions as agreed upon by the committee:

A boat of this class is intended to be a seaworthy boat with cabin house and fair accommodations; with watertight standing room, or air tanks of sufficient capacity to float the boat when full of water; rigged simply with only mainsail, forestaysail or jib and spinaker.

The length of the L.W.L., with full equipment and crew averaging 150lbs. per man aboard, shall not exceed 21ft. Dead weight may be substituted for crew in measuring.

The beam at L W.L , in keel boats, shall be at least 7ft., and in centerboard boats at least 8ft. The freeboard shall be not less than 20in. on the minimum beam, a reduction of 1in. on the freeboard allowed for every increase of 4in. in beam.

The forward side of mast at the deck shall be not less than 4ft. 3in. aft of forward end of L.W.L.

The planking, including deck and house, shall not be less than ⅝in. thick, finished.

The frame of the boat shall be of oak, or its equivalent in strength.

The frames shall not be less than 1sq. in. and deck beams not less than 1⅛sq. in. section.

The spacing of frames and deck beams to be not more than 9in. center to center.

Deck clamps shall run from stem to stern, with a minimum cross section of 4sq. in. for at least one-half the length; also bilge stringers of at least 4sq. in. cross section shall run for at least one-half the extreme length of boat amidships.

For centerboard boats the minimum draft shall be not less than 3ft.; the total outside fixed ballast shall be not less than 3,000lbs.

For keel boats the draft shall not exceed 6ft.; the outside ballast shall be not less than 3,500lbs.

The fin shall not be counted in the required weight of ballast, and no fin shall be less than ½in. in thickness.

The sail area shall be not over 600sq. ft., and not over 400 sq. ft. of actual sail area shall be in the mainsail. The inspector shall be provided with a correct sail plan of any boat to be measured, and previous to measurement the owner shall cause distinguishing marks, satisfactory to the inspector, to be placed on the spars as follows:

On the mast at the tack and at the throat of the mainsail, on the boom at the clew of the mainsail, on the gaff at the peak of the mainsail. No part of the mainsail shall be allowed to extend beyond these marks. The marks shall be black bands painted around the spars in a manner satisfactory to the inspector. The inner edges of the bands shall be the limits of the sail.

The area of the jib shall be considered to be the area of the forward triangle, viz., the product of one half the distance from the attachment of the tack to the forward side of the mast at the tack mark of the mainsail, multiplied by the distance from the upper edge of the said tack mark to a mark on the jibstay level with the head of jib.

The extreme distance in feet from mast to end of spinaker boom when in position, as used, shall be not more than 400 divided by the distance in feet from deck to throat of spinaker halyard block.

No battens over 30in. length allowed to be used in sails.

Equipment to include anchor not less than 25lbs. and cable of not less than 30 fathoms of 1¼in. rope; also bucket, pump, compass, fog-horn, lead and line, lantern and three life-preservers.

All boats now existing that have been accepted by the inspector under previous rules, and all that now comply with the present rule of the Beverly Y. C., and all boats built on the lines and specifications of W. B. Stearns, as accepted by the Seawanhaka Cor. Y. C., and carrying not more than 550ft. of sail, shall be accepted as complying with these restrictions.

Yacht Racing Union of Long Island Sound.

THE fall general meeting of the Yacht Racing Union of Long Island Sound was held on Dec. 7 at the Fifth Avenue Hotel, New York, Chairman Cromwell and Secretary Jones being present, with the following delegates:

Huguenot Y. C., E. Burton Hart, Jr., and T. F. Day; Indian Harbor Y. C., C. E. McManus and F. Bowne Jones; New York Athletic Club, Mayhew W. Bronson; Corinthian Fleet of New Rochelle, James D. Sparkman and W. Irvine Zerega; Riverside Y. C., C. T. Pierce and H. W. Tyler; Hempstead Harbor Y. C., Ward Dickson; Horseshoe Harbor Y. C., F. E. Towle, Jr., and G. S. Towle; New Rochelle Y. C., Charles E. Tower and Paul A. Meyrowitz; Park City Y. C., R. S. Bassett; Knickerbocker Y. C., O. H. Cheeborg; Bridgeport Y. C., R. R. Curtis and F. M. Wilson; Huntington Harbor Y. C., H. H. Gordon; Harlem Y. C., William Towner; Seawanhaka Corinthian Y. C., Oliver E. Cromwell.

After the roll was called it was moved to dispense with the reading of the lengthy minutes of the previous meeting, and the proposed amendments to the rules, as already printed, were taken up. The points involved were explained by the secretary and generally discussed, the rules being then voted on. In the general rules the only important changes were in the names, that of "Union" being changed to the "Yacht Racing Association of Long Island Sound," while the term "executive committee" was substituted for "council." The object of these changes was to avoid any conflict with the Yacht Racing Union of North America; the local organizations being thus termed associations and the national body a union. It was also decided to hold two general meetings, one in November, instead of December, and one in March.

The changes in the racing rules were made to conform to the rules of the Y. R. U. of N. A., as recently published in the FOREST AND STREAM. Under Rule II. Mr. E. Burton Hart offered an amendment to the effect that an owner should be at liberty to mark the extreme points of measurement on boom and gaff by black bands painted on the spar. While many were in favor of the suggestion, after discussion the amendment was lost. In case of remeasurement on protest, it was provided that the owner of a yacht thus protested must present his yacht for measurement immediately after the race when so required by the race committee, and that the fee shall be collected from the owner only in the event of the new measurement being in excess of that filed in advance. Should the measurement prove less, the fee is to be paid by the protesting party. The term "racing measurement" was adopted in place of "racing length."

When Rule III., Classification, was taken up, Secretary Jones announced that Mr. T. Fleming Day, of the Huguenot Y. C., had intended to offer an amendment that all yachts of 30ft. l.w.l. and under be measured and classed by waterline only, but that he declined to do so. Mr. Day, when called upon, spoke in favor of a L.W.L. measurement and classification as used in the Massachusetts Y. R. A. Some discussion followed, but the amendment was lost.

The draft limits adopted last year were allowed to stand, without discussion.

Under Rule V., Time Allowance, Mr. Day moved that time allowance be abolished at once in all classes, and the motion was seconded and put to vote after considerable discussion. The vote was a tie, 8 to 8. After further discussion it was decided to leave the matter until the March meeting, in order that all interested might be heard from. The sentiment was strongly in favor of the total abolition of time allowance; but opinion was divided as to the necessity and expediency of any radical move just now, when allowance is already denied to yachts built in 1897, and the older yachts entitled to it are rapidly dropping out of the racing.

The question of allowance for rig brought out some amusing remarks on yawls, Mr. Day claiming that the yawl would be improved by being denied the allowance and made to sail on even terms with the cutter and sloop rigs. The subject of establishing a special class for yawls was also discussed, and decided in the negative.

Under the head of "Boats and Life Buoys," it was decided that but one life buoy need be carried in yachts under 30ft. racing measurement, all yachts of the 36ft. class and the larger classes carrying two. A change was made in the rule relating to crews, allowing professional crews and helmsmen in the 51ft. class.

Under the head of "Starting and Finishing Signals," the subject of the special classes was discussed, and it was finally decided to start the special classes separately from the regular ones, as from the number of starters in the former, as in the new 25ft. and 21ft. knockabouts, they would interfere seriously with the yachts in the regular classes. This required a complete rearrangement of the starting signals, which work was referred to the executive committee, to report at the March meeting. The remaining rules were adopted as printed. As several important matters are thus left until the spring meeting, the book of rules will not be printed until after that meeting. In the meanwhile clubs can obtain from the secretary proofs of the rules as thus far amended.

One important subject that was discussed by the delegates was the enforcement of the rule relating to numbers on sails; it was decided that all the race committees would, for next season, enforce this rule strictly and literally, disqualifying every yacht which does not show her official racing number on both sides of the sail and in the proper position. Thus far this important rule has not been generally enforced, but especially as the rule compelling the carrying of a private signal in a race is rescinded, there is no reason why the numbers should not be properly displayed, as called for by the rule.

Mr. C. T. Pierce, of the Riverside Y. C., requested a ruling from the Association upon the question of the new 25ft. and 21ft. classes, as to whether yachts of different design, but complying with the dimensions and scantling of each class, would be recognized in the races. It was voted, as the sense of the meeting, that race committees should recognize no yachts in these two classes that were not built to the standard designs of the classes. The meeting approved of the proposal of the executive committee to adopt the blanket entry for the entire season.

According to Mr. Blair Cochrane, brother-in-law of Mr. Sutton, owner of the ½-rater Wee Winn, so successfully sailed on the Solent by Miss Sutton, the total weight of the hull, bulb-fin, spars, sails, oars, anchor and all equipment carried in racing is 990lbs. The hull alone weighs 396lbs. Wee Winn is supposed to be identical in design and construction with the 15-footer Trust Me.

Capt. John Carter, who has sailed Britannia since she was launched in 1893, and who has done a full share toward the splendid record which the yacht has made for five seasons, is no longer in the service of the Prince of Wales—a pretty strong indication that no new cutter is contemplated to replace Britannia.

The Mediterranean Yacht Clubs.

In all, there are some twenty societies or clubs along the shores of the littoral who organize regattas, and who between them own quite a considerable flotilla of yachts. The three most important are the Club Nautique de Nice, the Société Nautique de Marseille and the Union des Yachtsmen de Cannes. Among its members the Club Nautique de Nice counts such well-known yachtsmen as M. Frank Pilatte, Dr. Ed. Pilatte, M. J. G. Maurel, M. L. Bensa and others. In 1885, at the instigation of this club, the first yachting congress was held in France, with a view to arriving at a satisfactory rating rule for racing craft. In 1885 the Union des Sociétés Nautique de la Méditerranée was established, which extended from Cette to Naples, but which went to pieces from the very vastness of its organization. Nothing daunted, the Fédération des Sociétés Nautique de la Méditerranée was called into life, but whether it serves any practical purpose is highly doubtful, since all clubs are under the sway of the Union des Yachts Français, the governing body of the sport in France. Nevertheless the Club Nautique de Nice has done much in the interest of the sport on the Riviera, and numbers several of the best known yachtsmen among its members. Another and smaller club at Nice is the Cercle de la Voile, which takes it in turns with the Club Nautique in giving regattas. The second in importance is the Société Nautique de Marseille, which was founded in 1887. In addition to its annual international regatta it organizes a number of matches and smaller events along the coast.

This club has a capital anchorage, and has built a slip for repairs and cleaning. This slip can take yachts up to fifty tons, and has room for six or seven at a time. The total number of yachts is 106, displacing 2,200 tons. The youngest of the three important is the Union des Yachtsmen de Cannes, founded five years ago as a sporting outcome of a purely social body, the Cercle Nautique de Cannes. At Cette, again, there are two clubs, the Société Nautique de Cette and the Sport Nautique d'Etang de Thau. At Hyères, Ciotat, Sainte Maxime and Toulon there are similar institutions, all of which are most energetic in the organization of regattas.—*The Field.*

The Quincy Y. C. Challenge Cup.

The Quincy Y. C. has announced the following conditions to govern its new inter-club challenge cup for the 21ft. class. The cup, made by Tiffany, costs $200:

Article 1.—Races shall be limited to yachts belonging to any organized yacht club in good standing which are eligible to sail in the present 21ft. classes of the Massachusetts Yacht Racing Association.

Article 2.—The club holding the cup shall defend it between July 15 and Sept. 15, on three months' notice against all comers. All challenges shall be in writing, signed by the proper officers of the challenging club. One challenge shall be delivered at least three months prior to the date of the proposed match. Subsequently other clubs may challenge and enter the same series of races on the terms proposed in the challenge first received and accepted.

Article 3.—Each club shall name its representative for the series on or before the day of the first race.

Article 4.—A yacht must win three races of a series to win the cup. After four races of any series have been sailed, only winners shall be allowed to compete; after six races, only yachts which have won twice.

Article 5.—Races shall be sailed under the rules of the Yacht Racing Association of Massachusetts, with the further provision that the total weight of a crew in racing trim on day of race shall not exceed 850lbs.

Article 6.—Courses shall be so laid that at least one-third shall be to windward, but a change of wind subsequent to the start shall not invalidate a race. The depth of water over the whole course at the time of start and for four hours subsequent shall not be less than 5½ft.

Article 7.—The terms of this instrument may be modified by the Quincy Y. C. while the cup is in its possession, and when not in its possession by agreement between the Quincy Y. C. and the club holding the cup, but no modification shall be made during the pending of any challenge, unless consented to by all challengers.

Article 8.—All conditions of any competition not covered by these articles or by the rules of the Yacht Racing Association of Massachusetts shall be left to mutual agreement, and in case of failure to agree the executive committee of the Yacht Racing Association of Massachusetts shall act as arbitrator.

Article 9.—Any club winning the cup shall give a receipt specifying that it is responsible for the safety of the cup and holds it subject to the terms of this instrument, and that if it dissolves or ceases to exist the cup shall be returned to the Quincy Y. C.

Cruising Fin-Keels.

Editor Forest and Stream:

The fin-keel has much to answer for. Its sins of omission and commission are flagrant and many. Like many a high-spirited youth first turned loose upon society, it has steered wildly, and perhaps only on one phase of its performance has there been a universal ground of agreement—undeniably it was fast. But, as is often true in the case of the youth, there are some who fancy they have seen latent virtues shining through the hurly-burly of its wild-oats sowing—virtues of strength and energy that would surely survive the test of time and prove the essence of a sturdy maturity.

The writer is one of these, and has viewed with great interest your descriptions and drawings of Palmyra and her sisters, and later of Akista, and indorses fully the remarks of Mr. Hill on the use of the fin in the knockabout classes. He believes there are many others who think with him that displacement can be profitably removed from the region of the garboards even in large-bodied boats; that, weight for weight, the barrel-shaped hull is strongest and most easily driven; and, among the smaller classes at least, given certain limits of length, sail and displacement, a higher ratio of value as against outlay may be had.

Up here on Lake Ontario there has just been established a knockabout class of 22ft. racing length. The only restrictions are a draft of 5ft. and a minimum area of immersed midship section of 10ft.; it will be seen that in this there is great latitude as to type. I shall be much mistaken if the possibilities of the fin in this class are not well canvassed, and should therefore be glad to hear from Mr. Hill, through the Forest and Stream, what his ideas are as to the particular form in which he would adapt it to boats of this size.

Fin (de Siècle).

Toronto, Dec. 11.

Glencairn II.

The following is from the Montreal *Star*:—

Glencairn II., which won such a magnificent victory, and secured the possession of the Seawanhaka cup for another year last season, may leave Canada. It appears that efforts have been made to obtain possession of Glencairn II. on behalf of a couple of well-known Wisconsin yachtsmen. The gentlemen, evidently under the impression that the boat was owned by Mr. Duggan, opened negotiations with him, it is understood, for her purchase. The boat, however, is owned by Mr. Jas. Ross, and the latter does not seem any too anxious to part with her. Mr. Duggan, it is said, offered them the Avoca, which he built first, but it seems that the Wisconsin gentlemen do not want any boat from here unless they can have Glencairn II. It seems that the whole thing was a scheme on their part to surprise their rivals in the lake clubs, with which they compete, with the boat, without giving her name, and now that they have been discovered their excuse is that they simply desired the boat so as to see in what way the boat which had beaten the best United States craft of her class was superior to the swift boats which are being used in the vicinity. The gentlemen who have been negotiating for the purchase of the boat are Messrs. Robert and Hermann Nunnemacher, of the Pine Lake Yacht Club, of Milwaukee.

We hope, in the interest of fair sport and American yachting, that the above story is only in part true. Western canoeing has already been disgraced by a "ringer" in the shape of a fast Eastern canoe bought and raced under a false name, and it would be most unfortunate if yachting should suffer in the same way.

YACHTING NEWS NOTES.

Alcedo II., steam yacht, George W. Childs Drexel, arrived at Philadelphia on Dec. 10 from Savannah, at which port she touched on her voyage from Antwerp. Capt Frank E. Dyer is in command. The yacht sailed from Philadelphia for Southampton on July 10, but put into New York shortly after to repair damage to her machinery. She sailed from the latter port, and Mr. Drexel and his party joined her in Scotland for a cruise to Norway and the Baltic, leaving her at Antwerp and returning to New York by steamer.

A steam yacht of 120ft. length, 16ft. beam, is under way at J. Thomas & Son's yard, Winan's Cove, Baltimore, for W. H. Evans, of that city. She will have triple expansion engines and Williams water-tube boilers.

Republic, schr., G. P. Mathews, arrived at New York on Dec. 9, in tow of the tug Edgar T. Luckenbach, after being dismasted while on her way up the coast.

At the annual meeting of the Beverly Y. C. on Dec. 10 the following officers were elected; Com., Geo. H. Richards; Vice-Com., Lewis S. Dabney; Sec'y, R. W. Emmons; Treas., F. L. Dabney; Meas., A. S. Hardy; Regatta Committee: A. H. Hardy, S. G. King, C. E. Hodges, F. E. Cabot, David Rice, E. M. Farnsworth and J. G. Palfrey; House Committee: Dr. E. S. Wood, A. H. Hardy, W. E. C. Eustis, N. H. Emmons and F. L. Dabney. It was voted to change the measurement rule to conform to that of the Y. R. A. of M., "waterline with crew on board," and a committee was appointed to draw up a plan of reclassification should it be necessary in view of the change. A committee was also appointed to draft restrictions for a new class of about 25ft. waterline. It was voted to confer by committee with the Boston men interested in the new 21ft. 600ft. of sail class, with a view to making the restrictions uniform with the present Buzzards Bay class. It was voted to hold a regular meeting of the club late in August at the Wing's Neck club house.

The city of Milwaukee is planning a grand carnival for next summer, one feature of which will be three days of yacht and rowing races, on July 2, 3, 4. A special committee, including Messrs. Alexander Mathers, Horace Enos, Robert Nunnemacher, James Johnston and A. B. Cambier, has been appointed to attend to the yacht races. Prizes to the amount of several thousand dollars will be given, and it is expected that yachts will be in attendance from all the Lakes.

A Chesapeake Bay buckeye, to be named Dixie, is now building by E. J. Tull at Potomac, Va., for the Rev. Thomas Dixon, Jr., of New York. She will be about 80ft. over all and 20ft. beam, with 2ft. 6in. draft, and rigged with leg-o'-mutton sails, the conventional buckeye rig.

The shops of C. C. Hanley, at Monument Neck, Buzzards Bay, where so many fast yachts of the Cape cat type have been turned out, were destroyed by fire a short time since, Mr. Hanley losing his tools, patterns and models. He has decided, in view of this disaster and the growth of his business, to abandon the Cape and to establish himself permanently in larger and more convenient shops at Quincy, Mass. Mr. Hanley's business has long since outgrown his immediate vicinity, numbers of his yachts being used about New York and Boston.

The annual meeting and banquet of the Rochester Y. C. took place on Dec. 7, the following officers being elected: Com., F. E. Woodworth; Vice-Com., J. W. Robbins; Fleet Capt., N. H. Compton; Sec'y, T. G. Young; Cor. Sec'y, J. E. Burroughs; Treas., T. G. Young; Meas., Wm. H. Pillow; Fleet Surgeon, Dr. T. O. Tait. Directors—A. G. Wright, A. T. Hagen, Hy. Loewer, D. R. Clark. Delegates to L. Y. R. A.—T. B. Pritchard, J. E. Burroughs, W. J. Herriman.

Mr. Compton, of the regatta committee, read a report of the season's races, with the following summary:

	Firsts.	Seconds.	Thirds.		Firsts.	Seconds.	Thirds.
Pedro	4	1	1	Dragon	0	0	1
Nydia	4	0	0	Amelia	0	1	1
Chic	4	0	0	Zanita	0	2	0
Nox	3	3	0	Soubrette	1	0	0
Iris	2	3	0	Vita	0	1	1
Veritas	2	1	0	Kodak	0	1	0
Nydia	1	3	0	Facile	0	0	2
Weno	1	1	1	Majel	0	0	0
Kelpie	1	0	0	Althea	1	0	0
It	0	3	0				

Veritas also won the Flynn cup.

The racing has been more successful than in any previous season, and the interest displayed promises well for next year.

A meeting of the sailing committee of the Royal St. Lawrence Y. C. was held on Dec. 6 for general business, including the annual report. The following telegram was read: "Confirm Brand's challenge, conditions 1897.—Minima." The club having already accepted the challenge of the Seawanhaka Cor. Y. C., no action was taken on the telegram.

In spite of some vigorous denials, it is settled that the anonymous purchaser of the schooner yacht Yampa is none other than the Emperor of Germany. The yacht has been out for survey at City Island and has refitted there. Her racing spars and sails have been shipped from Boston to Southampton, and she will sail this week for that port in charge of Capt. John Burt, who has been with her during the past summer.

The annual meeting of the Lake Michigan Yachting Association was held on Dec. 4 at Racine, Wis., the following officers being elected: Pres., H. A. Coleman, of Milwaukee; Vice-Pres., George Warrington, of Chicago; Sec'y, C. O. Andrews, of Chicago; Treas., H. Schulte, of Manitowoc; Delegates to Yacht Racing Union: E. J. Baker, Edward Baker and Edward Warren. The place and date of the annual meet have not been decided.

Niagara II., steam yacht, now building for Howard Gould by the Harlan & Hollingsworth Co. at Wilmington, Del., is nearly plated, and engines, boilers, joiner work, etc., are all under way. It is expected that the yacht will be ready for launching next month, and that she will be completed by the contract date, April.

The Racine Boat Manufacturing Co. has under way two steam yachts, one for Otto Young, of Chicago, for Lake Geneva, to be 73ft. length, 12ft beam, and 4ft. draft, with a speed of 14 miles; the other for Martin A. Ryerson, of Chicago, to be 75ft. length, 12ft. 6in. beam, and 4ft. draft. The company has also under construction steel sectional steamers for the Klondike.

The Yonkers Cor. Y. C. elected the following officers on Dec. 2: Com., Alanson J. Prime; Vice-Com., Charles A. Valentine; Fleet Captain, Louis Quanchi; Fin. Sec'y, Henry J. Ritchie; Rec. Sec'y, F. A. Rigby; Treas., F. D. Canfield, Jr.; Meas., William E. Myers; Chaplain, Rev. James E. Freeman; Fleet Surgeon, Dr. N. A. Warren; Steward, W. N. Warner; Librarian, J. Willard Pruyn; Trustees—James S. Clark, Judge William C. Kellogg, Halcyon Skinner, Frank W. Sabold, W. Hunter Clark and Charles W. Swapp; Regatta Committee—John Dickson, Edward Crabbe, F. A. Rigby, Walter Blackburn and Gabriel Reeve; Membership Committee—J. S. Potter, G. Howard Clapp, Charles W. Swapp, J. Willard Pruyn and J. W. Kennedy; Delegates to New York Yacht Racing Association—A. J. Prime, Edward Moore, Jr., and Bertram Barnett. The club is in excellent financial condition—not only out of debt, but with a surplus of $8,000. Com. Prime has served for twenty-one years as commodore, and it is under his good management that the club has prospered.

The annual meeting of the Douglaston Y. C. was held on Dec. 7 at the Arena, New York, forty members being present at the dinner. The following officers were elected: Com., Clay M. Green; Vice-Com., F. R. Parsons; Rear-Com., W. H. Johns; Sec'y, George H. Petitt; Treas., John G. Bert; Meas., David Crispin; Board of Governors—Thomas L. Hamilton, Joseph R. Grismer, Louis Harway, David Crispin and Charles K. Sayer. The club has the plans ready for a new house at Bayside, L. I.

It is rumored that at least three of the big cutters will be seen in the Mediterranean next spring—Ailsa, under her present owner, A. Barclay Walker; Satanita, recently purchased from Charles Day Rose by Sir Maurice Fitzgerald, and now fitting out; and Valkyrie III. Various indefinite reports of the sale of the latter yacht have been in circulation, but it is now said that she will be raced next season by her original owners, Messrs. Robinson, McCalmont, and the Earl of Dunraven.

Answers to Correspondents.

No notice taken of anonymous communications

C. L. B., Trenton, Mo.—I would like to have a list of breeders of English mastiff dogs. Ans. There are few breeders of mastiffs in the United States. We have no information at present concerning mastiffs for sale.

H. S. K., Syracuse, N. Y.—Do Elliott and Heikes shoot the same kind of guns at live birds? Ans. Elliott and Heikes use the same kind of guns, viz., Winchester repeating shotguns. Elliott, however, shoots what is known as an "Elliott model," while Heikes is now shooting a '97 model. We believe he first shot this gun at the New Jersey State shoot, Sept. 28-Oct. 1.

E. E. P., Fort Smith, Ark.—My pointer puppy, seven months old, has had his tail cut off by former owner. The tail, about half its original length, has never healed perfectly. I think screw worms got into it. It is swelled to about twice its natural size and seems to give the dog a great deal of uneasiness. I have tried blue ointment, sulphur, and sulphur and aloes, and have been giving Fowler's solution internally for a week past. He does not improve. Will you kindly suggest something that will relieve him? Ans. It is impossible to determine the cause of the ailment from the meager description you give. We advise you to consult a veterinarian or physician.

J. G. W., Sherbrooke, P. Q.—My foxhound bi ch, aged six, lately bought, has been kept shut up two years except occasional exercise. Her feet are tender and got very sore on a day's hunt, leaving blood on her track. Toe-nails are very long. What should I do? Her feet get well in four or five days after a run. She now has plenty of room for daily exercise, and the best of care. She and another dog aged three are hard pullers. Are they too old to be benefited by the use of a spike collar? Should a foxhound be fed on the morning of a hunt? Ans. Reduce the claws to the proper size. Since the feet become sore only when the dog runs, no other treatment will be necessary. Give regular exercise every day to toughen the feet. A spike collar will promptly cure the pulling. Feed after the hunt.

Myron Bailey.—1. Which is the more accurate cartridge, the .25-20-86 Marlin rifle or the .25 25-86 Stevens Ideal rifle? 2. Where can I find the best place for deer, duck and grouse shooting in the Adirondack Mountains? 3. When is the best time to go there and camp out? Ans.—1. There is but little difference between them; the latter, however, is the more powerful of the two. 2. We presume you want this information for a trip next fall. Write us a month or so prior to the date you propose starting on, and we will try and tell you where to go. 3. The months of September and October are favorites. If you want grouse and deer, you will of course have to go when the seasons are open.

Canoeing.

American Canoe Association.

COMMITTEES FOR 1898.

Camp Site Committee—F. S. Thorn, chairman, Buffalo, N. Y.; H. L. Quick, Yonkers, N. Y.; Henry C. Morse, Peoria, Ill.

Transportation Committee—William E. Barlow, chairman, Sing Sing, N. Y.; Charles V. Winne, Albany, N. Y.; Louis A. Hall, Newton, Mass.; F. S. Rathbun, Deseronto, Can.

Regatta Committee—Percy F. Hogan, chairman, 243 Pearl street, New York; Raymond Appolonio, Winchester, Mass.; C. Howard Williams, Buffalo, N. Y.

Literature Committee—H. H. Smythe, Atlantic Division; Francis J. Burrage, Eastern Division; Frederic G. Mather, Central Division; E. B. Edwards, Northern Division.

Signal Officer—H. M. Stewart, Rochester, N. Y.

Assistant Signal Officer—Wm. J. English, Peterboro, Can.

Squaw Camp Committee—M. T. Bennett (active member at large), 1 Broadway, New York; Mrs. M. T. Bennett (associate for Atlantic Division).

Associate members for Central, Eastern and Northern Divisions will be announced later.

Entertainment Committee—L. W. Seavey, chairman. Balance of the committee to be announced later.

Fleet Surgeon—S. R. Upham, M.D., Claremont, N. H.

A. C. A. Photographer—A. A. Lewis, Claremont, N. H.

New York, Dec. 9.—*To the officers and members of the canoe clubs of the American Canoe Association:* Gentlemen—On account of the reduced income available to the officers of the American Canoe Association applicable to the running of the meet on Stave Island, Aug. 5 to 19, 1898, it is deemed advisable to ask the different canoe clubs in the Association their kindly help in the form of a subscription of $5 or more toward defraying the expense for prizes. It is hoped that a hearty response will be made to this appeal, in order that the regatta committee may be placed in funds with which to supply substantial prizes to the winners in the various events on the racing programme.

The sailing and paddling courses at Stave Island, St. Lawrence River, are particularly fine, and you are therefore requested to urge every aspirant for racing honors in your club to attend the 1898 Camp, and thus help to make the meet one of the most successful, from a racing standpoint.

Cordially yours, Frank L. Dunnell, Commodore.

The A. C. A. Race Programme.

AUBURNDALE, Mass., Dec. 7.—*Editor Forest and Stream:* Referring to the programme of the Stave Island regatta committee contained in the FOREST AND STREAM of Nov. 27 ult., I notice that in the limit on war canoes 120lbs. is given as the minimum weight. I am of the opinion that this weight should be 150lbs. Such was the weight specified in the motion made by me at the annual meeting in Brooklyn, at which the war canoe limits were laid down. Our nine-men crews average a total weight of 1,350 to 1,450lbs., which will put a pretty heavy strain on a canoe of even 150lbs. It is a question in my mind if in the new canoes built from now on clubs will care to come down to this limit, as the life of such a canoe will be likely to be short.

From the standpoint of a spectator I am glad to see that the war canoe race is to be "½ mile with turn," as such a race is much more interesting to watch. As a paddler, from which point I am interested, I would say I quite exhausted my vocabulary on the regatta committee of last year, and can now only utter a very feeble protest. However, at present I do not see much chance of this event being filled at the coming meet at Stave Island, so that this turning of war canoes need not cause us much worry.

LOUIS S. DRAKE.
Vice-Com. Eastern Division, A. C. A.

Editor Forest and Stream:

In the proposed schedule of races to be held at the A. C. A. meet in August, 1898, which was recently published, the limitation of crews of war canoes to a maximum of nine men was an error. There is no limit to crews of war canoes.

PERCY F. HOGAN,
Chairman Regatta Committee.

The A. C. A. Skating Club.

THE American Canoe Association Skating Club has been organized with a membership of fifty, representing the Yonkers, Brooklyn, Knickerbocker, New York and Ianthe canoe clubs, with headquarters at the Ice Palace Rink, One Hundred and Seventh street and Lexington avenue, New York city. Through the courtesy of Mr. E. H. Barney, of the Springfield C. C., the privileges of the rink, including admission, use of skates and a private room for meetings, has been accorded the members. The club meets every Monday evening at the rink, and those who so desire are served with dinner from 6:30 to 8 at a moderate cost. The club fills a long-felt want in providing a convenient meeting place for canoeists, and every Monday night a goodly number may be found at the rink rehearsing the scenes of the '97 meet and forming plans for '98 and "Old Stave."

Members of the American Canoe Association are eligible for membership, and any member of the Association who will communicate with Louis Simpson, Yonkers C. C., president, or W. N. Stanley, 554 Quincy street, Brooklyn, secretary-treasurer, will receive all particulars of the organization.

Trap-Shooting.

Leading dealers in sportsmen's supplies have advertised in our columns continuously for almost a quarter century.

If you want your shoot to be announced here send in notice like the following:

FIXTURES.

Dec. 21-22.—ELIZABETH, N. J.—Tournament of the Elizabeth Gun Club. Open to all. First day, targets; second day, live birds.

1898.

Jan. 1.—COLORADO SPRINGS, Col.—Tournament of the Pike's Peak Gun Club. $100 added money.

Jan. 1.—NEWARK, N. J.—Annual tournament of the South Side Gun Club. I. H Terrill, Sec'y.

Feb. 15-19.—HOT SPRINGS, Ark.—Second annual midwinter tournament. First four days, targets; last day, live birds. $1,100 added money. Programmes ready Jan. 15. Send your address for one to Jno. J. Sumpter, Jr., Box 111, Hot Springs, Ark.

Jan. 18-20.—HAMILTON, Ont.—Grand Canadian Handicap. Live birds; $1,000 guaranteed. For full information write secretary, H. Graham, American Hotel, Hamilton, Ont., Can.

March 22-24.—ELKWOOD PARK, Long Branch, N. J.—Interstate Association's sixth annual Grand American Handicap. 25 birds, $25, birds extra; $1,000 guaranteed to the three high guns; all surplus added

March 29-April 1.—READING, Pa.—Annual tournament of the Pennsylvania State Sportsmen's Association, under the auspices of the Independent Gun Club, of Reading. A. Knauer, Sec'y.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed. Ties in all events are considered as divided unless otherwise reported. Mail all such matter to Forest and Stream Publishing Company, 346 Broadway, New York.

On Dec. 10, the night following the annual winter convention of the New York State Association in Syracuse, the Rochester, N. Y., Rod and Gun Club held a meeting and passed a set of resolutions which, together with the preamble, we give elsewhere. The resolutions refer, of course, to the action taken by the fish and game protective portion of the Association at the above meeting of Dec. 9; action which resulted in the separation of the interests of the different sections of the Association. This action was first discussed at the annual summer convention in Auburn last June, and to the best of our knowledge, outside of a little discussion among a few members as to the propriety of the move, the feeling was very general that the change would be for the best interests of both parties. It was, we are certain, well understood that the change was to be made at the annual winter convention; and the proceedings at a meeting of the executive committee, held about five or six weeks ago, also in Syracuse, and which were made public in the columns of the press at the time, bear out our supposition. So far as we can see, the trap-shooters of New York have nothing to regret, and nothing for which to blame the game and fish protective portion of the Association. It seems far better to have two separate and distinct associations, each of which can work in its own province, free from any hampering claims of the other. Let the trap-shooters of New York go to work and organize a State trap-shooting association, with an up-to-date constitution that fits its name and interests better than did the old one. There is no reason why gun clubs and similar organizations should not belong to both the "New York State Trap-Shooting Association" and the "New York Fish, Game and Forest League," if they so desire, but a new association should be organized, and such we believe could be done without any feeling in the matter at all.

The programme for the Elizabeth (N. J.) Gun Club's shoot on Dec. 21-22 is somewhat similar to the programmes issued by that club for its tournaments in the past. The first day is devoted to targets, which will be trapped at a cent and a half each. The schedule of events call for 175 targets at a total entrance fee of $12, an extremely moderate sum. There are five 10-target events, four 15-target events, two 20s and a 25-target event. All these events are at unknown angles, except one 10-target and one 15-target event; of these two, the former is at known angles, the latter expert rule, rapid-fire, both barrels. On the second day live birds will be trapped, this portion of the programme being under the management of Eddie Earl. Six events are on the programme: Nos. 1 and 6, 7 birds, $5; No. 2, 10 birds, $5; No. 3, 25 birds, $10, handicap; No. 4, 4 birds, $2; No. 5, 5 birds, $5. Birds are included in all the entrance fees except in the handicap event, the 25-bird race, in which birds are extra. Under twelve entries, three moneys; twelve or over, four moneys. A. S. A. rules on both days. Conveyances will be at 1214 East Grand street to convey shooters to the grounds free of charge.

Most of the gun clubs around New York seem to he rather dead just now. Perhaps it is the result of the open-season game; perhaps it is only the natural reaction from the plethora of shooting events of the past season; perhaps it is a bit of both of these things. Anyway, there is less shooting around this city just now, and less talk of shooting, than we have known for some years past. The main reason, however, for this apathy is, we believe, the lack of any trap-shooting league, with regular monthly meetings between the clubs. The New Jersey Trap-Shooters' League is dead, and so also, it appears, is the Amateur Trap-Shooters' League of New Jersey. There are enough clubs in Jersey to support and keep going some such body as the Philadelphia Trap-Shooters' League. What is really needed is an energetic president and secretary. Who'll volunteer?

Last week we made a note of the way in which the Hamilton (Can.) Gun Club purposed dividing the $1,000 guaranteed by the club. Two hundred dollars is guaranteed in two sums of $100 each in two 10-bird races, $10 entrance, birds extra; another $200 is to be guaranteed in four $50 purses in as many target events; the remaining $600 is to be guaranteed in a 20-bird event, $15 entrance, birds included, fourteen moneys, high guns, $125 to the high gun. We wrote Mr. Overholt, the treasurer of the club, and the correspondent who sent us the above item, in regard to a question as to whether all surplus was to be added or not. He writes us, under date of Dec. 9, as follows: "We have never yet had enough entries to fill in big events, so only the amount of the guaranteed purses will be paid in prizes."

We heard rather a good story the other day anent the late tournament at Pawling, N. Y. It seems that there were one or two good shots who showed up at the shoot, and who thought they were going to have a good time fleecing the Pawling lambs. Things looked prosperous for them until the fourth event was shot. Then it transpired that there was a gentleman in blue overalls, whose name appeared on the score sheets as Tallman, who could and did "shoot some." Nine out of 10; 19 out of 20; 10 straight! That wasn't bad for a beginning, and he kept it up pretty well. The shoot was a pleasant one, and the boys threw a whole lot of targets.

Speaking the other day of the prominent live-bird shooters of this country, we were rather surprised to find that very few mentioned the name of Jack Fanning in that category. We look upon Fanning as a man who is decidedly too modest regarding his capabilities for shooting live birds. He is a good man on targets, but he is, in our opinion, far better on pigeons. His consistent work all this season, and his score of 99 out of 100 at the St. Louis tournament, stamps him as a man who will in the near future have something to say in regard to the disposal of some of the many live-bird championships now before the public.

The Palmetto and the Charleston gun clubs, of Charleston, S. C., are holding a tournament jointly on Thursday and Friday of this week, Dec. 16-17. Two hundred dollars in cash is being added to the purses. This sum of money should attract a good crowd to the grounds of the Charleston Gun Club, where the shoot will be held. The Charleston boys are famous for entertaining their guests most hospitably, so that all who go should have a good time. Professionals are barred from the purses, but are invited to shoot along in the sweeps for the birds only. There are eight 15-target events and two 20-target events each day; four moneys in each, the money being divided under the Rose system: 5, 3 and 2 to 1.

The Winchester repeating shotgun won two out of the three great individual matches at Watson's Park last week: Heikes defeated Grimm and Elliott broke even with Gilbert. As Elliott shoots Schultze and Heikes shoots E. C., Capt. Money is well satisfied. Elliott, Gilbert and Heikes all use W. R. A. Company's factory-loaded ammunition. Gilbert shoots an L. C. Smith gun; his work with that weapon during the past six months shows just what can be done with it when it is in the right hands and pointed straight. His powder load is 3¼drs. Du Pont.

J. H. Swan, by virtue of a liberal handicap and some good shooting on his part, won a heat for the Brooklyn, N. Y., Gun Club's monthly cup on Dec. 11. There was a large attendance at this shoot, and Swan deserved his victory. Mr. Swan is something of an electrical mechanic, and has shown his inventive genius by devising a plan whereby each shooter can spring his own target from the club's magautrap. As the plan will be given a trial at the club's tournament next Thursday, Dec. 16, we shall withhold all criticism until we have given it a personal test.

The match between L. T Duryea and H. Yale Dolan is not likely to be shot until somewhere about the middle of January. Mr. Dolan is now down South—we believe at Thomasville, Ga.—shooting quail, and will not return until about Christmas time. His shooting recently on good birds has been of the highest class; in fact, he is shooting pigeons as well as, if not better than, ever before. As Mr. Duryea is also doing good work, the match ought to be a most interesting one from start to finish.

J. N. Meyer, of New York city, returned home on Saturday evening last, Dec. 11, with a nice bunch of quail and English pheasants as the result of two days' shooting on the Robbins Island preserve, a piece of valuable club property now practically owned, we believe, by the Messrs. Meyer. The club only permits the killing of twenty quail and two pheasants to each gun per day. Mr. Meyer and his friend scored their joint allowance of forty quail on Dec. 10 in less than one hour after leaving the club house!

The Carteret Club has reason to be proud of its new grounds at Garden City, L. I. These grounds are a vast improvement over the old ones, which were located at Bayonne, N. J. They are just as accessible, and afford better facilities for furnishing fast birds than the old grounds did. That the Carteret "Saturdays" are popular fixtures was evidenced by the attendance of eighteen shooters at the club on Saturday last, Dec. 11.

Owing to the rush of important matter from Chicago (matter which properly belongs to this week's issue), we have been obliged to withhold certain other scores until next week. The great week at Chicago has been splendidly covered, and FOREST AND STREAM's pages of the issue of Dec. 18 give a full, graphic and detailed account of each day's doings, beginning with the Heikes-Grimm match on Monday, Dec 6, and closing with the banquet on the evening of Dec. 11.

At Hackensack, N. J., on Dec. 8, we met Mr. F. P. Post, of Woodcliffe, N. J. Mr. Post formerly lived at Nanuet, N. Y., and while there was about as well known as any trap-shooter in the State. It was not merely that he was present at pretty nearly every shoot in the neighborhood that he was so well known, it was the skill with which he handled his gun that gave him renown.

Rolla Heikes's win of the Cast-Iron badge was a popular one in this city. It was probably all the more popular because so few people expected that the expert target shot could down Charlie Grimm on live birds. It was also thought that the comparatively small load of powder used by Heikes would be a handicap to him. It didn't turn out so, however, as he won quite handily with 91 to 87.

The Elizabeth (N. J.) Gun Club announces that it will hold a two-days' shoot Dec. 21-22. The tournament will be open to all. The first day all events will be at targets, targets being charged for at the rate of 1½ cents each. The second day will be devoted to live-bird sweeps.

One day last week we had a pleasant chat with Lieut. Mertz, U. S. N., a writer whose experiences in the field of sport are not unknown to readers of FOREST AND STREAM. Lieut. Mertz will shortly leave for the South, and hopes to be able to sandwich in a little quail shooting with his duty toward his country.

Our Chicago budget this week is both lengthy and interesting. Judging from the scores and the accounts of the doings at Watson's Park, the pigeons are about the only things that have had cause to regret the friendly invasion of Missourians from Kansas City and her suburbs.

Justus von Lengerke has been putting in a few solid final licks at the ruffed grouse of Sullivan county, N. Y. During the present season no finer bags of game have been brought to this city than those that have arrived at 318 Broadway, tagged with the above name.

H. C. Reeser, secretary of the Pennsylvania State Sportsmen's Association, 1896-97, a resident of Oil City, Pa., has just returned from a four months' business trip to Alaska. Mr. Reeser brought with him a number of interesting relics, but says that "once is enough" for him in that territory.

U. M. C. Thomas will be with us again very shortly. He is now on the high seas, and is expected to land from the Cunard liner Lucania Friday of this week. During his absence of two months he has done considerable globe-trotting in Europe.

John J. Sumpter, Jr., announces his second annual midwinter tournament, Feb. 15-19. Four days targets and one day live birds. $1,100 added in cash. This latter fact, together with the Arkansaw Traveler's well-known personality, will insure a good gathering at Hot Springs, Ark., on the above dates.

The regular monthly shoot for the E. C. cup will take place at Hackensack, N. J., on the grounds of the Bergen County Gun Club, Saturday of this week, Dec. 18. The club event is 50 targets, unknown angles, handicap allowance, $1 entrance.

G. B. Hutchings, of Galveston, Texas, is in the city again, and says that he is likely to be here for a week or two yet. He hopes to be able to do a little target shooting this week, and wants to try his hand at bluerocks thrown from the Brooklyn Gun Club's magautrap on Dec. 16.

That story by Lew Wilmot in the "Game Bag and Gun" columns to-day really belongs to Trap, and should have been given over to this department. Read it.

John Gaughen, a member of the New Utrecht Gun Club, of Brooklyn, N. Y., had a few days' sport in the vicinity of Greenport, L. I., last week. The portion he seems to have enjoyed most was his experience in a battery when the coots were flying well.

One of the best target shots in the city of Rochester, N. Y., is L. V Byer. Mr. Byer is always well to the front in the tournaments of the State, but this year he has been doing some better work than usual. He attributes his success to his having found a load that suits him, viz., 45grs. of Gold Dust, "Jack Fanning's powder!"

Ferd Van Dyke's recent scores show what lack of practice will do to even so fine a shot as Ferd. Until Dec. 8 he had not touched a gun nor seen a target fly during the past two months.

The South Side Gun Club announces its "seventeenth annual greeting" to its friends on Jan. 1 next. An interesting programme has been arranged, and "open house" will be the order of affairs at this annual reunion.

DEC. 14. EDWARD BANKS.

New York State Association.

WHAT ARE THE TRAP-SHOOTERS GOING TO DO?

AT the meeting held in the evening of the first day of the New York State shoot at Auburn last June, it was decided to divide the State Association into two separate and distinct bodies: a game and fish protective association and a trap-shooting association. It might perhaps be more properly said that the present State Association decided to have no more to do with trap-shooting tournaments, as it felt that such things were outside its business as a game and fish protective association. Personally we agree with the majority, and feel rejoiced that the two interests, which are separate and distinct, have been finally made separate and distinct by the action taken at the annual meeting held in Syracuse Dec. 9.

Now that the New York State Fish, Game and Forest League—for that is the new title of the old Association—has given up the idea of holding trap-shooting tournaments, it behooves the trap-shooters of the State to form themselves into an organization under a new title, and under a new constitution and by-laws suitable to the condition of affairs.

Our idea is that the trap-shooters of New York State should organize, adopt a new constitution and by-laws, and start out *de novo*, which being translated literally means in brand spanking new attire. By agreement the officers of the Rochester Rod and Gun Club can be elected officers of the association, pending the annual meeting, which should be held in Rochester on the evening of the first day of the tournament.

As we understand it, the Lefever medal and the Dean Richmond trophy have been made the subject of a resolution, passed Dec. 9, in which the present game protective association waved all its rights, etc., in such trophies in favor of the trap-shooting portion of the old association. These trophies, however, have reverted back to the donors, and a new organization will have to have them properly and legally donated to it, the trophies being merely held in trust. If we are wrong on this point, will some one kindly give us the true facts of the case?

This subject of a New York State Trap-Shooters' Association, or some such body, is one that is well worth discussing. It is also a matter in which action should be taken at an early date. We shall be glad if those interested will write us their views on the question, not necessarily for publication, in order that a proper estimate of the feeling upon this point may be made and further action taken.

Trap at Buffalo.

BISON GUN CLUB.

BUFFALO, N. Y., Dec. 9.—Below are the scores made to-day on the grounds of the Bison Gun Club, Walden avenue and City Line:

Events:	1	2	3	4	5	6	7	Events:	1	2	3	4	5	6	7
Targets:	10	15	15	25	10	10	9	Targets:	10	15	15	25	10	10	9
Cooper	4	9	8	19	9	6	9	Bauman	7	12	8	19	9	5	8
Swiveler	8	8	13	20	6	8	5	Saleman	7	..	..	18	8	5	..
Foxie	9	13	8	20	6	7	6	Wilson	..	..	..	..	16	..	..
Mack	9	12	9	17	9	7	7								

No. 4 was the badge shoot. Cooper won Class A badge, Mack won Class B badge, Saleman won Class C badge.

No. 5 was a "walking match." The shooter starts to walk toward the trap and the puller sends the target when he chooses. This is very much like field shooting. No. 6 was at 5 pairs. No. 7 was at 9 live birds.

Dec. 10.—Wheeler was high in the four-handed match to-day, with 23 out of 25 live birds, he and his partner, Mack, winning by 2 birds, with 45 to 43. Scores were:

Bauman	1200112111111111121•212021—21
Mack	2111212111201211•1112121—22
Wheeler	2112211211•2112111122211•12—23
Foxie	2101222202222212 1•2111221—22

Another match has been arranged by the same parties, to take place in the near future.

Targets were shot as below:

Events:	1	2	3	Events:	1	2	3
Targets:	15	15	10	Targets:	15	15	10
Beebe	6	9	8	Danser	9	11	5
Mack	7	12	..	Cooper	9	12	..
Foxie	8	12	..	Wheeler	..	9	..
Bauman	13	12	..	Saleman	..	..	9

BISON.

More Fun in Chicago.

DEFEATED TEAM'S REPLY TO THE CHALLENGE.

CHICAGO, Ill., Dec. 13.—*Special to Forest and Stream:* In reference to the challenge issued to the defeated Chicago team by other shooters of this city, which challenge is referred to at the close of the report of the intercity shoot, the following reply has been authorized by the members of that team:

"In relation to the challenge addressed to the Chicago team that recently opposed Kansas City, to shoot a match against another team of ten Chicago shooters, five of whom are unnamed, I wish to state that the regular team will be glad to meet its challenger as soon as details can be arranged.

"As we understand, however, that said challenge is issued by gentlemen whom our committee did not deem quite strong enough to represent the city, and as we used all means to secure the strongest team possible, we wish to state that the challenging team must not contain any shooters who declined to aid the regular team. Three of Chicago's best shots were asked to shoot on the team, but for various reasons declined. Against these we refuse to shoot, as they refused to assist us. Against any other ten residents of Cook county we are ready to measure our skill under the same conditions governing last week's match, and will shoot for cost of birds and a reasonable consideration on the side.

"If the challengers really mean to shoot, I am now authorized to state that we will cover promptly any forfeit they may post, and will meet their representatives to arrange dates and details. We do this to vindicate the judgment of the committee and in the interests of sport. (Signed) W. P. MUSSEY, Chairman Chicago Team."

Mussey also individually offers a 100-bird race, $1,000 to each of the challengers.

E. HOUGH.

New York Association.

THE Rochester Rod and Gun Club adopted the following resolutions last Friday night:

Whereas, Certain members of the New York State Association for the Protection of Fish and Game met in convention at Syracuce on the 9th inst., and decided to withdraw from the organization and form a new one, having ostensible purposes similar to those for which this organization exists; and

Whereas, The action of such convention has been reported in the press of the State as dissolving the historic organization, of which the officers of this club are the only legal officers, as well as the custodians of its property and the guardians of its long and fair fame; and

Whereas, The members of this Association are in hearty sympathy with every reasonable effort for the protection of fish and game, and at the same time promoters of practice calculated to improve the skill of its members in the use of arms, therefore

Resolved, That we desire to correct the erroneous impression that the New York State Association for the Protection of Fish and Game has been dissolved, and

Resolved, That the Association renew its pledge of earnest interest in the preservation of fish and game in the State, and

Resolved, That the continued coöperation of all clubs of sportsmen heretofore associated with this organization be urged; and that new clubs interested in the preservation of fish and game, and in trap shooting, be invited to join the organization with a view to its increased efficiency, and

Resolved, That copies of this preamble and resolution be forwarded to all clubs in the organization, and to the daily and sporting press.

IN NEW JERSEY.

RECREATION CUP AT HACKENSACK.

Dec. 8.—The final shoot for the Recreation cup took place at Hackensack this afternoon on the grounds of the Bergen County Gun Club. This cup was donated to the club in the latter part of 1896, the club being permitted to name the conditions under which it was to be shot for. After some deliberation on the part of the management, it was decided to make the cup emblematic of the individual amateur championship of New Jersey, the contests being made open to all members of such clubs. It was further agreed to make the conditions 100 targets per man, 50 at known traps and angles, and 50 at known traps, unknown angles. There were to be seven shoots for the cup, one every two months, the man winning it the greatest number of times out of seven to become the owner of the cup.

The first contest took place in December, 1896. On this occasion very poor scores were made. The targets were thrown far and low in a bad light. Remsen scored the first win with 82. Banks was second with 79; Ed Taylor was third with 75; Neaf Apgar scored only 71. The second contest took place last February. Sinnock won with 94, Banks was second with 91, Remsen third with 89. Apgar, who was not entitled to compete for the cup, but who shot along for the cash prizes, went out with 93. The third contest was a capital one. Remsen and Gus Grieff tied on 92 each. Remsen winning easily on the shoot-off; Sinnock was second with 86. The fourth shoot was held in June. On this occasion Sinnock scored his second win by making 95. This made his number of wins equal to the number credited to Remsen, viz., two each, with only three more shoots for the cup. Remsen and Banks were tied for second and third places with 93 each. Van Dyke, who was not entitled to compete for the cup, shot along for the cash prizes and finished with 94, one less than Sinnock's total. In August the fifth shoot was held, Banks winning with 95; Dudley was second with 91, Fogarty being third with 90. Van Dyke again shot along for the cash prizes, scoring 24 out of his last 25, and finishing once more with 94 to his credit. In this race the contest was very close indeed, five men being tied at the end of the 75th round with 70 breaks each. The sixth contest was held on Oct. 13, and resulted in Banks scoring his second win with 93; Remsen was second with 89, and Fogarty third with 88. The result of this contest was to place Remsen, Sinnock and Banks on an equality with two wins each, and only one more contest for the cup.

The last contest was held, as stated above, this afternoon, Banks scoring his third win with 94. There were only five present who shot through the 100 targets, the triple tie between the three above named having taken away any chance for anybody else to win the cup. In addition to three previous winners, only Van Dyke and C. McL. Clark, the latter hailing from St. Louis, Mo., shot through. The scores show that to-day's order for the cup stood: Banks, Sinnock and Remsen. Van Dyke was actual second, but was shooting for the cash prizes only, as usual.

Most of the scores were very low, and it is hard to account for so many ciphers, save on the ground of curious light and eccentrically thrown targets. The light was far from good, the last 25 being shot in really the best light of the day. It was very foggy in New York, and the fog reached well beyond the Hackensack Meadows, while not a vestige of sun appeared to make things pleasant. There was not a breath of air, still it was chilly and penetrating to a degree that made the club house stove something to be hugged.

Among the lookers-on were: C. O. Gardner, Sr., lately returned from quail hunting in the sunny lands of Texas; Mr. Remsen, Sr.; T. W. Morfey, who acted as referee in the main event; H. E. Winans, the scorer; F. P. Post, late of Nanuet, N. Y., but now of Woodcliffe, N. J., an old-timer at the traps, and one who seldom missed an opportunity of trying his skill with the shotgun a few years ago; E. G. Horton, now of White Plains, N. Y., but formerly the club's very efficient secretary and manager of its most successful shoots. Assisted by H. D. Warner, the club's treasurer, Mr. Horton carried out to-day's programme most satisfactorily.

When the main event was half over, James Wolstencroft, of the Keystone Shooting League, of Philadelphia, Pa., put in an appearance in company with Gus Greiff. Both gentlemen shot at the 50 unknown targets that went to make up the last half of the race. Mr. Wolstencroft came on the grounds without either gun or shells, but picking up "any old thing," went out and broke his share. Scores follow:

E Banks	1111111111110111011101111111111111111111111111111111	—47

EAST SIDE GUN CLUB.

Dec. 8.—H. Henry and G. Fischer, both members of the East Side Gun Club, of Newark, shot a race at 10 live birds per man this afternoon on the grounds of their club. The match was for the price of the birds and a supper. Henry won easily by 9 to 6. A return match was made to take place Dec. 15, but the conditions for this second match are as follows: 25 birds, $25, and a supper, loser to pay for the birds. In to-day's race L. H. Esau was referee, and Stevenson scorer.

Match: 10 live birds per man, 28yds. rise, 50yds. boundary, Hurlingham rules:

ON LONG ISLAND.

AT CARTERET.

Dec. 11.—The gathering at Carteret's grounds, Garden City, this afternoon was above the average, eighteen shooters being present. There was quality there too: G. S. McAlpin, L. T. Duryea, H. B. Gilbert, Captain Money, C. S. Guthrie, W. W. Watrous, and a lot of others who manage to kill them all sometimes.

This was our first visit to these new grounds, and most agreeably were we surprised at the neatness, completeness and dispatch with which Carteret had supplied itself with a new home. The club house is a small frame structure, artistically designed, painted a dull red, and with a full glass front facing the traps. The interior is furnished in yellow pine, this wood being largely in evidence throughout the building. In the main room is a low gun rack, with shelves for shells that runs almost the entire length of the room. This rack is made of polished oak, and is made as all gun racks should be made, viz., with notches cut so that a gun may stand on its muzzle instead of butt downward. On the right of this main room is the locker room, an apartment that is far too small to accommodate all the members of this club which, by the way, to-day only lacks seven of its limit—100. On the left is a small but cozy reading room. To the left also, but in the main room, is the score board that shows how the game goes. This is looked after by two attendants, one of whom takes the cash, pays it out, and calls out the name of the man "to the score" and the man who has to "get ready"; the other attendant dispenses red buttons on the board for kills, white buttons for misses, yellows for "outs," and blues for "withdrawals with a privilege." A single glance at the board readily shows how the score stands, while the "squad hustling" methods are complete. Not that it often requires much calling to get a man to the score; time is too valuable these short winter days to allow of much dallying at Carteret; the shooters put their names on the board when they first come to the club, and they keep that order to the finish of the shoot. Thus, with no change of order, save when a man drops out, a shooter soon learns whom he has to follow.

Close by the score board is an annunciator, worked by electricity from the main scoring, pulling and refereeing house under the front windows. A buzzer calls attention to the fact whether the last shot was a kill, a miss or a no bird. In order also that those interested may be able to learn the result of a shot as soon as the decision is given, up flies a small notice board from the roof of the pulling house with the word "killed," "missed," or "no bird" on it. Knowing who is at the score, one can lean back in a chair and wait for the telltale sign without going to the trouble of standing up to watch the shot, or of turning round to see what the score board says.

The traps used are King's new patent traps. We had heard that these traps were not as good as his old ones for starting bird although they saved considerable time in trapping by being nearly closed before the trapper went to put the bird into the trap; the "partial closing act" is done by the purchase of a lever in the puller's box. To-day, however, although there was nearly no wind at all, the birds flew remarkably well, and less than half a dozen lingered after the traps were pulled. We did hear, however, that the springs were not quite strong enough apparently, but this is a matter that can easily be rectified. What we saw of the traps' work to-day was eminently satisfactory.

The manager of the shooting grounds is Fred Knopf, late of the Larchmont Yacht Club's grounds. Fred acts as puller, referee and scorer, and doesn't seem to have much difficulty in attending to his triple duties. He has under him a set of lively trappers, who waste no time between shots, everything being done smoothly and rapidly. The retrieving was done by the club's own dogs, chiefly by two red droppers and Dandy, Fred Hoey's old liver and white setter that used to work so well and strongly at the Westminster Kennel Club's grounds. If to-day's pigeons were a sample of what Fred Knopf can furnish, the club has made no mistake in securing his services. The wind, what there was of it, was directly incoming; yet the birds went out in a manner that was surprising to us. Many of them too were corkers, while the vast majority may be classed as fast birds. The grounds are inclosed with an 8ft. tight board fence, the side facing the shooters being painted a pale blue, a color that seems well suited to a background for live-bird shooting. It may sound a strange color to paint a fence for such purposes, but it appears to suit the eyes of those who shoot on these grounds.

The programme to-day contained the following events: No. 1, 5 birds, $5, handicap rise. No. 2, even distance cup, 10 birds, $10, all at 30yds. Those whose club handicap is 29yds. allowed 1 miss as a no bird; 28yds., 1 miss as a kill; 27yds., 1 miss as a no bird and 1 miss as a kill; 26yds. and forward, 2 misses as kills; cup to winner. No. 3, "Second Saturday Cup," $50 cup to winner; all at 28yds., miss-and-out. Nos. 4 and 5 were $5 miss-and-outs, handicap rise, with handicap allowances as in No. 2.

No. 1 had eleven entries, and at the end of the 5th round there were only five men with straight scores. Watrous and Duryea falling out in the next round, McAlpin, Chapin and Gilbert cut up the purse. No. 2 was productive of some excellent shooting on the part of Watrous and Duryea. Watrous ran 24 straight, while Duryea, who used up his allowance in the 6th round, stayed in until the 24th round with him. Chapin and Bird, by virtue of their allowances, stayed in until the 15th round. Watrous's victory was well received by those present, his win being the result of brilliant work, particularly toward the closing rounds of the event.

No. 3 was the "Second Saturday Cup." This was practically a $10 or $20 optional miss-and-out, all at 28yds. rise. This event had seventeen entries, but at the end of the 4th round, so well did the birds fly, only eight were left in. Two more dropped out in the 9th round, another in the 10th, while the 12th was fatal to Stafford. This left McAlpin, Brokaw, Gilbert and Capt. Money in the race for the cup. At this stage of the event an agreement was made between the four to divide up the purse and shoot off for the cup. Capt. Money, who had drawn his share of very fast birds, and who had made some excellent second-barrel kills in his 5th, 8th, 9th and 12th birds, finally got a stinger from No. 1 trap in the 16th round that got away, although hit hard. Gilbert was the next to fail, although he hung on to the 20th round. He began by drawing a rather easy lot of birds, but before the finish he had placed to his credit some dead birds that were the result of really quick and clean shooting. His 20th bird, the one he fell down on, didn't seem a hard one, but it got away apparently as well as when it was placed in the trap. The miss was one of those "unaccountables!"

This narrowed the prospective ownership of the cup down to McAlpin and Brokaw. The latter shot as well as we have ever seen him shoot. He has just returned from a quail hunt on his property near High Point, N. C., and hasn't lost either his time or his accuracy in holding while down there. He made some brilliant kills, notably on his 13th, 18th and 21st birds. In the 18th round he drew a blue bird from No. 5 trap that wandered around until Brokaw called "No bird." Then he drew a screamer from the same trap that looked a sure thing for over the 30yd. boundary, a quick second barrel alone saving it to him. The bird he lost in the 23d round was just the counterpart of that which put Gilbert out of the race, with the difference that his came from No. 5 trap, while Gilbert's came from No. 1. McAlpin found the subtraction of 4yds. from his club handicap of 32yds. something much to his liking. There were times too when that 28yd. mark came in handy. The birds he drew in the 5th, 7th, 8th, 13th, 20th and 22d rounds would all have looked very much smaller and very much further away had he been standing at 32yds. instead of at 28. It is quite possible that he might have scored all those birds just the same, for he was shooting as usual in the most finished and telling style. This makes, we believe, the sixth cup McAlpin has won this season!

Watrous, the winner in the previous event, drew a twister in the first round and retired to watch the struggle. Edey and Moore joined him, both succumbing to right-quartering outgoers. Peter Morris had a hair-raising time on his first bird, the pigeon almost getting over the dead line, where there is no boundary fence. In the next round he got the kind of a bird that no one wants—one of the unkillables. Result, a white button. Duryea, Ellison and Bird went out in the 3d round. Duryea's was a very fast driver that was hit hard with both barrels, but kept on going until out of sight. Bird's pigeon was good enough to leave very few traces of its twisting flight; it was a very hard bird to see. Guthrie, who had arrived while the 1st round was being shot, went to the score without a bye bird, and drew a succession of fast birds, the fourth one going out of bounds before dropping. F. P. Magoun killed his first three birds, but the fast twister he drew in the 4th round settled his chances for the cup. G. B. Magoun and Chapin were the next to drop. Both fell out in the 9th round, Magoun's bird dropping dead just over the fence; Chapin's bird had a leg down, but went to the coop. Remsen ran 9 straight, but had very hard luck in losing his 10th bird, which fell dead before reaching the fence around the grounds. Stafford made two very good kills in the 8th and 9th rounds, but went out on an easy bird in the 12th round.

No. 4 was a $5 miss-and-out, a small trophy being shot for in this race. At the end of the 6th round McAlpin, Guthrie and Watrous were tied for the purse and trophy. It was agreed to divide the purse and shoot off for the trophy in the next event, which was on precisely similar terms. Watrous fell out in the 1st round, but McAlpin gave Guthrie a long chase for the trophy, not losing a bird until he drew a dark twister that fairly beat him out in the failing light. The bird towered like a black duck, twisting off to the left all the time, and as McAlpin said, after coming into the shooting house, "I never got up to him at all!" The purse was finally divided between Guthrie and Ellison on 11 straight.

Below are the full scores in all the events except Nos. 4 and 5:

EDWARD BANKS.

John Sumpter's Midwinter.

HOT SPRINGS, Ark., Dec 10.—Please place the following notice in your Trap Fixtures for 1898: "Feb. 15-19.—Hot Springs, Ark., second annual midwinter tournaments; $1,100 in cash added. Four days targets, one day live birds. Address J. J. Sumpter, Jr., Box 111, Hot Springs, Ark."

Some people might think I got enough to last a long time when I held my live-bird shoot last February, and while I really did get more than I bargained for, still I am going to give the boys another chance to throw the hooks into me. This time I am going to give away $1,000, and then wind up with a 25-live-bird handicap event with an entrance of $25, birds extra, and $100 added, making $1,100 cash added.

I have been doing quite a lot of thinking and have decided upon the following scheme whereby the amateurs can get a lot of shooting and at the same time get some of the "cracks'" and 90 per cent. men's money, even if they do not break a straight every other time. There will be seven events each day at 20 targets, $2 entrance, and one event at 25 targets with $3 entrance; $25 added in 20-target events and $40 to the 25-target events. The five high guns each day will receive $4 each. All shooters who are known professionals or who receive their ammunition free, and all others who shoot 90 per cent., will be required to pay an extra 50 cents in each event, and all of this money will be set aside, and at the end of the tournament will be equally divided among all the amateurs who have shot through the entire programme and who do not have a general average of 90 per cent. or better. If an amateur shoots 90 per cent. the first day he will be required to pay $1 extra the following day; if he fails to shoot 90 per cent. on this day, then he will be allowed to enter the next day the same as on the first day. I estimate there will be at least twenty-five men who will have to pay an extra $1 each day, and for four days this will mean $100 to be divided equally among all the amateurs. To equalize this with the experts I have set aside $20 a day for the five high guns, and $60 for the first ten high averages for the four days, divided as follows: $10, $9, $8, $7, $6, $5, $4.50, $4, $3.50 and $3.

In the live-bird handicap the distances will be from 27 to 32yds., and I shall select the handicapping committee from the shooters who are on the grounds, probably one from each State. This will be decided upon later. I propose to add $100 to the live-bird event, and I will divide the money, according to the number of entries, at the ratio of two-fifths moneys to the number of entries. Should there be forty entries (you see I am figuring low) there will be sixteen moneys and divided as follows: First, $150; second, $125; third, $100; fourth, $90; fifth, $80; sixth, $70, seventh, $35; eighth, $30; ninth, $55; tenth, $50; eleventh, $45; twelfth, $45; thirteenth, $15; fourteenth, $40; fifteenth, $40, and sixteenth, $40.

As there will be no "Midwinter" at San Antonio next year, I expect a large attendance; and if I receive the right kind of encouragement from the shooters, and can come out of this shoot with "success" written upon my banner, then I will give another in February, 1899, with more cash added money than was ever hung up for a trap shoot in this or any other country. One thing I wish to impress upon everybody, and that is the fact that everything I advertise to do will be done regardless of the consequences. When I say that $1,100 will be added to the purses, I mean just that, and it doesn't make any difference what the attendance is either. The Missouri Pacific and St. Louis & Iron Mountain system will make suitable rates, and I promise all who attend a dead square shoot and a royal welcome to one of the liveliest little cities in the country, with hotel accommodations second to none. My programmes will be ready for mailing not later than Jan. 15, and I will take pleasure in sending one to any address.

JNO. J. SUMPTER, JR.

Items from Reading, Pa.

NEW RINGGOLD GUN CLUB.

READING, Pa., Dec. 1.—The New Ringgold Gun Club held its first annual fall tournamant to-day. The shoot was a success in every respect. Prominent shots were present from Mahanoy City, Pottsville and Frackville. The committee in charge of the shoot was made up as follows: Messrs. W. C. Leiser and Freed. Another tournament will be held in the near future, when both live birds and targets will be trapped.

Scores in to-day's tournament were as follows:

	No. 1.	No. 2.	No. 3.	No. 4.	No. 5.
H G Kimmel	11101110—6	111110—5	111110—5	010111—4	01111—4
Folmer	11100110—5	111110—5	110110—4	001101—3	.....
Albright	11110100—5	111111—6	111111—6	111100—4	11011—4
G Ketner	11110110—6	011100—3	001001—2	111101—5	01000—1
F Coleman	10111111—7	111111—6	111111—6	111100—4	01111—4

No. 1 was at 8 live birds, $4; Nos. 2, 3 and 4, 6 birds, $3; No. 5, 5 birds, $2.

SOUTH END GUN CLUB.

Dec. 1.—The South End Gun Club, of Reading, held its annual meeting to-day. The following officers were elected for the ensuing twelve months: President, Charles Miles; Vice-President, Joseph Downs; Secretary, Peter Texter; Treasurer, Mart. Eshelman; Directors—Fred Gerhardt, Francis Yost, Edwin Rhoades; Captain, Wm. W. Easick. Arrangements were completed at this meeting for the annual club shoot on Christmas Day, the shoot commencing at 2 P. M. Arrangements were also made for fixing up the club's grounds, so as to make them one of the best grounds in the State, either for live-bird or target shooting. The treasurer's report showed that the club is in an excellent condition financially.

THE WALKER-LAFFERTY MATCHES.

The third and last match of the series of live-bird matches between Daniel Walker, of Pottsville, Pa., and George Lafferty, Cumbola, Pa., was shot off at Drener's Hill, St. Clair, this week. The result was a win for Lafferty, who thus won two out of the three matches from his opponent. The match was to have been at 15 birds per man, but only 13 were trapped for each shooter. Lafferty killed 9 to Walker's 7. The stake was $100 a side and the Schuylkill county championship, the stake and the title to go to the man winning two out of three.

AT POTTSTOWN.

Dec. 10.—Shooters from Royerford, Spring City, Philadelphia and other places attended a live-bird tournament at Saratoga, under the auspices of the gun club of that place. The birds were a strong lot. American Association rules governed the events, which resulted as follows:

No. 1, 5 birds: Levengood 5, Trumbauer, Hawkins and Pennypacker, 4 each; Yerger, Scheifley, G. Shaner and F. Shaner, 3 each.

No. 2, 5 birds: Yerger 5, Trumbauer 4, Scheifley and Pennypacker 3 each, Hawkins and Levengood 0.

No. 3, 7 birds: Trumbauer 7, Yerger 6 Pennypacker 5, Scheifley and Geiss 4 each, Hawkins 3.

No. 4, 5 birds: Hawkins 4, Yerger, Scheifley, Newhart and Trumbauer 3 each.

No. 5, 5 birds, match between M. K. Scheifley and C. C. Hawkins resulted: Scheifley 1, Hawkins 4.

KURTZ VERSUS NOLAN.

J. W. Kurtz and Charles Nolan were contestants in a match at live birds at the Kurtz House shooting grounds, for $25 a side, on Friday, Dec. 10. Kurtz scored an easy victory, killing 19 out of 24 birds to Nolan's 7 out of 15. The pigeons were all strong flyers. The match was to have been 25 birds, but Nolan, seeing he was beaten, shot at only 15. A large crowd witnessed the match; four traps were used.

ARTHUR A. FINE.

The Chicago Week.

HEIKES-GRIMM FOR THE STOVE-LID.

CHICAGO, Ill., Dec. 6.—Festivities in the big trap-shooting week at Chicago began to-day, with a choice sample of Chicago weather to make things interesting. The air was moist, the thermometer at freezing, and a sleety rain mixed with snow fell on the newspaper men and the unjust alike. A goodly assemblage was on hand, about as large as one ever sees at a Chicago event, though not so large as we shall see later in the week, when the Kansas City cohorts are on hand. Messrs. Jos. Whitfield, J. A. R. Elliott and Dr. H. J. Whittier were the only ones on at date from Kansas City; but by Friday next, according to all data available now, thirty or forty husky men from the Kaw will be here and the plot will thicken. Local shooters were well represented. Among the representatives from Eastern shootingdom were Messrs. Bartlett, Hallowell, Quimby, Keller, McMurchy, Willard, Fanning, etc. Charlie Budd was in from Iowa, Mr. and Mrs. Shattuck from Minneapolis. Illinois sent in men from several adjacent towns. Everybody had a shotgun and a determined look.

Sweeps began at a moderate time of day in the morning, and members of the Chicago team kept up practice. Von Lengerke defeated Motion, 24-20, in a 25-bird race. McFarland shot one baddish score. Dr. Shaw was remarked as coming along in good form. Dr. Frothingham showed strong, 32 out of 35.

At 1 P. M. the main event of the day began, the contest between Rolla Heikes and Charlie Grimm for the stove-lid emblem recently secreted by the latter. As was remarked at that time, it snowed on the day when Grimm beat Carver. It snew again to-day, but it was different. The day was a good flying day, the sleet not falling very thick. The sky was overcast, and a good fairish wind blew in toward the score, in the direction of a right-quartering incomer. It is very rarely that one sees so large a number of incoming birds in any race. They started high and strong, the low and hard driver being rare, as in starting the bird would meet the wind full and be unable to get under way at once. Such birds as got up high and twisted around into the wind as high as incomers, or twisting-in quarterers, of course made difficult shooting. The side angles were not more numerous than in most matches, but the question of up-and-down angles, or elevation, was something of constant change. There was diversity of opinion about the difficulty of the shooting, some shooters stating that birds inside the trap line should be killed easily, as they were then well within the power of the gun, and it was only a matter of holding to kill them all in the air. Others thought that the shooting shown was of very high order, as so large a number of hard incomers could never have been expected or prepared for by any shooter. Both men lost birds killed high up in the air and carried over by the wind. The average of high kills was very large, and of course this made the shooting more spectacular than usual, both men drawing applause.

Heikes was warmly clad in a heavy sweater. He used, of course, one of his historic Winchester pumps, Winchester Leaders, E. C. Grimm was apparently dressed very lightly, though he said he was not cold. He wore a thin summer shooting blouse over ordinary light wear. His equipment was his usual L. C. Smith gun, U. M. C. shells and Du Pont. Grimm said he was not shooting right, was not on the birds. Gilbert cautioned him that he was getting under them. Heikes said he missed his birds usually by not following them up fast and far enough as they swung up on the wind. The race itself was not close enough to be very interesting. Heikes led at the 25, 50, 75 and 100 holes. At the beginning of his second 25 string he lost 3 birds in succession, and Grimm tied him, but fell out of the tie at his next bird, and thence on did not get a look at the front side of the big blonde pump engineer, who had his eye on the birds, and who ran his last 35 out straight, scored 48 out his last 50, and killed, dead out, one of the two birds lost in his last half. Grimm also improved in his last half, getting 45 out of his last 50, to 42 out of his first half. Each man made some very brilliant kills.

Thus another shift of the men has come into the merry game of champions whose intricacies are past finding out. It certainly seems we shall be a long time finding the man who can beat all of them all the time. Mr. Heikes surprised many of his friends by the kind of innocent way in which he took to the live bird game to-day, and he may make some of the boys tremble before he goes back to his target grinding. In his hands the Cast-Iron badge will perhaps not be allowed to rest for a year or so before it is taken out, given a coat of stove polish, or brought before the gaze of the curious public. Mr. Heikes and Mr. Heikes's good score to-day are worthy of a more considerable trophy; but little or great as may be the winning, no one ever begrudges Rolla Heikes what he wins. Different men may have different notions about the representative value of the stove-lid emblem, but the value of Mr. Heikes's score (91) at Burnside, on a hard winter day, is something which speaks for itself. The race was shot rapidly, beginning at 1 P. M., and being finished in the time of one hour and thirty-two minutes. Score:

Tuesday, Dec. 7.

The weather showed a marked improvement, the sun shining during the afternoon through a thin veil of clouds, but the air was raw and chilling. No wind of consequence blew during the main event of the day. There was a large crowd on hand, perhaps the largest ever seen here at this season of the year at a live-bird match, possibly 300 persons being present. Several more accessions to the gathering of the shooting clans came from points well outside Chicago. Irby Bennett, of the Winchester R A. Co. general offices, New Haven, spent the day, but left the same night, making a stay too short to suit his friends here. R S Waddell, the hustling agent of the Du Pont and Hazard powders at Cincinnati, also flitted away after one day's sojourn. S. A. Tucker, of the Parker gun, was on hand to day for the first time. Chan Powers came up from Decatur. In short, the affair began to look like a national tournament, and it seems fair to suppose that the week at Chicago will indeed assume an importance not short of national in live-bird matters. Such a trying out of men and material, and before so critical an audience of those interested in men and material, has perhaps not been seen in any one week in any part of the country.

ELLIOTT-GILBERT FOR THE "STAR" CUP.

Naturally the chief interest was suspended until 2 P. M., when Jim Elliott and Fred Gilbert stepped to the score for their match for the Kansas City *Star* cup, won by Gilbert from Elliott, of Kansas City, and now challenged for by the latter. The result, or rather the character and extent of the result, was something of a surprise, as the result in a pigeon race usually is. Gilbert surprised the oldest old-timers, not by winning, but by the nature of his win, and gained the highest opinions as to his ability as a match shooter. He surely belongs in the first flight. He was thought to be a trifle nervous before the race, but if so such nervousness would be well enough to let alone. In condition, Gilbert seemed thin and hollow-cheeked, but this is the look of any man trained hard. Really he was in the pink of fitness. Elliott was not in such good shape, and is evidently falling out of the fine form he held last summer. The fatality which has always pursued him in Chicago still clung to him. He never wins here and never does himself justice. His score of 87 is far below where he belongs. Part of this is due to his own notionalism. He insisted on using No. 6 shot in his left barrel, and thereby he got the credit of a poor gun and load. He at times made long kills, but too often his charge seemed meager in result, and often his birds fell dead out of bounds. A glance at his own scores should show him that there is a leak which he can stop. It is not hard luck, but bad judgment, which gave Jim so many starred ciphers.

Gilbert, on the other hand, was cutting his birds fairly to pieces, and his gun and load seemed perfect. It was not a hard day, and the birds were none of them very far out into the field, the flight not ruling straightaway. It was a small-shot day, and if Jim Elliott did not know it, his handler, Capt. Bartlett, did. The latter sneaked in some 7½s in Jim's loads in the second half of the race. The last string of 25 in Elliott's score was the best one. He was clearly out of shape, however, and was not getting in ahead of his birds far enough, as was plainly seen in more than one instance.

We hear a great deal about luck of the birds in pigeon races, but usually the matter is evened up before the race is over. In the race to-day, however, there was seen the strongest series of lucky instances

FRED GILBERT'S POSITION

ever noted in a race on these grounds. Elliott lost three or four of his birds just on the other side of the wire, whereas in three instances Gilbert gathered birds which caused his own eyes to stand out in surprise, and made the crowd break out into shouts and murmurs. In each of these three lucky gathers, or perhaps in four of them, Gilbert's bird circled round inside the wire, flying more than twice the distance which would have carried it out in a straight line. In one case the bird was flying high and strong, headed for the dead line of the score, and it had given time enough for the reporters to say, "Well, that bird won't be a dead-out-of-bounds!" Indeed it was not, for all at once it doubled up and fell stone dead well inside the line—one of the most singular things one is apt to see in pigeon shooting.

It was by no means luck, however, which decided this race. It was Gilbert's perfect mastery of himself and his weapon. He was like an automaton. It did not seem possible that he could miss, any more than that a machine can fail of its proper function. His time was perfect, and on the birds which started out fast and strong he quickened up as though by lightning, and stopped them before they got hard. Elliott's time also was fairly good, and in his last 15 or 20 birds he quickened up into something of his old style. Twice, however, he dwelt unaccountably in getting in his first on driving birds, and it seemed apparent that he was working under strain of some sort, and not shooting as though it was easy to him.

The birds started in to be duffers for the first half dozen or so, but then freshened up and offered a fairish average from then on, though rather a mixed lot. Gilbert had 5 birds flagged for him and Elliott 1. On the whole the birds could not be called a hard lot, because the wind was not strong enough to make them hard. As Gilbert went on, cutting them down one after the other until he had passed the 50 turn, it began to be murmured about that he would never in his life have a better chance to run 100 straight, and all present would have been glad to see him do so. He did with deceptive ease kill 64 straight, losing dead out of bounds his 65th bird and also his 75th. His 88th bird was hit, but could not be called dead out of bounds. It is very rarely that one sees such an exhibition of second barrel work as Gilbert gave to-day. Once in a while he would fail to land with his first, but would save himself with the second in such a way as to bring out loud applause.

Gilbert wore his faded yellow sweater, and seemed warm and comfortable. Elliott wore a dark Norfolk jacket, with the collar turned up about the neck. Elliott was plainly suffering from the cold. His nose and chin were pink with the chill of the damp air. He shot bare-handed, and the fingers which grasped the trombone of his pump were plainly seen to be red with the cold. Jim Elliott cannot shoot a race on a cold day, and the handler who understands him will, on such a day, give him hot coffee at least once or twice. Witness his race with Gay.

Elliott used in his Winchester pump Leader shells, 3¼drs. E. C., with 7½ and 6's. Gilbert used his L. C. Smith gun, Leader shells, No. 7 shot and 3¼drs., settled, of Du Pont powder. These loads are not so excessive as sometimes seen, but seemed effective. Rolla Heikes, who won his victory yesterday, is the best exponent of moderate charges before the shooting public. He has never gone in for the heavy loads, and he will be shooting when some of the heavy-load men have pounded their nerves to a finish.

John Watson refereed the race for the *Star* cup, as well as that yesterday for the Cast Iron badge

Elliott's 7th bird was a fast one, also his 10th and 11th. His 12th was hit full, but got out. His 19th was fairly cut to pieces. His 22d left a cloud of feathers, but was cut too far back. His 23d was a screamer. His 25th was flagged. His 26th was an ugly one, and his 27th fell on the wire. His 52d was apparently killed with the first barrel, but got up, and was flying away when it was dropped far out with the second. At the 50 turn the birds were easier, but the race was then practically over.

Gilbert's 3d bird was flagged. His 16th was high and hard. His 17th was slobbered badly with the right. His 35th was one of his lucky ones—the one that fell dead after so long a flight. His 39th was another case of luck, falling just inside the wire. His 61st was a fast blue, which went out beyond the traps at great speed, but was struck with both barrels high up in the air. It then twisted and turned, coming in, and seemed surely lost, but fell, and was gathered inside the wire near the dead line. Beside his 3d bird, Gilbert had flagged his 18th, 41st, 89th and 96th birds, the latter being a "no bird." The race was shot very promptly, the time being just one hour and thirty-three minutes, one minute longer than the Heikes-Grimm race the day before. Score:

Miss-and-out, $5 entrance: Powers 2, McMurchy 8, Elliott 8, Herman 9, Grimm 8, Fanning 9, Bartlett 2, Bingham 1, Gilbert 9, Roll 2, Fulford 3.

Wednesday, Dec. 8.

The weather was clear and almost springlike, a great relief from the chill of the preceding days. A goodly crowd gathered at the traps, two sets of which were thrown open for sweeps. Top entry was twenty-nine, and no one made any very great bank roll at this game. Fanning continued his excellent work, and Fulford, Powers, Milligan and Marshall tied him in the 15-bird sweep. U. M. C. Hallowell felt back 3 birds in this sweep, and found Fred Gilbert in the same hole with him, though Fred also went straight in the 10-bird event. Mrs. Shattuck, of Minneapolis, and Mrs Dr. Carson, of Chicago, shot a string of 10 each in one sweep, Mrs. Shattuck, ahead by 1 bird, scoring 9. Another sweep was the singular one between the four Waddington brothers, all old-time Iowa shooters. William Waddington won with 10 straight. The birds during the day ran uneven, some being very good.

Among other new arrivals were Dr. J. L. Williamson and Geo. L. Deiter, of Milwaukee; Royal Robinson and E. H. Tripp, of Indianapolis; A Kolarzik, of Mendota, Ill.; Tom Marshall, of Kelhsburg; A. D Johnston, of Watersmeet, Wis.; J. M. Curtice, of Kansas City. The latter gentleman announced that over a dozen more of the Kansas City delegation would be in the following day. The membership of the Chicago team was left still undetermined at the close of the day, close watch being kept on the practice of the different men. Following are the scores of the day:

Ten live birds, four moneys, $5 entrance:

Thursday, Dec. 9.

The morning started in like that of an April day, but in a couple of hours the sky clouded up and the air became saturated with dampness. During the afternoon a faint mist fell. The light was not of the best By noon the wind had freshened a little, coming in from right to left toward the score. The unusual preponderance of incomers continued.

During the day the following newcomers were noted at the grounds among the dense crowd that packed the club house and stands: Dr. D. W. King, of Weir City, Kan.; Jack Parker, of Detroit; Dick Merrill, of Milwaukee; John Meunier, of Milwaukee; Bryan Haywood, of Denver, Col. The following members of the Kansas City delegation reported at the grounds; Messrs. G. M. Walden (captain), J B. Porter, J. Lee Porter, Dave Elliott, Ed. Hickman and wife, George Stockwell, J. M. Curtice, J. K. Guinotte, F. J. Smith, Geo. N. Petty, Alex. Hilton, W. A. Laidlaw, Nelse Jarrett, Geo. N. Vallins, F. M. Furguson, W. Fettler, Walter Bales.

GRIMM CHALLENGES BACK FOR CAST-IRON BADGE.

During the day Charlie Grimm challenged Rolla Heikes back for the Cast-Iron badge, date not yet set. Heikes remarked later that if Grimm would allow him expense money he might come to Chicago to shoot this match. There is no doubt Mr. Heikes will give satisfaction to any challenger at any time, but it would add interest to the Cast-Iron badge to see it put into a wider and more active circulation than it has known in the past.

GILBERT AND ELLIOTT TIE FOR DU PONT.

The absorbing event of the day was, of course, the race between Gilbert and Elliott for the Du Pont trophy. Gilbert was picked for a sure winner, but did not land so at the end of the 100, the score being a tie on 93. The match was the closest and most exciting one seen for many a day on any ground, and is not apt to be soon forgotten. It was decided, or rather left undecided, for the day simply by a matter of luck. Elliott at his 94th bird had the race in hand with a lead of 1 bird, and was shooting in perfect form. This bird was a hopper and was overshot with a quick snap as it rose. It sat at the trap, facing the score, and Elliott shot at it with the second and missed it! The bird rose and sailed away apparently unhurt. This brought the men into a tie, but the lucky incident came a trifle later; Gilbert's 96th bird was a fast and high one that went out beyond the traps and circled in. He hit it light with the first and none too full with the second, and as the bird was so high it seemed surely lost. Fred's luck remained, however, and the bird suddenly let go and fell

fairly at the wire. This luck was in just the right place and it saved the race for the boy in the yellow sweater.

During the race the wind was fresh and the birds were, some of them, very strong and fast, especially those in the 3d string of 25. At the 50 hole both men had quickened up their time and were doing great work on good birds. Gilbert had 4 birds flagged and Elliott had 2 "no birds" and 1 flagged. Gilbert's birds averaged more outgoers than Elliott's Gilbert showed great speed on the sharp ones. His second-barrel work was great, and indeed it was all that saved him many times, though he seemed safe to kill anywhere after a careless right, winning applause for very many good second-barrel kills. Indeed, almost the unpleasant feature of this match was the rowdy partisanship displayed by a certain element—probably of Chicagoans too—who roared applaud at Gilbert's good kills and even yelled when Elliott lost a hard one Referee John Watson rebuked this element, but it did little good. Its discourtesy was undeniably felt by some of the Kansas City visitors, but they should reflect that it was not the better class of Chicago shooters who would show such unsportsmanlike conduct. Elliott, however, received much applause also from many who appreciated the quality of good work he was doing.

LOADS.

Elliott was erroneously reported as using E. C. powder and No. 6 shot in his race for the *Star* cup, and both these particulars should be corrected. To-day he said that in both races he shot Schultze powder, 3¼drs., and used No. 7½ and No. 6½ shot, in Leader shells. He said to-day that he would use the No. 6½ shot if the wind came up, but the look of many of his folded-up birds was sufficient to show that he was not using the coarser shot, and his d. o. b. string was reduced to 2 After the race Capt. Bartlett, his handler, said that No. 7½ had been used exclusively. Gilbert used the same load, Winchester factory, 3½drs. scant of Du Pont, 1¼ z. No. 7 chilled. The guns remained the same. Gilbert did not spare the great second of his L. C. Smith, but Elliott at times forbore the orthodox second shot and let a single-barrel record stand.

THE BIRDS.

Gilbert won the toss and went to the score. Gilbert's 5th bird was not hit full, and scored his first loss, tieing Jim Elliott, who lost his 4th. Gilbert's 9th was a hard stop; his 12th was flagged, and he lost dead out his 15th, a screecher His 21st was lucky, scored by a wing. His 29th hung in the trap, but got off fast; his 34th was a fast incomer. His 40th wobbled on far out, but luckily dropped inside the wire. His 47th, a twister, was not so obliging, and was lost 10ft. over

THE ELLIOTT—GILBERT MATCH.

Gilbert at the score.

the wire. His 55th and 65th were flagged, the latter getting off very fast. His 66th was slobbered, but scored. His 69th was scored by a miraculous second; his 72d was a grand-stand high kill with the same great second, and again his 73d was scored by a lucky second-barrel stop. His 84th was not hit full with the second, and was a very fast bird, and his 85th was reached by the second none too soon. His 90th bird lit inside the boundary, but was not hit hard, and flew out when approached by the dog. His 93d was another second-barrel find, and at his 96th came the spectacular piece of good fortune above noted, when the bird fell just inside instead of just outside the wire.

Elliott lost his 4th bird and then ran 37 straight like shelling peas. He led Fred 1 bird at the 25 turn, and led him 2 at the 34th bird. Then at his 42d bird he hit very hard one of his hoodoo birds, a twisting left-quartering incomer, which fell dead just over the wire. Then he scraped lightly with his second an outgoer that went across, and also missed his third bird in succession, touching it up very lightly if at all. This caused the knowing ones to whisper, "He's gone," and gave Gilbert stock a boom, he now getting the lead again. He could not last beyond the 47th, and at the 50 hole the men were tied again. Gilbert was first to miss again in the third string of 25, Elliott going in front. He kept this lead for 6 birds, and they were tied again, both fighting like tigers now, and the crowd wild. They swung around the 75 hole neck and neck, tied on 70, and ran so to the 83d, where Gilbert lost, placing Elliott to win. Elliott, however, held his chance only for 3 birds, losing his 86th, and tieing the score once more. Gilbert lasted this way only 4 birds, losing his 90th, and once more offered victory to the Kansas City man. Then came the fifth tie, Elliott's miss of the bird on the ground, the 95th, and the opposite luck of Gilbert, so the score at 100 was a tie. The applause was tremendous for both men at the finish. So closed as pretty a race as one often sees, the men tieing five times. At no time were they more than 2 birds apart.

TIE POSTPONED.

The race was shot rapidly, a little over an hour and a half being required (exact time not taken), but the weather was so dark and lowering that darkness appeared possible very soon. Elliott announced that he would prefer to shoot off the tie on the following day, and the hour was set for 1 P. M. Friday. Elliott fancied that he would have a better show in better light. The tie might have lasted some time, as the last few birds appeared to be flying more sluggishly as evening approached. The spectators dispersed this evening highly delighted with the quality of the entertainment offered.

Following are the scores of the race:

Friday, Dec. 10.

Morning broke wet, rainy and cloudy, and the attendance was smaller. A few ladies braved the discomforts of the day. At the No. 2 set of traps a few sweeps were shot, but the main interest centered in the team shoot and the Gilbert-Elliott shoot-off. The following gentlemen arrived from Kansas City in addition to those earlier on hand: Messrs. Chris Gottlieb, C. C. Herman, J. E Riley, J. W. Bramhall, F. A. Lamb, Hon. J. L. Peak, Judge Fred Gifford.

When the Kansas City team was grouped for a photograph it was seen that they deserved the name of "Big Ten." Their average weight runs over 200lbs., and every pound of it is shooting material. They could pick a pretty good football team from the delegation.

ELLIOTT WINS THE DU PONT TROPHY.

All is well that ends well. The majority thought that Jim Elliott was unwise not to finish the tie for the Du Pont cup with Gilbert yesterday. It was said that Jim "could finish a race, but couldn't begin one," and Gilbert was set to win by 2 or 3 birds in the 25. Quite to the contrary. Elliott outclassed his man to-day, winning the trophy, and another fall was taken out of the wheel of fortune that runs the merry game of championships. It is a toss-up when these two men shoot, and luck has much to do with the result. To day Gilbert's great second stood him in good stead two or three times, and he had one lucky gather of a dangerous bird, but fortune deserted him on the 6th bird—a slate-blue twister that was not much damaged—and the 10th bird was hardly hit at all. Meantime Elliott was slashing away in great form, and getting all sorts. His 8th was high and ugly, but he scored; his 17th was a stinging twister, and his 18th stopped only when fairly cut to pieces. (I think this was the hardest bird that went out of the traps this week.) His 19th was hard and fast; his 21st scored only by good judgment, as it twisted in. He cut down his last bird in his straight run of 25 amid a burst of applause.

The tie was begun at 1 P. M., after the third race in the team contest, but the birds shot in the tie race were different from those previously seen. They were fast blues, picked for the purpose, and only 1 was flagged, Elliott's 15th. Following is the score:

John Watson, referee.

INTERCITY TEAM RACE.

Shooting began about 9:30 A. M. in the team race. The weather was still cloudy, a misty rain fell, and a dull and puffy wind blew left quartering in toward the score. The birds were mixed, but did not rule hard, as indeed they have not at all in the soft weather of this week. John Watson refereed.

WRIGHT—J. L. PORTER.

R. W. Wright, for Chicago, and robust J. Lee Porter, of Kansas City, were the first to go into the lists. The former was not steady at first, and shot a patchy string, though he improved in gait if not in score in his second half, doing some good work. His 36th and 40th were great second-barrel kills. His 42d was an awkward bit of work, but his 43d was a good second. He fell across the common hoodoo, a r. q. l., on his 45th bird, and left a sag in the Chicago bosom right at the start.

The burly citizen from the rippling Kaw was as much at home as though on his own wood pile. He was cool and steady, shooting in good time and with good judgment. His 36th was a "no bird"; his 37th a corking high stop with the second. His 41st was bad work. The only reason J. L. didn't get more birds is because folks hardly ever do; but he walked off, leaving Chicago weeping, 2 birds in the hole before the guns were warm. Score:

HICKMAN—EICH.

Ed. Hickman, for K. C., and "Mary Jane" Eich, for Chicago. Hickman was nervous at first, but his nervousness proved a good sort not to monkey with. He shoots with a high elbow, but a pleasant style, dropping his gun for the call of "Pull!" He had a flagged bird at his 9th, but his 16th needed no flag and was a screamer. Only a good eye saved it. His 19th was equally brilliant work, and was stopped with a great second. His 23d was very fast and high. In gathering his 35th the dog made a swift run and slid on his back with the bird. Mr. Hickman put more ice on the Chicago thermometer.

Mr. Eich is one of the most popular of the Chicago shooters, and one of the best, though not in practice for this race. He felt badly at making so poor a showing, but there are champions running around unmuzzled who have done about as bad. Mr. Eich was so anxious he was over careful. His gun apparently was punishing him, and his load seemed excessive. His 29th was flagged, and so was his 33d. His 34th fell plump against the wire and was thought safe, but the dog chased it out. His 36th was the ugliest sort of a twister. His 42d was cut to pieces, and it was hard luck to lose it. Mr. Eich scored 39, and this put Kansas City 6 birds in the lead. Sorrow brooded with heavy wing over Watson's and the sky wept a few tears. Score:

SHAW—STOCKWELL.

Dr. S. Shaw, tall, slender and hirsute, now appeared for Chicago, and hope took a wild surge or so, because Dr. Shaw has been doing good work lately. Opposed to him, for Kansas City, was nobody but a short, stout jolly, innocent, harmless-looking man who wore glasses and was fifty years old—Geo. W. Stockwell. "We are glad to see you," said the Chicago team, "we're sorry for you, but here is where we get even." *Vide* totals to see how much they got even. Mr Stockwell apparently misconstrued the whole business. He evidently thought he was attending a cake walk. He laughed, talked, visited with his friends, and wiped the mist off his glasses, but that was about the only sort of missed he could see. He was kind and friendly, but really severe with the West Side physician. "This is a bad light for the old man," said Mr Stockwell, wiping his glasses and then killing his bird He was the calmest thing that has pushed inside these grounds for about 100 years, and to see this race was more fun than a cat and four parrots. He shot as careless and easy as though taking a chew of tobacco or orange sherbet.

The birds now were running dull. Dr. Shaw had flags on his 10th, 16th (a no bird), 28th and 32d. His 36th was a rattling fine second. His 47th was the r. q. l. hoodoo, and it wobbled into the shed. Dr. Shaw cut out a good, swift time and shot a very nice race.

Mr. Stockwell had flags twice on No. 9 bird, once a "no bird." His 20th was apparently dead in bounds, but the dog chased it out. His 21st was flagged and "no bird," his 44th was flagged. His 50th was stopped with a grand second and he retired amid a fire of cheers. Kansas City was now 8 birds ahead and gloom 4ft. thick settled over Chicago. This was almost wrong of Mr. Stockwell. D. ELLIOTT—MUSSEY.

Dave Elliott, a sad, slim man of the Elliott clan, now appeared, bearing a homely-looking $14 pump in his nerveless grasp. David pushed his pump gun against bird after bird, and nothing was heard but deep sobs of anguish from the Chicago rooters. His 9th was a great second stop, and he ought to have had his 14th, a screecher, hit full both times His 25th was a lucky second on a high bird, and his 32d also was high and far out. At his 40th he got a balk and the referee ordered him to shoot another bird with no shot in his first charge. He caught a fast driver and his gun went "snip—rattle—bang," and down came the bird far out in great shape, to a burst of applause. His 41st was flagged, but his 42d was only stopped by a grand second. Mr. Elliott sat down, and "41" was set opposite his name.

Meantime Parson Billy Mussey was also shooting. All Chicago thought Billy would pull up the team a few pegs, for he is a shooter of singular uniformity, ordinarily safe to shoot an 85 gait on the best of birds. In practice he has been doing brilliant work and was selected for one of the top scores. But Billy was shooting a day or so too late. He was just off edge and a bit more nervous than was good for him. The birds in this race picked up and were faster, this being the coop out of which the Gilbert-Elliott tie birds came. Worst of all, Billy saw before him a slim man from Kansas City, clad in a yellow sweater, and at the thought of one Bennett, of Kansas City, and his yellow sweater of years ago, Billy knew it was all up. His 5th, 6th and 7th birds, two of them hard twisters, all got away. His 10th was a good stop, and so was his 16th; his 17th was a lucky gather, the bird being at first thought dangerous. His 24th was good second work; his 25th a bit of hard luck, a white bird, dead just across the wire. His 30th and 31st were saved by timely seconds, his 33d hit the wire before it stopped. His 34th was low and fast and got over. By this time Billy was off his time and not doing his usual snappy work. The birds were averaging more drivers and were faster. When Billy returned from the score he was taken firmly by the hand and led to the lunch room, where the weeping of the Chicago team was less distinct, and where he could sit down and think it over. Such is the luck of the funny game of pigeon-shooting. Kansas City was now only 15 birds ahead. Rain began to fall softly. Score:

RUBLE—CURTICE.

John Ruble had been sick and was not feeling well, but it became apparent very soon that what the Chicago team needed was a few sick men of that sort. He ran out with the top score to date, 45, and showed a very clean, fast gait, with an especially accurate and effective first. Meeting an opponent who fell below the 40 mark, Mr. Ruble thus pulled up his team by 6 birds, a great gain. Ruble's 14th was a good stop of a fast one. His 19th seemed not touched, but fell dead against the wire. His 20th and 21st were flagged, the latter going over fast, and the 22d followed, just over the wire. His 27th was not hit, nor was his 37th much injured. His 39th was flagged. His 45th was saved by the dog.

Mr. J. M. Curtice was another burly Kansas City man, and good usually for something over 40, but the luck veered, and he went to town sad to night, only scoring 39. His 1st was flagged. His 6th was apparently safe and dead, when it rose before the dog and flew out. His 21st was flagged, and his 25th was a "no bird." His 44th was a very high second. His 47th was flagged. The light was now growing very dim and the shooting was not easy, though the birds were becoming dull and wavering in flight as evening and darkness approached. Score:

HERMAN—ROLL.

Mr. C. C. Herman was one of the first to speak about this intercity race and was anxious to be present all through it. To-day he ha

word of sickness in his family, and wished if possible to finish his score and leave for Kansas City to-night. Therefore, though it was now growing very dark, the efficient Kansas City field marshall, Captain Walden, put him in to shoot next. The Chicago banner was carried by Geo. Roll, the big Blue Island crackerjack, who offered some contrast to his slighter opponent Both these men turned out to be shooters, and they did what one takes to be about the best shooting yet seen. It was a question of eyesight. The birds were not flying so fast, but it was so dark one could hardly see to score. How the two men managed to do such work is a mystery to be solved only by the instinct of direction which enables the good field shot to kill without taking aim. The men had to stop at the 25th bird, and were then a tie on 22, each with 1 dead out and 2 lost clean. At the 16th bird it was very dark. Mr. Herman was apparently fast asleep and killed 15 straight. He shot in good form. Roll was prompt and regular and made a very good impression. The score was set for completion the first thing the following morning. Herman had his 5th bird flagged, and his 10th was a "no bird." The dog saved his 19th. Roll had flags for his 6th, 9th and 18th. His 8th was a good second.

Saturday, Dec. 11.

The weather continued cloudy all day, but was much colder. The wind shifted more to the north. The result was seen in a very marked improvement in the birds. Incomers became rare, and outgoing birds ruled many of them very high and hard twisters. The men who shot to-day had a very different task from those who came to the score earlier. The crowd was now small, but it was choice, and interest was continued to the close. Chicago made one spurt toward the close, but the gap was too wide, and the big men from Kansas City carried off the honors with a good wide margin. This places Kansas City winner of the series of three intercity races. She won the first by 4 birds (if memory serves), the second by 2, and this, the third, by 7. She holds fairly the palm of the West. They say they have 100 more as good as these ten left yet down there; but if so, we don't want to shoot a 100-men race.

HERMAN - ROLL (CONTINUED).

At an early hour shooting began in the unfinished race of the day before, between Herman, of Kansas City, and Roll, of Chicago. The men were tied in the dark last night, but this morning the Kansas City man was too good for George. He was cool and steady and centered his birds fair, seemingly encouraged by Roll's miss of his first bird. The wind was now light, from the N.W., and the birds were uneven, some hard. Herman's 7th was a fast black, but he lost his 8th, a duffer. He had only one bird flagged, and he ran out with 46, top score of the shoot, as easy as playing marbles. Large chunks of sadness dropped upon the club house platform, and Chicago began to think it never could pick even one winner.

Roll's 1st bird was an easy one, and slobbered badly. His 9th was a hard cinnamon. He had 1 flagged. His 50th was a brilliant kill of a hard twister. Kansas City was feeling good, now being 10 birds in the lead. The Chicago team was not yet decided This opening race of the day showed top score and second score of the whole series, and was a very prettily contested event. Score:

FROTHINGHAM—RILEY.

Here Chicago braced to expect a gain, but she misunderstood the big and smiling Riley, who was not there to lose. Dr. Frothingham, a short and boyish-looking, but sturdy figure, shot with his usual intensity and nervous energy, and he put up a fine race. The birds remained a little mixed, but now and again a screecher would go out. The Chicago man's 22d was a great stop, and his 24th was a hot one. His 35th was low and fast. His 40th was a plain miss. His 41st was an ugly one, and got over also. Frothingham got his share of hot ones, and his score of 43 is good.

Jim Riley has a fine position at the score and shoots in a beautiful style. His gun is low and easy; he does not need a guy rope to keep him from falling on his nose, but stands graceful and erect. He has a rapid second, and all in all is a very good specimen as he shot to-day. His 1st bird was flagged, also his 47th. His 12th fell in bounds, but the dog chased it out to die. His 19th was low and nasty; his 25th fell inside, but again the dog caused him a loss, chasing it out. His 26th was a hot one, and this made the race a tie at this point. His 27th was a warm baby too, the birds at this point freshening up and beginning to go like demons. He was slow with his 33d, but his 49th was a scratch second in the deep field that brought down the house. Riley shot beautifully, but the dogged doctor hung to him to the finish and gave him a lot of company. Grief now was 3 cents a bushel in Chicago, for K. C. now went up another bird and stood 11 ahead. Score:

GOTTLIEB—VON LENGERKE.

The band played the "Wacht am Rhein." Big Chris Gottlieb looked rosy and healthy as ever, and he was picked by many for top score of the meet. Luck did not favor him to this extent, but he beat his man, after the fashion of his fellows. These men got a real race, the hardest birds of the day so far. Incomers were few and far between, and the score shows very many drivers. These birds were many of them very fast Chris feathered his 5th, his 6th was a strong one and his 7th hit the wire pull, causing Chris to chew gum very fast for a moment. His 17th got off easy, his 19th was ugly and was only saved by quick work with the second, and his 20th was another grand second-barrel kill. His 24th was just across the wire, but to offset this his 28th hit the wire and was saved. His 34th was high and hot, and his 46th a corker which was too fast for the shot. It was anybody's race for a long time, as O. von Lengerke got off with a long lead.

The Chicago man was well keyed up and had his eye on the birds He was anxious and careful, but quick and snappy, getting down many stingers right at the traps before they grew harder. The Chicago man had one flagged bird. Von's 19th was a good, fast second. His 26th was lucky, suddenly letting go and dropping dead after it was thought sure to go out. His 30th fell inside, but rose and went out. His 32d was a hot one. His 33d had to be flagged, but started swiftly directly toward the score and was missed. His 46th was stopped after a deliberate wait for it to straighten out in flight. His 47th was scored by luck, after a long circle about inside. His 50th bird dropped a bit in flight, but recovered and went out, this finishing a very pretty race. A casual reference to the score, however, showed that Chicago had dropped yet another point back, the lead of K. C. now being 12 birds.

BINGHAM—J. B. PORTER.

Here was where we got revenge. Jim Porter was considered safe to make a big score for K. C., but he had left his timepiece at home. On the other hand, Eddie Bingham apparently thought that he was home on the old stone blind in Koshkonong shooting teal. He was in tent on his work, but he was not too nervous, and he never shot a better race in his life. His style was very sharp and his second rarely wasted. Porter got too slow and could not find the birds. The wind was now fresher, and the birds better and very fast. With the exception of Dave Elliott, Bingham's score covered the best work yet seen in the series, for he stopped many very wicked birds, and did it in brilliant style. His 9th was high and hard. His 10th fell to great applause, but the dog chased it out, and the score had to be changed. His 17th was flagged. His 27th was a good second, and his 32d excusable. His 38th was a hot one, and his 40th and 41st high and fast. His 45th was a stinger, a big cinnamon, the color so many of the twisters wore

Jim Porter was cool, easy and deliberate, and shot with his usual freedom from strain. (In position at the score the K. C. men could give Chicago cards and spades.) His style was just a trifle too slow, however, the birds getting hard before being hit. Toward the middle of the race his time was bad, and he tied the low score on the other side, 37. His 13th lit on the hand rail at the score, but Capt. Waldron did not push it back, of course, and it fluttered into cipherdom. His 18th was a good second, his 19th a "no bird." At the 25 hole he was too slow. His 39th was a red hot low bird, and his 43d a lucky second, far out. Porter did not lose his head under the stress, but pounded along calmly. He had the bad luck to lose his 50th dead out of bounds—a fast driver.

At last Chicago had won a race, and Eddie Bingham a hundred years from now will tell his grandchildren how he pulled his team up 6 birds in the big intercity shoot. Score:

Trap score type—Copyright, 1897, by Forest and Stream Publishing Co.

ELLIOTT—KLEINMAN.

Only one more race remained. George Kleinman was put in to shoot with Jimmy Elliott, late winner of the Du Pont trophy. George acquitted himself very well, and some of his second barrel work had his old phenomenal quality. Twice he lost hard drivers by getting his second in just a shade before he meant to do so, knowing as he pulled trigger that he was not on. But some of his other birds were cut down like lightning, and they needed to be. George said that some of his first 25 string were as fast birds as he ever shot at in his life. We were now getting birds such as we should have had all the week had the weather been good.

Elliott shot in his usual rapid style, at times almost carelessly. He scored his 4th by a lucky sudden fall. His 7th rose as the boy started to gather it, and the dog was started after it and gathered it. The referee, John Watson, decided another bird should be shot. Capt. Organ waived the right, and Capt. Walden thanked him. Elliott's 22d was flagged, his 33d not hit; his 34th chased against the wire by the Cur, one of the retrievers. His 42d had a wing off luckily. Elliott ran 43, and chewed gum all the time George was quick with both barrels on his 14th, but it was no use. His 15th was a duplicate, but he got it. His 17th was a grand fast second, and his 18th another. His 19th was still another very fast one, but this was not centered, and the 20th, another screamer, though hit hard both times, also got over. His 49th was gathered by the white pointer, which went crazy and tried to bring in 2 birds at a time, having found another dead one ungathered. This was a pretty race and a good exhibition of skill, but the Kansas City man followed custom and beat his opponent by 1 bird. Score:

KANSAS CITY WINS BY 7.

The official team totals were now announced to be:
Kansas City 424,
Chicago 417.
Kansas City won by 7 birds.

THE KANSAS CITY "STAR" MEDALS.

The Kansas City *Star*, the able newspaper which Jimmy Whitfield makes the best rod and gun daily in the West, had offered two individual medals for competition at this intercity meet—a medal for the highest individual score on the Kansas City team, and a duplicate badge for the highest Chicago individual score. C. C. Herman, of Kansas City, had won his badge by his score of 46. Two men on the Chicago team were tied on 45—Ruble and Roll. They shot at 10 birds and Roll won the medal. Score:

George E Roll.....0222222222—9 John A Ruble.... .. 2022222220—8

THE CAPTAINS' RACE.

The captains of the two teams now got gay. Capt. Walden allowed he could skin any Chicago captain—or all three of them—and Capt. Col. Felton was put up against him, no weight for age allowed or asked. They shot at 25 birds and showed they were both right up in the first rank and fit to command their lusty privates. It was approaching evening, and everybody felt good but the birds, which flew mixed Col. Felton missed 2 easy ones and killed a few hard ones, beating out the handsome Kansas City man by 2 birds. Capt. Walden shot a Greener ejector, 7lbs. 14oz., Winchester metal-lined shell, 3¼drs. Schultze, 1¼oz. No. 7. Col. Felton shot a Purdy, 7½lbs., Smokeless cases 3¼drs. Du Pont, $1^{3}/_{16}$oz. No. 7 right barrel, $1^{3}/_{16}$oz. No. 6 in left. Col. Felton wore a beaver jacket and a bright, glad smile. This race made a lot of fun. Score:

TABLE OF LOADS.

The following is the table of guns and loads:

CHICAGO TEAM.

R. W. Wright: Francotte, 6½lbs.; Leader, 3¼drs. Du Pont, 1½oz. No. 7 chilled.

M. J. Eich: Greener, 7lbs. 12oz.; Leader, 3¼drs Du Pont, 1¼oz. No. 7.

Dr. S Shaw: Greener, 7lbs. 9oz; Leader, 3½drs. Du Pont, 1¼oz. No. 7.

W. P. Mussey: Greener, 7lbs. 12oz.; Leader, 3½drs. Du Pont, 1¼oz. No. 7.

John Ruble: Lefever, 7lbs. 12oz.; U. M. C., 3¼drs. American Dead Shot, 1¼oz. No. 7

Geo. E. Roll: L. C. Smith, 7lbs. 14oz ; Leader, 3½drs. Du Pont, 1¼oz. No. 7.

Dr. H. H. Frothingham: Greener, 7lbs. 2oz.; 3in. Leader, 3½drs. Du Pont, 1¼oz. No. 7 chilled.

O. von Lengerke: Francotte, 6lbs. 15oz.; right barrel, U. M. C. Trap; left, Winchester Leader; 3⅛drs. Schultze in right, 3¼drs. Schultze in left; 1⅛oz. No. 6 in right, 1⅛oz. No. 7 in second.

Ed. Bingham: Ithaca, 8lbs.; Leader, 3½drs. Du Pont, 1¼oz. No. 7.

Geo. Kleinman: L. C. Smith, 7lbs. 12oz.; U. M. C., 3½drs. Du Pont, 1¼oz. No. 7.

KANSAS CITY TEAM.

J. Lee Porter: Boss (St. James street, London), 7½lbs.; metal-lined Winchester, 3½drs. Du Pont, $1^{3}/_{16}$oz. No. 7½.

Ed. A. Hickman: L. C. Smith, 8lbs.; U. M. C. Trap, 3½drs. Schultze, 1¼oz. Tatham's No. 7.

Geo. Stockwell: Greener, 7lbs. 12oz.; metal-lined, 3½drs. Schultze and 1⅛oz. No. 7½ in first barrel; second, Leader, 3½drs., 1⅛oz. No. 7

Dave Elliott Winchester repeater, 7½lbs. ;Leader, 3¼drs. Schultze $1^{3}/_{16}$oz. No. 7.

J. M. Curtice: Greener, 7½lbs.; metal-lined, 3¼drs. Schultze, 1¼oz. No. 7.

C. C. Hermann: L. C. Smith, 7lbs. 14oz ; U. M. C. Trap, 3¼drs. Blue Ribbon; 1¼oz. No 7½ first barrel. No. 7 second barrel.

J. E. Riley: L. C. Smith, 8lbs.; U M. C. Trap, 3½drs. Schultze, 1¼oz. Tatham's No 7.

Chris Gottlieb: L. C. Smith ejector, 8lbs.; U. M. C. Smokeless, 3½drs. Du Pont, 1¼oz. No. 7

James B. Porter: Greener, 7lbs. 4oz.; Winchester metal-lined, 3½drs. Du Pont, 1¼oz. No. 7½

J. A. R. Elliott: Winchester repeater, 3¼drs. Schultze, Leader, 1¼oz. No. 7½.

CHICAGO SHOOTERS CHALLENGE DEFEATED TEAM.

Messrs W. W. McFarland, Ed. Steck, Silas Palmer, T. P. Hicks and R. Kuss, all well-known Chicago shooters, who were possibilities in the selection of the Chicago team of ten in the Intercity shoot, have had on their war paint and now want a better chance to go to war. They say that they and five others would like to shoot a friendly race with the Chicago team which was to-day defeated. Messrs. Shaw, Von Lengerke, Eich, Roll and Bingham have informally signified their personal willingness to accept such a challenge. The race would be for 50 birds per man, ten men teams, for the price of the birds and a little wager. Nothing more definite is known to night of this, the matter having arisen after the close of team shoot to-day. The race may or may not be shot. E. HOUGH.

THE BANQUET.

The banquet of the Chicago Athletic Association on Saturday evening was a notable affair. The grand dining hall of the club was arranged in a quadruple rank of tables with a cross-board running the entire width of the room, plates being laid for 105 and nearly all seats occupied. Among others present were the following, though in the hurry of the late hour some may have been omitted who shared in the entertainment offered all visiting sportsmen by the Chicago organization:

KANSAS CITY AT THE BANQUET.

C. M. Walden, captain; J. A. R. Elliott, Dave Elliott, Geo. Stockwell, J. B. Porter, J. L. Porter, Ed A. Hickman, J. M. Curtis, Chris Gottlieb, C. C. Herman, J. E. Riley, T. F. Morton, W. A. Laidaw, Nelse Jarrett, J. K. Guinotte, F. J. Smith, Dr. H. J. Whittier, R. N. Campbell, D. W. King, Master Fred Elliott, J. L. Buckner, Geo. L. Petty, W. T. Davis, Jas. Whitfield, sporting editor the Kansas City *Star;* Alex. Hilton, Judge F. W. Gifford, F. A. Lamb, Hon. John L. Peak.

CHICAGO SPORTSMEN AND VISITORS.

Thos. Miller, E. W. Heath, C. E. Felton, Thos. Hicks, Jim Byer, B. D. Lewis, Abner Price. R. Dwyer, Geo. Strell, C. Silvester, of Winchester R. A. Co ; F. H. Lord, John Glover, Benj. Dicks, J. F. Rehm, Chas. Morris, W. R. Morgan, Emil Work, Geo. Morton (C. B. & Q.), Sam Matthews, R. B. Organ, Fred Gilbert, E. S Rice, Geo. E. Adams, A. C. Paterson, Silas Palmer, R Kuss, W. W. McFarland, H. L. Loveday, H. H. Frothingham, Jesse Sherwood, M. J. Eich, W. T. Johnson, Dr. S Shaw, R. S. Mott, Jas. Pease, C. S. Wilcox, F. C. Willard, O. von Lengerke, C. Antoine, J. M. Holt, Tom Donnelly, W. P. Mussey, J. Barto, J. H. Amberg, E. Hough, L. Harrison, Jas. P. Holligan, F. R. Bissell, Ed Bingham, E. Bacci, Geo. A. Airey, W. L. Shepard, Wm. Palmer, H. Levi, J. M Gillespie, Jack Parker, of Detroit; A. W. Wiley, E. W. Graham, E. D. Fulford, C. P. Richards, Tom Marshall, Wm. Sheffield, C. M. Grimm, F. M. Fish, Fred Quimby, W. B. Leffingwell, C. M. Powers, H. McMurchy, Capt. B. A. Bartlett, Jack Fanning, C. W. Budd, S. A. Tucker.

Mr. E. S. Rice, chairman of the Chicago Shooters' Organization, was in the chair and presided handsomely at the head of a large and energetic family.

At the close of the banquet the usual felicitations followed. Mr. Quimby proposed a toast to the chair. Mr. Rice responded in a brief written address of welcome and congratulation, introducing speakers of the evening.

Col. Felton made an address of welcome to the visiting gentlemen of Kansas City, marked with his usual happy turns of thought and phrases.

Judge E. Gifford, of Kansas City, responded pleasingly. He said Chicago hospitality was befitting the reputation of sportsmen. Judge Gifford recounted the doings of the early citizens who built the beginnings of the city by the Kaw. He said they never killed an Indian dead out of bounds. That was where the Kansas City men learned to shoot so well. He told of the history of the Gate City which had bred so sturdy a lot of sons. He spoke of the glorious climate of Kansas City with apparent seriousness. He said any man in Kansas City would split a $20 bill with a perfect stranger, he was so large hearted. Judge Gifford's speech was cheered to the echo.

Mr. W. T. Johnson, former treasurer of Cook county, Ill., and an old sportsman, told in turn of early days in Chicago and on the Western trail that ran through Kansas City in the frontier time. Mr. Johnson spoke feelingly and well, and his remarks elicited hearty applause.

Capt. G. M. Walden, the "Prince of Kansas City," was called upon. He spoke gracefully and with dignity, and added to the fine impression he has created throughout the entire week. Mr. Walden is a man of fine presence and winning address. It is said that to his tact and well-balanced judgment the sportsmanship of Kansas City owes its united and shoulder-to-shoulder condition to-day. His was the speech of the evening. He paid a high tribute to Chicago, ascribing praise to his own city only with modesty and delicacy. He said that his fellow-townsmen would always be ready to receive Chicago sportsmen, and would accord them a good place to shoot and all the welcome in the world.

Mr. Harry W. Loveday, State game warden, took up the running for Chicago briefly.

Mr. Emil Werk, of Cincinnati, and Mr. W. W. McFarland, of Chicago, were called upon for a song. They gave Scotch and German renditions of rattling Irish songs, Mr. Werk bringing down the house and Mr. McFarland ruining the rest of the roof with his song of the "Bould McIntyres."

A flash-light photograph was at this point taken of the banqueting hall.

Mr. Tom Vallins, ex Chief of Police of Kansas City, stirred up the house with his "first oratorical appearance at the trap." He claimed an early citizenship in Illinois, and an early education (from the almanac) as an orator. He married a Chicago lady, and had affiliations with this city. He convulsed the audience with *apropos* remarks. He said the Pullman porter had taken him for "Mistah Elliott," and he felt proud to be mistaken for a shooter. Mr. Vallins added firmness to the conviction that Kansas City could beat Chicago at speaking as decisively as at shooting. His speech bristled with anecdote and witty metaphor. To hear Mr. Vallins tell a Swedish dialect story is a liberal education.

Mr. Jas. Whitfield, of the Kansas City *Star*, now called upon Messrs. C. C. Herman and Geo Roll to receive the individual high-score medals mentioned earlier. Mr. Whitfield mentioned some of the Old Guard members of the Kansas City shooting cult.

Mr R. B. Organ moved a vote of thanks to the Kansas City *Star* and Mr. Whitfield for the able representation offered at this shoot. Carried.

Hon. Tom Marshall and Mr. Alfred Price (of Illinois) were both called for. Mr. Price spoke briefly and feelingly, commending the royal hospitality of Kansas City. He said we had to go west of Chicago to find shooters, but they had a plenty at Kansas City.

Speaking now became general. Votes of thanks to the Kansas City team, to Referee John Watson and the visiting and competing match shooters were passed. Fred Gilbert, Tom Marshall, Emil Werk, Fred Quimby, C. P. Richards, Dr. Whittier, R. B. Organ, W. L. Shepard, Geo. W. Stockwell and others.

A formal motion was passed, seemingly unnecessary, admitting the fact that Chicago had been defeated thoroughly, satisfactorily and elegantly, which nobody could deny.

Adjournment was had between the hours of 1 and 2 in the morning.

E. HOUGH.

1206 BOYCE BUILDING, Chicago.

PUBLISHERS' DEPARTMENT.

Christmas Holiday Tour to Washington.

AN opportune, delightful and instructive tour, in which all teachers of New York, Brooklyn and vicinity, and their friends, should participate, has been arranged by the Pennsylvania Railroad Company to Washington, to leave New York on Tuesday, Dec. 28, under the personal escort of a tourist agent and chaperon. Two days will be spent in Washington visiting the many points of interest, including the new Congressional Library, one of the most sublime edifices in the world. An opportunity will also be afforded for a trip to Mount Vernon. A stop of two hours will also be made at Philadelphia on the going trip, affording an opportunity to visit the United States Mint, Independence Hall, Wanamaker's and other points of interest.

Round trip rate, including transportation, hotel accommodations and all necessary expenses, $14.50 or $12.50, according to hotel selected in Washington.

For detailed itineraries and full information apply to ticket agents. Address Tourist Agent, 1196 Broadway, New York.—*Adv.*

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SATURDAY, DECEMBER 25, 1897.

VOL. XLIX.—No. 26. No. 346 BROADWAY, NEW YORK.

NOTICE TO SUBSCRIBERS.

The address label on the wrapper shows the date of the close of the term for which the subscription is paid. The receipt of the paper with such dated address label constitutes the subscriber's receipt for money sent to us.

Subscribers are asked to note on the wrapper the date of expiration of subscription; and to remit promptly for renewal, that delays may be avoided.

For prospectus and advertising rates see page iii.

Readers are invited to send us the names of friends who might be interested in a current copy of the Forest and Stream. We shall be glad to forward a specimen number to any person whose address may be furnished us for that purpose.

"Many a man past the middle of life remembers with a quite peculiar and especial tenderness that one dog which was the dear companion of his boyhood. No other canine friend can ever be to us exactly what that one was; and here let me venture to observe that the comparative shortness of the lives of dogs is the only imperfection in the relation between them and us. If they had lived to three score years and ten, man and dog might have traveled through life together; but as it is we must either have a succession of affections, or else, when the first is buried in its early grave, live in a chill condition of doglessness."

Philip Gilbert Hamerton.

THE PROSTITUTION OF THE UNITED STATES FISH COMMISSION.

IT is reported that yielding to political pressure brought to bear by Senator Elkins, the President has selected George F. Bowers to be United States Commissioner of Fish and Fisheries. This is a political appointment pure and simple, and a most scandalous one. The appointee is a West Virginia politician who has been of service to Senator Elkins; the Senator desires to reward him with an office where the Government will pay him a salary, and has picked out the fish commissionership as one of which the rewards are commensurate with the obligations involved.

Mr. Bowers has no fitness whatever for the place. He is devoid of attainments in the science and art of fishculture; has no knowledge of fish and fisheries, but in fact is totally ignorant as to them, and so is without the special information and experience which are absolutely essential equipments for the discharge of the duties of the head of the Commission. He would never have been thought of in connection with the office if his personal qalifications for it had been given the slightest consideration. The appointment is a prostitution of the Fish Commission to political ends, and by this act President McKinley has grossly betrayed a public trust.

Moreover, the appointment is also in plain violation of law. The act of Jan. 20, 1888, providing for a Fish Commissioner, expressly and implicitly prescribes that he shall be "a person of scientific and practical acquaintance with the fish and fisheries." The West Virginia man has no such acquaintance. He is by the law declared to be ineligible to the place. His installation in it would be a national disgrace. For the sake of the Commission and of the interests it represents, we sincerely trust that the nomination of a Bowers for the place once held by a Baird, a Goode and a Macdonald may not be confirmed by the Senate, while there are men who, by their high attainments in fishculture, their practical knowledge of fish and the fisheries, their familiarity with the work of the Commission and their fitness to direct it, might restore the United States Fish Commission to its former place in the regard of the public, and to its highest usefulness and value. The commercial and economic interests involved demand that the place should not be surrendered as official spoils to an incompetent.

THE OLD BUFFALO HUNT AND THE NEW.

TURN your eyes backward, gray-haired friend, to a time twenty-five years ago, when you were more supple than you are to-day. You remember the buffalo chase. How you looked over a hill and saw the limitless plain dotted with the "brown cattle of deformed aspect;" how you dashed over the crest at the full speed of your horse and raced down almost to the outskirts of the herd before they broke and fled with a thunder of hoof-beats over the solid earth that trembled and under the dust that hid the sky. Perhaps there rode by your side the brown-skinned owners of these herds—naked, on naked horses, silent, with stern, set faces, and with eager eyes; with long, black hair blowing out straight behind them on the breeze, rising and falling with the forward shoot of each horse's body. Their left hands held crooked bows bound with the tense sinew strings and a bundle of fine, slim darts, whose newly whetted points shone like dull silver.

You remember how the sand was flung against your face and the dust choked you; how the billowing brown backs before you, dimly seen through the thick cloud, rose and fell; how, little by little, your good horse carried you forward and the buffalo yielded you passage and fell away on either hand. Little by little the swift ponies drew up alongside the cows that were hardly less swift, the arrows sought the strings, the lithe bodies of the riders bent down toward their prey in eager readiness. Then soon the bows were bending and the arrows were flying, and perhaps your gun spoke once; and the prairie was dotted with fat cows that would never run again. Then the hides were stripped off, and the meat loaded on the hores, and you returned to your camp.

So you chased buffalo in the old days.

It is midnight in New Jersey in cold and stormy November. The wind blows and the level rain dashes against the face of the unlucky traveler with stinging blows. Along a sandy road six toiling horses tug and strain as they slowly haul a heavily-laden dray. Houses here are few and far between, but a distant light shows where one stands, and the vehicle at last approaches it. The panting horses stop close to some outbuildings, where three men are waiting. By the light of a lantern the dray is backed up close to a tight board pen, and its burden—an enormous box—is unloaded. Gate and door are opened, and the occupant of the great box is driven into the pen. He stands there, a big buffalo bull, tame as a cow, from his long confinement stupid as an owl at midday. Bewildered and confused, he stares about. Two men carrying a lantern follow him into the pen. One bears a rifle, the other a six-shooter, and both have knives. There are two sharp reports. The bull plunges once or twice, and comes to his knees. The butchers hack and saw the head from the body and carry it away, leaving the carcass untouched upon the muddy ground.

A buffalo chase of the year 1897 is ended.

SNAP SHOTS.

IN the midst of all the wild rumors of starvation at Dawson and stampedes of panic-stricken multitudes, this extract from a letter received on Dec. 17 from Mr. J. B Burnham, of the FOREST AND STREAM, will be a welcome reassurance to such as have friends on the Yukon. The letter is dated "In camp below the White Horse Rapids, Sunday, Oct. 24," and reads:

"We have had fine weather so far, and no floating ice. Climate about like Adirondacks. Have passed all the tedious delays from portages, head winds, etc., except Lake La Barge, and if things go well will be in Dawson about Nov. 1. If ice appears in river shall probably stop and winter at the Hootalinka River, where there is a post office, a police station, and monthly mails for 3 cents per letter (Canadian postage). Have gotten along splendidly, and have a very complete outfit of supplies.

"Two men have just come in from Dawson, ascending the river in a canoe. They left there Sept. 23, and say everything was then going well. This tallies with other recent reports we have from Dawson. There is no truth in the sensational reports of shortness of supplies.

"I am cook, and I tell you I can bake good bread (baking powder kind) in our Yukon stove; it has a fine oven. White Horse Rapids and Cañon were pretty bad, but we are safely by them, and smooth sailing ahead. Men from Dawson say they think we can make it."

The Anglers' Association of Onondaga County, with headquarters at Syracuse, N. Y., is an organization of citizens for voluntary effort in supplementing the work of the game protectors. The Association maintains a special protector, who works under its direction and control, giving particular attention to enforcing the anti-netting law in Oneida Lake. The record of miles traveled by the special protector for November of 1897 was 216; three fyke nets were captured, valued at $1,800; two gill nets, valued at $1,200, and nineteen trap nets of a value of $435. The excellent report of the Association's work for the last fiscal year, as submitted to the State Commission, is an exhibit of which the members may well be proud. The writers of the report have struck the keynote of success in the work of protection when they declared: "We have tried in all that we have done to educate public thought and sentiment to a better understanding of the cause of fish protection and to lead the large majority that has opposed it to see that in permitting the destruction of our food and game fish the people are losing forever one of the most bountiful sources of food supply, and one of the greatest blessings to mankind that an all-wise Providence has bestowed upon us."

In the work of education they have had to combat not only the ignorance and improvidence and selfishness of poachers, but the devious and hidden but no less baffling connivance of politicians and politically controlled officials. If the Fish Commission of the State did its whole duty, honestly, independently and fearlessly, executing the laws equally against all men, giving its subordinates untrammelled liberty to perform their oaths of office, holding up no cases "until after election," and granting immunity to no particular voters in special assembly districts, does any one dream for a moment that the day of necessity of such voluntary associations as this one of the Onondaga anglers would be past? It is only because the State officials, who are paid to enforce the laws, and who are sworn to enforce the laws, do not enforce the laws, that private citizens must give of their time and their means and their effort to restrain lawlessness and check the ravages by the few who defy the rights of the many.

In view of the excellence of dogs as draft animals in the Arctic regions, it seems strange that the supply in foreign countries has not been liberally drawn upon. The first organized effort of any importance, according to press reports, is that of Mr. G. R. Davies, an Englishman of cosmopolitan experience. While in Belgium he noted the common use of dogs for draft purposes, and also their efficiency. Being of an adventurous turn of mind, he conceived the plan of taking a number of them to the Klondike region. He arrived in New York on the steamship British King on Dec. 14, with seventy dogs from Antwerp. It is stated that the cost of the dogs averaged $20 each and that about $30 more each will be added in reaching the Klondike region, so that the dogs will then have cost $50 apiece. A Belgian was brought over with the dogs, to manage them till such time as they became familiar with commands in English. The dogs were shipped to Montreal, thence they go to Ottawa, where Mr. Davies will meet Warburton Pike, who has had some experience in the far North. The route they will take will be governed much by Mr. Pike's advice. If the venture is a success, Mr. Davies will establish a pack train to Circle City.

The story runs that the owner of a swift and rapid dog laid a wager that it could keep up with a railway train. The dog was tied behind the last car and the train sped on its way. After a while it was discovered that the dog had disappeared, and the stakes were claimed of the owner, but he triumphantly showed that instead of having fallen behind the dog was running along at his ease in the shade underneath the car. This dog story was constructed in the early years of the century, when dogs were faster and railway trains were slower than they are in these days. It has been determined by records kept in this office that the tale has a periodicity of five years. It is being told in 1897, and may be looked for next in 1902.

Readers of the FOREST AND STREAM'S "Angling Notes" will be glad to have the excellent portrait of the man who writes them. The picture was taken in the Adirondacks last summer, while Mr. Cheney was collecting material for the forthcoming report of the State Fish Commission. It is an admirable portrait, as his many friends will recognize, and is all the more pleasing for the woodland setting.

The New York Aquarium has now been open a year, and under the admirable direction of Dr. Tarleton H. Bean has steadily grown in the scope and interest of its collections and in popular appreciation. During the year it has been visited by 1,635,000 people, or an average of 6,289 per day.

The Sportsman Tourist.

UNCLE GID'S CHRISTMAS TREE.

"Wal, I do' know what to du." The words came up in a long sigh from the depths of Aunt Pamela Corbin's portly bosom, as she stood with both hands dropped helplessly, one holding an open letter, the other the spectacles which had aided its slow reading. "Chris'mas a-comin' tu-morrer, an' Nancy an' her man a-comin' tu spend it, an' nothin' pervided! Wal, I say for it!"

She looked down at Gideon, tilted forward on the front legs of his chair, and poking meditatively among the ashes on the stove hearth with the stick used in the last lighting of his pipe.

"Why don't ye say suthin', father?" she demanded after a moment of waiting.

"Why, I hain't nothin' to say no more'n the boy had when his father died," Uncle Gid responded, and then reconsidering this avowal, "why, yes, I hev tew, for I be glad Nancy's a-comin', an' she'll be glad tu see her father 'n' mother, if she doos hafter go it on pork an' beans, which I don't see there's nothin' for it but for her tu, an' I guess her man can stan' it. Nathan 's hearty t' eat, and the baby he's a-nussin' yit, I s'pose, so it won't make no diff'ence to him."

"A-nussin'?" cried Aunt Pamela, "why, Gideon Corbin, what be you a-thinkin' on? That child was three year ol' the tenth day o' November. A-goin' on four year ol', an' jus' the age fer candy an' sech, an' we not so much as a spoo'-f'l o' honey in the haouse! I do' know but what I feel the wust abaout that of anything. But the idee o' him a-nussin'! Oh, my! if men folkes haint enough tu kill!" and Aunt Pamela was so overcome by the absurdity of it that she was obliged to sit down and laugh, while Uncle Gid ground a silent accompaniment till he could divert her mind to a more serious channel.

"If you hedn't a-hed sech all-killin' luck a-raisin' chickens," he suggested, "but the' hain't a one. If the ol' ruster 'd du, I'd chance it on pickin' up one some'ers afore spring, but he's poorer 'n a skate; might's well try t' eat a tailor's goose! An ev'yb'dy sol' the last turkey 'at they hain't kep' for the'selves. Gosh, I do' know! I guess it's pork an' beans, Milly."

"If we 'd only killed the hawg last week as we cal'lated tu," Aunt Milly lamented, "the'd ha' been spare-rib, an' if it wa'n't for the name on't I'd just as lives hev it as turkey."

"Livser!" Uncle Gid warmly seconded her favorable opinion of spare-rib, "'cause you c'n du most o' the carvin' aforehand wi' an axe. Gosh! I druther be shot than tu carve a turkey afore folks! Yes, sir, my own folks! If I hed it my way, I'd hev turkeys 'nough so 't each pusson 'd hev one tu hisself, an' if he wanted any wings or laigs, or close-hugs or pope's-noses, he'd hafter git 'em for hisself."

"Wal, I'd be thankful enough if we hed one for all on us!" Aunt Milly sighed. "But, my land, it don't signify! I must be a-doin' wi' what the' is tu du with, for here 'tis 10 o'clock. Thank goodness, the's ten good punkins left, an' I'll make some punkin pies," and she began to stir herself ponderously.

"An' I'll jist make some 'lasses candy for that boy, an', I guess, bile him up some sweet flag in 'lasses if it hain't got tew dry. The idee o' him a-nussin'!"

Whereat she fell to laughing again as she moved about the kitchen, while the stove with its chattering doors and dancing griddles, and the table with its falling leaf beating a tattoo against its legs, seemed to join in her mirth. Being the cause of it, Uncle Gid could hardly be expected to take part in it, but the general commotion aroused him from his apathetic attitude. Arising, he unfolded his tall, bent form to more than its accustomed height, and fixed his gaze contemplatively upon the long rifle, which hung in its wooden hooks over the door.

"Wal," he said after a little deliberation, "I kinder guess I'll take a rantomscoot an' see 'f can ketch a pa'tridge. Don't s'pose the' is one, since them shoats from Higginston ranshacked the hul universal woods wi' the' cussed yollopin' spani'ls. It was yip! yopaty, yip! slam! bang! whang! day in an' day aout for a week till what pa'tridges wan't killed was skart tu death. By gum, I wish't the last identical spani'l wus—wal, no, I do' know as shot, ezackly, 'cause they hain't tu blame for bein' borned spani'ls, but I wish't they was turned intu 'spectable haoun' dawgs like my ol' Gab'el. If Gab'el wakes up arter I git away, don't ye tell him I've gone a-huntin', 'cause it'll most break his heart tu be left ahind, an' I don't scasely want him a pa'tridge huntin'."

The old hound, almost hidden beneath the stove, signified recognition of his name with languid beats of his tail on the floor.

"Consarn it, he's hear'd me talkin' on 't, an' nothin'll du naow but he must go," said Uncle Gid with some show of mild vexation.

"Wal, mebby I c'n ketch a pa'tridge or tew, an' they'll look more Chris'massy on the table 'an pork and beans."

Whatever of fin, fur or feather was overtaken by Uncle Gid's bullets he called "ketched" just as if it had been taken by hook, trap or net.

Now he took down the rifle. Gabriel's tail continued its languid beat while his master took down the rifle, opened the patch box in the stock and examined its contents, pocketed a handful of bullets from the clock shelf, shook the paper box of caps close to his ear and put it in his vest pocket, held up the small powder horn between his eye and the window before slipping it into his breast pocket, then drew the cleaning rod and its patch out of the long barrel with a critical ear and touch to its smooth progress, all so quietly that the strokes of the old hound's tail were not accelerated.

But when Gideon remarked to himself under his breath that "the ol' churn was all right," and began tiptoeing cautiously toward the door, Gabriel came scrambling backward out of his warm berth with a prodigious scratching and clattering of toe nails in a state of joyous excitement, to which he gave vent in awkward, stiff-jointed gambols and suppressed yelps.

When out of doors and assured of his master's intended course, he at once subsided to a sobriety befitting his years and jogged on toward the woods with a staid and business-like pace, now and then waiting for Gideon, and looking up into his face to catch his meaning when he said—

"Naow, Gab'el, you haint sech a fool, be ye, as tu cal'late you're goin' tu find anything you want this time o' day. The' hain't been a fox stirrin' these tew hours, an' rabbits you do' want, an' the' hain't been a coon aout door for a fortni't, I know. It's a pa'tridge I'm arter, an' you won't hunt them." Or when Gabriel sniffed at a fox track imprinted on the snow when the latest stars were shining or longer ago—

"Naow, dawg, you don't want tu be a-foolin' with that. It hain't got no more scent than moonshine."

Then the hound disappeared in the border of the woods, beyond the scope of conversation, except when after wide circuits, in which he could sometimes be heard thrashing the underbrush with his tail, or snapping a dry twig under foot, or sounding an irrepressible trumpet blast when the hot scent of a fresh squirrel track suddenly tickled his nostrils, he would return for a brief interview with his master, who was in more silent quest of game.

Now, to his intense disgust, a company of jays vociferously heralded Gideon's cautious progress; now a saucy red squirrel jeered at him with great volubility from various points of observation, and now he saw a bevy of chickadees flitting above a prostrate trunk with greater interest in some object just beneath them than in him. Several knots bristled from the log at various angles. One on top, as motionless and apparently as rigid as the others, seemed to attract Uncle Gid's attention, for he scrutinized it intently till at last the rifle arose slowly to his shoulder, then became motionless for an instant, then spat out a thin streak of fire with a spiteful crack, and the knot tumbled off the log in a sudden but brief and final spasm of animation.

Gabriel came in at the shot in a state of excitement which subsided in a contemptuous sniff at the meager result. Now he kept near his master as if to prevent his committing any further folly.

Uncle Gid pocketed the headless partridge and resumed his cautious quest, though not a little annoyed by Gabriel's persistent attendance. This became more annoying when the tracks of three partridges were found freshly imprinting the snow where the birds had wandered deviously, but still in company, from thicket to thicket, and likely to be so come upon in the next if the dog not flush them. But he seemed perversely bent on accomplishing this, for he nosed along the wandering trails in advance of his master, to whose low-toned but emphatic commands were as unheeded as unheard.

"There, you 'tarnal ol' fool-head, you've done it, hain't ye!" the old man's suppressed vexation broke forth aloud, when Gabriel threshed his way into the dead, dry underbranches of a copse of young pines, and in the same instant the three partridges burst up through the green tops like as many rockets simultaneously discharged.

"Oh, if I don't give ye a whalin' when I git a-holt on ye!" It is doubtful whether Uncle Gid's wrath would have endured to the fulfillment of the threat, even if the hound in his surprise had not uttered a loud, sonorous challenge; and, as if in obedience to it, the birds scaled upward in a steep incline, and, to the old hunter's great joy, alighted on the branches of a huge maple. Two were in sight, craning their necks to watch the movements of the dog, and Uncle Gid drew a bead full on the breast of the lower one, too anxious to secure the bird to risk a shot at the jerking head. In response to the imperative crack of the rifle the bird dropped like a plummet, and expired in a miniature snow flurry of its own creation, which had scarcely ceased when the patched bullet was driven down upon the measured charge of powder, the cap pressed upon the nipple, and the rifle ready for another execution. At its spiteful crack the second partridge tumbled from its loftier perch, crashing through the branches below it, and scaring from among them the unseen third member of the trio, which dashed away into distance and safety.

Gabriel abandoned the exploration of the thicket to ascertain the cause of so much firing, but the two dead birds did not seem to account for it satisfactorily. He searched the ground about them, then sniffed at the boll of the maple at first casually, then more carefully, then eagerly and standing on his hindlegs, and sniffing at the trunk as high as he could reach, and mingling quavering sobs of inhalation with a broken whine which finally burst forth in a prolonged trumpet blast.

"Sho, Gab'el! You're a-foolin' or bein' fooled," said Uncle Gid as he pocketed his game and carelessly observed his companion with an amused smile. "The' hain't nothin' up the tree naow." But Gabriel insisted to the contrary till his master came to him and examined the rough bark and found it scored with fresh claw marks. There were also a few long black and white hairs, with shorter ones of a neutral tint and finer texture, caught in clefts of the bark, and after a minute studying of these signs Uncle Gid openly admitted:

"Wal, I say for 't, I do' know but what you be right, arter all. Yes, sir, I guess the' is a coon or coons in 't!" and then backing slowly away from the trunk with his steadfast gaze as slowly climbing it, he discovered a hole just beneath one of the lower branches, the guess grew to a conviction. "Yes, sir, they come in afore it snowed, an' I'll go right home an' git an axe," and he set forth at once, while Gabriel maintained guard, assured of his master's return by the rifle left leaning against a tree. Half an hour later the woods resounded with the strokes of Uncle Gid's axe regularly delivered on the trunk of the hollow-hearted maple till it tottered and went down with a sweeping rush and crash of branches and a far-echoing boom.

Then a bewildered coon came scrambling out of the hole, closely followed by another, and were met so quickly by Uncle Gid that the stunning blows of his axe fell upon their heads before they realized the cause of their rude awakening.

The hound gave each limp body a shake, then thrust his muzzle into the hole and sniffed the interior with long-drawn inhalations, while Uncle Gid chopped into the hollow in several places to assure himself that it harbored no more of the family; and then, his curiosity somehow attracted thither, he drove the bat of the axe into the trunk at some distance above the doorway of the coons' chamber.

"No, the' hain't nothin' more in 't, Gab'el, but tew coons hain't to be sneezed at, an' that 'ere youngest one 'll help aout your Aunt Milly's Chris'mas 'mazin'ly. What—in—tunket!" he exclaimed in great surprise as he carelessly loosened a chip and a few torpid bees fell with it onto the snow. "Honey, by hokey!" he cried out exultantly when with a few more strokes he cleft out a longer chip and disclosed great longitudinal slabs of comb, some turned to the color of old gold with years of hoarding, some as bright as the virgin nuggets of Klondike. The discovery of this most unexpected treasure quite took away the old man's breath, and with it the power to give audible expression to his surprise and delight, though his face was first blank with one emotion, then broadly illuminated with the other; his form crooked into an interrogation mark, then straightened to one of unworded exclamation. But it remained so only until his breath was regained in a long inhalation, and then burst forth with slow vehemence.

"Wal, by gum, Gab'el, if this 'ere hain't a Chris'mas tree! Tew pa'tridges, tew coons an' gobs an' gobs o' honey. Who ever see the beat o' that tu one haul! Whoop! hooray for us, Gab'el. An' yer Aunt Milly 'd holler tew if she was here. More honey 'n I can draw tu one jag in the brass kittle on the han'-sled, an' 'nough sight better for Nancy's boy 'n any candy 't ever was! Who, whoop! Why don't ye hoot, Gab'el. Ta' care, you ol' fool-head. Keep yer nose aouten them bees, or they'll make ye play a diffunt tune on yer hoot horn. 'They hain't dead, but sleepeth,' as the tomb stuns says. Who, whoop!"

Far and near in the pearly arches of the woods the sleeping echoes awoke again to repeat the jubiliant chorus of the hunter and hound, and far away on the crest of the hill where the upper breezes sang among the pines the red-cockaded log-cock, also hunting his Christmas fare, sent back a cheery answering cry.

Rowland E. Robinson.

THE MOOSE VAMOOSING.

We had come up from the "land of the linen shirt," and the wilderness lay before us. On one hand was Deux Rivieres; on the other, the Ottawa. Beyond was the "bush," unscored save by an occasional aimless woods road that began anyhow and ended nowhere. Within its depths, we were told, roamed countless herds of moose, and goodness knows how many bears. So we gazed upon its fringe with interest not unmixed with hope.

It was Ivory that was to blame.

"Moose!" exclaimed he in New York, "Moose! Why, there are millions of them!"

We believed him—that is, Jones and the editorial We. But Pierce didn't. Pierce just grinned a sad, wan smile and moved on.

"Moose?" he murmured. "Oh, he means moose tracks. He'll tell you next that he has killed a moose—poor man!"

Here Pierce tapped his temple suggestively and cast a pitying look at Ivory.

Now, inasmuch as Ivory had on two different occasions brought back colossal heads from the Deux Rivieres region, We asked to be enlightened.

"Simply this," said Pierce "I have been hunting for years to find a man with actual proof that he killed a moose, but I have never found him I have found men that came out of the woods with moose, with every circumstantial evidence that they slew them, but no absolute proof. I myself have hunted moose for years. I have never killed one. I never will. Neither will I ever find a man with the absolute proof. It is like turning up the left bower in euchre; like the man that has married his widow's sister. Ah, me!"

Shedding a deep sigh, he moved on again.

But here we were, anyhow—Jones, Pierce and We The tote team was laden, the buckboard stood ready, the Indians resting and waiting. But there was nothing strange in this; the Indians were always waiting or resting. There was Chabot, Jean Dominick, Francois Landon and Peter, heir of all the Chabots. Peter was going into the bush for the first time. Before he came out we swore it would be the last time—with us, anyhow. But of that more later.

"Peter—him cook," Chabot was explaining, when something happened. It was largely in the nature of a young person in a brand new rubber coat and a song-and dance necktie.

"Well, I dunno," said he, "it's Sunday." Then he said suddenly, "Four dollars."

This was translated by Pierce into the intimation that it was $4 or no ferry. Discovering that this was the ferry hire, and not the price of the ferry line, including the Government franchise, Pierce proceeded to say things. After involving the Province of Quebec, Deux Rivieres, the ferry and the ferryman in a general disastrous hereafter, he gave up the $4 with the air of a man hard hit by a sandbag in a dark alley.

"All right," said he, as a final threat, "We'll write to the papers when we get back!"

But even this did not stagger the person in the rubber coat. Any man that could wear a rubber coat when the air was 92° in the shade would not be moved by a little thing like a newspaper. So Pierce moved on still again.

Three miles out, after shaking the dust of the ferry from our feet, we came to a whitewashed log cabin in a clearing. It was tastefully decorated with a large French flag, and had an appetizing scent of cooking things, and we at once fell out of the buckboard. We had been doing this with more or less frequency during the three miles, but this time we fell out to some purpose.

"Bernier's!" exclaimed Pierce.

"Bon jour, messieurs!" cried Mons. Bernier whereat he and Pierce fell upon one another's neck. Having been separated with some difficulty, Pierce introduced Mons. Bernier as an old friend, led him inside, and demanded a song. At this Mons. Bernier must sit down at an orchestrion, and, to add to our ravening hunger, sing the French chanson "The Swallow." It was only one swallow at that, and a scant sustenance for hungry men. But in the midst of it Mme. Bernier dragged her husband off and announced dinner. God bless Mme. Bernier; may her shadow never grow less! She saved our lives.

After that dinner the tote road! Of that road what shall we say? The purest Anglo-Saxon could not do it justice; and, anyhow, We are too polite to put it in print. Suffice that it was sixteen miles long, sixteen miles deep—in places—and just wide enough to let the trees bat our eyes out as we swept on to Hurdman's. Just before we got there, Pierce got out to shoot a partridge. No casualties; also no partridge.

Jones—his name was Jones, but that was nothing against him—had been pretty quiet up to this time. But just about this time he discovered that he owned a pair of legs. So he began to move them about, and in the midst of this altercation Hurdman's depot came into view.

"Here's the ferry," said Pierce, who had been there before; "thank heavens, it isn't $4 this time."

But it was, though Pierce didn't know then. He found out later, however. He was so busy, in fact, waking up the Indians that he forgot everything else, and by the time we were over he had forgotten even that there is a hereafter. Such language!

But before it was altogether too late some one yelled 'Tea!' and we all went in to eat. Jones ate, to be sure.

THE THOROUGHFARE.

Pierce and We looked on. It was the only chance we had, and when the wreck was cleared away Jones went out and looked at the stars, said it was going to rain, fell over a few dogs and went to bed.

And the morning; it did not rain. The sun was out, the par value had been knocked out of the thermometer, and the mercury was doing business around the 30s.

"Um," said Chabot, "cold. No got mitten. Must have 'em."

So Chabot got a brand new pair, which, for the fear of spoiling, he carefully put in his pack. That was a little way of Chabot's. Moreover, he and Jean Dominick must have talked it over. Presently Jean Dominick discovered that knickerbockers and pumps were not a costume calculated to withstand the rigors of the woods.

"Must have moccason," said Jean Dominick. He got them too, and also carefully put them in his pack. Frugal Jean Dominick. Francois, being of a mind less agile, could not think fast enough, and so missed the opportunity. However, he took it out in thinking, while Jean and Chabot patched up a trio of birch-bark canoes. This was a mistake. They should have saved time and labor by making new canoes.

"We'll start in by 8 o'clock," said Pierce the night before. At 8 A. M. he said 9. At 9 he said 10. Later on he said other things, but why should they be repeated? We got away finally, and after a carry of half a mile the waters of lower Lindsay burst upon our sight.

At the magnificent spectacle We knelt down and kissed the soil. It was a purely involuntary act, no fault of ours. We blamed a stub. However, we got over Lindsay without casualties, carried into Long Lake, skirted its precipitous cliffs and swept up Russell Stream. So far We had seen no sign of game, but at the foot of Russell Carry, Jones exhibited strong excitement. Foregathering with him, We discovered that he had found fresh tracks.

"Moose! moose!" he cried, "here's a fresh track!"

With a snort of disgust Pierce sought solitude, while We and Jones waded about in the brook, finding fresh sign. Jones counted more than 318 tracks, and was still at it when he lost count. He was beginning over again when Pierce allowed that if we had come into the woods for arithmetic we ought to have brought along a blackboard. Stung by this, Jones fell into the brook, uttered language and proceeded across the carry. Here at the end of First Russell, began what proved to be a few million remarks about the canoes and the nature of the man that owned them. In truth, the canoes were the limit. Outside they appeared to be made of pitch, patched here and there with a bit of bark. Chabot said a great deal about them, but then the Indian tongue was too simple to do them justice. An axe would have succeeded better. We traveled about 800 miles in them and found the lake water exceptionally hard. There was always about 2in. of it on the bottoms of the canoes.

From First Russell we walked to the head of the carry on Second Russell, while the Indians poled up stream. It would have saved time and energy to carry the canoes too, but it was Indian to do it the other way. Lo, the poor Indian! From there we carried over into Caughwana, where Chabot began to make bread. He never stopped it for two weeks.

"Have brought bread?" he murmured, inquiringly.

"No," said Pierce, "and we haven't brought a cow or a grand piano or a house and lot, nor a cartload of bricks and other things too numerous to mention."

So Chabot made bread.

"Why not Peter?" asked Pierce, and Jean and Francois smiled sadly, and guessed not in Indian, while Peter looked embarrassed and Chabot evasive. So we learned the fearful truth. Peter knew not how to make bread. We learned subsequently that this ignorance extended over a wide range of cooking possibilities. Reduced to its plainer form, Peter knew how to boil water and put in a potato when it was boiling. Later some one had to take out the potato; that was Peter's cooking.

At the head of Caughwana we camped, and in the morning passed on. Jones had been seeing tracks, and so had We. Pierce said we two weren't fit company for a man in full possession of his faculties.

"Tracks! Bosh!" said he in disgust. "There may be one moose in a million miles of here, and he's got a million legs. He's hired by the Government to make tracks to keep up the reputation of the woods. Even if you did shoot him, the people would lynch you for destroying their means of livelihood. Say, what do you think this country would do, anyhow, without that moose to make tracks for greenhorn sports? Bah! you make me tired!"

The trouble with Pierce was that he was soured. On four different occasions he has called up his moose and wounded it. Each time it has got away, and when anyone says moose he always talks about his past. Say moose, and he'll tell you the story of his life.

But we pacified him at length, and when each of us, to the intense gratification of the guides, had sacked about 300lbs. apiece across the carry, we paddled up Rasicot Lake. Jones, who had brought along a surf rod, tried to derrick out a fish, but didn't get a bite. We did though—that is, bites, because the black flies were numerous and impulsive; and it was Sept. 28 at that.

At the Thoroughfare, between Rasicot and Hamilton, Jones got out his gun. He had been seeing tracks again. We pitied him, but there was some reason for it after all. Nowhere in the wilds is a spot more calculated to entice moose than that same Thoroughfare. It is a sluggish, mud-bottomed stream running between boggy banks, and fringed by a dark and almost impenetrable swamp. We called out a big bull there subsequently. But We didn't get him. Hence these tears.

After a brief but spirited argument with the Indians we pitched our tents on Hamilton, forty miles from Deux Rivieres, and in the same spot where Pierce and Ivory had camped two years before.

"It's the same place," said Pierce. "Here's the same table, and there's Ivory's old weather vane, and there's the same pond, and no doubt Jones 'll go out and find the same old moose tracks we found."

Jones grinned. Chabot made bread. We rested, and the Indians pulled boughs for the beds. Jones and Pierce had new-fangled sleeping bags, and insisted upon stringing them on poles in the form of cots. The result of this was that they froze with patient regularity each and every night. We slept on the boughs in a bag made of Hudson Bay blankets and a square of rubber cloth. It cost $6; theirs cost much more, not including cough medicine. The open space under their bags caught all the cold air in the country, but they wouldn't change. They had paid out dollars for their bags; they were going to get their money's worth. They got it.

That night, with the camp nearly completed, We slept. So did the Indians. But Pierce and Jones lay awake with the weather, and swore at the cold and tied themselves in knots. Jones had on everything but his boots, and shivered so that the trees were in peril. It took nearly a cord of wood to warm him in the morning, and then we were sorry we did it. With the warming he recovered his appetite.

"Get um that moose to-day," said Chabot as he shoved off. "Try round mountain over there. Good place for big moose, that round mountain."

Thus We began. When We struck that round mountain We found it to be like the remainder of the country—windfalls, swamp holes, mud and indiscriminate water. For five hours We walked, admired the scenery and saw tracks, but no moose.

"Big moose here," said Chabot, "big feller; run hard, catch 'em cow."

At the end of the fifth hour it grew monotonous.

"Let's try calling, Chabot," We suggested.

So Chabot began looking up at the trees. Presently he dodged off in the bush, and the silence of the woods was the only thing left for company. It was painful, so We smoked. It was wrong, to be sure, but it was consoling to see the thin blue cloud drift lazily away into the infinite distance. Half an hour later Chabot came back scratching his head.

"Injun feller cut bark here; no good now. Go across pond."

So We went across the pond, where Chabot got a square of good, stout bark. Ten minutes later he had fashioned a horn that made up for its lack of beauty in resonant tones. He was grinning all over when it was finished.

"Good horn, that," said Chabot, "you give 'em call."

We called—softly and with dulcet tone.

"By gar!" exclaimed Chabot, "you call 'em that moose sure enough."

That was Chabot's compliment. It was his only one. It meant business, and We bowed. Then back to the round mountain we went, Chabot grinning like an ape. Up to the crest the two of us toiled, and Chabot climbed upon a stump.

"I call now," said he, "you call 'em by-an'-by. Throat get sore then."

Picking up the horn, Chabot hitched up his trousers, spat meditatively, and began his Wagnerian obligato.

"E-ee—e-yunh!"

Nothing happened.

"E-ee—e-yunh!"

No answer. Chabot spat again. Filling his lungs, he braced back his shoulders and let her whoop.

IN THE LAND OF THE VAMOOSING MOOSE.

"Muu-uu-o-oo-ooo-ooo-o-o-o-unh!"

The call boomed through the forest silence, filling the wilderness with sound. A meat bird, far in the distance, cackled in reply. Then silence held her own again. Chabot, with the horn held to his left ear, lay in wait for vagrant sounds. Once a twig broke sharply down at the foot of the hill, and Chabot's eye glistened.

"Coming!" he whispered.

Chabot was wrong. The moose was going. We discovered that later.

"You take that horn—blow good. Chabot's t'roat got sore."

Twenty minutes later We called. There was an answer-

ing crash in the distance—very much in the distance. Then silence; nothing but silence. For two hours more We and Chabot whooped and bawled and coaxed and wailed through the horn, and heard a variety of remarkable echoes. But no moose. Then we went home.

The next day We took up the track again. Through swamp holes, blow-downs, bogs and meadows, it led us a merry dance. Thus We acquired the "windfall walk," as Jones called it—a knee-and-hock action fit to put a blue-ribbon hackney to shame. Chabot said we had walked eleven miles; We guessed 1,100, there being a difference of opinion upon the subject. Also, at eventide, We split the solitudes with the booming notes of the birch-bark horn. No moose again. Only tracks, millions of tracks.

The third day, with Pierce and Jean Dominick, we portaged into Line Lake, where Ivory shot a tremendous bull three years ago. The sun shone upon us, the black flies were at it again, and Pierce smoked like a furnace. At the head of the pond we got ashore, fiddled about in the bush, discovered new ponds, and at 3 o'clock came back to the canoe. On the way up Pierce pointed out where he had called in a moose two years before, and had shot it in the leg. He never saw the moose again, but he wasn't astonished.

"Just my luck," said he. "What's yours? Try the horn once."

It was already beginning to grow dusk, and at the same time bitter cold. Suppressing a chill, We tilted up the horn and let her toot.

Crash! spang! One on the edge of the mountain, the other within the swamp.

"Look out!" said Jean Dominick, "coming now."

For an hour we waited, while those two moose pottered about in the bush. We never saw hide or hair of them, and after freezing till we threatened to capsize the canoe with our shivers, we gave it up in disgust.

"Must been cow," said Jean Dominick; "maybe too him muckwa—that Injun for bear."

So passed the third day, and likewise the fourth. But the fifth—much different. At 10 A. M. We picked up the track of the big moose on the round mountain, and hung to it with grim determination. It led us through a country worse than a hypocrite's hereafter, and toward nightfall bent toward the pond. Hour after hour We expected to come up with the brute, but he was always just a little ahead. Once We heard the brush crack in his passage, and We kept on with redoubled speed. Once Chabot thought he saw him, and pointed a finger through an opening in a maple ridge. There were his tracks, with the water seeping into the marks; there was the moss still crushed under his tread; there was a broken twig, the fracture still moist. But no moose. He was always just ahead.

At dusk we gave it up, and with flagging footsteps slouched down toward the canoe.

"By gar!" exclaimed Chabot, "that moose walk hard. Most dead now—walk so far."

Still We knew he had not scented us, and was somewhere near by.

"You take 'em horn now," said Chabot; "maybe you call 'im out."

Chabot thrust the canoe away from the beach, and when it had come to a rest We took the horn. The day was waning fast, and the mouth of the Thoroughfare lay dark and gloomy on our right. Noiselessly Chabot turned the canoe about until it faced the opening of the stream, and the wailing bellow of the horn uprose in the evening quiet.

Crash! bang! crash—crash—crack—crash!

Hardly 500yds. away the bull had heard the first soft call, and was coming quick.

"Get gun! gun! Quick!" hissed Chabot.

Leaning to the paddle, he sent the canoe surging down toward the lane amid the tree-tops that showed where the Thoroughfare lay. The last twilight had gone out like a candle in a cyclone, and the feeble light of the growing moon was all that held. Crash! bang! crash! came the big bull. Once he snorted—unh! unh! unh! Straight for the Thoroughfare he galloped, and then in he went—splash! splash! splosh! like cattle in a mill-pond.

We could see the white water fall away before him as he lunged over the muddy bottom, but against the dark background he did not show. Once We raised the gun to shoot at the splash of foam, but in that light We could not even see where to hold.

"Wait! wait!" hissed Chabot, "get 'im on bog."

There was reason in this. On the bog the moose would stand out against the sky, and give some sort of a shot. But the bull ordered differently. Changing his course as he reached the edge of the bank, he turned westward and away from us. Then We heard him crash ashore, and once a black shadow flitted from bush to bush. That was all.

"Eee-yunh! eee-yunh! ee-eee yunh!"

It was Chabot calling. Plaintively, seductively, he wrung notes from the impassive birch-bark that were fit to rend the human heart. For a moment the bull paused, and we thought he had turned. Once he stamped and then plowed his horns through the bushes. In answer Chabot imitated a cow walking in the pond—splashed the water to and fro—and then as a last resort dribbled it from the end of the horn.

But the moose went on, unmindful of the wailing horn. Half an hour later he came back toward us, splashed into the Thoroughfare half a mile west, and then We heard him no more. In disgust, not to say despair, We retired to camp.

Pierce and Jones in the meanwhile had gone fishing, Jones with his derrick and Pierce with an 8oz. split-bamboo. They had fished for half an hour in a pond fifteen miles away and then had given up in disgust. Jones had twenty trout, Pierce twenty-six.

"You don't call this fishing, do you?" said Jones. "This, in my mind, is a slaughter of the innocents."

One of the trout weighed 5½lbs., the smallest 1¼. We, however, had only a disgust and a sore throat, and said so.

"Yes," murmured Pierce, "there's a fortune in a machine that will make a moose-call."

"Pish, tush!" said Jones, "there's a bigger fortune in a machine that'll make a moose come."

Jones always was a wag. He threw Pierce overboard once and then blamed it on Us. That was his idea of a joke.

And so it went. Day after day and disappointment.

"See um that moose to-day," said Chabot one morning. But as Chabot had made this remark a dozen times before, We smiled and said nothing. But just as a fling at fortune We stowed a camera into the canoe and pushed off. Then from pond to pond we went, and at 3 P. M. came back to Line Lake and the scene of Pierce's former exploit.

Chabot called, and in answer came a crash in the bush. Whipping the canoe around, he sent it springing toward a wooded point 100yds. away. With gun cocked and at shoulder We waited. Around the point sped the canoe, and there stood a moose. Sadly We lowered the gun.

"Shoot! shoot!" said Chabot.

"Cow, Chabot," said We in a far-away, conversational tone.

"Dam!" said Chabot. That was all, but ah! what a depth of feeling he put in that single word. To be sure, a cow moose is legitimate prey in Quebec, but who would shoot a cow? I blush to say two New Yorkers on Caughwana Lake did it though, and then came over to our canoes to blow about it. Jones asked them mildly whether they had been in need of milk. But they didn't see the point.

But there stood the cow eyeing us mildly, and a moment later in came a calf.

"Kadok! kadok!" Chabot suddenly whispered, and then We remembered the camera. Lifting it to the edge of the canoe, We let her snap. The moose stopped feeding on the lilypads and waved her left ear. Once again the camera snapped.

"Hole on," whispered Chabot, "get nearer, maybe."

The next instant the canoe was lying alongside a log, the other side of which was shared by the cow and the calf. She had lost her mildness now, and the hair on her hump had stiffened up. She did not look too tame, and as the canoe edged toward her We had visions of journalistic headlines, such as: "Mangled by a Moose," and "Gored by the Game," and the like. But when we were 6ft. away the cow lunged suddenly at her calf, butted it on the southwest exposure and drove it before her into the woods. But before she was gone We got four more snap shots and a tender adieu.

How We ever managed to get within 6ft. of that cow only she can tell. If We ever meet her over the teacups We'll ask, but all that can be suggested now is that the wind was

THERE STOOD THE COW EYEING US MILDLY.

Photo by Maximilian Foster.

in our favor and the sun in her eyes. Still she should have had more discretion; it ruined faith in a few thousand hunting stories We have read.

"What I tell you?" said Chabot. "Say see um that moose o-day."

"Well, it was worth seeing, Chabot. Worth the price of admission, in fact."

"Chess," murmured Chabot, that being his way of saying "yes."

The next night We had another adventure. So did Pierce. So did Jones. Pierce fired at a moose in the dark, missed it, and was filling the woods with lead when he discovered it to be a cow. Jones fired at a moose, scratched it, and the moose got away. Jones swore it was a bull, but Pierce said more likely it was a nightmare or lunacy.

"Must kill moose to-night," said Chabot, as we reached the carry on Line Lake. "Stay all night, kill moose."

So Chabot paddled up to a rocky island at the head of the pond pulled the canoe ashore, and the two of us took turns at calling. After drawing blank for an hour, Chabot gave one particularly artistic howl on the horn and then held up a finger.

"Coming!" he whispered.

From a far distant swamp arose a curious sound.

"Chip—chip chop-chip-chop," just like a man chopping wood.

For half an hour the moose came toward us, chip-chopping every other minute. When he got nearer he began to say "Duck duck-duck!" and then "Unh! unh! unh!"

It was very interesting. It was also very cold. We shivered. So did Chabot At the height of it We heard from the other end of the pond another moose coming—"duck-duck duck." He was just getting into the "unh! unh! unh!" stage when a third moose lifted up its voice in the night.

"T'ree, by gar!" exclaimed Chabot, "hear um fight soon now!"

Of these three the first moose was the most earnest He must have been three miles away when we heard him first. The air at the time was dead—not a breath stirred the trees upon the shore. Presently the first moose fell over a tree and made noise. The two others at this withdrew, and the premier bull came on. Still grunting, he came up to within 200yds. of the shore, and then began circling around the bay.

He was very cautious. Now and then a twig snapped, and this was all that marked his progress. At intervals We and Chabot chirped a subdued note or two on the horn—"Eee-yunh! eee-yunh!" Also, Chabot beat a bush with the horn, and the bull beat other bushes in reply.

"Come out on bog dere," said Chabot, "best get in canoe."

We pushed off, and the bull came on. He was heading straight for us, and five minutes would bring him out. And then—ah! more bitter than hard-boiled tea—the wind arose. Chabot felt it and prayed. It didn't sound like white man's draying, to be sure, but was more like what the pale-face says when he hits his thumb with a tack-hammer, or when his mother-in-law comes for a long visit. At any rate, Chabot's appeal to his Manitou didn't work. With one vengeful blast the wind whisked our scent across the bog; there was a crash in the bush, and the next minute we heard the bull go banging away into the distance, his horns clattering like a lath upon a picket fence.

So, sore depressed, We waited an hour and called again. Along toward midnight We got another answer, tolled in a fourth bull, and a whisk of wind sent him away on business. Still another hour later a fifth bull lent ear to our music; the wind did it over, and Chabot's language became satisfactory, but impolite.

Then home across the carry We went, through a night blacker than pitch and across country that tried men's souls in the daytime. An hour before dawn We struck camp.

And so it went on. But for what reason, can any tell? Chabot thought it was because there were so many cows in the country. Every one saw cows. Everywhere We went were cows. We even caught them in the pond. Jones stopped talking about tracks, and told about cows.

"Gosh!" said he, "you ought to have seen the cow I——'

It was too much. We got up, and left him alone in his shame. Then he tried to tell us about a big bull track he had seen. We shunned him.

"How do you know it was a bull?" snorted Pierce at length.

"By the smell, of course," said Jones.

"How?"

"By the smell. You take two tracks—bull and a cow's—smell 'em; and if it does it isn't, and if doesn't it is."

"How simple," murmured Pierce; "just the way you tell the difference between a skunk and an onion"

The luck was against us. We saw fresh signs everywhere, called in moose after moose, and could not get a shot. Sometimes they would just hop into the pond and out again, and while we waited for a better shot in the dark, were gone, and forever.

We shot just one moose—a bull. But when the time comes to tell about it words fail us. It was sadder than golf. Some other time—but not now. *Adios*

MAXIMILIAN FOSTER.

A CHRISTMAS TURKEY SHOOT.

SOUTHWESTERN Arkansas was a delightful place to linger in in the late December days, and there was good shooting, while for character studies it was an ideal place. Between the Badeau and the Red River there was some good quail and squirrel shooting. I had temporary quarters with a farmer near Lewisville and had spent several days shooting quail. One day I wandered into the timber and brought out a lot of squirrels. My host looked at them, and fine large fox-squirrels they were, with something akin to contempt and asked: "Do you kill squirrels with a scatter gun up Nawth?"

"Yes, sir, as a rule, although a few affect the rifle. I have only this light shotgun, and in fact I never used a rifle on squirrels." As this was early in the 70s, my gun was a 12-gauge muzzle loader, and he had seen me do fair work with it on quail.

"Take my little rifle in the mawnin' if you want to shoot squirrels, for they ain't a ten-year-old boy 'bout yeah that would use a scatter gun awn a squirrel. No, sir, they'd pick 'em in the head ev'ry time, ef they didn't bark 'em. But in Arkansaw we are brought up with a rifle, an' we never thought that a Yankee could shoot one until Berdan's men picked off our gunners very neat at Fredericksburg. I got it in my hand when I stuck it above the works to load. See here." And he showed me his right hand where a bullet had gone through.

"You got your discharge on that, I suppose; it must have taken out some small bones and made a bad wound at the time."

"Thirty days' leave was all I got then, but I got it in the shoulder and in the leg at Cold Harbor next year, and that knocked me out."

"Many a good man on both sides got knocked out there, but I didn't."

"Was ye with Berdan?"

"No, I was not a sharpshooter."

"I'm glad to know it; I hate them fellows, for they'd watch and pick off a man when they was no fightin' goin' on an' when he didn't expect it."

"That's so, Mr. Johnson; but you said something that I didn't quite get the meaning of. You said that the boys always hit a squirrel in the head if they didn't bark 'em. When a boy barks 'em how does he do it?"

"Why, he just puts his bullet in the bark under the squirrel's belly and lifts him into the air dead, 'thout a mark on him. That's fine shootin', fer the bullet must hit jess the thickness of the bark under the squirrel, an' not go into the wood. My brother Sile is coming over to a shootin' match to-morrow, an' he's a good one with a rifle. You ought to go over to the shootin' match an' see some fun. I'll let ye have a hoss an' we'll ride over, an' ye can enter in any of the matches if ye choose; we always have a turkey shoot on Christmas."

"I'll go, but I'm not a rifleman, and prefer to look on. I met your brother Sile, with a lot of the boys from Prescott, Bourland's store and Falcon, at a gander pull last October, when I was there,* and I'll be glad to meet him again. At first he wanted to know if I was the man who shot him in the 'laig' in the Wilderness. He said that some one shot him, but who it was, and what they shot him for, he never knew. He has hard feelings toward the man who shot him in the 'laig,' but he realizes that it might be some other man, and we are friends. What's the shooting match to-morrow for?"

"It'll be for turkeys in the mawnin' an' for a bull in the evenin', an' they'll be lots o' fun. I'll see that a hoss is on hand in the mawnin', an' we'll go."

The darky boy, Sim, was holding my horse at the gate when the sun was just looking over the hill to see how the world looked on Christmas morning. The fog hung over the rivers and marked their courses for miles, and as I came out of the gate and said "mawnin'" to Sim, a high-hole flew across the road, just timing its undulating flight so that it cleared each fence, dropping almost into the road, and after seeming to alight on the other side gracefully sailed up and alighted on the bark of a stub, and began searching for a breakfast of insects, worms or the different sorts of larvæ or cocoons which hide in such places in order to afford the

*See FOREST AND STREAM of June 20, 1896.

woodpeckers a winter repast. Seeing my interest in the bird's movements, Sim said: "Dat ah's a clacker-mouth, an' w'en he finds a good feedin' spot he jess clacks till he calls all the clacker-mouths, an' dey come an' help eat what he finds. Jess lis'en to him clack now."

I had known the bird by the name of high-hole, high-holder, yellowhammer, clape, flicker, wakeup, dodger and pigeon woodpecker, as well as by the book name of "golden-winged woodpecker and the cognomen which cold-blooded science gives it, and the new name of "clacker-mouth" seemed as good as any.

I put my foot in the stirrup, swung my right leg over the saddle, and Ben Johnson, Sim and I started off for the shooting match, some six miles away. A crossroads tavern in Arkansas is much like the same thing in other parts. The bar is the main part of it and is the largest room in the house, for it is also the office, reading room and barber shop, and a chance traveler is fed and lodged up stairs. Across the road a temporary shed had been put up, with rude tables and shelves for the shooters. We were early, and as the darky, Pete, had moved his barber's chair into the woodshed and taken the crates of turkeys into the field, I had no doubt of gaining his confidence by a direct method. "Pete," said I, "you see dis yere dollar?"

"Yass, sah. I sees it."

"Well, you keep it. I may want to go out and see you put up the turkeys some time to-day, and that's for you to remember me by; you'll know me when you see me again."

"I 'specls I knows you, sah, fo' shu', but dat ah place whah I puts up de tuckeys is dange'us, caze de bullits might come when yo' ain' lookin'."

Up came Bill Turley, the man whom it was "not safe to go projectin' around," and Sile Johnson, brother of my host, on the same old bay plow-horse with white feet which he had ridden some weeks before at the gander pull. They dismounted, and Sile said: "Cunnel, I got drunk at that gandah pull, an' I gin'ally do git drunk at gandah pulls, fo' a man can twist a gandah's head off as well w'en he's drunk as w'en he's sobah; but thah's a shootin' match on to-day, an' a man who's got a dozen drinks in him can't shoot a rifle; he can't do it if he's only got fo' drinks in his carcass, an' I'm heah to win to-day, an' I don't take nary drink till the thing's ovah."

We men of the world are not surprised at such talk. Sile put the case fairly, but as Bill Turley never went astray to seek the worm of the still there was no such explanation, nor was there need of it.

I went out with Pete, and saw the hole in the ground where he and his turkeys were, and I counted forty birds, gobblers every one of them. I turned back to look at the guns. The horses were tied to the long hitching-pole, which is a prominent feature of every country store or tavern in the South, where all men ride horseback. There was a rack for the guns, and while the greetings were going on I looked them over.

There stood six of the old-fashioned Kentucky rifles, with their narrow, thin stocks deeply cleft at the butt-plate and stocked to the muzzle. I had not seen one in a dozen years, and the shooting match came off over twenty years ago. These rifles were of different calibers, but all had the brass-bound box for carrying greased patches in the stock and had the same faulty balance of the old-time rifles, for the theory was that the weight should be at the muzzle or the arm could not be held steady. Jo. Bevins, the blacksmith, said, as he recognized me, "That's my gun, and it's the best rifle in Arkansaw. Wait till you see me knock 'em. Just look at that thing Sile Johnson's goin' to shoot, with a peek-hole fo' a sight. Say, Sile! what is this thing, anyhow?"

I had picked up the gun and saw that it was a patent-muzzle target gun made by Billinghurst, Rochester, N. Y., and while heavier than the others was better balanced.

"That thing, as you call it," said Sile, "'ll show you what it is afore the day is ovah." Then, turning to me: "That's one o' yo' Yankee guns. When I was shot in the laig in the Wilderness an' went to the hospital they brought in one o' yo' sharpshooters who was shot through the chist, an' this yere gun was in the stretcher with him, an' they set it up by him as he lay on the barn floor by my side. He was fevery an' I nussed him as well as I could, kept wet cloths on his haid an' wet his lips. But he knew he was a-goin', an' he give me some papers to be sent Nawth an' his gun. I had trouble to get that gun in the ambulance when I was moved out, but thah it is, an' Bill Turley an' me's a-goin' to shoot it when it comes to rest shootin' fo' the bull, and we'll use his Sharps rifle awn the turkeys."

Wes Martin had an U. S. Springfield rifle, model of 1862, one so familiar as to need but a glance. Pete had a turkey in the box and the box had a hole in the top, through which the royal American bird, which Ben Franklin thought should be our emblem instead of the uneatable and tyrannical eagle, could stick its head and a portion of its neck and dodge a bullet, after the bullet had passed. The box containing the bird was protected by a barricade of logs so that the small mark of the bird's head, at twenty rods, was all that could be injured, and a winner must "draw blood or kill." In the South and West they reckon distance for shooting in rods, which my training requires to be reduced to yards in order to understand, and with a pencil I found out how far twenty rods was. The men all paid the entry fee, entitling them to one shot. If the first man got the bird another was put up, until each had a shot.

Jo Bostock led off after the whistle had warned Pete to get into his bomb-proof. The turkey dodged. "He's hit," said Abe Peters, but Pete's flag said "No," and Sam Stillman stood up and took long and careful aim. I was never a good rifleman, but Sam dwelt so long and his muzzle went off and on the target so many times that when Pete signaled a miss I was not surprised. "I'll bet five dolla's I touched him," said Sam.

"I'll take yo' fo' the drinks when the shootin's done," said Sile; and we all went across to inspect the head of the turkey, which was as clean and free from blood as when placed in the box. On the way back Sam confided to me the fact that he was the best shot in the whole State of Arkansaw, and that his old Kentucky rifle was the best gun that a man ever put to shoulder, and how it came about that the turkey still lived he did not know. "These niggahs," said Sam, "yo' can't trust. A half dollah, an' less, will make 'em signal that a tuckey is not hit when his bill has been shot off an' he's a-bleedin' like a bull. I have nevah missed befo', an' so I lost my bet because I did not trust that darky boy."

Wes Martin got the first turkey with his Springfield rifle, which they said was an extra good one, and there was a great difference in their shooting qualities, I went out and lay in the ditch with Pete to watch the turkeys. Pete protested that it was "dange'ous," but I kept watch of him and his signal flag. The sing or the wind of a close bullet would make them dodge with a ducking motion, as if avoiding a bee, but one that Sile Johnson's bullet cut on top of the head seemed dazed until taken from the coop, while one struck in the bone of the neck flopped about as if its head was cut off.

That morning when all was over I got the record, which was:

Name.	Rifle.	No. of Shots.	Turkeys.
Sile Johnson	Sharps	22	8
Bill Turley	Sharps	23	7
Wes Martin	Springfield	26	6
Jo Bostock	Kentucky	31	5
Ben Johnson	Kentucky	24	4
Abe Peters	Kentucky	31	4
Jo Bevins	Kentucky	33	3
Sam Stillman	Kentucky	35	3

The modern rifles were winners, although the landlord, John Brewster, said: "I tell ye the guns has got little to do with it, it's the men behind 'em. Sile, Bill Turley an' Wes Martin kin shoot the rags off the whole crowd if they swap rifles, that's all there is about it, it's the men." It is possible that there was some truth in what the landlord said, for I had studied the poses and style of shooting. Sile and Turley both stood erect and did not extend the left arm to its full length, slowly raised the muzzle and fired when the sights touched the target. Martin moved the muzzle from left to right and fired when he caught the target. The others extended the arm, leaned back to counteract the heavy muzzle, and most of them pottered about, especially Stillman, who dwelt on his sights as if shooting at a rest, and he was unsteady.

A luncheon was set out and cold ham, hot corn dodgers and coffee appeared in profusion, and after we had had our fill the darky boys found a feast. A turkey at that time and place was worth about half a dollar, and the landlord certainly had made no money at a dime a shot, with luncheon thrown in; for the bar had been neglected, every one there knew that drinking and rifle shooting were not good company; but the shooting for the bull was to come, and after that the landlord's harvest. There was to be an intermission of a couple of hours, and as I had heard enough rifle talk I got our boy Sim to go with me to a stream a few miles away, and we mounted and rode away from the smell of gunpowder.

Sim might have been forty years old with a leeway of ten years on each side of that figure. The song: "All Coons look alike to me," had not then been written, nor was a darky called a "coon" in those days; but I never could judge of the age of a colored man, but he was a "boy" in the South until gray-headed and "de misery pains" laid him up. Sim was much to my liking because he was an observer of the small life about him and had a fund of information on their ways and habits. After a gallop of a mile or two to get where the fusillade had not disturbed life, we slowed down to a walk, and Sim, knowing that I liked to hear him talk on his favorite subjects, began:

"Jes lissen to dat ah jaybird in de bresh; he gittin' ready fo' Friday, w'en he got to take sticks to de debbel fo' to make de fiah bu'n fo' a week. Ef he miss a week de debbel singe hees tail, an' so he calls out dat he's a comin'. De jaybird he's de slickest one dat's got fedders; slicker 'an a crow, um um! He can tap a mockin'bird's eggs froo de bottom ob de nes', an' suck 'em so slick she nevah know it w'ile she's a-settin' awn 'em, an' a crow nebber so slick like dat. No, no, a crow am slick an' can smell gunpowdah in a powdah-hawn, an' knows ef a man's got a gun, fo' ef yo' ain' got no gun yo' can walk o' ride close by de crow; but de jaybird's got de bes' edication, 'cause de debbel is his massa."

"It must take many bluejays to keep up the fires down below, Sim, if all the fuel they get is the few twigs the jaybirds can bring."

"Yo' ain' got it jess right. Dey's a heap mo' fiah down dah. It's all red hot, an' in some places it biles obah on de tops ob mountains; but w'en Noah let de jaybird outen de ahk de jaybird he up an' sass ole Noah, an' tole him dat de dove dun pick up de olive branch floatin' on de watah, an' he could get mo' twigs in ten minutes dan a dove could pick in all day, an' so Noah he tu'n de jaybird ober to de debbel, an' dat's his punishment."

We saw many interesting things on this ride, and Sim stored my mind with much animal lore which can't be related now. On our return we found the bull out for inspection, and a fine dark-red short-horn he was. After all had seen him he was led back to the stable, and, lest some kind-hearted persons should think that the bull was to be the target, like a turkey's head, I hasten to explain the scheme. The shooting was to be at a target placed three times as far as for the turkeys and the rifles were to be shot at a rest. Eight men more had come to shoot and their rifles were all of the old style, but they had as many calibers and shapes of bullets as there were men. There were five quarters to the bull and therefore five prizes. The two first took the hindquarters, the two second the forequarters and the fifth was to take the hide. There was a table with a notched rest for the muzzle and a stool for the shooter. The score was the old-fashioned "best three in five"; not the best test of skill, but they chose it. Sile Johnson shot first and then adjourned to the bar. What the Governor of North Carolina is reported to have said was on his mind. Pete put up a fresh target for each man and two hours passed while I watched the contest. Pete had the targets marked for each man by his number and no shooter knew how he stood.

Sile Johnson and his brother Ben, my host, had been at the bar and were feeling very numerous. They came over and Ben said: "See heah, Yank, we want to see you shoot. Some Yanks can shoot an' some can't; one hit me in that hand, see?"

Bill Turley came over and remarked, *sotto voce*: "These Johnson boys have done their shooting, and are now doing their drinking. You have not taken a hand in either; you held back at the gander pullin', but I want you to take this Yankee rifle and shoot in a friendly match with us."

I took the "Billinghurst" rifle and made five shots, and waited for Pete to come in with the targets. The judges gave the hindquarters to Sile and Turley, the forequarters to Martin and Bostock, and the hide to me. That was three prizes for the "Billinghurst," one for the "Springfield," and one for the "Kentucky" rifle, and by this term I mean all those full-stocked, ill-balanced American rifles which were not only popular with our hunters of a century ago, but which won our independence from foreign rule over a century ago. There was an old song entitled "The Hunters of Kentucky," which some reader of FOREST AND STREAM will be sure to send to refresh the memories of all who read it.

After the prizes were awarded the fun began. Bill Turley and I did not care for the bar and we got Pete, the barber, to get his banjo down and matched Sim and Mat, a waiter boy, to dance for our prizes. Pete started off in a $\frac{3}{4}$ time and Mat started in. That is clog or hornpipe time, and Sim appealed to me. Pete declared that it was "straight jig" and the only time he knew. The crowd gathered and Sim was sulky. I took him outside and when we returned he scattered a little dry sand on the floor; I took the banjo and played him a rattling straight jig in 2-4 time, while his doubles and trebles tickled the ears of all present. I could hardly follow him in my ecstasy, for to me a straight jig on a sanded floor is the highest form of music. I say "music" advisedly, for you need not see the dancer; you may close your eyes and listen to him, as you may do to any soloist; he is to be heard and not seen, like "the little man in the tin shop," as James Whitcomb Riley describes the man on the right of the theater orchestra.

The sun had gone down and the landlord, John Brewster, asked all hands in to supper, and there was roast turkey, boiled ham and roast possum. On our way home Sim said: "Golly, we boys was 'fraid you uns eat all de possum, but two was lef' an' dey was good, um—ah! Miss Brewster she kin jes' cook possum; she hang him out in de frost fo' free nights an' den she roas' him wid sweet 'taters an', golly, it's great."

FRED MATHER.

WE FOUND THE WORLD AGAIN.

THERE were strange noises in the air; dim, distant whisperings, mutterings and wails from the wind moved pines and firs.

Fog was everywhere, until the world was only a lonely bit of rock that faded into nothing, and the black lake that nestled among the cliffs of the crater might have been a sea of limitless expanse, for no man could see the further shore.

Everywhere the fog wreathes twisted and moved, wound up from below through the crevices, and skurried across the rocks, leaving tiny globes of water on the moss tips.

Sometimes a darker loom of gray appeared for a moment at some point, and we knew that it was the cliff that stood there—yesterday a painted wall of smooth-worn rock, to-day a vanishing bulk in the mists.

The poor old wind-racked balsams tossed their arms once more, and chanted a doleful tune as the wind eddied around the point of the cliff. Noises of the woods, faint and far off, welled up to us with the rise and fall of the wild wind, chanting a low-toned weird wail like the Klookwallie song of the Quinaults, only this was a song of nature, that rose and fell in the gusts that reached the crater.

By the echo that came back when we called, we knew that the cliffs still reared up into the sky straight above the black lake, just as they had done on me yesterday when the fog was in the valley and sunshine dwelt on the crater peak; but, for all the eye could distinguish, the peaks, the world, all, everything was gone, save a bit of rock and glacier on one side and a fragment of black lake on the other, and our meager camp between.

Our grub was gone—just one more scant meal left—and we must perforce pick our trail back to the lower country, for you must know that in the country of the silence there is no game, no fish, no love, no pity. One may not live for long in that land of beauty and solitude.

When I had gazed on the world from the topmost rock there was a valley to the east of the crater I remembered, and it had seemed a good place for traveling through, though rough, and so I said: "It will be worth the while to cross the pass and pick our way down to the world by way of the valley bowl there to the east, for we cannot attempt to go back the way we came up; you know that would be a hard thing to do if we had a day of sunlight. Now this way that is to the east is a bowl valley, with the upper end at the glaciers and the lower end half way down the mountain, and the rocks have fallen from both sides down into the bowl, as though mighty hands had shaken the cliffs to bits. The way is rough, but safer than swinging down from a cliff by a thread of rope. That could be done in the sunshine, but not now while the fog hangs thick, for the bottom of the cliff would be lost to sight."

There was not much parley that morning, for men do not wish to talk when the world is gray and they are like blind men.

Soon the packs were slung on, and we began to climb across the little wall of rock that kept the lake from rushing down into the valley. We reached the summit, and then by a mental process of dead reckoning, which I cannot explain, I knew that the way led downward and in a circling way to the east and north. I was the only one of the party who had seen this valley, so it remained for me to become "Indian" and guide.

Do you know what it is to "feel" that the direction is this way or that, regardless of landmarks or compass? Have you ever known that you were going in the right direction, though you wound around until you almost doubled on your trail?

That was the only guide I had to go by as I clambered over those broken cliffs there in the fog, coming back to the world again.

It was an uncanny place, that valley, and seemed to be the dwelling-place of silence and of mystery as we traveled along, always downward, always over the heaped-up fragments of shattered mountains, so old that the moss was thick on them, so jumbled together that at every turn black openings yawned—caves that ended somewhere down deep in the great mass of broken rocks.

It is weary work to climb even though you climb downward, and we rested and waited for breath at every 200 or 300yds. At these times we could hear the rush of wind high above us, right in the air seemingly, and still in the valley there was no wind—only the dim and ghost-like shadows that we knew were trees and great boulders; and once as we rested the fog cleared from the top of a cliff not far away, and there, by a freak of the broken outline, appeared a giant face—a witch head with hooked nose and chin, high cheek-boned and receding forehead, deep-set eye and fanged jaw—so real that it might have been carved by the hand of man, but for its size, 500ft. or so from crown to chin, a fiendish face set in a frame of swirling fog that drifted slowly athwart it and thickened until the old witch face vanished. Bluie saw it first, and pointing said: "Look! the witch's head of Rider Haggard!" And it did fit his description too, from its weirdness, and the way it came and vanished there in the fog of that grim valley.

Of course we did not pass all these broken rocks without

a look, but cracked off pieces here and there where the stain of mineral showed (as it did in almost every piece), and fragments of stone went into the packsacks, and when we tested these later we found gold, silver and copper in them, and with each there was iron and arsenic; so we shall go back to the valley of the witch head that is in the country of the silence some day when the sun shines and we shall follow the float up to the walls where it broke from the ledge and there perhaps drive a stake or two.

All things must end, so in time we climbed down out of the valley and stood among the giant firs that met it half way up the mountain, and here the fog hung to every bush and dripped from the treetops like rain. So we stopped and stripped, putting our underclothes into the packsacks, that we could have dry clothes to put on when we reached the cabin by the river far below.

The air was cold with only our outside clothes on, so we started down through the wet timber at a pace that reeled distance off very fast, and when a slide came into view we jumped into it, hit or miss, and standing up with the gun stock thrown back to steady us, shot down those raceways of loose stones and dirt like three toboggans.

At 4 o'clock we slid down into the little cañon from the east slide, wet, tired, covered with the dirt of the mountain, the heavy nails torn from our shoes in our mad flight in the many slides, but out of the fog and back to the valley where the river roared down to the sea, back to the cabin that stood on the bank, back to the camp we had left to climb up to the crater, back to the world that is far below the country of the silence, which we knew was somewhere away up there in the gray sky that came down to the treetops in the river valley.

Three men, if they be hungry and wet, can do things quickly, especially if they be three men who know how. That is how it came about that we sat down to a hot supper before the darkness came, and we had dry clothes and a good, warm cabin too, which we all concluded was better than standing watch and watch away up there in the silent country where the glaciers are born.

El Comancho.

CHRISTMAS WEEK SCRAPES.

This was in the early fifties. Our uncle had recently purchased a plantation on one of the tributaries of the Chesapeake, rich in ducks, while the fields had quail in lavish abundance, and the swamps were full of coons and squrrrels. Nothing could be more inviting to John and Tom, two young larks just, we will say, blooming into gunhood. Our uncle would almost weekly ride up—only about twelve miles—on a visit to the old folks, bringing with him on each visit the increased abundance of ducks, etc. The fall now set in, and, winter drawing nearer at hand, the lavish tales were more and more whetting the appetite of John and Tom for a Christmas hunt in these rich fields of sport; but their mischievous tendencies were so well known to the old people that the best of strategy must be resorted to in order to obtain consent. A good boy, as a rule, is a dull fellow; "bad boys make smart men" is an old saying, and not without truth. The work of getting the desired permission was not long in doubt; we had it in time, in fact, to give a couple of months to prepare and get everything in readiness.

The old carbines were to be brought to a polish, locks tinkered on, a good supply of flints procured, while the wherewithal for the purchase of ammunition was a deep financial problem. Money did not grow on trees in those days. However, the difficulties were fairly met, and uncle was informed that we might be expected on Christmas Day. We were answered with an assurance that ducks were as thick in the creeks as grasshoppers, and of all colors, black and pied, and some so near like tame ducks that one could scarcely tell the difference; while raccoons and possums, with squirrels and hares, were to be had for the asking.

The long-looked-for day arrived, and we were granted the use of old Bess, a mare with one eye, and a tumbler cart as a means of transportation. Our vehicle was well stowed when we made the early morning start: five guns, two coon dogs, two squirrel dogs, a pointer bitch with one eye, half a dozen powder horns, 5lbs. of tow for wadding, a trunk of clothing to hunt in, two pairs of boots, etc.

We reached our journey's end, put old Bess in her stall, unloaded our arms and ammunition, and then concluded we'd go to the creek and sample the oysters, which were extra fine. We shoved an old canoe off the shore out in the creek, when Tom, getting a lurch, went overboard, and between the mud and water there was but trifling consistency, it was all so soft at least as to look very much as a short route to China. Of course, uncle and aunty made no ado over this trifling affair.

The next morning we took a walk down to a clump of cedar, taking along our large gun, No. 8, and long as a beanpole. Just on the edge of a gully which separated Mr. B.'s barn from uncle's, we spied an immense flock of ducks swimming along shore, the tide being up. So we crept down and turned our old No. 8 loose on the bunch. A general squawking and fluttering ensued, but not a duck got on the wing. "Look here, John, if those ain't tame ducks. Well, they sed they were all colors, and those are that way." Trouble loomed up. Still we concluded to face the music, they might not be tame ducks. But the truth soon developed. Here came Mr. B. with blood in his eye, to know who had shot into his ducks. The fact was at once plain. Uncle explained as to the mistake and would pay all damages. Aunty read the "riot act" to us." So for the present we were allowed to spend our Christmas, to which we had looked forward with so great pleasure, not in the use of firearms, but in coon hunting, which we thought would be equally amusing.

Night having come, we started off for the swamps with the coon dogs. Plunging through mud and water, presently we found a trail, and directly the dogs treed a "coon sure," declared Jake, a colored boy who was to do the climbing and knock the coon out. So Jake started up the tall, slick-bark oak. About 30ft. had been climbed when here comes Jake end over end, landing on a root, breaking his arm. Here was trouble again. We felt sure of being got under way when the fact of Jake's misfortune became known to uncle and aunty; still, it passed off as being no fault of ours. We were now further restricted in our field of sport, and were placed under orders to engage in nothing but quail shooting, and to carry but one gun, while none of the colored boys were to go as a convoy. This looked a little rough, still it was the best we could do in the way of a compromise; so the next morning we started out with one gun and the old pointer bitch which had but one eye. Firing a shot or two at some larks, we drew a neighbor's pointer to us. It was a very valuable dog and we had now decided expectation of getting a good bag of birds. John could see a quail on the ground as a hawk would. Of course we made no calculation for birds on the wing. It was but a little while and the neighbor's dog was pointing a bevy stiff as a liner's shaft. John took the chance as his turn to shoot, and slowly walked up, peeping through the bean, when suddenly up went the bevy. John, fumbling in an awkward way with his gun, fired prematurely and killed the strange dog stone dead. "Here, John," said I, "No use to stand call court any longer. We'd better go. So let's go back and hook up old Bess and go for home before this thing is known, or we'll get a thundering flogging."

So we got off, leaving behind us a trail of evils. This ended our Christmas hunt. T. G. Elliott.

CAMP IN THE MOOSE COUNTRY.

Brass Wire and Hollow Bullets.

Editor Forest and Stream:

A gentleman who has hunted for some years in southeast Africa, and lately returned, has related to me a fact in his experience which may be useful to those of your readers who shoot large game with hollow pointed bullets.

My friend's rifle, a double .50-138-340, did not always give sufficient penetration for the larger and tougher antelopes, so he tried the plan of filling the hollow in the bullet with a piece of brass wire thick enough to fit tightly. He considers the hartbeest (of which he has killed more than 300) to possess more vitality than any other thin-skinned game, and states that the bullets so treated invariably passed through both shoulders, stopping at the skin on the further side, and at the same time expanded so as to give a large striking surface.

When hitting the front of the breast the bullets acted in an equally satisfactory manner, penetrating well into the vital organs.

Shots at the hindquarters of hartbeests galloping straight away were carefully avoided. J. J. Meyrick.

South Devon, England.

A Shower of Ducks.

A recent Leesburg, Va, special to the Richmond *Dispatch* says: A shower of ducks fell here last night. It was a rainy night, and toward morning, attracted and bewildered by the electric lights of the town, large quantities of wild ducks were perceived swooping around. Twenty-seven were picked up in the streets and suburbs. They seem to be worn out with flying, and some of them rest quietly in the window of a store in which they have been placed and where they attract much attention. The ducks are of two kinds. One is said to be called southerly, from the sound they seem to make in flying. They are small, very pretty plumage —black and white—white heads, with occasional long, green tail feathers. The other kind are small, with long, bird-like bill, and seemingly unable to rise from the ground in flight, the legs being at the extremity of the body and with little flexibility. They are said to be called water witch, and to make a poor show at flying even from the water.

Natural History.

THE BALANCED AQUARIUM.

How It should be Made and Managed.

BY T. C. SHEPHERD.

THE self-sustaining, or, as it is now named, the balanced aquarium, if it is made and managed on scientific principles, is one of the most interesting and instructive recreations, and is within the reach of anyone with modest means who has a love of nature.

Little is known by people generally of the strange and wonderful animal and plant life to be found under the water of almost any pond or stream, and even by those who do know something about them, without a knowledge of how to find and capture them and to arrange them so that their habits can be watched and studied, much pleasure is lost.

I will try to explain in a few words what the balanced aquarium is, and how it is to be managed. It is simply a fish pond in miniature, which we can sit by in our own comfortable room, and in it observe the curious and beautiful life that is going on in any clear lake or stream. The globes and small tanks, with a few sickly goldfish and a little pond weed, is not in any sense an aquarium.

It is universally known that growing plants give off oxygen and absorb carbonic acid, and fish and other animals breath the oxygen and give off carbonic acid gas. Now what we want to do is to have no more animal life in our aquarium than the oxygen given off by the plants will suffice to keep in life and health. I propose to give some idea of how this can be done. It is not an aquarium if the water has to be continually changed.

The Tank.

In starting an aquarium the first thing we must do is to get the tank or vessel. The rectangular-shaped tank is much the best, although a large jar or bell glass will answer, but it should not be less than 14in. in diameter, and about the same in depth.

If a tank with glass sides and ends, such as can be bought at most of the bird stores where goldfish, etc., are sold, it should not be less than 2ft. long by 1ft. wide and 14in. deep. If larger the length and breadth should be in the same proportions, and 15in. in depth is enough for any size.

Construction of Tank.

Supposing the frame to be made of iron, it should be so made that none of the iron shall be exposed to the action of the water, as the iron will corrode, and so foul it, and will also cause the plants to decay. The iron bottom can be protected by a sheet of glass, cut to fit after the side and end glasses are properly cemented into place. This should be laid on a bed of asphaltum, the asphaltum being softened by heating the iron bottom, and the glass then pressed into place, care being taken to see that the glass adheres to the asphaltum so that no water can get under it. After the bottom is properly covered, strips of glass should be cut to fit the corners, just wide enough to reach the side and end glass; the corners filled with cement, and the strips pressed firmly into place.

The cement or putty used for putting in the glass should be waterproof and elastic. The following is the best for the purpose: Equal parts by measure of powdered rosin, litharge, fine white sand (dry), plaster of Paris.

These should be well incorporated by passing through a fine sieve, and then mixed to the consistency of putty with boiled linseed oil. It should be mixed as required, as it soon sets too hard for use.

The receptacle being finished, whether tank or bell glass, must be thoroughly cleansed from all grease and dirt. If a new tank, it should be well washed, inside and out, with warm water and soap, and well rinsed with clean water. Thus prepared, it is ready to receive the material for the bottom.

Cover the bottom with rather course sand, which should be first washed in clean water, until water passed through it comes away clear; about 1½in. spread evenly over the bottom is enough. This should be covered with about 1in. of white gravel, such as is used by gravel roofers; the gravel also must be well washed.

Rock Work.

For this we should have three pieces of rough, porous stone. Two of them must be the same length and nearly about the same thickness, and should be placed upright in about the center of the tank or glass a few inches apart. The other piece should be flat, and large enough to rest on the top of the upright ones. It should now reach to about 1½in. from the top of the tank or bell glass. It will be best to cement this top stone to the two uprights, using Portland cement for the purpose. It will then form a rough-looking stone arch, the top making a landing place for many interesting amphibious creatures, of which mention will be made hereafter.

Many of the dealers in gold fish and globes have terra-cotta centerpieces for aquaria, but as a rule they are unnatural and unsightly, being mostly in the form of castles and masonry. It is better to imitate nature as nearly as possible.

The sand, gravel and rock work being already in place, we must now put in about 3 or 4in. of clean rain or river water, using a sprinkling can so as not to disturb the gravel and sand. The jar should then be left to stand for six or eight days, being covered with a piece of paper or muslin to keep out the dust.

It would be well to have a frame made of light wood, and to stretch a piece of thin muslin or cheese cloth over it; the frame should be made to fit the top of the aquarium, to be used as a cover at all times.

The Plant Life.

The water having been in the aquarium six or eight days should be perfectly clear, and therefore ready to receive the plants. Of these there is quite a variety that can be used for our purpose, and all are very beautiful seen through the glass of an aquarium. I will mention only a few, however, which are considered the best and most easily obtained.

Vallisneria.—Tape or eelgrass—Leaves long or ribbon-like, resembling grass, common in almost all running waters. It is one of the best plants for the aquarium on account of the great quantity of oxygen it gives off.

Myriophyllum.—Water milfoil or foxtail—Commonly found in deep water ponds, a beautiful plant, with its finely divided leaves crowded around the stem, giving it the appearance of a fox's tail; it is generally sold by all dealers in aquarium supplies.

Ceratophyllim.—Hornwort—Common in ponds and streams everywhere, somewhat like the above in appearance, but coarser and much more branched; it is generally found floating, and without root it is a very rapid grower.

Anacharis Canadensis.—Water weed—Is to be found in all slow-flowing streams and ponds; a slender plant with opposite oval shaped leaves.

Utricularia.—Bladder wort—Common in shallow ponds during the summer. In the early spring it is often found in the form of a round, soft, green ball about the size of an ordinary marble, which in the aquarium soon begins to unfold, and forms a very beautiful plant, with its delicate, bright green, very much divided foliage covered with transparent bladders.

Ranunculus.—Water crow's foot—A delicate feathery plant bearing pretty, white, buttercup-shaped flowers, common in shallow ponds and streams.

Hottonia.—Water violet or feather foil—Will be found in pools and ditches. This leaves white or tinted flowers in the form of a raceme.

Stocking the Aquarium.

We are now ready to begin what to any one having a love for outdoor exercise is one of the most interesting and pleasurable parts of the work connected with the home aquarium—that is, the searching for and collecting the material to stock it with. We will suppose it is now early summer, say the middle of May, so we will take a trip to some nearby pond or stream in search of plants, first providing ourselves with a small, long-handled rake, one with four or six long and strong teeth for dragging up the plants from the bottom of the pond or stream, and a tin pail with lid for carrying them in, one holding about two quarts will do for this; care must be taken not to press the plants into the pail, as they, being soft and tender, are likely to be bruised and broken.

Myriophyllum, Anacharis, Ranunculus, Hottonia and *Vallisneria* will be fouud rooted in the mud, while *Ceratophyllim* and *Utricularia* will be found loose and floating; the two last can easily be taken from the water, but the four first mentioned will have to be pulled up by the roots, and this can be done by placing the rake teeth down on the further side of the plants, and pulled while pressing down upon the handle of the rake. It is best to take only the young green shoots or sprouts of *Myriophyllum* and *Vallisneria*; the latter propagates itself much after the manner of the strawberry plant, that is, by runners, and these runners are the best for our purpose. Having now secured the plants, we are ready for the

Planting.

Of all those mentioned above except *Vallisneria,* it is best to use only the tops, and these should be cut to 4 or 5in. in length, as they will readily form new roots. Take two or three sprigs of each kind separately, and tie the cut ends to a small piece of stone, say about the size of half a hickory nut, using some soft darning cotton for the purpose; press them down firmly into the sand until the stone rests on the bottom of the aquarium, being careful to draw the gravel over the stone so that it will be held firmly down in its place.

The plants may be arranged to suit the taste of the planter, being careful not to overcrowd them, for once well rooted they will grow rapidly. They look better when planted about 3in. apart, and so grouped that clear spaces are left for the fish, etc.

The aquarium is now ready to be filled up with water, perfectly clean rain or river water being used, which should reach to within 3 or 4in. from the top; again use the sprinkling can for this. It should be again left to stand six or eight days to give the plants time to take

REDHEAD.

From "Birdcraft," by courtesy of The Macmillan Company.

MALLARD.

From "Birdcraft," by courtesy of The Macmillan Company.

root; by that time the water will be clear and pure, and ready to receive some of the

Animal Life.

We will first begin with a few water snails. These are a very necessary factor to the success of the balanced aquarium, as they act as scavengers and rid us of the decayed vegetable matter and also keep down the growth of confervæ that would otherwise cover the glass with a green coating so dense that in time we would not be able to see through it. This the snails will do effectually.

The varieties mentioned below are the best for our purpose, on account of their great size and the hardness of their shells, although any of the fresh-water snails will do the work; but as they are dainty morsels for some of the fish, etc., the soft-shelled ones will soon fall an easy prey to their rapacity.

Paludina—Is much like the common land snail in appearance, and is about the same in size; it is found in slow-running water, frequently at the base of reeds, among water plants, or on the mud near the margin of ponds or streams.

Planorbis.—This has a trumpet-shaped shell about ¾in. across, and about ¼in. thick, and is to be found in similar places as the above mentioned.

We will now take a trip in search of them to some sluggish stream or pond. We shall require a ring or landing net for this purpose, such as is used by anglers for landing fish; the mesh should be about ¼in., the handle about 7 or 8ft. long, which it would be well to have made in two joints, being easier to carry. Our two-quart pail will again come into use. To find the snails we must run our net, mouth down, over and among the weeds and under the overhanging banks, where they are often to be found just below the surface of the water. Possibly we may not succeed in finding them in our first attempt, but with perseverance we will surely be rewarded. Three or four dozen will be enough to start with, and they can be replaced from time to time as they die or are destroyed by the fish, etc.

The plants in our aquarium should now be growing well, and in a thrifty condition, and the water pure and clear, therefore ready to receive the

Animals, Reptiles, etc.

So with a six or eight-quart pail and our landing net we will start out in quest of any fish, etc., that will answer for our purpose. Almost anything living in water can be used, but it is best to take only very small fish, those averaging about 4in. in length or less.

The few varieties mentioned below are some of the best, and some of them most likely the first we shall find, but in looking for these we shall probably meet with others that can be used.

Common Sunfish or Pumpkin Seed—Is to be found in almost any pond or stream, and is easily taken with the landing net. This is an interesting aquarium friend, bright and beautiful in color and markings. It is full of life, active and very hardy.

Striped or Banded Sunfish—Is much more rare than the foregoing, but is to be found in a small lake near Bristol, Pa., and at Brown's Mills, N. J., and no doubt can be found in other ponds in central New Jersey and in Pennsylvania, near the Delaware River, above Bristol. It is a small fish, seldom exceeding 3in. in length, and is truly one of the most beautiful specimens for the aquarium, with its alternate bands of deep black and silvery white, and delicate, almost transparent, appearance. It is worth a long journey to be able to add this to our collection. It must be looked for among the pond lilies, under the leaves of which it is found.

Eels—Make very interesting pets, but should be very small, not more than 5 or 6in. in length. They are to be found among aquatic plants in pools and ditches near tide-water.

Gold and Silver Fish—Can be bought at any of the dealers in birds, fish, etc.

Dace.—Black-nosed, banded and silver dace, commonly called minnows, are all small fish, and are to be found in holes and pools in swift, clear streams, and are easily taken with the landing net, if the water be first made turbid by stirring up the mud above the pool where the fish have been located.

Stickleback.—This interesting pigmy fish is to be found at the mouth of any small stream near tide-water, and will thrive equally well in salt or fresh water. No aquarium is perfect without at least a pair of these active little creatures.

They are nest builders, and to have a pair of them, male or female, in a half-gallon glass jar with a few aquatic plants, makes a very interesting object; the sexes are easily distinguished, the male being larger and much more brilliant in color.

They should be caught and placed in the jar or aquarium early in the spring, before the breeding season; we shall then be rewarded by seeing them construct their curious little nest.

Tryton or Newt is a lizard-like creature and is to be found in shallow weedy ponds. It is a very desirable addition to the aquarium; being amphibious, it will make use of our miniature island.

It will be well to cover our little island with moss, such as can be found growing on stones in any moist, shady wood. It will improve the appearance of the aquarium, and also afford a cover for the amphibians.

Red Salamander is somewhat like the above in appearance, and is to be found in cool, clear streams or springs under stones. It is of a pinkish or flesh color, covered with minute black spots when full grown, but in its immature state is a dull brown. It is also amphibious, but is not so hardy in the aquarium as the tryton.

Tadpole of Frog can be found in any shallow pond or stream. It is interesting to watch this odd-looking creature gradually changing into the frog state. It is also valuable as a scavenger, devouring everything in the way of decayed animal or vegetable matter.

Emys Picta or Red-bellied Turtle is to be met with in ponds and streams, and makes a pretty inmate for the aquarium, but for our use they must be very small, not larger than will cover a silver dollar.

Water Beetles add life to the collection, notably the curious-looking boat fly and the large water beetle (*Ditiseus*); these we are sure to find in our net while looking for fish, etc.

Water Spider is another very interesting acquisition to our collection. This curious spider weaves a balloon-shaped nest about the size of a thimble under the water attached to the water plants, which it fills with air, taking it down in pearl-like globules, which adhere to the hair which covers the body.

These bright silvery-looking nests are found attached to aquatic plants under the water in shallow ponds, streams, etc., with the spider inside, at the mouth of which it sits, ready to dart out at any passing water insect or animalcule.

Grawfish or Crayfish is in appearance much like a small lobster, and will be found under stones in shallow streams and springs. Two or three of these add interest to our collection, but only very small ones must be used—those 1 or 2in. in length; if larger they will root up the plants.

Fresh-water Shrimp are plentiful in most ponds; they are easily known from their likeness to the common wood louse, and when full grown are about ½in. long. They are good scavengers, and also excellent food for some of the fish. It is a good plan to keep a supply of them on hand in a jar containing water and a few plants. They can then be introduced into the aquarium as required. The fact of their being scavengers and also food for the fish is their principal value.

Our aquarium now being properly stocked, a few instructions as to the treatment and feeding the fish, etc., and general management of the aquarium will be next in order.

Great care should be used in feeding; no food should be allowed to remain in the water uneaten. Small earthworms are the best for most of the fish, etc., but if these are not to be obtained, lean mutton or fish may be substituted; but it must be cut into very small pieces and the blood or juice well washed from it, and afterward laid on a piece of clean muslin or other like material until the liquid is thoroughly drained from it. This should be dropped piece by piece until all are fed. Pulverized cracker and a little flour mixed with water or milk into a stiff dough, and small pieces rolled between the finger and thumb, is good for the gold fish, carp, etc.

Here again let me reiterate the fact that this is to be a balanced aquarium, and must not be overcrowded with animal life—one pair of each of the previously named fish and reptiles being sufficient for the sized tank here described; of course a larger tank will sustain more life in proportion.

All decayed animal and vegetable matter must be removed frequently, and this can be done best with a piece of glass tubing about ½in. diameter and about 16 or 18in. long, both ends being evenly cut and open; with it can be drawn up any sediment from the bottom by holding the finger at one end and placing the other end just over the sediment to be removed; raise the finger a little and the sediment will flow up into the tube, again press the finger on the top of the tube and lift it out, bringing the water and sediment with it; this must be repeated until the bottom is perfectly clean.

A small ring net is also a necessary and useful article to have, and this can be made with a piece of soft brass wire by bending the wire around any cylindrical form about 3in. in diameter, twisting the two ends together so as to form a handle about 12in. long. Then sew on the ring a piece of thin cheese cloth or mosquito net so as to form a bag about 6in. deep. This is to be used to remove the fish to and from the tank, as may be required. Fish should never be touched with the hand.

Clear water should be added from time to time to supply that wasted by evaporation.

Location of the aquarium should also be carefully studied. A cool room—say between 40° and 60° F.—being the best, with good light, but very little sun, as too much sun induces the growth of confervæ. Plenty of light we must have, as otherwise the plants will be sickly and spindled and lose much of their beauty of form and color; nor will they give off oxygen as they should if in a healthy condition.

"BIRDCRAFT."

The new edition of Mrs. Mabel Osgood Wright's book entitled "Birdcraft," issued by the MacMillans, is a large and handsome volume, a great improvement over the earlier ones. While it is printed from the same electrotype plates as those of 1895 and 1896, the old and very unsatisfactory colored lithograph plates have been replaced by an excellent colored frontispiece of the veery, and by eighty uncolored full-page plates from drawings of Mr. Louis Agassiz Furtes. Most of these illustrations are those which appeared in the book called "Citizen Bird," the joint production of Mrs. Wright and Dr. Elliott Coues, which was reviewed in these columns not very long ago, when our opinion of these bird pictures was set forth somewhat fully.

"Birdcraft" is one of the modern publications on ornithology which are doing and will do so much good in the way of educating young folks in America to study and to enjoy nature. No child can see the pictures which appear in these pages without being impressed by them, and the volume with its illustrations ought to be permanently on the table of every country home in the land. It will teach all who read it to observe, and when one has learned something of the lesson of observation, that of appreciation and admiration will be swift to follow.

Mrs. Wright's book opens with a picture of leafless trees, brown bare fields with snow patches in the fence corners, of freezing nights and mild gray days, the earliest of the springtime. She is waiting the advance of the army of northern migrants whose coming she pictures, and on the individuals of which she comments in charming fashion. Then comes the building of the nests, with suggestions as to how the birds should be observed at this time, and remarks as to where the different species are to be found. The water birds are further off and less easily observed than those of the upland woods and swamps, yet many of them can be reached and there is a charm in the mystery of their coming, their absence and their return. Not less interesting is the chapter on the birds of autumn and winter, when the struggle for existence is so severe. These are Mrs. Wright's introductory chapters, and they lead one by a most charming path to the body of the book.

This, which occupies about 250 of the 335 pages of the volume, includes the chapters How to Name the Birds, Synopsis of Families, and Bird Biographies; and these last are divided into sub-chapters on the Perching Song Birds; Perching Songless Birds; Birds of Prey; Pigeons, Quail and Grouse; Shore and Marsh Birds, and Swimming Birds. In each case the English and Latin names of the species are given; the description of male and female, the note, the season at which the species may be found, its breeding range, its nest and eggs, and the range through which it occurs the year through. These facts are followed by biographies, more or less brief, running from a few lines to in some cases more than a page. In all 200 species are described in Mrs. Wright's very happy vein. Following these pages is an artificial key to the birds which in many cases will be useful to the novice.

Taken as a whole the volume is useful, attractive and helpful. It deserves and no doubt will have a continued wide popularity. The illustrations which we print this week we owe to the kindness of the MacMillan Co. They are good examples of the pictures in the book. Price $2.50

Nuthatch vs. English Sparrow.

Editor Forest and Stream:

For some time there has been a white-breas'ed nuthatch (*Sitta carolinensis*) in this neighborhood. It was first brought to my notice by my wife saying that she heard a woodpecker pecking somewhere. My first thought was to get my gun, supposing it must be a pileated woodpecker for anyone to hear while in the house with the door closed. Going outside, I saw on an apple tree 20ft. from where Mrs. D. stood, not a woodpecker, but a nuthatch. I watched him for some minutes, until he left the tree. I have seen him twice since. The last time he was feeding on the trunk of a large willow tree beside the walk. He attracted the attention of an English sparrow, who probably thought he would bully him a little, and going up to him asked what he was doing there, anyway. Mr Sitta answered by giving him just one punch on his head with his sharp bill, and Mr. John Bull dropped down among a cluster of small sprouts just below where the interview had commenced. His cry for help brought some eight or ten of his fellows, but Mr. Sitta was all over them in less time than it takes me to write it. He even attacked them in their supposed stronghold, the clump of sprouts, and drove them out and away from the tree; and then placing himself tail upward on the tree trunk within 10ft. of me gave me a look which seemed to say: "Perhaps you would like to take a hand in this scrap?" I was so much taken back by the whole performance that I did not give him an answer, and he quietly commenced circling the tree for parasites more palatable than *Passer domesticus.* J. L. Davison.

Lockport, N. Y., Dec. 15.

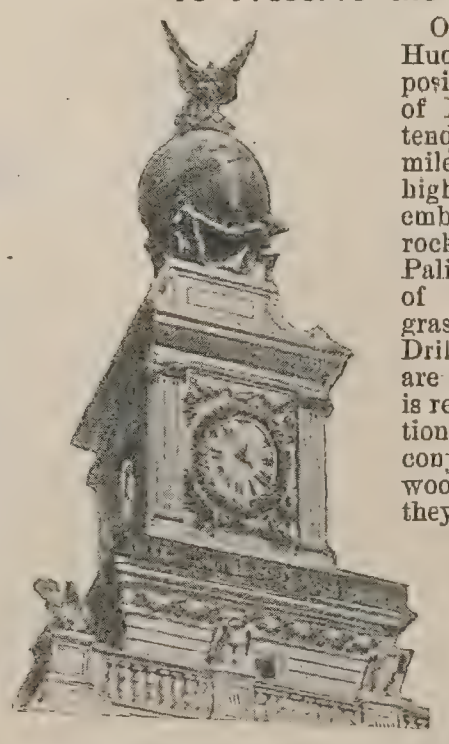
A Copy of Audubon.

The past week was signalized by the transfer from Geo. H Richmond & Co., of this city, to Mr. Chas. H. Williams, of Buffalo, of one of the best existing copies of Audubon's great work, "The Birds of America."

The present copy must have been a very early impression, as the condition of each copper plate is perfect, no signs of wear being visible.

It is also one of the largest copies in existence, *i. e.*, the least injured by the cropping by senseless binders. It is usual to find a number of the birds themselves minus beak or tail, thanks to the binder's guillotine; but in Mr. Williams's copy not a single plate has been injured by cropping. This copy is 25⅜×38½in.; the work is usually catalogued at 24×37in.

Mr. Ernest Seton Thompson, who acted as expert for Mr. Williams, was six hours in examining the 435 plates. A. B.



Infertility of the Half-Breed Goose.

A few days ago, while on a visit to our shooting club on the Virginia coast, our club steward called my attention to some half-breed geese he was raising—a cross of the common domestic goose with the Canada goose (*Branta canadensis*). During our conversation he casually remarked that, as he had learned from a goose-breeder of his acquaintance, the eggs of such half-breed geese are sterile and will not hatch.

This, if true, is a new fact to me, and I would like to have it verified. Can any reader of Forest and Stream give us any information on this point? Shaganoss.

THE MAN IN THE CLOCK TOWER.

"To Preserve the Palisades."

On the western shore of the Hudson River, beginning opposite the northern section of New York city and extending northward many miles, is the long stretch of high, rugged and picturesque embankment—mostly solid rock—known to fame as the Palisades. The vandalism of commerce has laid its grasping hand upon it. Drills are piercing, hammers are crushing and dynamite is rending this majestic creation of nature. Taken in conjunction with river and woodland, sky and earth, they are a scene delightful to gaze upon. As a vehicle for the carriage of patent medicine signs, or as a deposit of rocks prepared by nature to be quarried in a vulgar kind of way, as any other rocks are quarried to supply the demands of trade, they are degraded. New York dearly loves to gaze across the river at New Jersey, where the Palisades are, for there New York cannot see further than New Jersey's edge, but New York does not care to gaze on stone quarries and defaced grandeur.

The grim, the silent, the majestic Palisades, rugged, beseamed and lofty, making to the river a wall whose like could not be found elsewhere on earth, are no longer a thing of beauty or wonder when the hand of man conquers them and sends them out piecemeal at a schedule price. But, unfortunately, New York does not own the Palisades. New Jersey is the owner. New Jersey does the ripping, breaking, selling; New York does the nervous part. The roar of the dynamite is heard, and New York jumps in startled dismay.

New York thunders in return, but in a different manner. The roar of the dynamite and rending rock are answered by the roar of printer's ink. The Palisades are a standard topic for good newspaper work at all times, either for week day or Sunday edition. The descriptive writer can perform highly-colored capers over them in fancy; the philanthropist can mourn over the harm done to a great public good, or the simple news-gatherer can relate the latest facts concerning them, so that it is a rare day indeed when one does not see a headline reading: "To Save the Palisades;" "The Destruction of the Palisades;" "The Wonders of the Palisades;" and still the Palisades and their workings remain about the same. The noise on each side of the river goes on undisturbed. New Jersey blasts her rocks and New York shouts in return, and there you are.

A Buffalo in a Box.

Early last November I learned of a rather extraordinary occurrence in New Jersey, which was until recently enveloped in mystery. At the time the facts were these: About the month before a farmer living in the village of Almonesson, near Woodbury, N. J., had a high tight-board pen constructed on his property. On the night of Nov. 1 a heavy dray drawn by six horses and containing an enormous box was driven up to his pen and box unloaded. These mysterious occurrences excited the curiosity of the village, and at midnight a number of young men went to the place to find out what was going on. They were met at the gate of the pen by a man armed with a large knife who ordered them away. A deputy sheriff was then called on, and the crowd, led by him, returned to the place. The deputy sheriff forced his way into the pen and found there a carcass of a full-grown buffalo just killed. In answer to questions the men said that they were doctors from New York and wished to experiment on the animal. They gave their names as Dr. White and Howard Johnson.

The next day persons who returned to the spot found the carcass of a buffalo lying there, its head having been cut off. The robe had not been removed and none of the meat had been used.

A little inquiry revealed the fact that the buffalo in question was one sold by the Zoölogical Society, of Philadelphia, for $800 to a man giving the name of Bertram Marks. This one is the same who gave his name as Howard Johnston. He represented that he wanted the bull for breeding purposes, but declined to give its destination. The Zoölogical Society, having several surplus bulls, sold the animal to him at the price mentioned, and Marks was to come and remove it in a tight crate.

About this removal there was some delay. It seemed that the purchaser of the bull wanted to take it away in stormy weather. On several days when it rained in the morning, but cleared up in the afternoon, the purchasers advised the keepers at the Zoo that they were ready to take away the buffalo, but they never did so. Monday, Nov. 1, however, was a very stormy day, and that afternoon Marks reached the gardens with a six-horse dray and a big wooden box. The buffalo was put in this and they hauled it off. The rest of the story has already been given. It is said now that the animal was purchased by Thomas C. M. Cardoza, of Germantown, Pa., because he wanted a buffalo head for a trophy, and that his agent in the matter was Marks. The two are said to have butchered the bull, shooting it with a rifle, and then to have cut off the head and carried it back to Philadelphia, where it is, according to the story, to adorn Cardoza's rooms at the Hotel Walton.

The Zoölogical Society is very indignant over the matter, taking the ground that, as the species is so nearly extinct, no buffalo should be killed for any purpose whatever.

It is difficult to conceive why the purchaser of this bull should have acted as he did, unless he had some motive other than the mere acquisition of a buffalo's head. Such heads, and good ones, can be purchased for less than a quarter of what he paid for this bull. It is conceivable, of course, but hardly probable, that a man might have such an extraordinary mental twist that he would be willing to buy a tame buffalo and butcher it for the mere purpose of saying afterward that he had a buffalo's head of his own killing. That such a motive might appeal to some people is shown by an advertisement which recently appeared in the columns of FOREST AND STREAM, where a man advertised that he had a buffalo bull for sale, and offered, separately, the head and the robe and the meat. As an additional inducement for the purchase of the head, the advertiser said that whoever bought the head could fire the shot to kill the animal, and that here was an opportunity for some sportsman to obtain a fine buffalo head of his own killing. Any "sportsman" who wants to get a head of his own killing that way is welcome to it; none of it in mine.

Analogous to this case is one of which I heard not long ago, where a foreigner—I do not recall whether he was an Englishman or a German—wished to kill an elk and secured from the owner of a private park the privilege of slaughtering a bull. I do not know whether he carried out his intention or not; but if he did, no doubt he took the head away with him to his own home and expatiated generously about the hardships and adventures encountered while he was securing his trophy. Men such as these call themselves sportsmen, and a very large majority of the people to whom they make their brags and boasts believe them. As a consequence the people who have decent ideas of sport are mixed up in the public mind with these braggarts, and the sportsman's reputation for intelligence and good morals suffers. Certainly the great public needs a whole lot of education.

THE MAN IN THE CLOCK TOWER.

Christmas Gifts.

AT this season of the year persons residing at a distance from large cities often desire to order a number of different books issued by different publishers. This necessitates writing many letters, and perhaps paying many express charges, and takes time, trouble and money.

To relieve its readers of this burden, the Forest and Stream Publishing Co. will receive and fill all book orders that may be sent to it, purchasing the books, packing and forwarding them, and all this without charge. In all cases the titles of books must be plainly written; where possible the name of the publisher must be given and the money for the consignment must accompany the order.

As the busy season has already begun, those who wish to take advantage of this offer should send on their orders at once, so that the goods may be sent off in time to be received before the holidays.

Game Bag and Gun.

CHICAGO AND THE WEST.

Number of Deer Killed in Wisconsin.

CHICAGO, Ill., Dec. 18.—The records of Wisconsin on the deer-killing question are something largely made up of guesswork, as we have no such accurate system in this region as that which prevails for Maine and the Eastern deer hunting regions. The Wisconsin law says that each man may kill two deer, but a great many men killed all they could and no doubt very many men killed a dozen each. The Milwaukee *Journal* thinks it fair to allow each hunter his pair of deer, though it seems to me that this is putting the average quite too high. Should it be a fair average it would follow that the number of deer actually killed would be at least 24,000, for over 12,000 licenses were taken out, and no one knows how many men shot without any license. One deputy warden, Okershauser, thinks that 30,000 deer were killed in Wisconsin this fall.

The upper peninsula of Michigan is practically the same as Wisconsin as a hunting country, and about the same respect is shown for the laws of one State as for the other. The Ontonagon *Herald*, of Michigan, estimates that there were 3,000 deer killed in the upper peninsula during the season just closed, and adds: "As the hunters are not all in yet it is hard to tell how many returned alive."

I think the above estimates on deer killed are too large—probably double the size they should be—but even at that, the showing is a big one. It is so very large as to show at one glance the absolute ineffectiveness of the Wisconsin executive branch so far as enforcement of the game law is concerned. No one for a moment supposes that only thirty non-residents shot in Wisconsin this fall. Chicago alone sent twice that many men up to Wisconsin. There is so much frank unfitness about all this that local feeling is very strong against the law. An Ashland newspaper says that a deputy informs it that during the past season he asked to see the licenses of nearly 1,000 different hunters, and he found them almost without exception resident licenses. He says it was common for the non-resident to announce himself from a distant town in the State, and of course the clerk could not in all instances, or in very many of them, get any facts outside the declaration of the applicant. Whatever may be the reason or excuse, or whatever may be the theoretical virtue or faultiness of the non-resident act, its colossal and egregious absurdity as a working success cannot longer be doubted. It was walked into and driven over and promenaded through by over 1,000 different outside men this fall, each of whom thought his own ideas better than those of the State of Wisconsin, and against whom the State of Wisconsin is obliged weakly and ridiculously to confess its weakness. No one asks a State to locate or to punish all or more than a fraction of the offenders who break its laws, of whatever nature; but when it comes to declaring that only thirty outside shooters shot in Wisconsin last fall, the thing is too absurd to be funny, and the slight on intelligent legislation too apparent and too injurious. The status at date simply means that the State of Wisconsin can make no game laws, but that the men who go there to shoot will make laws to suit themselves.

War Among Wardens.

It seems that not all deputy game wardens are great and good. Warden Grocock, of Menominee, has taken out a warrant for Warden Chas. Munger, of Marinette county, who lives in Wausaukee, Wis. Chas. Dickson, of Wausaukee, claims that he was out hunting with Munger Nov. 10, and that he had dogs and used them, and they both, after hounding deer in Wisconsin, crossed the river into Michigan and hounded deer there also until they got ready to quit. They had several days of fun, and now Warden Munger is to explain to the curious how it is that a warden is any better than anybody else before the law.

Fined for Hounding.

At Houghton, Mich., last week, John Hoyslop, of Higgins Lake, and Henry Howe, of Markey, were fined $25 each and $6 costs for hounding deer, each man pleading guilty. If I had all the hounds that were used between here and Lake Superior last month I could start a dog train that would reach from here to the Missouri River, end to end. Seven more violators of the dog law will be tried at Houghton this week; for they do get them now and then.

Pokes up the Deputy.

S. B. Clark, of Colorado, is a game dealer, and he has ordered some grouse from Utah, being detected by Deputy Warden Hays. The latter wrote to Commissioner Swan, saying that Mr. Clark was a nice man and he didn't mean no harm, wherefore he, Warden Hays, was not going to prosecute him. Mr. Swan wrote back that Mr. Hays would please go right to work and prosecute Mr. Clark, no matter how nice he was, and also to prosecute the express company that carried the goods, which were shipped as "poultry."

Express Company Appeals.

On Dec. 12, S. L. Maxwell, local agent of the Wells-Fargo Express Company at Wichita, Kan., was fined for violating the quail shipping law. The company has appealed the case and will test it to a finish. Let us hope that the courts of Kansas will in this case not forget their traditional hostility to corporations in general, and will soak the good right mit of justice deftly on the bosom of the offending outfit until the latter concludes it was mistaken and is no better than anybody else.

Saginaw Game.

At Saginaw, Mich., they have a sparrow bounty, and now the city clerk and his office force are working nights to keep up with the count of sparrows, which are appearing in thousands. It is thought that a few enterprising individuals are killing sparrows outside of Saginaw, and bringing them in for the bounty. How shall a mere municipality expect to stem the current of the great natural law of supply and demand? Let Saginaw reflect that though she go broke buying sparrow scalps, she is martyr in a good cause. If she will take our sparrows, even at a cut rate, she shall have a vote of thanks.

Minnesota Matters.

The annual meeting of the Minnesota Game and Fish Commission was held last Tuesday; present: Agent Fullerton; C. S. Benson, of St. Cloud; Wm. Bird, of Fairmount; Fred von Bombach, of Alexandria; Tim Byrnes, attorney, and President W. S. Timberlake, of St. Paul. It was resolved that the Commission prosecute several express companies carrying over railroads crossing the State, all of which express companies are charged with carrying game out of the State. The report made up on the State. The report made up on the supply of deer states that it is not thought that the deer supply is failing, but that deer are as abundant now as at any time for ten years.

The Minnesota Commission has caused 425 arrests this year, and has secured 302 convictions. More power to them.

Uniform Game Laws.

We are going to give the iridescent dream of uniform game laws another chase out here, and if we get it we will have a pretty thing. Representatives of the Legislatures of Minnesota, Wisconsin, Illinois, Michigan and Iowa, probably also of North and South Dakota, are to meet at Chicago Feb. 7, and take steps to secure for these several States a code of game laws which shall be roughly applicable to all the States alike. Minnesota has appointed Senator Potter and Representatives Douglas and Ferris, with the members of the Fish and Game Commission, as delegates, and has appropriated $200 for expense money. Should this convention really occur its doings will assume immediate importance, even though the actual result in legislation may not be what is expected by the convention. A strong push will be made to abolish spring shooting in all the States named above, and reciprocity among the State wardens of the different States will be another feature of interest. It is hardly likely that Illinois could get through a law preventing spring shooting, owing to the heavy opposition from the lower end of this long State; but the other States named have a closer resemblance in general features, and it may be that such a law could be put through, in spite of the absurd Wisconsin jealousy, which has so long said to Illinois: "If you shoot in the spring, I'm going to shoot too."

Mark the Old Portage.

The Northern Indiana Historical Society is going to erect a monument to mark the old portage of the early exploration days when the St. Jo and Kankakee rivers were part of the water trail between the Great Lakes and the Mississippi River. This lower portage was between the headwaters of the Kankakee and the St. Joseph River, and it made a carry of only about four miles. We forget all about that sort of thing very quickly nowadays, but there was a wonderful lot of history connected with that old carry, and it is well that a few thinking men are thoughtful enough to preserve the memory for us. This old trail from the one water to the other was used by Père Marquette, Hennepin, La Salle and a lot of other old parties who are now mostly dead, but who had a lot of hustle to them in their day. You shall see the very spot where they crossed the low ridge that lies between the two streams, and so you shall envy the men who saw new country, then of most delectable sort.

Shortens Shooting Time.

A directors' meeting of Hennepin Shooting Club, of Chicago, was held Dec. 13, and a rule was framed for submission to the annual meeting which, if adopted, will shorten the shooting time on the club grounds to the morning hours only, that is to say, allowing no shooting after 1 P. M. of any day. This rule has been adopted by many clubs, and has usually been found a desirable one.

A Little Bear.

A Chicago restaurant this week displayed a little cub bear, minus his skin, which was about the nearest approach to babes and sucklings seen since Warden Loveday found the two squabs of mourning doves in a lot of game. This baby bear would have weighed 8 or 10lbs., perhaps, and was offered at the low price of $1.50.

E. HOUGH.

1206 BOYCE BUILDING, Chicago.

IN THE MACHIAS REGION.

BOSTON, Mass., Dec. 18.—The Machias region, in Maine, is getting a good name as a big game section. Mr. Walter Pinkham, of Dudley street, Boston, with a party of friends, has made a most successful trip this fall to Westley and the lakes further in. The party went directly over the road where Graves shot the one-armed game warden a number of years ago. Sentiment toward game protection has greatly changed in that section since that sad event. Now the people see that there is a good deal in store for them outside of the game they can kill themselves individually. Mr. Pinkham's party each brought out two deer, with one exception, as has already been noted in the FOREST AND STREAM, and it is explained that the game was all legally obtained. The lakes in that section are remarkable for the pickerel fishing they afford. Mr. Pinkham visited Fourth Lake one day for fishing. In the first place he shot a wild goose, and then made a catch of thirty-four pickerel, running from 2½lbs. to much larger. His guide, Charles McRavey, was in Boston the other day. His ideas of the game supply and prospects in Maine are excellent. He believes that there is more danger to the game from the hunting of the people of Maine themselves than from all that outside sportsmen can ever do. The residents are ever on the ground, are good shots and generally great hunters. He is down on the practice of citizens and guides having deer and moose killed and ready to sell to sportsmen who are not woodsmen and hunters enough to kill it themselves; admits that a great deal of such hunting has been done the past season. His idea is that, besides depleting the game, the registered guides should study to make sportsmen feel that there is no sport in such hunting.

The latest rumor in the Maine papers is that Game Commissioner Carlton will recommend to the next Legislature in that State a tax on all the game that outside sportsmen kill, the proceeds of the tax to go toward better protection and propagation of fish and game.

SPECIAL.

Cruelty to Animals.

BY one of those blunders which happen to man I neglected to put my name to the article under this head last week. I had no intention to attack Didymus anonymously, and the editor would not have allowed it if I had.

FRED MATHER.

The FOREST AND STREAM *is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.*

THOSE HENRY COUNTY CHICKENS.

Editor Forest and Stream:

Having just returned from a two months' sojourn in the game regions of South Dakota, I have been somewhat behind the times in the matter of keeping posted as to what was going on. The first thing that attracts my attention in going over the back numbers of FOREST AND STREAM, collected during my absence, is an item which says that Game Warden Loveday, of Illinois, went down into Henry county and bagged seventy prairie chickens in a two days' shoot. Now, I was born and raised in Henry county, and have used a gun for the last thirty years, and many of the shooting seasons of that period were spent in this county yet I never shot the half of seventy chickens in any one season in Henry county.

A mile and a half to the west of where I live is a rise of ground, surrounded by marsh lands, that has always been a playground for prairie chickens in the spring. A couple of years ago the stock of prairie chickens in Henry county was reduced to just twelve; yet, so great was their love for this dear old stamping ground, that when the April breezes began to whisper tales of a life beyond to the withered grasses, they would all gather on this little knoll to boom out their welcome to the spring. Here, within a mile and a half of a gathering of 5,000 people, they were safe. The boy with the catapult, who spares nothing else, animate or inanimate, withheld the destroying pebble from these. The gawky country youth with his zulu passed them by on the other side, and harmed them not. The gray-haired market-hunter looked upon them with reverential glances, for he deemed them the last remnant of a rapidly disappearing race. The farmer scattered the choicest of his grain for their nourishment, and his orchards, groves, and even sheds and barns were freely tendered to shelter them from the snows of winter. Fostered thus, they increased, until on Sept. 1, this year, there were just seventy of them.

Before starting for the far fields of Dakota, where I went for my shooting, to escape the odium of being pointed out as a relic hunter, I went out and counted them over and took note of their condition. When after an arduous campaign, lasting over two months, I started for home, I was happy in the consciousness of having bagged six chickens, to say nothing of other game too numerous to mention. As I swept in homeward on the morning express, I glanced expectantly out at that knoll. It was there—that is, part of it—but oh! how sadly changed. The once tall and graceful blue stem was much trampled and broken, and withal black and grimy with powder smoke. Its old-time tenants were gone. Evolution had turned up a new period. A once familiar landmark had passed away. All around were the evidences of a mighty struggle; here and there a mottled feather fluttered in the wind as it clung to a withered rag weed, but nothing of life remained, there had been a struggle for the survival of the fittest. The game warden had been there! Aye, "he had come and seen and conquered;" and when the warm April sunlight makes glad the heart of the bull nettle there will be no booming welcome to the spring. The boom is busted.

Seventy chickens in two days! Not one of Henry county's more than 100 market-hunters has equaled this bag in the entire season in this or any other county, which goes to prove that "protection does protect," the game warden anyway. Thirty-five dollars' worth of chickens in two days! This would go far toward helping out the poor compensation of a game warden. But shame on such reflections. Far be it from me to detract from the pleasures of hard-earned success. The meanest thing that breathes is the fellow who, too lazy and indifferent to achieve success himself, shouts game hog at the hard-working student that does. But, spirit of commerce, away with thee! and loiter not in the pathway of him who would carve his name high on the battlements of fame. Utility, get thee hence! let us live on wind pudding if we must, but leave the field clear to him who would send his achievements ringing down the corridors of time—like "a tin can tied to a dog's tail." Let no one suppose that any of this Spartan seventy went to waste. They are preserved beyond any possible erosion of time "in history's golden urn;" but the story of their taking off should be put in brine, or it will sour long before our old speckled hen shows a tendency to set on the corn cobs underneath the feed box. E. P. JAQUES.

GENESEO, Ill.

A FIELD COMPANION.

WYMORE, Neb., Dec. 10.—I do not know whether my old friend, Elias C. Wilcox, ever fished with Fred Mather or not, but he is dead.

For fifty years he had hunted and fished, camped out, tramped the forests, fields and prairies, and told stories. But for all that he had held many offices and positions of trust, and for the last ten years of his life he was the cashier of the bank in which I kept my overdraft.

He was a constant reader of FOREST AND STREAM, and regarded Frank Forester as the highest authority on all subjects pertaining to field sports.

We were friends for twenty-five years, and hunted together a great many times. The last few years of his life he lived in Wymore, and was my neighbor. During that time he had an old black team of horses and a buggy, and two large old-fashioned liver and white pointers, sire and son, and they were great dogs.

I remember one day that we were hunting quail together, and the old dog pointed, and the young dog backed him; I never saw them work any other way. We came up and got ready to shoot, when I noticed a rabbit sitting about 3ft. in front of the old dog. I called the old man's attention to it, and he stood about a minute and then said, "Mac, if that dog is pointing that rabbit, this is his last hunt." I could see that the old man meant just what he said, and was delighted just at that time to see the rabbit get up and dust, and the old dog hold his point; and within 2ft. of the place where the rabbit had been sitting we flushed a flock of quail. After we had emptied our guns Wilcox called the dog to him, stooped down and patted him on the head and played with his ears, and when the old man straightened up tears were running down his cheeks.

The old man's story-telling was his long suit; everything that anybody said or did reminded him of something. To me he was the soul of honor, and I believed everything he said. But once in a while I had to admit that he had an impediment in his arithmetic. For instance, one morning when the boys were all assembled in Given & Fogg's drug store, something reminded him of a goose hunt he once had back on the Wabash. He said there was a cornfield about a mile from his father's house in which the corn had been cut and shocked. He was about fourteen years old and had his first gun, a muzzle-loader. He noticed that the geese were lighting in that field, and he loaded up and went down there and got into a shock of corn. The geese were all large Canada geese, very fat, and none of them would weigh less than 20lbs. The geese began to light all around him and he began to shoot, and in less than an hour he had twenty of them down; and he said, "as he did not want to make a hog of himself, he picked up his geese and his gun and went home."

After the old man went out some of the boys expressed doubts as to the truth of the story, but I thought it was all right until one smart alick who had been away to college figured out that that fourteen-year-old boy had carried over 400lbs. of goose and his gun over a mile. I regretted that my old friend had not gone home and gotten an ox team and hauled his game home; but it could not be helped then, so I adjourned the meeting.

The old man was born somewhere in the East, and had lived in Indiana, Illinois, Iowa and Nebraska, always on the frontier. Very few men ever lived who killed more game of all kinds than he did. He wore glasses all the years that I knew him, but he was a dead shot.

He was a true friend, a kind and generous man, a too indulgent father, and was many times imposed upon. He died respected and mourned by all that had known him. If a kind Providence provides a happy hunting ground for good men after this life, he is there. He will enjoy it and get his share of the game, and if any ghostly Nimrod hunts alongside of him he must needs hold dead on, or the old man will wipe his eye. And so I bid him farewell.

And now as I read this over, it occurs to me how much better it could have all been said by dear old Nessmuk:

> "Soul that no treason nor guile could inveigle,
> Dying in patience and pride that was regal,
> Firm hand of the fearless, bright eye of the eagle,
> A greeting we send to thy grave by the sea"

A. D. MCCANDLESS.

RING-NECKED PHEASANTS IN NEW JERSEY.

From the Annual Report of the Fish and Game Commissioners of New Jersey for 1897.

THE details of what has been done in stocking the woods and fields with birds and the waters with fish have been told in the preceding part of this report, and your Commission now proposes to give such facts as are in its possession relative to the success attending such stocking, and what may be hoped for in the future.

RING-NECKED PHEASANTS.—The introduction and propagation of these birds have been confined almost altogether to individual enterprise, and very few States have assisted in the work. The consensus of opinions of those best versed in the matter of introducing the foreign game birds seems to indicate the advisability of confining all such efforts as far as pheasants are concerned to what is known as the ring-necked variety, this being a cross between the Chinese pheasant and the dark-necked English bird. Mongolian pheasants have been introduced in a few States, but they do not appear to have done as well as the ring-necked, the latter bird being not only hardier and a swifter flyer, but also more likely to remain in the neighborhood selected for its future home. A great deal has been written in connection with the rearing of these birds, but most literature of this kind has emanated from persons pecuniarily interested in the sale of the birds.

It has been argued by persons who deal in pheasants that these birds do better here than they have ever done in England, and that the mother takes better care of her young here, the latter fact being attributable to the prolific insect life in this country; in England the hens are more apt, not only from the small supply of insects, but also from many years of half-domestication, to leave the care of the young to man. It frequently happens that a change of country effects a material change in the habits of the transplanted animals, and we have been assured that such is the case with the ring-necked pheasants. We have also been assured that they have developed insect-eating proclivities far in excess of the bird in England, and that consequently the birds here will be of economic importance to the farmer as well as affording sport and food. On the other hand it has been argued that the stock from which the birds sprang has, by many years of domestication, lost many of its wild traits, and that the bird consequently more nearly approaches the domestic hen than our wild grouse. Those who favor the introduction of the bird into this country have insisted that the birds quickly regain their wild traits, and that in a short time—when not pampered or too closely looked after—will afford an excellent substitute for our ruffed grouse. The latter is unquestionably diminishing in numbers, and its exceedingly wild nature has prevented its propagation by means of transplanting from regions of country where it is still numerous.

If the ring-necked pheasant is at all adapted to introduction in this country, there is perhaps no State better qualified by nature for that purpose than New Jersey; for here the bird will find sufficient of cultivated lands, of forests and of streams to provide it with all that is necessary for its well-being. For the purpose of ascertaining whether the place of our native grouse can be taken by the foreign bird, your Commission caused the distribution of a number of them, taking care in every instance that the new environment of the bird should be as well calcutated to its success as was possible. These birds were put out in the spring of the year, the largest number being sent to the southern part of the State, where they had a better chance of escaping the guns of the hunter than in the more thickly settled northern part. The introduction of the birds in this State is still in its experimental stage, and what the probable success of this experiment will be can be readily judged from the following extracts from letters received from persons who had received some of the birds.

Hon. S. H. Stanger, Senator from Gloucester, writes: "I have heard from some of the sportsmen that the pheasants have done very well, but they fear that they are too domestic to live in the woods down here, as there are a great many hawks."

Hon. Robt. B. Engle, Senator from Ocean, writes: "I had them put out where we hope to protect them for a few years and not have them killed. I heard from only two of them during the last summer, and then under unfavorable circumstances, both of their nests being in a field, and both destroyed by mowing machines. I think each had from twelve to fourteen eggs. I would be glad if there was a fine for killing them for a few years."

Hon. Robert C. Miller, Senator from Salem, writes: "I have made inquiry in regard to the pheasants put out here in April. Only one person, as far as I can learn, has seen them, and he saw one with young during the summer. I presume if they are still here we will hear from them as soon as the gunning season comes in."

Hon. Joseph B. Crispen, Assemblyman from Salem, writes: "The pheasants have done exceedingly well. We have seen two old ones with their young almost as large as the old ones. Some of their nests have been found in other places with as many as thirteen eggs in them. I think they will do well here if we give them some protection, say for three years or more, so as to give them a chance to multiply. We will try to secure some protection for them this winter."

Hon. David O. Watkins, Assemblyman from Gloucester, writes: "The pheasants sent me seem to have thrived very fast and have furnished considerable sport for our sportsmen. The only complaint that seems to be made is that they are not as gamy as the Mongolian and other pheasants, and not as well calculated to protect themselves, being much slower flyers and more of a domestic nature."

Col. J. Howard Willets, of Port Elizabeth, Cumberland county, writes; "I have been keeping a close watch over the experiment we made with the ring-necked pheasants and they have exceeded all my expectations. I released twenty-four. One cock and two hens I gave to a friend who is in the pigeon business here and has good pens, etc. One hen only laid eggs and she laid thirty-two. Sixteen of these he placed under a Seabright (bantam), and she

GREEN-WINGED TEAL.

hatched thirteen; they did well until one day she scratched a hole under the wire and every one escaped. As it was only a hundred yards to good cover, we saw no more of them; whether they lived or not I do not know. The other sixteen eggs (as the pheasant hen would not sit on them) we placed under another bantam; twelve of them she hatched and three of them she killed, smothering or treading on them. The others are now nearly grown up, and we shall turn them out or keep all and try to hatch a larger number next spring and then release them. We saw or heard from those released on receipt last April every few days ever since. They scattered well (I found one nest over three miles from where the birds were released) and they laid and hatched well. I have heard of and seen six different nests, all hatching well.

"The largest nest of eggs was hatched by a pair on the farm near which they had been released. There were thirty-six eggs in it, and I watched it daily until one day when we found one egg in the nest and thirty-five hatched out. I saw this brood a few days ago, grown full size, and had at least twenty-five in it or more. All the sportsmen here agree not to kill a single bird this year, and I have warned all that if they kill any they will not be allowed to gun any more on the farms near here. There are so many city and strange gunners here that some may be killed during the season, but we shall protect them with all our power. I am thoroughly satisfied that the pheasants will do well in this part of the country, and we shall have it well stocked in a year or two if we can protect them another year. They lay an enormous number of eggs and hatch well. The only trouble I see is that they are quite tame, and we often walk up to 8 or 10yds. of them and then they only run off; they also come out into the open fields and seem to like to get out of cover. The nest of thirty-six I spoke of was laid in a field of oats; the farmer in mowing frightened the hen off in time to avoid cutting over the nest and left 8 or 10yds. of oats around it. The hen kept her nest and hatched, as I have told above. I hope the birds have done as well in other places."

Hon. E. C. Hutchinson, Assemblyman from Mercer, said: "The pheasants have done very well indeed and nothing has happened for a long time which has so pleased the farmers. We have a good many of the sporting fraternity in Mercer county and all agreed not to kill any for a year at least. One man did kill one of the birds and at once trespass notices went up on five farms in the neighborhood, and the farmers will not permit any hunting unless they feel confident that the gunners will not destroy any of the pheasants. We had them with us all through the summer and they did very well. Now that they are to be introduced for the benefit of the general public I shall strenuously urge the passage of a law prohibiting their being killed for a period of years."

Mr. Samuel P. Fithian, Surrogate of Cumberland county, writes: "In relation to the ring-necked pheasants I will state that we put out two cocks and four hens on the land of Isaac M. Smalley, in Stow Creek township. All four of the hens had nests, and in mowing the clover two of them were completely demolished and the legs cut off one of the hens. The other two hatched and I hear from them once in a while, and Mr. Smalley is endeavoring to protect them this year so we can have the increase for another year. The balance of the dozen you sent me were put in the care of Fish and Game Warden Harry R. Dare, and he kept them in a pigeon fly. Mr. Dare found only one egg, and late in the summer he took them into Fairfield township and turned them loose. We hear from them, but do not hear that they have any young. I do not think much of keeping them in captivity, but with their liberty I think they would do well and be a great benefit to the sportsmen of this section."

Mr. M. Warner Hargrove, of Brown's Mills, Burlington county, writes: "From all appearances the pheasants are doing well. I have not seen any myself, but have heard of them frequently. They appear to have spread fairly well, but are too tame for practical sport to get well introduced, as I fear they will get killed this fall. I am encouraging gunners not to kill them this fall, and I have requested land owners where there are pheasants to prohibit gunning this year."

Mr. George W. Phifer, of Manumuskin, writes: "The pheasants I received are doing very nicely. The twelve birds I received have raised forty two young ones that I have seen, and these are almost grown to full size. I found one of the male birds in my potato patch dead, which I presume was due to eating potato bugs where I had placed Paris green. I find that they are quite an insectivorous bird, and I have frequently watched them catching grasshoppers in the clover field. I was afraid that they would be very tame, but as soon as the grass and oats were cut they left the fields, and they are now fully as wild as our common pheasants. The sportsmen are very much pleased with them."

Fish and Game Warden George W. Dunham, of Flemington writes: "The pheasants sent me were placed upon adjoining farms for several miles square. They all remained upon the farms where they were first placed, and the young birds, which are quite abundant, have remained with them.

"One hen was killed by a mowing machine and her nest of sixteen eggs destroyed, and another nest was plowed up. Wherever I placed them the owners of the land agreed to advertise, and promised that no one should shoot upon their premises this fall. This has been done, and I doubt whether a single shot will be fired among them. The birds are doing remarkably well, and I have seen a great many of their young."

The above include all the letters, both favorable and unfavorable, received by your Commission; and it is apparent from them that the pheasants will do well in this State, especially when the people become better acquainted with their

RUFFED GROUSE

From "Birdcraft," by courtesy of The Macmillan Company.

traits, characteristics, habits and needs. The southern part of the State, as had been anticipated, showed itself particularly well adapted to their needs. As it is evident from the above letters, and from others received from persons anticipating the purchase of birds for introduction at their own expense, that the experiment of endeavoring to establish the birds firmly in this State will be continued for some time at least, it may perhaps be well to give a few facts for the guidance of those interested. That the introduction of the birds in some localities will prove failures is not more than may be expected, for with all the teachings of science and the lessons learned from experience it is impossible to always indicate just the kind of a place to which pheasants will take.

A guarantee of success at propagating the birds could be given with no more safety than a guarantee that trout will do well in a stream just because the water flows from springs through sheltered territory. Mankind has not as yet become sufficiently well acquainted with the animal kingdom to deal in certainties. The probabilities certainly favor the establishment of the pheasants as a valuable addition to the game birds of the State.

Although essentially a woodland bird, the ring-necked pheasant resembles the quail in that respect that it requires arable or cultivated fields for its well-being. As a rule they confine themselves to the woods in the daytime and at night for roosting, but in the early morning and again at dawn they forage in fields—especially cultivated fields, where the work of the gleaner has left something for them to subsist on. When disturbed at such times they will quickly retreat either to the woods or to some convenient hedge. Success need not be looked for in the introduction of pheasants unless there are fields and woods in the neighborhood. To put out pheasants where there is no food or water for them is simply absurd. An ideal harborage for them is a wooded hollow with a stream passing through it, with cultivated fields in the neighborhood; they have always shown a preference for cedar and deciduous trees.

Pheasants should be put out as nearly as possible just before their breeding time, and should invariably be released at night. If they are put out in the daytime they are apt to take to flight and scatter far and wide, and frequently to continue flying until utterly exhausted. Becoming separated in this way, increase is hardly to be looked for. When put out at night they will find some limb of a tree or shelter under a hedge, and before dawn they will have become calmed down. Under such circumstances they will quietly examine the place, and if it suits them they will remain; if for some reason they are not suited they are apt to remain together until they have found a more favored locality. At times success has attended the putting out of pheasants when they were first placed in a wire inclosure after the quill feathers from one of their wings had been removed. Under such circumstances it is necessary that the same person should supply them with food every day. It will take about five weeks for the plumage to grow again, and by that time the birds will have escaped over the top of the inclosure, finding themselves well at home in the new locality.

Although the introduction of the birds is attended generally with the best results when the adults are released, the same end has frequently been attained by rearing the young from eggs. For the purpose of doing this it is not advisable to select a bantam, as this bird can cover only a very few eggs. Any clean-legged fowl, weighing not over 3lbs., is preferable. It is best always to begin the hatching in a covert which the birds are expected later on to inhabit.

In selecting a place of this kind care should be taken that there is fresh water near by, that the soil is not too damp nor too sandy, and that there is plenty of insect life in the vicinity. The young birds should be carefully housed, or they will quickly escape to the woods, with nearly all the chances against their surviving. Young chicks should be fed six times a day, the food consisting of hard-boiled eggs chopped up fine, shells and all, with a few bread crumbs added. When they are a month old boiled potatoes mashed fine may be added and the number of times of feeding reduced to five a day. When they are ten months old they may be fed whole grain, and after this they require less care than the common barnyard fowl, being far hardier. Then is the time to put them out, and they will find shelter and food for themselves. In putting them out the proportion should be one cock to three hens. Persons desiring to keep them over another year can readily do so, as they require very little shelter, an ordinary chicken coop being more than is requisite to protect them against the rigors of winter.

The Preserve Question.

Editor Forest and Stream:

Twenty or thirty ducks are as many as any man should be allowed to shoot in one day, and any club that gives its members greater limits ought to suffer for it. Many years ago, when ducks were as thick as bees on Long Island Sound, two of us came home one day with sixty bluebills; but even that I look upon as slaughter, and it did not give me half the pleasure that ten or twenty have given me since, because the pleasure becomes deadened as it merges into labor.

Clubs are looked upon as aristocratic institutions, and naturally rouse antagonistic feeling among people whose privileges are restricted.

If clubs would be more considerate in their intercourse with the people and allow them a little more latitude over grounds that they have always considered free, they would get along with much less friction.

It's all well enough for a club of wealthy men to monopolize a few hundred acres of swamp land, but they are not satisfied till they have scooped in every foot that a duck can feed on.

Wealthy men have bought up nearly all the approachable land in the Adirondacks, and many of them have purchased tracts containing from one to half a dozen lakes, for fear that others besides themselves might have some pleasure. If preachers would give us more sermons on selfishness and less stuff about dogmas they would benefit the world far more.

I would like to know what but hatred of monopolies among the stupid and ignorant classes at the South could instigate such an unparalleled piece of barbarism as poisoning those club pheasants. But where is the remedy? The only thing that I can suggest is careful preparation for such work among the neighboring country people by slyly sending intelligent but common-looking men among them to show them the advantages of the spread of such game through the country, and at the same time they should employ them as much as possible on the place, and by that means come to a better understanding with them. There would, of course, be many escapes from their inclosure, and the whole surrounding country would reap the benefit of their splendid enterprise.

DIDYMUS.

ST. AUGUSTINE, Fla., Dec. 14.

The British Columbia Wood Pile.

OROVILLE, Okanogan County, Wash., Dec. 4.—*Editor Forest and Stream:* The game laws are enforced much better over in British Columbia than they are here. The Indians from the lower Okanogan and the Columbia have been in the habit of coming up on the Reservation and hunting every fall. They would camp near the line and occasionally go across the line and kill a few deer that seemed to be slow about crossing to the "Boston" side.

This fall some came and camped near the line and hunted for a week and killed several over on the British side. The police were watching and found where they had killed two deer; but the Indians had got back to the American side. The police got a Chinaman to go to the Indian camp and get the Indians to bring some venison down to Rock Creek on the British Columbia side; then they arrested two and fined them $50, and put them to sawing wood for a month each. That has put a very bad taste in their mouths, and the rest of the tribe have pulled out for home, saying it would be the last time they would hunt across the line.

If they would serve all men on the Reservation who kill game out of season the same way, there would not be any tears shed by

LEW WILMOT.

A Heavy Southern Deer.

NEW BERNE, Dec. 14.—One of the largest buck deer ever killed in this latitude was shot last week on the Foy plantation, near New Berne, by a colored man named Chadwick. The animal weighed 200lbs., and was served as meat at one leading butcher shop in town. Deer seldom run over 125lbs. on the hoof in this section.

Since one of our young sports captured a bear cub out on the macadamized road the other day, this method of hunting is likely to be popularized. The cyclist picked the animal up without dismounting, and succeeded in escaping with his prize, although the old bear pursued, as is usual in such cases.

A party of Pennsylvania railroad officials spent several days out at the Benders' shooting box, near Catfish Lake, below Riverdale, and bagged deer, turkeys, ducks and quail to their satisfaction.

I understand that no less than seven parties have been inquiring about the Bogue Bank hunting grounds below Morehead City, which were advertised in the FOREST AND STREAM, which shows what a remarkable advertising medium it is, and how a good thing is appreciated when it is offered.

C. H.

Books for Holiday Gifts.

THE Forest and Stream Publishing Co. invites attention to its list of works on outdoor life and sport as including many books which are admirably adapted to be given as Christmas or New Year's gifts. Mather's "Men I Have Fished With," Whitehead's "Camp-Fires of the Everglades," Robinson's Danvis books, Grinnell's Indian books the Boone and Crockett Club's series, Kunhardt's "Small Yachts," and the "Supplement" to it—these are some of the volumes which are in subject and examples of fine book making certain to be valued. The list is given on another page. Orders should be sent in such season that they may be filled in time for the holidays.

Maine at the Sportsmen's Show.

THE proposed exhibit of the region around Moosehead Lake and others reached by the Bangor & Aroostook R. R., now being arranged for by Granville M. Gray, may well be looked for with keen interest on the part of visitors to the Sportsmen's Exposition in January at Madison Square Garden. It will be, in fact, nothing more or less than a breeze from the Maine woods, laden with the scent of the pine and fir, and giving one a glimpse of "life as it is lived" by the camper-out. The plans include the transportation to the Garden from Maine of not only a complete outfit for camping—the sportsmen's tent, the fly for a "dining hall," the guides' tent, all put up just exactly as they would be in the heart of the Maine woods—but added attractions will be given the exhibit by the erection in the Garden of a veritable Maine forest in miniature; the trees, the mosses which cover the ground, the occasional moss-covered rocks, the wild creatures half hidden by the shrubbery and "woods" of the background, all will have come from Maine to add interest to this exhibit and make it realistic. Even the half-burned logs which form the dead embers of the camp-fire will have been rescued from the oblivion of some long-forgotten camping place, that the actual scene may be as like to the real spot represented as possible. On a knoll near the tent, resting easily upon the bed of ferns carelessly dropped there for them to rest upon, will be a handsome string of the trout that have made Maine famous, lying just where, in his eagerness to step aside for a moment, the victorious angler has laid them and his tackle as he has brought them from the water.

Guides from the various sections of the territory touched upon will be on hand with maps and other descriptive matter, and, what is far more valuable and entertaining, a great fund of ready "wood yarns" and practical information at their tongues' ends. It is designed, in fact, to make this exhibit as nearly an actual reproduction of a Maine camping scene, where foot of white hunter never trod before, as possible. Mr. Gray is an expert guide, and is practically fitted to arrange such an exhibit from many years spent in the Maine woods as guide and taxidermist.

Cheat Mountain Association.

THE members of the Sportsmen's Association of Cheat Mountain, of Pittsburg, Pa., have nominated the following officers for the ensuing year: W. M. Kennedy, President; U. Baird, W. S. Edwards, Nathaniel Ewing, W. G. Brown and S. B. Elkins, Vice-Presidents; Dr. W. F. Robeson, Secretary; Theodore Sproull, Treasurer; Dr. W. J. Riggs, Naturalist and Surgeon; C. C. Scaife, George Shiras III., H. P. Pears, James H. Stewart, A. P. Tallman, J. M. Bell and M. C. Miller, Directors.

The preserve of the Association is situated in Randolph and Pocahontas counties, West Virginia, and covers 64,000 acres. A fish hatchery has recently been added, and last week 1,500 live trout and 150,000 eggs were turned into the mountain streams. The annual election takes place in January.

Virginia Quail Law.

THE Virginia law of 1896, prescribing a two-years' close time on quail in Virginia, has just been repealed. The general open season on quail runs to Jan. 1, with many special county laws noted in the *Brief* extending it to later dates.

Sea and River Fishing.

ANGLING NOTES.

The Habitant.

EVERY man who goes to Canada for fishing or shooting is more or less familiar with the Canadian habitant, for he thrives where fishing is found at its best, and to know him even in a slight degree creates a desire to know him better. We know him chiefly as guide and voyageur, faithful, looking to our comforts and safety on portage and rapid; skillful with canoe and versed in woodcraft; honest as the day and innately polite; enduring heat and cold and bearing burdens for us that would tire a pack horse, yet doing it cheerfully; interested in our sport and as pleased as we can be when successful; simple as a child, lightening labor with song; a loyal friend and companion that is left behind each year with regret when we return to town from an outing in the woods and on the waters of the Dominion. It may be Joe Mercier, of the St. Maurice, who forty years and more ago journeyed to the Great Mistassini Lake; or Aimé Beautieu, of the Laurentian, who takes you down the rapids of a big river in a frail canoe in a way to make you think it safe as a house; or Raphael Morace, of the Triton, who can fashion a moose horn or mink trap with dispatch; or Maurice Boirall, of Lake St. John, who knows just where the ouananiche are waiting for your flies; or it may be any one of scores of other members of the race of hardy, faithful men who speak English more or less imperfectly, but who serve you well, good men and true, who if they have any little failings we prefer not to remember them, that all sportsmen, I am sure, desire to become better acquainted with.

Dr. William Henry Drummond, of Montreal, has made this possible not only for those who journey to Canada, but for men and women of all nations; for he brings the habitant to our homes, wherever those homes may be, in his charming book of verse, "The Habitant and Other French-Canadian Poems."

The author has lived among the habitants, fished with them, hunted with them, known them in their home life, and in his big-hearted, kindly way, has come to sympathize with them and appreciate them, all the time absorbing their speech as they convey their meaning to English-speaking people, until he speaks the French-English like one to the manor born. A practicing physician, he has met the habitant in sickness and in health, at home and abroad, and has entered keenly into all that concerns him, and now he has told the world about him in verses that bear the hall mark of the soil in every line, and it has all been a labor of love.

I first heard the author read in his own library "The Wreck of the Julie Plante;" then I heard it recited at a club entertainment, and a little later I heard it sung at another entertainment. Upon each succeeding visit to Montreal Dr. Drummond would fish out of his library table a new habitant poem and read it, as he only can read it, until I began to ask the question: "Why do you not gather the poems together and give them to the public in a book, for you have been plowing in a new field and your harvest should be a generous one, the reading public being quick to appreciate real worth?"

The question has finally been answered and the book of poems is published—homely, true to the life, with never a suspicion of burlesque, the desire being only to represent the French-Canadian habitant as he is. Hundreds of sportsmen will find old friends mentioned by name in the volume, for the author has not been obliged to draw upon his imagination for the names of his characters.

Maxime Labelle tells in the book of his visit to Egypt during the Egyptian war with a band of voyageurs, among them Joe Mercier, and Joe has told me the tale himself as we fished together on Wayagmack, and of the two stories I prefer that told by Maxime.

The illustrations by Mr. Frederick Simpson Coburn are fascinating in their truthfulness and beauty of execution, and taking the book altogether, we feel like saying with the author in the only purely English poem in the volume:

"Oh, Spirit of the Mountain! that speaks to us to-night,
Return again and bring us new dreams of past delight,
And while our heart throbs linger, and till our pulses cease,
We'll worship thee among the hills where flows the Saint Maurice."

Ouananiche Again.

Dr John D. Quackenbos, of New York city, writes me from Soo-Nipi Park Lodge, in New Hampshire, as follows: "Apropos of the discussion in FOREST AND STREAM regarding the pronunciation of ouananiche, I have at the lodge a Montagnais Indian from Lake St. John, whom I have engaged to trap some otters that have made their appearance here, and take in a few mink, foxes, raccoons, etc., to make the ladies furs and rugs. He pronounces the word wonnahn'-ish, accent on second syllable. The first syllable is pronounced exactly as we pronounce one. The second gives the Boston sound to the a, nahn—not the flat Cape Cod sound nan, with a twang, nor the Jersey snap to the a. The last syllable is ish. I have had my Indian pronounce the word over and over, and it is really quite musical. No win-in-ish about it."

A few years ago, at Lake St. John, Mr. Chambers and I interviewed a lot of men—Indians, half-breeds and habitants—in reference to the pronunciation of the word, and one and all pronounced the word in the same way, and that was as Dr. Quackenbos states above, except that the accent was on the last syllable. Pat Cleary had previously told me that that was the correct pronunciation, which was confirmed by Prosper Cleary, his brother, and young Prosper.

I should say that they pronounced it as indicated by Dr. Quackenbos when left to themselves; as, for instance, when pointing to a fish, and asking what it was, they would one and all say won-nahn-ish, as the doctor has expressed it, dwelling a little on the last syllable. But ask them if it was win-in-ish, they would say yes, and pronounce the word as you had done. Vary the pronunciation and ask the question, the reply was always yes, and they would adopt whatever you suggested to them. We talked with from twelve to twenty men that evening to get the correct pronunciation, and, if they had no lead, they would each one pronounce the word as I have given it, and I found this was true afterward at the Island House, and of my own men, but every blessed one of them would change it the moment either Chambers or I would indicate the change. Johnny Morel, one of the oldest of the habitant guides, who was in my canoe, changed the pronunciation six times in as many minutes when I indicated six different pronunciations, for he would say *oui*, and follow my lead, only to resume the universal pronunciation when left to his own devices.

Migrations of Salmon.

It was my good fortune to be a guest of the Camp-Fire Club at their regular monthly dinner in New York city, and to be seated at table between the artist Mr. Harry S. Watson and Dr. Robert T. Morris. The subject for the speakers that evening was: "Where have you been and what did you get?"

Dr. Morris told of his trip the past season to Labrador, and while I do not mean to anticipate anything the doctor may write of it for publication, I desire to say a few words upon what he told me after the dinner. He said that salmon and sea trout (*Stagnales*) run down the Eagle, Paradise, White Bear and North rivers to Sandwich Bay and there remain all winter, not going to sea at all. The bay is thirty miles long and twenty miles wide, with a strata of fresh water overlaying the salt water, and the bay so abounds in fish food that the salmon and trout have no reason to go to sea to seek it. This is but confirmation of what I wrote in this paper a few years ago, when I gave what I had been able to gather in relation to the habits of salmon in salt water. There have been two theories in regard to the movements of salmon after they go to sea: One that all the salmon of all the rivers along a sea coast join in one great body and proceed for some distance until they find, generally in the south, suitable water and food for their winter sojourn. The other, that salmon of each river resort to the sea in the immediate neighborhood of their particular river. The evidence that I was able to gather pointed to the latter theory as being the correct one, and Dr. Morris's observations strengthen it.

In Sandwich Bay the salmon and sea trout are caught through the ice all through the winter, and they remain there, as they find food in abundance; and that is what salmon go to sea for, to recuperate on the rich ocean food from the exhaustion of spawning; as they find the food near the mouth of the river, they seek no further for it, and that would appear to be the extent of their migration in the ocean after leaving the river in which they have spawned.

Turtles on a Set Line.

A Delaware & Hudson R. R. train stopped at Round Lake Station in Saratoga county, and Mr. John Manning, of Troy and Saratoga, who was sitting next me, said: "I often am reminded when I pass this place of coming here when I was a boy, probably not much above twelve years of age. Some friends were camping here on the lake, and I came up from Troy to spend the night in camp with them. There was another camp not far from ours, and members of the party in that camp had put out a set line for eels, as it proved. The next morning we were attracted by the noise of the people in the other camp. Some of them were out in boats and some on the shore, and all were excited over something, so we went down to see what it was all about. The people in the boats were taking up their set line, and on it were a lot of snapping turtles. The short lines from the main line had been baited with minnows, and some of the minnows had been taken by eels and some by turtles. It was estimated that the sixteen or eighteen turtles that they found on their hooks weighed nearly a ton, and the largest one would weigh 85 or 90lbs. Such a time as they had getting the turtles into the boat! It was no wonder that the men made a noise, for I distinctly remember to this day that it was no small matter to get the turtle up to the surface and into the boat, with those on shore and in the boat shouting directions to the men lifting the line. In some instances the turtles had seized the live eels that had taken the minnows, and I recall one big fellow that had a large piece of eel hanging from his mouth, although he was securely hooked."

I have had minnows bitten in two by turtles when on the hook, for they leave a mark on the bait fish that cannot be mistaken; but I have never hooked a turtle, although my friend, the late Judge Ranger, had that experience in Lake George. In the days of the Minnehaha, a steamer that ran down through the lake in the morning and back at night, it was not unusual to take boat and oarsman down the lake in the morning and fish during the day and have the steamer pick you up in midlake on her return trip. This the Judge did one day when the black bass fishing was at its best.

He had not taken any very large bass, something we are all ever fishing for, and it was nearly time for the steamer to be sighted. There was a nibble at his bait and he gave the fish plenty of time, for it seemed to be mouthing the bait as though the fish were very fastidious. Finally the Judge struck, and to his intense surprise he was fast to something huge that he could not move with his light rod, and at this juncture the boat appeared in sight, but several miles down the lake.

Try as he might, he could not raise his prize, whatever it was, from the bottom, and he imagined all sorts of things as being on the hook, for it was his first experience with a turtle, and he had no idea whatever that that was what he had hooked. He thought he had the largest fish in the lake, trout or pike; for he was satisfied that it was too large for a black bass, and that the fish was not yet alarmed, but had simply gorged the bait and resisted by simple avoirdupois all efforts to raise it to the surface. His boatman had the anchor up, and he had mentally calculated how much line he could give the fish, when it made its first rush and the fight actually began. The steamer was drawing nearer, but he had lost all interest in it, for he was ready to put up an all-night fight if necessary to get that fish in his boat and eventually mounted in his office. All the time he was putting on as much pressure as his tackle would stand, and little by little getting his fish up in the direction of the surface, but the rush did not come and the weight was like a sunken log, although it did give evidence of life. When his fish had been lifted up some distance from the bottom he peered into the clear water over the side of the boat and made out the form of a turtle on his hook, and utterly disgusted, he cut his line and told the oarsman to row out and hail the steamer, which he was just in time to do.

A. N. CHENEY.

CHICAGO AND THE WEST.

Illinois Fish Work.

CHICAGO, Ill., Dec. 18.—The FOREST AND STREAM office here was in receipt this week of a little visit from Pres. Nat Cohen and S. R. Bartlett, of the Illinois Fish Commission, who came in with Warden Loveday, of Chicago. These gentlemen say that in all probability the State Commission will by next spring have a brand new boat in commission—a craft something of the dimensions required by the great and growing work of the board, quite outshining the useful and faithful but rather inadequate Lotus. The new boat is designed by Moritz, of Quincy, and will cost about $6,000. She will be a stern-wheeler, 115ft. over all and 26ft. beam, with a full battery of powerful boilers, and fitted up with all the appliances for the work along the coastwise rivers of this State, which has over 1,000 miles of shore line on the Mississippi, Illinois, Wabash and Ohio rivers.

Mr. Bartlett says that there are 10,000 fishermen of the professional class in Illinois, and that last year they snipped 7,250,000lbs. of fish, worth nearly $250,000. It is with pleasure that one observes that of this amount over one-half was composed of that husky foreigner, the German carp.

Mr. Cohen is a hustler, and he gives me the quiet tip that next year he is going to let a large harsh substance fall on the neck of the transgressor in game fish matters. He says he at last has good fishways in at Walden and Kankakee, on the Kankakee River, and that he will restore the circulating medium of that stream. He is especially proud of his new black bass hatchery at Urbana, where he will have stock raised for the eastern portions of the State.

The Florida Fish Congress.

Mr. August Hirth, of A. G. Spalding & Bros., long and well known by the angling community of this section, has received his commission from the Governor as delegate to the Fish Congress of Florida, earlier mentioned, and will leave for the sunny South about the middle of next month. It is likely that two or three others will be sent from this State, besides Commissioner Bartlett, named last week as one of the representatives for this State. It is not certain that the latter will be able to attend, but Mr. Hirth will go, and we could not have a better man to represent the better class of sportsmen and their interests in this part of the North.

Hatchery Sold.

The private trout hatchery of Mr. H. B. Gardner, on the Pine River of Wisconsin, was last week sold to Manager McLeod, of the Wisconsin Telephone Co., of Milwaukee.

E HOUGH.

1206 BOYCE BUILDING, Chicago.

Sundown Fishing Club.

THE annual dinner of the Sundown Fishing Club was held in the banqueting room of the Lotos Club, No. 558 Fifth avenue, on the evening of the 15th. The club in question is a very successful one, limited to twenty members, whose preserve and attractive club house is in the town of Neversink, Sullivan county, on the Rondout Creek. The gathering was a most pleasant one, and the dinner a great success.

The following gentlemen were present: Rev. A. P. Van Gieson, President; C. B. Lawrence, Vice-President; J. B. Yale, Secretary; Samuel A. Wood, Treasurer; William J Follett, T. A. Knapp, C. H. Post, R. C. Christopher, R. F Sinclair, Geo. S. Graves, C. H. Tiebout, R. E. Van Gieson and Geo. C. Howe. In addition to the above, the following invited guests were also at the dinner: D. K. de Bexideon, J. M. Woodbridge, George Hitchcock, N. A. McNeil and Dr. Cyrus Edson.

A New Departure in Fishing Rods.

Editor Forest and Stream:

From the present outlook it is reasonably safe to assert that the bass fishing season of 1897 is practically over in this latitude. Not because it is too cold to fish, for the temperature all the autumn has been quite moderate, but because the later rains have swollen the streams so that the fish no longer frequent their favorite haunts, but have gradually dropped down with the rising waters into the deeper hiding places, where they go into a state of suspended activity.

I am led to the conclusion that every year the bass and the trout grow more intelligent and wary, and that the only way we are able to keep pace with their growing acumen is by continually improving the tackle that is devised for their destruction. Years ago the uneducated fish rose greedily at a bit of salt pork suspended by a heavy cord from an uncouth sapling; to-day nothing is effective save a microscopic fly pendant from a leader of drawn gut fastened by means of a slender braided and enameled silk line to an 1897 split-bamboo rod.

And this reminds me that, speaking of improvements in tackle, Toledo, whose inhabitants regard angling as one of the weighty and serious joys of life, is to be credited with one of the most ingenious novelties of the year. Mr. J. M. Kenyon, of our city, an enthusiastic angler and amateur rod maker, has perfected an improvement in split-bamboo and wooden rods which has elicited a great deal of favorable comment. By his process, every joint in the rod, before the guides or rings are attached, is wrapped continuously from end to end with white spool silk, which is afterward treated to several coats of spar varnish rubbed down and polished by the usual methods. When the rod is finished and thoroughly dry the wrapping of silk becomes beautifully transparent, and even the closest scrutiny can hardly detect the windings. In one case, a tip of split-bamboo which had been finished as above mentioned was sent by Mr. Kenyon to a friend in Washington with a description of the process. In return the recipient wrote a polite intimation that the sender of the tip was playing on his friend's credulity—kidding him, as the boys say—and it was only when he had followed instructions to break the tip that he was satisfied it was exactly as represented.

During the past spring and summer Mr. Kenyon has finished up several split-bamboo rods in this style, and they have been borrowed with great assiduity by his friends whenever it has been possible. One in particular that has been a great favorite is a split-bamboo 10ft. long, and weighing a trifle over 7oz., made in only two pieces, which were spliced at the single joint with a waxed cord. These rods present a remarkable combination of elasticity and backbone, and no matter how severe their use (within reason) never take a set. This improvement is applicable also to the three-joint bamboo and to wooden rods, but the latter do not show such good results. A split-bamboo of this description will endure a wonderful amount of hard work without breakage, and yet retain all its vitality unimpaired. A 3lb. bass on such a rod gives a feeling of serene satisfaction that well nigh discounts an approving conscience.

It will be remembered that some months ago FOREST AND STREAM published a letter from a Pennsylvania correspondent, I believe, who described the device of some angler who had wrapped an ordinary cane pole with linen thread, obtaining a very excellent rod by the operation. At that time I clipped the article and directed to it the special attention of Mr. Kenyon, who at that time had already made one or two rods of his pattern. So that it will be seen Toledo is by no means a mere imitator.

JAY BEEBE.

TOLEDO, O., Dec. 16.

Yachting.

WE note the growing use of the term "race committee" to replace the old one of "regatta committee," and commend it to those clubs which have not yet made the change. There was a time when the latter term was strictly appropriate, the principal racing functions of a club being set regattas for the fleet at infrequent intervals. Save in the case of a few of the great non-racing clubs, such as the New York Y. C., this solitary annual function of a formal "regatta" is obsolete; a regular series of races is sailed through the season, and the "annual" is but one of many instead of the sole event of the year. The duty of a modern committee is not to figure at one "regatta," but to plan and carry out an extended series of yacht races of all kinds through the season, and the term "race committee" is in every way preferable to "regatta committee." Similarly the term "race" is quite as expressive, and in most cases even more accurate than "regatta," and may well be universally adopted. The modern "race," as managed to-day in all racing yacht clubs, with its exact system of rules, is quite a different affair from the old "regatta" on the go-as-you-please plan, an odd lot of big yachts of all sizes and rigs mixed together.

Another new term is that of "racing measurement," just adopted by the Sound Y. R. A., in place of "racing length," as being on the whole more exact and definite. As applied to a rule in which both length and sail are joint factors, it serves to distinguish it more thoroughly from the various length rules in which length alone is used.

One-Design Classes.

THE general outlook in yachting for the coming year is anything but encouraging; there is no prospect of a match for the America's cup; no schooners are building to meet Colonia; the proposed new 51ft. class has been abandoned, and the best that can be hoped for in the large classes is a continuation of the uninteresting procession of Colonia, Queen Mab, Wasp and Syce. While an international match is still possible, and there is yet time for the building of new yachts before the season opens, there are no reasons to believe that a challenge will be made and accepted, or that any serious efforts will be made to strengthen the larger classes. In the smaller classes a match is already assured for the Seawanhaka Cup, and one is quite possible for the Canada Cup; but both of these will be sailed on fresh and not salt water. That there will be any racing at all is due, not to the wise and far-sighted legislation and judicious encouragement of desirable classes by the great yacht clubs, but rather to the current *furore* for an imported fad, the "one-design" class; thanks to this, the indications are that the season of 1898 will be a notable one from the amount of small yacht racing and the general and popular interest in the sport.

Whether or no one-design classes are either necessary or desirable in theory is a question that may well be deferred for some years at least; as matters have been in yachting and are likely to continue, the one-design class offers the only practical solution of a very difficult problem. A look at the measurement question in all countries and among all classes of yachtsmen shows a general condition of confusion and uncertainty, such as was so painfully evident at the recent meeting of the special committee of the British Y. R. A. for the revision of the rule in the small classes, eight of the committee voting for the proposed change after long consideration, and another eight against it; no action being taken by the Association in the end. Thus far there are few indications of the possibility of an agreement among yachtsmen on a formula designed to restrict extreme features or on salutary limitations of construction; nor is there even a certainty that if really good legislation were possible in both details, any general revival of building and racing would follow.

In this condion of affairs, the one-design class, with its arbitrary restriction of dimensions, details of design and construction carried to an extreme, offers to yachtsmen the only hope of continued racing. Examples of the one-design idea are found in all sizes from the special Newport 30ft. class down to classes of racing dinghies and dories, all types being represented. We have within the past two years published many designs of keel, fin-keel and centerboard craft, from the extreme racer to the veritable cruiser, that have been utilized as the basis for such classes.

Though essentially English in its origin, such classes being found everywhere in British waters, the idea has now taken root in this country, and especially about New York. The Seawanhaka fleet, with the extra boats lately ordered, will number about thirty-five, the American Y. C. 25ft. fleet will number about fifteen, and now a still larger size, of cruising schooner, is proposed for the Sound. The largest class yet proposed, the 51ft., has failed of realization, but not on its merits; and unless some radical change of rules is made, it is only through a one-design class, or its parallel in a strongly restricted class, that any building can be looked for in the classes above 42ft. R. M.

Thanks to this new idea, there is a fair prospect of racing next season about the Sound, and of a continuance of the sport for a couple of seasons more before the mere novelty of the one-design idea has worn off and the craft thus built are left to live or not, according to their intrinsic merits. It is to be hoped that by this time yachtsmen will be prepared to begin the new century with an improved rule of measurement that will produce a useful and serviceable racing yacht in the regular classes.

Apart from the immediate aid thus afforded to yachting by the one-design idea, it promises to be most useful in another way in developing yacht racing in remote and isolated localities. There are numerous stretches of water throughout the country, in convenient proximity to cities, and in every way available for yacht racing, that thus far have not been brought into use for that purpose. In many cases there are no boats at all, in others a small mixed fleet. Where such a fleet exists, its very nature is often such as to bar all attempts at regular yacht racing. It numbers perhaps one cabin sloop of 30ft., a couple of Cape cats of different sizes, about 20ft.; a few old sandbaggers, some cat and some jib-and-mainsail rig; a St. Lawrence River skiff, a Barnegat sneakbox, perhaps a canoe or two, and a rowboat of the Whitehall model with a sail. Such a collection will be readily recognized as representative of the little fleets that nestle in odd nooks and bays along the Sound, the Hudson, the Delaware, and numerous other places throughout the country. The vested interests back of such a marine agglomeration are a permanent bar to the establishment of racing in their locality; one attempt to race the fleet under any possible system of measurement, or even an arbitrary handicap, is quite enough to satisfy the bold man who makes it, and also to set the entire lot of owners by the ears.

In such a locality as this, as well as in one where there are as yet no yachts nor yachting, the one-design idea is specially applicable. It is only necessary that those interested in yachting and racing, though but half a dozen in number, should get together and agree on a standard design to be built to by all alike, with positively no difference whatever in the boats, to be kept in the same condition as nearly as practicable, and raced regularly under stringent regulations and some standard racing rules.

In regard to the design, there are two important points: in the first place, the boat must be directly adapted to the locality in which it is to be used and the general requirements of the members: in the second, the cost must be kept within a reasonable, sometimes within a very low figure. It is impossible to give any exact idea of cost, but it may be said in a general way that a satisfactory craft of even the smallest size can hardly be had under $200 for complete racing equipment, and the attempt to reduce the cost to one-half or one-quarter of this sum is likely to result in complete failure. The cost varies greatly in different localities; we have seen a very good 16ft. sailing skiff—a very good boat for a one-design class on a small bay or lake—turned out as low as $75 in Canada; but this represents an extreme figure; in the States the cost would be considerably higher, and in any case there are certain items which will add to the cost. If a good stock design can be had of a builder, as was the case in the boat just mentioned, the cost of a design is saved; but as a rule it will pay in the end to secure a special design from a designer who will take the trouble to familiarize himself closely with the special conditions of the case and to turn out the best possible craft to meet them. This alone may avoid a failure through the selection of the wrong type of boat. The designer's fee must in this case be divided among the different owners, but this is nearly or quite offset by the careful planning of a special construction for the fleet that will give lighter, better and cheaper boats than if this art of the work were left to the builder.

The questions of size and type are important ones, to be determined by the amount which the owners are willing to pay and the waters on which the yachts or boats are to be used. In the face of the notable success of the Kingstown Water Wag class, of but 13ft. length, it will hardly do to say that this size is too small, and a 14ft. sailing dinghy, as described in the FOREST AND STREAM and in the "Supplement to Small Yachts," has proved a very handy boat; but in most cases it will hardly pay to go below 15ft. l.w.l., unless for very small bodies of water. Where even occasional rough water is to be considered, a boat of 15ft. l.w.l. will be found sufficiently safer, faster and more comfortable than one of but 18ft. Of course, the model must be considered in making such a comparison; a broad and full dinghy of but 13ft. may be abler than a canoe of 15ft. The depth of water at the anchorage, as well as over the course, and the general sailing waters accessible within a few miles, will probably settle the question of centerboard and keel; if the latter be chosen, there comes up the question of fin-keel or full S section. As to speed, it is not absolutely essential that the boats shall be very fast for their length; it is presumed that they will only race together, and that they will not be called upon to meet the fastest possible construction of racing machine. At the same time it is absolutely necessary that they shall not be tubs, sluggish and ill-balanced, but smart, lively little craft, moving off easily, always under control and quick in stays. It is quite possible to attain this much, and it is a good deal, even though the boats may not be of the fastest of their measurement. As racing is presumably the first purpose in view, at least such speed as comes from harmonious proportions, good form, moderately light construction and neat rig must be had; but after this the boats must in most cases serve one or more other purposes. They may be needed for afternoon sailing with three or four aboard, for fishing, or for Saturday cruises. The racing features must be developed to just such a point as will hold the class strongly together and keep up the interest in it, as only racing can do; beyond this, the more generally useful the boats are for cruising, fishing, pleasure sailing, etc., the better for their individual owners.

It will be seen, from this point of view, that much depends upon the selection of the right boat for a certain locality; and that a model which answers perfectly for one place may prove a failure in another where the conditions are quite different.

It may, after all, if the necessary amateur skill is not at hand, actually save money to employ a competent designer to get up a special design.

As to practical methods in organizing such a class, the first step is for the few directly interested to meet and consider about what can be done, how much can be paid for the boats and what general dimensions and type are most desirable. The many designs published in the FOREST AND STREAM will serve to show what there is to select from. After sufficient study of the subject to give a definite plan of dimensions, type and cost, a meeting of the club or of the yachting men from the locality, in the event of there being no club, may be called; the proposed plan will be laid before it and discussed and a committee of three or five appointed, to consult with designers or builders as to exact plans and prices.

After suitable plans have been adopted, in accordance with the general wishes of the proposed owners, all of these may be asked to enroll themselves as members of the class, and a formal set of rules for the class may be drawn up and signed by each member.

It is not necessary that the class should be strictly one-design; in some cases better results can be obtained by leaving the owners free to secure designs where they will, merely complying with the general restrictions of the class. These, however, must be very rigidly drawn to prevent that evasion which is almost certain to occur in time if the racing proves successful. The one-design idea, however, has one very great advantage in that it lessens the cost of building materially.

After the final plans and estimates have been approved, the contract for a certain number of craft will be made, usually as a matter of course with some one builder who will go to special expense in the preparation of his moulds and patterns for the whole number, thus minimizing the cost. It is the practice, in such a case, to select the boats by lot, each being given a number as it is wrought into shape and the owners drawing for her when partly completed. Sometimes special arrangements are made for a more elaborate finish or minor changes of plan; but the nearer the boats are to absolute identity in hull and rig, the better sport may be expected. It is the custom also to give a generic name to the class, as Water Wag, Colleen, Droleen, Red Wing, etc.; this name sometimes being selected so as to allow of a series of names for the boats, as of birds, sea fishes, etc.

Where no club exists, it is absolutely necessary that some form of organization be entered into by the members of the class, and also that a committee be appointed to look after the general management of the class, the framing of rules, consideration of plans, contracts, etc., this committee to continue permanently. Even in the case of a club, or of several clubs acting together in a locality, such a class committee will be found almost essential.

In the case of a club or clubs, the regular race committee will naturally attend to the racing of the special class with its other duties; but where no club exists, or where one is organized from the owners of such a limited class, in addition to the class committee, composed mainly of owners, there should be a race committee of three or five, composed exclusively of non-owners, disinterested parties, who will have entire charge of the racing, selecting dates, making all arrangements and managing each race as it comes off. This race committee should, if possible, be entirely distinct from the class owners; but of course it must be composed of experienced yachtsmen.

One important feature of such class racing is the continuous record of each boat for the entire season, coupled with a system of prizes that will induce general and continued competition. It is never desirable to give too many or indiscriminate prizes, but in the case of a one-design or restricted class of a dozen boats a variety of prizes is possible. The first boat over the line in each race (of course there will be a one-gun start and no time allowance) should always have an individual prize for that win, with second prize possibly for five starters, and third for seven. The positions in each race should be recorded by one of the merit systems, and prizes given at the end of the season for the first three or four boats on the list. An individual prize may be given to the owner who makes the most starts in a season, another to the helmsman who has the best record, to the crew of the boat with the season's record, etc. The great thing is to stimulate competition, and to keep alive the interest of even those who fail to win direct prizes in the early races, and by degrees drop out.

We have already published the rules and conditions of different limited classes, but the following, recently adopted by the Dublin Bay Sailing Club, show the general nature of such rules. The Colleens mentioned were illustrated in the FOREST AND STREAM of May 1, 1897.

The hon. secretary, Mr. P. O'Connor-Glynn, proposed, and Mr. J. Lamont-Brown seconded: "That the A Class, which shall be known by the distinctive name of 'Dublin Bay 25-footers,' be one-design, deep-keeled boats, cutter-rigged, and with the following dimensions: Length over all, 37ft. 3in.; length on l.w.l., 25ft.; beam, 8ft. 8in.; draft, 6ft. 3in.; lead on keel, 3 tons 5cwt., and sail area, 845sq. ft., divided into mainsail—which shall be laced at foot, and may have three battens—topsail, foresail and jib. The following sails may also be used: Second jib, jibtopsail, balloon foresail, spinaker, storm jib and trysail." This was passed without dissent. The design of the new class was handed round for inspection, the hon. secretary stating that it had been prepared by Fife. It showed a boat very similar to the No. 1 Belfast class which has attracted so much attention this year, with the exception that there was more hollow in the bilges, lessening the displacement by about 5cwt. The design met with universal approval, and it was the unanimous expression of those present that the class would be very successful.

The following conditions applicable to the class were next proposed and carried:

(*a*) That this type of boat shall not be altered for at least five years from Jan. 1, 1898, and during that period shall constitute the A Class.

(*b*) The boats, masts, spars, sails, etc., shall be exactly alike, both as to size, material and construction, and to be built in accordance with drawings and specification marked G.A. and G.B. respectively, which shall be deposited with the hon. secretary. And no boat shall be built without a payment of a fee of three guineas to the club, for the use of the design and specification.

(*c*) Each boat's L.W.L. length shall be marked by the builders, but the official length of the Y. R. A. rating and Y. R. A. certificate shall not be compulsory for racing in this class.

(*d*) Any owner wishing to add or substitute internal fittings to those supplied in the pattern design may do so, but subject to the marks, as mentioned in condition (*c*), remaining unsubmerged when stores are on board. The gear and all stores and fittings which are common to all boats of the class shall be carried in the race.

(*e*) No structural alteration of any kind shall be permitted, and any structural repair due to accident or otherwise must be made or sanctioned under the direction of the committee.

[CONTINUED ON PAGE 516.]

THE ONONDAGA ASSOCIATION.

"To the Honorable Board of Commissioners of Fish, Game and Forests of the State of New York:

"Gentlemen: At a recent meeting of the Anglers' Association of Onondaga, of Syracuse, N. Y., it was resolved, and the secretary was directed, to make a report to your honorable board of its work during the year ending Sept. 30, 1897. The Association has received so many courtesies from members of your board, and so many favors of encouragement and assistance at your hands as a commission, that we are constrained to believe such a report will be of interest to you; and it certainly is due that we should report to you the uses to which we have put the substantial aid that you have given us in shipments of fish and fry for the waters of this territory, and to gratefully acknowledge the favors we have received from your board.

"In making such a report it may not be amiss to relate briefly the history of our Association. It was organized in 1890, chiefly through the efforts of the late John N. Babcock, than whom no truer gentleman or sportsman, nor one more devotedly attached to the cause of fish protection, ever lived. The first name signed to the articles of association was that of the late Hon. Thomas G. Alvord, a man known throughout the country as a true sportsman, and honored as a faithful servant of his State. These and about thirty others, prominent as business men and sportsmen in this vicinity, were the charter members of an organization that has since grown to a membership of almost 300, and comprises some of the foremost citizens and best known business and professional men and sportsmen in Syracuse and its vicinity.

"The officers of the Association are a president, a vice-president, a secretary, a treasurer and an executive board of six members, all of whom serve without compensation. The first president of the Association was R. W. Jones, who served in that capacity three successive years, when he retired voluntarily and was succeeded by Gen. Dwight H. Bruce, who has been re-elected each year to the present time.

"The purposes of the Association were the protection and preservation of game fish in the waters of Onondaga county, and the enforcement of the laws pertaining thereto. Since the time of its organization, however, its scope has broadened, and the Association is now working not only for the protection of game fish, but for the propagation and protection of food fish as well. More than this, we have striven for the enactment of better game laws, and in opposition to laws detrimental to the cause, which have at times threatened to deface the pages of our statute books. Above all, we have tried in all that we have done to educate public thought and sentiment to a better understanding of the cause of fish protection and to lead the large majority that has opposed it to see that in permitting the destruction of our food and game fish the people are losing forever one of the most bountiful sources of food supply, and one of the greatest blessings to mankind that an all-wise Providence has bestowed upon us.

"Our efforts have been to benefit not alone the angler and the sportsman, but all people and all classes. Our aim and our desire is that the laboring man as well as the sportsman may be encouraged, in the cessation of his toil, to spend his leisure hours in a pure and healthful recreation by the hope of a fair reward for his time and skill; that the people may be induced to indulge more generally in a pastime that will benefit their mental and moral as well as their physical being; that they may come in contact with nature in her most attractive form and learn to see her smiles in sunny skies, her frowns in the gathering of the storm; to hear her voice in the murmur of the mountain stream, her laughter in the babbling of the brooks.

"We desire above all that the people, not of one class, but of all classes, especially the poor, may have forever within their reach a source of food supply that may serve them in the exigencies of financial reverses, and the hardships that accrue from industrial depression and the scarcity of wage-producing occupations. To these ends our Association has devoted its time, its energies and its money, and the knowledge that our efforts have been crowned with much success, and that public opinion in this vicinity is rapidly forming in our favor, is a sufficient reward for our labor.

"One of the first acts of our Association was to employ a protector to patrol and guard, as far as possible, the public waters of this county, and, with the exception of a short period in each winter, we have kept a protector at work from the date of our organization down to the present time. We are, we believe, the only private association in the State, if not the United States, that employs and pays a protector for public waters. During the first three years of our existence the salary of the protector, as well as his expenses and other expenditures of the Association, were paid from the annual dues and voluntary contributions of our members. About four years ago application was made to the Board of Supervisors of Onondaga county for financial assistance. This application was granted, and since then, with the exception of one year, appropriations varying from $300 to $500 have been made to aid us in paying the expenses of the protector.

"About this time also a series of semi-annual outings was instituted. These outings are participated in by the members of the Association, who individually pay their own expenses, and in addition thereto an entrance fee, which is turned into the treasury of the Association.

"From the inception of our organization individual members have made application for and have received from your board quantities of young fish and fry, which they have planted in the public waters in this vicinity. It is only during the past two years, however, that the Association has taken up the matter and engaged systematically in the work of restocking our lakes and streams. The species and quantities of fish received, and the waters in which they have been planted, are shown in the following statement: 625,000 pike fry, planted in Oneida River; 500,000 pike fry, planted in Seneca River; 1,000 yearling trout, planted in Onondaga Creek; 1,000 Oswego bass fry, planted in Oneida River. A total of 1,626,000 fry and 1,000 yearling fish have been placed in public waters in this county.

"It is the intention of the Association, with the assistance and co-operation of your board, to continue this work during coming seasons until all the waters of this vicinity are thoroughly restocked with game and food fish.

"The work of our protector, who holds a commission from your board as a State officer, will be presented to you in a separate detailed report. A summary of his work for the year ending Sept. 30, 1897, is as follows: Number of miles traveled, 25,270; gill nets captured 21, value $146; fyke nets captured 19, value $143; trap nets captured 1, value $35; flat nets captured 1, value $5; seines captured 1, value $75; spears captured 8, value $12; total devices captured 51, value $416; number of arrests 9; convictions, 3; cases pending, 4.

"The above summary for the past year is a fair example of the work of our protectors during each of the former years of our existence, and a criterion for the future.

"In the prosecution of our work we have recived aid and encouragement from many sources, and we desire to make acknowledgment of it here. We wish to thank your honorable board for fish and fry, as well as for courtesies and encouragement; the honorable Board of Supervisors of Onondaga county for financial aid; the press of this city for universal kind treatment and many favorable notices; the Chamber of Commerce of this city for the use of its rooms; the business men and merchants of Syracuse, who have contributed generously to the interest and success of our outings, and Hendrick H. Holden, of this city, member of your board and fellow member of our Association, for many courtesies to our Association and to its individual members.

"If, in the judgment of your board, the publication of this report will benefit the cause of fish protection by promoting the formation of clubs and associations of a similar nature in other localities, we shall be glad to see it given such publicity as you may deem best.

"We remain, very respectfully,

"The Anglers' Association of Onondaga."

Camp-Fire Flickerings.

"That reminds me."

Shadow's tale of the squirrel tail in Forest and Stream of Oct. 23 recalls to my mind a little fun that an elder brother and myself had on Little Buffalo Creek in Perry county, Pa., ever so many years agone. My mother owned a strip of woodland on the side of the creek next to the land of a man named Strauser. Our fences joined his, and we were constantly missing the top rails, and wood out of the woods would mysteriously disappear, and the Dutchman and his tricks were always in evidence, so much so that we concluded we would even things up if possible by a practical joke.

One day that fall we killed a fine large gray squirrel, and stuffed the skin with sawdust, and at night took it over as near the Dutchman's house as we dared, and tied it securely up among the branches of a large oak. The next morning one of us boys had an errand across the creek, and passing along noticed the gray squirrel in the oak, and informed the Dutchman and his son Ike. They at once got their guns, and the way they gave it to that squirrel skin with powder and shot would have been a caution to Davy Crockett or to Shadow.

They poured hot shot into that hide until it was like a sieve, and the sawdust began to fall in their eyes, when it flashed upon them they'd been sold. The Dutch oaths uttered by father and son weren't equaled by the army in Flanders. To get even with us, however, the old man sent over to our house to borrow some ammunition, but we were conveniently short just then, and they were beaten on all sides. It was a scurvy trick, we knew, but it "kinder sorter" evened up things, and the Dutchman ceased to trouble us forevermore. James H. Ferguson.

Charlottesville, Va.

Wheeling.

Communications for this department are requested. Anything on he bicycle in its relation to the sportsman is particularly desirab'e

IN THE MATTER OF GEARS.

Pertaining to the wheel, there are few subjects so mystifying as that of gears. To the average wheelman or wheelwoman, the fact that a wheel may be a 68 or 80, or any other gear, contains no definite idea of what quailties the different gears have one compared with another, or what the properties of the gear are within itself. There is no suggestion of a unit as a starting point, nor anything in the practical workings of the wheel to warrant other than a vague conclusion. The sum total of average knowledge on the subject is that the higher-geared wheels have larger sprocket wheels and that more force is required to pedal them, although slower pedaling on them gives higher speed than it would in the lower-geared wheels.

Small wonder is it that the matter of gears is so mystifying, since the unit of measure is in the old style of wheel, the "ordinary," and is simply the diameter of the front wheel of that now ancient vehicle. The length of a rider's legs was a prime factor in determining the size of wheel that he could ride. The crank, axle and wheel worked together on the same principle that turning the crank of a grindstone turns the stone also; therefore every time the rider turned the pedal once the large wheel of the "ordinary" turned once also. This wheel on an average was 52in. in diameter, although it varied a great deal as used by individuals, it being greater or less, accordingly as men's legs were longer or shorter. Thus whether the wheel was large or small one revolution of the crank accomplished one revolution of the wheel.

When the "ordinary" was superseded by the safety, the old unit of measure, which was quite appropriate to the former, was retained and applied to the latter, to which it was not appropriate at all. One revolution of the crank on an 80-gear safety corresponds to one revolution of the larger wheel of an ordinary 80in. in diameter. The 118-gear, ridden by that prince of riders, "Jimmy" Michael, would correspond to a wheel 9ft. 10in. in diameter, of the "ordinary" type. As a unit based on the old "ordinary" it is absurd, since no one could ride an "ordinary" of 10 or 12ft. in diameter; and it is further absurd to apply a unit of measurement to a mechanism to which the unit is but remotely related.

Therefore the gear of a safety denotes that it corresponds to the front wheel of an "ordinary" whose diameter in inches is the same as the gear. And yet there is a relation between gear and diameter in that one revolution of the pedal of a safety—as an 80-gear, for instance, covers the same distance in results as a wheel 80in. in diameter. This is accomplished by a simple and well-known mechanical device. Two wheels, called sprocket wheels, are connected by a chain which travels around their circumference and transmits motion as does a belt when similarly used in various kinds of machinery. Now, if one sprocket wheel is three times greater in circumference than the other, the lesser wheel will have to revolve three times to the greater one's once. Thus, if the sprocket wheel on which the pedal acts has twenty teeth, and the smaller wheel has seven teeth, the latter must needs turn two and six-sevenths times to the larger wheel's once, and as the smaller wheel is firmly fixed to the axis of the rear wheel, the latter also makes two and six-sevenths revolutions every time the larger sprocket revolves once. As the pedal revolves with the big sprocket and the rear wheel revolves with the small sprocket, it follows that one revolution of the pedal causes two and six-sevenths revolutions of the rear wheel. If the wheel is 28in. in diameter we multiply the diameter by two and six-sevenths, which gives us 80 for a product, which is considered the equivalent of a wheel 80in. in diameter.

Dividing the number of teeth in the large sprocket wheel by the number of teeth in the smaller determines how many times the rear wheel revolves at one revolution of the pedal and what distance it travels; then the quotient multiplied by 28 determines the diameter of a single wheel which will cover the same distance in one revolution. Thus gear and diameter have practically the same meaning.

The higher the gear, the greater the power required to drive it. The crank is simply a lever, the point of which is at its axle; the teeth of the large sprocket wheel is the fulcrum, and the pedal is where the force is applied. The nearer the fulcrum is to the end of the lever, where the force is applied, the more power is there then required to overcome the resistance. A low gear gains in power, but loses in speed; a high gear loses in power, but gains in speed, following the law of the lever, as anyone can readily perceive by recalling the laws of dynamics so trying to our understanding in school days.

The power and physical form of individuals differ greatly, to say nothing of the differences in endurance, temperament, purpose, etc. The gear for the individual will therefore be largely a matter for settlement on a personal basis. One selects a gear according to his powers and according to the circumstances attending its use; that is, if he selects wisely. The probabilities are, that he will select a gear several degrees beyond his abilities to drive properly and with becoming ease; and as to the circumstances of whether the country is hilly or level, the roads good or bad, etc., he selects the gear first and considers the circumstances afterward.

The longer the crank, that is, the lever, the greater the power derived from the force applied, hence a rider should aim to have as long a crank as is consistent with his length of leg, and with the crank's function as a part of the mechanism.

The method of determining the gear of a wheel has been given above, but it can only be applied to such wheels as have the gearing in sight; or at least those with inclosed gearing could only be gotten at by a great deal of trouble. A ready and accurate way to determine the gear is to mark the exact distance that the wheel travels in one complete revolution of the crank. This can be readily done by placing the cranks perpendicular, then marking a spot on the floor in a line directly under one of the pedals. The wheel is then moved forward till the pedal makes one complete revolution, and another mark is made on the floor under it. The distance is measured in inches, and it is then considered the circumference of one wheel, let us say the big front wheel of the "ordinary." It is necessary to find the diameter of this single wheel, therefore its circumference is divided by 3.14159, and the quotient is the diameter of the "ordinary" in inches, and the gear of the safety.

The table herewith appended will enable to reader to readily determine the distance covered by the wheel in one revolution of the pedals, the gear being known; or, conversely, the distance being known, the gear can be determined. Sixty gear, 15.70ft.; 61, 15.97ft.; 62, 16.23ft.; 63, 16.49ft.; 64, 16 75ft.; 65, 17 01ft.; 66, 17.28ft.; 67, 17 54ft.; 68, 17 80ft.; 69, 18 06ft; 70, 18.32ft.; 71, 18 59ft; 72 18.85ft; 73, 19.11ft.; 74, 19.37ft.; 75, 19.63ft.; 76, 19.89ft.; 77, 20.16ft.; 78, 20.42ft.; 79, 20 68ft.; 80, 20.94ft.; 81, 21 20ft.; 82, 21.47ft; 83, 21 73ft.; 84, 21.99ft.; 85, 22.25ft.; 86, 22.51ft.; 87, 22.77ft.; 88, 23 04ft.; 89, 23 30ft.; 90, 23.56ft.; 92, 24 08ft.; 94, 24.61ft.; 96, 25.13ft.; 98, 25.65ft.; and 100 gear, 28 18ft. The largest gear in the world is said to be one built by the Ariel Cycle Co., Goshen, Ind. It is geared to 260in., and is ridden by H. Lyons, Elkhart, Ind This would be equal to an "ordinary" 21ft. and 8in. in diameter. Anyone having access to a work containing engineering formulæ can readily find all diameters and circumferences of circles within such limits as are practical.

WHEELING NOTES.

The L. A. W. has done a most beneficent work in placing large signs in dangerous places to warn wheelmen of them in time. They read in most instances as follows: "The danger sign. To cyclists: Ride with caution." These signs are furnished to individual wheelmen or organizations of wheelmen who have use for them. No one who has started down an innocent-looking hill and slowed up on noticing such sign but will feel grateful at finding at some place on the hill a serious danger, which is avoided as a result of the warning. Whenever the rider sees such sign he should make an invariable rule to heed it.

The construction of a special bicycle path over the Brooklyn Bridge is earnestly engaging the attention of the Bridge Co.'s engineers. The contemplated occupation of the driveways by the trolley cars makes a cycle path a necessity. One plan is for an asphalt path; another is for a path of an aerial nature.

A new thing in bells for 1898 will be the stamp of the L. A. W. on bells of superior excellence for the use of L. A. W. members.

If the rider should see a gold brick lying ahead in the road, it is the wiser course to turn to the right.

The 100,000 mark of the L. A. W., so long a point to strive for, has been passed so rapidly, notwithstanding so many losses from withdrawals, that the next effort should be to reach 200,000.

The Forest and Stream is put to press each week on Tuesday Correspondence intended for publication should reach us at the atest by Monday, and as much earlier as practicable.

The Kennel.

FIXTURES.

BENCH SHOWS.

1898.

Jan. 5.—Wilmington Kennel Club's show, Wilmington, Del. E W Jester, Sec'y.

Feb. 15.—New England Kennel Club's fourteenth annual show, Boston. James L. Little, Sec'y.

Jan. 18.—Butterly Bench Show Association's show, Grand Rapids, Mich. Miss Grace H Griswold. Sec'y.

Feb. 21.—Westminster Kennel Club's twenty-second annual show, New York. G. de F. Grant, Sec'y.

——.—St Louis Kennel Club's third annual show, St. Louis, Mo. Wm. Hutchinson, Sec'y.

FIELD TRIALS.

1898.

Jan. 10.—U. S. F. T Club's winter trials, West Point, Miss. W. B. Stafford, Sec'y.

Jan. 17.—Continental F. T. Club's trials, New Albany, Miss. W. S. Bell. Sec'y.

Jan. 24.—Champion Field Trial Association's Champion Stake, Tupelo, Miss. W. B. Stafford, Sec'y.

Feb. 7. Alabama Field Trial Club's second annual trials, Madison, Ala. H. K. Milner, Sec'y.

DOGS AS DRAFT ANIMALS.—II.

MR. H. C. MORRIS, Consul at Ghent, reports as follows:

In this western portion of Belgium, including the two Flanders, the dog has been employed "beyond the memory of man" as a beast of burden. Everywhere in the city and country he may be seen employed in what may be generally described as small teaming. He is a characteristic feature of life, and to the Fleming abroad there is always something missing—his familiar servant, the dog. For this existence and employment of the dog there are several good and evident reasons. The dog himself, his strength and endurance, are the principal factors; the conformation of the country in which he lives and works, the limited resources of his master, as well as the economy and facility of his maintenance, are secondary considerations.

The Belgian Dog.—There are all kinds and conditions of dogs at service in Belgium; there are large, medium and small dogs, strong and weak dogs, smooth-coated as well as shaggy dogs. It makes little difference to the Fleming what his dog may be, whether he be fitted for service or not, if the master needs his labor, he harnesses him to a cart and puts him to work. For this single reason there are very few lazy dogs in this country. There is such a diversity of variety and breed as to be bewildering when we undertake to describe what dogs are employed as draft animals in this country. There is, however, a type of dog peculiarly fitted for toil which is only found in Belgium and Holland. To this breed therefore special attention will be given. All the other kinds which may happen to be pressed into the ranks of the toilers may be properly considered as mongrels or half-breeds, and without any right to recognition as draft animals.

The Belgian dog—the breed being known only by this name—is a large, compactly-built animal. When standing he measures in height from 20 to 30in.; the hair is smooth and short, generally tan or dark-brown. Both his tail and ears are cut short, the former because it is believed that the strength which would otherwise center into this extremity is retained in the spinal column and haunches, and the latter in order to prevent the constant flapping of the naturally long ears, which would be a great inconvenience and hindrance to their work when annoyed by flies.

Strength.—This specimen of dog has been employed in Flanders for years unnumbered. These dogs are seldom harnessed single, but are usually driven two, three, four, five, or even six abreast. Five or six of such animals can easily draw a load of 600 or 800lbs. for a considerable distance and during several consecutive hours. The level plains of western Belgium and Holland are especially suitable for the employment of dogs for hauling purposes. While in mountainous regions they are not practicable for heavy loads, still even in slightly rolling country they are able to outdistance horses for long hauls. For example, the distance between Ghent and Brussels is thirty-four miles; ordinary horses require four hours to cover it, while a team of dogs will easily go over the ground in three hours without any apparent fatigue. A good team of two to four dogs will haul a peddler's load from 5 A. M. to 8 P. M., with only such short intervals of rest as they may obtain during the sale of goods.

The Belgian dog may be put to work when about a year old and can be employed daily during eight or nine years. He generally lives to be ten or eleven years of age. After death the skin is still of value for tanning purposes.

Training and Cost.—The training of these animals is very simple. It is customary to fasten the young dog, when about six months of age, alongside of experienced dogs and without giving him any load to draw, thus to teach him to run in harness. The prices of the dogs vary. Young ordinary dogs sell for about $6 to $7; a good specimen between one and three years of age brings $10 to $12, while a very fine animal will command $15. The number of dogs employed as draft animals in Belgium is very considerable, but exact statistics on this subject are not obtainable. According to the police registers of Ghent, 2,037 dogs are licensed for hauling in this city. These animals are exempt from the $2 tax imposed on pet house dogs, which number 3,775 in this city of 160,000 inhabitants. Notwithstanding the great number of these animals employed, there is an absolute and entire lack of statistics or literature on this subject, so far as I can learn, not a single published book relative thereto existing.

Breed.—Properly speaking, there is no organized trade in these animals anywhere in Belgium; dog markets are held, but the only people who frequent them are small farmers or merchants who may have an extra dog not necessary for their business which they wish to sell. There are no persons who make a specialty of breeding, raising and selling dogs used for hauling purposes. When anybody has a dog to sell, he generally informs his neighbors, and then, if any of them happen to need such an animal, he bargains directly for it. On this account the breed is not improving. There are no efforts to this end, and in all probability, by the haphazard crossing with other breeds, it is more likely degenerating. A dog seller informs me that in this respect improvement could be made, as, if there were a systematic and scientific crossing of the Belgian dog with the Ulm dog or Great Dane, he believes a very materially better breed would be obtained. Such efforts, however, have never been made in this country, as the market price of dogs does not justify the expense. It is chiefly because of their cheapness that the Belgian dogs have never attracted much attention or study.

Food and Care.—Their food and maintenance are trifling items of expense. One large dog can subsist on the kitchen waste of a household of five or six persons. Properly speaking, daily meat is indispensable, but very few of these Belgian animals get it. They should have daily 1lb. of meat—horse meat will answer; if they receive that much in a week they are lucky. In the country districts the dog's food is exclusively milk, bread and vegetables, but still he seems to be healthy, and to thrive on it. If specially purchased the food of five or six dogs will average 6 or 7 cents apiece per day. The care and attention required are slight. At night the dog must be given a good kennel, full of straw, and left unchained. Incidentally it may also be mentioned that, notwithstanding his long day's work, he is an excellent watch-dog. It should be noted that his feet never need attention, and that he is likewise proof against all kinds of weather, supporting equally well the extremes of heat and cold. Any casual observer will, upon reflection, be convinced that, in view of his generally hard treatment, the Belgian dog of burden is a patient, long-suffering animal. The French indeed, well express this condition of servitude by their proverb, "I would not be a dog in Belgium."

Wagons and Harness.—Very little of interest can be said of the wagons and harness employed. Two-wheeled low carts are preferably used. They should be as light as possible, and when loaded so balanced on the axle as to be almost in a state of equilibrium, thus relieving the back of the dog from all possible weight. Wagons or carts without shafts for this reason are the best, as then the dog is free to move around and lie down when halting. The carts in ordinary use weigh 100 to 120lbs. They cost $8 to $12. The harness is a horse's equipment in miniature. Even when driven several abreast each dog should have separate harness, as he is then in less restraint. The only peculiarity, if it may be so called, is that the pad or saddle placed on the back is relatively much thicker and stronger than in the harness for a horse. A good dog's harness made of leather costs from $1.25 to $2. There are indeed special manufacturers of these articles. The great majority of dog harnesses in use are, however, home made, of pieces of old leather, rope, or any old stuff which may be at hand, and most rudely put together, costing generally only a few cents.

Conclusion.—In conclusion it should be noted, as heretofore mentioned, that, owing to an entire absence of any organized trade or business in the breeding and sale of dogs used for draft purposes, it is practically very difficult to determine with any precision the utility of their service from a statistical standpoint. It may, however, be taken for granted, I think, that their general and common use throughout Belgium tends to prove that, under the conditions existing here, they are a great economy and labor factor. A farmer, peddler or merchant can buy a very good outfit of three or four Belgian dogs, harness and wagon for $40. Their subsequent cheap keep and little care also are great considerations. Furthermore, one great advantage which dogs have in this country is that they may be housed in very small quarters. In many village households, crowded together as the dwellings generally are in Europe, the dogs may be kept in the courtyard or cellar, while horses would require separate quarters. It must also be considered that pasturage is essential for horses at certain seasons of the year. In these respects the dog, in the eyes of these people, enjoys great advantages over his equine friend. Whether or not in our country such considerations would be sufficient to give the dog the preference, or even place him on an equality with the horse, is a question that must be referred by me to higher authority. So far as possible, I have endeavored to describe the Belgian dog as he is found at home employed for draft purposes. Would he be the same dog in foreign lands, can only be determined by trial and experience.

France.

Concerning dogs as draft animals in France, S. E. Morse, Consul-General, Paris, writes that:

The use of dogs as draft animals is practically unknown in this consular district. Dogs are sometimes utilized for the propulsion of the small handcarts used by ragpickers, but this use is hardly extensive or important enough to be considered.

Germany.

Mr. Charles de Kay, Consul-General at Berlin, reports:

There may be said to be no breeding and training of dogs used as draft animals in Prussia, and as little harness as possible. It is true that, for the purpose of advertisement in large cities like Berlin, Hamburg and Dresden, dogs of even size and fairly decent breed are occasionally harnessed to lacquered wagons bearing the name of some firm, but such are rare. The dog wagon is a familiar sight in the streets of Prussian and Saxon towns and on every highway in Germany, but it is usually a rudely constructed four-wheeled cart made by the village carpenter and smith, and employed to bring milk, vegetables and other agricultural produce from the country into the town, or agricultural implements from the village to the field. The dogs used are of any breed that comes handy to the peasant, usually the short-haired, heavy-limbed dog about the size of a foxhound, or else a small specimen of the liver-colored hound, suggestive of the Danish dog. Spotted carriage dogs and others of any distinctive breed or style are very rare, for the simple reason that the people who employ dogs are very poor and would at once sell any dog to the dog fanciers that might show good points. Still, there seems no reason why special kinds should not be bred, whose weight and pulling powers would give them a decided advantage over all other dogs for this purpose.

Last year, at Dresden, there was a special exhibition of dog wagons and dogs, mostly two to a team; but the entries did not present anything remarkable, except in the case of a fancy team of four big mastiffs, which presented a handsome appearance, but could not be considered practical.

The harness is a strap harness of the simplest description. It must be remembered that a woman, man or boy always accompanies the dog or dogs, and generally assists by pulling. Here in Berlin one rarely sees the smart milk carts with high wheels that may be noticed in Belgium and Holland, where the dogs are sometimes harnessed below the wagon and pull strongly in collars like horses.

There are laws regarding the treatment of dogs which are intended to protect them from overwork and cruel treatment. One is a rule that, when in motion, the woman, man or boy with the wagon must have hold of the tongue or handle of the cart. Another is that persons must not ride on dog wagons. It is doubtful if either one of the rules is of value to the dogs, while it is certain that the owners regard them as oppressive, since they furnish the rural and city police one more excuse for overbearing conduct toward the poor.

The following are the regulations governing the use of dogs. It may be noted that, whereas a very large sum is raised from the tax on dogs that do not work for a living, the *bona-fide* working dog is exempt from taxation, and thus enjoys a freedom much envied him by his master. In regard to muzzles, they are supposed to be muzzled when at large, even in the country; by special order they must wear the muzzle when used as draft animals.

SECTION 1. Every dog harnessed before a wagon must carry a safe, properly arranged muzzle, which allows the dog to breathe freely and to cool his tongue, but makes biting impossible.

SEC. 2. Dogs that are unfit for draft purposes on account of sickness, exterior hurts, or on account of their bodily make in general are not permitted to be harnessed to a wagon. This is also not permitted for dogs that are temporarily unfit to pull—for instance, in the case of pregnant or nursing bitches or bitches in heat during the continuance of this condition.

SEC 3. Dogs which may be considered unfit to pull according to the above signs, either permanently or temporarily, may be immediately removed from the street—that is to say, from the wagon—by the police.

SEC. 4. The weight of the wagon and loading must not be so great that the strength of the dog is overtaxed. The overloading of a dog wagon is punishable and gives the police the right to order the immediate interruption of the drive and to prohibit the continuance of the same until a reasonable reduction of the load shall have taken place.

SEC. 5. A proper vessel must be kept on the wagon from which the dog can drink, and also, during the time from October 1 to April 1, there must be kept for each dog a mat to lie on and a cover to spread over it during halts.

SEC. 6. The cartman of a dog wagon is in no case allowed to sit on the wagon while driving; on the contrary, he must walk beside the dog and lead it by a leash. When on municipal and other much-frequented streets he must permanently keep hold of the wagon shaft. In case the driver wants to leave the wagon while at a halt, the dog must be loosened and fastened to the wagon in such a manner that he can neither get loose from nor move the wagon.

SEC. 7. Dog wagons must give the road to the utmost edge of the way to all other vehicles and horsemen that they meet or that overtake them

SEC. 8. Wagons harnessed with dogs are not allowed to be hitched to other wagons.

SEC. 9. The use of two-wheeled dog wagons is only allowed under the condition that the dogs are exclusively used for pulling and are not burdened by the weight of the cart on their backs.

SEC. 10. The regulations published in regard to the marking and lighting of wagons, as well as to the driving in ditches and on slopes and embankments of the roads, apply also to dog vehicles.

SEC 11. Actions contrary to these police regulations will be punished, unless more severe punishments are to be applied according to the general penal code, with a fine of 60 marks.

Latterly an effort has been made by the local Society for the Prevention of Cruelty to Animals to cause the substitution of donkeys for dogs as draft animals. The movement is commendable so far as supplying poor people with donkeys is concerned, but it is accompanied by the usual exaggerations. The charge that owners of draft dogs abuse them more than they would donkeys cannot be held reasonable; on the contrary, the natural lovableness of the dog, his fidelity and intelligence, win for him far more attention and kindness than the more useful draft qualities of horses, oxen, sheep, donkeys and goats. Statistics that show that draft dogs do not live long prove nothing, because the average life of dogs is low. There can be no question that dogs which are worked in a reasonable way remain in better health than dogs that have little exercise. Naturally, the poverty, bad food and bad quarters of the people who use dogs as draft animals make it appear as though work were hurtful to dogs. If the same care were taken to feed, clean, harbor and work dogs as horses, I have not the slightest doubt that they would live longer and remain in better health than dogs not so employed, with the possible exception of hunting dogs in the hunting season. Their chance of good treatment is always greater than that of other animals, owing to their winning natures.

The use of dogs as draft animals is probably the oldest in the world, antedating perhaps by thousands of years the use of ox, horse or ass. It is a method that seems fitted for special people and special lands—as, for instance, to note the best known, the polar regions. But there are other places where, among the poor, even donkeys can be profitably replaced by dogs, because the latter are cheaper to feed and useful as watchdogs when not in harness. Such are very sandy regions, where grass and hay are dear, the suburbs of large towns, islands subject to bleak winds, and hilly districts where roads are bad. The chief objection to the ordinary dog as a draft animal is his lack of weight and undeveloped flanks; but if it were once understood that dogs for draft purposes were needed in America, the managers of dog shows could be readily induced to give prizes for dogs with the needed points and training, and it would not be long before a sturdily pulling dog could be bred in any required numbers. The best way to begin would be to set the fashion of dog wagons for the boys and young children of well-to-do people, who could afford to pay for such dogs while they are scarce and consequently dear. The dog is a very willing worker and responds as no other animal, not even the horse, to encouragement by voice and gesture on the part of his master.

The American Consul at Brussels, George W. Roosevelt, reports to the Department of State as follows:

Nowhere, excepting perhaps with the Esquimaux, is the use of dogs as draft animals so extensively practiced as in Belgium. In Brussels and its suburbs more than 10,000 are employed as beasts of burden.

Since 1842 the harnessing of dogs has been absolutely prohibited in England. The custom obtains in some parts of Germany and Holland, but is wholly unknown in France and Italy. I am reliably informed that during the past twenty years the use of dogs as draft animals in Belgium has steadily increased, completely superseding the donkey. Previous to this time the dog was only seen hitched to small, light-running milk carts. At the present time his use is very general; bakers, butchers, washerwomen, in fact, nearly all trades find him useful in some part of their work. They are hitched single, double, and sometimes three or four to carts weighing from 50 to 150lbs. When the animal is hitched beneath, the cart is provided with supports attached to the shafts to relieve the dog of the weight of the cart and load when standing. The axletree is bowed, so as not to interfere with the action of the dog when in motion. These carts vary in size and construction. The milk carts are usually constructed after the same model, varying only in size. They are neat but small box-shaped affairs resting upon two wheels. Much attention is given to the harness, which is heavily studded with brass ornamentation.

As far as I am able to learn there is no special breed of dog used here for draft purposes. All sorts and sizes, according to conditions, are employed. Experiments have been made to produce a large, strong animal by crossing as follows: Mastiff with Danish hound, St. Bernard, shepherd (collie) and setter; St. Bernard with collie and common hound; Danish hound with setter, and Newfoundland with collie. The pure-bred Newfoundland is rarely used here as a draft animal on account of the height of hindquarters.

A good draft dog usually sells for from 60 to 125 francs ($11.58 to $24.12). But the increase of the number of small carts drawn by dogs has provoked the propagation of a category of dogs which endure the greatest privation, and as his value is insignificant his life is of small consideration, as he is easily replaced either by a stray dog or homeless cur.

As scarcely any attention is devoted to breeding, none whatever is given to training the dog as a draft animal. His first initiation into bondage is by being hitched alongside of a dog long in service. If the new recruit is refractory and refuses to pull he is forced to do so.

A special harness, consisting of collar or breast strap (Dutch collar), traces, saddle, tugs and girth, is used for dogs hitched in front of carts. For those hitched beneath or at sides of carts the harness is supposed to consist of breast strap, girth and traces.

Muzzles are obligatory at all seasons of the year, as the dogs are always more or less vicious, rendered so by unnatural employment and powerless condition to escape danger when left, as they very frequently are, hitched in the cart and unprotected by the owner. It is not an infrequent occurrence for a cab or beer wagon to collide with the small cart and injure the helpless dog. A regulation imposes that owners of draft dogs shall employ leather muzzles approved by the municipal council, a model of which is exposed at the central division of police in the Hotel de Ville. This regulation is not always complied with, and much needless suffering is given the poor dumb creatures by ill-fitting and badly adjusted muzzles.

The Society for the Prevention of Cruelty to Animals in Belgium is industriously working, not only to ameliorate the condition of the dog as a draft animal, but eventually to succeed in having a law passed prohibiting the harnessing of dogs in any manner whatever.

The Forest and Stream Publishing Co. are the largest publishers and importers in America of Books on Outdoor Sports. Their illustrated descriptive catalogue will be sent free on request.

A. K. QUARTERLY MEETING.

In the absence of the president, vice-president and president of the Associate Members Mr. A. P. Vredenburgh was elected chairman. There were present, Associate Members: (A. C. Wilmerding, H. K. Bloodgood and G. W. H. Ritchie); American Dachshund Club (C. Motschenbacher); American Spaniel Club (M. A. Viti); Bull Dog Club of America (E. Willard Roby); Columbus Fanciers' Club (J. M. Taylor); French Bull Dog Club (W. W. Watrous); Gordon Setter Club (J. B. Blossom); Metropolitan Kennel Club (G. M. Carnochan); National Beagle Club (H. F. Schellhass); Oakland Kennel Club (Elliott Smith); Pacific Fox Terrier Club (B. Waters); Pointer Club (George Jarvis); Rhode Island Kennel Club (W. C. Codman); Southern California Kennel Club (C. D. Bernheimer); Mascoutah Kennel Club (C. F. R. Drake).

The credentials of Elliott Smith, Oakland Kennel Club; W. C. Codman, R. I. Kennel Club; G. B. Sykes, St. Bernard Club of California; Erastus Hamilton, Pacific Mastiff Club; Walter W. Watrous, French Bull Dog Club; and Arthur Thompson, Bull Terrier Club of America, were accepted.

The treasurer's report was accepted. It was as follows: Balance on hand Jan. 1, 1897, $3,256.97. Receipts from all sources to date, $9,030.44. Total, $12,287.41. Disbursements since Jan. 1, $8,102.46. Balance on hand, $4,184.95.

The pedigree of the English setter Ty-I., owned by L. A. Uttrichs, was canceled and the owner disqualified. In the matter of dogs sold by Lewis Miller, of West Chester, Pa., affecting the pedigrees of the bloodhound June II. and certain English setters, as Miller was already disqualified and the other interested parties had purchased the dogs in good faith, the book entries of the dogs in question were canceled. In the matter of who was the breeder of the Great Dane Leo G., a matter in dispute between Messrs. Lasen and Gerhart, of Kansas City, Mo., it was ruled that the former were the breeders.

The Pacific Advisory Board reported that it held no meeting on Nov. 2, no quorum being present.

Kennel names were granted as follows: "Holroyd," to Wm. L. Andrus; "Norfolk," to George H. Gooderman; "Royal Blue," to F. H. von Waffenstein; "Westchester," to F. M. McWilliams.

The matter of a discrepancy in the statement of the date of birth of the Irish setter Hunter, owned by P. F. O'Neil, in respect to entries in the Westminster Kennel Club and Metropolitan Kennel Club shows; and in the matter of the beagle bitch Sova, entered at different shows under different alleged owners, this bitch having been owned by George Thomas at the time of his suspension; and in the matter of the disqualification of the pugs Otterburn Penrice and Otterburn Treasure, whose winnings at Brooklyn and Washington were canceled for having been entered in classes to which they were not eligible, were all referred to the Executive Board.

In the matter of the wolfhound Olaf, owned by George M. Keasby, entered at the Brooklyn show with a wrong pedigree, it was shown that it was due to mistake, and therefore Mr. Keasby was exonerated from blame. In the matter of the seven errors in the Brooklyn show catalogue, it was shown that they were due to the fault of the printers entirely, the club officials being blameless, and therefore no penalty was imposed.

In the matter of medals to be awarded to champions of record, it was carried that on payment of $3 all owners of champions of record may obtain a championship medal.

The secretary was authorized to buy an oak case in which to keep the club records, at a cost not to exceed $16 50.

Mr. J. B. Blossom gave notice of amendments, to be acted on at the next meeting of the club, but in the meantime to be considered by the committee on constitution and rules, as follows: Section 3, Rule 12, Class 6—After the words "one of which must be in the free-for-all class," add the words "and one the senior class." And after the words "no class winner can be withdrawn from competition in the winners' class," add the words, "except those dogs which have already won their championship."

Mr. Watrous proposed that the club consider the so-called charges against Mr. Mortimer and give him a complimentary exoneration, but the general opinion was that he did not need any exoneration.

It was carried that "hereafter public notice shall be given to all members of meetings of the membership committee, at which the applications of delegates for admission shall be considered."

Mr. Carnochan gave notice of an amendment to the rules as follows: "That at bench shows all dogs having won a prize in one class shall not carry the ribbon showing such win into any subsequent class at the same show."

Mr. Vredenburgh, in respect to the committee appointed last May to investigate the matter of rabies, explained that the committee had been at work in its investigation since about the middle of June. The reports from all sections but one, he thought, had been received, and had been forwarded to Dr. Huidekoper to edit and embody in one report. Dr. Huidekoper reported by telegram to the meeting as follows: "Reports on rabies appear to show more rabies than I believe exist, and require considerable verification. I beg for delay until the next meeting to submit full report."

National Beagle Club.

An executive committee meeting of the National Beagle Club of America was held at 171 Broadway, Monday, Dec. 13. The members present were: H. F. Schellhass, chairman; James W. Appleton, G. Mifflin Wharton and George W. Rogers.

Special prizes will be offered at the coming Westminster Kennel Club show as follows: A gold medal for the best beagle in the show, open to members of the National Beagle Club of America only.

Silver medal for the best beagle in the show of opposite sex to the winner of the gold medal, open to members of the National Beagle Club of America only.

Bronze medal for the best beagle in the show having been placed at any recognized field trial held in America, open to members of the National Beagle Club of America only.

At the New England Kennel Club show at Boston, a silver medal for the best beagle in the show, open to members of the National Beagle Club of America only. Bronze medal for the best beagle in the show of opposite sex to winner of the silver medal.

Messrs. Jas. W. Appleton and Geo. W. Rogers were appointed as a committee to draw up suitable resolutions on the death of the late Pottinger Dorsey, a former member of the club.

GEO. W. ROGERS, Sec'y.

Alabama Field Trials Club.

Those who are interested in the trials of the A. F. T. C. should keep in mind that the entries close on Jan. 8. Besides the Derby and All-Age stakes, there will be two special stakes, a Champion and a Puppy. The former is for all dogs owned in Alabama, and there are no restrictions on age or winnings in respect to eligibility. The first series of heats will be two hours' duration; second series, one hour; subsequent running at the discretion of the judges. Prize, $50 silver cup. No entrance fee. The Puppy Stake is for puppies born in 1897 owned by residents of Alabama. Puppies will be required to point and back, but there will be no penalty for unsteadiness. The prize is a handsome silver cup. All dogs must be handled by owner or other resident amateur. Address H. K. Milner, Sec'y-Treas., Birmingham, Ala., for entry blanks and all necessary information.

Pointer Club Meeting.

The Board of Governors of the Pointer Club of America held a meeting on Dec. 13 at the American Kennel Club rooms. It was resolved that the special prize awarded to Shotaway in heavy-weight class, at the November show of the Metropolitan Kennel Club, shall revert to the club, his owner not being a member. Special prizes of $10 each for the best pointer dog and best bitch in the show were voted to the New England Kennel Club's show of 1898, and also $40 for the Westminster Kennel Club's show of 1898, divided as follows: $10 for the best heavy-weight pointer dog, $10 for the best heavy-weight pointer bitch, $10 for the best light-weight pointer dog and $10 for the best light-weight pointer bitch. Competition open to members only of the club. It was resolved that the American Field Pointer Club Cup shall be competed for at the Westminster Kennel Club's show of 1898, and that the annual meeting shall be held on Feb. 21, 8 P. M., at Madison Square Garden.

POINTS AND FLUSHES.

Mr. Dudley E. Waters writes us as follows:

The dates of the Butterfly Show have been changed to Jan. 18–21, one week later than previously announced. Entries will close Jan. 7, that being the third day of the Wilmington show. E. M. Oldham will superintend the Butterfly Show. Entries will be received by him at Wilmington as well as by Miss Grace H. Griswold, Michigan Trust Building, Grand Rapids. Judges will be: E. M. Oldham, all spaniels; John Davidson, setters; J. Wallace Wakem, fox terriers; and R. K. Armstrong, collies; H. W. Lacy, all other breeds. Entry fee, $1. We have every assurance of having a much larger show than last year, with a great improvement in the quality. This show is given by young women and the entire proceeds are devoted to charity. From the proceeds of the shows they have given heretofore, they have been able to maintain free beds in two of our local hospitals and have employed a nurse to take care of the poor who are in need of a nurse's attention. The association is composed of something over twenty young society women, and they are divided into pairs and the weeks of the year are divided among them. They visit the occupants of the free beds, and with the nurse visit the poor about the city and take with them such delicacies as may be required. They are working for a noble cause, besides greatly advancing the canine interest in this locality. I am glad to say that they have had and have the promises of support of dog fanciers from all over the country. I think the show they give has less of the professional atmosphere than any I have attended In fact it is almost entirely amateur, and the dogs are exhibited not for the money they will win, but for the record and sport.

Spratts Patent, 239 East Fifty-sixth street, have issued their calendar for 1898. It contains portraits of typical specimens of dogs, fowls, and does not ignore the finer breed of cats. The edition is a limited one, therefore those desiring it should apply early.

A correspondent writes us that Mr. J. M. Avent had an insurance of $2,500 on his house and $500 on his furniture, therefore his loss from fire will be slight from a strictly monetary standpoint.

The United States Field Trials Club desires to call attention to its Stake for Amateur Club Members, to be run at the club's trials at West Point next month. The prize is the Tabasco Cup. Dogs which have run in any public field trial are ineligible. Entries close the day before the stake is run. There can hardly be any good reason advanced for such a stringent regulation in respect to dogs which have run in a public trial. If applied to dogs which have won in a public trial, there would be much in it to commend, but as it now stands it disqualifies dogs without good reason.

In our business columns C. Brockel, Woonsocket, R. I., offers broken setter. R. B. Smith, Commack, N. Y., offers pointer. J. S. McLean, Hackettstown, N. Y., offers trained setter. S. Clark, Tuckahoe, N. J., offers broken setter. H. C. Deane, Hoosac, N. Y., offers fox terrier. W. George Smith, Maydel, Md., will train pointers and setters. Wm. Howell, Islip, L. I., will board and train dogs.

KENNEL NOTES.

Kennel Notes are inserted without charge; and blanks (furnished free) will be sent to any address. Prepared Blanks sent free on application.

SALES.

Mr. Charles E. Rossington has sold Rossington and Victoria, mastiffs, to Wyanoke Kennels.

One Design Classes.

(*Continued from page 513.*)

(*f*) Spars must not be altered nor reduced by planing or heavy scraping.

(*g*) Boats provided with movable skylights must carry them on board during a race.

(*h*) When racing there shall be no limit of crew, but no paid hands shall be permitted to take part in club races. When racing at local regattas under the rules and regulations of the club one paid hand may be carried.

(*i*) The under-water body of each boat must be coated with such anti-fouling composition as the committee may from time to time direct.

(*k*) Builders to issue a certificate that the boats are built strictly in accordance with design and specification. Sailmakers will also issue a certificate that the sails are in accordance with drawings.

(*l*) Sails not required may be left ashore during the race.

In addition to the above, it was suggested by Mr. Lambert Moyers that where two or more boats were being built in the same yard ownership should be decided by ballot. This caused a little discussion, in which Messrs. Meldon, Toomey and others took part. Finally the proposal was withdrawn.

With regard to the Colleen class, it was proposed that the width of waterways should be increased to 18in.; that the mast be increased by 18in. to give the peak of the mainsail a greater hoist; that some alterations should be made in the rudder to make it stronger; that the centerboard casing be increased in height, and that each boat should be coated with a special anti-fouling composition suggested by the committee. After some discussion these alterations were passed, they being made optional, with the exception of the last proposal.

It was proposed by the hon. secretary, and seconded by Mr. Louis Meldon, that no alterations in the general rules applicable to the type of boats in the three classes should be made, except with the approval of a two-thirds majority of owners of the respective classes, and that in the case of joint ownership of any boat only one owner shall be entitled to vote. Passed unanimously.

The hon. secretary proposed, and Mr. Worrall seconded, that only one suit of sails should be allowed for each boat per annum in the A and B classes, save under exceptional circumstances, when the sanction of the committee must be obtained. Passed.

San Francisco Y. C.

San Francisco, Dec. 10.—The last time I wrote you I was mourning over the loss of our yacht club house by fire, and with it all our paintings, models and fixtures. But a new club house, Phœnix-like, has risen from the ashes. In this we are in a great measure indebted (in more cents-es than one) to the enterprise and energy of ex-Com. Gutte, who raised the money and the building. We now have an elegant house, commodious and with every convenience that a yachtsman could desire, and we are proportionately proud, only lamenting the loss of our models and paintings and many cherished souvenirs that cannot be replaced. So the old original San Francisco club can be found once more at the old stand and doing business as of yore. We invite all stray yachtsmen happening this way to come and see us. We are not quite in running order yet as regards the cravings of the inner man, but just across the street is vitality for man and beast, and the street is not over wide.

I intended saying something about yachts and matters yachty, and to express an old Fogy's opinion of the new order of things as you have them, but I will defer until a later occasion.

PODGERS.

A One-Design Schooner Class.

There seems to be no limit to the one-design idea now that it is fairly under way about New York. The latest proposal is for a class of small cruising schooners. Mr. F. Bowne Jones, who has been requested to take charge of the matter, has sent out the following letter to yachtsmen likely to be interested in the class:

Dear Sir: I beg to advise you that a movement has been instituted for the building of a one-design class of small cruising schooners, vessels of good seagoing qualities, ample accommodations and moderate cost. I would be glad to know whether you desire to subscribe for the building of a vessel for this class, providing the plans and price are satisfactory. To insure completion of the vessels before the opening of the yachting season of 1898, it is necessary that all arrangements be completed with as little delay as possible. I therefore request the favor of a response at your earliest convenience. Yours very truly, F. Bowne Jones.

Mr. A. Cary Smith is preparing a design for a schooner of about 45ft. l.w.l. for the class.

A Restricted 15ft. Class.

The 'Squam Y. C., of Annisquam, Mass., has established a special 15ft. racing class at the request of some members of the club who are interested in these small craft. The class is called the 'Squam Y. C. Half-Rater Association. The limits are identical with those of the Seawanhaka 15ft. class, 15ft. racing measurement; but with two special provisions: that the L.W.L. shall be not more than 15ft. and not less than 14ft.; and that, while the yachts are measured with 300lbs. of dead weight representing the crew, three persons shall actually be allowed in racing. The helm must be held by a member of the club. Spruce IIII., now owned by Paul Butler, is on Ipswich Bay, the racing waters of the club, with other 15-footers, and some new boats will be built this winter. Under the special provisions, as above, it will be impossible to introduce such craft as Glencairn I., with short L.W.L. and excessive sail area.

YACHTING NEWS NOTES.

The owner of the new Watson schooner is Charles L. Orr-Ewing, M. P. Capt. Carter is mentioned as the prospective skipper.

At its annual meeting on Dec. 7 the Toledo I. Y. C. elected the following officers: Com., Hugh R. Hone; Vice-Com., Bert H. Bortree; Sec'y-Treas., L. G. Colton; Meas., Karl Mathias; Sergeant-at-Arms, George Wilds; Fleet Surgeon, Mr. Gatesman, d. q. f; Regatta Committee: Capt. Mark Knabenshue, Dr. Gertz and Joseph Taylor; Entertainment: Charles Stanley, F. C. Smith, Karl Mathias.

Starlight, steam yacht, J. E. Hubinger, of New Haven, Conn., recently made the passage outside from New York to Pamlico Sound, encountering very heavy weather. After reaching the Sound her shaft broke.

According to reports in the daily papers, a new yacht for a foreign yachtsman is on the stocks at Bristol. She is described as follows: What can be seen of the boat indicates a clean-cut racing model. The waterline length is about 40ft., and she will be nearly 50ft. over all. There are in the plans of the yacht features which suggest some of the underbody characteristics of Wasp, as well as of Defender. It would appear that the new boat would embody some of the good points of both of these yachts. The underbody is partly of the hollow section variety. The lead ballast will take the form of the wooden keel, and will be fastened to the bottom. The yacht will be of good draft, but the beam will be narrow. The forward part of the underbody appears to be cut away considerably, and there does not seem to be much to cause resistance in headway work. The frames are of oak, and the craft is double planked. The inside layer is of cypress, while the outboard planking is of mahogany laid in marine glue. The overhangs are well defined. The yacht will probably be ready for launching in February next, and if she is to go abroad will be ready for the spring racing in the Mediterranean.

Valhalla, steam yacht, is now at Havre, the property of Count Castellane, who has purchased her of Joseph F. Laycock after having her under charter.

Among the orders of the Roberts Safety Water Tube Boiler Co. are boilers of 1,400 I. H. P. for the steam yacht Embla, 1,200 for the new Bliss yacht, 1,000 for the steamer Sarah A. Jenks, 1,200 for a new steel tug, and one of 800 for another tug. The company has also a number of smaller orders. The Roberts boilers have proved very successful in the steam yacht Marietta III.

Messrs. E. Bernard & Co., publishers of the "Library of the Union of French Yachts," announce a new volume of the series, by Mr. Chevreux, naval constructor. The title is "Treatise on the Construction of Sailing Yachts," and the volume will be an octavo of 312 pages, with an atlas of thirty plates. These include a large number of representative French yachts designed and constructed within the past twelve years, showing the great progress made during the existence of the Union. The book promises to be a valuable addition to yachting literature.

After some delay from the heavy fogs of last week, Yampa sailed from City Island on Dec. 16 for Southampton. A tug took her through the Sound. Capt. John Burt is still in command.

Canoeing.

AMERICAN CANOE ASSOCIATION, 1897-98.

Commodore, F. L. Dunnell, Brooklyn, N. Y.
Sec'y-Treas., C. V. Schuyler, 309 Sixth avenue, Brooklyn, N. Y.
Librarian, W. P. Stephens, Bayonne, N. J.

PURSERS.

Atlantic Division, Wm. M. Carpenter, Main street, Sing Sing, N. Y.
Central Division, Laurence C. Woodworth, Gouverneur, N. Y.
Eastern Division, F. J Burrage, West Newton, Mass.
Northern Division, Edgar C. Woolsey, 37 Charles St., Ottawa, Can.
Annual dues, $1; initiation fee, $1.

WESTERN CANOE ASSOCIATION, 1895-96.

Commodore, C. F. Pennewell, Detroit, Mich.
Vice-Commodore, Nat. H. Cook, Chicago, Ill.
Rear-Commodore, E. H. Holmes, Milwaukee, Wis.
Sec'y-Treas., W. D. Stearns, Detroit, Mich.
Executive Committee: R. M. Lamp, Madison, Wis.; C. J. Steadman Cincinnati, O.; F. W. Dickens, Milwaukee, Wis.

The Wawbewawa Smoker.

THE Wawbewawa Canoe Association entertained a goodly number of representative Eastern Division canoeists at its handsome club house on the Charles River, Auburndale, Mass., Saturday evening, Dec. 11, the occasion being the club's second smoker of the winter season.

The affair was a pronounced success, and the Wabewawas maintained their reputation of being genial hosts.

A "colored" gentleman of local renown offered his services for the evening, banjo solos, songs and dances being his specialty.

Messrs. Hoffman, Wiggin and Hines furnished some excellent music with their piano, harmonica, mandolin and banjo combination, and Mr. Clarence B. Ashenden, so well known to A. C. A. men, rendered several songs in his usual pleasing manner.

About all the clubs in eastern Massachasetts were represented, and the following familiar faces were noticed in this jolly gathering of devotees of the paddle: Vice-Com. Louis S. Drake, Raymond Apollonio, Charles F. Dodge, Purser Francis J. Burrage, Clarence B. Ashenden, Louis A. Hall, Parry C. Wiggin, Wm. V. Forsaith, W. W. Crosby, E. T. Brigham, Roger D. Smith, L. S. F. Hoffman, Wellington Wells and H. C. Wiggin, representing the Shuh-Shuh-Sahs, of Winchester; Inniton C. C., of Woburn; Fish Brook Association and Lawrence C. C., of Lawrence; Vesper B. C., of Lowell; Dedham B. C., of Dedham; Bradford B. C., of Cambridge; Puritan C. C. and Boston Athletic Association, of Boston, and the Wawbewawa Canoe Association, of Newton.

The Wawbewawas intend to keep open house to A. C. A. members on similar occasions planned for the winter by the committee, Messrs. Louis S. Drake, Wm. V. Forsaith, Francis J. Burrage, Louis A. Hall, L. S. F. Hoffman and C. W. Knapp.

Canoe-Yawl Rules.

THE definition of a canoe-yawl adopted by the Royal C. C. at its autumn meeting is as follows:

"A canoe-yawl, to be classified for racing purposes, shall be sharp at each end, with no transom or flat stern. Any metal keel, center plate or ballast shall be detachable from her, and any bucket well fitted within the sleeping compartment shall be detachable. Dimensions—Maximum: The length over all shall not exceed 24ft.; beam, not over 5ft. 3in. Sliding seat, if any, when rigged in, to be within the beam of the boat. Her fixed draft, including keel or drop keel when hauled up, shall not exceed 1ft. 10in. Extreme length of any spar shall not exceed the load waterline length or rating length. Minimum dimensions: The depth inside, from deck to skin (to be taken at any distance within 4ft. 6in. of mid over-all length and at not less than 15in. out from the middle line) shall not be less than 18in. Depth outside, from top of deck at middle line to under side of keel (taken anywhere up to 18in. from either end) shall not be less than 18in. Sleeping space, between two bulkheads, shall not be less than 8ft. 3in. in length; with hatchway thereto of not less than 2ft. 3in. in width for a distance of 4ft. 6in.

Rating $\left(\frac{\text{length of L.W.L.} \times \text{sail area}}{6000}\right)$ not to exceed 0.5.

Another proposal, by Mr. Linton Hope, $\frac{\text{R.}=\text{L.}+\text{B.}\times\text{S.A.}}{8000}$ was not adopted.

Rifle Range and Gallery.

Cincinnati Rifle Association.

CINCINNATI, O., Dec. 12.—The following scores were made by members of Cincinnati Rifle Association at their range to-day. Conditions: 200yds. off-hand at the German ring target. Mr Uckotter was out with his new Zischang Sharps rifle, .32-40cal., which fitted him so well that he raised his record one point by making 198 the first score. The rifle weighs 12lbs., and he shoots it strictly off-hand. Gindele was declared King for the day. On the Honor target Gindele was high with a score of 65. Payne fired 100 shots to count for a match with F. C. Heim, of Haubstadt, Ind., the result of which will be forwarded when Mr. Heim shoots his scores. Payne shot strictly off-hand at the German ring target:

Take inventory of the good things in this issue of Forest and Stream. Recall what a fund was given last week. Count on what is to come next week. Was there ever in all the world a more abundant weekly store of sportsmen's reading?

Trap-Shooting.

If you want your shoot to be announced here send in notice like the following:

FIXTURES.

Jan. 1.—SCHENECTADY, N. Y.—Tournament of the Schenectady Gun Club. Pigeons and sparrows.

Jan. 1.—COLORADO SPRINGS, Col.—Tournament of the Pike's Peak Gun Club. $100 added money.

Jan. 1.—NEWARK, N J.—Annual tournament of the South Side Gun Club. I. H. Terrill, Sec'y.

Feb. 15-19.—HOT SPRINGS, Ark.—Second annual midwinter tournament. First four days, targets; last day, live birds. $1,100 added money. Programmes ready Jan. 15. Send your address for one to Jno. J. Sumpter, Jr., Box 111, Hot Springs, Ark.

Jan. 18-20.—HAMILTON, Ont.—Grand Canadian Handicap. Live birds; $1,000 guaranteed. For full information write secretary, H. Graham, American Hotel, Hamilton, Ont., Can.

Jan. 26-27.—ORANGE LAKE, Newburgh, N. Y.—Tournament at Pine Point. Open to all. First day, targets: second day, live birds.

March 22-24.—ELKWOOD PARK, Long Branch, N. J.—Interstate Association's sixth annual Grand American Handicap. 25 birds, $25, birds extra; $1,000 guaranteed to the three high guns; all surplus added.

March 29-April 1.—READING, Pa.—Annual tournament of the Pennsylvania State Sportsmen's Association, under the auspices of the Independent Gun Club, of Reading. A. Knauer, Sec'y.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed. Ties in all events are considered as divided unless otherwise reported. Mail all such matter to Forest and Stream Publishing Company, 346 Broadway, New York.

The annual meeting of the Interstate Association, held Dec. 16, was not without interest to the trap-shooters of the States. A full report of the proceedings at that meeting is given elsewhere It will be noticed that the guarantee has been raised from $1,000 to $1,500, an addition of $500, that shows plainly how confident the Association is that its meeting of March next will be the greatest event of its kind ever held in this or any other country. The "$1,500 guaranteed" will be divided as follows: $600, $500 and $400 to the three high guns. The division of the surplus (for all surplus derived from the entries over sixty, the number required to fill the guarantee, will be added) will be made on the same lines adopted at the Grand American Handicaps of 1896-97. Last year the number of entries was 146; this year we confidently expect the total to be somewhere in the neighborhood of 200. But put the number of entries for 1898 at the same figure as those of 1897 and we have the sum of over $2,100 to be divided among those who finish below the three high guns. By dividing this surplus among a certain fixed number of high guns below the three high guns, the Association has undoubtedly added largely to its popularity in the past. Its intention to adhere to this policy at its Grand American Handicap of 1898 will, without question, add largely to the number of entries in this year's big event. It will also be noted that the Association will, for the first time in its history, donate a suitable trophy to the winner. Whether lightly handicapped or not, any man who wins the Grand American Handicap would be glad of and deserves some trophy to mark his winning of this event It is therefore with pleasure that we call attention to this fact.

A change will be made in the manner of shooting the Grand American Handicap next March. Instead of dropping shooters out on 3 misses, it will take 5 misses before a shooter's name will be struck from the list. Also, to facilitate shooting and to prevent delays at Nos. 2 and 3 sets of traps, a man who happens to score his 5th miss on either No. 1 or No. 2 set of traps will finish that round of 2 birds, irrespective of the fact of his having 5 misses to his credit. Another innovation will be the numbering of every shooter, each entry being known by his number when called to the score. For this purpose a small sign will be affixed to each shooter's back, giving his number on the shooting list, and also his handicap in yards. This will enable the referee to see at a glance if the shooter is at his right mark; and will also enable both shooters, spectators and scorers to tell who is at the score by merely referring to the list of entries numbered in shooting order. There will be no need to ask, "Who is shooting now?" The benefit of this plan cannot fail to recommend it to all who know anything about running a shoot.

At Olathe, Kan., they have a gun club that does its best to gather into its fold all those who like to shoot targets for the sport itself and for the social advantages to be derived from attending its shoots. Among the members is Mr. Frank Hodges, a very moving spirit in the councils and at the shoots of this club. Mr. Hodges has just returned from the Sunken Lands of Arkansas, where he was in at the death of two bears and two wildcats. His experience with such big game did not affect his aim on targets, for on Dec. 9 he won a heat for a gold medal at his club's shoot, and scored altogether 56 out of 60 shot at, all targets being thrown from three traps set Sergeant system, unknown angles. The Olathe Gun Club, an organization which is only three years old, holds annually a shoot and banquet on New Year's Day. Jan. 1, 1898, is to be no exception to the rule, and our correspondent from that city writes us that the club hopes to gather together all those who are "in sympathy with sportsmen, have a banquet, toasts, songs and music."

Frank Butler is in search of a bullet-proof suit. One day last week he was down along the banks of the Passaic River in Jersey, right near his home in Nutley, waiting for any fool ducks that might come his way. He held his gun in his right hand, with the right hand just in front of the breech, the butt swinging clear of his legs. He felt something strike his gun, and also heard a faint report immediately afterward. An examination of his gun showed that a .30cal. bullet had struck the stock fairly in the middle and had gone clean through it, tearing quite a lot of wood away on the far side. Frank doesn't know who fired the shot; he'd like to. Also he doesn't know where the bullet went to, but he's not so anxious about that. The general opinion seems to be that the shot was the result of some idiot practicing with a .30cal. rifle, regardless of the fact that there were other people in Jersey besides himself. Anyway it was a close call, and Miss Annie Oakley came very nearly being a widow.

The plans of the Interstate Association for its target tournaments of 1898 are yet in embryo. The scheme to be adopted by the Association has yet to be decided upon, and is to be presented by the tournament committee at a general meeting of the stockholders to be held in Madison Square Garden, Jan. 17. What that scheme will be it is hard to say, but it is scarcely likely that it will be upon the old lines, although the plans of past years may be adhered to to a certain extent. If, however, the Association should withdraw itself entirely from the arena of target tournaments, we should look upon this move as a direct loss to the trap-shooting public, as the Interstate tournaments of the past five years have been always deserving of being classed among the best shoots of their respective years, and have done much to boom the sport.

F. J. Alston, late of Atlanta, Ga., but now of New York city, an expert with rifle, pistol or shotgun, is now to be found in the New York store of the Winchester Repeating Arms Company, 312 Broadway. Quite recently Mr. Alston was the victim of a remarkable accident. He was carrying a loaded revolver wrapped in paper, being on his way to try it at a range. Somehow or another the pistol fell out of the paper on to the pavement; it struck the pavement butt downward, the jar setting it off. The bullet hit him just above the elbow of the right arm, took a course upward directly between the main artery and the bone, coming out above the shoulder, leaving a very bad wound where it left his body. It was really a miraculous escape, and Mr. Alston is to be congratulated on a comparatively short convalescence and the prospect of being able to use his good right arm in the near future.

Mr. V. Wallburg, president of the Schenectady (N. Y.) Gun Club, has issued the following invitation to his club's shoot on New Year's Day; "You are hereby invited to appear, armed with your best choke bore gun and 100 rounds of cartridges, loaded for both pigeons and sparrows, at the grounds of the Schenectady Gun Club, on Saturday, Jan. 1, 1898, at 9:30 A. M. Sparrows to be shot in 5-bird events, entrance $1.50, birds included, two moneys. Pigeons, any old thing to suit the company present. All electric cars run to the grounds; fare, 5 cents. Dinner provided for visiting sportsmen, free, at 1 P. M. Hereof fail not, but proceed immediately to make such arrangements as to insure your presence as above, where some seventeen others have already promised to meet you. A word to the wise is sufficient."

Mr. C. O. Gardner, Jr., is once more secretary of the Bergen County Gun Club, of Hackensack, N. J., Mr. E. A. Jackson, the late secretary, having resigned, owing to his departure for the Klondike early in the month of February next. All correspondence in connection with the club should now, therefore, be addressed to Mr. C. O. Gardner, Jr., Hackensack, N. J.

At the shoot of the Brooklyn, N. Y., Gun Club on Dec. 16, the management put up a dozen solid silver teaspoons as the prize in one of the events, a 30-target handicap. There were about twenty entries, and out of this number nine qualified, each man having made the requisite highest possible of 30. The magnitude of such an undertaking as shooting off nine ties, added to the diversity of opinion as to what should be done and the lateness of the hour, resulted in each one of the nine taking a spoon each as a souvenir, dice being thrown to decide who should take the remaining three spoons; and also to decide who should pocket the $3 and $2 donated by the club to the second and third high guns respectively. This is rather a novel way of settling ties for a dozen spoons, and is therefore worth mentioning.

Sam Castle is one of the veterans of the Newark, N. J., Gun Club. Every prominent shooter who has shot around New York during the past thirty or forty years knows Sam Castle. What his age is we can't say exactly, but we should guess that he has not far to travel before chalking up the "three score and ten" to his credit. He can shoot a bit yet, and is as sparing of shells as ever, preferring to do the business with his first barrel. At a small shoot on Dec. 15 on the grounds of the East Side Gun Club, of Newark, Castle shot at just 27 birds in the four sweeps, scoring 24 of them, and 21 out of that 24 were scored with the first barrel. In the miss-and-out that brought the shoot to a close he divided with 10 straight, all one-barrel kills.

Will Park was in the city on Friday last, Dec. 17. He informed us that the next monthly shoot of the Philadelphia Trap-Shooters' League, Jan. 1, is going to be a big affair. It will be held on the grounds of either the Frankford Gun Club at Bridesburg, Pa., or on the grounds of the Florists' Gun Club at Wissinoming, Pa. As this shoot will be about the only one to be held in the neighborhood of Philadelphia on New Year's Day, it is bound to be a large gathering of the clans. It is quite probable that three sets of traps will have to be used to furnish shooting for the crowds that will attend. Philadelphia has some large gatherings at these monthly shoots, but Jan. 1, 1898, promises to break all previous records in that city.

Noel Money has very nearly run the gamut of sport. He has shot pheasants, grouse, partridges, etc., in the British Isles; he has stuck wild boars and hunted tiger, bear, deer and all the big and little game of British India; he has pursued the wily ruffed grouse (the king of game birds) up and down (chiefly up) the mountains of New Jersey; and has also, under the tutorship of Bobo, given chase to the bears in the Mississippi bottoms. In fact, he has done a pretty good deal of hunting in his time. Not satisfied, however, with the experience he has had in the past, he is now trying the temper of the bears of Russia in company with, and under the guidance of, his host, Baron Hirsch.

There will be two days' shooting this week at the Dover, N. J., Driving Park. The dates are Dec. 24-25. On Dec. 24 all the events will be at targets; live birds will be used on the second day. The main event on the second day will be a 20-bird handicap, $10; handicaps, 25 to 32yds. There will also be a 10-bird sweep for amateurs only. The target events will be on the usual order. A special feature offered for the last day is "Brewer versus birds;" that is, Brewer is matched to kill 45 out of 50 trained birds, 31yds. rise, 50yds. boundary. Mr. E. L. Decker, proprietor of the Park Hotel, will look after the shooters.

The Lockport, N. Y., Gun Club announces that it will hold an all-day shoot on Friday of this week, Dec. 24. It will also hold a rifle tournament on its range on Christmas morning. An interesting programme has been arranged for the shoot on Dec. 24, all purses in the scheduled events being divided 40, 30, 20 and 10. Professionals will be barred from shooting for the money. Event No. 8 on the programme is a 20-target event, 50 cents entry; the prizes are four turkeys, which should come in handy for four Christmas dinners the following day.

Among the visitors at the tournament of the Brooklyn, N. Y., Gun Club on Dec. 16 last was C. W. Scott, one of the best shots and most popular members of the Lynchburg, Va., Gun Club, an organization that can boast of such men in its ranks as Colonel Terry, W. H. Moorman, Nelson, Dornin, Welford, Dawson, etc. It will be some satisfaction to Mr. Scott's fellow clubmen to scan the scores he made on that occasion, and not that he did Old Virginny proud, handicapped though he was by a strange gun and shells.

The sparrows had a bad time of it at the Indianapolis shoot last week. Heikes was high average for the day with 76 out of 80; Fred Gilbert, McMurchy and Bartlett tied for second average on 75 each; Rike was third with 74. In other words, the above five shooters scored 375 sparrows out of 400 shot at, an average per cent. for the five men of 93.7.

Tom Marshall and his wife are going to spend the winter months in the vicinity of Phœnix, Ariz. Mrs. Marshall's health requires the change, and it is hoped that a few months in the dry atmosphere of Arizona will restore her to perfect health. Mr. Marshall promises to be with us at the next Grand American Handicap, and says that "There'll be lots more with me."

On Dec. 29 there will be an all-day live-bird shoot at Yardville, N. J., on Zwirlein's grounds. The main event will be a 25 bird handicap at pigeons, $6.25 entrance, *i. e.* price of birds. Winner takes a silver pitcher and two goblets offered for competition by Zwirlein. An optional sweep will be made according to the shooters' wishes.

Dr. G. V. Hudson has won many trophies at the Dexter Park traps in past years. This year he is going to add another to his collection, viz.: The championship trophy for the season of 1897 offered by the New York German Gun Club for monthly competition. He won the last shoot, held Dec. 15, with 9 out of 10, his lost bird being "dead out."

Jack Fanning showed once more that he can shoot live birds with the best of them by scoring 25 straight in the main event at the Indianapolis shoot; he got first money alone too, something that should make up for disappointments in the past, when "24 with 1 dead out" was Fanning's usual record.

Charlie Zwirlein writes us from Yardville, N. J., that he has several hundreds of good birds on hand, most of them just brought in from the country, and adds that he would like a couple of good shots to come along and try their hands in a match at 100 or more of them.

Colin R. Wise, captain of the Boiling Springs Gun Club, of Rutherford, N. J., has issued the following invitation for the club's Christmas Day shoot: "Christmas dinner. Also live-bird and target shooting to start at 9 A. M. Come, bring your friends and enjoy a good day's sport."

Capt. Money has had the single-trigger addition applied to his crown grade Greener. He tried it for the first time at Carteret last Saturday, and found that he was better than ever. Some may wonder what that means; it means that he very nearly "killed em all."

Frank Parmelee used a Remington gun when he defeated Jim Elliott in the match recently shot between these two experts. So pleased is Frank with the work of this gun that the Remington Arms Company are building him another gun to his order, similar to the one he now owns.

Jno. J. U. M. C. Hallowell has just returned from Chicago and Indianapolis. He brings lots of big stories with him, some true and some ——. In connection with the Indianapolis shoot he says: "What do you think of 'Old Jack Fanning' now?" We reply: "Just the same we have always thought of him—A No. 1."

Jack Parker will manage the Hamilton, Ont., Gun Club's tournament, Jan. 18-20. In a personal letter to us the other day, Jack said that they have had a very good season's duck shooting up his way, and also some very good snipe shooting; canvasbacks, he said, had been very plentiful indeed.

The Audubon Gun Club, of Buffalo, N. Y., will hold a large open-to-all tournament on New Year's Day at its grounds in Audubon Park. Both cash and merchandise prizes will be offered for competition by the club in order to draw out the members and their friends.

"One of the boys" at East Hampton, L. I., is likely to have a good opinion of Blue Ribbon Smokeless. With five shells given him by a friend "just for trial," he scored 100 per cent., viz., three black ducks and two geese, honkers at that.

W. Liddiard, of Shelburne, Vt., who acted as gamekeeper at that place for Mr. Seward Webb for some years, is now down in North Carolina looking after a lot of pointers and setters for Mr. Whitney for the hunting season.

U. M. C. Thomas is back again once more in the United States. It is fairly safe to say that we are as glad to welcome Mr. Thomas back to our shores as he is to set his foot once more on American soil.

It is to be hoped when Mr. Grimm meets Mr. Heikes again that he, Mr. Grimm, will be in his "usual good form."

DEC. 21. EDWARD BANKS.

A Challenge.

JAMESTOWN, N. Y., Dec. 20.—*Editor Forest and Stream:* I hereby challenge Mr. W. H. Wolstencroft, the present holder of the Austin Powder Co. trophy, to shoot 100 targets under rules and conditions governing same. B. A. BARTLETT.

P. S.—Inclosed find New York draft for $25.

The Interstate Association.

ANNUAL MEETING OF THE STOCKHOLDERS.

THE annual meeting of the stockholders of the Interstate Association took place on Dec. 16 at Oakland, N. J. The meeting was called to order at 2 P. M. by President J. A. H. Dressel.

The roll call showed the following firms to be represented: Union Metallic Cartridge Company, J A. H. Dressel; Winchester Repeating Arms Company, Irby Bennett; Hazard Powder Company, Jno. L Lequin; Du Pont Powder Company, Edward S. Lentilhon: Tatham & Bros., Chas. Tatham; Parker Bros., W. F. Parker; Laflin & Rand Powder Co., A. W. Higgins; American E. C. & Schultze Powder Company, Lim'd, Captain A. W. Money. The Cleveland Target Company and the Leroy Shot and Lead Works were both represented by proxies.

The reading of the minutes and of the report of the treasurer first occupied the attention of the meeting.

THE MANAGER'S REPORT.

The report of the manager, Elmer E. Shaner, was presented and read. It ran as follows:

"PITTSBURG, Pa., Dec. 15.—I herewith submit the following report of the transactions of the manager's office for the season of 1897. The statistical data in connection with the year's work will be found in the Review of Tournaments, copy of which is hereunto annexed. [Note.—The 'Review of Tournaments' was printed in full in FOREST AND STREAM of Nov. 6.]

"I am pleased to inform you that the season now drawing to a close has not only been eventful in good results for our subscribers, but it has furnished more positive proof of the splendid growth of the real purposes of the Interstate Association than has ever been our lot to witness before. Furthermore, I am pleased to state that the future prospects are highly encouraging in every sense of the word. It is a pleasant matter to look back to seven years ago, and realize that within that short period a useful and powerful organization has been built up; and from a very small beginning we are now in a position to look for reward for the labors performed by those that have guided our affairs so carefully, so systematically and so successfully in the past.

"It has been said, and argued with considerable force, that trap-shooting is on the wane, but the records of this Association do not show such to be the case. On the contrary, it would seem from information in our possession that there is more interest and a greater indulgence in the sport manifested to-day than at any time previously. To the uninitiated, or to those not in close touch with trap shooting, there may appear to be a falling off in interest in the sport; but, in my opinion, this impression is created by the lack of large tournaments this season. However, it must be remembered that for every one of the larger tournaments formerly given, there were two or three smaller tournaments given this year—besides any number of club shoots not open to all. And, furthermore, statistics will show that there are more clubs in existence to-day, whose practice scores and private shoots do not reach the eye of the general public, than at any time since trap-shooting was first introduced. This latter condition of affairs is to be deplored, and it is hoped that such clubs will see the advisability of forwarding their scores to the sportsmen's journals for publication, as this has a tendency to create and keep up interest in the sport.

"The territory selected for the scene of the Association's labors during the season of 1896 presented such a series of phenomenal successes that the tournament committee deemed it advisable to continue its efforts in the same direction in 1897. Accordingly, the Association gave inanimate target tournaments in the South the first part of the present season, and in the New England States the latter part. Those who have watched closely the operations of the Interstate Association during the past season will readily accord to the committee the highest merit of praise for its selection of the territory named, as the results obtained and the general and increased interest manifested have been of such a notable character as to predicate beneficial results of the highest order to our subscribers.

THE SPORTSMEN'S EXPOSITION.

"The space taken by the Association at the Sportsmen's Exposition in Madison Square Garden, March 13 to 20, was of inestimable value, since it served not only as a recognized headquarters for the shooting fraternity, the followers of which availed themselves of the excellent arrangements provided for their exclusive benefit; but, moreover, brought one and all in close touch with the officials of our Association. The small sum expended was indeed well spent, and the results of such a move cannot well be calculated in a monetary sense. One of the noticeable effects of this action on the part of the Association is easily seen in the official announcement that about seventy entries for the Grand American Handicap were received at the Exposition headquarters.

GRAND AMERICAN HANDICAP OF 1897.

"The opening of the season was marked, as usual, by the Grand American Handicap Tournament, held at Elkwood Park, Long Branch, N. J., March 23-25. It was a meeting long to be remembered by those who were so fortunate as to witness the superb skill displayed by the contestants who took part in the different events. The trap shooting fraternity appreciate enterprise. They appreciate the Interstate Association, and there is no better evidence of this fact than my being able to make the gratifying announcement that the number of entries in the main event was 146. When it is considered that the number of entries has grown from the modest figure, twenty-one, in the inaugural year, 1893, to 146 the present year, some idea may be formed of the popularity of this, the principal shooting event of America, if not in the world. The tournament committee is deserving of the highest praise for its wise selection of the Elkwood Park grounds. No finer arrangements could be made for pigeon-shooting, and none equal to them exist in this or in any other country. I am firmly of the opinion that much of the success of the tournament was due to the grounds selected for the holding of same. The methods adopted for dividing the purses in the different events met with such universal approval that I would advocate a continuance of same at future Grand American Handicap tournaments.

INANIMATE TARGET TOURNAMENTS

"A splendid tournament emphasized the opening of the inanimate target season at Baltimore, Md., April 14, 15 and 16. The tournament attracted more than ordinary attention, as Baltimore, although a great trap-shooting center, has done more in the live-bird line than in that of inanimate targets in recent years. The amount of money added by the Baltimore Shooting Association, together with the absence or rather scarcity of large tournaments in the list of fixtures for the year, made it more than probable that the attendance would be quite large. As a matter of fact the entry list was exceptionally good, and the results attained were eminently satisfactory to all concerned.

"The next tournament was held at Richmond, Va., April 28 and 29. As to the success or otherwise of this tournament, there can be but one opinion. It was one of the nicest shoots ever given, while the number of new shooters present showed that the missionary work of the Association was sowing good seed in the South. It can be truthfully said that the work of the Association has done more to boom the sport of trap-shooting in that part of the country than all other causes combined. The West End Gun Club, the local club under whose auspices the tournament was given, handled its guests in a manner that reflects credit upon the tact of its members.

"The third inanimate target tournament on the Association's circuit was held at Savannah, Ga., May 19 and 20, under the auspices of the Forest City Gun Club. It bore the stamp of success in every phase, and was in line with the expectations declared by the members of the local club when they requested that a shoot be given in that city. The tournament, as anticipated, attracted attention from points miles around, and performed what was hoped for, namely, the instilling of a stimulus into the pastime, and making many new converts in that section.

"The closing tournament in Southern territory was held at Monroe, La., June 9 and 10, under the auspices of the Monroe Gun Club. The attendance was hardly as large as expected, owing to the disastrous floods which prevailed along the Mississippi River about that time. However, there were twenty-nine shooters present to take part in the different events, and the two days were replete with good fellowship and sociability. It was the general expression of shooters who were present that it was one of the nicest little tournaments they had ever attended.

"The tournament given at New Haven, Conn., July 14 and 15, under the auspices of the New Haven Gun Club, marked the opening of that part of the season devoted to the New England States. It was a most extraordinarily pleasant and successful shoot, one that was well patronized and appreciated. It would appear from the amount of interest shown that the aims and objects of the Interstate Association would not be neglected in that section.

"The next New England tournament was held at Lewiston, Me., Aug 4 and 5, under the auspices of the Androscoggin Gun Club. It was what every one expected it to be, a grand success, and the local club deserves credit for the able manner in which it handled the same. The arrangements made prior to the opening of the shoot were about the most complete I ever saw. In dismissing this tournament I can but reiterate the statement made last year with reference to the Portland, Me., tournament, viz, that the benefits accruing from this tournament were of such a nature as would guarantee the success of future ventures that may be made in that direction.

"The third New England tournament was held at Montpelier, Vt., Aug. 25 and 26, under the auspices of the Montpelier Gun Club. There was a unanimous expression of opinion among the visitors, who were from all parts of the country, that it was one of the most notable events of the kind ever held by the Interstate Association. Quite a number of new beginners took part, and the entries in the different events held up remarkably well. The advancement and stimulus given to the sport in consequence of this tournament can hardly be overestimated.

"The last tournament on the Association's schedule for the season was held at Portsmouth, N. H., Sept. 15-16, under the auspices of the Portsmouth Gun Club. This tournament was like its predecessors in many respects, and I can say without fear of possible contradiction that there has never been a shoot given in the State of New Hampshire through which the same satisfactory results, from a business point of view, have been attained, as by this tournament. It was a glorious *finale* to a wonderfully successful season.

"The foregoing brief resume of the tournaments given shows a record of which our Association may well be proud, yet it conveys but a slight indication of the total amount of work done during the past year. This is but scantily told in the necessarily meager detail of an annual report, but an interest has been created in trap shooting, emanating mainly from the Interstate Association's efforts, that will in due time secure to our subscribers results—results that please, results that repay.

LOOKING FORWARD.

"Each succeeding year finds our Association branching out further and further, and the interest displayed convinces us of the great importance of our organized efforts thus far. At no time in our history have the benefits of organization been more manifest than now. It leads us to believe that our past accomplishments will be exceeded in the near future. But it must not be expected that this result will be attained without earnest labor and hearty coöperation. The latter is especially desirable, as the major portion of the work and expense in the past has devolved upon a few. What we really should have, and what we are justly entitled to, is the encouragement, judgment, wisdom and ardent support of all sporting goods manufacturers. In no way can the manufacturer contribute more to the general interest of trap-shooting than by adding his influence and personal attention to the efforts of the Interstate Association. With an enlarged active membership, success should attend our every well-directed effort, and our usefulness increase beyond the expectations of the most sanguine.

"The season of 1898 will present a practically unlimited field for the scene of our labors, and as it will be impossible to comply with all requests for assistance, it should be our aim to arrange a circuit that will result in the greatest good to the greatest number—one that will not only put us in close touch with a desirable element, but that will be of great value to our subscribers.

SIXTH ANNUAL GRAND AMERICAN HANDICAP

"All preliminary details pertaining to the sixth annual Grand American Handicap Tournament have been arranged, and contracts signed for the holding of same at Elkwood Park, Long Branch, N. J., March 22-24, 1898. I am confident that the selection of the Elkwood Park grounds will meet with the hearty approval of a great majority of those who contemplate taking part in the tournament. From information that I have received I see no reason why the Grand American Handicap of 1898 should not prove to be a great success. Furthermore, I am fully satisfied that an individual effort on the part of each of our subscribers is all that will be required to make it the equal, if not the superior, of any of its predecessors in every respect.

"I would suggest that the Association consider the advisability of increasing the amount guaranteed from $1,000 to $1,500, and dividing same as follows: $600 to first high gun, $500 to second high gun and $400 to third high gun. I would also suggest that provision be made for presenting to the winner of first money a silver cup, or other suitable trophy, commemorative of the win.

INANIMATE TARGET TOURNAMENTS FOR 1898.

"I am in receipt of numerous communications requesting our coöperation next season. This condition of affairs is similar to that existing at the close of the season of 1896. The continued growth of applications for tournaments is highly encouraging, and while we derive comfort from the fact, we are still further assured of success in the future. The wonderful progress made during the past year will be hard to surpass, yet it should be our aim to excel that record during the coming season. With such a feeling in existence, I see no reason why our efforts should not meet with success.

MINOR MATTERS.

"The duties of my office during the past year have entailed a very large correspondence, but the matters dealt in were of such a nature that I do not consider a review necessary.

"I can see no reason for changing the rule whereby clubs are permitted to select such handicap, method or system of dividing purses, as they may deem most advantageous for their particular tournament; therefore I would advocate a continuance of same.

"The meritorious work of the several sportsmen's journals, honorary members of our Association, is deserving of the highest commendation. They have aided us by faithfully and fully reporting all scores of the various tournaments, as well as all incidental and interesting news pertaining thereto. ELMER E SHANER, Manager."

A SILVER CUP TO THE WINNER.

After the reading of the report of the manager, it was agreed that Mr Shaner's suggestion that $1,500 be guaranteed in the proportions suggested, viz, $600 to the first high gun, $500 to the second high gun, and $400 to the third high gun, be adopted. It was also agreed that the manager's suggestion that a silver cup commemorative of the great event be donated by the Association to the winner of the Grand American Handicap.

A general discussion on the Grand American Handicap and its future followed, the result being that a motion was put and carried that the Grand American Handicap of 1899 would be held at a point to be selected by the tournament committee at the close of the Grand American Handicap of 1898.

After disposing of the above, another discussion followed as to what were to be the plans of the Association for the inanimate target season of 1898. It was finally agreed that the tournament committee should submit a plan to a meeting of the stockholders to be held Jan. 17, at Madison Square Garden.

The following were elected as the Board of Directors: A. W. Money, Edward S. Lentilhon, John L Lequin, Charles Tatham, A. W. Higgins, Irby Bennett and J. A. H. Dressel.

MEETING OF THE BOARD OF DIRECTORS.

When the above business had been transacted by the stockholders the meeting of the board of directors for the election of officers was called to order.

The following officers were elected for 1893: President, J. A. H. Dressel; Vice-President, Irby Bennett; Secretary-Treasurer, John L. Lequin. Executive committee, Messrs Bennett, Parker and Money. Tournament committee, Messrs. Bennett, Lequin, Higgins, Tatham and Lentilhon. Club organization committee, Messrs. Delano, North and Parker.

Mr. Elmer E Shaner was unanimously reappointed manager of the Association.

The following handicap committee for the coming Grand American Handicap was appointed: Messrs Jacob Pentz, Will K Park, Elmer E Shaner and Edward Banks.

CARTARET CLUB HOUSE.

Olathe Gun Club.

OLATHE, Kan., Dec. 9.—The Olathe (Kan.) Gun Club held a shoot to-day for a medal, Woolard & Co., jewelers, having donated an elegant solid gold medal to the club, to be shot for monthly. Under the club rules the members shoot at unknown traps, unknown angles, Sergeant system. The traps are adjusted to throw the targets 60yds., as nearly as possible, and the trapper boys are instructed to throw all the different angles they can. The idea is to make shooters, not percentages; and to make members feel when they attend shoots away from home that they are up against an easier game than that on the home grounds. The weather to-day was bright and cold, and there was a good breeze blowing over the traps, making the targets sail and dip nicely. Following is the score:

Hodges 24, R. E. Walker 18, Lemon 22, Thiele 20, Thomas 17, Carpenter 17, W. R. Walker 19.

The winner is handicapped to 18yds. Should he win at this distance he is again put back to 20yds. He is then subject to three challenges. Should he win, the medal then becomes his property. The conditions are purposely made so hard that it is almost impossible for any member ever to win the medal. Rolla Heikes could hardly win it.

The following extra at 10 targets was shot: Lemon 10, R. E. Walker 9, Hodges 10, Pettyjohn 6.

The club permits no shooting for money, but the shooters present divided into two parties, the losers buying the oysters. The conditions were: 25 targets per man, five men to a team:

R E Walker	15	Lemon	24
Hodges	22	McIntyre	19
Thiele	19	Thomas	21
Carpenter	19	W R Walker	17
Dent	18—93	Avery	17—98

There has been occasional trap-shooting in Olathe for fifteen years, but the present club is only three years old. The membership is largely business and professional men, and numbers twenty in all. Most of them have begun trap shooting within two or three years, and have improved their averages considerably since that. The club has a nice shooting ground leased and owns a neat club house.

OLATHE.

At Buffalo.

AUDUBON GUN CLUB.

BUFFALO, N. Y., Dec. 10.—Perhaps it was the holidays and perhaps it was the rather unseasonable weather, but whatever may have been the cause, the usual large crowd was conspicuous by its absence for the Audubon Gun Club weekly shoot yesterday afternoon. Although the shooters were few, there was nevertheless some very good sport, both at targets and live birds. In the two races, Nos 5 and 6, at live birds, the best work was done by C. S. Burkhardt, as he was tied for first honors in both events. In that at ten birds he divided honors with J. J. Reid, and in that at seven birds he shared the victor's glory with L. W. Bennett. In the badge shoot, No. 3, E. C. and C. S. Burkhardt were tied in Class A, but did not shoot the tie off. Hebard and Jacobs were tied for the Class B badge, but Hebard proved the winner in the shoot-off. Reid won the badge in Class C.

IN NEW JERSEY.

WITH THE EAST SIDE GUN CLUB

Dec. 15.—J. Fischer and H. Henry shot the third match in their series on the grounds of the East Side Gun Club this afternoon. Fischer won by 19 to 17, actually gaining the victory on the last 3 birds, Henry losing his 23d dead out of bounds, making the score a tie, and then dropping his 24th and 25th birds. This gives Fischer the series, as the score was previously 1 and 1, Fischer having won the first and Henry the second. The birds were a good lot, with a strong wind directly from the shooters toward the traps. About seventy-five spectators were on hand to witness the race. E. Waldeck, a shooter who scored every bird he shot in the sweeps (27 in all), acted as referee, G. H. Fairmount pulling the traps. The match was shot as follows:

Trap score type—Copyright, 1897, by Forest and Stream Publishing Co.

JEANNETTE GUN CLUB.

Dec. 17.—The Jeannette Gun Club held its regular monthly live-bird shoot to-day on its grounds at Guttenburg race track. The tie in Class A between C. Meyer, H. Pape and C. F. Offermann was shot off, miss-and-out, resulting in a win for Meyer in the second round. Packard was the winner of the gold medal. Scores:

Class A.

C F Offermann (28)	2111111021—9	H Pape (28)	1111•22221—9
H Otten (30)	1101122•22—8	H F Karsten (28)	121201••00—5
Chas Meyer (30)	1121101111—9	C Steffens (30)	1100102120—6
N C Brunie (28)	1121•21011—8	Job Lott (30)	•222220112—8

Class B.

F Foebrenbach (25)	2100102•12—6	J H Bigelow (25)	1220000010—4
R L Packard (25)	2120012212—8	F H Ehlen (25)	0010212112—7
W Rohlfs (25)	01000001•1—3	C Bohling (25)	111222100•—7

Team race, 5 birds, 28yds. rise:

Capt. Brunie 4, Packard 4, Offermann 3, Ehlen 3, Rohlfs 2, Bigelow 4—20.

Capt. Meyer 4, Otten 5, Pape 4, Foebrenbach 4, Bohling 4, Steffens 5—26

Same conditions:

Capt Meyer	2101•—3	Capt Packard	220?•—3
Steffens	11211—5	Otten	11111—5
Brunie	1•112—4	Lott	22200—3
Bohling	200•0—1	Pape	11200—3
Ehlen	021•2—3	Karsten	2•911—3
Foehrenbach	12012—4	Offermann	•2000—1
Bigelow	21000—2—22	Rohlfs	20222—4—22

Shoot-off of tie, 1 bird each:

Meyer 1, Steffens 1, Brunie 2, Bohling 2, Ehlen 2, Foebrenbach 0, Bigelow 0—5.

Packard 1, Otten 2, Lott 2, Pape 1, Karsten 0, Offermann 0, Rohlfs 0—4.

W. V. Wussow.

E. C. CUP AT HACKENSACK.

Dec. 18.—The regular monthly contest for the E. C cup took place this afternoon on the grounds of the Bergen County Gun Club, of Hackensack. The day was very cold, a strong wind from the northwest making it far from pleasant work shooting targets. The targets too were most erratic. The wind had much to do with this, but part was caused by the condition of one or two of the traps which need overhauling. A harder lot of targets to shoot at it has seldom been our lot to see. The result is best shown by the scores, in which zeros figure conspicuously. H. Blauvelt and E A. W. Everitt tied for the cup on highest possibles, while A. B. Gladwin shot up to the top notch with 49. Blauvelt shot at 63, Everitt at 61 and Gladwin at 58.

Among those who took part in the shooting were: Ed. Taylor, E. A. W. Everitt and F. W. Getchell, of the Laflin & Rand W-A Powder Company; Jno. L. Lequin, Secretary of the Hazard Powder Company, and B. H. Norton and Mr. Barry, of the same company; Harold Money, of the American E C. Powder Company; Ferd. Van Dyke, of the Winchester Repeating Arms Company, etc.

The scores in the main event were as follows, the tie between Blauvelt and Everitt not being shot off on account of darkness:

E Everitt (11)	11011011101111111110111011111111111111101110011111	—42

*J Lequin (15)	01100001001000101001111011010001100301000000601001	—18

* Did not shoot up their allowances.

It will be noticed that H. Blauvelt had to break every one of his allowance of 13 to make a highest possible. Gladwin also had to break all his allowance, and only failed by 1 target.

Edward Banks.

ON LONG ISLAND.

ERIE GUN CLUB

Dec. 8.—Nine members of the Erie Gun Club, of Brooklyn, put in an appearance this afternoon at Dexter Park. The occasion was the regular monthly shoot of the club at live birds, 7 pigeons per man. Charles Plate, of Class AA, was the only one to score all his birds. Scores were as below:

Class AA, 28yds.:

Chas Plate	1222212—7	M J Elsasser	0020010—2
John Plate	1022222—6		

Class A, 28yds.:

Harry Blackley	1212•12—6	Henry Miller	1022221—6

Class B, 27yds.:

Fred Graef	0222011—5	Geo Fuchs	•200002—2
Wm Roberts	2201122—5		

Class C, 26yds.:

J H Plate	1022000—3		

Sweepstake, 3 birds: C. Plate 3, Miller 3, Blackley 3, J. Plate 3, Roberts 2, J. H. Plate 2, Fuchs 2, Elsasser 1, Graef 0.

Shoot-off for first money, miss-and-out: C. Plate 1, Miller 1, Blackley 0, J. Plate 0. C. Plate and Miller divided.

Shoot-off for second money, miss and-out: J. H. Plate 1, Fuchs 1, Roberts 0. Plate and Fuchs divided.

UNKNOWN GUN CLUB.

Dec. 9.—The Unknown Gun Club, of Brooklyn, is a thriving organization and bids fair to beat out, in the matter of popularity, several of the older associations. To-day was the regular monthly shoot of the club at Dexter Park, and nineteen members took part in the regular club shoot at 7 live birds per man. Of all this number, so good were the birds, only three—Timke, Schwartz and Brown—were able to score all their birds. Below are the scores:

D Timke (21)	1212122—7	H Malsteadt (25)	2010212—5
Dr Schwartz (28)	1111121—7	J Akhurst (25)	0101211—5
M Brown (28)	1222112—7	E A Vroome (27)	1200121—5
J King (25)	1012112—6	S Kichmann (26)	0212002—4
Wm Mills (30)	1211110—6	J Van Staden (25)	0011101—4
John Bohling (26)	1011112—6	J B Voorhies (29)	0101110—4
Wm Sands (26)	2222202—6	J Vogts (25)	0211100—4
Dr Moore (25)	1102111—6	J Knebel (21)	0102101—4
P J Sweeney (26)	1222001—5	H Selig (25)	0002011—3
H Knebel (26)	0111120—5		

Sweepstake, 3 birds, all 28yds.: Dr. Moore 3, Dr. Schwartz 3, J. B. Voorhies 3, M. Brown 3, P. Sweeney 2, H. Malsteadt 2, W. B. Miller 2, Selig 0.

NEW UTRECHT GUN CLUB.

Dec. 11.—Two members of Class A and two members of Class B were all that entered in the regular semi-monthly club shoot this afternoon at Woodlawn, L. I. Cornelius Furgueson and J. A Bennett tied for the Class A badge, while F. A. Thompson beat out Conny Furgueson for the Class B badge. On the shoot-off for the Class A badge, Furgueson won with 5 out of 6 to Bennett's 4 out of 6. In the sweeps Furgueson took the honors. Scores:

	Club Shoot.	Sweep No. 1.	Tie.	No. 2.	No. 3.
C Furgueson (A)	2222220022— 8	22202—4	2	02222—4	2222•—4
J A Bennett (A)	•202222222— 8	12021—4	0	.....	12210—4
F A Thompson (B)	2222122221—10	12121—5		1112•—4	11200—3
Furgueson, Jr (B)	2222210022— 8	20222—4		22220—4	22222—5

Sweep No. 1 was the shoot-off of the tie for Class A badge, Furgueson and Bennett tieing on 4 each. Shooting off again, miss-and-out, the former won in the first round.

G. E. Pool, Sec'y.

Dec. 18.—The regular semi-monthly target shoot of the New Utrecht Gun Club was held to-day on the Dyker Meadow grounds. In the club shoot F. A. Thompson won in class A, Dr. Shepard winning in class B. Scores:

F A Thompson (A)	00111101111101111111111111—21
M Van Brunt (A)	11111011101111001111111011—20

J Gaughen	11110111011111000111011l010 —19
Dr Shepard	11101100101101011010011101111100—19
C C Fleet	01001110100110110011101111 —15
Dr O'Brien	10010111011110101101100000110w —14
P A Hegeman	11001010100101001010C0011 —12

As F. A. Thompson donated the gun, he withdrew in favor of the next highest man, Mr D. C. Bennett. In this event Dr. O'Brien and M. Van Brunt shot off their tie for the gun and Van Brunt won.

Sweeps were shot as follows:

No. 1—25 targets—Van Brunt 23, Bennett 21, Gaughen 20, F. A. Thompson 20, W H Thompson 17, and George 17.

No. 2—10 targets—Dr. O'Brien 8, Gaughen 7, Adams 7, F. A. Thompson 6, and Fleet 5.

This is the last shoot of 1897 series; 24 regular shoots have been held. W. H. Thompson wins in class A; Dr. O'Brien in class B, and Dr. Parr in class C.

F. A. Thompson's prize (Winchester repeating shot gun) will be carried over to next year. The record to date stands: Dr. Bennett 2 wins, and P. Adams, D. Deacon, Dr. O'Brien, M. Van Brunt and W. H. Thompson 1 win each.

G. E. Pool, Sec'y.

NEW YORK GERMAN GUN CLUB.

Dec. 15.—The New York German Gun Club held its final shoot for the season of 1897 this afternoon on the Dexter Park grounds. Dr. G. V. Hudson was high score with 9 out of 10 and 1 dead out of bounds. He wins the club championship for this year very easily. Scores of to day's shoot were:

Club shoot, 10 birds, all 28yds., 7 points:

Dr G V Hudson	1•21212222—9	E Doeinck	2102110110—7

Six points:

Hy Leopold	210110111•—8	F Sauter	2110110020—6
P Garms, Jr	1010102102—6		

Five points:

M Bondin	1202010201—6		

Four and one-half points:

W G Meisenholder	2011021012—7	P Moersch	0020010101—4
Hy Meyer	0101101110—6		

BROOKLYN GUN CLUB'S BIG DAY.

Dec. 16—Some weeks ago John Wright, the popular manager-captain of the Brooklyn Gun Club, set aside Dec. 16 as a day on which his club should do itself proud, and entertain a large number of guests. He was a trifle nervous about the weather a few days prior to the appointed date, but fortune favored him, and, although cold, the day was fine and favorable for target-shooting. The result of his energy and popularity was evidenced by the large number of shooters on hand, thirty-seven taking part in the sweeps scheduled for the day.

Among the visitors were some birds of passage—viz., G. B Hutchings, of Galveston, Tex., and C. W. Scott, of Lynchburg, Va. The latter gentleman was captured on Broadway the afternoon before, and came out for a few hours to visit and shoot a few targets. With a strange gun and shell, and with a rawness in the air hardly suitable for shooting in shirtsleeves, Mr. Scott was heavily handicapped, but he pulled himself out of the hole most ably. A looker-on was also F. J. Alston, of Atlanta, Ga., a rattling good shot, but unfortunately just now prevented from using his right arm by reason of a pistol wound received accidentally. The names of most of the others who were present are well known to the shooting fraternity around New York, while more than a squad have shot in other portions of the States than New York and New Jersey. It was, in fact, a good gathering and a good shoot

The chief events were Nos. 5 and 7. The first-named was a handicap race at 30 targets per man, handicap allowance of extra targets to shoot at. The prizes offered by the club were: First, 1 dozen solid silver teaspoons; second, $3; third, $2 The above three prizes were to go to the three high guns. The second event was a 15-target handicap, allowance of extra targets to shoot; prize, a silver-mounted toilet set. Both this prize and the other were well worth winning.

For the prizes in No. 5 there were 25 entries. The handicaps were apportioned off so as to bring the shooters as nearly together as possible, with the idea of enabling each one to make a highest possible if shooting up to form. Even the scratch man received an allowance. As a result of the work, 9 out of the 25 entries scored highest possibles, while several more only just missed the goal. With nine ties and only three prizes, and with a dull sky promising an early nightfall, a consultation was had among the tie men, the following plan of division being arrived at: Each man took a spoon as a souvenir of his being in the tie. This left three spoons and $5 to be distributed. A set of dice was called into action. The "bones" favored Combs, who carried off the three extra spoons; Sanders won the $3, and Swan the $2. It will be noticed from the scores, which follow, that several of those who made highest possibles did not need all their allowances. A notable case is that of J. B Hopkins, who struck a gait that kept him pegging away until he had scored 29 out of his first 30, with an allowance of 9 more up his sleeve. Taken as a whole the scores in this event were very good considering the light, which was growing poorer every minute.

No. 7 was brought up from its position as No 10 at the tail of the programme, it being quickly seen that with the number of entries, twenty-four, it would be well on into the dark before it could be decided, even if commenced as soon as No. 6 had been finished. After each man had shot at his 15 targets, with his allowance of extras, it was found that there were ten ties on 15—the highest possible. The tie was shot off under the original conditions, four dropping out in this round, leaving six still in. Two more dropped out in the second round, leaving only four to compete. In the gloom that hung over the field, and that concealed almost every target after it had left the trap, Sanders pulled himself together and scored 13 out of 15, which with his allowance of 2 (which he broke), gave him a highest possible, a total that no one then in could equal if he broke them all.

Below will be found the detailed score in event No. 5, and also, in tabulated form, the scores made in all the events shot during the day, with the exception of three unimportant "warming-up" 10-target sweeps, shot prior to the commencement of the programme. Over 3,000 targets were thrown during the day, a large number when the short days at this season of the year, with a late start, are taken into consideration.

An incident of the afternoon was the flag raising. A new flag, made by Mrs. Remsen, the mother of the club's president, J. S. S. Remsen, and presented by her to the club, was flung to what little wind there was amid a noisy salute from six pump guns, loaded to the full with black powder shells The flag is a very handsome one, with the letters B G C on it. The letters and the narrow border are in royal purple, the ground of the flag being white.

No. 5 Handicap—30 targets, handicap allowances, unknown angles.

O. K. GUN CLUB, OF KANSAS CITY.

Chicago, Ill., Dec. 10.—The O. K. Gun Club, of Kansas City (which sent so large and useful a quota of members to represent Kansas City at Chicago in the big intercity shoot), has issued the neatest and most complete season's summary card put out by any club for a long time, the whole record of the year being given in a nutshell, as seen below:

	Jan.	Feb.	March.	April.	May.	June.	July.	August.	Sept.	Oct.	Nov.	Dec.	Average Per Cent.
Ed. A. Hickman	13	15	14	14	14	15	14	13	15	15	13	14	93.3
C C. Herman	15	11	14	14	15	12	14	12	14	15	15	15	92.2

ILLINOIS STATE SPORTSMEN'S ASSOCIATION.

"Peoria, Ill. Dec. 6.—The Peoria Gun Club met to-night, with H. H. Fahnestock, president of the Illinois State Sportsmen's Association, and discussed matters of interest to the game hunters and fishermen. It was decided to call a midwinter convention of the Illinois State Sportsmen's Association in this city Feb. 9, at which time papers will be read and views obtained on the best modes and methods for the protection of the game and fish of the State The revision of the game laws will also be considered. The meeting fixed the time for holding the annual convention and tournament of the State Association June 7 to 11, inclusive. This convention will be held in Peoria. Committees were appointed to arrange the programme and other details."

WAUKEGAN SPARROW SHOOT.

Waukegan Gun Club, of Illinois, holds a sparrow shoot Dec 14.

OUT TO IDAHO.

At Idaho Falls, Idaho, the gun club held a little thanksgiving shoot, eight men teams. Score:

Mitchell	1101111111—9	Taylor	0111111111—8
Moore	1001111011—7	Evans	0100011000—3

E Wright	0111111111—8—57	G G Wright	1100101711—6—43

THE CHICAGO CHALLENGES.

Chicago, Ill., Dec 18.—Up to date only one response has been made to the challenge of Mr. W. P. Mussey to shoot a race with any member of the team who proposed a challenge to the regular team of the Chicago-Kansas City match. Mr. R. Kuss has accepted the proposal of the challenge issued for individual matches, and it is expected that the $100 will soon be posted and the articles of war signed. The race will not be shot before the end of the year. The terms of Mr. Mussey's proposal were as follows, addressed to a local daily paper:

"I note a challenge issued in behalf of ten shooters who were not members of the team recently opposed to Kansas City to shoot against the regular team. While I have as yet had no opportunity to see my *confreres* in relation to the acceptance of such challenge, I have no doubt same will be promptly accepted. Though having myself accomplished the feat of making the lowest score on the Chicago team, I feel at liberty to issue this counter challenge. I will shoot a match with any one or with each of the five gentlemen who issued the challenge, conditions to be 100 specially selected birds each man, for $100 and the cost of the birds a side, Illinois State rules to govern, and the contest or contests to be decided at Watson's Park within ten days from date. I inclose check for $25 as a pledge of good faith, and would require acceptance by Thursday of this week. Unless these gentlemen can defeat the poorest shot on the regular team perhaps they will not feel inclined to shoot the full team.

"W. P. Mussey."

Although the regular team formally accepted the proposition of the other gentlemen to shoot, as published in last week's Forest and Stream, it does not appear likely at this date that any such race will be concluded, the Kuss-Mussey race being the only development thus far.

ST. LOUIS—KANSAS CITY.

The intercity match at Chicago seems to have stirred up a little interest in other Western cities, and as a consequence it is not unlikely that a team race between the victorious city and her neighbor, St. Louis, may result at an early date. St. Louis is out already with a challenge to the winners, and is even talking about challenging Chicago. The latter would appear to be safer. The St. Louis proposition is that the shoot be in St. Louis, losers to pay expenses; and although the latter clause of the conditions does not seem to the Kansas City men altogether appropriate in a friendly race of this nature, it may be accepted if insisted upon. (The Chicago-Kansas City race was shot with no wager up except the price of the birds.) Should Kansas City shoot her rival Missourians, she will probably use the same team that carried off the honors at Chicago. The following are the gentlemen who are starting the ball at St. Louis, and who would probably shoot on the team if the affair is concluded: Dr. Smith, Ed Pendergast, Bert Taylor, Will Nold, Peter M. Kling, J. H. Conrades, Dute Cabanne.

KANSAS CITY NEXT MAY.

Chris. Gottlieb, of the K. C. warriors, said while here that Kansas City would give next May the biggest shoot of 1898, and he asks that all tournament lovers keep their eyes open for big money and big attractions at that date. It surely seems that the Gate City of the West is plum full of shooters and spilling over with shooting energy and enthusiasm.

LIMITED GUN CLUB TOURNAMENT.

The shooting talent left Chicago late last week or early this for the seat of war at Indianapolis. The Limited Gun Club appears to have had a very pleasant and successful tournament, with a red hot company to divide the glory. Fanning kept up his strong streak as shown at Chicago in the open sweeps, and won the main honors at Indianapolis, carrying off the Grand Central Handicap with its comfortable little purse. The other cracks split up the winnings among them pretty evenly. Local attendance was not heavy, but the shoot was high class for this season, and Royal Robinson's town is sure of the whole gang again next winter, and they will then very likely want a whole week of it. Among those present from outside the city were: Fred Gilbert, Iowa; R. O Heikes, Ohio; B. A. Bartlett, C. W. Budd, Thomas Marshall, H. McMurchy, C. E. Willard; C D. Rutledge, Alton, Ill.; E. D. Fulford; C. N. Powers, Decatur, Ill.; J. S. Fanning, Arthur Dubray; E. D. Rike, Dayton, O.; H. C. Imes, Cincinnati; E. C. Hanford, New York; Ed Voris, Crawfordsville, Ind.

The first day's shoot was devoted to sparrows. This was new to most of the shooters, but, considering the weather, excellent scores were made. The four regular events called for 20 birds each. In the first event Gilbert, Heikes and McMurchy tied on 19 for first money. In the second event Heikes, Bartlett, Fanning and Powers were first with 19. In the third shoot McMurchy and Rike made clean scores. The fourth event was another split—Heikes, Gilbert and McMurchy tied on 19. Heikes made the highest average of the day, with a total of 76 out of a possible 80. Gilbert and McMurchy tied for second place with 75, and Rike and Fulford for third place with 74.

The live-bird traps were set on Monday, and the game was joined by the full company of cracks. The weather was not so bad, and the birds were good. Fulford and Gilbert divided the honors of the day and made clean scores. Heikes, Tripp, Voris and Marshall also did excellent work.

The first event was at 7 birds, entrance $7, with twenty-five entries. Powers, Gilbert, Budd, Fanning, Fulford, Voris and Tripp divided the money on clean scores.

In the second event, at 10 birds, entrance $10, twenty-two entries, Marshall, Powers, Fulford, Gilbert and Heikes divided the money on clean scores.

In the third event, miss-and-out, entrance $5, sixteen entries, Fanning, Gilbert, Marshall, Wood, Fulford, Tripp and Voris cleaned up the supply of pigeons and divided the money.

On the third day the feature was, of course, the Grand Central. Royal Robinson, Geo. Beck, E. H Tripp and A. B. Tolin were on hand to carry the Indianapolis banner; but the stocky man from the Golden Gate did not allow them to carry it very far. He shot in great form, and only got all of them, so it was hard to beat him. Fulford and Budd were at his heels with 24. Following summary shows handicap and winnings, eighteen entries, $25:

	Yds.	Scores.	Win'gs.		Yds.	Scores.	Win'gs.
Fanning	31	25	$112.50	Powers	30	23	$42.75
Fulford	30	24	78.75	McMurchy	31	22	31.50
Budd	31	24	78.75	Gilbert	32	22	31.50
Voris	29	23	42.75	Garland	26	22	31.50

There were two extra events after the big shoot, with the following results:

Event No. 2, 7 birds, entrance $7, two moneys, 60 and 40 per cent., fifteen entries: Marshall and Fulford, with 7 birds each, divided first money, $50.40; Gilbert, Tripp, Bartlett, Voris, Heikes, Powers, Budd and Beck, with 6 each, divided second money, $31.60.

Event No. 3, miss-and-out, entrance $3, ten entries: Gilbert and Bartlett divided $20 after killing 9 each.

AT ST. LOUIS.

On Dec 13 at Du Pont Park in St Louis there was live-bird and target shooting. In a live-bird race at 10 birds Kling and Arnold tied with 9 each, Nold killing 7 and Summers 6. In a 15-bird race Kling beat his son by a score of 13 to 12. A summary of the target scores will be found below:

Prendergast 20, Kling 19, Kling, Jr., 17, Bell 11, Kling 17, Prendergast 20, Kling 20, Prendergast 14, Kling, Jr., 16, Bell 8, Prendergast 18, Kling 20, Bell 9, Kling, Jr., 20, Kling 20, Bell 9, Kling, Jr., 15, Kling 15, G. Prendergast 21, Kling, Jr., 16.

STILL ANOTHER TEAM SHOOT.

Still another instance of the new intercity rivalry is in evidence out along the Missouri River, this time between Frank Parmalee's town and the city across the river. In regard to this the Council Bluffs *Nonpareil* has the following in its budget of local information:

"The Council Bluffs Gun Club has received a challenge from Messrs. Parmalee, Smead, Loomis, Peters and Blake, offering to shoot any five Council Bluffs men a friendly match race, 100 birds a man, for the price of the birds and a banquet for the two teams. It is understood that the challenge will be accepted and that an early date will be fixed for the shoot.

"On Monday, Dec. 20, Tom Crabill, of this city, and J. C. Plume, of Omaha, will shoot a match of 50 live birds for $50 a side. The race will be called at 1:30 P. M.

"On Friday, Dec. 24, Frank Crabill, of this city, and Jake Crabill, of Clarinda, will shoot Jim Den, of Arapahoe, Neb., and Jim Snead of Omaha, a match race, 100 birds per man, for a purse of $100. The shoot will take place on the grounds of the club near the motor bridge.

"On Christmas Day there will be a miss-and-out sweepstakes the entire day, in which most of the members of the club, it is expected, will participate.

"C. B. Randlett, of this city, and J. C. Plume, of Omaha, held a friendly shoot on the grounds here, the match being 100 birds each. The score stood:

Randlett	21121112222•2222222021122—23 21122212121202222111622—23 12222212211112222222220222—24 20•21122212122222212122222—23—93
J C Plume	211•12102•2100222222211201—19 20120212100222111111102121—20 011221201•211•22010112121—19 21212222112112222012111212—24—82

AT PEORIA.

They can kill 25 straight at Peoria also, it seems. At the last club shoot G. N. Portman defeated Kit Sammis in a 25 live-bird race with a straight score as follows:

Portman	22221211222122221222222222—25
Sammis	2•22202222222220•2222222—21

In the regular club medal contest that followed, 30 targets unknown angles and 20 expert rules, the scores were: A. E Leisy 42, F. Thorn 38, E. Giles 32, C. Sammis 41, G. W. Portman 42, W. Onl 29, W. Bordeaux 25, A. Giles 22, Frederick 23, W. Weber 31, Scott 22, Wilson 27. In the shoot-off Portman won, 4 out of 5 targets.

AT PEKIN.

Pekin Gun Club, of Illinois, held its monthly medal contest this week, Plattner winning the medal, known traps, 15 targets. Score:

J. Hoff 13, Baker 13, Ruhaak 10, Olt 13, Plattner 13, W. Hoff 11, Becker 10, Jaeckel 11, Reuling 9, Rauber 9. On the shoot-off at 10 birds, same conditions, J. Hoff scored 8, Baker 8, Olt 7, Plattner 10.

E. Hough.

1206 Boyce Building, Chicago.

EUREKA GUN CLUB.

Dec. 18.—The Eureka Gun Club, of Chicago, held their second winter shoot for trophies, at Watson's Park, Burnside Crossing, this afternoon. There were twenty-seven present who participated, and many others as spectators. The birds were good ones, and left-quartering drivers predominated. There was a soft sunlight, and a strong wind blew from right to left.

Mr. and Mrs. Shattuck, of Minneapolis, were present, and were elected honorary members of the club. Fred Gilbert, though present, shot but 10 birds for practice. He leaves for his home at Spirit Lake, Ia., where he will spend a couple of weeks. Returning to Chicago after that time, he will again take up his practice for another race for the Du Pont trophy.

The following are detailed scores after medal contest:

10 live birds from 5 traps classified.

* Indicates back score which should have been shot at the previous contest.

† Not classified.

The following are scores made by those practicing on another set of traps.

It is understood that R. Kuss has accepted challenge issued by William P. Mussey to a race of 100 live birds, still conditions are not as yet arranged. Mr. R. Kuss did some good work in his practice to-day, killing 47 out of 50 birds:

Kuss	12122212222?212221212222222	—25
	21222221222222102202110112	—22—47

NOTLER ROD AND GUN CLUB.

The Notler Rod and Gun Club, of Chicago, announces a shoot to be given on its grounds at Archer avenue, two blocks west of Kedzie avenue, Dec. 25 and 26. The shoot will be at live birds and targets, two moneys in all events. All are invited and no one barred.

CICERO GUN CLUB

The Cicero Gun Club will hold an all-day tournament on its grounds, West Madison street and the Desplanes River, on Christmas Day. This shoot will also be at live birds and targets. All are invited.

GARFIELD GUN CLUB.

The Garfield Gun Club will hold its second live-bird contest Christmas Day at Watson's Park, Chicago. The contest is a handicap in birds, each participant shooting at 20 live birds, 30yds. rise. Any member not having attended the previous contest will be allowed to shoot up one back score. A good attendance is looked for at that time.

A. C. Paterson.

SWEEPS OF DEC. 11.

Dec. 11.—While the Chicago-Kansas City team race was being finished to-day the following sweeps were shot:

Tri-County Shoot at Detroit.

Detroit, Mich., Dec. 16.—Northmore, of this city, captured the Peters Cartridge Co.'s diamond trophy for the marksmen of the three counties—Wayne, Oakland and Monroe—in the final shoot at the Rausch House yesterday. There were nineteen contestants, all from this county, though Schuyler Hodges, who came near capturing the trophy, was formerly from Pontiac. Hodges had never shot over the traps before, but he had a clean style and didn't need his handicap of 10 to reach the full number of 50 rocks and tie the leaders in the first shoot. In the shoot-off he and Northmore again tied, and it took another trial to decide the ownership of the diamond charm.

Peters' Cartridge Company's trophy; 50 bluerocks; handicap allowances of extra targets to shoot at; all contestants to use Peters' Cartridge Company's ammunition:

Parker (scratch) 42, Renick (scratch) 43, Scotten (15) 46, Wood (scratch) 40, Webb (8) 44, Joe Cabinaw (8) 38, Bortle (8) 48, Buesser (5) 50, Fleischer (scratch) 40, Cox (8) 48, Northmore (8) 50, Klein (5) 49, Hodges (10), 50, Weissen (15) 46, Brady (8) 46, M. Kramer (15) 33, Morris (15) 50, H. Cabinaw (15) 37, Gillman (15) 48.

In the shoot-off between the first four, Hodges and Northmore reached their 25 without requiring all their allowances, and in the shoot-off between them Northmore scored 24 and Hodges 23.

The following scores were made in the sweeps shot during the day:

Events:	1	2	3	4	5	6	7

John B. Rogers.

Rochester Rod and Gun Club.

Rochester, N. Y., Dec. 8.—Below are the scores made in the first contest of the winter prize series:

Twenty-five targets per man, handicap allowances: Wride (29) 27, McChesney (35) 25, Bolton (28) 23, Glover (26) 22, Byer (26) 22, Tassell (29) 22, Mann (29) 22, McCord (28) 21, Davis (29) 21, Rickman (30) 19.

Wride, McChesney and Bolton each won certificates.

De Witt.

Pawtuxet Gun Club.

Providence, R. I., Dec. 14.—The following averages were made by the members of the Pawtuxet Gun Club in all the regular club shoots of the past season:

Class A.

	Shot at.	Broke.	Av.		Shot at.	Broke.	Av.
W H Sheldon	475	397	83 1/5	W H Mooney	475	314	66
F J Greener	125	101	80 4/5	F Arnold	500	325	65
S D Greene, Jr.	450	352	78 1/5	H W Bain	275	200	61 2/3
R C Root	325	244	75	H Badmington	225	138	61 1/3
F L Corey	425	292	68 4/5	A B Hawkins	325	195	60

Class B.

J Armstrong, Jr.	500	270	54	W Repeater	300	156	52
W Thoene	325	179	53 1/3	Y E Buxton	150	78	52

The above list shows the ten best averages in Class A and the four best in Class B. There were other shooters who shot in more than two or three events, but there were not many of them. These averages were taken in the three series of shoots entitled the W. A., "Fishermen's" and Hunters' handicaps, and were taken without counting the extra birds given in same. This little State has two live clubs, the above named and the Rhode Island Shooting Association, and a number of friendly contests have taken place between the two—the latter club having a trifle the better of it; but we are not discouraged yet. Nearly all the best shots in the State belong to both clubs, so when we have a team race we have to draw lots or something of the kind. There are several other clubs that we hope to see get into line next season and try to make it lively for the R. I. S. A., who now hold the State challenge pennant.

Pawtuxet.

Lockport Gun Club.

Lockport, N. Y., Dec. 10.—The regular shoot of the Lockport Gun Club was held to-day, there being a good attendance of members present to keep the traps moving. No 6 was "the gun event," 25 targets per man. In this event some good scores were made, Angevine and Ward tieing on 24 each. On the shoot-off at 10 targets Angevine defeated Ward. No. 5 was a team race between teams captained respectively by Covert and Ward. After a very close race (none could be closer) Covert's team won by 54 to 53; each man shot at 10 targets. Scores in this event, by teams, were as follows:

Covert's team: Beers 8, Newman 8, Covert 7, Sherman 7, Ringueberg 7, Welsher 6, Whitcomb 6, Angevine 5—54.

Ward's team: Atwater 9, Ward 8, Benedict 8, Burt 7, Dr. Buck 6, Bunker 5, Mosher 5, Woods 5—53.

Below is a table showing the scores made to-day in all the events shot off:

Events:	1	2	3	4	5	6	Events:	1	2	3	4	5	6
Targets:	10	10	10	10	10	25	Targets:	10	10	10	10	10	25

Lockport.

Answers to Correspondents.

No notice taken of anonymous communications

Dumont Smith, Newton, Kans.—1. Which do you consider the more accurate cartridge for target shooting at 200yds. range, the .25-20-86 or the .25-20-77? 2. Will either of them shoot accurately at a greater distance than 200yds.? 3. Which has the flatter trajectory? Ans. 1. There is but little difference between the two at that distance. The .25-20-77 is not a factory cartridge. 2. Under favorable conditions fair accuracy may be secured at longer ranges, but we do not advise their use beyond 200yds. 3 There is but little difference between them, although the 77gr. should have the slightly flatter curve.

M., Montclair, N. J.—Will a 28in. barrel of a 12-gauge gun equal a 30in barrel in penetration, pattern and range? Which is considered the better for upland shooting? Ans. The 30in. is preferred where the hardest shooting is to be encountered, as at the trap, duck shooting, prairie shooting. At closer ranges, for shooting quail, ruffed grouse, etc., in open and cover where lightness and quickness are matters important enough to consider, the 28in. barrels have an advantage and are preferred by many. Each barrel would require its own peculiar loading to secure the best results. Each in its special field has its peculiar advantages. It is impossible to answer the question definitely without knowing what powders you use. For an all-round gun, ducks, quail, grouse, snipe, etc., the 30in have the most general preference.

R. S. C., Sandy Hill, N. Y.—My spaniel is about fifteen months old. I wish him to hunt partridges only. He is full of hunt at first, for an hour or so. Then he will come to heel and is not disposed to hunt any more. If I ask him in a gentle manner to go "hunt them" he crouches considerably and after a while lies down. I am at a loss just how to manage in order to improve the situation. I am quite sure that he has been possibly whipped or kicked by the parties I obtained him from What do you say to my leading him with a dog chain for a time? Have heard of such being done with a foxhound. Ans. The indications are that your dog hunts till he satisfies his own pleasure, then loafs. If he was cowed so much that he feared to hunt, he would hunt an hour or so in the manner you describe. The better way would be to let him hunt anything he pleases, rabbits included, and leave him entirely free. Give him no commands whatever. If he is cowed, he will quickly overcome it. Then he can be broken from chasing, and his efforts confined to partridges. Under no circumstances should he be led for the purpose of correcting his fault. Leading prevents a dog from hunting, instead of aiding him to hunt.

PUBLISHERS' DEPARTMENT.

Calendars for 1898.

THE U. M. C. COMPANY.

The calendar issued by the U. M. C. Company for 1898 is illustrated by a scene from the Revolutionary War that is calculated to make the blood flow a little more quickly than usual. The scene depicted shows "Molly Pitcher at Monmouth, June 28, 1778." Molly Pitcher is shown ramming home the ball into a cannon, while all around her is death, fire and smoke One of the crew that mans the gun has just been struck by a bullet from the British rifles, while the others tend the cannon, shirt-sleeved and hatless. It is a stirring scene.

DU PONT POWDER COMPANY.

The E. I Du Pont de Nemours & Co. have issued a calendar for 1898 that is a good standing advertisement of its smokeless powder for one year. The label of the Du Pont Smokeless Powder is shown in autumn colorings. The English setters on this label are well drawn and plainly show an eagerness to be off again, notwithstanding the fact that they have evidently already been at work, judging from the ruffed grouse that hang behind them on the fence. Below, and apparently behind the calendar tablet, stand two Canada geese, true to life. We understand that it took fifteen separate printings to produce this work, the blendings of the colors being exceptionally numerous. It is bold in coloring, while the contrasts are by no means glaring. The whole work has a pleasing appearance.

WINCHESTER REPEATING ARMS COMPANY.

The W. R. A. Company has called upon A. B. Frost for the scenes used to illustrate the top and bottom of its calendar for 1898. The central figures in the top picture are two hunters and a dead caribou. The snow on the ground tells the time of year. One of the hunters is on his knees beside the dead animal, and is pointing out to the other a bullet wound "in the right place," from which blood is flowing. "The .30 did it," he says. The object for his remark is apparent from the fact that the man in front of him carries a W. R. A. Co.'s .30cal. rifle; away to the right is his own gun—a .45 Winchester—leaning against a tree. The picture underneath the calendar tablet shows a gunner getting to work with a repeating shotgun on a flock of canvasbacks that are passing over his decoys. Taken altogether, the Winchester calendar for 1898 will be a popular one with sportsmen.

Trout Advertising Experience.

Plymouth Rock Trout Co., Plymouth, Mass., Dec. 15.—*Editor Forest and Stream:* Our adv. in your columns brings us letters from all over the United States, as well as from Europe and Mexico. Yours truly,
